Revision History

Revision Details	Release
Masks the credentials in the output URL of show crash config command for FTP, SFTP, and TFTP servers.	21.28.0

Behavior Changes

Previous Behavior: The output of the **Show crash config** command displays the complete URL for FTP, SFTP, and TFTP servers.

New Behavior: The output of the **Show crash config** command now masks the credentials in the URL for FTP, SFTP, and TFTP servers.

Command Changes

The **Show crash config** command masks the credential and displays the URL in the output as shown in the following:

```
[local]laas-s001-ssi-11(config)# crash enable url ftp://username:Csc0123@10.84.65.140/tmp/

[local]laas-s001-ssi-11# show crash config
URL                               : ftp://***@10.84.65.140/tmp/
Disk Space Limit                  : Not Configured
```
