2G-Msg Not Compatible with State	Total number of SGSN initiated requests to modify PDP context for 2G service rejected as message type is not compatible with protocol state.
3G-Recovery on Timer Expiry	Total number of SGSN initiated requests to modify PDP context for 3G service rejected as timer expired for recovery.
2G-Recovery on Timer Expiry	Total number of SGSN initiated requests to modify PDP context for 2G service rejected as timer expired for recovery.
3G-Proto Err Unspecified	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to unspecified protocol error.

Field	Description
2G-Proto Err Unspecified	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to unspecified protocol error.
Deactivate Context Request	Indicates the statistics of MS and network initiated PDP context deactivation requests received for 2G and 3G service.
Total-Deactiv-Request	Total number of MS and network initiated PDP context deactivation requests received for 2G and 3G service.
3G-Deactiv-Request	Total number of MS and network initiated PDP context deactivation requests received for 3G service.
2G-Deactiv-Request	Total number of MS and network initiated PDP context deactivation requests received for 2G service.
MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 2G and 3G service.
3G-MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 3G service.
2G-MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 2G service.
SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests received for 2G and 3G service.
3G-SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests received for 3G service.
2G-SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests received for 2G service.
HLR-Deactiv-Request	Total number of home location register (HLR) initiated PDP context deactivation requests received for 2G and 3G service.
3G-HLR-Deactiv-Request	Total number of HLR initiated PDP context deactivation requests received for 3G service.
2G-HLR-Deactiv-Request	Total number of HLR initiated PDP context deactivation requests received for 2G service.
GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests received for 2G and 3G service.
3G-GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests received for 3G service.
2G-GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests received for 2G service.
Retransmission	Indicates the statistics of network initiated PDP context deactivation requests retransmitted for 2G and 3G service

Field	Description
Total-SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests retransmitted for 2G and 3G service.
3G-SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests retransmitted for 3G service.
2G-SGSN-Deactiv-Request	Total number of SGSN initiated PDP context deactivation requests retransmitted for 2G service.
Total-HLR-Deactiv-Request	Total number of home location register (HLR) initiated PDP context deactivation requests retransmitted for 2G and 3G service.
3G-HLR-Deactiv-Request	Total number of HLR initiated PDP context deactivation requests retransmitted for 3G service.
2G-HLR-Deactiv-Request	Total number of HLR initiated PDP context deactivation requests retransmitted for 2G service.
Total-GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests retransmitted for 2G and 3G service.
3G-GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests retransmitted for 3G service.
2G-GGSN-Deactiv-Request	Total number of GGSN initiated PDP context deactivation requests retransmitted for 2G service.
Deactivate Context Accept	Indicates the statistics of MS and network initiated PDP context deactivation requests accepted for 2G and 3G service.
Total-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 3G service.
2G-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 2G service.
MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 3G service.
2G-MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 2G service.
SGSN-Deactiv-Accept	Total number of SGSN initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-SGSN-Deactiv-Accept	Total number of SGSN initiated PDP context deactivation requests accepted for 3G service.

Field	Description
2G-SGSN-Deactiv-Accept	Total number of SGSN initiated PDP context deactivation requests accepted for 2G service.
HLR-Deactiv-Accept	Total number of home location register (HLR) initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-HLR-Deactiv-Accept	Total number of HLR initiated PDP context deactivation requests accepted for 3G service.
2G-HLR-Deactiv-Accept	Total number of HLR initiated PDP context deactivation requests accepted for 2G service.
GGSN-Deactiv-Accept	Total number of GGSN initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-GGSN-Deactiv-Accept	Total number of GGSN initiated PDP context deactivation requests accepted for 3G service.
2G-GGSN-Deactiv-Accept	Total number of GGSN initiated PDP context deactivation requests accepted for 2G service.
Deactivation Causes Rx	This group displays the statistics of PDP context deactivation causes received by SGSN.
3G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 3G service network.
2G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 2G service network.
3G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 3G service network.
2G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 2G service network.
3G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 3G service network.
2G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 2G service network.
3G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 3G service network.
2G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 2G service network.
3G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 3G service network.
2G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 2G service network.
3G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 3G service network.

Field	Description
2G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 2G service network.
3G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 3G service network.
2G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 2G service network.
3G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 3G service network.
2G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 2G service network.
3G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 3G service network.
2G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 2G service network.
3G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 3G service network.
2G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 2G service network.
3G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 3G service network.
2G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 2G service network.
3G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 3G service network.
2G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 2G service network.
3G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 3G service network.
2G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 2G service network.
3G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 3G service network.
2G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 2G service network.
3G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 3G service network.
2G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 2G service network.

Field	Description
3G-Network Failure	The PDP contexts deactivated due to network failure in 3G service network.
2G-Network Failure	The PDP contexts deactivated due to network failure in 2G service network.
3G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 3G service network.
2G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 2G service network.
3G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 3G service network.
2G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 2G service network.
3G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 3G service network.
2G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 2G service network.
3G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 3G service network.
2G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 2G service network.
3G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 3G service network.
2G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 2G service network.
3G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 3G service network.
2G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 2G service network.
3G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 3G service network.
2G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 2G service network.
3G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 3G service network.
2G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 2G service network.
3G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 3G service network.
2G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 2G service network.

Field	Description
3G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 3G service network.
2G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 2G service network.
3G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 3G service network.
2G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 2G service network.
3G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 3G service network.
2G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 2G service network.
3G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 3G service network.
2G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 2G service network.
3G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 3G service network.
2G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 2G service network.
3G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 3G service network.
2G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 2G service network.
3G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 3G service network.
2G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 2G service network.
3G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 3G service network.
2G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 2G service network.
3G-Msg Not Comp With State	The PDP contexts deactivated due as received message was incompatible with session state in 3G service network.
2G-Msg Not Comp With State	The PDP contexts deactivated due as received message was incompatible with session state in 2G service network.

Field	Description
3G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 3G service network.
2G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 2G service network.
Deactivation Causes Tx	This group displays the statistics of PDP context deactivation causes sent by SGSN.
3G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 3G service network.
2G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 2G service network.
3G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 3G service network.
2G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 2G service network.
3G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 3G service network.
2G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 2G service network.
3G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 3G service network.
2G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 2G service network.
3G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 3G service network.
2G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 2G service network.
3G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 3G service network.
2G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 2G service network.
3G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 3G service network.
2G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 2G service network.
3G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 3G service network.
2G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 2G service network.
3G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 3G service network.

Field	Description
2G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 2G service network.
3G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 3G service network.
2G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 2G service network.
3G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 3G service network.
2G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 2G service network.
3G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 3G service network.
2G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 2G service network.
3G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 3G service network.
2G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 2G service network.
3G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 3G service network.
2G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 2G service network.
3G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 3G service network.
2G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 2G service network.
3G-Network Failure	The PDP contexts deactivated due to network failure in 3G service network.
2G-Network Failure	The PDP contexts deactivated due to network failure in 2G service network.
3G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 3G service network.
2G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 2G service network.
3G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 3G service network.
2G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 2G service network.

Field	Description
3G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 3G service network.
2G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 2G service network.
3G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 3G service network.
2G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 2G service network.
3G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 3G service network.
2G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 2G service network.
3G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 3G service network.
2G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 2G service network.
3G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 3G service network.
2G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 2G service network.
3G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 3G service network.
2G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 2G service network.
3G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 3G service network.
2G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 2G service network.
3G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 3G service network.
2G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 2G service network.
3G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 3G service network.
2G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 2G service network.
3G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 3G service network.

Field	Description
2G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 2G service network.
3G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 3G service network.
2G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 2G service network.
3G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 3G service network.
2G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 2G service network.
3G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 3G service network.
2G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 2G service network.
3G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 3G service network.
2G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 2G service network.
3G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 3G service network.
2G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 2G service network.
3G-Msg Not Comp With State	The PDP contexts deactivated due as received message was incompatible with session state in 3G service network.
2G-Msg Not Comp With State	The PDP contexts deactivated due as received message was incompatible with session state in 2G service network.
3G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 3G service network.
2G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 2G service network.
SM Status Messages	This group displays the statistics of the service manager status messages for 2G and 3G service.
Total-SM-Status-Tx	Total number of service manager status messages sent for 2G and 3G service
3G-SM-Status-Tx	Total number of service manager status messages sent for 3G service
2G-SM-Status-Tx	Total number of service manager status messages sent for 2G service

Field	Description
Total-SM-Status-Rx	Total number of service manager status messages received for 2G and 3G service
3G-SM-Status-Rx	Total number of service manager status messages received for 3G service
2G-SM-Status-Rx	Total number of service manager status messages received for 2G service
SM Status Rcvd Causes	This group displays the statistics of session manager status messages received by SGSN.
3G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 3G service network.
2G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 2G service network.
3G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 3G service network.
2G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 2G service network.
3G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 3G service network.
2G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 2G service network.
3G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 3G service network.
2G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 2G service network.
3G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 3G service network.
2G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 2G service network.
3G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 3G service network.
2G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 2G service network.
3G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 3G service network.
2G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 2G service network.
3G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 3G service network.
2G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 2G service network.
3G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 3G service network.

Field	Description
2G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 2G service network.
3G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 3G service network.
2G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 2G service network.
3G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 3G service network.
2G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 2G service network.
3G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 3G service network.
2G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 2G service network.
3G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 3G service network.
2G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 2G service network.
3G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 3G service network.
2G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 2G service network.
3G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 3G service network.
2G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 2G service network.
3G-Network Failure	The PDP contexts deactivated due to network failure in 3G service network.
2G-Network Failure	The PDP contexts deactivated due to network failure in 2G service network.
3G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 3G service network.
2G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 2G service network.
3G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 3G service network.
2G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 2G service network.

Field	Description
3G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 3G service network.
2G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 2G service network.
3G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 3G service network.
2G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 2G service network.
3G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 3G service network.
2G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 2G service network.
3G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 3G service network.
2G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 2G service network.
3G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 3G service network.
2G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 2G service network.
3G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 3G service network.
2G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 2G service network.
3G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 3G service network.
2G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 2G service network.
3G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 3G service network.
2G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 2G service network.
3G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 3G service network.
2G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 2G service network.
3G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 3G service network.

Field	Description
2G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 2G service network.
3G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 3G service network.
2G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 2G service network.
3G-Msg Type Not Comp With State	The PDP contexts deactivated as message type was not compatible with session state in 3G service network.
2G-Msg Type Not Comp With State	The PDP contexts deactivated as message type was not compatible with session state in 2G service network.
3G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 3G service network.
2G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 2G service network.
3G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 3G service network.
2G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 2G service network.
3G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 3G service network.
2G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 2G service network.
3G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 3G service network.
2G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 2G service network.
3G-Msg Not Compatible With State	The PDP contexts deactivated due as received message was incompatible with session state in 3G service network.
2G-Msg Not Compatible With State	The PDP contexts deactivated due as received message was incompatible with session state in 2G service network.
3G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 3G service network.
2G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 2G service network.
SM Status Sent Causes	This group displays the statistics of session manager status messages sent by SGSN.

Field	Description
3G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 3G service network.
2G-Barred Due to ODB	The PDP contexts deactivated due to operator determined barring in 2G service network.
3G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 3G service network.
2G-Mbms Cap Insufficient Svc	The PDP contexts deactivated due to insufficient capacity for MBMS service in 2G service network.
3G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 3G service network.
2G-Llc Or Sndcp Failure GB Mode	The PDP contexts deactivated due to failure of Logical Link Control or Sub Network Dependent Convergence Protocol (SNDTCP) on Gb interface in 2G service network.
3G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 3G service network.
2G-Insufficient Resources	The PDP contexts deactivated due to insufficient resources in 2G service network.
3G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 3G service network.
2G-Missing Or Unknown Apn	The PDP contexts deactivated due to unknown or missing APN in 2G service network.
3G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 3G service network.
2G-Unknown Pdp Add Or Pdp Type	The PDP contexts deactivated due to unknown PDP context address or PDP context type in 2G service network.
3G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 3G service network.
2G-User Auth Failed	The PDP contexts deactivated due to user authentication failure in 2G service network.
3G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 3G service network.
2G-Actv Rej By Ggsn	The PDP contexts deactivated as PDP context activation rejected by GGSN in 2G service network.
3G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 3G service network.
2G-Actv Rej Unspecified	The PDP contexts deactivated as PDP context activation rejection was not specified by network in 2G service network.
3G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 3G service network.
2G-Svc Option Not Supported	The PDP contexts deactivated as service option was not supported in 2G service network.

Field	Description
3G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 3G service network.
2G-Req Svc Option Not Subscribed	The PDP contexts deactivated as requested service option was not subscribed by respective subscriber in 2G service network.
3G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 3G service network.
2G-Svc Option Tmp Out Of Order	The PDP contexts deactivated as requested service option was temporarily out of order or not available in 2G service network.
3G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 3G service network.
2G-Nsapi Already Used	The PDP contexts deactivated as requested Network Service Access Point Identifier (NSAPI) was already used in 2G service network.
3G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 3G service network.
2G-Regular Deactv	The PDP contexts deactivated due to periodic deactivation in 2G service network.
3G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 3G service network.
2G-Qos Not Accepted	The PDP contexts deactivated as requested QoS for session was not accepted by system in 2G service network.
3G-Network Failure	The PDP contexts deactivated due to network failure in 3G service network.
2G-Network Failure	The PDP contexts deactivated due to network failure in 2G service network.
3G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 3G service network.
2G-Reactv Required	The PDP contexts deactivated as reactivation was required for PDP context in 2G service network.
3G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 3G service network.
2G-Feature Not Supported	The PDP contexts deactivated as requested feature was not supported in 2G service network.
3G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 3G service network.
2G-Sem Error In The Tft Op	The PDP contexts deactivated due to semantic error in traffic flow template options in 2G service network.
3G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 3G service network.

Field	Description
2G-Synt Error In The Tft Op	The PDP contexts deactivated due to syntax error in traffic flow template options in 2G service network.
3G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 3G service network.
2G-Unknown Ctx	The PDP contexts deactivated due to unknown PDP context in 2G service network.
3G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 3G service network.
2G-Ctx No-Tft Already Activated	The PDP contexts deactivated as no PDP context was available for activated TFT in 2G service network.
3G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 3G service network.
2G-M-Cast Grp Membership Time Out	The PDP contexts deactivated due to timeout in multicast group membership for particular subscriber in 2G service network.
3G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 3G service network.
2G-Sem Errors In Pkt Filter	The PDP contexts deactivated due to semantic error in packet filter in 2G service network.
3G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 3G service network.
2G-Synt Errors In Pkt Filter	The PDP contexts deactivated due to syntax error in packet filter in 2G service network.
3G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 3G service network.
2G-Invalid Transaction Id Val	The PDP contexts deactivated due to invalid transaction id value in message in 2G service network.
3G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 3G service network.
2G-Sem Incorrect Msg	The PDP contexts deactivated due to semantically incorrect message in 2G service network.
3G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 3G service network.
2G-Invalid Mandatory Info	The PDP contexts deactivated due to invalid information in mandatory field of message in 2G service network.
3G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 3G service network.
2G-Msg Non Existent	The PDP contexts deactivated due to non-existent type of message received in 2G service network.

Field	Description
3G-Msg Type Not Comp With State	The PDP contexts deactivated as message type was not compatible with session state in 3G service network.
2G-Msg Type Not Comp With State	The PDP contexts deactivated as message type was not compatible with session state in 2G service network.
3G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 3G service network.
2G-Ie Non Existent	The PDP contexts deactivated due to non-existent type of information element received in 2G service network.
3G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 3G service network.
2G-Conditional Ie Error	The PDP contexts deactivated due to error in conditional information element received in 2G service network.
3G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 3G service network.
2G-Proto Err Unspecified	The PDP contexts deactivated due to unspecified protocol error in message received in 2G service network.
3G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 3G service network.
2G-Apn Restr val Incomp With Ctx	The PDP contexts deactivated due as APN restore value was incompatible with PDP context in 2G service network.
3G-Msg Not Compatible With State	The PDP contexts deactivated due as received message was incompatible with session state in 3G service network.
2G-Msg Not Compatible With State	The PDP contexts deactivated due as received message was incompatible with session state in 2G service network.
3G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 3G service network.
2G-Recovery On Timer Expiry	The PDP contexts deactivated due recovery of context started after expiry of deactivation timer 2G service network.
RNC Initiated RAB Messages	Indicates the statistics of the radio network controller (RNC) initiated radio access bearer (RAB) messages for 2G and 3G service.
Total Rab Mod Requested	Total number of requests for radio access bearer modification initiated by radio network controller.
Num Rab Mod	Total number of RAB modified on requests for modification initiated by radio network controller.
Total Rab Rel Requested	Total number of requests for radio access bearer release initiated by radio network controller.

Field	Description
Num Rab Rel	Total number of RAB modified on requests for release initiated by radio network controller.
SGSN Initiated RAB Messages	Indicates the statistics of the SGSN initiated radio access bearer (RAB) messages for 2G and 3G service.
Total Rab Assign Requested	Total number of SGSN initiated RAB assign requests messages received.
Total Rab Assign Rsp Rcvd	Total number of SGSN initiated RAB assign response messages received.
Rab Setup/Mod Attempted	Total number of SGSN initiated setup and modification attempted for RAB.
Rab Setup/Mod Accepted	Total number of SGSN initiated setup and modification accepted for RAB.
Rab Setup/Mod Timer Expired	Total number of SGSN initiated RAB setup and modification events where procedure timer exhausted.
Rab Setup/Mod Failed	Total number of SGSN initiated RAB setup and modification events failed.
Rab Rel Attempted	Total number of SGSN initiated RAB release procedure attempted.
Rab Rel Accepted	Total number of SGSN initiated RAB release procedure accepted.
Rab Rel Timer Expired	Total number of SGSN initiated RAB release procedure where procedure timer exhausted.
Rab Rel Failed	Total number of SGSN initiated RAB release procedure failed.
Rab Queued	Total number of SGSN initiated RAB messages in queue.
Rab Setup Reattempted (Diff IP)	Total number of SGSN initiated RAB setup reattempted with different IP address.
Total Set/Mod/Rel Rab Rejected	Total number of SGSN initiated RAB setup, modification/release rejected.
RAB Release Reason	This group indicates the statistics of reasons for RAB release.
Pre-Empted RAB Release	Total number of RABs released because SGSN preempted another RAB.
Rab Rel Due to UTRAN	Total number of RAB released due to UTRAN.
UE Radio Connection Lost	Total number of RAB released due to radio connection lost from UE.
Rab Rel Due to Other Reason	Total number of RAB released due to reasons other than listed in this table.
RAB Assignment Denied	This group indicates the statistics of reasons for RAB assignment denial.
Rab Pre Empted	Total number of RAB assignment denied because SGSN preempted another RAB.
Trelocoverall Expiry	Total number of RAB assignment denied because Overall Relocation timer expired.
Trelocprep Expiry	Total number of RAB assignment denied because Relocation Preparation timer expired.
Treloccomplete Expiry	Total number of RAB assignment denied because Relocation Completed timer expired.
Tqueuing Expiry	Total number of RAB assignment denied because Queuing timer expired.

Field	Description
Relocation Triggered	Total number of RAB assignment denied because another relocation procedure triggered.
Unable Establish During Reloc	Total number of RAB assignment denied because RAB failed to establish during relocation as it cannot be supported in the target RNC.
Unknown Target Rnc	Total number of RAB assignment denied because the target RNC is not known to the CN.
Relocation Cancelled	Total number of RAB assignment denied because relocation procedure was cancelled by the UTRAN or the UE.
Successful Relocation	Total number of RAB assignment denied because relocation was completed successfully.
Req Cipher Algo Not Supported	Total number of RAB assignment denied because the UTRAN or the UE is unable to support the requested ciphering and/or integrity protection algorithms.
Conflict Cipher Info	Total number of RAB assignment denied because there was conflict in ciphering information.
Failure In The Radio I/F Proc	Total number of RAB assignment denied because radio interface procedure has failed.
Rel Due To Utran Reason	Total number of RAB assignment denied as RAB release is initiated due to UTRAN generated reason.
User Inactivity	Total number of RAB assignment denied due to user inactivity.
Time Critical Relocation	Total number of RAB assignment denied because relocation is requested for time critical reason.
Req Traffic Class Unavail	Total number of RAB assignment denied because requested traffic class was not available for subscriber or in the RAN.
Invalid Rab Parameters Val	Total number of RAB assignment denied due to invalid value in RAB parameters.
Req Max Bit Rate Unavail	Total number of RAB assignment denied because requested Maximum Bit Rate was not available for downlink or uplink in RAN.
Req Max Bit Rate DL Unavail	Total number of RAB assignment denied because requested Maximum Bit Rate was not available for downlink in RAN.
Req Max Bit Rate For UL Unavail	Total number of RAB assignment denied because requested Maximum Bit Rate was not available for uplink in RAN.
Req G-Bit Rate Unavail	Total number of RAB assignment denied because requested Guaranteed Bit Rate was not available for downlink or uplink in RAN.
Req DL G-Bit Rate Unavail	Total number of RAB assignment denied because requested Guaranteed Bit Rate was not available for downlink in RAN.
Req UL G-Bit Rate Unavail	Total number of RAB assignment denied because requested Guaranteed Bit Rate was not available for uplink in RAN.

Field	Description
Req Trans Delay Not Achievable	Total number of RAB assignment denied because requested transfer delay is not achievable.
Invalid Rab Param Combo	Total number of RAB assignment denied due to invalid RAB parameters combination.
Violation For Sdu Parameters	Total number of RAB assignment denied due to condition violation for SDU parameters.
Violation Traffic Hndl Prio	Total number of RAB assignment denied due to condition violation for traffic handling priority.
Violation For G-Bit Rate	Total number of RAB assignment denied due to condition violation for guaranteed bit rate.
User Plane Ver Unsupported	Total number of RAB assignment denied because requested user plane versions were not supported.
Iu Up Failure	Total number of RAB assignment denied due to failure in Iu user plane.
Trelocalloc Expiry	Total number of RAB assignment denied because Relocation Resource Allocation procedure failed due to expiry of the timer TRELOCALLOC.
Relocation Failure In T-System	Total number of RAB assignment denied because relocation failed due to a failure in target CN/RNC or target system.
Invalid Rab Id	Total number of RAB assignment denied because the RAB ID is unknown in the RNC.
No Remaining Rab	Total number of RAB assignment denied because no RAB is available.
Interaction With Other Proc	Total number of RAB assignment denied because relocation was cancelled due to interaction with other procedure.
Repeated Integrity Check Fail	Total number of RAB assignment denied due to repeated failure in integrity checking.
Req Type Not Supported	Total number of RAB assignment denied because the RNC is not supporting the requested location report type.
Req Superseded	Total number of RAB assignment denied because there was a second request on the same RAB.
Ue Gen Sig Con Rel	Total number of RAB assignment denied due to due to UE generated signalling connection release
Resource Optimisation Reloc	Total number of RAB assignment denied because relocation was requested due to resource optimisation.
Req Info Unavail	Total number of RAB assignment denied because requested information is not available.
Relocation Due to Radio Reason	Total number of RAB assignment denied because relocation was requested due to radio reason.

Field	Description
Reloc Unsupported In T-Rnc	Total number of RAB assignment denied due to relocation failure as relocation was not supported in target RNC or target system.
Directed Retry	Total number of RAB assignment denied because retry was directed from RNC.
Radio Con With Ue Lost	Total number of RAB assignment denied because radio connection was lost with UE.
Rnc Unable Establish All Rfcs	Total number of RAB assignment denied because RNC couldn't establish all RAB subflow combinations indicated within the RAB Parameters IE.
Deciphering Keys Unavail	Total number of RAB assignment denied because RNC is not able to provide requested deciphering keys.
Dedicated Assist Data Unavail	Total number of RAB assignment denied because RNC is not able to successfully deliver the requested dedicated assistance data to the UE.
Reloc Target Not Allowed	Total number of RAB assignment denied because relocation to the indicated target cell is not allowed for the UE in question.
Location Reporting Congestion	Total number of RAB assignment denied as congestion status reported location report.
Reduce Load In Serving Cell	Total number of RAB assignment denied because system was reducing load in service cell.
No Radio Resources In T-Cell	Total number of RAB assignment denied because radio resource was not available in target cell.
Geran Iu Mode Failure	Total number of RAB assignment denied because the GERAN cannot provide an appropriate RAB due to limited capabilities within GERAN.
Acc Rstrd Due To Shared N/w	Total number of RAB assignment denied because access to target system restricted due to shared networks.
Reloc Unsupported Due Puesbin	Total number of RAB assignment denied as the incoming relocation cannot be accepted by the target RNC because of the Provision of UE Specific Behavior Information to Network Entities (PUESBINE) feature.
Traffic T-Cell > S-Cell	Total number of RAB assignment denied because the target cell's traffic load is higher than that in the source cell.
Mbms No Multicast Svc For Ue	Total number of RAB assignment denied because the UE does not have any active multicast service.
Mbms Unknown Ue Id	Total number of RAB assignment denied because the CN does not know the UE or unknown UE identifier.
Mbms Sess Start No Data	Total number of RAB assignment denied because the MBMS Session Start procedure was successfully performed, but the RNC does not have any interested UE.
Mbms Superseded Due To Nnsf	Total number of RAB assignment denied as the MBMS Session Start procedure was rejected because NAS Node Selection Function (NNSF) towards another CN node.

Field	Description
Mbms Ue Linking Already Done	Total number of RAB assignment denied because the UE has already been linked to the given Multicast service
Mbms Ue De Linking Failure	Total number of RAB assignment denied because the UE had not been linked to the given Multicast service.
Tmgi Unknown	Total number of RAB assignment denied due to requested MBMS action failure because of the indicated Temporary Mobile Group Identity (TMGI) is unknown.
MS Unspecified Failure	Total number of RAB assignment denied due to unspecified failures from UE side.
SRNS Context Transfer Messages	Indicates the statistics of SGSN radio network subsystem context transfer messages.
SRNS Context Req Send	Total number of SGSN radio network subsystem context transfer request messages sent.
SRNS Context Rsp Rcvd	Total number of SGSN radio network subsystem context transfer response messages received.
SRNS Context Req Timer Expired	Total number of events when timer exhausted for SGSN radio network subsystem context transfer request messages.
Total PDP-Ctxt Accepted	Total number of PDP context accepted for SGSN radio network subsystem.
Total PDP-Ctxt Rejected	Total number of PDP context rejected for SGSN radio network subsystem.
SRNS Data Fwd Cmd Send	Total number of SGSN radio network subsystem data forward commands sent.
SRNS Ctxt Req Denied	This group indicates the statistics of reasons for SRNS context request denial.
Rab Pre Empted	Total number of SRNS context request denied because SGSN preempted another RAB.
Trelocoverall Expiry	Total number of SRNS context request denied because Overall Relocation timer expired.
Trelocprep Expiry	Total number of SRNS context request denied because Relocation Preparation timer expired.
Treloccomplete Expiry	Total number of SRNS context request denied because Relocation Completed timer expired.
Tqueuing Expiry	Total number of SRNS context request denied because Queuing timer expired.
Relocation Triggered	Total number of SRNS context request denied because another relocation procedure triggered.
Unable Establish During Reloc	Total number of SRNS context request denied because RAB failed to establish during relocation as it cannot be supported in the target RNC.
Unknown Target Rnc	Total number of SRNS context request denied because the target RNC is not known to the CN.

Field	Description
Relocation Cancelled	Total number of SRNS context request denied because relocation procedure was cancelled by the UTRAN or the UE.
Successful Relocation	Total number of SRNS context request denied because relocation was completed successfully.
Req Cipher Algo Not Supported	Total number of SRNS context request denied because the UTRAN or the UE is unable to support the requested ciphering and/or integrity protection algorithms.
Conflict Cipher Info	Total number of SRNS context request denied because there was conflict in ciphering information.
Failure In The Radio I/F Proc	Total number of SRNS context request denied because radio interface procedure has failed.
Rel Due To Utran Reason	Total number of SRNS context request denied as RAB release is initiated due to UTRAN generated reason.
User Inactivity	Total number of SRNS context request denied due to user inactivity.
Time Critical Relocation	Total number of SRNS context request denied because relocation is requested for time critical reason.
Req Traffic Class Unavail	Total number of SRNS context request denied because requested traffic class was not available for subscriber or in the RAN.
Invalid Rab Parameters Val	Total number of SRNS context request denied due to invalid value in RAB parameters.
Req Max Bit Rate Unavail	Total number of SRNS context request denied because requested Maximum Bit Rate was not available for downlink or uplink in RAN.
Req Max Bit Rate DL Unavail	Total number of SRNS context request denied because requested Maximum Bit Rate was not available for downlink in RAN.
Req Max Bit Rate For UL Unavail	Total number of SRNS context request denied because requested Maximum Bit Rate was not available for uplink in RAN.
Req G-Bit Rate Unavail	Total number of SRNS context request denied because requested Guaranteed Bit Rate was not available for downlink or uplink in RAN.
Req DL G-Bit Rate Unavail	Total number of SRNS context request denied because requested Guaranteed Bit Rate was not available for downlink in RAN.
Req UL G-Bit Rate Unavail	Total number of SRNS context request denied because requested Guaranteed Bit Rate was not available for uplink in RAN.
Req Trans Delay Not Achievable	Total number of SRNS context request denied because requested transfer delay is not achievable.
Invalid Rab Param Combo	Total number of SRNS context request denied due to invalid RAB parameters combination.

Field	Description
Violation For Sdu Parameters	Total number of SRNS context request denied due to condition violation for SDU parameters.
Violation Traffic Hndl Prio	Total number of SRNS context request denied due to condition violation for traffic handling priority.
Violation For G-Bit Rate	Total number of SRNS context request denied due to condition violation for guaranteed bit rate.
User Plane Ver Unsupported	Total number of SRNS context request denied because requested user plane versions were not supported.
Iu Up Failure	Total number of SRNS context request denied due to failure in Iu user plane.
Trelocalloc Expiry	Total number of SRNS context request denied because Relocation Resource Allocation procedure failed due to expiry of the timer TRELOCALLOC.
Relocation Failure In T-System	Total number of SRNS context request denied because relocation failed due to a failure in target CN/RNC or target system.
Invalid Rab Id	Total number of SRNS context request denied because the RAB ID is unknown in the RNC.
No Remaining Rab	Total number of SRNS context request denied because no RAB is available.
Interaction With Other Proc	Total number of SRNS context request denied because relocation was cancelled due to interaction with other procedure.
Repeated Integrity Check Fail	Total number of SRNS context request denied due to repeated failure in integrity checking.
Req Type Not Supported	Total number of SRNS context request denied because the RNC is not supporting the requested location report type.
Req Superseded	Total number of SRNS context request denied because there was a second request on the same RAB.
Ue Gen Sig Con Rel	Total number of SRNS context request denied due to UE generated signalling connection release
Resource Optimisation Reloc	Total number of SRNS context request denied because relocation was requested due to resource optimisation.
Req Info Unavail	Total number of SRNS context request denied because requested information is not available.
Relocation Due to Radio Reason	Total number of SRNS context request denied because relocation was requested due to radio reason.
Reloc Unsupported In T-Rnc	Total number of SRNS context request denied due to relocation failure as relocation was not supported in target RNC or target system.
Directed Retry	Total number of SRNS context request denied because retry was directed from RNC.

Field	Description
Radio Con With Ue Lost	Total number of SRNS context request denied because radio connection was lost with UE.
Rnc Unable Establish All Rfcs	Total number of SRNS context request denied because RNC couldn't establish all RAB subflow combinations indicated within the RAB Parameters IE.
Deciphering Keys Unavail	Total number of SRNS context request denied because RNC is not able to provide requested deciphering keys.
Dedicated Assist Data Unavail	Total number of SRNS context request denied because RNC is not able to successfully deliver the requested dedicated assistance data to the UE.
Reloc Target Not Allowed	Total number of SRNS context request denied because relocation to the indicated target cell is not allowed for the UE in question.
Location Reporting Congestion	Total number of SRNS context request denied as congestion status reported location report.
Reduce Load In Serving Cell	Total number of SRNS context request denied because system was reducing load in service cell.
No Radio Resources In T-Cell	Total number of SRNS context request denied because radio resource was not available in target cell.
Geran Iu Mode Failure	Total number of SRNS context request denied because the GERAN cannot provide an appropriate RAB due to limited capabilities within GERAN.
Acc Rstrd Due To Shared N/w	Total number of SRNS context request denied because access to target system restricted due to shared networks.
Reloc Unsuported Due Puesbin	Total number of SRNS context request denied as the incoming relocation cannot be accepted by the target RNC because of the Provision of UE Specific Behavior Information to Network Entities (PUESBINE) feature.
Traffic T-Cell > S-Cell	Total number of SRNS context request denied because the target cell's traffic load is higher than that in the source cell.
Mbms No Multicast Svc For Ue	Total number of SRNS context request denied because the UE does not have any active multicast service.
Mbms Unknown Ue Id	Total number of SRNS context request denied because the CN does not know the UE or unknown UE identifier.
Mbms Sess Start No Data	Total number of SRNS context request denied because the MBMS Session Start procedure was successfully performed, but the RNC does not have any interested UE.
Mbms Superseded Due To Nnsf	Total number of SRNS context request denied as the MBMS Session Start procedure was rejected because NAS Node Selection Function (NNSF) towards another CN node.
Mbms Ue Linking Already Done	Total number of SRNS context request denied because the UE has already been linked to the given Multicast service

Field	Description
Mbms Ue De Linking Failure	Total number of SRNS context request denied because the UE had not been linked to the given Multicast service.
Tmgi Unknown	Total number of SRNS context request denied due to requested MBMS action failure because of the indicated Temporary Mobile Group Identity (TMGI) is unknown.
MS Unspecified Failure	Total number of SRNS context request denied due to unspecified failures from UE side.
No Response From RNC	Total number of SRNS context request denied due no response from RNC.
Miscellaneous Statistics	This group displays the miscellaneous statistics.
Rnc Overload Statistics	This subgroup displays the RNC overload statistics.
Activate Request Rejected	Indicates the total number of PDP context activation requests rejected due to RNC overload.
Activation dropped during hand-off	Indicates the total number of PDP context activation dropped during handoff due to RNC overload.
Ms-Modify-Request Rejected	Indicates the total number of PDP context modify requests from MS rejected due to RNC overload.
N/W-Modify-Request Dropped	Indicates the total number of PDP context modify requests from network side dropped due to RNC overload.
Paging Req (Data) Dropped	Indicates the total number of paging requests from network side dropped due to RNC overload.
2G APN Selection Failure Statistics	
SDL-1	
All Packet Services Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - "All Packet Switched Services Barred" setting is present in the Subscription information for the subscriber.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
PDP Type not Present, PDP Address Present	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - Activate PDP Context Request has PDP Address without PDP Type.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
PDP Type not Present, APN Present	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - Activate PDP Context Request has APN without PDP Type.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>

Field	Description
PDP Type, Address and APN not Present, No Single SubRec	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - PDP Type, PDP Address, APN are not present in Activate PDP Context Request and multiple PDP Subscription Records are present for the subscriber.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
SDL-2	
No SubRec matching PDP Type	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - No PDP Subscription Records matching PDP Type from Activate PDP Context Request.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
No SubRec matching PDP Type and APN, No Wildcard APN	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - No PDP Subscription Record matching PDP Type and APN from Activate PDP Context Request. Also, the subscriber does not have any PDP Subscription record with wildcard APN.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Multiple SubRecs matching PDP Type and APN, No Dynamic Address	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - Multiple PDP Subscription Records exist matching the PDP Type and APN from Activate PDP Context Request, but without dynamic PDP address.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Multiple SubRecs matching PDP Type and APN, with Dynamic Address	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - Multiple PDP Subscription Records exist matching the PDP Type and APN from Activate PDP Context Request, but all with dynamic PDP address.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
SDL-3	
APN not Present	

Field	Description
No Wildcard APN, Multiple SubRecs matching PDP Type	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN not present in Activate PDP Context Request</li> <li>• No PDP Subscription record with wildcard APN and Multiple PDP Subscription Records exist matching the PDP Type</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Multiple SubRecs with Wildcard APN and same PDP Type	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN not present in Activate PDP Context Request</li> <li>• Multiple PDP Subscription Records with wildcard APN exist matching the PDP Type</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
PDP Address Present	
No SubRec matching PDP Address	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• PDP Address present in Activate PDP Context Request</li> <li>• No PDP Subscription record exist matching the PDP Type and PDP Address</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Single SubRec matching PDP Address, No APN Match	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• PDP Address present in Activate PDP Context Request</li> <li>• Single PDP Subscription record exist matching the PDP Type and PDP Address, but APN does not match</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>

Field	Description
Multiple SubRecs matching PDP Address, APN not requested	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• PDP Address present in Activate PDP Context Request</li> <li>• Multiple PDP Subscription record exist matching the PDP Type and PDP Address, but APN not present in Activate PDP Context Request</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Multiple SubRecs matching PDP Address, No APN Match	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• PDP Address present in Activate PDP Context Request</li> <li>• Multiple PDP Subscription record exist matching the PDP Type and PDP Address, but APN does not match</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
SDL-4	
APN sent by MS	
VPLMN User, APN-OI not HPLMN, not VPLMN	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI is neither matching HPLMN nor VPLMN</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
VPLMN User, APN-OI is VPLMN, VPLMN Addr not allowed	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI matches VPLMN, but VPLMN Address is not allowed</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>

Field	Description
VPLMN User, APN-OI is VPLMN, VPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI matches VPLMN, but VPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
VPLMN User, APN-OI is HPLMN, HPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI matches HPLMN, but HPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
VPLMN User, No APN-OI, VPLMN Addr not allowed, HPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI is not present</li> <li>• VPLMN Address is not allowed</li> <li>• HPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
VPLMN User, No APN-OI, VPLMN AP Barred, HPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in VPLMN</li> <li>• Requested APN-OI is not present</li> <li>• VPLMN Access Point Access is barred</li> <li>• HPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>

Field	Description
HPLMN user, APN-OI not HPLMN	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN present in Activate PDP Context Request</li> <li>• Subscriber is in HPLMN</li> <li>• Requested APN-OI doesn't match HPLMN</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
APN from Single Context	
VPLMN Addr not allowed, HPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN selected from Single PDP Subscription Record</li> <li>• VPLMN Address not allowed</li> <li>• HPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
VPLMN AP Barred, HPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• APN selected from Single PDP Subscription Record</li> <li>• VPLMN Access Point Access is barred</li> <li>• HPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
SDL-5:	
VPLMN User, VPLMN Addr not allowed	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• Default APN chosen by SGSN</li> <li>• Subscriber in VPLMN and</li> <li>• VPLMN Address not allowed</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>

Field	Description
VPLMN User, VPLMN AP Barred	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reasons:</p> <ul style="list-style-type: none"> <li>• Default APN chosen by SGSN</li> <li>• Subscriber in VPLMN</li> <li>• VPLMN Access Point Access is barred</li> </ul> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
No Default APN for PDP Type	<p><b>Description:</b> Total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - No Default APN configured for the PDP Type.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Internal APN Selection Failures:	
Wildcard APN with Static Address	<p><b>Description:</b> This proprietary counter indicates the total number of 2G Activate Reject(s) sent to MS for the following APN Selection Failure reason - Subscription PDP Record with wildcard APN has static PDP address.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
Unknown PDP Type in Subscribed Record	<p><b>Description:</b> This proprietary counter indicates the total number of 2G Activate Reject(s) sent to MS for the APN Selection Failure reason - matching Subscription PDP Record has unknown PDP Type.</p> <p><b>Triggers:</b> Increments when Activate PDP Reject is sent due to this reason.</p> <p><b>Availability:</b> per Chassis</p>
GPRS SM Dropped Statistics	This group displays the statistics related to GPRS session manager packets dropped.
2G-Deactiv-Accept	Total number of Deactivate Accept messages received by GPRS session manager on SGSN for 2G service.
2G-Other-SM-Msg	Total number of messages received by GPRS session manager on SGSN for 2G services from other session manager.
GPRS PDP FSM Statistics	This group displays the statistics related to GPRS finite state machine states for Primary PDP Context procedures.
Pri Actv Req Rcvd	Total number of Primary PDP Context Activate Request messages received by GPRS session manager on SGSN for GPRS service.
Pri Actv Acc Sent	Total number of Primary PDP Context Activate Request Accept messages sent by GPRS session manager on SGSN for GPRS service.

Field	Description
Pri Actv Rej Sent	Total number of Primary PDP Context Activate Request Reject messages sent by GPRS session manager on SGSN for GPRS service.
Sec Actv Req Rcvd	Total number of Secondary PDP Context Activate Request messages received by GPRS session manager on SGSN for GPRS service.
Sec Actv Acc Sent	Total number of Secondary PDP Context Activate Request Accept messages sent by GPRS session manager on SGSN for GPRS service.
Sec Actv Rej Sent	Total number of Secondary PDP Context Activate Request Reject messages sent by GPRS session manager on SGSN for GPRS service.
Modify Req Rcvd	Total number of PDP Context Modify Request messages received by GPRS session manager on SGSN for GPRS service.
Modify Acc Sent	Total number of PDP Context Modify Request Accept messages sent by GPRS session manager on SGSN for GPRS service.
Modify Rej Sent	Total number of PDP Context Modify Request Reject messages sent by GPRS session manager on SGSN for GPRS service.
Modify Req Sent	Total number of PDP Context Modify Request messages sent by GPRS session manager on SGSN for GPRS service.
Modify Acc Rcvd	Total number of PDP Context Modify Request Accept messages received by GPRS session manager on SGSN for GPRS service.
Deactv Req Rcvd	Total number of PDP Context Deactivate Request messages received by GPRS session manager on SGSN for GPRS service.
Deactv Acc Sent	Total number of PDP Context Deactivate Request Accept messages sent by GPRS session manager on SGSN for GPRS service.
Deactv Req Sent	Total number of PDP Context Deactivate Request messages sent by GPRS session manager on SGSN for GPRS service.
Deactv Acc Rcvd	Total number of PDP Context Deactivate Request messages received by GPRS session manager on SGSN for GPRS service.
SM Status Sent	Total number of messages with GPRS session manager status on SGSN for GPRS service sent by SGSN.
SM Status Rcvd	Total number of messages with GPRS session manager status on SGSN for GPRS service received by SGSN.
3G-Req Rej BCM Violation	Indicates the transmission or receipt of a Modification PDP Context Reject with a Request Rejected, Bearer Control Mode (BCM) Violation Cause code on the S4-SGSN.
2G-Req Rej BCM Violation	Indicates the transmission or receipt of a Modification PDP Context Reject with a Request Rejected, Bearer Control Mode (BCM) Violation Cause code on the S4-SGSN.
No suitable cell in Location Area	This counter is added for the re-direction message, it displays the presenc or absence of suitable cells in the Location Area.

Field	Description
XID Resp Failure	This counter keeps track of the number of attach failures due to the XID response failure for the XID's initiated from SGSN to negotiate IOV-UI value after successful authentication procedure (only if the Random IOV-UI procedure is enabled). Separate counters are added to count the XID failures during simple attach and combined attach procedures.
Paging Statistics	
Total-CRA-Page-Req-Same-RAT	This counter keeps track of total common RA page requests.
3G-PS-CRA-Page-Req-in-2G	This counter keeps track of common RA RANAP page requests for a 3G subscriber.
Total-CRA-Page-Ret-Same-RAT	This counter keeps track of total common RA page re-transmission requests .
3G-PS-CRA-Page-Ret-Req-in-2G	This counter keeps track of total common RA RANAP page retransmission requests for a 3G subscriber.
Total-CRA-Page-Req-Other-RAT	This counter keeps track of total common RA page requests.
3G-PS-CRA-Page-Req	This counter keeps track of total common RA BSSGP page for a 3G subscriber.
Total-CRA-Page-Ret-Other-RAT	This counter keeps track of total common RA page re-transmission requests
3G-PS-CRA-Page-Ret-Req	This counter keeps track of total common RA page re-transmission requests for a 3G subscriber.
Total-CRA-Page-Rsp-Same-RAT	This counter keeps track of total common RA page responses.
3G-PS-CRA-Page-Rsp	This counter keeps track of total common RA page response for a 3G subscriber.
Total-CRA-Page-Rsp-Other-RAT	This counter keeps track of total common RA page responses.
3G-PS-CRA-Attach-from-2G	This counter keeps track of total common RA attach requests for 3G subscriber.
3G-PS-CRA-RAU-from-2G	This counter keeps track of total common RA RAU requests for 3G subscriber.
3G-PS-CRA-Power-Off-from-2G	This counter keeps track of total common RA Power of requests for 3G subscriber.
Total-CRA-Page-TO-Other-RAT	This counter keeps track of total common RA page requests to other RAT.
3G-PS-CRA-Timeout-in-2G	This counter keeps track of total common RA time outs for a 3G subscriber.
Total-CRA-Page-Stop	This counter keeps track of total common RA stop ongoing page requests for subscribers.
3G-PS-CRA-Page-Stop	This counter keeps track of total common RA stop ongoing page requests for 3G subscribers.
2G-PS-CRA-Page-in-3G	This counter keeps track of common RA BSSGP page requests for a 2G subscriber.
2G-PS-CRA-Page-Ret-Req-in-3G	This counter keeps track of total common RA page re-transmission requests for a 2G subscriber.
2G-PS-CRA-Page-Req	This counter keeps track of common RA BSSGP page requests for a 2G subscriber.

Field	Description
2G-PS-CRA-Page-Rsp	This counter keeps track of total common RA page response for a 2G subscriber.
2G-PS-CRA-Attach-from-3G	This counter keeps track of total common RA attach requests for 2G subscriber.
2G-PS-CRA-RAU-from-3G	This counter keeps track of total common RA RAU requests for 2G subscriber.
2G-PS-CRA-Power-Off-from-3G	This counter keeps track of total common RA Power of requests for 2G subscriber.
2G-PS-CRA-Timeout-in-3G	This counter keeps track of total common RA time outs for a 2G subscriber.
2G-PS-CRA-Page-Stop	This counter keeps track of total common RA stop ongoing page requests for 2G subscribers.
Non Paging Statistics	
3G-CRA-Attach	This counter keeps track of common RA Attach requests for 3G subscribers.
3G-CRA-RAU	This counter keeps track of common RA RAU requests for 3G subscribers.
3G-CRA-Power-Off	This counter keeps track of common RA Power-Off requests for 3G subscribers.
2G-CRA-Attach	This counter keeps track of common RA Attach requests for 2G subscribers.
2G-CRA-RAU	This counter keeps track of common RA RAU requests for 2G subscribers.
2G-CRA-Power-Off	This counter keeps track of common RA Power-Off requests for 2G subscribers.
3G Page Throttling Statistics	
PS-Page-Req sent by RLF	Number of PS Paging Request sent by RLF
Ret-PS-Page-Req sent by RLF	Number of PS Paging Request Retries sent by RLF
PS-Page-Req dropped by RLF	Number of PS Paging Request dropped by RLF
Ret-PS-Page-Req dropped by RLF	Number of PS Paging Request Retries dropped by RLF
PS-Page-Req dropped due to no memory	Number of PS Paging Request dropped due to insufficient memory
2G Page Throttling statistics	
Paging Request sent out by RLF	Number of Total PS Paging Request sent by RLF
Total-Page-Req sent	Total number of Paging requests sent.
Ret-Total-Page-Req sent	Number of Total PS Paging Request Retries sent by RLF
Page-Requests-LA	Number of PS Paging Request at LA level sent by RLF
Ret-Page-Requests-LA	Number of PS Paging Request Retries at LA level sent by RLF
Page-Requests-RA	Number of PS Paging Request at RA level sent by RLF
Ret-Page-Requests-RA	Number of PS Paging Request Retries at RA level sent by RLF

Field	Description
Page-Requests-BSS	Number of PS Paging Request at BSS level sent by RLF
Ret-Page-Requests-BSS	Number of PS Paging Request Retries at BSS level sent by RLF
Page-Requests-Cell	Number of PS Paging Request at Cell level sent by RLF
Ret-Page-Requests-Cell	Number of PS Paging Request Retries at Cell level sent by RLF
Paging Request dropped by RLF	Number of Total PS Paging Request dropped by RLF
Total-Page-Req dropped	Total number of Paging requests dropped.
Ret-Total-Page-Req dropped	Number of Total PS Paging Request Retries dropped by RLF
Page-Requests-LA	Number of PS Paging Request at LA level dropped by RLF
Ret-Page-Requests-LA	Number of PS Paging Request Retries at LA level dropped by RLF
Page-Requests-RA	Number of PS Paging Request at RA level dropped by RLF
Ret-Page-Requests-RA	Number of PS Paging Request Retries at RA level dropped by RLF
Page-Requests-BSS	Number of PS Paging Request at BSS level dropped by RLF
Ret-Page-Requests-BSS	Number of PS Paging Request Retries at BSS level dropped by RLF
Page-Requests-Cell	Number of PS Paging Request at Cell level dropped by RLF
Ret-Page-Requests-Cell	Number of PS Paging Request Retries at Cell level dropped by RLF
PS-Page-Req dropped due to no memory	Number of PS Paging Request dropped due to insufficient memory
Attach Reqs (with LAPI)	Number of 2G Attach Requests received with LAPI
Attach Reqs(without LAPI)	Number of 2G Attach Requests received without LAPI
Attach Cong Rej(LAPI)	Number of 2G Attach Requests with LAPI rejected due to congestion
Attach Cong Rej(non LAPI)	Number of 2G Attach Requests without LAPI rejected due to congestion
Attach APN Cong Reject	Number of 2G Attach Requests rejected due to apn level congestion
RAU Reqs(with LAPI)	Number of 2G RAU Requests received with LAPI
RAU Reqs(without LAPI)	Number of 2G RAU Requests received without LAPI
RAU reject Cong LAPI	Number of 2G ISRAU Requests with LAPI rejected due to congestion
RAU reject Cong non-LAPI	Number of 2G ISRAU Requests without LAPI rejected due to congestion
RAU reject APN based Cong	Number of 2G ISRAU Requests rejected due to apn congestion
Dropped due to congestion	Number of 2G Intra RAU Requests dropped due to congestion

Field	Description
With LAPI	Number of 2G Intra RAU Requests with lapi dropped due to congestion
Without LAPI	Number of 2G Intra RAU Requests without lapi dropped due to congestion
RAU reject Cong LAPI	Number of 2G Intra RAU Requests with lapi rejected due to congestion
RAU reject Cong non-LAPI	Number of 2G Intra RAU Requests without lapi rejected due to congestion
Inter RAT Congestion Reject	Number of Inter RAT RAU Requests rejected due to congestion
Congestion rej with LAPI	Number of Inter RAT RAU Requests with LAPI rejected due to congestion
Congestion rej without LAPI	Number of Inter RAT RAU requests without LAPI rejected due to congestion
Inter GPRS Srv Rau Cong Rej	Number of Inter GPRS Service RAU Request rejected due to congestion
Congestion rej with LAPI	Number of Inter GPRS Service RAU Request with LAPI rejected due to congestion
Congestion rej without LAPI	Number of Inter GPRS Service RAU Request without LAPI rejected due to congestion
Inter RAT Congestion Drop	Number of Inter RAT RAU Requests dropped due to congestion
congestion drop with LAPI	Number of Inter RAT RAU requests with LAPI dropped due to congestion
congestion drop without LAPI	Number of Inter RAT RAU requests without LAPI dropped due to congestion
Inter GPRS Srv Rau Cong Drop	Number of Inter GPRS Service RAU Requests dropped due to congestion
Congestion drop with LAPI	Number of Inter GPRS Service RAU requests with LAPI dropped due to congestion
Congestion drop without LAPI	Number of Inter GPRS Service RAU requests without LAPI dropped due to congestion
3G-Att-Req-with-LAPI	Number of 3G Attach Requests received with LAPI
3G-Att-Req-without-LAPI	Number of 3G Attach Requests received without LAPI
Ret-3G-Req-With-LAPI	Number of 3G Attach Requests retried with LAPI
Ret-3G-Req-Without-LAPI	Number of 3G Attach Requests retried without LAPI
3G-Att-Rej-Cong-With-LAPI	Number of 3G Attach requests with LAPI rejected due to congestion.
3G-Att-Rej-Cong-Without-LAPI	Number of 3G Attach requests rejected without LAPI due to congestion
3G-Att-Rej-APN-Based-Cong	Number of 3G Attach requests rejected due to apn level congestion
3G-RAU-Req-with-LAPI	Number of 3G RAU Requests received with LAPI
3G-RAU-Req-without-LAPI	Number of 3G RAU Requests received without LAPI
Ret-3G-RAU-With-LAPI	Number of 3G RAU Requests with LAPI retried
Ret-3G-RAU-Without-LAPI	Number of 3G RAU Requests without LAPI retried
3G-RAU-Rej-Cong-With-LAPI	Number of 3G RAU requests with LAPI rejected due to congestion

Field	Description
3G-RAU-Rej-Cong-Without-LAPI	Number of 3G RAU requests without LAPI rejected due to congestion
3G-RAU-Rej-APN-Based-Cong	Number of 3G RAU requests rejected due to apn level congestion
3G-Serv-Req-With-LAPI	Number of 3G Service Requests received with LAPI
3G-Serv-Req-Without-LAPI	Number of 3G Service Requests received without LAPI
Ret-3G-Req-With-LAPI	Number of 3G Service Requests with LAPI retried
Ret-3G-Req-Without-LAPI	Number of 3G Service Requests without LAPI retried
3G-Serv-Rej-Cong-With-LAPI	Number of 3G service requests rejected due to congestion with LAPI
3G-Serv-Rej-Cong-Without-LAPI	Number of 3G service requests rejected due to congestion without LAPI
3G-Congestion	Service requests rejected due to congestion.
Congestion(With LAPI)	Number of service requests with LAPI dropped due to congestion
Congestion(non LAPI)	Number of service requests without LAPI dropped due to congestion
Congestion(With LAPI) [ under "Routing Area Update Requests Drops:" ]	Number of 3G RAU requests with LAPI dropped due to congestion
Congestion(non LAPI) [ under "Routing Area Update Requests Drops:" ]	Number of 3G RAU requests without LAPI dropped due to congestion
Activated Subscribers 3G Activated Gn Interface	Number of 3G Gn subscribers activated with LAPI
Activated Subscribers 3G Activated Gn Interface	Number of 3G Gn subscribers activated without LAPI
Activated Subscribers 2G Activated Gn Interface	Number of 2G Gn subscribers activated with LAPI
Activated Subscribers 2G Activated Gn Interface	Number of 2G Gn subscribers activated without LAPI
Activated Subscribers 3G Activated S4 Interface	Number of 3G S4 subscribers activated with LAPI
Activated Subscribers 3G Activated S4 Interface	Number of 3G S4 subscribers activated without LAPI
Activated Subscribers 2G Activated S4 Interface	Number of 2G S4 subscribers activated with LAPI
Activated Subscribers 2G Activated S4 Interface	Number of 2G S4 subscribers activated without LAPI

Field	Description
Activate PDP Contexts 3G-Actv Pdp Ctx Gn Interface	Number of 3G Gn Activate PDP Contexts with LAPI
Activate PDP Contexts 3G-Actv Pdp Ctx Gn Interface	Number of 3G Gn Activate PDP Contexts without LAPI
Activate PDP Contexts 2G-Actv Pdp Ctx Gn Interface	Number of 2G Gn Activate PDP Contexts with LAPI
Activate PDP Contexts 2G-Actv Pdp Ctx Gn Interface	Number of 2G Gn Activate PDP Contexts without LAPI
Activate PDP Contexts 3G-Actv Pdp Ctx S4 Interface	Number of 3G S4 Activate PDP Contexts with LAPI
Activate PDP Contexts 3G-Actv Pdp Ctx S4 Interface	Number of 3G S4 Activate PDP Contexts without LAPI
Activate PDP Contexts 2G-Actv Pdp Ctx S4 Interface	Number of 2G S4 Activate PDP Contexts with LAPI
Activate PDP Contexts 2G-Actv Pdp Ctx S4 Interface	Number of 2G S4 Activate PDP Contexts without LAPI
Activate Context Request 3G-Actv-Request	Number of 3G Primary Activation Request Received with LAPI
Activate Context Request 2G-Actv-Request	Number of 2G Primary Activation Request Received with LAPI
Activate Context Request 3G-Secondary-Actv-Request Secondary-Actv-Request	Number of 3G Secondary Activation Request Received with LAPI
Activate Context Request 2G-Secondary-Actv-Request Secondary-Actv-Request	Number of 2G Secondary Activation Request Received with LAPI
Activate Context Reject Primary-Actv-Reject	Number of 3G Primary Activation Reject due to Congestion
Activate Context Reject Primary-Actv-Reject	Number of 3G Primary Activation Reject due to Congestion and LAPI
Activate Context Reject Primary-Actv-Reject	Number of 2G Primary Activation Reject due to Congestion
Activate Context Reject Primary-Actv-Reject	Number of 2G Primary Activation Reject due to Congestion and LAPI
Activate Context Reject Secondary-Actv-Reject	Number of 3G Secondary Activation Reject due to Congestion

Field	Description
Activate Context Reject Secondary-Actv-Reject	Number of 3G Secondary Activation Reject due to Congestion and LAPI
Activate Context Reject Secondary-Actv-Reject	Number of 2G Secondary Activation Reject due to Congestion
Activate Context Reject Secondary-Actv-Reject	Number of 2G Secondary Activation Reject due to Congestion and LAPI
Modify Context Request Modify-Request Rx 3G-Modify-Request Rx	Number of 3G MS Initiated Modify Request Received with LAPI
Modify Context Request Modify-Request Rx 2G-Modify-Request Rx	Number of 2G MS Initiated Modify Request Received with LAPI
Modify Context Reject Modify-Reject Tx	Number of 3G Modify Reject due to congestion
Modify Context Reject Modify-Reject Tx	Number of 3G Modify Reject due to congestion and LAPI
Modify Context Reject Modify-Reject Tx	Number of 2G Modify Reject due to congestion
Modify Context Reject Modify-Reject Tx	Number of 2G Modify Reject due to congestion and LAPI
cur-iu-srv-req-dt-ukn-ptmsi	This counter is incremented every time current access is released due to Service request received in direct transfer with unknown-ptmsi value.
cur-iu-intra-rau-dt-ukn-ptmsi	This counter is incremented every time current access is released due to Local Intra RAU received in direct transfer with unknown-ptmsi value.
Rab-Not-Re-Estd-UL-Data-Stat	This field is added to display the number of RABs not re-established due to absence of NSAPI bit set in the Uplink Data Status IE. This field is also used as a measure to verify the reduction in radio signaling.
3G-Pri-Actv-APN-Not-Sup-Rej	Total number of Primary 3G activate requests rejected due to absence of APN support.
2G-Pri-Actv-APN-Not-Sup-Rej	Total number of Primary 2G activate requests rejected due to absence of APN support.
3G-APN-Not-Supported-in-PLMN-RAT	Indicates if APN is not supported in PLMN-RAT combination in a 3G scenario.
2G-APN-Not-Supported-in-PLMN-RAT	Indicates if APN is not supported in PLMN-RAT combination in a 2G scenario.
APN Not Supported in PLMN RAT combination Statistics	Statistics collected for APN not supported in PLMN RAT combination.
3G-Pdp-Dropped-During-New-SGSN-RAU	Number of 3G PDP contexts dropped due to new SGSN-RAU.
2G-Pdp-Dropped-During-New-SGSN-RAU	Number of 2G PDP contexts dropped due to new SGSN-RAU.

Field	Description
3G-Pdp-Dropped-During-New-SGSN-SRNS	Number of 3G PDP contexts dropped due to new SGSN-SRNS.
Pdp-Dropped-During-3G-To-2G-IRAT	Number of 2G PDP contexts dropped due to new SGSN-SRNS.
3G-Actv-NRPCA-Reject	Number of 3G activate NRPCA requests rejected.
Pdp-Dropped-During-2G-To-3G-IRAT	Number of PDP contexts dropped during 2G to 3G IRAT
APN not sup PLMN-RAT	Statistics collected for APN not supported in PLMN RAT combination.
Inbound Inter node SRNS failure	Number of inbound inter-node SRNS failures.
APN not sup in PLMN/RAT	Statistics collected for APN not supported in PLMN RAT combination.
Inbound Inter-RAU Fallback Statistics	Displays the inbound Inter RAU Fallback statistics.
3G-Inbound Inter SGSN RAU Fallback to GTPV1	This counter displays the number of 3G in-bound ISRAUs for which GTPv2 is restricted and RAU has succeeded over GTPv1. This counter is pegged during 3G in-bound ISRAU, when the S4-SGSN sends EGTP context Ack with failure cause to the peer as the subscriber's call-control profile has <b>sgsn core-nw-interface gn</b> configuration and initiates a GTP context request for a subscriber.
Inter-RAU Inbound Fallback to GTPV1	This counter displays the number of 2G in-bound ISRAUs for which GTPv2 is restricted and RAU has succeeded over GTPv1. This counter is pegged during 2G in-bound ISRAU, when the S4-SGSN sends EGTP context ACK with failure cause to the peer as the subscriber's call-control profile has <b>sgsn core-nw-interface gn</b> configuration and initiates a GTP context request for a subscriber.

## CHAPTER 58

# show gprs-service

This chapter includes the **show gprs-service** command output tables.

- [show gprs-service all, on page 1127](#)

## show gprs-service all

*Table 290: show gprs-service all Command Output Descriptions*

Field	Description
Service name	The GPRS service name that is running in this session.
Context	Name of the VPN context in which specified GPRS service is running.
Status	Status of the GPRS service for which statistics are displayed.
Accounting Context Name	Name of the accounting context for this GPRS service to enable accounting parameters.
Self PLMN	Name of the PLMN of this GPRS service.
MAP Service	Name of the mobile application part (MAP) service configured in this GPRS service.
HSS Service	The name of the home subscriber service (HSS) associated with this GPRS service.
SGTP Service	Name of the SGSN GTPP (SGTP) service configured in this GPRS service.
EGTP Service	The name of the EGTP service associated with this GPRS service.
CAMEL Service	The name of the CAMEL service associated with this GPRS service.
DSCP Template	The name of the DSCP template to be used for downlink packets with this GPRS service.
GS Serviceq	Name of the Gs service configured in this GPRS service to provide Gs interface support between an SGSN and an MSC/VLR.
SM-T3385 Timeout	The time-out duration in seconds for GPRS session management timer - T3385 on network side for PDP context activation.
SM-T3386 Timeout	The time-out duration in seconds for GPRS session management timer - T3386 on network side for PDP context modification.

Field	Description
SM-T3395 Timeout	The time-out duration in seconds for GPRS session management timer - T3395 on network side for PDP context deactivation.
SM-GUARD Timeout	The time duration, in seconds, after which session manager resources are cleared for this GPRS service.
SM-Max Activate Retries	Total number of retries for PDP context activation from GPRS session manager.
SM-Max Modify Retries	Total number of retries for PDP context modification from GPRS session manager.
SM-Max Deactivate Retries	Total number of retries for PDP context deactivation from GPRS session manager.
SM-Ignore PCO IE Decode Error	Indicates whether the decoding error ignored due to incorrect PCO IE length in SM messages is enabled/disabled.
SM-Trim Trailing Spaces in APN	Indicates whether the removal of any trailing space(s) in requested APN by SGSN is enabled/disabled.
SM-APN Partial match	Indicates whether the partial matching of requested APN during APN selection is enabled/disabled.
SM-APN(R) from First Sub Record	Indicates (enabled) that the selection of the APN from the first subscription record is to be used as the requested APN.
GMM TRAU Timeout	The time duration, in seconds, that the "old" 3G SGSN waits to purge the MSs data. This timer is started by the "old" SGSN after completion of an inter-SGSN RAU.
GMM-T3302 Timeout	The time, in seconds, that the system will wait before initiating a GPRS attach procedure or RAU procedure.
GMM-Mnr Timeout	The time-out duration in seconds for GPRS mobility management timer - Mobile Reachable on network side.
GMM-Purge Timeout	The time-out duration in seconds for GPRS mobility management timer - Purge to hold the detach of MM context on network side.
GMM-T3313 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3313 on network side for paging procedure initiation.
GMM-T3312 Timeout	The periodic routing area update timer delivered by the SGSN to the UE in the Attach Accept and the Routing Area Update Accept messages.
GMM-T3323 Timeout	The amount of time, in minutes, the UE will wait after the Periodic RAU timer (T3312 timer) expiry before deactivating Idle Mode Signaling Reduction.
GMM-T3370 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3370 on network side for identity request procedure.
GMM-Max Identity Retries	Maximum number of retries for identity request procedure from GPRS mobility manager.
GMM-T3360 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3360 on network side for Authentication and Cipher request procedure.

Field	Description
GMM-Max Auth Retries	Maximum number of retries for authentication request procedure from GPRS mobility manager.
GMM LLC Timeout	Configured timeout duration in seconds at the logical link control protocol message procedure from GPRS mobility manager.
GMM LLC PDU Life Time	Configured life time in seconds at the logical link control protocol message procedure from GPRS mobility manager.
GMM-Perform-Identity-After-Auth	Specifies whether "perform identity after authentication" procedure is enabled or not.
GMM Ciphering Algorithm	This group provides the ciphering algorithm configuration in this GPRS service.
Priority/..3	Specifies the priority for GPRS Encryption Algorithm (GEA) configured for ciphering in this GPRS service. Possible GPRS encryption algorithms are: gea0: GPRS Encryption Algorithm 0 (GEA0)gea1: GPRS Encryption Algorithm 1 (GEA1)gea2: GPRS Encryption Algorithm 2 (GEA2)gea3: GPRS Encryption Algorithm 3(GEA3)
Accounting cdr-types	Specifies type of accounting CDRs configured in this GPRS service. Possible values are: mcd: Mobility CDR (M-CDR)scdr: SGSN CDR (S-CDR)sms mo-cdr: SMS Mobile Originated CDR (S-MO-CDR)sms mt-cdr: SMS Mobile Terminated CDR (S-MT-CDR) : Mobile Terminated Location request CDR (LCS-MT-CDR): Mobile Originated Location request CDR (LCS-MO-CDR)
Charging Characteristics(CC) Profiles	This group provides the charging characteristics (CC) profiles configured in this GPRS service
Profile <i>nn</i>	Specifies the charging characteristic (CC) profile configured in this SGSN service. <i>nn</i> is the number of CC profiles configured in this GPRS service and possible values are 1 through 15.
Buckets	Specifies the charging bucket configured for charging characteristic in this GPRS service
paging-scheme	Specifies the paging scheme configuration information in this GPRS service
max-page-retransmission	Specifies the maximum number of retries configured for paging in this GPRS service
paging-area	Specifies the paging area information in this GPRS service.
last-known-cell	Indicate the last known cell of the subscriber.
last-known-ra	Indicate the last known routing area of the subscriber.
last-known-la	Indicate the last known location area of the subscriber.
last-known-bsc	Indicate the last known base station controller (BSC) of the subscriber.
Network Global MME ID Mgmt DB	Indicates if a network global MME ID management database ID is associated with this GPRS service. This ID is used for GUTI to RAI mapping of networks with LACs for UTRAN and GERAN coverage in the 32768 - 65535 range.

Field	Description
TAI Management Database	Indicates if a Tracking Area Identifier (TAI) Management database is associated with this GPRS service.
MCC/MNC Encoding in DNS for RAI FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RAI FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for RAI FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RAI FQDN in SNAPTR Query .
MCC/MNC Encoding in DNS for APN FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for APN FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for APN FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for APN FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for RNC FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RNC FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for RNC FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RNC FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for MMEC FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for MMEC FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for MMEC FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for MMEC FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for TAI FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for TAI FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for TAI FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for TAI FQDN in SNAPTR Query.
NRI(s) that will be used in NON-POOLED area	Displays the list of NRIs used in the Non-Pooled area.
Gprs NRI value	Displays the NRI value and also indicates the status of offloading for each NRI.
NRI(s) that will be used in POOLED area	Displays the list of NRIs used in the Pooled area.
NRI(s) that will be used in POOLED & NON-POOLED area	Displays the list of NRIs used in the Non-Pooled and Pooled areas.

## CHAPTER 59

# show gs-service

This chapter includes the **show gs-service** command output tables.

- [show gs-service all, on page 1131](#)

## show gs-service all

*Table 291: show gs-service all Command Output Descriptions*

Field	Description
Service name	The Gs service that is running in this session.
State	Status of the Gs service.
Context	The name of the context in which Gs service is running.
SGSN Number	The E.164 number for the SGSN to associate with the Gs service.
SSN	Indicates the subsystem number configured or not. If configured it indicates SSN.
Self SCCP Network Id	Indicates the SCCP network identifier configured or not. If configured it indicates SSCP network identifier.
T6-1 Timeout	Indicates the retransmission timer (T6-1) value to guard the location update. Default: 10 seconds Range: 10 to 90 seconds
T8 Timeout	Indicates the retransmission timer (T8) value to guard the explicit IMSI detach from the GPRS service procedure. Default: 4 seconds Range: 1 to 30 seconds
T9 Timeout	Indicates the retransmission timer (T9) value to guard the explicit IMSI detach from the non-GPRS service procedure. Default: 4 seconds Range: 1 to 30 seconds

Field	Description
T10 Timeout	Indicates the retransmission timer (T10) value to guard the implicit IMSI detach from the non-GPRS service procedure. Default: 4 seconds Range: 1 to 30 seconds
T12-1 Timeout	Indicates the retransmission timer value (T12-1) in minutes to control the resetting of SGSN-Reset variable procedure. Default: 54 minutes (plus 8 seconds for transmission delay) Range: 0 to 380 minutes
T12-2 Timeout	Indicates the retransmission timer (T10) value to guard the SGSN reset procedure. Default: 4 seconds Range: 1 to 30 seconds
Max N8 Retries	Indicates the maximum retransmission allowed for procedure for explicit IMSI detach message from GPRS service (N8). Default: 2 retries Range: 0 to 10 retries
Max N9 Retries	Indicates the maximum retransmission allowed for procedure for explicit IMSI detach message from non-GPRS service (N9). Default: 2 retries Range: 0 to 10 retries
Max N10 Retries	Indicates the maximum retransmission allowed for procedure for implicit IMSI detach message from non-GPRS service (N10). Default: 2 retries Range: 0 to 10 retries
Max N12 Retries	Indicates the maximum retransmission allowed for N12 procedure for sending BSSAP+ Reset Indication message (N12). Default: 2 retries Range: 0 to 10 retries
GS Service Configurations	
LAC Id	Indicates the subscriber location area code identifier configured in Gs service. Range: 1 through 65535
Pool Type	Type of pool area (non-pool area or pool area) configured in Gs service. Possible values are: <ul style="list-style-type: none"> <li>• Non Pool Area</li> <li>• Pool Area</li> </ul>

Field	Description
Pool Area/ Non Pool Area name	Name of the configured Non-pool area or pool area in Gs service.
Pool Area Configurations	
Pool Area Name	Name of the configured pool area in Gs service.
Default Vlr	Name of the default VLR attached to this pool area.
LAC in Pool Area	Indicates the subscriber location area code identifier configured in this pool area. Range: 1 through 65535
VLR Hash Type	Indicates the type of hash configured for this pool area. Possible values are: <ul style="list-style-type: none"> <li>• Value</li> <li>• Range</li> </ul>
Value / Range	Indicates the value of hash or range of hash.
Vlr Name	Name of the VLR attached to this pool area.
Non-Pool Area Configurations	
Non-Pool Area Name	Name of the configured non-pool area in Gs service.
Vlr Name	Name of the VLR attached to this non-pool area.
LAC in Pool Area	Indicates the subscriber location area code identifier configured in this non-pool area. Range: 1 through 65535
VLR Configurations	
VLR Name	Name of the VLR attached to this Gs service.
ISDN Numbe	Indicates the E.164 ISDN number of configured VLR.
SSN	Indicates the subsystem number configured or not. If configured it indicates SSN.
Point Code	Indicates the configured point code address for VLR in SS7 address format.a
SGSN Reset	Indicates whether SGSN reset function is allowed or not. Possible values are: <ul style="list-style-type: none"> <li>• TRUE</li> <li>• FALSE</li> </ul>

# CHAPTER 60

## show gtpc

This chapter includes the **show gtpc** command output tables.

- [show gtpc counters ggsn-service](#), on page 1135
- [show gtpc full](#), on page 1137
- [show gtpc summary callid](#), on page 1142
- [show gtpc statistics custom1](#), on page 1144
- [show gtpc statistics custom2](#), on page 1145
- [show gtpc statistics verbose](#), on page 1145

## show gtpc counters ggsn-service

*Table 292: show gtpc counters ggsn-service Command Output Descriptions*

Field	Description
APN Name	The name of the APN that the subscriber is currently accessing.
Callid	The call identification number that uniquely identifies the subscriber.
IMSI	The subscriber's International Mobile Subscriber Identity.
NSAPI	The subscriber's Network Service Access Point Identifier.
Updates PDP Context	
Update PDP Context RX	The total number of Update PDP Context Request messages received from the SGSN(s).
Accepted	The total number of Update PDP Context Response messages transmitted to the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s).
Update PDP Context Denied	
System Failure	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 204 (CCH, System failure).

Field	Description
Invalid Message Format	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Mandatory IE Incorrect:	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Updates PDP Context Sent	
Update PDP Context RX	The total number of Update PDP Context Request messages transmitted to the SGSN(s).
Accepted	The total number of Update PDP Context Response messages received from the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages received from the SGSN(s).
Update Sent Reasons	
IP Address Updated	The total number of Update PDP Context Request messages transmitted to the SGSN(s) because of a change in the IP address of the PDP context.
QoS Updated	The total number of Update PDP Context Request messages transmitted to the SGSN(s) because of a change in the quality of service (QoS) level for the PDP context.
Misc. Reasons	The total number of Update PDP Context Request messages transmitted to the SGSN(s) for other reasons.
Update PDP Context Deny Received	
System Failure	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 204 (CCH, System failure).
Non-existent	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).

Field	Description
Unsupported Service	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Invalid Message Format	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Mandatory IE Incorrect	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 204 (CCH, System failure).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
GTPU Receive	
Total Packets	The total number of GTPU packets received.
Total Bytes	The total number of GTPU bytes received.
GTPU Send	
Total Packets	The total number of GTPU packets transmitted.
Total Bytes	The total number of GTPU bytes transmitted.

## show gtpc full

**Table 293: show gtpc full Command Output Descriptions**

Field	Description
APN Name	The name of the APN that the subscriber is currently accessing.
Callid	The call identification number that uniquely identifies the subscriber.
User Name	The user name associated with this session.

Field	Description
User Address	Is the address of the user's PDP context in dotted decimal notation.
Session Type	Specifies the type of session for MBMS service. Possible values are: <ul style="list-style-type: none"> <li>• MBMS UE</li> <li>• MBMS Multicast Bearer</li> </ul>
Mcast Address	Displays the IP address of Broadcast Multicast service center.
Update MBMS Context RX	Total number of update messages received for MBMS context.
Accepted	Total number of update messages received and accepted for MBMS context
Denied	Total number of update messages received and denied for MBMS context
Discarded	Total number of update messages discarded for MBMS context
IMEI(SV)	Indicates the International Mobile Equipment Identity (and Software Version) (IMEI(SV)) of subscriber's mobile equipment.
IMSI	The subscriber's International Mobile Subscriber Identity.
NSAPI	The subscriber's Network Service Access Point Identifier.
GGSN Service	Specifies the name of a configured GGSN service that can be from 1 to 63 alpha and/or numeric characters and is case sensitive.
SGSN Address	Specifies the IP address for the SGSN.
MBMS Session Start	This group specifies the statistics of messages for MBMS session start.
MBMS Session Start TX	Total number of messages sent for MBMS session start.
Accepted	Total number of messages accepted for MBMS session start.
Denied	Total number of messages denied for MBMS session start.
MBMS Session Start Denied	This group specifies the statistics of reasons for denial of MBMS session.
No Resources	Total number of MBMS session start messages denied due to non-availability of resources.
No Memory	Total number of MBMS session start messages denied due to non-availability of memory.
System Failure	Total number of MBMS session start messages denied due to system failure.
Non-existent	Total number of MBMS session start messages denied due to non-existence of MBMS context.
Invalid Message Format	Total number of MBMS session start messages denied due to invalid message format.
Mandatory IE Incorrect	Total number of MBMS session start messages denied as mandatory information element was incorrect.

Field	Description
Mandatory IE Missing	Total number of MBMS session start messages denied as mandatory information element was missing.
Bearer Ctxt Superseded	Total number of MBMS session start messages denied as bearer context get superseded by information in message.
MBMS Session Stop	This group specifies the statistics of messages for MBMS session stop.
MBMS Session Stop TX	Total number of messages sent for MBMS session stop.
Accepted	Total number of messages accepted for MBMS session stop.
Denied	Total number of messages denied for MBMS session stop.
Charging ID	Contains an identifier used for correlating charging records and events.
Charging Characteristics Statistics	<p>Hot - The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "1", representing "hot" billing.</p> <p>Normal - The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "8", representing "normal" billing.</p> <p>Prepaid - The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "4", representing "prepaid" billing.</p> <p>Flat - The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "2", representing "flat-rate" billing.</p>
User Location Info Type	Indicates the type of User Location Information, Cell Global Identification (CGI) or Service Area Identity (SAI) of where the user currently is registered or available.
User Location Info	Indicates the information of User location, CGI or SAI.
MS TimeZone	The Time Zone MS is sending in the CPC/UPC message.
Daylight Saving Time	The number of hours the MS TimeZone is adjusted for Daylight Savings Time
CAMEL Charging Info	Indicates whether or not CAMEL charging information was received.
Length	The length of the CAMELInformationPDP IE
Payload Compression	Indicates whether payload compression is allowed or prohibited.
Transitions to Presv. Mode	<p>Indicates total number sessions in transitions state for preservation mode.</p> <p>Note: This is a customer specific counter and dependent of customer specific license only.</p>
Transitions to LORC state	<p>Indicates total number sessions in transitions state for overcharging protection support mode.</p> <p>This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.</p>

Field	Description
GTP-U Tunnel Establishment	<p>Indicates if the particular session is using direct tunnel or not. Possible values are:</p> <ul style="list-style-type: none"> <li>• Normal</li> <li>• Pending</li> <li>• Direct-Tunnel</li> </ul> <p>Status "Pending" means that GGSN is switching from direct-tunnel to two tunnels for the particular session. "Normal" status indicates that particular context is not using Direct Tunnel.</p>
Updates PDP Context	
Update PDP Context RX	The total number of Update PDP Context Request messages received from the SGSN(s).
Accepted	The total number of Update PDP Context Response messages transmitted to the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s).
Update PDP Context Denied	
System Failure	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 204 (CCH, System failure).
Invalid Message Format	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Mandatory IE Incorrect:	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Updates PDP Context Sent	
Update PDP Context TX	The total number of Update PDP Context Request messages transmitted to the SGSN(s).

Field	Description
Accepted	The total number of Update PDP Context Response messages received from the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages received from the SGSN(s).
Update PDP Context Deny Received	
System Failure	The total number of "reject" Update PDP Context Response messages received with a cause code of 204 (CCH, System failure).
Non-existent	The total number of "reject" Update PDP Context Response messages received with a cause code of 192 (C0H, Non-existent).
Invalid Message Format	The total number of "reject" Update PDP Context Response messages received with a cause code of 193 (C1H, Invalid message format).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages received with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages received with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Mandatory IE Incorrect:	The total number of "reject" Update PDP Context Response messages received with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages received with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages received with a cause code of 203 (CBH, Optional IE incorrect).
GTPU Receive	
Total Packets	The total number of GTP User (GTPU) packets received.
Traffic Class	
Conversational	The number of GTPU packets received tagged with a traffic class of Conversational.
Streaming	The number of GTPU packets received tagged with a traffic class of Streaming.
Interactive 1	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 1.
Interactive 2	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 2.

Field	Description
Interactive 3	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 3,
Background	The number of GTPU packets received tagged with a traffic class of Background.
GTPU Send	
Total Packets	The total number of GTP User (GTPU) packets transmitted.
Traffic Class	
Conversational	The number of GTPU packets transmitted tagged with a traffic class of Conversational.
Streaming	The number of GTPU packets transmitted tagged with a traffic class of Streaming.
Interactive 1	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 1.
Interactive 2	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 2.
Interactive 3	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 3,
Background	The number of GTPU packets transmitted tagged with a traffic class of Background.

## show gtpc summary callid

Table 294: show gtpc summary callid Command Output Descriptions

Field	Description
GTP Summary	Displays a brief status for GTP.
Update PDP Context RX	Displays the total number of Update PDP Context Request messages received.
Accepted	Displays the number of Update PDP Context Request messages received that were accepted.
Denied	Displays the number of Update PDP Context Request messages received that were denied.
Update PDP Context TX	Displays the total number of Update PDP Context Request messages transmitted.
Accepted	Displays the number of Update PDP Context Request messages received that were transmitted.
Denied	Displays the number of Update PDP Context Request messages received that were transmitted.
IP Address Updates	Displays the number of times the IP address was updated.

Field	Description
QoS Updates	Displays the number of times the quality of service (QoS) level was changed.
Misc. Updates	Displays the number of updates experienced.
Qos negotiation	
CPC Qos Accepted	The number of times QoS parameters received in Create PDP Context (CPC) Request messages were accepted.
CPC Qos Downgrade	The number of times QoS parameters received in Create PDP Context (CPC) Request messages were downgraded.
UPC Qos Accepted	The number of times QoS parameters received in Update PDP Context (UPC) Request messages were accepted.
UPC Qos Downgraded	The number of times QoS parameters received in Update PDP Context (UPC) Request messages were downgraded.
GTPU Receive	
Total Packets	The total number of GTP User (GTPU) packets received.
Traffic Class	
Conversational	The number of GTPU packets received tagged with a traffic class of Conversational.
Streaming	The number of GTPU packets received tagged with a traffic class of Streaming.
Interactive 1	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 1.
Interactive 2	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 2.
Interactive 3	The number of GTPU packets received tagged with a traffic class of Interactive and a priority of 3,
Background	The number of GTPU packets received tagged with a traffic class of Background.
GTPU Send	
Total Packets	The total number of GTP User (GTPU) packets transmitted.
Traffic Class	
Conversational	The number of GTPU packets transmitted tagged with a traffic class of Conversational.
Streaming	The number of GTPU packets transmitted tagged with a traffic class of Streaming.
Interactive 1	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 1.
Interactive 2	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 2.

Field	Description
Interactive 3	The number of GTPU packets transmitted tagged with a traffic class of Interactive and a priority of 3,
Background	The number of GTPU packets transmitted tagged with a traffic class of Background.

## show gtpc statistics custom1

**Important** These statistics are specific to Free-of-Charge service (FoCS) and Operator Determined Barring (ODB) support using private GTP-C extensions and enabled under customer-specific license. For more information on this support, contact your local representative.

*Table 295: show gtpc statistics custom1 Command Output Descriptions*

Field	Description
Preservation Mode stats	Displays the statistics of GTP-C messages in preservation mode.
Sessions in preservation mode	Indicates total number sessions in preservation mode.
Transitions to preservation mode	Indicates total number sessions in transitions state from non-preservation mode to preservation mode.
Transitions to non-preservation mode	Indicates total number sessions in transitions state from preservation mode to non-preservation mode.
Free Of Charge Service stats	Displays the statistics of GTP-C messages for Free-of-Charge services.
Session stats	Indicates sessions statistics for FOCS and/or ODB enabled sessions.
FOCS	Indicates the total number of sessions Free-of-Charge services (FOCS) enabled status.
ODB	Indicates the total number of sessions with Operator Determined Barring enabled status.
Sessions release stats	Indicates the statistics for sessions, in preservation mode of using FOCS and/or ODB, released due to any reason
Other-reasons	Indicates the total number of sessions, in preservation mode of using FOCS and/or ODB, released due to reasons not specified in this table.
in-acl-disconnect-on-violation	Indicates the total number of sessions, in preservation mode of using FOCS and/or ODB, released due to ACL rule violation.

## show gtpc statistics custom2

**Important** These statistics are specific to private GTP-C extensions for overcharging protection on loss of radio coverage for a subscriber. For more information on this support, contact your local representative.

*Table 296: show gtpc statistics custom2 Command Output Descriptions*

Field	Description
LORC Stats	This group indicates the status of loss of radio coverage extensions in GTP-C messages configured for overcharging protection.
Sessions in lorc state	Indicates the number of GGSN session are in LORC state and subscriber is in out of radio coverage area.  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.
Transitions to lorc state	Indicates total number sessions in transitions state for overcharging protection support mode.  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.

## show gtpc statistics verbose

*Table 297: show gtpc statistics verbose Command Output Descriptions*

Field	Description
Session Stats	
Total Current	The total number of PDP contexts currently being facilitated by the system.
S6b Assume Positive	The number of S6b assumed positive subscriber count being facilitated by the system.
IPv4	The number of IPv4 PDP contexts currently being facilitated by the system.
PPP	The number of PPP PDP contexts currently being facilitated by the system.
IPv4 Emergency	The number of non-emergency IPv4 calls.
Auth IMSI	The number of authorized IMSIs by SGSN (i.e. valid subscription).
UnAuth IMSI	The number of authentic IMSIs but NOT verified by SGSN.

Field	Description
Only IMEI	The IMSIs that have not been provided by the SGSN and the session is based on IMEI.
IPv6	The number of IPv6 PDP contexts currently being facilitated by the system.
Network Initiated	The number of PDP contexts currently being facilitated by the system that were activated using the NRPA procedure.
IPv6 Emergency	The number of non-emergency IPv6 calls.
Auth IMSI	The number of authorized IMSIs by SGSN (i.e. valid subscription).
UnAuth IMSI	The number of authentic IMSIs but NOT verified by SGSN.
Only IMEI	The IMSIs that have not been provided by the SGSN and the session is based on IMEI.
IPv4v6	The number of IPv4v6 PDP contexts currently being facilitated by the system.
MBMS UE	Total number of MBMS UE context connected.
MBMS Mcast Bearer	Total number of MBMS multicast bearer context connected.
MBMS Bcast Bearer	Total number of MBMS broadcast bearer context connected.
Total Setup	The total number of PDP contexts that have been facilitated by the system since it was either powered up or since the statistics were last cleared -whichever is latest.
IPv4	The total number of IPv4 PDP contexts that have been facilitated by the system.
PPP	The total number of PPP PDP contexts that have been facilitated by the system.
IPv4 Emergency	The total number of non-emergency IPv4 calls.
Auth IMSI	The number of authorized IMSIs by SGSN (i.e. valid subscription).
UnAuth IMSI	The number of authentic IMSIs but NOT verified by SGSN.
Only IMEI	The IMSIs that have not been provided by the SGSN and the session is based on IMEI.
IPv6	The total number of IPv6 PDP contexts that have been facilitated by the system.
SGSN Initiated	The total number of SGSN-initiated PDP contexts that have been facilitated by the system.
IPv6 Emergency	The number of non-emergency IPv6 calls.
Auth IMSI	The number of authorized IMSIs by SGSN (i.e. valid subscription).
UnAuth IMSI	The number of authentic IMSIs but NOT verified by SGSN.
Only IMEI	The IMSIs that have not been provided by the SGSN and the session is based on IMEI.
IPv4v6	The number of IPv4v6 PDP contexts currently being facilitated by the system.
Network Initiated	The number of IPv4v6 PDP contexts currently being facilitated by the system that were activated using the NRPA procedure.

Field	Description
MBMS UE	Total number of MBMS UE context connected.
MBMS Mcast Bearer	Total number of MBMS multicast bearer context connected.
MBMS Bcast Bearer	Total number of MBMS broadcast bearer context connected.
Total Released	The total number of PDP contexts that have been released by the system.
Dynamic Address Allocation	
IPv4 Attempt	The total number of IPv4 sessions attempted with dynamic PDP address allocation.
Successful	The total number of IPv4 sessions successfully established with dynamic PDP address allocation.
IPv6 Attempt	The total number of IPv6 sessions attempted with dynamic PDP address allocation.
Successful	The total number of IPv6 sessions successfully established with dynamic PDP address allocation.
IP Authentication	
CHAP Auth Attempt	The total number PDP contexts that attempted CHAP authentication.
Successful	The total number PDP contexts that were successfully authenticated using CHAP.
Failure	The total number PDP contexts that failed authentication attempting to use CHAP.
PAP Auth Attempt	The total number PDP contexts that attempted PAP authentication.
Successful	The total number PDP contexts that were successfully authenticated using PAP.
Failure	The total number PDP contexts that failed authentication attempting to use PAP.
No Auth Requests	The total number PDP contexts that did not have authentication enabled.
Session Release Reasons	
SGSN Initiated	The total number of PDP contexts that have been released due to the receipt of a Delete PDP Context message from the SGSN(s).
Secondary Teardown	The total number of PDP contexts that have been released due to the termination of a secondary context (for example, a teardown flag was set in Delete PDP Context message received or a teardown happened due to the context replacement case).
Session Mgr. Died	The total number of PDP contexts that have been released due to the termination of the Session Manager task that was facilitating the contexts.
Admin Releases	The total number of PDP contexts that have been released due by the system administrator (for example, issuing the <b>clear subscriber</b> command, or stopping the GGSN service).
APN Removed	The total number of PDP contexts that have been released due to the removal of the APN configuration from the system.

Field	Description
Call Aborted	The total number of PDP contexts that have been released due to miscellaneous reasons such as the removal of a source or destination context on the system, etc.
Idle Timeout	The total number of PDP contexts that have been released due to the expiration of the idle timeout period as configured in the APN configuration mode.
Absolute Timeout	The total number of PDP contexts that have been released due to the expiration of the absolute timeout period as configured in the APN configuration mode.
Source Addr Violation	The total number of PDP contexts that have been released due to the detection of a source violation.
Flow Addition Failure	The total number of PDP contexts that have been released due to the system's failure to add a flow.
DHCP Renewal Failure	The total number of PDP contexts that have been released due to a DHCP lease renewal failure.
Long Duration Timeout	The total number of PDP contexts that have been released due to the expiration of the long duration timeout period.
Error Indication	The total number of PDP contexts that have been released due to an error indication.
Context replacement	The total number of PDP contexts that have been released due to a context replacement.
Other Reasons	The total number of PDP contexts that have been released due to other reasons.
Purged via Audit	The total number requests that were purged during Session Manager recovery. If the GTPCMgr did not get an audit request for a particular session, then it is released by GTPCMgr.
Update Handoff Reject	The total number of PDP contexts that have been released due to the receipt of a reject message during an update handoff.
LP Fallback Timeout	The total number of IP CAN sessions that have been released due to local policy timeout.
Total Path Failures	The total number of PDP contexts that have been released due to SGSN path failures detected by the system.
SGSN Restart	
Create PDP Req	The total number of PDP contexts that have been released due to path failures detected after sending a Create PDP Context Request message.
Update PDP Req	The total number of PDP contexts that have been released due to path failures detected after sending a Update PDP Context Request message.
Echo Response	The total number of PDP contexts that have been released due to path failures detected after sending an Echo Response message.
Timeout	
GTPC Echo Timeout	

Field	Description
GTPU Echo Timeout	
GGSN Req Timeout	
Path Management Messages	
Echo Request RX	The total number of Echo Requests received from SGSN(s).
Echo Response TX	The total number of Echo Responses sent to SGSN(s) in response to Echo Requests.
Echo Request TX	The total number of Echo Requests sent to the SGSN(s).
Echo Response RX	The total number of Echo Responses received from SGSN(s) in response to Echo Requests.
GTP-U Echo Request RX	The total number of GTPU Echo Requests received from SGSN(s).
GTP-U Echo Response TX	The total number of GTPU Echo Responses sent to SGSN(s) in response to GTPU Echo Requests.
GTP-U Echo Request TX	The total number of GTPU Echo Requests sent to the SGSN(s).
GTP-U Echo Response RX	The total number of GTPU Echo Responses received from SGSN(s) in response to GTPU Echo Requests.
Version Not Supported	
RX	The total number of Version Not Supported messages received.
TX	The total number of Version Not Supported messages transmitted.
Supported Ext. Headers Notif	
RX	The total number of supported extension headers notifications received.
TX	The total number of supported extension headers notifications transmitted.
Tunnel Management Messages	
Total CPC Req	The total number of Create PDP Context Request messages received. This is the sum of GTPC v0 and GTP v1 messages.
CPC Req(V1)	The total number of Create PDP Context Request messages received that used GTPC version 1.
CPC Req(V0)	The total number of Create PDP Context Request messages received that used GTPC version 0.
Primary CPC Req	The total number of Activate Primary PDP Context Request received.
Secondary CPC Req	The total number of Activate Secondary PDP Context Request received
Initial CPC Req	The total number of non-retransmitted Create PDP Context Requests for the primary PDP context.

Field	Description
Retransmitted	The total number of re-transmitted Create PDP Context Request messages received for either the primary or secondary PDP contexts.
Total Accepted	The total number of Create PDP Context Response messages transmitted containing a cause value of 128 (80H, Request accepted).
Total Denied	The total number of "reject" Create PDP Context Response messages transmitted.
Total Discarded	The total number of Create PDP Context Request messages received from the SGSN(s) that were discarded.
Update PDP Context RX	The total number of Update PDP Context Request messages received from the SGSN(s).
Accepted	The total number of Update PDP Context Response messages transmitted to the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s).
Update PDP Context TX	The total number of Update PDP Context Request messages transmitted to the SGSN(s).
Accepted	The total number of Update PDP Context Response messages received from the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Update PDP Context Response messages received from the SGSN(s).
Delete PDP Context RX	The total number of Delete PDP Context Request messages received from the SGSN(s).
Accepted	The total number of Delete PDP Context Response messages transmitted containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Delete PDP Context Response messages transmitted.
Discarded	The total number of Delete PDP Context Request messages received from the SGSN(s) that were discarded
Delete PDP Context TX	The total number of Delete PDP Context Request messages transmitted to the SGSN(s).
Accepted	The total number of Delete PDP Context Response messages received from the SGSN(s) containing a cause value of 128 (80H, Request accepted).
Denied	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s).
Error Indication RX	The total number of error indication messages received from the SGSN(s).
Error Indication TX	The total number of error indication messages transmitted to the SGSN(s).
PDU Notification	The total number of PDU notifications sent by GGSN as a part of the NRPA procedure.
Accepted	The total number of accepted PDU notifications sent by GGSN as a part of the NRPA procedure.

Field	Description
Denied	The total number of rejected PDU notifications sent by GGSN as a part of the NRPA procedure.
PDU Notificatn Reject	The total number of PDU Notification Rejects that were received.
Accepted	The total number of PDU Notification Rejects that were received and accepted.
Denied	The total number of PDU Notification Rejects that were received and rejected.
Discarded	The total number of PDU Notification Rejects that were received and discarded.
GTP-U Tunnel Establishment with RNC	
Direct Tunnels Established	Indicates the number of times direct tunnels established between GGSN and RNC as instructed by SGSN in Update PDP Context Request.
Direct Tunnels torn down by SGSNs	Indicates the total number of times direct tunnels between GGSN and RNC are removed as instructed by SGSN in Update PDP Context Request.
Direct Tunnels that received Error Indication	Indicates the total number of Direct Tunnels that have received GTP Error Indication from RNC. This statistic counts GTP Error Indication only once per Direct Tunnel.
Update PDP Tx Reasons	
QoS Change	The number of Update PDP Context Request messages were sent when the GGSN requested the QoS Profile information to the SGSN.
Providing PDP address	The providing PDP address that is sent to the SGSN.
Direct Tunnel Flags update	Indicates the number of Update PDP Context Requests going out of GGSN towards SGSN with direct tunnel flags IE.
Update PDP Context Rx Reasons	
SGSN Handoff	The total number SGSN handoffs that have been completed for which PDP context updated.
SGSN Group Handoff	The total number handoffs between SGSN groups that have been completed for which PDP context updated.
Create PDP Context Denied	
No Resources	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 199 (C7H, No resources available).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - No Resource Reasons</b> of this table.

Field	Description
No Memory	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 212 (D4H, No memory is available).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - No Memory</b> of this table.
All Dyn Addr Occupied	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 211 (D3H, All dynamic PDP addresses are occupied).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - Dynamic Address Occupied</b> of this table.
User Auth Failed	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (D1H, User authentication failed).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - Auth Failure Reasons</b> section of this table.
Unknown/Missing APN	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 219 (DBH, Missing or unknown APN).
System Failure	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 204 (CCH, System failure).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - System Failure Reasons</b> section of this table.
Unknown PDP Addr/Type	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 220 (DCH, Unknown PDP address or PDP type).  <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - Unknown PDP Addr or Type</b> section of this table.
Unsupported Version	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 198 (C6H, version not supported).
Semantic Error in TFT	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in Packet Filter	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).

Field	Description
Mandatory IE Incorrect	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect). <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - Mandatory IE Incorrect</b> section of this table.
Mandatory IE Missing	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect). <b>NOTE:</b> Statistics that further detail the reasons for rejecting a Create PDP Context Request with this reason are located in the <b>Create PDP Denied - Optional IE Incorrect</b> section of this table.
Invalid Message Format	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Context Not Found	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 210 (D2H, Context not found).
Service not Supported	The total number of "reject" Create PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 200 (C8H, Service not supported).
APN restriction Incompatibility	
No APN Subscription	Indicates that the GGSN has denied the user access to an APN because a subscription is required, but the subscriber does not have the necessary subscription.
<b>Create PDP Denied - No Resource Reasons</b>	
PLMN Policy Reject	The PLMN policy configured for the GGSN service processing the request is configured to reject the SGSN's requests.
New Call Policy Reject	The system is configured with a newcall policy to reject new sessions.
APN/Svc Capacity	The APN being accessed is currently facilitating the maximum number of PDP contexts specified in its configuration (refer to the <b>max-contexts</b> command in the APN configuration mode).
Input-Q Exceeded	The queue size between demux-mgr and session managers has been exceeded due to pending requests.
No Session Manager	No Session Manager task is available to process the request.
Session Manager Dead	The Session Manager Task assigned to the PDP context was terminated.
Secondary For PPP	A secondary request for PPP was received.

Field	Description
Other Reasons	Other reasons not listed here.
Session Mgr Retried	Multiple Session Manager Tasks were unable to accept the request.
Session Mgr Not Ready	The Session Manager Task assigned to the PDP context was not ready to accept the request.
Session Setup Timeout	The total number of Create PDP Context (CPC) reject due to session setup timeout
Charging Svc Auth Fail	Authorization with the charging service failed.
APN Reject Policy	
ICSR State Invalid	Indicates that the Create PDP request was denied because the interchassis session recovery state is invalid.
DHCP IP Address Not Present	DHCP-assigned IP addresses were not available for assignment to the PDP Context.
Radius IP Validation Failed	RADIUS IP validation failed.
S6B IP Validation Failed	
Congestion Policy Applied	The system entered a state resulting in the invocation of a GGSN service "reject" congestion policy.
Exceeded secondary-pdp-context limit per-subscriber	
GTP-v0 IP address allocation/validation failed	IP address allocation or validation failed.
Mediation Delay GTP Response Accounting Start failed:	The number of call setup failures due to Accounting Start failures with delay GTP response feature enabled.
Create PDP Denied - Auth Failure Reasons	
Authentication Failed	The total number of requests rejected due to incorrect username/password.
AAA Auth Req Failed	The total number of requests rejected due to authentication failure requests.
APN selection-mode mismatch	The total number of requests rejected due to a conflicting configuration of the Selection Mode in the Create PDP Context request and the APN.
Non-Existent Virtual APN	The request is rejected due to an invalid APN.
Reject Foreign Subscriber	
IMS Authorization Fail	
Create PDP Denied - No Memory	
No More AAA Sessions	The total number of requests rejected due to the system not having AAA session handles available.

Field	Description
Misc. Reasons	The total number of requests rejected due to the system not being able to allocate the memory required for processing the request.
Create PDP Denied - Unknown PDP Addr or Type	
Invalid IP Address	The total number of requests rejected due to the receipt of an invalid IP address (i.e. 0.0.0.0) from the SGSN.
Conflict IP Address	The total number of requests rejected due to a conflict between the IP addresses provided by the MS and RADIUS servers.
Static Address Not Present	The total number of requests rejected due to the MS not having a static address when the system is configured with an IP address allocation method of static.
Static Address Not Allowed	The total number of requests rejected due to the system's IP address allocation method being configured for static, but the Create PDP Context Request message requests dynamic allocation.
Static IP Validation Failed	The total number of requests rejected due to the validation failure of the static IP address offered by the MS.
Local Pool Static Address Not Allowed	The total number of requests rejected due to the MS offering a static IP address that is not configured in a pool on the system.
DHCP IP Validation Failed	The total number of requests rejected due to the validation failure of the IP address allocated by DHCP.
DHCP Relay Static Address Not Allowed	The total number of requests rejected due to the IP address being present in the call but the system not being configured to accept statically assigned addresses for DHCP relay.
DHCP Proxy Static Address Not Allowed	The total number of requests rejected due to the IP address being present in the call but the system not being configured to accept statically assigned addresses for DHCP proxy.
DHCP Local Pool Static Address Not Allowed	The total number of requests rejected due to the IP address being present in the call but the system not being configured to accept statically assigned addresses for DHCP local pool.
DHCP Client Static Address Not Allowed	The total number of requests rejected due to the IP address being present in the call but the system not being configured to accept statically assigned addresses for DHCP client.
PDP Type Mismatch or Unknown PDP Type	The total number of requests rejected due to an unknown PDP type or a PDP type that does not match with the one configured for the APN using the <b>pdp-type</b> command.
Create PDP Denied - Dynamic Address Occupied	
DHCP No IP Address Alloc	The total number of requests rejected due to a failure in DHCP IP address allocation.
DHCP Timer Notification	The total number of requests rejected due to an expiration of the system's DHCP timer prior to the receipt of a reply from the DHCP server resulting in a failure to allocate an IP address.
Local IP Validation Failed	The total number of requests rejected due to an IP address validation failure.

Field	Description
Local IP Pool All Address Occupied	The total number of requests that are occupied due to an IP address is occupied.
Create PDP Denied - System Failure Reasons	
Misc. Reasons	The total number of requests rejected due to miscellaneous reasons.
Create PDP Denied - Mandatory IE Incorrect	
NSAPI	The total number of requests rejected due to an invalid NSAPI.
Create PDP Denied - Optional IE Incorrect	
Private Extention	The total number of requests rejected due to incorrect optional information elements in the request such as private extensions.
Create PDP Discard Reasons	
No Session	The total number of requests discarded due to no session being found for the secondary context request.
No Memory	The total number of requests discarded due to no memory being available on the system to allocate for the request.
Malformed Message	The total number of requests discarded due to the request being poorly formed.
Invalid Ctrl TEID	The total number of requests discarded due to an invalid control TEID in the request.
Internal Bounce Error	The total number of requests discarded due to a bounce in an internal system message.
Misc. Reasons	The total number of requests discarded due to miscellaneous reasons.
Version Not Supported	The total number of requests discarded due to the request using an unsupported version.
Congestion Policy Applied	The system entered a state resulting in the invocation of a GGSN service "drop" congestion policy.
ICSR State Invalid	Indicates that the Create PDP request was denied because the interchassis session recovery state is invalid.
Update PDP Context Denied	
No Resources	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 199 (C7H, No resources available).
No Memory	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 212 (D4H, No memory is available).
System Failure	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 204 (CCH, System failure).
Non-existent	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 192 (C0H, Non-existent).

Field	Description
Unsupported Service	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 200 (C8H, Service not supported).
Invalid Message Format	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Mandatory IE Incorrect	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Update PDP Context Deny Received	
No Resources	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 199 (C7H, No resources available).
No Memory	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 212 (D4H, No memory is available).
System Failure	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 204 (CCH, System failure).
Non-existent	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 192 (C0H, Non-existent).
Unsupported Service	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 200 (C8H, Service not supported).
Invalid Message Format	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Semantic Error in TFT	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 215 (D7H, Semantic error in the TFT operation).
Syntactic Error in TFT	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 216 (D8H, Syntactic error in the TFT operation).

Field	Description
Semantic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 217 (D9H, Semantic error in packet filter(s)).
Mandatory IE Incorrect	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Syntactic Error in Packet Filter	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 218 (DAH, Syntactic error in packet filter(s)).
Optional IE Incorrect	The total number of "reject" Update PDP Context Response messages received from the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Delete PDP Context Denied	
Mandatory IE Incorrect	The total number of "reject" Delete PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of "reject" Delete PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Optional IE Incorrect	The total number of "reject" Delete PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Invalid Message Format	The total number of "reject" Delete PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Non-existent	The total number of "reject" Delete PDP Context Response messages transmitted to the SGSN(s) sent with a cause code of 192 (C0H, Non-existent).
Delete PDP Context Discard Reasons	
No Memory	The total number of "reject" Delete PDP Context Response messages received from the SGSN and discarded due to no memory being available to process the request.
Pacing Queue Exceeded	The total number of "reject" Delete PDP Context Response messages received from the SGSN and discarded due to there being too many requests pending in the Session Manager Task's Pacing Queue.
Recovery Session Fail	The total number of "reject" Delete PDP Context Response messages received from the SGSN and discarded due to the recovery of a demux-manager resulting in its inability to queue the request for processing.
ICSR State Invalid	Indicates that the delete PDP request was denied because the interchassis session recovery state is invalid.
Delete PDP Context Deny Received	
Mandatory IE Incorrect	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s) sent with a cause code of 201 (C9H, Mandatory IE incorrect).

Field	Description
Mandatory IE Missing	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s) sent with a cause code of 202 (CAH, Mandatory IE missing).
Optional IE Incorrect	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s) sent with a cause code of 203 (CBH, Optional IE incorrect).
Invalid Message Format	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s) sent with a cause code of 193 (C1H, Invalid message format).
Non-existent	The total number of "reject" Delete PDP Context Response messages received from the SGSN(s) sent with a cause code of 192 (C0H, Non-existent).
Location Management Messages	
Send Routeing Info	The total number of Send Routeing Info Request messages sent by the GGSN to the SGSN(s).
Accepted	The total number of Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were accepted.
Denied	The total number of Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied.
Failure Report	The total number of Failure Report messages sent by the GGSN to the SGSN(s).
Accepted	The total number of Failure Report messages sent by the GGSN to the SGSN(s) that were accepted.
Denied	The total number of Failure Report messages sent by the GGSN to the SGSN(s) that were denied.
Note MS GPRS Present	The total number of Note to MS GPRS Present Request messages sent by the GGSN to the SGSN(s).
Accepted	The total number of Note to MS GPRS Present Request messages sent by the GGSN to the SGSN(s) that were accepted.
Denied	The total number of Note to MS GPRS Present Request messages sent by the GGSN to the SGSN(s) that were denied.
Discarded	The total number of Note to MS GPRS Present Request messages sent by the GGSN to the SGSN(s) that were discarded.
Send Routing Information Request Failure Causes	
No Resources Available	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 199 (C7H, No resources available).
Service Not Supported	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 200 (C8H, Service not supported).
System Failure	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 204 (CCH, System failure).

Field	Description
Mandatory IE Incorrect	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 202 (CAH, Mandatory IE missing).
Optional IE Incorrect	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 203 (CBH, Optional IE incorrect).
Invalid Message Format	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied with a cause code of 193 (C1H, Invalid message format).
No Proxy Found	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied because no proxy MAP configuration was located for the NRPA procedure.
Proxy Not Reachable	The total number of Note to Send Routeing Info Request messages sent by the GGSN to the SGSN(s) that were denied because the configured MAP proxy is unreachable (i.e. not responding to SRI requests).
Send Routing Information Failure MAP Causes	
Subscriber Absent	The total number of Send Routeing Info Request responses received with a failure MAP cause of subscriber absent.
System Failure	The total number of Send Routeing Info Request responses received with a failure MAP cause of system failure.
Data Missing	The total number of Send Routeing Info Request responses received with a failure MAP cause of data missing.
Unexpected Data	The total number of Send Routeing Info Request responses received with a failure MAP cause of unexpected data.
Unknown Subscriber	The total number of Send Routeing Info Request responses received with a failure MAP cause of unknown subscriber.
Facility Not Supported	The total number of Send Routeing Info Request responses received with a failure MAP cause of facility not supported.
Unauthorized Network	The total number of Send Routeing Info Request responses received with a failure MAP cause of unauthorized network.
Call Barred	
Note MS GPRS Present Request Failure Causes:	
Mandatory IE Incorrect	
Mandatory IE Missing	
PDU Notification Failure Causes	

Field	Description
Unsupported Service	The total number of PDU Notification responses received with a failure cause code of 200 (C8H, Service not supported).
System Failure	The total number of PDU Notification responses received with a failure cause code of 204 (CCH, System failure).
MS GPRS Detached	The total number of PDU Notification responses received with a failure cause code of 195 (C3H, MS is GPRS Detached).
GPRS Cnxn Suspended	The total number of PDU Notification responses received with a failure cause code of 207 (CFH, GPRS connection suspended).
Mandatory IE Incorrect	The total number of PDU Notification responses received with a failure cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of PDU Notification responses received with a failure cause code of 202 (CAH, Mandatory IE incorrect).
Optional IE Incorrect	The total number of PDU Notification responses received with a failure cause code of 203 (CBH, Optional IE incorrect).
Invalid Message Format	The total number of PDU Notification responses received with a failure cause code of 193 (C1H, Invalid message format).
Unknown IMSI	The total number of PDU Notification responses received with a failure cause code of 194 (C2H, IMSI not known).
Roaming Restriction	
No Resources	The total number of PDU Notification responses received with a failure cause code of 199 (C7H, No resources available).
PDU Notification Reject Causes	
MS Not GPRS Responding	The total number of PDU Notification responses received with a reject cause code of 196 (C4H, MS is not GPRS Responding).
MS Refuses	The total number of PDU Notification responses received with a reject cause code of 197 (C5H, MS Refuses).
Mandatory IE Incorrect	The total number of PDU Notification responses received with a reject cause code of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of PDU Notification responses received with a reject cause code of 202 (CAH, Mandatory IE incorrect).
Optional IE Incorrect	The total number of PDU Notification responses received with a reject cause code of 203 (CBH, Optional IE incorrect).
Invalid Message Format	The total number of PDU Notification responses received with a reject cause code of 193 (C1H, Invalid message format).
MS Info Change Reporting Messages:	

Field	Description
MS Info Chng Notif Req	
Accepted	
Denied	
Discarded	
MS Info Change Reporting Message Failure Causes:	
Invalid Message Format	
Unknown IMSI	
Mandatory IE Incorrect	
Mandatory IE Missing	
Optional IE Incorrect	
System Failure	
Qos QCI Stats	
QCI 1	
CPC QoS Accepted	The number of QoS requests with QCI 1 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci1 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci1 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci1 coming from UPC were downgraded.
QCI 2	
CPC QoS Accepted	The number of QoS requests with qci 2 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci2 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 2 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 2 coming from UPC were downgraded.
QCI 3	
CPC QoS Accepted	The number of QoS requests with qci 3 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 3 coming from CPC were downgraded.

Field	Description
UPC QoS Accepted	The number of QoS requests with qci 3 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 3 coming from UPC were downgraded.
QCI 4	
CPC QoS Accepted	The number of QoS requests with qci 4 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 4 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 4 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 4 coming from UPC were downgraded.
QCI 5	
CPC QoS Accepted	The number of QoS requests with qci 5 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 5 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 5 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 5 coming from UPC were downgraded.
QCI 6	
CPC QoS Accepted	The number of QoS requests with qci 6 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 6 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 6 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 6 coming from UPC were downgraded.
QCI 7	
CPC QoS Accepted	The number of QoS requests with qci 7 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 7 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 7 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 7 coming from UPC were downgraded.
QCI 8	

Field	Description
CPC QoS Accepted	The number of QoS requests with qci 8 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 8 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 8 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 8 coming from UPC were downgraded.
QCI 9	
CPC QoS Accepted	The number of QoS requests with qci 9 coming from Create PDP Context (CPC) were accepted, as as it is without downgrading.
CPC QoS Downgraded	The number of QoS requests with qci 9 coming from CPC were downgraded.
UPC QoS Accepted	The number of QoS requests with qci 9 coming from Update PDP Context (UPC) were accepted as it is without any downgrading.
UPC QoS Downgraded	The number of QoS requests with qci 9 coming from UPC were downgraded.
GTPC Receive	
Total Packets	The total number of GTPC packets received.
Total Bytes	The total number of GTPC bytes received.
GTPC Send	
Total Packets	The total number of GTPC packets transmitted.
Total Bytes	The total number of GTPC bytes transmitted.
GTPC Outgoing Throttling:	
Total Messages Rate Limited	
Total Messages Rate Limited No Delay	
Total Messages Queued	
Total Messages Aborted From Queue	
Total Messages Throttled	
Prioritized APN/ARP Statistics:	
CPC Req allowed under APN prioritization	
CPC Req allowed under ARP prioritization	

Field	Description
GTPC Incoming Throttling:	
Total Messages Rate Limited	
Total Messages Scheduled	
Total Messages Currently Queued	
Total Messages Dropped From Queue	
Total Messages Throttled	

# CHAPTER 61

## show gtpc-load-control-profile full all

- [show gtpc-load-control-profile full all](#), on page 1167

### show gtpc-load-control-profile full all

This chapter includes the output of the **show gtpc-load-control-profile full all** command.

*Table 298: show gtpc-load-control-profile full all Command Output Descriptions*

Field	Description
GTP-C Load Control Profile Name	The name of this configured Load Control Profile. A string of 1 to 64 alphanumeric characters.
<b>Weightage</b>	
System CPU Utilization Weightage	The weightage, as a percentage of 100, configured for system CPU utilization for this Load Control Profile.
System Memory Utilization Weightage	The weightage, as a percentage of 100, configured for memory utilization for this Load Control Profile.
License Session Utilization Weightage	The weightage, as a percentage of 100, configured for license session utilization for this Load Control Profile.
<b>Inclusion Frequency</b>	
Change Factor	The change factor, as a percentage of 1 to 20, configured for this Load Control Profile.
Advertisement Interval	The configured advertisement-interval for this Load Control Profile. Valid entries are from 0 to 3600 seconds. The default is 300 seconds.
<b>Load control information Handling</b>	
Homer	Indicates if load control information handling is enabled for the home PLMN.
Visitor	Indicates if load control information handling is enabled for the visited PLMN.

Field	Description
<b>Load control information Publishing</b>	
Homer:	Indicates if load control information publishing is enabled for the home PLMN.
Visitor	Indicates if load control information publishing is enabled for the visited PLMN.
<b>Load Threshold</b>	
Threshold	The load threshold setting configured for this node.

## CHAPTER 62

# show gtpc-overload-control-profile full all

- [show gtpc-overload-control-profile full all, on page 1169](#)

## show gtpc-overload-control-profile full all

This chapter includes the show gtpc-overload-control-profile full all command output table.

*Table 299: show gtpc-overload-control-profile full all Command Output Descriptions*

Field	Description
<b>Weightage</b>	
System CPU Utilization Weightage	The weightage, as a percentage of 100, configured for system CPU utilization for this Overload Control Profile.
System Memory Utilization Weightage	The weightage, as a percentage of 100, configured for memory utilization for this Overload Control Profile.
License Session Utilization Weightage	The weightage, as a percentage of 100, configured for license session utilization for this Overload Control Profile.
<b>Tolerance</b>	
Report Reduction Metric	The configured report reduction metric, as a percentage of 100, configured for this Overload Control Profile.
Self Protection Limit	The configured self-protection limit, as a percentage of 100, configured for this Overload Control Profile.
Initial-Reduction-Metric	The initial reduction metric, as a percentage of 100, configured for this Overload Control Profile.
<b>Inclusion Frequency</b>	
Change Factor	The change factor, as a factor of 1 to 20, configured for this Load Control Profile.
Advertisement Interval	The configured advertisement-interval for this Load Control Profile. Valid entries are from 0 to 3600 seconds. The default is 300 seconds.

Field	Description
<b>Validity Period</b>	The configured validity period, configured for this Overload Control Profile, after which the overload control information will no longer be valid.
<b>Throttling Profile</b>	
Exclude Emergency Events	Indicates if excluding the emergency events from throttling due to the peer's overload reduction metric is enabled or disabled for this Overload Control Profile. n/a indicates that Exclude Emergency Events is disabled.
Exclude EARP	Indicates which messages with earp (one or more of messages 1-15) are configured to be excluded from throttling for this Overload Control Profile. n/a indicates that Exclude EARP is disabled.
<b>Self-Protection Behavior</b>	
Exclude EARP	Indicates if self-protection-behavior is configured for up to three EARP values. This setting configures the node so that incoming request messages for the configured evolved ARP priority values are not rejected even if the system is under self-protection mode. n/a indicates that self-protection behavior is disabled for EARP(s).
Exclude APN	Indicates if self-protection-behavior is configured for up to three APNs. n/a indicates that self-protection behavior is disabled for APN(s).
<b>Overload control information Handling</b>	
Homer:	Indicates if the handling of overload control information for the home PLMN is enabled or disabled.
Visitor:	Indicates if the handling of overload control information for the visited PLMN is enabled or disabled.
<b>Overload control information Publishing</b>	
Homer:	Indicates if the publishing of overload control information for the home PLMN is enabled or disabled.
Visitor:	Indicates if the publishing of overload control information for the visited PLMN is enabled or disabled.
<b>Message Prioritization</b>	
Group1	<p>Indicates the message prioritization, as a percentage of 100, configured for the following group of messages (group1):</p> <ul style="list-style-type: none"> <li>• Update Bearer Request message for default bearer generated from P-GW ingress</li> <li>• Update Bearer Request message for dedicated bearer generated from P-GW ingress</li> <li>• Handoff Create Session Request message generated from ePDG egress.</li> </ul> <p>The default setting is 60%.</p>

Field	Description
Group2	<p data-bbox="609 283 1455 348">Indicates the message prioritization, as a percentage of 100, configured for the following group of messages (group2):</p> <ul data-bbox="646 365 1433 510" style="list-style-type: none"><li data-bbox="646 365 1433 430">• Create Bearer Request message for default bearer generated from P-GW ingress</li><li data-bbox="646 447 1433 510">• PDN connection requested Create Session Request message from ePDG egress</li></ul> <p data-bbox="609 541 898 573">The default setting is 40%.</p>

# CHAPTER 63

## show gtp

This chapter includes the **show gtp** command output tables.

- [show gtp storage-server counters](#), on page 1205
- [show gtp storage-server local file counters](#), on page 1205
- [show gtp storage-server local file statistics](#), on page 1205
- [show gtp storage-server status](#), on page 1206
- [show gtp storage-server streaming file statistics](#), on page 1208
- [show gtp storage-server streaming file statistics verbose](#), on page 1209
- [show gtp storage-server streaming file counters all](#), on page 1210

## show gtp accounting servers

**Table 300: show gtp accounting servers Command Output Descriptions**

Field	Description
Context Name	The name of the system context in which the CGF is configured.
Primary Accounting server address	The IP address of the CGF.
port	The TCP port over which GTPP messaging is performed.
priority	The configured priority of the CGF.
State	The status of the CGF as Active or Inactive.
Group	The GTPP server group name in which this server is configured.

# show gtp counters all

Table 301: show gtp counters all Command Output Descriptions

Field	Description
Outstanding GCDRs	The current total number of G-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding GCDRs	The total number of G-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived GCDRs	The current total number of G-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
GCDRs buffered with AAAPROXY	The current total number of G-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
GCDRs buffered with AAAMGR	The current total number of G-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding eGCDRs	The current total number of eG-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding eGCDRs	The total number of eG-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived eGCDRs	The current total number of eG-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
eGCDRs buffered with AAAPROXY	The current total number of eG-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
eGCDRs buffered with AAAMGR	The current total number of eG-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding MCDRs	The current total number of M-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding MCDRs	The total number of M-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived MCDRs	The current total number of M-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
MCDRs buffered with AAAPROXY	The current total number of M-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.

Field	Description
MCDRs buffered with AAAMGR	The current total number of M-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding PGWGCDRs	The current total number of PGW G-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding PGWGCDRs	The total number of PGW G-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived PGWGCDRs	The current total number of PGW G-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
PGWGCDRs buffered with AAAPROXY	The current total number of PGW G-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
PGWGCDRs buffered with AAAMGR	The current total number of PGW G-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding SCDRs	The current total number of S-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding SCDRs	The total number of S-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived SCDRs	The current total number of S-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SCDRs buffered with AAAPROXY	The current total number of S-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SCDRs buffered with AAAMGR	The current total number of S-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding S-SMO-CDRs	The current total number of S-SMO-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding S-SMO-CDRs	The total number of S-SMO-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived S-SMO-CDRs	The current total number of S-SMO-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
S-SMO-CDRs buffered with AAAPROXY	The current total number of S-SMO-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
S-SMO-CDRs buffered with AAAMGR	The current total number of S-SMO-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.

Field	Description
Outstanding S-SMT-CDRs	The current total number of S-SMT-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding S-SMT-CDRs	The total number of S-SMT-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived S-SMT-CDRs	The current total number of S-SMT-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
S-SMT-CDRs buffered with AAAPROXY	The current total number of S-SMT-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
S-SMT-CDRs buffered with AAAMGR	The current total number of S-SMT-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding LCS-MT-CDRs	The current total number of LCS-MT-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding LCS-MT-CDRs	The total number of LCS-MT-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived LCS-MT-CDRs	The current total number of LCS-MT-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
LCS-MT-CDRs buffered with AAAPROXY	The current total number of LCS-MT-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
LCS-MT-CDRs buffered with AAAMGR	The current total number of LCS-MT-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding LCS-MO-CDRs	The current total number of LCS-MO-CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding LCS-MO-CDRs	The total number of LCS-MO-CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived LCS-MO-CDRs	The current total number of LCS-MO-CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
LCS-MO-CDRs buffered with AAAPROXY	The current total number of LCS-MO-CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
LCS-MO-CDRs buffered with AAAMGR	The current total number of LCS-MO-CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.

Field	Description
Outstanding GMBH CDRs	The current total number of GMBH CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding GMBH CDRs	The total number of GMBH CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived GMBH CDRs	The current total number of GMBH CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
GMBH CDRs buffered with AAAPROXY	The current total number of GMBH CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
GMBH CDRs buffered with AAAMGR	The current total number of GMBH CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding SGW CDRs	The current total number of S-GW CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding SGW CDRs	The total number of S-GW CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived SGW CDRs	The current total number of S-GW CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SGW CDRs buffered with AAAPROXY	The current total number of S-GW CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SGW CDRs buffered with AAAMGR	The current total number of S-GW CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
WLAN CDRs buffered with AAAPROXY	The current total number of WLAN CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
WLAN CDRs buffered with AAAMGR	The current total number of WLAN CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding ePDG CDRs	The current total number of ePDG CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding ePDG CDRs	The total number of ePDG CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived ePDG CDRs	The current total number of ePDG CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
ePDG CDRs buffered with AAAPROXY	The current total number of ePDG CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.

Field	Description
ePDG CDRs buffered with AAAMGR	The current total number of ePDG CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
Outstanding SMBMS CDRs	The current total number of SMBMS CDRs sent to the CGF(s) for which no response was received.
Possibly Duplicate Outstanding SMBMS CDRs	The total number of SMBMS CDRs sent to the CGF(s) with a packet transfer command of "Send Possibly Duplicated Data Record Packet"
Archived SMBMS CDRs	The current total number of SMBMS CDRs achieved by CGF. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SMBMS CDRs buffered with AAAPROXY	The current total number of SMBMS CDRs buffered by the system's AAA Proxy tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.
SMBMS CDRs buffered with AAAMGR	The current total number of SMBMS CDRs buffered by the system's AAA Manager tasks. <b>Note</b> This counter is only present if the <b>all</b> keyword is used.

## show gtp group

The output of this command is enhanced to display the following fields

**Table 302: show gtp group Command Output Descriptions**

Field	Description
Group name	The GTPP server group name.
Context	The context name of the configured GTPP group.
CDR timeout	Indicates the configured timeout duration in seconds for CDRs.
CDR max-retries	Indicates the configured maximum retries for CDR.
ECHO timeout	Indicates the configured timeout duration in seconds for ECHO message.
ECHO max-retries	Indicates the configured maximum retries for ECHO message.
Dead time	Indicates the dead time for specific GTPP group.
Detect-dead-server consecutive-failures	Indicates the total consecutive failure of dead server detection probe.
Dead-server-suppress-cdrs	Indicates whether suppression of CDRs is enabled or not when a dead server is detected.
Duplicate-hold-time minutes	Configured time in minutes to hold duplicate CDRs.
Redirection allowed	Indicates whether redirection is allowed or not.

Field	Description
Source-port-validation	Indicates whether source port validation is enabled or not.
Charging-agent address	Indicates the IP address of configured charging agent.
Charging-agent port	Indicates the port number of configured charging agent.
Suppress zero-volume CDRs	Indicates if the suppression of zero byte data count CDRs is enabled or not.
Max CDR size	Indicates the maximum CDR size allowed in bytes.
Max CDRs in msg	Indicates the maximum CDRs allowed in a message.
Max CDRs wait-time	Indicates the maximum wait/live time allowed for CDRs.
Dictionary	Indicates the applicable GTPP dictionary for CDR encoding.
Data-req start seq-num	Indicates the starting sequence number of data request message.
start-file-seq-num	Indicates the starting file sequence number during chassis load/reload. It will be active only for recovery failure case.
recover-file-seq-num	Indicates whether recovery of file seq num is needed during chassis reload.
Storage Server	This group indicates the storage server information if CDR storage mode is remote. This counter is applicable for the ASR 5000 only.
Mode	Indicates the mode of the CDR storage. Possible modes are: <ul style="list-style-type: none"> <li>• Local: CDRs stored on local HDD on SMC card.</li> <li>• Remote: CDRs stored on remote GSS server.</li> </ul> This counter is applicable for the ASR 5000 only.
Storage-server address	Indicates the configured GTPP storage server IP address.
Storage-server port	Indicates the port number of configured GTPP storage server.
Storage-server timeout	indicates the timeout in seconds configured for GTPP storage server.
Storage-server max-retries	Indicates the maximum retries configured for the GSS messages.
Local Storage	This group indicates the storage server information, if CDR storage mode is local. This counter group is applicable for the ASR 5000 only.
Last-MS-Timezone	Indicates the "Last MS-Timezone" in the CDR field.
last-uli	Indicates the "Last ULI" in the CDR field.
AAAmgr Wait Time	Indicates the time in seconds that AAAmgr has to wait trying to accumulate 255 CDRs.
File Transfer Mode	Indicates whether Push method is provisioned to send local CDR files to a remote host.
Push via Local Context	Specifies whether local context was used to reach remote server with Push method.

Field	Description
File rotation volume-limit	Indicates the volume of CDR file in MB after which CDR file rotation will happen. This counter group is applicable for the ASR 5000 only.
File rotation CDR-count	Indicates the number of CDRs to include in a CDR file after which CDR file rotation will happen. This counter group is applicable for the ASR 5000 only.
File rotation time-interval	Indicates the time duration in seconds after after which CDR file rotation will happen. This counter group is applicable for the ASR 5000 only.
Force File rotation by time-interval	Indicates whether force file rotation is enabled or not. If this is enabled it forces the system for file-rotation at specified interval even if there are no CDRs generated.
File compression	Indicates the whether file compression is configured or not on CDR files. This counter group is applicable for the ASR 5000 only.
File format	Indicates the format name of file to store CDRs in specified format in CDR file. This counter group is applicable for the ASR 5000 only.
Purge-processed-files	Indicates the configuration of purge interval duration of processed files.  This is an optional setting and can be configured with <b>purge-interval</b> <i>purge_dur</i> keyword with <b>gtp storage-server local file purge-processed-files</b> command in GTPP Group Configuration Mode.
Attributes	
APN present	Indicates whether or not the "APN" attribute is present in the CDR.
PDP type present	Indicates whether or not the "PDP Type" attribute is present in the CDR.
PDP address present	Indicates whether or not the optional field "PDP Address" is present in the CDR.
Dynamic flag present	Indicates whether or not the "Dynamic Flag" attribute is present in the CDR.
Diagnostics present	Indicates whether or not the "Diagnostics" attribute is present in the CDR.
Node ID present	Indicates whether or not the "Node ID" attribute is present in the CDR.
Charging-Char sel mode present	Indicates whether or not the "Charging Characteristic Selection Mode" attribute is present.
MSISDN present	Indicates whether or not the MSISDN attribute is present.
IMEI present	Indicates whether or not the IMEI attribute is present.
RAT present	Indicates whether or not the RAT attribute is present.
MS-Timezone present	Indicates whether or not the "MS-Timezone" attribute is present in the CDR.
User Location Information present	Indicates whether or not the "User Location Information" attribute is present in the CDR.
TWAN User Location Information present	Indicates whether or not the "TWAN User Location Information" attribute is present in the CDR.

Field	Description
List of service Data present	Indicates whether or not the optional field "List of Service Data" is present in the CDR.
Served MNAI present	Indicates whether or not the optional field "Served MNAI" is present in the CDR.
PGW PLMN-ID present	Indicates whether or not the optional field "PGW PLMN-ID" is present in the CDR.
Start-Time present	Indicates whether or not the optional field "Start-Time" is present in the CDR.
Stop-Time present	Indicates whether or not the optional field "Stop-Time" is present in the CDR.
PDN connection ID present	Indicates whether or not the optional field "PDN Connection ID" is present in the CDR.
Served PDP PDN address extension present	Indicates whether or not the optional field "Served-pdp-pdn-address-extension" is present in the CDR.
SGSN-Change present	Indicates whether or not the optional field "SGSN Change" is present in the CDR.
Duration in milliseconds	Indicates the configured duration in milliseconds.
PLMN-id present	Indicates whether or not the public land mobile network identifier attribute is present in the CDR.
PLMN-id unknown-use	Indicates whether a public land mobile network identifier which is of unknown use is present in the CDR.
Local-rec-seq-num present	Indicates whether or not the local record sequence number attribute is present.
Node-id suffix	Indicates whether or not the server node id attribute is present in the CDR.
APN-AMBR	Indicates whether or not the optional field "apn-ambr" is present in the CDR.
Furnish-charging-information present	Indicates whether or not the optional field "PSFurnishChargingInformation" is present in the CDR.
Cell-plmn-id	Indicates whether cell public land mobile network identifier attribute is present or not.
Camel-Info	Indicates whether or not the "CAMEL" specific fields are present in the S-CDR, M-CDR, S-SMO-CDR and S-SMT-CDR.
Sms	Indicates the SMS attribute information.
Recording entity	Indicates whether or not the SMS recording entity is present in the attribute.
Service centre	Indicates whether or not the SMS service center information is present in the attribute.
Destination number	Indicates whether the destination number for SMS is present in the attribute.
Record extensions:	Indicates the information for record extensions.
Rat	Indicates whether radio access type information is present in record extension attributes or not.
qos max-length	Displays the QoS max-length configured value. If this field is not configured, "None" will be displayed.

Field	Description
Packet count present	Indicates if including packet count is enabled in G-CDR.
Triggers	
Volume-limit	Indicates the status of configured volume limit trigger. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Time-limit	Indicates the status of configured time limit trigger. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Tariff-time-change	Indicates the status of configured trigger for tariff time change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Serving-Node-change-limit	Indicates the status of configured trigger for SGSN change limit. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Intra-SGSN-group-change	Indicates the status of configured trigger for intra-SGSN group change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Inter-plmn-sgsn-change	Indicates the status of configured trigger for SGSN change between PLMN. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Egcdr-max-losdv-limit	Indicates the status of configured trigger for maximum list of service data volume (LoSDV) limit for eG-CDRs. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Qos-change	Indicates the status of configured trigger for QoS change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>

Field	Description
RAT-change	Indicates the status of configured trigger for RAT change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
on RAT-change generate	Indicates whether to generate CDRs for RAT change.
ULI-Change	Indicates the status of configured trigger for ULI change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
MS-timezone-change	Indicates the status of configured trigger for change in time zone of MS. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Routing-area-update	Indicates the status of configured trigger for update in routing area. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Presv-mode-state-change	Enables/disables preservation-mode-change trigger. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Direct-tunnel	Indicates the status of configured trigger for direct tunnel. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Cell-update	Enables cell-update trigger for S-CDR (if the dictionary specified in the gtp group supports the cell update. This trigger is available only for 2G. Currently "custom18" supports cell update trigger. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
PLMN-id-change	Enables plmn-id-change trigger for SGSN CDRs provided, if the dictionary specified in the gtp group supports the plmn-id-change. Possible status are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>

Field	Description
Mbms config	Specifies the MBMS configuration information.
Buckets	Indicates the total number of data buckets configured for MBMS service.
Interval	Indicates the interval duration configured for MBMS service.
Volume	Indicates the data volume configured for MBMS service.
Tarif:	Specifies the tariff configuration for MBMS service.
Time1	Indicates the tariff configuration for time slot 1 in MBMS service.
Time2	Indicates the tariff configuration for time slot 2 in MBMS service.
Time3	Indicates the tariff configuration for time slot 3 in MBMS service.
Time4	Indicates the tariff configuration for time slot 4 in MBMS service.
EGCDR	Specifies the configuration for eG-CDRs.
Lotdv-max-containers	Indicates the maximum number of containers configured for list of traffic data volume (LoTDV) for eG-CDRs.
Losdv-max-containers	Indicates the maximum number of containers configured for list of service data volume (LoSDV) for eG-CDRs.
Service-idle-timeout	Indicates the idle timeout duration configured in seconds for service for eG-CDRs.
Rulebase-max-length	Indicates the maximum character length of charging rulebase name in LOSDV, if configured to a non-zero value.
Service-interval	Indicates whether interval duration configured in seconds to retry for eG-CDRs.
Service-uplink	Indicates the total bytes uplinked for service in eG-CDRs.
Service-downlink	Indicates the total bytes downlinked for service in eG-CDRs.
Service-total	Indicates the total bytes in traffic (uplinked+ downlinked) for service in eG-CDRs.
Closing-cause-unique	Indicates whether any unique closing cause set for eG-CDR closing.
Include-all-losdvs	Indicates whether eG-CDR configured to include all LoSDV.
Delete-service-thresholds	Indicates the configured threshold in eG-CDR to delete the service.
<b>Secondary RAT records present</b>	Specifies whether the Secondary RAT record is present or not. The available options are: <ul style="list-style-type: none"> <li>• no</li> <li>• yes</li> </ul>
<b>Limit-secondary-rat-usage</b>	Specifies a limit for Secondary RAT usage report.

## show gtp statistics

Table 303: show gtp statistics Command Output Descriptions

Field	Description
<b>Accumulated Statistics</b>	
Start Collection Req	Total number of Start Collection requests.
Normal Release Req	Total number of Normal Release requests.
Management Intervention Req	Total number of Management Intervention requests.
Abnormal Release Req	Total number of Abnormal Release requests.
Time Limit Req	Total number of Time Limit requests.
Volume Limit Req	Total number of Volume Limit requests.
SGSN Change Req	Total number of SGSN Change requests.
Maximum Change Condition Req	Total number of Maximum Change Condition requests.
RAT Change Req	Total number of RAT Change requests.
MS Time Zone Change Req	Total number of MS Time Zone Change requests.
List of Down Stream Node Change	List of down-stream node change.
Intra SGSN Intersystem Change Req	Total number of Intra SGSN Intersystem Change requests.
FOCS/ODB ACL Violation Req	Indicates the total number of FOCS enabled sessions closed due to ACL rule violation recieved for FOCS and/or ODB.
Inactivity Timeout (FOCS enabled):	Indicates the total number of FOCS enabled sessions closed due to inactivity timeout.
SGW Relocation	Indicates the total number of S-GW to SGSN relocations.
Total G-CDR transmission	Total number of G-CDR transmissions.
Total eG-CDR transmission	This indicates the total number of eG-CDRs transmitted to the mediation system.
Total PGW-CDR transmission	This indicates the total number of PGW-CDRs transmitted to the mediation system.
Total S-CDR transmission	Total number of S-CDR transmissions.
Total M-CDR transmission	Total number of M-CDR transmissions.
Total S-SMO-CDR transmission	Total number of S-SMO-CDR transmissions.
Total S-SMT-CDR transmission	Total number of S-SMT-CDR transmissions.
Total LCS-MT-CDR transmission	Total number of LCS-MT-CDR transmissions.

Field	Description
Total LCS-MO-CDR transmission	Total number of LCS-MO-CDR transmissions.
Total G-MB-CDR transmission	Total number of G-MB-CDR transmissions.
Total SGW-CDR transmission	Total number of SGW-CDR transmissions.
Total ePDG-CDR transmission	Total number of ePDG-CDR transmissions.
Total WLAN-CDR transmission	Total number of WLAN-CDR transmissions.
Total G-CDR retransmission	Total number of G-CDR retransmissions.
Total eG-CDR retransmission	This indicates the total number of eG-CDRs re-transmitted to the mediation system. This will happen whenever SGSN/GGSN is not getting the response from the mediation server in a stipulated period of time.
Total PGW-CDR retransmission	This indicates the total number of PGW-CDRs re-transmitted to the mediation system. This will happen whenever PGW/SGW is not getting the response from the mediation server in a stipulated period of time.
Total S-CDR retransmission	Total number of S-CDR retransmissions.
Total M-CDR retransmission	Total number of M-CDR retransmissions.
Total S-SMO-CDR retransmission	Total number of S-SMO-CDR retransmissions.
Total S-SMT-CDR retransmission	Total number of S-SMT-CDR retransmissions.
Total LCS-MT-CDR retransmission	Total number of LCS-MT-CDR retransmissions.
Total LCS-MO-CDR retransmission	Total number of LCS-MO-CDR retransmissions.
Total SGW-CDR retransmission	Total number of SGW-CDR retransmissions.
Total ePDG-CDR retransmission	Total number of ePDG-CDR retransmissions.
Total WLAN-CDR retransmission	Total number of WLAN-CDR retransmissions.
Total G-MB-CDR retransmission	Total number of G-MB-CDR retransmissions.
Total G-CDR accepted	Total number of G-CDR accepted.
Total eG-CDR accepted	This indicates the total number of eG-CDRs successfully sent to the mediation server for which the SGSN/GGSN received the ACCEPT response.
Total PGW-CDR accepted	This indicates the total number of PGW-CDRs successfully sent to the mediation server for which the PGW/SGW received the ACCEPT response.
Total S-CDR accepted	Total number of S-CDR accepted.
Total M-CDR accepted	Total number of M-CDR accepted.
Total S-SMO-CDR accepted	Total number of S-SMO-CDR accepted.

Field	Description
Total S-SMT-CDR accepted	Total number of S-SMT-CDR accepted.
Total LCS-MT-CDR accepted	Total number of LCS-MT-CDR accepted.
Total LCS-MO-CDR accepted	Total number of LCS-MO-CDR accepted.
Total G-MB-CDR accepted	Total number of G-MB-CDR accepted.
Total SGW-CDR accepted	Total number of SGW-CDR accepted.
Total ePDG-CDR accepted	Total number of ePDG-CDR accepted.
Total WLAN-CDR accepted	Total number of WLAN-CDR accepted.
Total G-CDR transmission failures	Total number of G-CDR transmission failures.
Total eG-CDR transmission failures	This indicates the total number of eG-CDRs successfully sent to the mediation server for which the SGSN/GGSN received the FAIL response.
Total PGW-CDR retransmission	This indicates the total number of PGW-CDRs successfully sent to the mediation server for which the PGW/SGW received the FAIL response.
Total S-CDR transmission failures	Total number of S-CDR transmission failures.
Total M-CDR transmission failures	Total number of M-CDR transmission failures.
Total S-SMO-CDR transmission failures	Total number of S-SMO-CDR transmission failures.
Total S-SMT-CDR transmission failures	Total number of S-SMT-CDR transmission failures.
Total LCS-MT-CDR transmission failures	Total number of LCS-MT-CDR transmission failures.
Total LCS-MO-CDR transmission failures	Total number of LCS-MO-CDR transmission failures.
Total G-MB-CDR transmission failures	Total number of G-MB-CDR transmission failures.
Total SGW-CDR transmission failures	Total number of SGW-CDR transmission failures.
Total ePDG-CDR transmission failures	Total number of ePDG-CDR transmission failures.
Total WLAN-CDR transmission failures	Total number of WLAN-CDR transmissions failures.
G-CDR transmission failure percent	G-CDR transmission failure percentage.
eG-CDR transmission failures percent	Total percentage of transmitted eG-CDRs failed on peer node.
PGW-CDR transmission failures percent	Total percentage of transmitted PGW-CDRs failed on peer node.
S-CDR transmission failure percent	S-CDR transmission failure percentage.

Field	Description
M-CDR transmission failure percent	M-CDR transmission failure percentage.
S-SMO-CDR transmission failure percent	S-SMO-CDR transmission failure percentage.
S-SMT-CDR transmission failure percent	S-SMT-CDR transmission failure percentage.
LCS-MT-CDR transmission failure percent	LCS-MT-CDR transmission failure percentage.
LCS-MO-CDR transmission failure percent	LCS-MO-CDR transmission failure percentage.
G-MB-CDR transmission failure percent	G-MB-CDR transmission failure percentage.
SGW-CDR transmission failure percent	SGW-CDR transmission failure percentage.
ePDG-CDR transmission failure percent	ePDG-CDR transmission failure percentage.
WLAN-CDR transmission failure percent	WLAN-CDR transmission failure percentage.
CDRs purged by dead-server suppress-cdrs	Total number of CDRs purged in all GTPP server groups configured on system when <b>gtp dead-server suppress-cdrs</b> command is enabled.
<b>Charging Characteristics Statistics</b>	
Hot	The charging characteristic setting.
Normal	The charging characteristic setting.
Prepaid	The charging characteristic setting.
Flat	The charging characteristic setting.
Unknown	The charging characteristic setting.
<b>CGF Specific Statistics</b>	
<b>Data Record Transfer Requests Sent</b>	
<p>When the primary CGF goes down, all outstanding requests with the primary CGF are marked as Possibly Duplicate and sent to the secondary CGF. This is because of the uncertainty as to whether the primary CGF processed the requests or not. So the seq-numbers (for primary CGF) for these requests are stored.</p> <p>When the primary CGF comes back again, an Empty DRT with the stored seq-numbers is sent to the primary CGF. The CGF can reply either REQ_ALREADY_FULFILLED (primary CGF processed the request. Cancel request is sent to the secondary CGF to delete the request) or REQUEST_ACCEPTED (primary CGF has not got this request before. Release request is sent to secondary to store the request).</p>	
Send	Total number of DRT requests sent.

Field	Description
Possibly Duplicate	Total number of possibly duplicate DRT requests sent.
Cancel	Total number of cancel DRT requests sent.
Release	Total number of release DRT requests sent.
Empty	Total number of empty DRT requests sent.
<b>Data Record Transfer Requests Retried</b>	
Send	Total number of DRT request retried.
Possibly Duplicate	Total number of DRT requests marked possibly duplicate retried.
Cancel	Total number of cancel DRT requests retried.
Release	Total number of release DRT requests retried.
Empty	Total number of empty DRT requests retried.
<b>Data Record Transfer Requests Success</b>	
Send	Total number of DRT requests sent successfully.
Possibly Duplicate	Total number of DRT requests marked possibly duplicate sent successfully.
Cancel	Total number of canceled DRT requests sent successfully.
Release	Total number of release DRT requests sent successfully.
Empty	Total number of empty DRT requests sent successfully.
<b>Data Record Transfer Response Cause</b>	
Accepted	Total number of DRT response messages with cause as "accepted".
Not Fulfilled	Total number of DRT response messages with cause as "not fulfilled".
Already Fulfilled	Total number of DRT response messages with cause as "already fulfilled".
Dup Already Fulfilled	Total number of DRT response messages with cause as "duplicate already fulfilled".
Invalid Msg Format	Total number of DRT response messages with cause as "invalid message format".
Mandatory IE Missing	Total number of DRT response messages with cause as "mandatory IE missing".
Service not supported	Total number of DRT response messages with cause as "service not supported".
Version not supported	Total number of DRT response messages with cause as "version not supported".
Mandatory IE incorrect	Total number of DRT response messages with cause as "mandatory IE incorrect".
Optional IE incorrect	Total number of DRT response messages with cause as "optional IE incorrect".
No Resources	Total number of DRT response messages with cause as "no resources".

Field	Description
System Failure	Total number of DRT response messages with cause as "system failure".
CDR Decode Error	Total number of DRT response messages with cause as "CDR decode error".
Seq No incorrect	Total number of DRT response messages with cause as "sequence number incorrect".
Unknown Cause	Total number of DRT response messages with unknown cause.
<b>GTP Echo Messages</b>	
Echo Req Sent	Total number of echo request messages sent.
Echo Req Rcvd	Total number of echo request messages received.
Echo Rsp Rcvd	Total number of echo response messages received.
Echo Rsp Sent	Total number of echo response messages sent.
<b>Redirection Req/Rsp Messages</b>	
Redirection Req Rcvd	Total number of redirection request messages received.
Redirection Rsp Sent	Total number of redirection response messages sent.
<b>Redirection Request Cause</b>	
Trans Buffer full	Total number of redirection requests with cause code as "transmit buffers are full".
Recv Buffer Full	Total number of redirection requests with cause code as "receive buffers are full".
Other Node Down	Total number of redirection requests with cause code as "other node is about to go down".
Self Node down	Total number of redirection requests with cause code as "this node is about to go down".
System Failure	Total number of redirection requests with cause code as "system failure".
<b>Redirection Response Cause</b>	
Accepted	Total number of redirection responses with cause code as "accepted".
Service Not Supported	Total number of redirection responses with cause code as "service not supported".
System Failure	Total number of redirection responses with cause code as "system failure".
Mandatory IE Incorrect	Total number of redirection responses with cause code as "mandatory IE incorrect".
Mandatory IE Missing	Total number of redirection responses with cause code as "mandatory IE missing".
Optional IE incorrect	Total number of redirection responses with cause code as "optional IE incorrect".
Invalid Msg Format	Total number of redirection responses with cause code as "invalid message format".
Version Not Supported	Total number of redirection responses with cause code as "version not supported".

Field	Description
No Resources	Total number of redirection responses with cause code as "no resources".
<b>Node Alive Req/Rsp Messages</b>	
Node Alive Req Rcvd	Total number of node alive request messages received.
Node Alive Req Sent	Total number of node alive request messages sent.
Node Alive Rsp Sent	Total number of node alive response messages sent.
Node Alive Rsp Rcvd	Total number of node alive response messages received.
<b>Invalid messages received</b>	
Invalid Sequence Number	Total number of messages with invalid sequence number received.
Unknown CGF	Total number of messages received with unknown CGF.
Unknown Msg type	Total number of messages received with unknown message type.
<b>Round Trip Time</b>	
Last DRT Round Trip Time	Time taken for the last DRT round trip.
Average DRT Round Trip Time	Average time taken for DRT round trip.

## show gtp statistics group

The output of this CLI command displays the following parameter.

Field	Description
<b>Total PGW-CDR exceed size limit</b>	Displays the total number of CDRs that exceeded size limit in P-GW.

## show gtp statistics cgf-address

*Table 304: show gtp statistics cgf-address Command Output Descriptions*

Field	Description
Accumulated Statistics	
Start Collection Req	The total number of accounting start requests generated.  <b>NOTE:</b> These requests are not sent to CGF. The requests are just a system record that accounting for a session has started and in future releases may be required to be sent to CGF.

Field	Description
Normal Release Req	The total number of requests generated because of normal PDP context deletion (i.e. PDP context deletion initiated by SGSN or GGSN).
Management Intervention Req	The total number of requests generated because of management intervention (request due to O&M reasons, e.g. clear subscribers all)
Abnormal Release Req	The total number of requests generated because of abnormal termination of session (e.g. Session Manager failure results in abnormal release of PDP contexts active for that Session Manager).
Time Limit Req	The number of interim requests generated because of the time limit being reached. The time limit is configured using the <b>cc profile</b> command in the GGSN service configuration mode.
Volume Limit Req	The number of interim requests generated because of volume limit being reached. The volume limit is configured using <b>cc profile</b> command in the GGSN service configuration mode.
SGSN Change Req	The number of interim requests generated because of the number of inter SGSN switch-overs reaching the configured limit or because of an SGSN switchover resulting in a new RAI (Routing Area Identity). The maximum number of SGSN changes is configured using the <b>cc profile</b> command in the GGSN service configuration mode.
Maximum Change Condition Req	The number of interim requests generated because of the "List of traffic Volume" Containers reaching the configured limit. This value is configured using the <b>cc profile</b> command in the GGSN service configuration mode.
Total G-CDR transmission	The total number of GTPP Requests sent to the CGF. <b>NOTE:</b> This counter does not include requests re-transmitted to the CGF.
Total G-CDR retransmission	The total number of GTPP Requests retransmitted to the CGF. <b>NOTE:</b> This counter does not include the requests that were originally transmitted to the CGF.
Total G-CDR accepted	The total number of G-CDRs accepted by the CGF.
Total G-CDR transmission failures	The total number of GTPP Requests that were not responded to by CGFs. <b>NOTE:</b> This statistic is not displayed if the cgf_address optional keyword is used.
G-CDR transmission failure percent	The failure percentage of DRT requests. This is calculated as (Total G-CDR Trans failures/(Total GCDR Trans Failures + Total G-CDR accepted) *100).
Total LCS-MT-CDR transmission	The total number of GTPP Requests sent to the CGF. <b>NOTE:</b> This counter does not include requests re-transmitted to the CGF.
Total LCS-MT-CDR retransmission	The total number of GTPP Requests retransmitted to the CGF. <b>NOTE:</b> This counter does not include the requests that were originally transmitted to the CGF.
Total LCS-MT-CDR accepted	The total number of LCS-MT-CDRs accepted by the CGF.

Field	Description
Total LCS-MT-CDR transmission failures	The total number of GTPP Requests that were not responded to by CGFs. <b>NOTE:</b> This statistic is not displayed if the cgf_address optional keyword is used.
LCS-MT-CDR transmission failure percent	The failure percentage of DRT requests. This is calculated as (Total LCS-MT-CDR Trans failures/(Total LCS-MT-CDR Trans Failures + Total LCS-MT-CDR accepted) *100).
Total LCS-MO-CDR transmission	The total number of GTPP Requests sent to the CGF. <b>NOTE:</b> This counter does not include requests re-transmitted to the CGF.
Total LCS-MO-CDR retransmission	The total number of GTPP Requests retransmitted to the CGF. <b>NOTE:</b> This counter does not include the requests that were originally transmitted to the CGF.
Total LCS-MO-CDR accepted	The total number of LCS-MO-CDRs accepted by the CGF.
Total LCS-MO-CDR transmission failures	The total number of GTPP Requests that were not responded to by CGFs. <b>NOTE:</b> This statistic is not displayed if the cgf_address optional keyword is used.
LCS-MO-CDR transmission failure percent	The failure percentage of DRT requests. This is calculated as (Total LCS-MO-CDR Trans failures/(Total LCS-MO-CDR Trans Failures + Total LCS-MO-CDR accepted) *100).
Charging Characteristics Statistics	
Hot	The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "1", representing "hot" billing.
Normal	The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "8", representing "normal" billing.
Prepaid	The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "4", representing "prepaid" billing.
Flat	The number of times that PDP Context Requests were processed with a charging characteristic profile index value of "2", representing "flat-rate" billing.
Unknown	The number of times that PDP Context Requests were processed with an unknown charging characteristic profile index value.
CGF Specific Statistics	
Data Record Transfer Requests Sent	
Send	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet". <b>NOTE:</b> This counter counts "Send Data Record Packet" with length more than 0.
Possibly Duplicate	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send possibly duplicated Data Record Packet".

Field	Description
Cancel	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Cancel Data Record Packet".
Release	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Release Data Record Packet".
Empty	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet". <b>NOTE:</b> This counter counts "Send Data Record Packet" with length equal to 0.
Data Record Transfer Requests Retried	
Send	The total number of re-transmitted "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet". <b>NOTE:</b> This counter counts "Send Data Record Packet" with length more than 0.
Possibly Duplicate	The total number of re-transmitted "Data Record Transfer Requests" sent with the Packet transfer command "Send possibly duplicated Data Record Packet".
Cancel	The total number of re-transmitted "Data Record Transfer Requests" sent with the Packet transfer command "Cancel Data Record Packet".
Release	The total number of re-transmitted "Data Record Transfer Requests" sent with the Packet transfer command "Release Data Record Packet".
Empty	The total number of re-transmitted "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet". <b>NOTE:</b> This counter counts "Send Data Record Packet" with length equal to 0.
Data Record Transfer Requests Success	
Send	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet" for which a response from the CGF was received. <b>NOTE:</b> This counter counts "Send Data Record Packet" with length more than 0.
Possibly Duplicate	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send possibly duplicated Data Record Packet" for which a response from the CGF was received.
Cancel	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Cancel Data Record Packet" for which a response from the CGF was received.
Release	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Release Data Record Packet" for which a response from the CGF was received.
Empty	The total number of "Data Record Transfer Requests" sent with the Packet transfer command "Send Data Record Packet" for which a response from the CGF was received. <b>NOTE:</b> This counter counts "Send Data Record Packet" with length equal to 0.
Data Record Transfer Response Cause	

Field	Description
Accepted	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 128 (80H, Request accepted).
Not Fulfilled	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 255 (FFH, Request not fulfilled).
Already Fulfilled	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 253 (FDH, Request already fulfilled).
Dup Already Fulfilled	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 252 (FCH, Request related to possibly duplicated packets already fulfilled).
Invalid Msg Format	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 193 (C1H, Invalid message format).
Mandatory IE Missing	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 202 (CAH, Mandatory IE missing).
Service not supported	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 200 (C8H, Service not supported).
Version not supported	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 198 (C6, Version not supported).
Mandatory IE incorrect	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 201 (C9H, Mandatory IE incorrect).
Optional IE incorrect	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 203 (CBH, Optional IE incorrect).
No Resources	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 199 (C7H, No resources available).
System Failure	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 204 (CCH, System failure).
CDR Decode Error	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 177. The cause value "CDR decoding error" is primarily intended to inform the CDR generating node that the receiving node can not decode the CDR.
Seq No incorrect	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code of 254.
Unknown Cause	The total number of Data Record Transfer Response messages received from the CGF that indicated a cause code which is other than mentioned above.
GTPP Echo Messages	
Echo Req Sent	The total number of Echo Request messages transmitted to the CGF.
Echo Req Rcvd	The total number of Echo Request messages received from the CGF.

Field	Description
Echo Rsp Rcvd	The total number of Echo Response messages received from the CGF.
Echo Rsp Sent	The total number of Echo Response messages transmitted to the CGF.
Redirection Req/Rsp Messages	
Redirection Req Rcvd	The total number of Redirection Request messages received from the CGF.
Redirection Rsp Sent	The total number of Redirection Response messages transmitted to the CGF.
Redirection Request Cause	
Trans Buffer full	The total number of Redirection Request messages received from the CGF(s) containing a cause information element of 60 (3CH, The transmit buffers are becoming full).
Recv Buffer Full	The total number of Redirection Request messages received from the CGF(s) containing a cause information element of 61 (3DH, The receive buffers are becoming full).
Other Node Down	The total number of Redirection Request messages received from the CGF(s) containing a cause information element of 62 (3EH, Another node is about to go down).
Self Node down	The total number of Redirection Request messages received from the CGF(s) containing a cause information element of 63 (3FH, This node is about to go down).
System Failure	The total number of Redirection Request messages received from the CGF(s) containing a cause information element of 59 (3BH, System failure).
Redirection Response Cause	
Accepted	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 128 (80H, Request accepted).
Service Not Supported	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 200 (C8H, Service not supported).
System Failure	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 204 (CCH, System failure).
Mandatory IE Incorrect	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 201 (C9H, Mandatory IE incorrect).
Mandatory IE Missing	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 202 (CAH, Mandatory IE missing).
Optional IE incorrect	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 203 (CBH, Optional IE incorrect).
Invalid Msg Format	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 193 (C1H, Invalid message format).
Version Not Supported	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 198 (C6H, Version not supported).

Field	Description
No Resources	The total number of Redirection Response messages transmitted to the CGF(s) containing a cause information element of 199 (C7H, No resources available).
Node Alive Req/Rsp Messages	
Node Alive Req Rcvd	The total number of Node Alive Request messages received.
Node Alive Rsp Sent	The total number of Node Alive Response messages transmitted.
Node Alive Req Sent	The total number of Node Alive Request messages sent.
Node Alive Rsp Rcvd	The total number of Node Alive Response messages received.
Invalid messages received	
Invalid Sequence Number	The total number of requests received from a pre-configured CGF, with sequence number that is not in the system's buffers.
Round Trip Time	This section shows average latency on Ga/Gz interface per CGF.
Last DRT Round Trip Time	Total time taken in milliseconds for round trip of previous data record transfer message.
Average DRT Round Trip Time	Average time taken in milliseconds for round trip of all data record transfer messages.

## show gtp group name default

Table 305: show configuration access-link

Field	Description
TAC Always present	Displays "Yes" or "No" to indicate whether TAC is always present in the ULI field of the PGW-CDR.
Last User Location Information present	Displays "Yes" or "No" to indicate Last User Location Information.

## show gtp storage-server statistics

Table 306: show gtp storage-server statistics Command Output Descriptions

Field	Description
Store Requests (GTPP Requests)	
Sent	The total number of GTPP Requests Messages sent by AAAProxy to GSS for storage. Each GTPP Request corresponds to one Store request to GSS. Therefore, each store request may contain one or more GCDR.

Field	Description
Retried	The total number of GTPP Requests Messages re-sent by AAProxy to GSS for storage.
Success	The total number of GTPP Requests Messages successfully sent by AAProxy to GSS for storage.
Failed	The total number of GTPP Requests Messages that failed to be sent by AAProxy to GSS for storage.
Store Requests (GCDRs)	
Sent	The total number of G-CDRs in the GTPP Requests sent for "store".
Retried	The total number of G-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of G-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of G-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (MCDRs)	
Sent	The total number of M-CDRs in the GTPP Requests sent for "store".
Retried	The total number of M-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of M-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of M-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (SCDRs)	
Sent	The total number of S-CDRs in the GTPP Requests sent for "store".
Retried	The total number of S-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of S-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of S-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (S-SMO-CDRs)	
Sent	The total number of S-SMO-CDRs in the GTPP Requests sent for "store".
Retried	The total number of S-SMO-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of S-SMO-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of S-SMO-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (S-SMT-CDRs)	
Sent	The total number of S-SMT-CDRs in the GTPP Requests sent for "store".
Retried	The total number of S-SMT-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of S-SMT-CDRs in the GTPP Requests successfully sent for "store".

Field	Description
Failed	The total number of S-SMT-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (LCS-MT-CDRs)	
Sent	The total number of LCS-MT-CDRs in the GTPP Requests sent for "store".
Retried	The total number of LCS-MT-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of LCS-MT-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of LCS-MT-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (LCS-MO-CDRs)	
Sent	The total number of LCS-MO-CDRs in the GTPP Requests sent for "store".
Retried	The total number of LCS-MO-CDRs in the GTPP Requests re-sent for "store".
Success	The total number of LCS-MO-CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of LCS-MO-CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests(GMBMSCDRs)	
Sent	The total number of GMBMS CDRs in the GTPP Requests sent for "store".
Retried	The total number of GMBMS CDRs in the GTPP Requests re-sent for "store".
Success	The total number of GMBMS CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of GMBMS CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests(SMBMSCDRs)	
Sent	The total number of SMBMS CDRs in the GTPP Requests sent for "store".
Retried	The total number of SMBMS CDRs in the GTPP Requests re-sent for "store".
Success	The total number of SMBMS CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of SMBMS CDRs in the GTPP Requests that failed to be sent for "store".
Store Requests (SGWCDRs)	
Sent	The total number of S-GW CDRs in the GTPP Requests sent for "store".
Retried	The total number of S-GW CDRs in the GTPP Requests re-sent for "store".
Success	The total number of S-GW CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of S-GW CDRs in the GTPP Requests that failed to be sent for "store".

Field	Description
Store Requests (WLANCDRs)	
Sent	The total number of WLAN CDRs in the GTPP Requests sent for "store".
Retried	The total number of WLAN CDRs in the GTPP Requests re-sent for "store".
Success	The total number of WLAN CDRs in the GTPP Requests successfully sent for "store".
Failed	The total number of WLAN CDRs in the GTPP Requests that failed to be sent for "store".
AAAProxy Recover Requests	
Sent	The total number of AAA Proxy Recover Requests sent by the AAA Proxy to the GSS. These requests are sent when the AAA Proxy is restarted after an outage.
Retried	The total number of AAA Proxy Recover Requests re-sent by the AAA Proxy to the GSS.
Success	The total number of AAA Proxy Recover Requests successfully sent by the AAA Proxy to the GSS.
Failed	The total number of AAA Proxy Recover Requests that failed to be sent by the AAA Proxy to the GSS.
Get Next Requests	
Sent	The total number of Get Next requests sent by the AAA Proxy to the GSS. The AAA Proxy maintains a limited buffer. When the buffer gets filled because of a delay in the CGF response, the AAA proxy starts sending the request to the GSS. To get these requests from the GSS, the AAA Proxy sends Get Next Requests to the GSS.
Retried	The total number of Get Next requests re-sent by the AAA Proxy to the GSS.
Success	The total number of Get Next requests successfully sent by the AAA Proxy to the GSS.
Failed	The total number of Get Next requests that failed to be sent by the AAA Proxy to the GSS.
Update CGF Requests	
Sent	The total number of requests sent by the AAA Proxy to the GSS to indicate a change in the status of the CGFs (i.e. from up to down or vice versa).
Retried	The total number of requests re-sent by the AAA Proxy to the GSS to indicate a change in the status of the CGFs
Success	The total number of requests successfully sent by the AAA Proxy to the GSS to indicate a change in the status of the CGFs
Failed	The total number of requests that failed to be sent by the AAA Proxy to the GSS to indicate a change in the status of the CGFs
AAAMgr Recover Requests	

Field	Description
Sent	The total number of AAAMGR Recovery Requests sent by the system to the GSS. These requests are sent when a AAA Mgr software task is restarted after an outage.
Retried	The total number of AAAMGR Recovery Requests re-sent by the system to the GSS.
Success	The total number of AAAMGR Recovery Requests successfully sent by the system to the GSS.
Failed	The total number of AAAMGR Recovery Requests that failed to be sent by the system to the GSS.
Clear DataBase Requests	
Sent	The total number of Clear Database Requests sent by the AAA Proxy to the GSS. These requests are sent after the AAA Proxy discovers that the GSS has come up again after a period of dormancy (i.e. the GSS moves from "down" to "up" state) so as to bring the GSS in sync with the state that the AAA Proxy is in.
Retried	The total number of Clear Database Requests re-sent by the AAA Proxy to the GSS.
Success	The total number of Clear Database Requests successfully sent by the AAA Proxy to the GSS.
Failed	The total number of Clear Database Requests that failed to be sent by the AAA Proxy to the GSS.
GCDR Purge Requests	
Received	The total number of G-CDR Purge Request messages received by the storage server. This request is sent by the GSS notifying the AAA Proxy of the purging of GTPP Requests due to buffer overflow.
Responded	The total number of responses sent from the AAA Proxy to the GSS in response to "purge Requests".
Generated File Requests	
Received	The total number of Generate File Request messages received by the storage server. This request is sent by the GSS notifying the AAA Proxy of the generation of unAcked files. The GTPP Requests purged by the GSS as a result of buffer overflow are moved to a file. This request indicates the completion of the moving of purged G-CDRs to the file.
Responded	The total number of responses sent by the AAA Proxy to the GSS for the "Generated File Requests" received.
Notification Received	
Outstanding GCDRs	The total number of notification for outstanding G-CDRs.
Responded	The total number notifications received and responded for outstanding G-CDRs.
Outstanding GCDRs cleared	The total number of notification for cleared outstanding G-CDRs.

Field	Description
Responded	The total number notifications received and responded for clearing outstanding G-CDRs.
CPU Usage Overlimit	The total number of notification received for CPU usage overlimit.
Responded	The total number notifications received and responded for CPU usage overlimit.
CPU Usage Normal	The total number of notification received for normal usage of CPU.
Responded	The total number of notification received and responded for normal usage of CPU.
Disk Usage Overlimit	The total number of notification received for disk usage overlimit.
Responded	The total number notifications received and responded for disk usage overlimit.
Disk Usage Normal	The total number of notification received for disk usage is in normal limit.
Responded	The total number notifications received and responded for disk usage in normal limit.
Cluster State Change	The total number of notification received for change in Cluster node status.
Responded	The total number notifications received and responded for change in Cluster node status.
Cluster Switchover	The total number of notification received for Cluster node switchover.
Responded	The total number notifications received and responded for Cluster node switchover.
Cluster Disk Path Failure	The total number of notification received for failure in Cluster disk path failure.
Responded	The total number notifications received and responded for failure in Cluster disk path failure.
Cluster Disk Path Normal	The total number of notification received for change in Cluster disk path from failure to normal.
Responded	The total number notifications received and responded for change in Cluster disk path from failure to normal.
Cluster Interconnect Failure	The total number of notification received for failure of interconnection between Cluster nodes.
Responded	The total number notifications received and responded for failure of interconnection between Cluster nodes.
Cluster Interconnect Normal	The total number of notification received for change in interconnection between Cluster nodes from failure to normal.
Responded	The total number notifications received and responded for change in interconnection between Cluster nodes from failure to normal.
Cluster Interface Failure	The total number of notification received for failure of interface of Cluster node.
Responded	The total number notifications received and responded for failure of Cluster node interface.

Field	Description
Cluster Interface Normal	The total number of notification received for change in status of Cluster node interface from failure to normal.
Responded	The total number notifications received and responded for change in status of Cluster node interface from failure to normal.
Cluster Memory Low	The total number of notification received for low memory at Cluster node.
Responded	The total number notifications received and responded for low memory at Cluster node.
Cluster Memory Normal	The total number of notification received for change in status of low memory to normal memory at Cluster node.
Responded	The total number notifications received and responded for change in status of low memory to normal memory at Cluster node.
Storage Server Counter Requests	
Sent	The total number of times the AAA Proxy sent "Storage Server Counter" requests to the GSS. This request is sent when "show gtp storage-server counter" CLI is executed.
Failed	The total number of times that the AAA Proxy failed to be send "Storage Server Counter" requests to the GSS.
Success	The total number of times the AAA Proxy successfully sent "Storage Server Counter" requests to the GSS.
Storage Server Status Requests	
Sent	The total number of times the AAA Proxy sent "Storage Server Status" requests to the GSS. This request is sent when "show gtp storage-server status" CLI is executed.
Failed	The total number of times that the AAA Proxy failed to be send "Storage Server Status" requests to the GSS.
Success	The total number of times the AAA Proxy successfully sent "Storage Server Status" requests to the GSS.
Fetch Requests	
Sent	The total number of "Fetch Requests" sent by the AAA Proxy to the GSS. This request is sent to discover the status of a particular GTPP Request (i.e. if it has been successfully stored but not sent to CGF, or if it is successfully stored and sent to CGF, or if it has not been received by GSS at all).
Retried	The total number of "Fetch Requests" re-sent by the AAA Proxy to the GSS.
Success	The total number of "Fetch Requests" successfully sent by the AAA Proxy to the GSS.
Failed	The total number of "Fetch Requests" that failed to be sent by the AAA Proxy to the GSS.
Echo Requests	

Field	Description
Sent	The total number of Echo requests sent by the AAA Proxy to the GSS.
Success	The total number of Echo requests successfully sent by the AAA Proxy to the GSS.
Commit Requests	
Sent	The total number of "commit requests" sent by the AAA Proxy to the GSS. This request is sent as a result of executing the "gtp force-save" Exec mode command.
Success	The total number of "commit requests" successfully sent by the AAA Proxy to the GSS.
Update Requests	
Sent	The total number of requests sent by the AAA Proxy to the GSS to indicate the success of a request from the CGF.
Invalid Request	
Received	The total number of invalid requests sent by the GSS to the AAA Proxy (i.e. when a GSS is reconfigured, all the requests from the old GSS are marked as invalid).
Message Statistics	
Total Req Sent	The total number of requests sent to GSS.
Total Store Req Sent	The total number of requests sent to GSS to store G-CDRs.
Total Rsp Rcvd	The total number of requests responded to GSS.
Total Store Req Sent	The total number of requests to store G-CDRs responded.
Total Notif Msg Rcvd	The total number of notification messages received.
Total Notif Rsp Sent	The total number of notification messages responded.
Total Req Sent Failure	The total number of requests failed during sent.
Invalid Socket State	The total number of requests failed during sent due to invalid socket state.
MED/Socket Tx Failure	The total number of requests failed during sent due to Tx failure of mediation or socket.
Store Response Time Statistics	Statistical information of response time for STORE messages.
Get Next Response Time Statistics	Statistical information of response time of GET NEXT messages.
GCDR distribution in DRT Messages	Distribution of G-CDRs in Data Request Transfer (DRT) messages.

## show gtp storage-server counters

*Table 307: show gtp storage-server counters Command Output Descriptions*

Field	Description
Archived GTPP Requests	The total number of GTPP Requests archived with the GSS that have been responded to by the CGF.
Archived Unack GTPP Requests	The total number of GTPP Requests archived with the GSS that have not yet been responded to by the CGF.
Archived GCDRs	The total number of G-CDRs archived in "Acknowledged GTPPRequests".
Archived Unack GCDRs	The total number of G-CDRs archived in "Unacknowledged GTPP Requests".

## show gtp storage-server local file counters

*Table 308: show gtp storage-server local file counters Command Output Descriptions*

Field	Description
GTPP Req pending write	The total number of pending GTPP requests to write files to the hard disk..
GTPP Req pending response	The total number responses sent to GTPP requests.
File related counters	
Current file CDR count	The total number of files compressed.
Files pending sync	The number of files that were not able to be compressed.
Compr files pending sync	The number of files waiting to be synced.
Compression in progress	The number of files being compressed.

## show gtp storage-server local file statistics

*Table 309: show gtp storage-server local file statistics Command Output Descriptions*

Field	Description
Total CDR written	The total number of GTPP CDR files written to the hard disk.
Total File Rotations	The total number of file rotation processes completed.
File Rotation Type	

Field	Description
CDR-Count-limit	The total number of CDR files that have been rotated.
Time-limit	Identifies the time limit for file rotation..
Forced (0 CDRs)	Identifies the total number of zero-cdr files created at the local storage due to enabling of "force-file-rotation" trigger.
Others	Total number of file rotations happened due to triggers not listed in this table when for local CDR files.
File Compression	
Compression Success	The total number of files compressed.
Compression Failures	The number of files that were not able to be compressed.

## show gtp storage-server status

Table 310: show gtp storage server status Command Output Descriptions

Field	Description
Configuration	
Execution Mode	Execution mode of the G-CDRs.
File Format	Specifies the file format used for CDRs.
Max GCDRs per file	Maximum number of G-CDRs per file.
Notification Type	Type of notification.
Poll Interval (min)	Poll interval in Minutes.
Resource Monitor	
Outstanding GCDRs File Period (min)	Outstanding G-CDRs file period in minutes.
CPU Usage(%)	CPU usage in percentage.
Available Disk Gss Datafile Path (GB)	Threshold value for available disk size for path or partition on GSS node where CDR files are generated and stored by GSS Filegen application. Example: /sharedgss
Available Disk Gss Install Path (GB)	Threshold value for available disk size for path or partition on GSS node where basic components of GSS like bin directory, config files, postgres bin directory and local log files are present. Example: /gss

Field	Description
Available Disk Gss Database Path (GB)	Threshold value for available disk size for path or partition on GSS node where postgres database is installed. Example: /sharedpostgres <b>Note</b> It is possible that gss and postgres are installed on only one partition, i.e. sharedgss.
Available Memory (MB)	Available memory at a given time.
Resource Monitor Status	
Outstanding GCDRs File Period (min)	Number of outstanding G-CDR files during a given period of time (in minutes).
State	State of the G-CDR collection.
CPU Usage (%)	CPU usage in percentage.
State	State of the CPU.
Available Disk Gss Datafile Path (GB) State	Measured or current value for disk size for path or partition on GSS node where CDR files are generated and stored by GSS Filegen application. Example: /sharedgss If Measured or current value for disk size (GB) falls below configured limit (Threshold value), then Alarm is generated.
Available Disk Gss Install Path (GB) State	Measured or current value for disk size for path or partition on GSS node where basic components of gss like bin directory, config files and postgres bin directory and local log files are present. Example : /gss If Measured or current value for disk size (GB) falls below configured limit (Threshold value), then Alarm is generated.
Available Disk Gss Database Path (GB) State	Measured or current value for available disk size for path or partition on GSS node where postgres database is installed. Example: /sharedpostgres If Measured or current value for disk size (GB) falls below configured limit (Threshold value), then Alarm is generated.
Available Memory (MB)	Amount of memory available for additional G-CDR files.
State:	Condition of the available memory.
Cluster Status	
Cluster Name	Name of the gss cluster.
Online Cluster Node	Name of cluster node(s) that are online at the status collection time.

Field	Description
Cluster Node List	Name(s) of the node(s) included in the cluster.

## show gtp storage-server streaming file statistics

Table 311: show gtp storage-server streaming file statistics Command Output Descriptions

Field	Description
Total CDR written	Total number of streaming CDRs written into the RAM-Disk when gtp storage-server "streaming" mode was enabled.
Total CDR sent to remote	Total number of streaming CDRs sent to CGF from the HDD once the CGF/GTPP is up.
Total Files Failed	During streaming if the CDR file is corrupted, the file will not stream to CGF and renamed to *.fail. This counters indicates the total number of such failed files.
Total File Rotations	Total number of file rotations based on File Size, CDR count, time-limit when "streaming" mode was enabled. The file rotation triggers are configurable in GTPP Group Configuration mode.
File Rotation Type	
File-Size-limit	Total number of file rotations happened due to "File-Size-limit" trigger when "streaming" mode was enabled.
CDR-Count-limit	Total number of file rotations happened due to "CDR-Count-limit" trigger when "streaming" mode was enabled.
Time-limit	Total number of file rotations happened due to "Time-limit" trigger when "streaming" mode was enabled.
Forced (0 CDRs)	Identifies the total number of zero-cdr files created at the local storage due to enabling of "force-file-rotation" trigger.
Others	Total number of file rotations happened due to triggers not listed in this table when "streaming" mode was enabled.
Automatic File Transfer Statistics	
Total Gtp-Groups transferred	Total number of GTPP groups for which file transfer was initiated.
Total Files transferred	Total number of files that are transferred.
File Transfer Status	Indicates the file transfer status i.e. Transfer Not initiated, Transfer Success, Transfer Stopped.
Total file transfer initiated count	Total number of times the file transfer was initiated.
Total file transfer stopped count	Total number of times the file transfer was stopped.

## show gtp storage-server streaming file statistics verbose

Table 312: show gtp storage-server streaming file statistics verbose Command Output Descriptions

Field	Description
Accumulated Statistics:	
Total CDR written	Total number of streaming CDRs written into the RAM-Disk when gtp storage-server "streaming" mode was enabled.
Total CDR sent to remote	Total number of streaming CDRs sent to CGF from the HDD once the CGF/GTPP is up.
Total CDR accepted	Total number of CDRs that are acknowledged by CGF (successfully streamed by the ASR 5000).
Total CDR req already fulfilled	Total number of CDR requests that are already acknowledged by CGF. <b>NOTE:</b> When streaming is in progress from a file, the AAA proxy may fail. When the AAA proxy is recovered, requests will <u>not</u> be sent from files that are acknowledged by CGF. Instead, the counter is incremented.
Total Files sent to remote	Total number of CDR files sent to GTPP Storage Sever and acknowledged by CGF. <b>NOTE:</b> When streaming is in progress from a file, the AAA proxy may fail. When the AAA proxy is recovered, requests will <u>not</u> be sent from files that are acknowledged by CGF. Instead, the counter is incremented.
Total Files Failed	During streaming if the CDR file is corrupted, the file will not stream to CGF and renamed to *.fail. This counters indicates the total number of such failed files.
Total File Rotations	Total number of file rotations based on File Size, CDR count, time-limit when "streaming" mode was enabled. The file rotation triggers are configurable in GTPP Group Configuration mode.
File Rotation Type	
File-Size-limit	Total number of file rotations happened due to "File-Size-limit" trigger when "streaming" mode was enabled.
CDR-Count-limit	Total number of file rotations happened due to "CDR-Count-limit" trigger when "streaming" mode was enabled.
Time-limit	Total number of file rotations happened due to "Time-limit" trigger when "streaming" mode was enabled.
Forced (0 CDRs)	Identifies the total number of zero-cdr files created at the local storage due to enabling of "force-file-rotation" trigger.
Others	Total number of file rotations happened due to triggers not listed in this table when "streaming" mode was enabled.
CDR distribution in DRT Messages	

Field	Description
0:	Total number of Data Request Transfer (DRT) requests sent with no CDRs.
1:	Total number of Data Request Transfer (DRT) requests sent with one CDR.
2..5:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 2 to 5.
6..10:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 6 to 10.
11..15:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 11 to 15.
16..20:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 16 to 20.
21..40:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 21 to 40.
41..60:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 41 to 60.
61..80:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 61 to 80.
81..100:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 81 to 100.
101..150:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 101 to 150.
151..200:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 151 to 200.
201..254:	Total number of Data Request Transfer (DRT) requests sent where each request contains CDRs from 201 to 254.
255:	Total number of Data Request Transfer (DRT) requests sent where each request contains 255 CDRs.

## show gtp storage-server streaming file counters all

Table 313: show gtp storage-server streaming file counters all Command Output Descriptions

Field	Description
GTPP Req pending write	Total number of CDR request queued up and not yet stored in RAM-Disk when "streaming" mode was enabled.

Field	Description
GTPP Req pending response	Total number of GTPP request yet to send acknowledgement to the AAAMgr after storing the CDRs successfully in RAM-Disk when "streaming" mode was enabled.
File related counters	
Current file CDR count	Total number of CDRs stored in RAM-disk file which is not yet synced to the HDD when "streaming" mode was enabled.
Files pending sync	Total number of files waiting for the sync response from HDD when "streaming" mode was enabled.
Current Pending CDRs in HDD	Total number of CDRs written into the hard-disk (Indicates the CDR count of rotated files) when "streaming" mode was enabled.
Current Pending Files in HDD	Total number of files stored in hard-disk when "streaming" mode was enabled.

show gtp storage-server streaming file counters all

# CHAPTER 64

## show gtpu-service

This chapter includes the **show gtpu-service** command output tables.

- [show gtpu-service all, on page 1213](#)
- [show gtpu statistics, on page 1214](#)

## show gtpu-service all

*Table 314: show gtpu-service all Command Output Descriptions*

Field	Description
Service name	The name of the service configured in the named context.
Context	The name of the context where the service is configured.
State	The status of the service, i.e., "Initiated".
Echo Interval	The duration between the sending of GTP-U echo messages.
Sequence Number	Identifies if the sequence number is added to every GTP-U packet.
Include UDP Port Ext.Hdr	Indicates if an extension header, in the GTP-U packet header, allowing for error indication messages will be added.
Max-retransmissions	The number of user data packet request message retransmissions that can be sent before an error condition is established.
Retransmission Timeout	The number of seconds between the re-sending of GTP-U echo messages
IPSEC Tunnel Idle Timeout	The number of seconds an IPsec tunnel is idle before tunnel deletion is triggered.
Allow Error-Indication	Indicates if the error indication will be allowed or suppressed upon the receipt of a user data packet for a non-existent session.
Address List	Identifies the IP address used to transmit/receive GTP-U packets. Also indicates, if configured, the type of bearer traffic to be associated with the bind address (non-ims media only, ims-media only or all).

Field	Description
GTPU UDP Checksum	Indicates if the UDP checksum in UPD header of GTP-U packet is enabled/disabled and if it is optimized.  Possible values are: <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled - Attempt Optimize Default Mode</li> <li>• Enabled - No Optimize</li> </ul>
Path Failure Detection on gtp echo msgs	Identifies if the path failure detection is enabled upon reaching the maximum number of echo retransmissions.
Path Failure Clear Trap	Identifies the configuration of the <b>path-failure clear-trap</b> command.  <b>Echo</b> indicates that the path-failure trap will be cleared only on receipt of an echo message from the particular peer.  <b>Non-echo</b> indicates that the path-failure trap will be cleared on receipt of the first control plane message for that GTPU peer allocation.

## show gtpu statistics

Table 315: Show gtpu Statistics Command Output Descriptions

Counter	Description
<b>Session Stats</b>	
Current	The total number of current sessions set up using GTPU service.
Current (IMS-media)	The total number of current (IMS-media) sessions set up using GTPU service
Total Setup	The total number of sessions set up using GTPU service.
Total Setup (IMS-media)	The total number of sessions set up (IMS-media) using GTPU service.
Current gtpu v0 sessions	The total number of current GTP-0 sessions.
Current gtpu v1 sessions	The total number of current GTP-1 sessions.
<b>Total Data Stats</b>	
Uplink Packets	The total number of uplink packets.
Uplink Bytes	The total number of uplink bytes.

Counter	Description
Downlink Packets	The total number of downlink packets.
Downlink Bytes	The total number of downlink bytes.
Packets Discarded	The total number of discarded packets.
Bytes Discarded	The total number of discarded bytes.
Uplink Packets (IMS-media)	The total number of uplink packets (IMS-media).
Uplink Bytes (IMS-media)	The total number of uplink bytes (IMS-media).
Downlink Packets (IMS-media)	The total number of downlink packets (IMS-media).
Downlink Bytes (IMS-media)	The total number of downlink bytes (IMS-media).
Packets Discarded (IMS-media)	The total number of discarded packets (IMS-media).
Bytes Discarded (IMS-media)	The total number of discarded bytes (IMS-media).
<b>QoS Stats</b>	
<b>QCI &lt;n&gt;</b>	
Uplink Packets	The total number of QCI <n> uplink packets.
Uplink Bytes	The total number of QCI <n> uplink bytes.
Downlink Packets	The total number of QCI <n> downlink packets.
Downlink Bytes	The total number of QCI <n> downlink bytes.
Packets Discarded	The total number of discarded QCI <n> packets.
Bytes Discarded	The total number of discarded QCI <n> bytes.
<b>Non-Std QCI(Non-GBR)</b>	
Uplink Packets	The total number of non-standard QCI, non-GBR uplink packets.
Uplink Bytes	The total number of non-standard QCI, non-GBR uplink bytes.
Downlink Packets	The total number of non-standard QCI, non-GBR downlink packets.
Downlink Bytes	The total number of non-standard QCI, non-GBR downlink bytes.
Packets Discarded	The total number of discarded non-standard QCI, non-GBR packets.

Counter	Description
Bytes Discarded	The total number of discarded non-standard QCI, non-GBR bytes.
<b>Non-Std QCI(GBR)</b>	
Uplink Packets	The total number of non-standard QCI (GBR) uplink packets.
Uplink Bytes	The total number of non-standard QCI (GBR) uplink bytes.
Downlink Packets	The total number of non-standard QCI (GBR) downlink packets.
Downlink Bytes	The total number of non-standard QCI (GBR) downlink bytes.
Packets Discarded	The total number of discarded non-standard QCI (GBR) packets.
Bytes Discarded	The total number of discarded non-standard QCI (GBR) bytes.
<b>Total GBR QCI'S</b>	
Total uplink packets GBR QCI's	The total number of GBR QCI (s) uplink packets.
Total uplink Bytes GBR QCI's	The total number of GBR QCI (s) uplink bytes.
Total Downlink packets GBR QCI's	The total number of GBR QCI (s) downlink packets.
Total Downlink Bytes GBR QCI's	The total number of GBR QCI (s) downlink bytes.
Total uplink packets Non-GBR QCI's	The total number of non-GBR QCI (s) uplink packets.
Total uplink Bytes Non-GBR QCI's	The total number of non-GBR QCI (s) uplink bytes.
Total Downlink packets Non-GBR QCI's	The total number of non-GBR QCI (s) downlink packets.
Total Downlink Bytes Non-GBR QCI's	The total number of non-GBR QCI (s) downlink bytes.
<b>Path Management Messages</b>	
Echo Request Rx	The total number of GTPU echo requests received.
Echo Response Rx	The total number of GTPU echo responses received.
Echo Request Tx	The total number of GTPU echo requests transmitted.
Echo Response Tx	The total number of GTPU echo responses transmitted.

Counter	Description
SuppExtnHdr Tx	Total GTPU messages with supported extension headers transmitted.
SuppExtnHdr Rx	Total GTPU messages with supported extension headers received.
<b>Peer Stats</b>	
Total GTPU Peers	Total number of GTPU Peers available in the system.
Total GTPU Peers with Stats	The total number of GTPU Peers available in the system with statistics.
<b>Tunnel Management Messages</b>	
Error Indication Tx	The number of Error Indication messages transmitted.
Error Indication Rx	The number of Error Indication messages received.
Error Indication Rx Discarded	The total number of error indications discarded.
<b>Optimization Stats</b>	
Total Packets Input	Total number of packets input.
Total Packets Optimized	Total number of packets optimized.
Total TCP Packets Input	The total number of TCP packets input.
Total TCP Packets Optimized	The total number of TCP packets optimized.
Total UDP Packets Input	The total number of UDP packets input.
Total UDP Packets Optimized	The total number of UDP packets optimized.
Total Fragments Input	The total number of fragments input.
<b>IPSec Data Stats</b>	
<b>Discards Due To IPSec Tunnel Not Present</b>	
Packets Discarded	Number of discarded IPSec Tunnel packets.
Bytes Discarded	Number of discarded IPSec Tunnel bytes.
Err-Ind Tx Discarded	Number of discarded IPSec Tunnel error Indication messages that are sent.

**Note** In CUPS, the "Packets Discarded" statistics will be the aggregate of packets dropped at the Session manager and packets dropped at VPP. As VPP handles majority packets, the packet drops at VPP can only be categorized broadly under these statistics.

You can view specific packet drop reasons only for packets dropped at session manager. Packets dropped at VPP are categorized under Packets Discarded counter in the **show gtpu statistics** CLI.

# CHAPTER 65

## show hardware

This chapter includes the **show hardware** command output tables.

**Important** The nomenclature appearing in the outputs of **show hardware** commands vary based on platform (VPC, ASR 5000, ASR 5500), card type, date of manufacture, and the StarOS release.

- [show hardware \(VPC-DI\)](#), on page 1219
- [show hardware \(VPC-SI\)](#), on page 1221
- [show hardware card \(ASR 5000\)](#), on page 1222
- [show hardware card \(ASR 5500\)](#), on page 1225
- [show hardware inventory \(ASR 5x00\)](#), on page 1229
- [show hardware version \(ASR 5000\)](#), on page 1229
- [show hardware version \(ASR 5500\)](#), on page 1230
- [show hardware version \(VPC-DI\)](#), on page 1231

## show hardware (VPC-DI)

In a VPC-DI instance, card numbers correspond to the virtual slot numbers assigned to the virtual machines (VMs) that run StarOS within the virtual chassis created by hypervisor templates.

**Table 316: show hardware Command Output Descriptions (VPC-DI)**

Field	Description
<b>Control Function and Service Function Cards</b>	
Card <number>	Virtual slot number of the specified card. Slots 1 and 2 = CF; Slots 3 – 48 = SF.
Card Type	Control Function Virtual Card or 1-Port Service Function Virtual Card.
CPU Packages	Number of vCPUs.
CPU nodes	Number of CPU nodes.
CPU Cores/Threads	Number of cores/threads.

Field	Description
Memory	vMemory in Megabytes
Platform	Hypervisor type.
CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Network Interfaces</b>	
cpeth0	VPC-DI network communication port.
Address	MAC address.
Device	Device type.
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type.
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
loeth0	<b>CF only:</b> LOCAL management port (Console).
Address	MAC address.
Device	Device type.
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type.
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
port_slot_port	<b>SF only:</b> Service port.
Address	MAC address.
Device	Device type.
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type. (alphanumeric string)
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
<b>Storage Devices</b>	
Virtual Flash	Indicates whether or not the virtual /flash drive is Present.
Type	Virtual drive type (alphanumeric string).

Field	Description
Model	Virtual drive model (alphanumeric string).
Hard Drive 1	Indicates whether virtual Hard Drive 1 is Present.
Type	Virtual drive type (alphanumeric string).
Model	Virtual drive model (alphanumeric string).
Hard Drive 2	Indicates whether virtual Hard Drive 2 is Present.
USB 1	Indicates whether virtual USB port 1 is Present (must be configured via hypervisor).
USB 2	Indicates whether virtual USB port 2 is Present (must be configured via hypervisor).
CDROM 1	Indicates whether virtual a CDROM is Present (must be configured via hypervisor).
Type	CDROM drive type (alphanumeric string).
Model	CDROM drive model (alphanumeric string).
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision. "up to date" – all software is current "out of date" – identifies one or more components do not have the most current software. "experimental/unreleased" – one or more components have experimental or unreleased software.

## show hardware (VPC-SI)

For VPC-SI, the output of this command displays the parameters of the virtual chassis created by the hypervisor in which the StarOS VM runs.

*Table 317: show hardware Command Output Descriptions (VPC-SI)*

Field	Description
<b>System information</b>	
Platform	Hypervisor type.
UUID/Serial Number	Cisco serial number
CPU Packages	Number of vCPUs.
CPU nodes	Number of CPU nodes.

Field	Description
CPU Cores/Threads	Number of cores/threads.
Memory	vMemory in Megabytes
<b>Storage Devices</b>	
Virtual Flash	Indicates whether or not the virtual /flash drive is Present.
Type	Virtual drive type (alphanumeric string).
Model	Virtual drive model (alphanumeric string).
Hard Drive 1	Indicates whether virtual Hard Drive 1 is Present.
Type	Virtual drive type (alphanumeric string).
Model	Virtual drive model (alphanumeric string).
Hard Drive 2	Indicates whether virtual Hard Drive 2 is Present.
USB 1	Indicates whether virtual USB port 1 is Present (must be configured via hypervisor).
USB 2	Indicates whether virtual USB port 2 is Present (must be configured via hypervisor).
CDROM 1	Indicates whether virtual a CDROM is Present (must be configured via hypervisor).
Type	CDROM drive type (alphanumeric string).
Model	CDROM drive model (alphanumeric string).
<b>Network Interfaces</b>	
loeth0	LOCAL management port IP address and port type.
port1_<10 through 21>	Traffic management port IP address and port type in parentheses.

## show hardware card (ASR 5000)

Table 318: show hardware card Command Output Descriptions (ASR 5000)

Field	Description
<b>Common to All Card Types</b>	
Card <number>	Slot number of the specified card.
Card Type	Description of the card in the specified slot, for example "System Management Card".

Field	Description
Card Description	SMC, PSCx, FELC, GELC/GLC2, QGLC, XGLC, CLC/CLC2, OLC/OLC2, SPIO, RCC
Part Number	Legacy part number (xxx-xx-xxxx xx).
Serial Number	Legacy part number (alphanumeric string).
CLEI Code, Starent CLEI Code	Common Language Equipment Identifier (CLEI) code.
UDI Product ID	Unique Device Identifier (UDI) Product Identifier (PID).
UDI Version ID	UDI version.
UDI Serial Number	UDI serial number (alphanumeric string).
UDI CLEI Code	UDI Common Language Equipment Identifier (CLEI) code.
UDI Top Assembly Number	UDI for top-level assembly.
UDI TAN Revision	UDI Top Assembly Number (TAN) revision level.
UDI Deviation Number	UDI deviation number (DEVNUM).
MAC Addresses	Media Access Controller hexadecimal starting address in format: xx-xx-xx-xx-xx-xx.
Switch Fabric Modes	Mode type – "control plane" and/or "switch fabric".
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
<b>System Management Card</b>	
Compact Flash	Status of PCMCIA flash memory card, for example "Present".
Type	Memory capacity of the Compact Flash card.
Model	Operational card type.
Serial Number	Serial number of this Compact Flash card.
PCMCIA1	Status of front panel Personal Computer Memory Card International Association (PCMCIA) card, for example "Not Present".
Hard Drive 1	Status of this hard drive, for example "Present".
Type	Drive capacity in Mbytes.

Field	Description
Model	Manufacturer and model number.
Serial Number	Serial number of the hard drive.
SRM	Status, Reset, and Monitoring firmware.
BIOS	Basic Input/Output System.
CIF FPGA	Chassis Information (CIF) Field Programmable Gate Array (FPGA) firmware.
CPU 0 Type/Memory	Socket: 0: <processor type>, <processor speed>; Chipset: <chipset_type>, <part_number>, <RAM>
CPU 0 DIMM-A1 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-B1 P/N	Dual In-line Memory Module part number.
CPU 0 CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Packet Processing Card (PSC, PSC2, PSC3, PSCA, PPC)</b>	
NPU Microcode	Firmware running on the Network Processing Unit (NPU).
Slave SCB	Firmware component that allows non-SMC cards to communicate with the SMC over the system control bus (SCB).
PSR, PSR2	Power, Status, and Reset firmware.
BIOS	Basic Input/Output System firmware.
DT FPGA, DT2 FPGA	Data Transport (DT) Field Programmable Gate Array (FPGA) firmware.
CPU 0 Type/Memory	Socket: 0, <processor type>, <processor speed>. Socket: 1, <processor type>, <processor speed>. Chipset: <components>.
CPU 0 DIMM-N0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0D1 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1D1 P/N	Dual In-line Memory Module part number.
CPU 1 Type/Memory	<processor type> <processor speed> <memory in MB>
CPU 0 CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Line Cards (SPIO, RCC, FELC, GELC/GLC2, QGLC, XGLC, CLC/CLC2, OLC/OLC2)</b>	
Slave SCB	Firmware component that allows non-SMC cards to communicate with the SMC over the system control bus (SCB).

Field	Description
FPGA	Field-Programmable Gate Array firmware.
SFP Info (Port 1 or 2)	Information about the Small Form-factor Pluggable (SFP) transceivers includes:  Vendor Name, Vendor IEEE ID, P/N (part number), S/N (serial number, date).

## show hardware card (ASR 5500)

Table 319: show hardware card Command Output Descriptions (ASR 5500)

Field	Description
<b>Common to All Card Types</b>	
Card <number>	Slot number of the specified card.
Card Type	Data Processing Card Management & 20x10Gb I/O Card Management v2 & 4x 100Gb I/O Card System Status Card Fabric & 2x200GB Storage Card
Description	Card type – DPC, DPC2, MIO, MIO2, SSC, FSC.
Starent Part Number	Legacy part number (xxx-xx-xxxx xx).
Cisco Part Number	Cisco part number.
CLEI Code	Common Language Equipment Identifier (CLEI) code.
UDI Serial Number	Unique Device Identifier (UDI) serial number (alphanumeric string).
UDI Product ID	UDI Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
UDI Top Assem Num	UDI for top-level assembly.
<b>Data Processing Card (DPC)</b>	
Daughter Card #3	Daughter card number.
Card Type	DPC CCK Daughter Card (crypto).
Description	DPC_CRYPT0_DC.
Starent Part Number	Legacy part number (xxx-xx-xxxx xx).

Field	Description
UDI Serial Number	UDI serial number (alphanumeric string).
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF	Board Control FPGA firmware.
CAF	Control and Availability FPGA firmware.
CPU 0 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 0 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 BIOS	Basic Input/Output System.
CPU 0 i82599	Intel 10GbE Controller firmware.
CPU 0 i82574	Intel Gigabit Ethernet Controller firmware.
CPU 0 CFE	Common Firmware Environment version.
CPU 1 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 1 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C2D2 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C1D1 P/N	Dual In-line Memory Module part number.

Field	Description
CPU 1 BIOS	Basic Input/Output System.
CPU 1 i82599	Intel 10 GbE Controller firmware.
CPU 1 i82574	Intel Gigabit Controller firmware.
CPU 1 CFE	Common Firmware Environment version.
<b>Management Input/Output (MIO)</b>	
Daughter Card #<number>	Daughter card number.
Card Type	MIO 10x10Gb Daughter Card. MIO CCK Daughter Card (crypto).
Description	MDC MIO_CRYPT0_DC
Starent Part Number	Legacy part number (xxx-xx-xxxx xx)
Cisco Part Number	Cisco part number.
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].
Midplane:	Chassis EPROM information.
Card Type	Midplane EPROM Card.
MAC Addresses	Media Access Controller hexadecimal starting address in format: xx-xx-xx-xx-xx-xx.
MEC:	Midplane EEPROM Card.
Description	MEC.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].
UDI Product ID	UDI Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
Midplane:	
Description	Midplane.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
Chassis:	
Description	Chassis.

Field	Description
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
UDI Product ID	Cisco Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
UDI Top Assem Num	UDI for top-level assembly.
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
SDHC Flash	Secure Digital High Capacity on-board flash memory (/flash drive).
Type	Disk capacity in Mbytes.
Model	Generic-UltraFastMedia.
USB 1	Status of front panel USB port, for example. "Not Present".
SFP+ Module On Port <number>:	Information on the SFP+ transceiver in the specified port (10 through 29).
Transceiver Info	SFP+ transceiver type.
Vendor Info	Vendor Name and Vendor IEEE ID.
Part Info	Cisco PID and serial number.
<b>System Status Card (SSC)</b>	
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF	Board Control FPGA firmware.
<b>Fabric and Storage Card (FSC)</b>	

Field	Description
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF	Board Control FPGA firmware.

## show hardware inventory (ASR 5x00)

*Table 320: show hardware inventory Command Output Descriptions*

Field	Description
Slot	Slot number of the specified card.
Type	Descriptor of the card in the specified slot.
Part Number	Starent or Cisco part number.
Product ID / Version ID	Cisco PID and version identifier.
Serial Number	Serial number of the card.
CLEI code	Common Language Equipment Identifier (CLEI) code.
Fan Tray (ASR 5500 only)	Lower Rear Lower Front Upper Rear Upper Front

## show hardware version (ASR 5000)

*Table 321: show hardware version Command Output Descriptions (ASR 5000)*

Field	Description
Slot	Slot number of the specified card.
Type	Descriptor of the card in the specified slot.
<b>Packet Processing Card</b>	

Field	Description
SSCB	Slave Serial Control Bus (SSCB) firmware.
PSR, PSR2	Power, Status, and Reset firmware.
BIOS A	Basic Input/Output System A.
BIOS B	Basic Input/Output System B.
DT, DT2	Data Transport (DT) FPGA firmware.
<b>System Management Card</b>	
SRM	Status, Reset, and Monitoring (SRM) firmware.
BIOS A	Basic Input/Output System A.
BIOS B	Basic Input/Output System B.
On-Card	Version of the firmware that is on the boot flash for the component.
CIF-FPGA Running	Chassis Information (CIF) FPGA firmware that is currently operational.
<b>Line Cards</b>	
SSCB	Slave Serial Control Bus (SSCB) firmware.
FPGA	Field Programmable Gate Array.
On-Card	Version of the firmware that is on the boot flash for the component.
WPOS Running	WinPath Operational Software
<b>Diagnostic Revisions</b>	
On-Card	Version of the firmware that is on the boot flash for the component.
CPU 0 Running	Firmware that is currently operational on this CPU.
<b>Fan Tray Controller Version</b>	
Upper Fan Tray	UFT controller firmware.
Lower Fan Tray	LFT controller firmware.

## show hardware version (ASR 5500)

Table 322: show hardware version Command Output Descriptions (ASR 5500)

Field	Description
Slot	Slot number of the specified card.

Field	Description
Type	Descriptor of the card in the specified slot – DPC, DPC2, MIO, MIO2, SSC, FSC.
BCF	Board Control FPGA firmware.
CAF	Control and Availability FPGA firmware.
CAF Rcry	CAF Recovery.
DCF A	Daughter Card FPGA A firmware.
DCF B	Daughter Card FPGA B firmware.
CPU	CPU number.
BIOS A	Basic Input/Output System A.
BIOS B	Basic Input/Output System B.
82599 A	Intel 10GbE Controller firmware.
82574 A	Intel Gigabit Ethernet Controller firmware.
PLX8618	PCIe Switch PROM.
N9485 A	Serial Attached SCSI Controller A, SPI (SCSI Parallel interface) Flash.
N9485 B	Serial Attached SCSI Controller B, SPI Flash.
CFE Flsh	Common Firmware Environment on /flash.
<b>Fan Tray Controller Version</b>	
Upper Fan Tray	UFT controller firmware (front and rear).
Lower Fan Tray	LFT controller firmware (front and rear).

## show hardware version (VPC-DI)

Table 323: show hardware version (VPC-DI) Command Output Descriptions (VPC-DI)

Field	Description
Slot	Slot number of the specified card.
Type	Descriptor of the card in the specified slot – CFC or SFC.
CFE Flash	Version number of Common Firmware Environment.

# CHAPTER 66

## show hd-storage-policy

This chapter includes the **show hd-storage-policy** command output tables.

- [show hd-storage-policy counters all, on page 1233](#)
- [show hd-storage-policy statistics all, on page 1233](#)

## show hd-storage-policy counters all

*Table 324: show hd-storage-policy counters all Command Output Descriptions*

Field	Description
HD Storage Policy	The name of the HD storage policy configured on the system.
Diameter Counters	
File related counters	
Current ACR file record count	The total number of ACR file records for this policy currently stored on the HDD.
Current ACR file Size	The current ACR file size on the HDD for this policy.
Current ACR Files Synced to HDD	The total number of ACR files rotated and sent to the hard disk drive from the time the system is operational.

## show hd-storage-policy statistics all

*Table 325: show hd-storage-policy statistics all Command Output Descriptions*

Field	Description
HD Storage Policy	The name of the HD storage policy configured on the system.
Diameter Statistics	
Total ACR written	The total number of active charging records written to the HD storage device for this policy.

<b>Field</b>	<b>Description</b>
Total ACR File Rotations	The total number of times files were rotated.
File Rotation Type	
ACR-File-Size-limit	The file size limit, in megabytes. When exceeded, file rotation occurs.
ACR-Record-Count-limit	The record count limit. When exceeded, file rotation occurs.
ACR-Time-limit	The time limit, in seconds. When exceeded, file rotation occurs.
ACR-Manual-File-Rotation	The total number of times file rotation was initiated manually.
ACR-Others	The total number of ACR rotations for reasons other than above. If incremented, this counter generally indicates an error condition.

## CHAPTER 67

# show hd raid verbose

- [show hd raid verbose, on page 1235](#)

## show hd raid verbose

*Table 326: show hd raid verbose Command Output Descriptions*

Field	Description
HD RAID	
State	The following conditions apply to the RAID function: Available (clean): At least one disk is ready Available (active): Disk resynchronizing Not Available
Degraded	The following conditions apply: No: Both disks are ready Yes: One disk is ready
UUID	Universal Identification number
Size	Drive size in bytes
Action	The following conditions apply: Idle: Neither resynchronizing nor rebuilding RAID Recovering (dd% done) Rebuilding Resynching (dd% done) Checking (dd% done) Repairing (dd% done)
Disk	Disk name

Field	Description
	<p>The following conditions apply to the disk:</p> <p>State:</p> <p>In-sync component Spare component: Rebuilding RAID Valid image of UUID: Different image Not used: Set by Admin Faulty component Invalid partition or image Unknown partition or image</p> <p>Created Date image created</p> <p>Updated Date image updated</p> <p>Events Interval event count</p> <p>Model Disk model number</p> <p>Serial Number Disk serial number</p> <p>Location Disk location</p> <p>Size Disk size in bytes</p> <p>Partitions Total number of partitions</p> <p>Partition Partition size in bytes and sectors for each partition</p>

# CHAPTER 68

## show hcnbgw

**Important** In Release 20, 21.0 and 21.1, HeNB-GW is not supported. For more information, contact your Cisco account representative.

This chapter includes the **show hcnbgw** command output tables.

- [show hcnbgw-access-service all](#), on page 1237
- [show hcnbgw-access-service hcnb-association full](#), on page 1238
- [show hcnbgw-access-service statistics verbose](#), on page 1239
- [show hcnbgw-network-service all](#), on page 1247

## show hcnbgw-access-service all

*Table 327: show hcnbgw-access-service all Command Output Descriptions*

Field	Description
Service name	The name used to identify the HeNB-GW Access service to the system. <b>Important</b> At a time only one HeNB-GW Access Service can be configured per system.
Context name	The name of the system context in which the HeNB-GW Access service is defined.
Status	The status of the configured HeNB-GW Access Service, e.g. Started or Not Started.
SCTP IP Address	The IP address used to transmit SCTP messages from HeNBs to the HeNB-GW.
SCTP Port	The HeNB-GW uses this port to listen for SCTP messages from HeNBs.
MME Code	The HeNB-GW Access Service uses MME Code which is a configurable option used to send HENB prior to 17.0 release in S1 Setup Resp.

Field	Description
MME Group	The HeNB-GW Access Service uses this MME group ID to identify the MME for communication. This configurable option used to be sent to HENB prior to 17.0 in S1 Setup Resp.
PLMN Id	The Public Land Mobile Network ID configured for this HeNB-GW Access service. It consists of the MCC and MNC (see below).
MCC	The Mobile Country Code defined for use with this HeNB-GW Access service. It consists of the first 3 digits of the Available Radio Network PLMN ID.
MNC	The Mobile Network Code defined for use with this HeNB-GW Access service. It consists of the last 3 digits of the Available Radio Network PLMN ID.
S1-U Relay	Identifies if the S1-U Relay is configured or not for this HeNB-GW Access Service. If S1-U Relay is disabled, the data path is established directly between HeNB and S-GW.

## show hcnbgw-access-service hcnb-association full

Table 328: show hcnbgw-access-service hcnb-association full peer\_address peer\_addr Command Output Descriptions

Field	Description
SessMgr	Session Manager instance used for the entrance of S1AP signaling messages from access side.
Peerid	ID of the associated peer(s) to the HeNB-GW Access Service.
Global HENB ID	Globally Unique ID of HENB.
HENB Name	The name used to identify the Home eNodeB connected to the HeNB-GW Access service.
HENBGW Access Service Name	The name used to identify the HeNB-GW Access service to the system.
HENBGW Access Service Address	The IP address used to bind the HeNB-GW Access service to the system.
HENBGW ACCESS Service Port	The IP Port associated to the IP address of the configured HeNB-GW Access service to the system.
HENB IP Address(s)	IP address(s) assigned to the connected Home eNode B(s).
HENB Port	Port(s) associated to the HeNB's IP address(s)
Paging DRX	Paging Drx value received from HeNB in S1 Setup Request.
Supported TAI(s)	TAI of HeNB received.

Field	Description
CSG ID(s)	CSG ID of HeNB received.

## show henbgw-access-service statistics verbose

Table 329: show henbgw-access-service verbose Command Output Descriptions

Field	Description
<b>SCTP Statistics: Transmitted SCTP Data</b>	
Init Chunks	The total SCTP packets with INIT transmitted over SCTP interface by this HeNBGW.
Init Ack Chunks	The total SCTP packets with INIT-ACK transmitted over SCTP interface by this HeNBGW.
Shutdown Chunks	The total SCTP packets with SHUTDOWN transmitted over SCTP interface by this HeNBGW.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK transmitted over SCTP interface by this HeNBGW.
Cookie Chunks	The total SCTP packets with COOKIE transmitted over SCTP interface by this HeNBGW.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK transmitted over SCTP interface by this HeNBGW.
Data Chunks	The total SCTP packets with DATA transmitted over SCTP interface by this HeNBGW.
Data Ack Chunks	The total SCTP packets with DATA-ACK transmitted over SCTP interface by this HeNBGW.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE transmitted over SCTP interface by this HeNBGW.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT transmitted over SCTP interface by this HeNBGW.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK transmitted over SCTP interface by thisHeNBGW.
Abort Chunks	The total SCTP packets with ABORT transmitted over SCTP interface by this HeNBGW.
Error Chunks	The total SCTP packets with ERROR transmitted over SCTP interface by this HeNBGW.
<b>SCTP Statistics: Received SCTP Data</b>	

Field	Description
Init Chunks	This sub-group displays the statistics of the total data received over SCTP interface and processed by this HeNBGW.
Init Ack Chunks	The total SCTP packets with INIT-ACK received over SCTP interface by this HeNBGW.
Shutdown Chunks	The total SCTP packets with SHUTDOWN received over SCTP interface by this HeNBGW.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK received over SCTP interface by this HeNBGW.
Cookie Chunks	The total SCTP packets with COOKIE received over SCTP interface by this HeNBGW.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK received over SCTP interface by this HeNBGW.
Data Chunks	The total SCTP packets with DATA received over SCTP interface by this HeNBGW.
Data Ack Chunks	The total SCTP packets with DATA-ACK received over SCTP interface by this HeNBGW.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE received over SCTP interface by this HeNBGW.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT received over SCTP interface by this MMEmanager.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK received over SCTP interface by this HeNBGW.
Abort Chunks	The total SCTP packets with ABORT received over SCTP interface by this HeNBGW.
Error Chunks	The total SCTP packets with ERROR received over SCTP interface by this HeNBGW.
<b>SCTP Statistics: Retransmitted SCTP Data</b>	
Init Chunks	The total SCTP packets with INIT retransmitted over SCTP interface by this HeNBGW.
Shutdown Chunks	The total SCTP packets with SHUTDOWN retransmitted over SCTP interface by this HeNBGW.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK retransmitted over SCTP interface by this HeNBGW.
Cookie Chunks	The total SCTP packets with COOKIE retransmitted over SCTP interface by this HeNBGW.

Field	Description
Data Chunks	The total SCTP packets with DATA transmitted over SCTP interface by this HeNBGW.
Total Bytes Sent	The total bytes processed and sent over SCTP interface by this HeNBGW.
Total Bytes Received	The total bytes received over SCTP interface by this HeNBGW for processing.
Total Packets Sent	The total packets processed and sent over SCTP interface by this HeNBGW.
Total Packets Received	The total packets received over SCTP interface by this HeNBGW for processing.
<b>S1AP Statistics: Transmitted S1AP Data</b>	
S1 Setup Resp	The total number of S1 SETUP RESPONSE messages for S1 setup procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
S1 Setup Fail	The total number of S1 SETUP FAILURE messages for S1 setup procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Reset	The total number of S1 RESET messages for S1 reset procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Reset Ack	The total number of S1 RESET-ACK messages for S1 reset procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Overload Start	The total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Overload Stop	The total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
MME Dir Info Transfer	The total number of MME DIRECT INFORMATION TRANSFER messages for MME Direct Information Transfer procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Paging	The total number of PAGING messages for paging procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
eNB Config Update Ack	The total number of ENB CONFIGURATION UPDATE ACK messages for eNodeB Configuration Update procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
eNB Config Update Fail	The total number of ENB CONFIGURATION UPDATE FAILURE messages for eNB Configuration Update procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.

Field	Description
S1AP Msg Encode Fail	The total number of failure occurred during S1AP encode procedure and S1AP ENCODE FAILURE messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
E-RAB Setup Req	The total number of E-RAB setup request messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
E-RAB Modify Req	The total number of E-RAB modify request messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
E-RAB Release Command	The total number of E-RAB release request messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Initial Ctxt Setup Req	The total number of initial context setup request messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
UE Ctxt Release Command	The total number of initial UE context release command messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
UE Context Modify Req	The total number of UE context modify request messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Downlink NAS Transport	The total number of NAS Transport in downlink messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Error Ind	The total number of S1AP messages with error-indication processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Handover Command	The total number of S1AP messages with handover command processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Handover Prep Fail	The total number of S1AP messages generated for handover preparation failure procedure and transmitted over S1AP interface by this HeNBGW to eNodeB.
Handover Request	The total number of S1AP messages with handover request processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Handover Cancel Ack	The total number of HANDOVER_CANCEL_ACK messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Path Switch Request Ack	The total number of PATH_SWITCH_REQ_ACK messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Path Switch Req Fail	The total number of PATH_SWITCH_REQ_FAIL messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
Downlink S1 CDMA2000	The total number of CDMA2000 request messages processed and transmitted over S1AP interface by S1 tunneling to interact with cdma2000 network in downlink direction by this HeNBGW to eNodeB.

Field	Description
Trace Start	The total number of messages processed and transmitted over S1AP interface to indicate that Session Trace started for specific session by this HeNBGW to eNodeB.
Deactivate Trace	The total number of messages processed and transmitted over S1AP interface to indicate that Session Trace deactivated for specific session by this HeNBGW to eNodeB.
MME Status Transfer	The total number of messages processed and transmitted over S1AP interface to indicate the MME status by this HeNBGW to eNodeB.
Loc Report Control	The total number of LOCATION REPORT CONTROL messages sent by the MME to the eNodeB requesting the current location of the UE.
MME Config Update	The total number of MME CONFIGURATION UPDATE messages sent by the MME to the eNodeB for the purpose of updating the Transport Network Layer (TNL) association. The TNL association is required for the MME and eNodeB to interoperate correctly across the S1 interface.
S1AP Encode Fail	The total number of failure occurred during S1AP encode procedure and S1AP ENCODE FAILURE messages processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
MME Config Transfer	The total number of MME CONFIGURATION TRANSFER messages sent by the MME to the eNodeB for the purpose of transferring RAN configuration information.
Kill Request	The total number of KILL REQUEST messages sent by the MME to the eNodeB.
Downlink Non-UE LPPaTpt	The total number of non-UE downlink transport messages sent by the MME to the eNodeB for LPPa (LTE Positioning Protocol annex).
Downlink UE LPPaTpt	The total number of UE downlink transport messages sent by the MME to the eNodeB for LPPa.
<b>S1AP Statistics: Received S1AP Data</b>	
S1 Setup Req	The total number of S1 SETUP REQUEST messages for S1 setup procedure received over S1AP interface by this HeNBGW from eNodeB.
Reset	The total number of S1 RESET messages for S1 reset procedure received over S1AP interface by this HeNBGW from eNodeB.
Reset Ack	The total number of S1 RESET-ACK messages for S1 reset procedure received over S1-P interface by this HeNBGW from eNodeB.
eNB Dir Info Transfer	The total number of ENB DIRECT INFORMATION TRANSFER messages for eNodeB Direct Information Transfer procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.

Field	Description
eNB Config Update	The total number of ENB CONFIGURATION UPDATE messages for eNB Configuration Update procedure processed and transmitted over S1AP interface by this HeNBGW to eNodeB.
S1AP Msg Decode Failure	The total number of failure occurred during S1AP control message decoding procedure by eNodeB and S1AP DECODE FAILURE messages received over S1AP interface by this HeNBGW from eNodeB.
S1AP Msg Unexpected	The total number of failure occurred due to unexpected events during S1AP control message procedure at eNodeB and S1AP UNEXPECTED EVENT messages received over S1AP interface by this HeNBGW from eNodeB.
E-RAB Setup Resp	The total number of E-RAB setup request response messages received over S1AP interface by this HeNBGW from eNodeB.
E-RAB Modify Resp	The total number of E-RAB modify request response messages received over S1AP interface by this HeNBGW from eNodeB.
E-RAB Release Resp	The total number of E-RAB release request response messages received over S1AP interface by this HeNBGW from eNodeB.
E-RAB Release Ind	The total number of E-RAB release indicator messages received over S1AP interface by this HeNBGW from eNodeB.
Initial Ctxt Setup Resp	The total number of initial context setup request response messages received over S1AP interface by this HeNBGW from eNodeB.
Initial Ctxt Setup Fail	The total number of initial UE context setup failure messages received over S1AP interface by this HeNBGW from eNodeB.
UE Context Release Req	The total number of initial UE context release command messages received over S1AP interface by this HeNBGW from eNodeB.
UE Ctxt Release Comp	The total number of UE context release request messages received over S1AP interface by this HeNBGW from eNodeB.
UE Context Modify Resp	The total number of UE context modify request messages received over S1AP interface by this HeNBGW from eNodeB.
UE Ctxt Modify Fail	The total number of UE context modify request failure messages received over S1AP interface by this HeNBGW from eNodeB.
Initial UE Message	The total number of initial UE messages received over S1AP interface by this HeNBGW from eNodeB.
Uplink NAS Transport	The total number of NAS Transport in Uplink direction messages received over S1AP interface by this HeNBGW from eNodeB.
NAS Non-Delivery Ind	The total number of S1AP messages for NAS non delivery indication received over S1AP interface by this HeNBGW from eNodeB.
Error Indication	The total number of S1AP messages with error-indication received over S1AP interface by this HeNBGW from eNodeB.

Field	Description
Handover Request Ack	The total number of ACK messages for handover request received over S1AP interface by this HeNBGW from eNodeB.
Handover Cancel	The total number of handover cancel messages received over S1AP interface by this HeNBGW from eNodeB.
Handover Required	The total number of handover required messages received over S1AP interface by this HeNBGW from eNodeB.
Handover Fail	The total number of HANDOVER_FAILURE messages received over S1AP interface by this HeNBGW from eNodeB.
Handover Notify	The total number of HANDOVER_NOTIFY messages received over S1AP interface by this HeNBGW from eNodeB.
Path Switch Req	The total number of PATH_SWITCH_REQ messages received over S1AP interface by this HeNBGW from eNodeB.
eNB Status Transfer	The total number of messages received for eNodeB status transfer message over S1AP interface by this HeNBGW from eNodeB.
UE Capability Info Ind	The total number of messages with UE capability information indication received over S1AP interface by this HeNBGW from eNodeB.
Uplink S1 CDMA2000	The total number of response messages for S1 tunneling with cdma2000 network in uplink direction received over S1AP interface by this HeNBGW from eNodeB.
Trace Failure Ind	The total number of response messages with Session Trace failure indication for specific session received over S1AP interface by this HeNBGW from eNodeB.
Location Report	The total number of LOCATION REPORT messages sent by the eNodeB to the MME providing the UE's location.
Loc Report Fail Ind	The total number of LOCATION REPORT FAILURE INDICATION messages sent by the eNodeB to the MME indicating that a LOCATION REPORT CONTROL procedure has failed due to an interaction with a handover procedure.
S1AP Decode Fail	The total number of response message indicating S1AP decode failure received over S1AP interface by this HeNBGW from eNodeB.
MME Config Update Fail	The total number of MME CONFIGURATION UPDATE FAILURE messages sent by the eNodeB to the MME indicating an S1-MME configuration update failure.
MME Config Update Ack	The total number of MME CONFIGURATION UPDATE ACKNOWLEDGEMENT messages sent by the eNodeB indicating the receipt of the Transport Network Layer (TNL) association information.
S1AP Unexpected Event	The total number of message indicating failure due to unexpected event received over S1AP interface by this HeNBGW from eNodeB.

Field	Description
eNB Config Transfer	The total number of ENB CONFIGURATION TRANSFER message received by the MME from the eNodeB for the purpose of transferring RAN configuration information.
Uplink Non-UE LPPaTpt	The total number of non-UE uplink transport messages received by the MME from the eNodeB for LPPa (LTE Positioning Protocol annex).
Uplink UE LPPaTpt	The total number of UE uplink transport messages received by the MME from the eNodeB for LPPa.
Kill Response	The total number of CMAS Kill Response messages received by the MME from the eNodeB. This message is sent by the eNodeB to indicate the list of warning areas where cancellation of the broadcast of the identified message was successful and unsuccessful.
<b>Radio Network Error Statistics</b>	
Unknown MME UE S1AP Id	The total number of times an MME UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.
Unknown ENB UE S1AP Id	The total number of times an ENB UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.
Unknown UE S1AP Id Pair	The total number of times an ENB and MME UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.
<b>Protocol Error Statistics</b>	
Transfer Syntax Error	The total number of messages received by the MME from the eNodeB containing a Transfer Syntax Error.
Semantic Error	The total number of messages received by the MME from the eNodeB containing a Semantic Error.
Message Not Compatible	The total number of messages received by the MME from the eNodeB that were not compatible with the receiver state.
Abstract Syntax Error	This sub-group displays abstract syntax error statistics for S1AP messages received by the MME from the eNodeB.
Reject	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error with a criticality of "reject".
Ignore And Notify	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error with a criticality of "ignore and notify".
Falsely Constr Msg	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error because the message contained IEs or IE groups in the wrong order or with too many occurrences.
Total eNodeB Associations	The total number of eNodeB associations

Field	Description
License Exceeded	Total number of messages discarded due to license getting exceeded.

## show hcnbgw-network-service all

Table 330: show hcnbgw-network-service all Command Output Descriptions

Field	Description
Service name	The name used to identify the HeNB-GW Network service to the system. <b>Important</b> At a time only one HeNB-GW Network Service can be configured per system.
Context name	The name of the system context in which the HeNB-GW Network service is defined.
Status	The status of the configured HeNB-GW Network Service, e.g. Started or Not Started.
Logical eNodeB	Displays the configured MCC, MNC, and Macro eNodeB or Home eNodeB ID configured for this Logical eNodeB. More configuration details pertaining to this Logical eNodeB are listed below: <b>Important</b> This information is listed for each individual Logical eNodeB, since multiple Logical eNodeBs can be configured per HeNB-GW Network service.
SCTP Port	The HeNB-GW uses this port to communicate with the MME(s) over S1-MME interface
SCTP IP Address	The IP address used by HeNB-GW for establishing S1 associations with MME(s).
TAI List DB	The name of the TAI database used to configure the list of TAI(s) supported by the Logical eNodeB instance
MME Pool Name	The MME pool name used to associate an MME Pool with the Logical eNodeB instance.

# CHAPTER 69

## show hnbgw

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

This chapter includes the **show hnbgw** command output tables.

- [show hnbgw access-control-db](#), on page 1249
- [show hnbgw access-control-db imsi](#), on page 1250
- [show hnbgw counters](#), on page 1250
- [show hnbgw counters](#), on page 1251
- [show hnbgw counters hnbgw-service](#), on page 1253
- [show hnbgw counters hnbid](#), on page 1254
- [show hnbgw disconnect-reasons](#), on page 1254
- [show hnbgw-global](#), on page 1260

- [show hnbgw sessions all](#), on page 1268
- [show hnbgw sessions full](#), on page 1269
- [show hnbgw statistics paging-only](#), on page 1272

## show hnbgw access-control-db

*Table 331: show hnbgw access-control-db Command Output Descriptions*

Field	Description
Total Number of IMSIs	The total number of IMSIs available in White List of Access Control database on HNB-GW service instance.
Number of Registered IMSIs	The total number of IMSIs from Access Control database are registered on HNB-GW service instance.
Number of IMSIs undergoing Relocation	The total number of IMSIs from Access Control database are under the process of relocation on HNB-GW service instance. <b>Important</b> From StarOS 14.0 onward, this counter is deprecated.

Field	Description
Number of IMSIs marked for Purging	The total number of IMSIs from Access Control database are marked for purging from database on HNB-GW service instance.

## show hnbgw access-control-db imsi

Table 332: show hnbgw access-control-db imsi Command Output Descriptions

Field	Description
IMSI	Indicates the IMSI for which statistics queried in White List of Access Control database on HNB-GW service instance.
Owner Location Area Code (LAC)	Indicates the Location Area Code (LAC) of the owner of specific IMSI registered in Access Control database on HNB-GW service instance.
Undergoing Relocation	Indicates whether queried IMSI is going through relocation procedure or not.
HNBs having IMSI in whitelist	Indicates the total number of HNBs where specific IMSI is in White List in Access Control database on HNB-GW service instance.
Core Network Id	Indicates the core Network ID of specific IMSI.
IMSI Purge Timer	This group indicates status of IMSI purge timer for Access Control database.
State	Indicates the status of Access Control database purge process.
Start Time	Indicates the configured time for start of purge process on Access Control database for specific IMSI.
End Time	Indicates the configured time for completion of purge process on Access Control database for specific IMSI.

## show hnbgw counters

**Note** Show command output described in table below is not supported in StarOS Release 14.0 and onward.

Table 333: show hnbgw counters Command Output Descriptions

Field	Description
Number of registered HNBs	The total number of HNB devices (Open and Closed) registered with this HNB-GW service.
Number of registered Open HNBs	The total number of Open HNB devices registered with this HNB-GW service.

Field	Description
Number of registered Closed HNBs	The total number of Closed HNB devices registered with this HNB-GW service.
Number of registered UEs	The total number of User Equipment devices registered with this HNB-GW service through open and closed HNBs.
Number of UEs registered from Open HNBs	The total number of User Equipment devices registered with this HNB-GW service through open HNBs.
Number of UEs registered from Closed HNBs	The total number of User Equipment devices registered with this HNB-GW service through closed HNBs.
Number of UEs with IuPS connection	The total number of User Equipment devices that have established a connection with the Packet Switched network.
Number of UEs with IuCS connection	The total number of User Equipment devices that have established a connection with the Circuit Switched network
Number of UEs with IuPS and IuCS connection	The total number of User Equipment devices that have established connections to both the Packet Switched and Circuit Switched networks.
Number of Idle UEs	The total number of User Equipment devices that have no active connections to either the Packet Switched or Circuit Switched networks.

## show hnbgw counters

**Note** Show command output described in table below is supported in StarOS Release 14.0 and onward only.

**Table 334: show hnbgw counters Command Output Descriptions 1**

Field	Description
Registered HNBs	This group displays the total number of Closed, Hybrid, and Open HNBs registered with HNB-GW services.
Closed HNBs	The total number of Closed HNB devices registered with this HNB-GW service.
Hybrid HNBs	The total number of Hybrid HNB devices registered with this HNB-GW service.
Open HNBs	The total number of Open HNB devices registered with this HNB-GW service.
Registered UEs	This group displays the total number of User Equipment devices registered with this HNB-GW service through Closed, Hyrbids, and Open HNBs.
Closed HNB UEs	The total number of User Equipment devices registered with this HNB-GW service through Closed HNBs.

Field	Description
Hybrid HNB UEs	The total number of User Equipment devices registered with this HNB-GW service through Hybrid HNBs.
Open HNB UEs	The total number of User Equipment devices registered with this HNB-GW service through Open HNBs.
UEs with IuPS connection	This group displays the total number of User Equipment devices that have established a connection with the Packet Switched network through Closed, Hybrid, and Open HNBs.
Closed HNB UEs	The total number of User Equipment devices that have established a connection with the Packet Switched network through Closed HNBs.
Hybrid HNB UEs	The total number of User Equipment devices that have established a connection with the Packet Switched network through Hybrid HNBs.
Open HNB UEs	The total number of User Equipment devices that have established a connection with the Packet Switched network through Open HNBs.
UEs with IuCS connection	This group displays the total number of User Equipment devices that have established a connection with the Circuit Switched network through Closed, Hybrid, and Open HNBs.
Closed HNB UEs	The total number of User Equipment devices that have established a connection with the Circuit Switched network through Closed HNBs.
Hybrid HNB UEs	The total number of User Equipment devices that have established a connection with the Circuit Switched network through Hybrid HNBs.
Open HNB UEs	The total number of User Equipment devices that have established a connection with the Circuit Switched network through Open HNBs.
UEs with IuPS and IuCS connection	This group displays the total number of User Equipment devices that have established connections to both the CN; i.e. PS and CS through Closed, Hybrid, and Open HNBs.
Closed HNB UEs	The total number of User Equipment devices that have established connections to both the CN; i.e. PS and CS through Closed HNBs.
Hybrid HNB UEs	The total number of User Equipment devices that have established connections to both the CN; i.e. PS and CS through Hybrid HNBs.
Open HNB UEs	The total number of User Equipment devices that have established connections to both the CN; i.e. PS and CS through Open HNBs.
Idle UEs	This group displays the total number of User Equipment devices that have no active connections to either of the Packet Switched or Circuit Switched networks and registered through Closed, Hybrid, and Open HNBs..
Closed HNB UEs	The total number of User Equipment devices that have no active connections to either of the Packet Switched or Circuit Switched networks and registered through Closed HNBs.

Field	Description
Hybrid HNB UEs	The total number of User Equipment devices that have no active connections to either of the Packet Switched or Circuit Switched networks and registered through Hybrid HNBs.
Open HNB UEs	The total number of User Equipment devices that have no active connections to either of the Packet Switched or Circuit Switched networks and registered through Open HNBs.
PS Rab connections	This group displays the total number of RAB connections established with PS network through Closed, Hybrid, and Open HNBs.
Closed HNB PS Rabs	The total number of RABs connections established in PS CN through through Closed HNBs.
Hybrid HNB PS Rabs	The total number of RABs connections established in PS CN through through Hybrid HNBs.
Open HNB PS Rabs	The total number of RABs connections established in PS CN through through Open HNBs.
CS Rab connections	This group displays the total number of RAB connections established with CS network through Closed, Hybrid, and Open HNBs.
Closed HNB PS Rabs	The total number of RABs connections established in CS CN through through Closed HNBs.
Hybrid HNB PS Rabs	The total number of RABs connections established in CS CN through through Hybrid HNBs.
Open HNB PS Rabs	The total number of RABs connections established in CS CN through through Open HNBs.

## show hnbgw counters hnbgw-service

*Table 335: show hnbgw counters hnbgw-service Command Output Descriptions*

Field	Description
HNBGW Service	The name that identifies this HNB-GW service.
Number of registered HNBs	The total number of HNB devices (Open and Closed) registered with this HNB-GW service.
Number of registered Open HNBs	The total number of Open HNB devices registered with this HNB-GW service.
Number of registered Closed HNBs	The total number of Closed HNB devices registered with this HNB-GW service.
Number of registered UEs	The total number of User Equipment devices registered with this HNB-GW service through open and closed HNBs.

Field	Description
Number of UEs registered from Open HNBs	The total number of User Equipment devices registered with this HNB-GW service through open HNBs.
Number of UEs registered from Closed HNBs	The total number of User Equipment devices registered with this HNB-GW service through closed HNBs.
Number of UEs with IuPS connection	The total number of User Equipment devices that have a Packet Switched network connection to a SGSN via this HNB-GW service.
Number of UEs with IuCS connection	The total number of User Equipment devices that have established a Circuit Switched network connection to a MSC via this HNB-GW service.
Number of UEs with IuPS and IuCS connection	The total number of User Equipment devices that have established Packet Switched (SGSN) and Circuit Switched (MSC) network connections via this HNB-GW service.
Number of Idle UEs	The total number of User Equipment devices that do not have an active connection to a Packet Switched (SGSN) or Circuit Switched (MSC) network.

## show hnbgw counters hnbid

*Table 336: show hnbgw counters hnbid Command Output Descriptions*

Field	Description
HNB Id	The HNB device ID sent to the HNB-GW during registration.
Number of registered UEs	The number of User Equipment devices that have registered with this HNB.
Number of UEs with IuPS connection	The number of User Equipment devices that have established a connection to a SGSN via the Packet Switched network.
Number of UEs with IuCS connection	The number of User Equipment devices that have established a connection to a MSC via the Circuit Switched network.
Number of UEs with IuPS and IuCS connection	The number of User Equipment devices that have established connections to an MSC via the Circuit Switched interface and an SGSN via the Packet Switched network.
Number of Idle UEs	The number of User Equipment devices that do not have an active connection to Packet Switched (SGSN) or Circuit Switched (MSC) networks.

## show hnbgw disconnect-reasons

*Table 337: show hnbgw disconnect-reasons Command Output Descriptions*

Field	Description
HNB	This group displays the detailed disconnect reasons at the HNB-GW for particular HNB.

Field	Description
HNB Re-Registered over same SCTP Association	Total number of HNBs disconnected on HNB-GW as HNB tried to re-registration over same SCTP association between HNB and HNB-GW.
Duplicate HNB Registration	Total number of HNBs disconnected on HNB-GW as duplicate registration was tried for same HNB.
Admin Disconnect	Total number of HNBs disconnected on a HNB-GW due to administrative decision like removal of service, subscriber or result of clearing subscriber session through Exec mode.
Miscellaneous	Total number of HNBs disconnected on a HNB-GW due to miscellaneous or unknown reasons, the reason not mentioned in this table.
HNB Terminated SCTP Association	Total number of HNBs disconnected on a HNB-GW as HNB terminated the SCTP association with HNB-GW.
SCTP Idle Timeout	Total number of HNBs disconnected on a HNB-GW as HNB was idle for long time and timer for SCTP idle duration triggered the termination after timeout duration expired.
Access Accept Message had issue	Total number of HNBs disconnected on a HNB-GW due to some error in Access Accept message format or missing value or parameters.
Access Reject	Total number of HNBs disconnected on a HNB-GW as HNB access was rejected by HNB-GW.
Unauthorised Location	Total number of HNB registration requests rejected on an HNB-GW due to mismatch of Macro LAC configured on the HNB-GW.
Open Access Mode disabled	Total number of HNBs disconnected on a HNB-GW as AAA server has sent the Access Accept message with access mode for particular HNB as 2 but Open Access Mode is disabled on HNB-GW.
Hybrid Access Mode disabled	Total number of HNBs disconnected on a HNB-GW as HNB requesting registration is of Hybrid mode but Hybrid Access Mode is disabled on HNB-GW.
Configuration Issue	Total number of HNBs disconnected on a HNB-GW due to some error or misconfiguration found in configuration on HNB or on HNB-GW for particular HNB.
Deregister from HNB	Total number of HNBs disconnected on a HNB-GW as HNB sent de-registration request to HNB-GW.
Deregister Radius DM	Total number of HNBs disconnected on a HNB-GW as AAA server sent the Disconnect message to deregister the HNB with HNB-GW.
Cleared due to SCTP timeouts	Total number of HNBs disconnected on a HNB-GW as timer for SCTP idle duration triggered the clearing of session after timeout duration expired.
Access mode mismatch	Total number of HNBs disconnected on a HNB-GW as there is mismatch in value sent by AAA server in Access-Accept message for access mode and configuration allowed on HNB-GW.
UE	This group displays the detailed disconnect reasons at the HNB-GW for particular UE.
Duplicate UE Registration	Total number of UEs disconnected on HNB-GW as duplicate registration was tried for same UE.

Field	Description
UE Relocated to another HNB	Total number of UEs disconnected on a HNB-GW as same UR relocated to another HNB.
UE Register Reject - Miscellaneous	Total number of UEs registration rejected on a HNB-GW due to miscellaneous or unknown reasons, the reason not mentioned in this table.
UE Deregister from HNB	Total number of UEs disconnected on a HNB-GW as UE deregisters it self from associated HNB.
RUA Connect after COA	Total number of UEs disconnected on a HNB-GW as RANAP User Adaptation connected after Change of Authorization from AAA server.
HNB Removed	Total number of UEs disconnected on a HNB-GW as particular associated HNB is removed from HNB-GW.
UE Idle time out	Total number of UEs disconnected on a HNB-GW as UE was idle for long time and timer for idle duration triggered the termination after timeout duration expired.
Auth Failure - UE Register Rejected	Total number of UEs disconnected on a HNB-GW as AAA server has sent the Authentication Failure and UE registration is rejected.
UE Reg reject - Max UEs per Open HNB Limit	Total number of UEs disconnected on a HNB-GW as number of UEs connected through an Open HNB exceeds the limit of maximum UEs allowed for particular Open HNB on HNB-GW in Open Access mode.
UE Reg rej - Max non-access-ctrl UEs per Hybrid HNB	Total number of UEs disconnected on a HNB-GW as number of non-access type UEs connected through a Hybrid HNB exceeds the limit of maximum UEs allowed for particular Hybrid HNB on HNB-GW in Hybrid Access mode.
Miscellaneous	Total number of UEs disconnected on a HNB-GW due to miscellaneous or unknown reasons, the reason not mentioned in this table.
Stale UE Session cleared on Relocation arrival	Total number of stale UEs sessions cleared on a HNB-GW due to relocation arrival with particular HNB.
IuCS	This group displays the detailed disconnect reasons at the HNB-GW for particular IuCS connection.
UE Deregistered	Total number of IuCS association disconnected on HNB-GW as de-registration procedure was initiated for UE.
Miscellaneous	Total number of IuCS association disconnected on a HNB-GW and CN due to miscellaneous or unknown reasons, the reason not mentioned in this table.
Relocation Failure from HNB	Total number of IuCS association disconnected due to relocation failure message received from HNB.
Connect over Connect	Total number of IuCS association disconnected on a HNB-GW as same connection tried over the same association.
RUA Disconnect	Total number of IuCS association disconnected on a HNB-GW due to RANAP User Adaptation disconnected.
SCCP Released	Total number of IuCS association disconnected on a HNB-GW as SCCP association is release between HNB-GW and associated CN.

Field	Description
HNB Reset	Total number of IuCS association disconnected on a HNB-GW due to trigger of RESET procedure from HNB.
Admin Disconnect	Total number of IuCS disconnected on a HNB-GW due to administrative decision like removal of service, subscriber or result of clearing subscriber session through Exec mode.
Iar Expiry	Total number of IuCS disconnected on a HNB-GW due to expiry of Iar timer.
Common-ID IMSI check failed	Total number of IuCS disconnected on a HNB-GW due to failure in IMSI and common id check of UE.
MSC Reset/Unreachable	Total number of IuCS association disconnected on a HNB-GW due to trigger of RESET procedure from MSC or MSC is not reachable in CN.
IuPS	This group displays the detailed disconnect reasons at the HNB-GW for particular IuPS connection.
UE Deregistered	Total number of IuPS association disconnected on HNB-GW as de-registration procedure was initiated for UE.
Miscellaneous	Total number of IuPS association disconnected on a HNB-GW and CN due to miscellaneous or unknown reasons, the reason not mentioned in this table.
Relocation Failure from HNB	Total number of IuPS association disconnected due to relocation failure message received from HNB.
Connect over Connect	Total number of IuPS association disconnected on a HNB-GW as same connection tried over the same association.
RUA Disconnect	Total number of IuPS association disconnected on a HNB-GW due to RANAP User Adaptation disconnected.
SCCP Released	Total number of IuPS association disconnected on a HNB-GW as SCCP association is release between HNB-GW and associated CN.
HNB Reset	Total number of IuPS association disconnected on a HNB-GW due to trigger of RESET procedure from HNB.
Admin Disconnect	Total number of IuPS disconnected on a HNB-GW due to administrative decision like removal of service or any entity, subscriber or result of clearing subscriber session through Exec mode.
Iar Expiry	Total number of IuPS disconnected on a HNB-GW due to expiry of Iar timer.
Common-ID IMSI check failed	Total number of IuPS disconnected on a HNB-GW due to failure in IMSI and common id check of UE.
SGSN Reset/Unreachable	Total number of IuPS association disconnected on a HNB-GW due to trigger of RESET procedure from SGSN or SGSN is not reachable in CN.
GTPU Path Failure towards HNB	Total number of IuPS association disconnected on a HNB-GW due to failure of GTP-U path towards HNB.
CS-RAB	This group displays the detailed disconnect reasons at the HNB-GW for particular RAB in CS domain.

Field	Description
Issue in RAB Asst Req Message	Total number of RABs disconnected on HNB-GW due to issue in RAB AssignmentRequest message from MSC to HNB-GW.
Issue in Reloc Req Message	Total number of RABs disconnected on HNB-GW due to issue in RAB RelocationRequest message.
Config Issue	Total number of RABs disconnected on a HNB-GW due to some error or misconfiguration found in configuration in CS domain or on HNB-GW for particular CN.
AAL2 Channel Establish failure	Total number of RABs disconnected on a HNB-GW due to failure in AAL2 channel establishment between MSC and HNB-GW in particular CS domain.
Issue in RAB Assgt Resp Message	Total number of RABs disconnected on a HNB-GW due to issues in RAB Assignment Response message from HNB-GW to MSC in particular CS domain.
HNB Failed RAB in RAB Assgt Resp Message	Total number of RABs disconnected on a HNB-GW as RAB establishment failed between HNB and HNB-GW and response received in RAB Assignment Response message from HNB-GW to MSC in particular CS domain.
HNB Failed RAB in Reloc Request Ack Message	Total number of RABs disconnected on a HNB-GW as RAB Relocation failed between HNB and HNB-GW and response received in RAB Relocation Request Ack message from HNB-GW to MSC in particular CS domain.
Issue in Reloc Req Ack Message	Total number of RABs disconnected on a HNB-GW due to issues in RAB Relocation Request Ack message from HNB-GW to MSC in particular CS domain.
CN Initiated RAB Release	Total number of RABs disconnected on a HNB-GW as CN node (MSC) initiated the RAB release procedure in particular CS domain.
RAB Assignment Timer Expiry	Total number of RABs disconnected on a HNB-GW due to expiry of RAB Assignment timer duration.
RAB Release Timer Expiry	Total number of RABs disconnected on a HNB-GW due to expiry of RAB Release Timer duration.
AAL2 Connection Released	Total number of RABs disconnected on a HNB-GW due to release of AAL2 connections.
IU went down	Total number of RABs disconnected on a HNB-GW due failure of IuCS interface.
Admin Disconnect	Total number of RABs disconnected on a HNB-GW due to administrative decision like removal of service or any entity, subscriber or result of clearing subscriber session through Exec mode.
Dropped - RAB Assgt Req Decoding failed	Total number of RABs disconnected on a HNB-GW due to failure in decoding of RAB Assignment Request message from HNB-GW to MSC in particular CS domain.
Miscellaneous	Total number of RABs disconnected on a HNB-GW and CN due to miscellaneous or unknown reasons, the reason not mentioned in this table.
PS-RAB	This group displays the detailed disconnect reasons at the HNB-GW for particular RAB in PS domain.
Issue in RAB Asst Req Message	Total number of RABs disconnected on HNB-GW due to issue in RAB AssignmentRequest message from SGSN to HNB-GW.
Issue in Reloc Req Message	Total number of RABs disconnected on HNB-GW due to issue in RAB RelocationRequest message.

Field	Description
Config Issue	Total number of RABs disconnected on a HNB-GW due to some error or misconfiguration found in configuration in PS domain or on HNB-GW for particular CN.
Issue in RAB Assgt Resp Message	Total number of RABs disconnected on a HNB-GW due to issues in RAB Assignment Response message from HNB-GW to SGSN in particular PS domain.
HNB Failed the RAB in RAB Assgt Resp Message	Total number of RABs disconnected on a HNB-GW as RAB establishment failed between HNB and HNB-GW and response received in RAB Assignment Response message from HNB-GW to SGSN in particular PS domain.
HNB Failed the RAB in Reloc Request Ack Message	Total number of RABs disconnected on a HNB-GW as RAB Relocation failed between HNB and HNB-GW and response received in RAB Relocation Request Ack message from HNB-GW to SGSN in particular PS domain.
Issue in Reloc Req Ack Message	Total number of RABs disconnected on a HNB-GW due to issues in RAB Relocation Request Ack message from HNB-GW to SGSN in particular PS domain.
CN Initiated RAB Release	Total number of RABs disconnected on a HNB-GW as CN node (SGSN) initiated the RAB release procedure in particular PS domain.
RAB Assignment Timer Expiry	Total number of RABs disconnected on a HNB-GW due to expiry of RAB Assignment timer duration.
IU went down	Total number of RABs disconnected on a HNB-GW due failure of IuPS interface.
Admin Disconnect	Total number of RABs disconnected on a HNB-GW due to administrative decision like removal of service or any entity, subscriber or result of clearing subscriber session through Exec mode.
Dropped - RAB Assgt Req Decoding failed	Total number of RABs disconnected on a HNB-GW due to failure in decoding of RAB Assignment Request message from HNB-GW to SGSN in particular PS domain.
Miscellaneous	Total number of RABs disconnected on a HNB-GW and CN due to miscellaneous or unknown reasons, the reason not mentioned in this table.
GTPU CN Error Indication	Total number of RABs disconnected on a HNB-GW and CN due to CN Error Indication in GTP-U message.
GTPU CN Path Failure	Total number of RABs disconnected on a HNB-GW and CN due to CN Path Failure in GTP-U message.
GTPU HNB Error Indication	Total number of RABs disconnected on a HNB-GW and CN due to HNB Error Indication in GTP-U message.
GTPU HNB Path Failure	Total number of RABs disconnected on a HNB-GW and CN due to HNB Path Failure in GTP-U message.

# show hnbgw-global

Table 338: show hnbgw-global Command Output Descriptions

Field	Description
NNSF TIMER for Paging in IuFlex	Indicates the duration set in seconds for NAS Node Selection Function (NNSF) timer (T-NNSF) which is used by the HNB-GW to store the IMSI and the relevant <i>CN Global-ID</i> in the short term after Paging. This timer is used for IuFlex feature support. Default timer value is 30 seconds.
IMSI Purge Timeout	Indicates the timeout duration set in minutes for to store the IMSI and the relevant information after which IMSI information will be purged from HNB-GW db. This timer is used for IuFlex feature support. Default timeout value is 1440 minutes.
SCTP ALPHA-RTO	The retransmission timeout attempt set for initial phase for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 5 attempts.
SCTP BETA-RTO	The retransmission timeout attempt set for second phase for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 10 attempts.
SCTP MAX-RETX-INIT	Indicates the maximum number of SCTP INIT messages retransmitted for SCTP communication between HNB and HNB-GW.
SCTP MAX-RETX-PATH	Indicates the maximum number of SCTP PATH messages retransmitted for SCTP communication between HNB and HNB-GW.
SCTP MAX-RETX-ASSOC	Indicates the maximum number of SCTP ASSOC messages retransmitted for SCTP communication between HNB and HNB-GW.
SCTP MAX-IN-STRMS	Indicates the maximum number of incoming SCTP streams allowed on HNB-GW for SCTP communication between HNB and HNB-GW
SCTP MAX-OUT-STRMS	Indicates the maximum number of outgoing SCTP streams allowed from HNB-GW for SCTP communication between HNB and HNB-GW  <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
Paging Optimization Policy	Displays configuration of the Paging Optimization policy for Open Access support on an HNB-GW service instance.
Page Open HNBs	Indicates the status of paging optimization configuration for open HNBs, with and without paging-area, in an HNB-GW service instance. Possible configuration is: <ul style="list-style-type: none"> <li>• Always</li> <li>• Never</li> </ul>
Page Open HNB Where UE Registered	Indicates the status of paging optimization configuration for open HNBs, with and without paging-area, and UEs registered in an HNB-GW service instance. Possible settings are: <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>

# show hnbgw-service

Table 339: show hnbgw-service all Command Output Descriptions

Field	Description
Service name	The name used to identify the HNB-GW service to the system.
Context name	The name of the system context in which the HNB-GW service is defined.
SCTP IP Address	The IP address used to transmit SCTP messages from HNBs to the HNB-GW.
SCTP Port	The HNB-GW uses this port to listen for SCTP messages from HNBs.
GTP-U Service	The defined GTP-U service name(s) associated with the HNB-GW service in a Packet Switched network instance. The GTP-U service(s) are used for GTP-U tunneling towards the HNB-GW access network.
CBS Service	The defined CBS service name(s) associated with the HNB-GW service. Cell broadcasting services are used for simultaneous delivery of messages to multiple users in a specified area, primarily for emergencies and alerting services.
RTP MUX	Indicates if RTP multiplexing is enabled or disabled. If enabled, multiple subscriber voice packets can be multiplexed and sent as one RTP packet towards the HNB-GW. This is explicitly negotiated between the HNB and the HNB-GW during HNB Registration.
RTP MUX Port	This is the RTP multiplexing port number used for used in the binding-id in the RAB request sent to the HNB by the HNB-GW during voice call setup. The HNB will send RTP data (packetized voice) to this MUX port number.
RTP Pool	This is the IP pool used to allocate IP address to subscriber in the RAB request by the HNB-GW as the transport layer endpoint. The HNB will send RTP data (packetized voice) to IP address allocated from this pool.
RTCP report interval	Indicates if the RTCP (Real time Transport Control Protocol) report interval is enabled or not. RTCP enables the receiver to detect if there is any packet loss and to compensate for any delay jitter. RTP and RTCP protocols work independently of the underlying Transport layer and Network layer protocols.
HNBGW Initiated Ranap Reset	Indicates if the HNB-GW Initiated RANAP Reset function is enabled or disabled.  <b>Important</b> From StarOS 14.0 onward, this counter is moved to show cs-network and show ps-network command outputs.
Ranap Reset Ack Timer	The timer value, in seconds, that defines how long the HNB-GW waits for a RESET ACK message from the SGSN or MSC after transmitting a RESET message. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled.  <b>Important</b> From StarOS 14.0 onward, this counter is moved to show cs-network and show ps-network command outputs.

Field	Description
Ranap Reset Maximum Retransmissions	<p>Sets the maximum number of retries allowed for the HNB-GW to transmit a RANAP RESET message to the SGSN or MSC if the RESET ACK timer expires. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show cs-network and show ps-network command outputs.</p>
Ranap Reset Guard Timer	<p>The timer that the HNB-GW starts after receiving a RESET message from the core network. While this timer is running, the HNB-GW discards any new RESET messages that it receives.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show cs-network and show ps-network command outputs.</p>
SCTP HEARTBEAT Timeout	<p>The timeout duration set in milliseconds for SCTP heartbeat transmission between HNB and HNB-GW. Default value is 3000 milliseconds. After this duration retransmission will start.</p>
SCTP RTO-MIN Timeout	<p>The minimum retransmission timeout duration set in milliseconds for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 1000 milliseconds.</p>
SCTP RTO-MAX Timeout	<p>The maximum retransmission timeout duration set in milliseconds for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 10000 milliseconds.</p>
SCTP RTO-INITIAL Timeout	<p>The initial retransmission timeout duration set in milliseconds for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 10000 milliseconds.</p>
SCTP ALPHA-RTO	<p>The retransmission timeout attempt set for initial phase for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 5 attempts.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
SCTP BETA-RTO	<p>The retransmission timeout attempt set for second phase for SCTP heartbeat retransmission between HNB and HNB-GW. Default value is 10 attempts.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
SCTP CHECKSUM-TYPE	<p>Indicates the checksum type set for SCTP communication between HNB and HNB-GW. Default checksum type is <b>CRC32</b>.</p>
SCTP COOKIE-LIFE	<p>Indicates the life duration set for SCTP Cookies for SCTP communication between HNB and HNB-GW. Default value is 60000 msec.</p>

Field	Description
SCTP MAX-RETX-INIT	Indicates the maximum number of SCTP INIT messages retransmitted for SCTP communication between HNB and HNB-GW. <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
SCTP MAX-RETX-PATH	Indicates the maximum number of SCTP PATH messages retransmitted for SCTP communication between HNB and HNB-GW. <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
SCTP MAX-RETX-ASSOC	Indicates the maximum number of SCTP ASSOC messages retransmitted for SCTP communication between HNB and HNB-GW. <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
SCTP MTU-SIZE-MIN	Indicates the minimum transmission unit size set for MTU for SCTP communication between HNB and HNB-GW. Default value is 508 bytes.
SCTP MTU-SIZE-MAX	Indicates the minimum transmission unit size set for MTU for SCTP communication between HNB and HNB-GW. Default value is 1500 bytes.
SCTP MTU-SIZE-INITIAL	Indicates the initial transmission unit size set for MTU for SCTP communication between HNB and HNB-GW. Default value is 508 bytes.
SCTP SACK-FREQUENCY	Indicates the frequency of set for Selective Acknowledgement (SACK) messages for SCTP communication between HNB and HNB-GW
SCTP SACK-PERIOD	Indicates the Selective Acknowledgement (SACK) period between two SACK messages set for SCTP communication between HNB and HNB-GW
SCTP MAX-IN-STRMS	Indicates the maximum number of incoming SCTP streams allowed on HNB-GW for SCTP communication between HNB and HNB-GW <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
SCTP MAX-OUT-STRMS	Indicates the maximum number of outgoing SCTP streams allowed from HNB-GW for SCTP communication between HNB and HNB-GW <b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.
SCTP Connection Timeout	Indicates the timeout duration set for SCTP communication between HNB and HNB-GW after which reconnection procedure will start. Default value is 10 secs.
UE Registration Timeout	Indicates the timeout duration set for UE registration between UE and HNB-GW after which re-registration procedure will start. Default value is 120 secs.

Field	Description
NNSF TIMER for Paging in IuFlex	<p>Indicates the duration set in seconds for NAS Node Selection Function (NNSF) timer (T-NNSF) which is used by the HNB-GW to store the IMSI and the relevant <i>CN Global-ID</i> in the short term after Paging. This timer is used for IuFlex feature support. Default timer value is 30 seconds.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
IMSI Purge Timeout	<p>Indicates the timeout duration set in minutes for to store the IMSI and the relevant information after which IMSI information will be purged from HNB-GW db. This timer is used for IuFlex feature support. Default timeout value is 1440 minutes.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
Incoming handover for CS domain	<p>Indicates the status of incoming handover permission/restriction set in HNB-GW service instance for incoming handover of an MS via SRNS Relocation procedure for CS core network domain. Possible values are:</p> <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>
Incoming handover for PS domain	<p>Indicates the status of incoming handover permission/restriction set in HNB-GW service instance for incoming handover of an MS via SRNS Relocation procedure for PS core network domain. Possible values are:</p> <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>
HNB Access-Mode mismatch handling	<p>Access mode received in HNB Reg request and access mode received in access accept can be different. If there is mismatch based on this flag, HNB is rejected or accepted with access mode received from AAA. ♦</p>
HNB-id Leading Character Discard	
Open HNB Support	<p>Indicates the status of Open Access support on an HNB-GW service instance. Possible values are:</p> <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>
Maximum UEs Allowed Per Open HNB	<p>Indicates the total number of UEs allowed to register through an open HNB when Open Access support is enabled on an HNB-GW service instance. Possible range is between 1 through 32 where default value is 16.</p>
Paging Optimization Policy	<p>Displays configuration of the Paging Optimization policy for Open Access support on an HNB-GW service instance.</p> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>

Field	Description
Page Open HNBS	<p>Indicates the status of paging optimization configuration for open HNBS, with and without paging-area, in an HNB-GW service instance. Possible configuration is:</p> <ul style="list-style-type: none"> <li>• Always</li> <li>• Never</li> </ul> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
Page Open HNB Where UE Registered	<p>Indicates the status of paging optimization configuration for open HNBS, with and without paging-area, and UEs registered in an HNB-GW service instance. Possible settings are:</p> <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul> <p><b>Important</b> From StarOS 14.0 onward, this counter is moved to show hnbgw-global command outputs.</p>
Hybrid HNB support	<p>Indicates the status of Hybrid Access support on an HNB-GW service instance. Possible values are:</p> <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>
Maximum non-access-controlled UEs allowed per Hybrid HNB	<p>Indicates the total number of non access controlled UEs allowed to register through a hybrid HNB on an HNB-GW service instance. Maximum allowed number is 1000.</p>
Available Radio Network PLMN	<p>The Public Land Mobile Network ID configured for this HNB-GW service. It consists of the MCC and MNC (see below).</p>
MCC	<p>The Mobile Country Code defined for use with this HNB-GW service. It consists of the first 3 digits of the Available Radio Network PLMN ID.</p>
MNC	<p>The Mobile Network Code defined for use with this HNB-GW service. It consists of the last 3 digits of the Available Radio Network PLMN ID.</p>
RNC-Id	<p>The Radio Network Controller ID provided to HNBS for use by the core network for this HNB-GW service. It is configured under the PLMN-ID.</p>
Macro Coverage IE Absent Action	<p>The action, accept or reject, to be taken if macro coverage information IE is absent in HNB location information.</p>
Authorised Macro LAI	<p>The information pertaining to following parameters for macro LAC authorization:</p> <ul style="list-style-type: none"> <li>• MCC</li> <li>• MNC</li> <li>• LAC Range</li> </ul>

Field	Description
Lac	The defined Location Area Identifier provided to HNBs during registration with this HNB-GW service. The LAC signifies which location area this HNB-GW service belongs to, and is configured under the PLMN-ID.  <b>Important</b> From StarOS 14.0 onward, this counter is deprecated.
Rac	The Routing Area Identifier provided to HNBs during registration with this HNB-GW service. The RAC signifies the routing area that this HNB-GW service belongs to and is configured under the PLMN-ID  <b>Important</b> From StarOS 14.0 onward, this counter is deprecated.
PS Network Name	The PS-network to be used for selecting the packet-switched core-network (i.e., SGSN) and its point-code.  <b>Important</b> From StarOS 14.0 onward, this counter is deprecated.
CS Network Name	The CS-network to be used for selecting circuit-switched core-network (i.e., MSC) and its point-code.  <b>Important</b> From StarOS 14.0 onward, this counter is deprecated.
Service Status	The current operating status of this HNB-GW service. If the status does not read 'enabled' HNB-GW functionality is not available.
Security GW service Address	The IP address of the HNB-Security Gateway associated with this HNB-GW service. Security Gateway configurations are used when the IPsec GW is co-located with the HNB-GW service on the chassis. If the services are co-located, the SeGW IP address will be used as the IPsec tunnel endpoint by HNBs.
Security Gateway Context	Specifies the context name in which Security Gateway service is configured.
Crypto-template	Specifies the Crypto-Map template being used by the HNB-GW service for secure IPsec IKEv2 tunneling for the configured Iuh (HNB to HNB-GW) interface. The Crypto-Map template is used only if the HNB-GW and SeGW are co-located on the chassis.
Service in IPsec	Specifies whether specific HNB-GW service is started in secure IPsec IKEv2 tunneling for the configured Iuh (HNB to HNB-GW) interface.
Newcall Policy	Indicates the policy for action on new calls coming on this HNB-GW service instance. Possible actions are: <ul style="list-style-type: none"> <li>• Accept</li> <li>• Reject</li> </ul>
Paging	
CS Domain: Handle unknown IMSI	Indicates that the configuration for "Handle unknown IMSI" has been provided or not in the Paging Manager in CS domain.

Field	Description
CS Domain: Page last known HNB timeout	Indicates the timeout configured for paging the last know HNB in the CS doamin. Default timeout value for CS domain is 3 seconds.
CS Domain: Fanout Paging timeout	Indicates the timeout configured for fanout paging in CS doamin. Default timeout value for CS doamin is 5 seconds.
PS Domain: Handle unknown IMSI	Indicates that the configuration for "Handle unknown IMSI" has been provided or not in the Paging Manager in PS domain.
PS Domain: Page last known HNB timeout	Indicates the timeout configured for paging the last know HNB in the PS doamin. Default timeout value for CS domain is 6 seconds
PS Domain: Fanout Paging timeout	Indicates the timeout configured for fanout paging in CS doamin. Default timeout value for CS doamin is 10 seconds.
IP QoS DSCP marking	This group indicates the DSCP marking used for egress traffic for various protocols used on IuH and Iu interface in a HNB-GW service instance.
Traffic egress on Iuh	Indicates the DSCP marking used for egress traffic for various protocols used on IuH interface in a HNB-GW service instance.
Traffic egress on Iu	Indicates the DSCP marking used for egress traffic towards CN for various protocols used on Iu-CS/Iu-PS interface in a HNB-GW service instance.

# show hnbgw sessions all

Table 340: show hnbgw sessions all Command Output Descriptions

Field	Description
vvvv	<p>Displays service and session state information. This column displays a code consisting of six characters.</p> <p>From left-to-right, the first character represents the <b>Access Technology</b> that the subscriber is using. The possible access technologies are:</p> <ul style="list-style-type: none"> <li>• <b>F</b>: FEMTO UTRAN</li> <li>• <b>.</b>: Other/Unknown</li> </ul> <p>From left-to-right, the second character represents the <b>Session Type</b>. The possible HNB Session types are:</p> <ul style="list-style-type: none"> <li>• <b>H</b>: HNB</li> <li>• <b>U</b>: UE</li> </ul> <p>From left-to-right, the third character represents the <b>HNB State</b>. The possible HNB states are:</p> <ul style="list-style-type: none"> <li>• <b>R</b>: Registered</li> <li>• <b>D</b>: Deregistered</li> <li>• <b>I</b>: Idle</li> <li>• <b>d</b>: Disconnecting</li> <li>• <b>u</b>: Unknown</li> </ul> <p>From left-to-right, the fourth character represents the session <b>Network Type</b>. The possible network types are:</p> <ul style="list-style-type: none"> <li>• <b>I</b>: IP</li> <li>• <b>S</b>: IPSEC</li> <li>• <b>u</b>: Unknown</li> </ul>
HNBID	The HNB identification (HNBID) number used for this session.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.
Total subscribers matching specified criteria	The total number of subscribers using HNB sessions.

## show hnbgw sessions full

Table 341: show hnbgw sessions full Command Output Descriptions

Field	Description
	This is the first row which indicates the name of the HNB(s) registered for this HNB-GW session.
Card/Cpu	Indicates the card and CPU ID used for this session.
Sessmgr Instance	The session manager instances for this HNB-GW session used.
Access Tech	Indicates the accessing technology. Possible access technologies are: <ul style="list-style-type: none"> <li>• <b>F</b>: FEMTO UTRAN</li> <li>• <b>.</b>: Other/Unknown</li> </ul>
Network Type	Indicates the network service used for the subscriber session. The possible network types are: <ul style="list-style-type: none"> <li>• <b>I</b>: IP</li> <li>• <b>S</b>: IPSEC</li> <li>• <b>u</b>: Unknown</li> </ul>
Status	Indicates the session status. Possible HNB status are: <ul style="list-style-type: none"> <li>• Online/Active</li> <li>• Offline/Inactive</li> </ul>
Access Type	Indicates the session type for this subscriber. The possible access types are: <ul style="list-style-type: none"> <li>• hnbgw</li> <li>• Unknown</li> </ul>
HNB Id	The HNB identification (HNBID) number used for this session in Femto UTRAN network.
state	Indicates the state of the HNBs. Possible HNB states are: <ul style="list-style-type: none"> <li>• Registered</li> <li>• Deregistered</li> </ul>
Service Name	Indicates the name of the HNB-GW service which is used by this session instance to display the information.
HNB Local Id	The HNB identification (HNBID) number used locally for this session on HNB-GW.

Field	Description
HNB IP address	Indicates the primary IP address of the HNB in the session. In HNB-GW session this is the primary IP address of Femto CPE.
idle time	The time period that the subscriber session has been idle, either in an active or dormant state.
source context	The name of a configured source context from which the subscriber initiates a session.
callid	Indicates the identity number of call used by this instance of HNB-GW service.
PLMN-ID	The Public Land Mobile Network ID configured for this HNB-GW service. It consists of the MCC and MNC.
LAC	The defined Location Area Identifier provided to HNBs during registration with this HNB-GW service. The LAC signifies which location area this HNB-GW service belongs to, and is configured under the PLMN-ID.
RAC	The Routing Area Identifier provided to HNBs during registration with this HNB-GW service. The RAC signifies the routing area that this HNB-GW service belongs to and is configured under the PLMN-ID.
RNC-ID	Indicates the Radio Network Controller ID provided to HNBs for use by the core network for this HNB-GW service. It is configured under the PLMN-ID.
Cell ID	The cell identifier provided to HNBs during registration with this HNB-GW service. The cell id signifies the geographical location of HNB-GW session user belongs to.
Service Area Code	This identify a SA (Service Area) within a LA (Location Area) used during this HNB-GW session.
Access Mode	Indicates the access mode used by HNBs for this HNB-GW session. Possible access modes are: <ul style="list-style-type: none"> <li>• Closed: Indicates that HNB is connected to HNB-GW using Closed Access mode in this session.</li> <li>• Hybrid: Indicates that HNB is connected to HNB-GW using Hybrid Access mode in this session.</li> <li>• Open: Indicates that HNB is connected to HNB-GW using Open Access mode in this session.</li> </ul> This counter is applicable for HNB access mode.
IMSI White List	This group displays the White List IMSI database on HNB-GW.
IMSI #	Indicates the IMSI number entered in White List and have clear access to HNB-GW.
Registered IMSI List	This group displays the list of IMSIs registered on HNB-GW. This group is not supported in StarOS 14.0 and onward.
IMSI #	Indicates the IMSI number which is currently registered with HNB-GW service session instance.

Field	Description
Context Id	Indicates the identity number of the context used by specific IMSI.
Registration	Indicates the status of registration of IMSI on HNB-GW.
IuPS connection	Indicates the availability of Iu-PS connection for specific registered IMSI on HNB-GW.
Sessmgr Instance	Indicates the SessManager instance used by specific IMSI for Iu-PS or Iu-CS connection.
callid	Indicates the identity number of call used by specific IMSI for Iu-PS or Iu-CS connection on this instance of SessManager.
IuCS connection	Indicates the availability of Iu-CS connection for specific registered IMSI on HNB-GW.
IuPS connection	Indicates the availability of Iu-PS connection for specific registered IMSI on HNB-GW.
Registered UE List	This group displays the list of IMSIs registered on HNB-GW. This group is supported in StarOs 14.0 and onward.
UE #	Indicates the UE identifier which is currently registered with HNB-GW service session instance.
IMSI #	Indicates the IMSI number which is currently registered with HNB-GW service session instance.
Context Id	Indicates the identity number of the context used by specific IMSI.
Registration	Indicates the status of registration of IMSI on HNB-GW.
Type	Indicates the type of UE which is registered in this UE list having specific IMSI on HNB-GW. Possible type of UEs are: <ul style="list-style-type: none"> <li>• Access-Controlled</li> <li>• Non-Access Controlled</li> </ul>
IuCS connection	Indicates the availability of Iu-CS connection for specific registered IMSI on HNB-GW.
IuPS connection	Indicates the availability of Iu-PS connection for specific registered IMSI on HNB-GW.
Registered UE Summary	This group displays the summary of Registered UE based on access control type on HNB-GW.
Access-Controlled	Indicates the total number of Access-Controlled UEs currently registered with HNB-GW service session instance.

Field	Description
Non-Access-Controlled	Indicates the total number of Non-Access-Controlled UEs currently registered with HNB-GW service session instance.

## show hnbgw statistics paging-only

Table 342: show hnbgw statistics paging-only Command Output Descriptions

Field	Description
CS Domain Paging	
Total paging RX	Number of total paging messages received in CS domain.
Paging for unknown IMSI - Received	Number of paging messages received for unknown IMSI.
Paging for unknown IMSI - Handled	Number of paging messages handled for unknown IMSI.
Paging for unknown IMSI - Dropped	Number of paging messages dropped for unknown IMSI.
Paging for unknown IMSI - Success	Number of successful paging messages for unknown IMSI.
Paging for unknown IMSI - Failure	Number of failed paging messages for unknown IMSI.
Paging for last-registered-hnb - Attempted	Number of paging messages attempted for last registered HNB.
Paging for last-registered-hnb - Success	Number of successful paging messages for last registered HNB.
Paging for last-registered-hnb - Failure	Number of failed paging messages for last registered HNB.
Paging for last-registered-hnb - Skipped	Number of skipped paging messages for last registered HNB.
Paging for last-known-LA - Attempted	Number of attempted paging messages for last known location area..
Paging for last-known-LA - Success	Number of successful paging messages for last known location area.
Paging for last-known-LA - Failure	Number of failed paging messages for last known location area.
Paging for last-known-LA - Dropped	Number of dropped paging messages for last known location area.
PS Doamin Paging	
Total paging RX	Number of total paging messages received in PS domain.
Paging for unknown IMSI - Received	Number of paging messages received for unknown IMSI.
Paging for unknown IMSI - Handled	Number of paging messages handled for unknown IMSI.
Paging for unknown IMSI - Dropped	Number of paging messages dropped for unknown IMSI.
Paging for unknown IMSI - Success	Number of successful paging messages for unknown IMSI.
Paging for unknown IMSI - Failure	Number of failed paging messages for unknown IMSI.
Paging for last-registered-hnb - Attempted	Number of paging messages attempted for last registered HNB.
Paging for last-registered-hnb - Success	Number of successful paging messages for last registered HNB.
Paging for last-registered-hnb - Failure	Number of failed paging messages for last registered HNB.

<b>Field</b>	<b>Description</b>
Paging for last-registered-hnb - Skipped	Number of skipped paging messages for last registered HNB.
Paging for last-known-LA - Attempted	Number of attempted paging messages for last known location area..
Paging for last-known-LA - Success	Number of successful paging messages for last known location area.
Paging for last-known-LA - Failure	Number of failed paging messages for last known location area.
Paging for last-known-LA - Dropped	Number of dropped paging messages for last known location area.

# CHAPTER 70

## show hss-peer-service

This chapter includes the **show hss-peer-service** command output tables.

- [show hss-peer-service service name <name>](#), on page 1275
- [show hss-peer-service session full](#), on page 1277
- [show hss-peer-service statistics all](#), on page 1279

## show hss-peer-service service name <name>

*Table 343: show hss-peer-service service name <name> Command Output Descriptions*

Field	Description
Service name	The name of the HSS peer service configured and running on the system.
Context	The name of the VPN context in which HSS peer service configured and running on the system.
Status	Indicates whether the HSS peer service is started or not.
Diameter hss-endpoint	The Diameter endpoint name configured in the HSS peer service configuration mode for the S6a HSS interface.
Diameter eir-endpoint	The Diameter endpoint name configured in the HSS peer service configuration mode for the S13 EIR interface.
Diameter hss-dictionary	The name of Diameter dictionary configured for messaging which is to be used for HSS peer service sessions.
Update-Dictionary-AVPs	The release of 3GPP 29.272 that is configured to be used for the HSS peer service, either 3gpp-r10, 3gpp-r9, or N/A if <b>diameter update-dictionary-avps</b> command is not configured.
Request timeout	The timeout duration in seconds set for heartbeat checking of Diameter requests with the HSS server.
Request Auth-vectors	The number of authentication vectors the MME requests in an Authentication-Information-Request (AIR) message to the HSS for each UE requiring authentication.

show hss-peer-service service name &lt;name&gt;

Field	Description
Zone Code format	Displays how the MME is to interpret the zone-code received from the HSS. This field displays the setting, as configured using the <b>zone-code-format</b> command in the HSS Peer Service configuration mode. The possible values are "octet-string" (default) and "ascii-string".
Notify-Req-Msg	Displays if the MME is configured to send Notify-Request-Messages to the HSS. Possible values are Enable and Disable.
Destination Realm	Displays the configuration of the <b>dynamic-destination-realm</b> HSS Peer Service command. Possible values are "Configured Peer Realm" (default) or "Dynamic Realm".
<b>Failure-Handling</b>	This group shows the configuration/settings of failure handling actions on various type of Diameter messages for different type of failure.
Message Type	The type of Diameter messages configured for failure handling on specific type of failure or error.  The following types of Diameter messages can be configured for failure handling: <ul style="list-style-type: none"> <li>• Authentication-Information-Request</li> <li>• Check-Identity-Request</li> <li>• Notify-Request</li> <li>• Purge-UE-Request</li> <li>• Update-Location-Request</li> </ul>
Failure Type	The type of message failures to trigger the failure handling actions on specific Diameter messages.  The following types of failure can be handled for different types of diameter messages: <ul style="list-style-type: none"> <li>• Diameter Result Code (3000 to 9999) single or a range of code.</li> <li>• Request Timeout</li> </ul>
Action	The type of action to be taken of a type of failure for specific type of Diameter messages.  The following types of action can be configured for different types of diameter message failures: <ul style="list-style-type: none"> <li>• Continue</li> <li>• Retry-and-terminate</li> <li>• Terminate</li> </ul>

# show hss-peer-service session full

Table 344: show hss-peer-service session full Command Output Descriptions

Field	Description
<b>HSS</b>	
Peer	The HSS peer name.
Mode	The mode of the session.
Callid	The EPS subscriber's call identity in 8 digit hex number of the connected call to an HSS peer service session.
NAI	The network access identifier (NAI) of MME-HSS session on the HSS peer service.
MDN	The mobile directory number (MDN) of the MME-HSS session on the HSS peer service.
Service Name	The name of HSS peer service for which statistics are displayed.
State	The status of MME-HSS session on the HSS peer service.
Pending Requests	The status of pending request between the MME and the HSS over the S6a interface during this MME-HSS session on the HSS peer service.
<b>API Requests</b>	
Open	The number of api sessions opened.
Close	The number of api sessions closed.
Update Locations	The number of ULR messages initiated by the MME or SGSN application.
Purge UE	The number of Purge Request messages initiated by the MME or SGSN application.
Authenticate	The number of AIR messages initiated by the MME or SGSN application.
Notify	The number of Notify Request messages initiated by the MME or SGSN application.
Identity Check	The number of MICR messages initiated by the MME or SGSN application.
Recoveries	The number of api session recoveries initiated.
Micro Checkpoint	Not used.
Full Checkpoint	Note used.
User Data Query	The number of user data requests sent by the MME or SGSN application.
<b>API Successes</b>	
Open	The number of api sessions opened successfully.
Close	The number of api sessions closed successfully.

Field	Description
Update Locations	The number of ULR messages successfully sent by the MME or SGSN application.
Purge UE	The number of Purge Request messages successfully sent by the MME or SGSN application.
Authenticate	The number of AIR messages successfully sent by the MME or SGSN application.
Notify	The number of Notify Request messages successfully sent by the MME or SGSN application.
Identity Check	The number of MICR messages successfully sent by the MME or SGSN application.
Recoveries	The number of api sessions recovered successfully.
Micro Checkpoint	Not used.
Full Checkpoint	Not used.
User Data Query	Not used.
<b>API Errors</b>	
Open	The number of api sessions which encountered an error when opened.
Close	The number of api sessions which encountered an error when closed.
Update Locations	The number of ULR messages that failed to be sent by the MME or SGSN application.
Purge UE	The number of Purge Request messages that failed to be sent by the MME or SGSN application.
Authenticate	The number of AIR messages that failed to be sent by the MME or SGSN application.
Notify	The number of Notify Request messages that failed to be sent by the MME or SGSN application.
Identity Check	The number of MICR messages that failed to be sent by the MME or SGSN application.
Recoveries	The number of api sessions that failed recovering.
Micro Checkpoint	Not used.
Full Checkpoint	Not used.
User Data Query	The number of user data request that couldn not be processed.
<b>Server Requests</b>	
Update Locations	The number of ULR messages created at the session level.
Purge UE	The number of Purge Request messages created at the session level.
Authenticate	The number of AIR messages created at the session level.
Notify	The number of Notify Request messages created at the session level.

Field	Description
Identity Check	The number of MICR messages created at the session level.
User Data Req	Not used.
<b>Server Successes</b>	
Update Locations	The number of ULR messages successfully sent.
Purge UE	The number of Purge Request messages successfully sent.
Authenticate	The number of AIR messages successfully sent.
Notify	The number of Notify Request messages successfully sent.
Identity Check	The number of MICR messages successfully sent.
User Data Req	Not used.
<b>Server Errors</b>	
Update Locations	The number of ULR messages which could not be sent. The peer is unavailable, down, or the session could not be opened.
Purge UE	The number of Purge Request messages which could not be sent. The peer is unavailable, down, or the session could not be opened.
Authenticate	The number of AIR messages which could not be sent. The peer is unavailable, down, or the session could not be opened.
Notify	The number of Notify Request messages which could not be sent. The peer is unavailable, down, or the session could not be opened.
Identity Check	The number of MICR messages which could not be sent. The peer is unavailable, down, or the session could not be opened.
User Data Req	Not used.

## show hss-peer-service statistics all

Table 345: show hss-peer-service statistics all Command Output Descriptions

Field	Description
<b>HSS Statistics for all services</b>	
<b>Session Stats</b>	
Total Current Sessions	The total number of sessions currently accessing the HSS peer service.
Session Failovers	The total number of session failovers occurring on the SS peer service.

Field	Description
Total Starts	The total number of sessions started on the HSS peer service.
Total Session Updates	The total number of sessions updated on the HSS peer service.
Total Terminated	The total number of sessions that were terminated on the HSS peer service.
<b>Message Stats</b>	
UL Request	The total number of Update Location Request messages sent by the HSS peer service to the HSS.
UL Answer	The total number of Update Location Answer messages received by the HSS peer service from the HSS.
ULR Retries	The total number of Update Location Request Retry messages sent by the HSS peer service to the HSS.
ULA Timeouts	The total number of Update Location Answer Timeout messages received by the HSS peer service from the HSS.
ULA Dropped	The total number of Update Location Answer Dropped messages received by the HSS peer service from the HSS.
PU Request	The total number of Purge UE Request messages sent by the HSS peer service to the HSS.
PU Answer	The total number of Purge UE Answer messages received by the HSS peer service from the HSS.
PUR Retries	The total number of Purge UE Request Retry messages sent by the HSS peer service to the HSS.
PUA Timeouts	The total number of Purge UE Answer Timeout messages received by the HSS peer service from the HSS.
PUA Dropped	The total number of Purge UE Answer Dropped messages received by the HSS peer service from the HSS.
AI Request	The total number of Authentication Information Request messages sent by the HSS peer service to the HSS.
AI Answer	The total number of Authentication Information Answer messages received by the HSS peer service from the HSS.
AIR Retries	The total number of Authentication Information Request Retry messages sent by the HSS peer service to the HSS.
AIA Timeouts	The total number of Authentication Information Answer Timeout messages received by the HSS peer service from the HSS.
AIA Dropped	The total number of Authentication Information Answer Dropped messages received by the HSS peer service from the HSS.

Field	Description
CL Request	The total number of Cancel Location Request messages sent by the HSS peer service to the HSS.
CL Answer	The total number of Cancel Location Answer messages received by the HSS peer service from the HSS.
CLR Retries	The total number of Cancel Location Request Retry messages sent by the HSS peer service to the HSS.
CLA Timeouts	The total number of Cancel Location Answer Timeout messages received by the HSS peer service from the HSS.
CLA Dropped	The total number of Cancel Location Answer Dropped messages received by the HSS peer service from the HSS.
ISD Request	The total number of Insert Subscriber Data Request messages received by the HSS peer service from the HSS.
ISD Answer	The total number of Insert Subscriber Data Answer messages sent by the HSS peer service to the HSS.
ISDR Retries	The total number of Insert Subscriber Data Request Retry messages received by the HSS peer service from the HSS.
ISDA Timeouts	The total number of Insert Subscriber Data Answer Timeout messages sent by the HSS peer service to the HSS.
ISDA Dropped	The total number of Insert Subscriber Data Answer Dropped messages sent by the HSS peer service to the HSS.
DSD Request	The total number of Delete Subscriber Data Request messages received by the HSS peer service from the HSS.
DSD Answer	The total number of Delete Subscriber Data Answer messages sent by the HSS peer service to the HSS.
DSDR Retries	The total number of Delete Subscriber Data Request Retry messages received by the HSS peer service from the HSS.
DSDA Timeouts	The total number of Delete Subscriber Data Answer Timeout messages sent by the HSS peer service to the HSS.
DSDA Dropped	The total number of Delete Subscriber Data Answer Dropped messages sent by the HSS peer service to the HSS.
R Request	The total number of Reset Request messages received by the HSS peer service from the HSS.
R Answer	The total number of Reset Answer messages sent by the HSS peer service to the HSS.
RR Retries	The total number of Reset Request Retry messages received by the HSS peer service from the HSS.

Field	Description
RA Timeouts	The total number of Reset Answer Timeout messages sent by the HSS peer service to the HSS.
RA Dropped	The total number of Reset Answer Dropped messages sent by the HSS peer service to the HSS.
N Request	The total number of Notify Request messages sent by the HSS peer service to the HSS.
N Answer	The total number of Notify Answer messages received by the HSS peer service from the HSS.
NR Retries	The total number of Notify Request Retry messages sent by the HSS peer service to the HSS.
NA Timeouts	The total number of Notify Answer Timeout messages received by the HSS peer service from the HSS.
NA Dropped	The total number of Notify Answer Dropped messages received by the HSS peer service from the HSS.
MIC Request	The total number of Mobile Identity Check Request messages sent by the HSS peer service to the HSS.
MIC Answer	The total number of Mobile Identity Check Answer messages received by the HSS peer service from the HSS.
MICR Retries	The total number of Mobile Identity Check Request Retry messages sent by the HSS peer service to the HSS.
MICA Timeouts	The total number of Mobile Identity Check Answer Timeout messages received by the HSS peer service from the HSS.
MICA Dropped	The total number of Mobile Identity Check Answer Dropped messages received by the HSS peer service to the HSS.
<b>Message Error Stats</b>	
Unable To Comply	The total number of Update Location Answer messages containing the result code "Unable To Comply" received by the HSS peer service from the HSS.
Auth Data Unavailable	The total number of Update Location Answer messages containing the result code "Auth Data Unavailable" received by the HSS peer service from the HSS.
User Unknown	The total number of Update Location Answer messages containing the result code "User Unknown" received by the HSS peer service from the HSS.
Equipment Unknown	The total number of Update Location Answer messages containing the result code "Equipment Unknown" received by the HSS peer service from the HSS.
Unknown EPS Subscription	The total number of Update Location Answer messages containing the result code "Unknown EPS Subscription" received by the HSS peer service from the HSS.

Field	Description
RAT Not Allowed	The total number of Update Location Answer messages containing the result code "RAT Not Allowed" received by the HSS peer service from the HSS.
Authorization Rejected	The total number of Update Location Answer messages containing the result code "Authorization Rejected" received by the HSS peer service from the HSS.
Roaming Not Allowed	The total number of Update Location Answer messages containing the result code "Roaming Not Allowed" received by the HSS peer service from the HSS.
Other Errors	The total number of Update Location Answer messages containing the result code "Other Errors" received by the HSS peer service from the HSS.
<b>Subscription-Data Stats</b>	
Skip Subscription Data	The Skip Subscription Data statistic is incremented when the ULR is sent with the skip-subscription-data flag set.
Subscription-Data Not Received	The Subscription-Data Not Received statistic is incremented if the HSS does not send the subscription data in the ULA when skip-subscription-data flag is set in ULR. The difference between the Skip Subscription Data and Subscription-Data Not Received gives us the number of times HSS does not honour the skip-subscription-data flag.
<b>Location Message Stats</b>	
Asynchronous ISDR Req	
Asynchronous ISDR Dropped	This counter pegs the asynchronous ISD request dropped.
Asynchronous ISDA	
Aynchronous ISDA Dropped	
ISDR Req with Current Location	This statistics is updated when ISDR is received with the Current Location bit set in the IDR flags.
ISDA with Cached Location	This statistics is updated when an ISDR is responded with the current location information immediately from the cache, before the location validity timer expires.

# CHAPTER 71

## show ims-authorization

This chapter describes the outputs of the **show ims-authorization** command.

- [show ims-authorization policy-control statistics](#), on page 1285
- [show ims-authorization policy-gate status full](#), on page 1295
- [show ims-authorization policy-gate counters all](#), on page 1296
- [show ims-authorization servers](#), on page 1297
- [show ims-authorization service name](#), on page 1298
- [show ims-authorization service name p-cscf all](#), on page 1300
- [show ims-authorization service statistics](#), on page 1301
- [show ims-authorization sessions full all](#), on page 1306

## show ims-authorization policy-control statistics

*Table 346: show ims-authorization policy-control statistics Command Output Descriptions*

Field	Description
<b>DPCA Session Stats</b>	
Total Current Sessions	The total number of DPCA session currently running on this system.
Total IMSA Adds	The total number of IP multimedia subsystem applications (IMSAs) added to service.
Total DPCA Starts	The total number of Diameter Policy Control Applications (DPCAs) started.
Total Fallback Sessions	The total number of Diameter Policy Control Application (DPCA) sessions successfully fallback to PCRF after being with local-policy.
Total Secondary Create	The total number of secondary contexts created. <b>Important</b> This field is no longer available in 14.0 and later releases.
Total Secondary Terminate	The total number of secondary contexts deleted. <b>Important</b> This field is no longer available in 14.0 and later releases.

Field	Description
Total Session Updates	The total number of updates applied for session/s. <b>Important</b> This field is not available in 14.0 release.
Total Terminated	The total number of Diameter Policy Control Application sessions terminated.
DPCA Session Failovers	The total number of Diameter Policy Control Application sessions failed.
<b>DPCA Message Stats</b>	
Total messages Received	Total policy control messages received for IMS authorization policy control.
Total Messages Sent	Total messages sent to IMS authorization policy control server.
Total CCR	Total Credit Control Request (CCR) messages received.
Total CCA	Total Credit Control Answer (CCA) messages sent in response to CCRs.
CCR-Initial	Total number of initial CCR messages received.
CCA-Initial	Total number of initial CCA messages sent in response to initial CCR messages.
CCA-Initial Accept	Total number of initial CCA messages accepted in response to initial CCR messages.
CCA-Initial Reject	Total number of initial CCA messages rejected in response to initial CCR messages.
CCA-Initial Dropped	Total number of CCA-I messages which are dropped due to S-GW restoration, DPCA is off or not present or if the IMSA session is in preservation mode.
CCA-Initial Timeouts	Total number of initial CCA messages timed out in response to initial CCR messages.
CCR-Update	Total number of Credit Control Request (CCR) messages received after initial CCR for update.
CCA-Update	Total Credit Control Answer (CCA) messages sent in response to update CCRs.
CCA-Update Timeouts	Total Credit Control Answer (CCA) messages sent in response to update CCRs but timed out.
CCA-Update Errors	Total number of errors in parsing the CCA-Update Message.
CCA-Update Dropped	Total number of CCA-U messages which are dropped due to S-GW restoration, DPCA is off or not present or if the IMSA session is in preservation mode.
CCR-Final	Total number of final CCR messages received to end application.
CCA-Final	Total number of final CCA messages sent in response to final CCR messages to end session/s.
CCA-Final Timeouts	Total number of final CCA messages sent in response to final CCR messages to end session/s but timed out.
CCA-Final Errors	Total number of errors in parsing the CCA-Terminate Message.

Field	Description
CCA-Final Dropped	Total number of CCA-T messages which are dropped due to S-GW restoration, DPCA is off or not present or if the IMSA session is in preservation mode.
ASR	Total number of Abort-Session-Requests (ASRs) received.
ASA	Total number of Abort-Session-Accept (ASA) messages sent in response to Abort-Session-Requests (ASRs).
RAR	Total number of Re-Auth-Requests (RARs) received for re-authorization.
RAA	Total number of Re-Auth-Requests (RARs) answered with Re-Auth-Answer (RAA) message.
RAR-CCR collision	Total number of Re-Auth-Request (RAR) messages received from PCRF when there is any outstanding Credit Control Request (CCR) message.
IRAT RAR Reject	The total number of DPCA Re-Auth-Accept messages sent in response to Re-Auth-Request (RAR) messages received from PCRF during S2b handoff.
<b>CCA Parse Failure</b>	
CCA-Initial Failure	This is the counter incremented when failure cb is invoked for CCR-Initial due to parse error at diabase.
CCA-Update Failure	This is the counter incremented when failure cb is invoked for CCR-Update due to parse error at diabase.
CCA-Final Failure	This is the counter incremented when failure cb is invoked for CCR-Final due to parse error at diabase
<b>SGW Restoration</b>	
RAR Reject	The total number of RAR messages that were not processed during S-GW restoration. That is, the total number of RAR messages from the PCRF, that were rejected with result-code 5012 (UNABLE_TO_COMPLY).
<b>RAR Accepted</b>	
Rule Removals	The total number of times the P-GW accepted RAR with rule removals from the PCRF during S-GW Restoration.
Session Release	The total number of times the P-GW accepted RAR with Session Release Cause from the PCRF during S-GW Restoration.
CCA-U Dropped	The total number of times that the P-GW dropped CCA-U during S-GW Restoration.
<b>CCA-U Accepted</b>	
Rule Removals	The total number of times that the P-GW accepted CCA-U with rule removals from the PCRF during S-GW Restoration.
Session Release	The total number of times the P-GW accepted CCA-U with Session Release Cause from the PCRF during S-GW Restoration.

Field	Description
Internal Updates Dropped	
Revalidation Timeout	The total number of DPCA messages that were not sent towards PCRF due to the expiry of revalidation timer when S-GW is down.
Pending Updates	The total number of CCR-U's that were dropped when S-GW is down and update is received from SM/ECS.
Sync Request	The total number of messages that were dropped when S-GW is down and the session sync request is received.
SGW Restoration Reported	
RAA Sent	The total number of times S-GW restoration reported in RAA to the PCRF during S-GW Restoration.
CCR-U Sent	The total number of times that S-GW restoration reported in CCR-U to the PCRF during S-GW Restoration.
<b>DPCA Message Error Stats</b>	
Diameter Protocol Errs	Total number of errors related to Diameter protocol.
Bad Answers	Total number of errors related to invalid response/answers.
Unknown Session Reqs	Total number of errors related to unknown session requests.
Unknown Command Code	Total number of errors related to unknown command codes.
Unsupported Command Code	Total number of errors related to unsupported command codes.
Unk Failure Handling	Total number of errors related to unknown handling of failures.
<b>DPCA Termination Cause Stats</b>	
Diameter Logout	Total number of DPCA session termination due to Diameter logout.
Service Not Provided	Total number of DPCA session termination due to unavailability of service.
Bad Answer	Total number of DPCA sessions terminated due to invalid/bad response reason.
Administrative	Total number of DPCA sessions terminated due to administrative reasons.
Link Broken	Total number of DPCA sessions terminated due to link broken.
Auth Expired	Total number of DPCA sessions terminated due to authorization expired.
User moved	Total number of DPCA sessions terminated as subscriber/user moved to unknown/non-service area.
Session Timeout	Total number of DPCA sessions terminated due to timed out reason.
Auth Rejected	Total number of DPCA sessions terminated due to authorization rejected.

Field	Description
Other Errors	Total number of DPCA sessions terminated due to unknown reasons or reasons not listed in this list.
<b>DPCA Experimental Result Code Stats:</b>	Statistics of the number of times the specific Experimental-Result-Code value was received in the Diameter Gx Credit-Control-Answer (CCA) from the PCRF per IMSA service.
Error Initial Parameters	The number of times DIAMETER_ERROR_INITIAL_PARAMETERS (5140) Experimental-Result-Code value was received in the Diameter Gx CCA.
Error Trigger Event	The number of times DIAMETER_ERROR_TRIGGER_EVENT (5141) Experimental-Result-Code value was received in the Diameter Gx CCA.
Bearer Not Authorized	The number of times DIAMETER_ERROR_BEARER_NOT_AUTHORIZED (5143) Experimental-Result-Code value was received in the Diameter Gx CCA.
Traffic Mapping Rejected	The number of times DIAMETER_ERROR_TRAFFIC_MAPPING_INFO_REJECTED (5144) Experimental-Result-Code value was received in the Diameter Gx CCA.
PCC Rule Event	The number of times DIAMETER_PCC_RULE_EVENT (5142) Experimental-Result-Code value was sent in the Diameter Gx Re-Auth-Request (RAR).
Conflicting Request	This error is used when the PCRF cannot accept the UE-initiated resource request as a network-initiated resource allocation is already in progress with packet filters that cover the packet filters in the received UE-initiated resource request.
Bearer Event	This error is used when a PCC rule for some reason cannot be enforced or modified successfully in a network initiated procedure.
Bad Exp Result Code	The number of times an unknown Experimental-Result-Code value (apart from the ones recognized in CCA that are listed above PCC Rule Event) was received in the Diameter CCA.
PCRF Too Busy	This error is used when the PCRF is unable to process the CCR message due to transient failures.
Pending-Trans-Sent	The total number of times the Experimental Result Code DIAMETER_PENDING_TRANSACTION (4198) is sent to the server.
Pending-Trans-rcvd	The total number of times the Experimental Result Code DIAMETER_PENDING_TRANSACTION (4198) is received from the server.
Session Recovery Req	The total number of times the session recovery request experimental result code is received from PCRF.
Diameter Overload Control	The total number of times the Experimental-Result-code (5198 - DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY) is received from the PCRF.  This result code is used to indicate that all the nodes connected behind the Diameter Agent are overloaded and that the client (ePDG and P-GW) should not attempt the message on the alternate connection.

Field	Description
Newer Session Detected	The total number of times the Experimental-Result-code (5199 - DIAMETER_NEWER_SESSION_DETECTED) is received from the PCRF.  When the response message is received with 5199 result code, the Diameter application does not retry to a secondary AAA server. If the Experimental Result-Code 5199 is received in Assume Positive mode, then the current call is terminated.
Gx APN Change	The total number of times the Experimental-Result-code (5999 - DIAMETER_GX_APN_CHANGE) is received from the PCRF.  This result code is sent when Virtual APN is selected through PCRF.
<b>Diameter Overload Control Stats:</b>	
CCA-Initial	The total number of times the Experimental-Result-code (5198 - DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY) is received in CCA-I.
CCA-Update	The total number of times the Experimental-Result-code (5198 - DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY) is received in CCA-U.
CCA-Terminate	The total number of times the Experimental-Result-code (5198 - DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY) is received in CCA-T.
<b>Session Sync Request Stats:</b>	
RAR	The total number of times the RARs in which the session sync request is received.
CCA	The total number of times the CCAs in which the session sync request is received.
<b>DPCA FH Retry Server On Event</b>	
<b>Important</b>	The counters under "DPCA FH Retry Server On Event" will not be incremented if the message is sent or received after session recovery/ICSR switchover.
CCR-Update	The total number of times the CCR-U is sent out after Failure-Handling action " <b>continue retry-server-on-event</b> " is applied.
CCR-Terminate	The total number of times the CCR-T is sent out after Failure-Handling action " <b>continue retry-server-on-event</b> " is applied.
RAR	The total number of times the RAR is received after Failure-Handling action " <b>continue retry-server-on-event</b> " is applied.
<b>Session Release Cause</b>	
CCA	
Unspecified Reason	The total number of IP CAN sessions terminated because of Session Release Cause "Unspecified Reason" received in CCA.

Field	Description
UE Subscription Changed	The total number of IP CAN sessions terminated because of Session Release Cause "UE Subscription Changed" received in CCA.
Insuffcnt Srvr Resource	The total number of IP CAN sessions terminated because of Session Release Cause "Insufficient Server Resources" received in CCA.
RAR	
Unspecified Reason	The total number of IP CAN sessions terminated because of Session Release Cause "Unspecified Reason" received in RAR.
UE Subscription Changed	The total number of IP CAN sessions terminated because of Session Release Cause "UE Subscription Changed" received in RAR.
Insuffcnt Srvr Resource	The total number of IP CAN sessions terminated because of Session Release Cause "Insufficient Server Resources" received in CCA.
<b>DPCA Failure Handling Stats</b>	
<b>Connection Based FH</b>	
Total FH Triggered	Total number of times when ims-auth-service Failure Handling is triggered.
Total Message Timeouts	Total number of response message timeouts, i.e. PCRF failed to respond within the configured timeout value.
CCA-Initial	Response to the CCR-I message was timed out.
CCA-Update	Response to the CCR-U message was timed out.
CCA-Terminate	Response to the CCR-T message was timed out.
Total Message Send Errs	Total number of requests failed to be sent due to socket based send errors.
CCR-Initial	CCR-I failed to be sent due to socket based errors.
CCR-Update	CCR-U failed to be sent due to socket based errors.
CCR-Terminate	CCR-T failed to be sent due to socket based errors.
<b>Result Code Based FH</b>	
Configured Result Code	Failure handling being undertaken due to configured result code range.
CCA-Initial	Failure handling being undertaken due to configured result code range for CCA-Initial messages.
CCA-Update	Failure handling being undertaken due to configured result code range for CCA-Update messages.
CCA-Terminate	Failure handling being undertaken due to configured result code range for CCA-Terminate messages.

Field	Description
Unh and Unk Result Code	Failure handling being undertaken due to a result code which is neither defined in the diameter or customer specs.
CCA-Initial	Failure handling being undertaken due to unknown result code for CCA-Initial messages.
CCA-Update	Failure handling being undertaken due to unknown result code for CCA-Update messages.
CCA-Terminate	Failure handling being undertaken due to unknown result code for CCA-Terminate messages.
<b>FH Behavior</b>	
Continue	Total number of times the failure handling action "continue" has been undertaken.
Retry-And-Continue	Total number of times the failure handling action "retry-and-continue" has been undertaken.
CCR on Call Terminate	Total number of times the failure handling action "continue" has been undertaken and CCR-T has been sent to PCRF on call termination.
Continue-Without-Retry	Total number of times the failure handling action "continue-without-retry" has been undertaken. This failure action implies that the IMSA call will be continued without retrying to the secondary PCRF.
Continue-With-Fallback	Total number of times the failure handling action "continue-with-fallback" has been undertaken. This failure action implies that the IMSA call will be continued with the PCC rules defined in local policy.
Continue-With-Fallback Without Retry	Total number of times the failure handling action "continue-fallback-wo-retry" has been undertaken. This failure action implies that the IMSA call will be continued with the PCC rules defined in local policy without retrying to the secondary PCRF server.
Retry Server On Event	Total number of times the failure-handling action "continue retry-server-on-event" has been undertaken.
<b>Retry and Terminate</b>	
Retry-And-Terminate	Total number of times the failure handling action "retry-and-terminate" has been undertaken.
Retry Term without CCRT	Total number of times the failure handling action "retry-and-terminate" has been undertaken without sending CCR-T to PCRF on call termination.
Retry same server	Total number of times the failure handling action "retry-and-terminate" has been applied to retry to the same server within a configurable timer.
<b>Termination</b>	
Terminate	Total number of times the failure handling action "terminate" has been undertaken.
Terminate without CCRT	Total number of times the failure handling action "terminate" has been undertaken without sending CCR-T to PCRF on call termination.

Field	Description
Local Fallback Cause Stats	Displays the reason for fallback to local-policy.
Tx-expiry	Total number of the times the OCS server is unreachable due to Tx expiry.
Request-timeout	Total number of the times the OCS server is unreachable due to request timeout.
Diabase error	Total number of the times the OCS server is unreachable due to Diabase error.
Result-code error	Total number of the times the OCS server is unreachable due to Result code errors.
<b>Peer Switches</b>	
Attempted Switches	Total number of peer switches attempted.
Successful Switches	Total number of peer switches successful.
Switches-Tx timeout	Total number of peer switches due to timeout expiry.
Switches-RAR change	Total number of peer switches due to RAR from secondary server.
<b>CCA Result Code Stats</b>	
Result Code 2xxx	Total number of CCA messages that have been received with result code 2xxx for Gx.
Result Code 3xxx	Total number of CCA messages that have been received with result code 3xxx for Gx.
Result Code 4xxx	Total number of CCA messages that have been received with result code 4xxx for Gx.
Result Code 5xxx	Total number of CCA messages that have been received with result code 5xxx for Gx.
Other Result Code	Total number of CCA messages that have been received with other result codes for Gx.
<b>Backpressure Stats</b>	
CCR-I Backpressure Stats	
Messages	Total number of CCR-I messages that are in backpressure state.
Failures	Total number of times the application fails to create a CCR-I message due to no TCP connection when the messages are in backpressure state.
Sess-Id Recovery Failures	Total number of times the CCR-I message is sent before recovering the session ID when the call is running in proxy mode and session recovery happens.
CCR-U Backpressure Stats	
Messages	Total number of CCR-U messages that are in backpressure state.
Failures	Total number of times the application fails to create a CCR-U message due to no TCP connection when the messages are in backpressure state.
Max Retry	Total number of times the max retries have been attempted when the CCR-U message is in backpressure state.

Field	Description
Dropped Messages	Total number of CCR-U request messages that are dropped when there are already some messages in backpressure state.
Sess-Id Recovery Failures	Total number of times the CCR-U message is sent before recovering the session ID when the call is running in proxy mode and session recovery happens.
<b>CCR-T Backpressure Stats</b>	
Messages	Total number of CCR-T messages that are in backpressure state.
Failures	Total number of times the application fails to create a CCR-T message due to no TCP connection when the messages are in backpressure state.
Sess-Id Recovery Failures	Total number of times the CCR-T message is sent before recovering the session ID when the call is running in proxy mode and session recovery happens.
<b>RAA Result Code Stats</b>	
Result Code 2xxx	Total number of RAA messages that are received with the result-code between 2000 and 2999
Result Code 3xxx	Total number of RAA messages that are received with result-code between 3000 to 3999.
Result Code 4xxx	Total number of RAA messages that are received with result-code between 4000 to 4999.
Result Code 5xxx	Total number of RAA messages that are received with result-code between 5000 to 5999.
Other Result Code	Total number of RAA messages that are received with result-code other than the range of 2xxx to 5xxx.
<b>Transient Errors:</b>	
<b>Note</b>	The CCA experimental result-code statistics will be displayed only for CUPS-enabled platforms.
<b>Responses in Queue</b>	
Current Responses in Queue	Total number of out of order responses present in queue across all sessions at current time.
Purged Responses	Total number of responses purged without sending to the session manager.
Total Response in Queue	Total number of responses that are buffered in the queue.
<b>Requests in Queue for LP</b>	
Current Requests in Queue	Total number of requests present in the queue which are yet to be sent to Local Policy module.
Purged Requests	Total number of requests purged without sending to Local Policy.
Total Requests Fwd to LP	Total number of outstanding requests forwarded to Local Policy.
<b>Session Recovery Failure</b>	

Field	Description
Resource Limitation	Total number of times the rule installation failed due to the resource limitation i.e. when received string is more than expected size like redirecturlen more than 512.
Unknown Bearer ID	Total number of times the rule installation failed due to unknown bearer ID.
Invalid QCI	Total number of times the rule installation failed due to invalid QCI.
Invalid ARP	Total number of times the rule installation failed due to invalid ARP.
Bearer-Id in QoS	Total number of times the rule installation failed due to a mismatch in the bearer ID present in QoS flow.
<b>Session Recovery Failure</b>	
Activate-LP-Rule	Indicates the total number of times lp-activate-rules session recovery or ICSR recovery failed.

## show ims-authorization policy-gate status full

**Important** This command is no longer an option in StarOS release 11.0 and beyond.

*Table 347: show ims-authorization policy-gate status full Command Output Descriptions*

Field	Description
CallID	Specifies Call Identifier.
IMSI	Specifies International Mobile Subscriber Identity (IMSI) of subscriber.
NSAPI	Specifies Network Service Access Point Identifier (NSAPI) to a single PDP context of the subscriber.
Charging Rule	Specifies dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Precedence	Displays the precedence of the dynamic charging rule applicable to specific flow.
Flow Status	Specifies the status of flow with specific charging rule. Possible states are: <ul style="list-style-type: none"> <li>• Open</li> <li>• Closed</li> <li>• Dormant</li> </ul>

Field	Description
Flow Dir	Specifies the direction of flow with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service. Possible states are: <ul style="list-style-type: none"> <li>• Uplink</li> <li>• Downlink</li> </ul>
Source Addr	Specifies the source IP address of flow with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Source Addr Mask	Specifies the masking of source IP address of flow with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Destination Addr	Specifies the destination IP address of flow with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Destination Addr Mask	Specifies the masking of destination IP address of flow with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Source Port	Specifies the IP port of flow origin with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.
Destination Port	Specifies the destination IP port of flow end with specific dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.

## show ims-authorization policy-gate counters all

**Important** This command is no longer an option in StarOS release 11.0 and beyond.

**Table 348: show ims-authorization policy-gate counters all Command Output Descriptions**

Field	Description
CallID	Specifies Call Identifier.
IMSI	Specifies International Mobile Subscriber Identity (IMSI) of subscriber.
NSAPI	Specifies Network Service Access Point Identifier (NSAPI) to a single PDP context of the subscriber.
Charging Rule	Specifies dynamic charging rule applicable for specific flow through a policy gate in IMS authorization service.

Field	Description
Gate State changed	Displays the change state of policy gate for specific subscriber flow. Possible values are: <ul style="list-style-type: none"> <li>• 0: No change</li> <li>• 1: Changed</li> </ul>
Uplink Pkts Statistics	Displays the statistics of packets in uplink direction.
Downlink Pkts Statistics	Displays the statistics of packets in downlink direction.
Pkts processed	Displays the total number of packets received and processed.
Bytes processed	Displays the total number of bytes received and processed.
Pkts dropped	Displays the total number of packets received but dropped.
Bytes dropped	Displays the total number of bytes received but dropped.

## show ims-authorization servers

*Table 349: show ims-authorization servers ims-auth-service Command Output Descriptions*

Field	Description
Service Name	IMS authorization service name.
IMS Authorization Server	IMS authorization server name.
Server Type	IMS Authorization server type. It may be Policy, Charging, or both.
PCRF host	Identifies the Policy Control and Charging Rules Function (PCRF) host.
Operational State	Indicates operational state of the authorization server.
Server Session State	Indicates authorization server session state.
Server Statistics	Indicates authorization server session statistics.
Session Active	Total number of active authorization server sessions.
Session Opened	Total number of opened authorization server sessions.
Session Closed	Total number of closed authorization server sessions.
Sessions switched due to Tx Expiry	Total number of sessions switched due to transmission expiry.
Sessions switched due to reselection	Total number of sessions switched due to re-selection of authorization servers.
Server Up -> down indications	Total number of servers going to down state from up state.

Field	Description
Pending-Transactions	
RAA sent	Total number of times the Experimental Result Code DIAMETER_PENDING_TRANSACTION (4198) is sent to the server.
CCA rcvd	Total number of times the Experimental Result Code DIAMETER_PENDING_TRANSACTION (4198) is received from the server.
Session Recovery Request	
CCA rcvd	Total number of times the session recovery request is received in CCA.
CCR sent	Total number of times the subsequent CCR updates are sent in session recovery request.
Session Sync Request	
RAR rcvd	Total number of times the session sync request is received in RAR.
CCA rcvd	Total number of times the session sync request is received in CCA.
CCR sent	Total number of times the subsequent CCR updates are sent in session sync request.
Total servers matching specified criteria	Total number of servers matching the specified criteria.

## show ims-authorization service name

Table 350: show ims-authorization service name Command Output Descriptions

Field	Description
IMS Authorization Service Name	Name of IMS authorization service name.
Context	Name of the context in which IMS authorization service is configured.
Service State	State of the IMS authorization service.
Service mode	Mode of IMS authorization service for policy and charging.
Binding Mechanism	Describes the mechanism on the control of bearer resources based on a binding mechanism that binds one or more service to a bearer.
QoS Update Timeout	Specifies the timeout duration in seconds to discard QoS update request. <b>NOTE:</b> QoS Update Timeout is no longer shown in StarOS release 11.0 and beyond.
Reauth Trigger	Specifies the Re-authorization trigger's status.
P-CSCF Discovery	Specifies the configured route-table applicable for Proxy-Call Session Control Function (P-CSCF) discovery.

Field	Description
P-CSCF Selection Table[ <i>n</i> ]	Specifies the configured selection table information for Proxy-Call Session Control Function (P-CSCF) server selection. This table includes information on the configured row precedence, primary and secondary IP address, and the weight.  [ <i>n</i> ] indicates the selection table number.
Tertiary IPV4 Addr:	The IPv4 Tertiary Address.
Tertiary IPV6 Addr:	The IPv6 Tertiary Address.
Primary IPV4 Addr:	The IPv4 Primary Address.
Primary IPV6 Addr:	The IPv6 Primary Address.
Secondary IPV4 Addr:	The IPv4 Secondary Address.
Secondary IPV6 Addr:	The IPv4 Secondary Address.
<b>Diameter Policy Control</b>	
Specifies Diameter Policy Control related configuration and information.	
Endpoint	Specifies Diameter endpoint name for Diameter Policy Control.
Origin-Realm	Specifies Diameter origin domain name for Diameter Policy Control.
Dictionary	Specifies the configured applicable dictionary for Diameter Policy Control.
Update-Dictionary-Avps	Indicates whether the 3GPP Rel. 8 AVPs, 3GPP Rel. 9 AVPs are selected for encoding.
Supported Features	Displays the information about the supported features that are configured.
Request Timeout	Indicates the configured request timeout value.
Endpoint Peer Select	Indicates the configuration of endpoint peer selection at Diabase.
Extended-bw-nr	Enables the extended bandwidth with new radio feature support on Gx interface.
Reauth Trigger	Indicates the re-authorization trigger status.
Custom Reauth Trigger	Indicates enabled custom reauth event triggers.
Failure Handling	Specifies the configured mechanism for failure handling in Diameter Policy Control.
Peer Switch	Specifies the status of Peer switching for in Diameter Policy Control.  <b>Important</b> This field has been deprecated in 8.1 and later releases.
Local Policy Service	Specifies the configured local policy service name.
Host Selection	Specifies host selection mechanism with selection table.
Host Reselection Subscriber Limit	Specifies the limit of subscriber bind to specific host origin to trigger re-selection of host.

Field	Description
Host Reselection Interval	Specifies time interval to trigger host re-selection for subscriber.
Sgsn Change Reporting	Specifies whether or not the feature, to report SGSN-Address AVP in CCR-I messages during GnGp scenario, is configured.
Session-Id Mismatch Clear Session	Specifies whether or not the feature, to delete session ID mismatched subscriber sessions during ICSR switchovers or process failures, is configured.  For more information on this feature, see the <i>Gx Interface Support</i> chapter in the administration guide for the product you are deploying.
3GPP R9 Flow Direction Compliance	Specifies whether or not the feature, to enable Rel.9 changes for Flow-Description, TFT-Filter, and Packet-Filter-Content AVPs, is configured.  For more information on this feature, see the <i>Gx Interface Support</i> chapter in the administration guide for the product you are deploying.
Host Selection Table[ <i>n</i> ]	Specifies the configured selection table information for host server selection.  [ <i>n</i> ] indicates the selection table number.
Precedence	Specifies the precedence applicable.
Primary Host	Specifies the primary name/IP address the host.
Secondary Host	Specifies the secondary name/IP address of the host.
multiple-pra	Multiple Presence Reporting Area Information Reporting.

## show ims-authorization service name p-cscf all

Table 351: show ims-authorization service name p-cscf all Command Output Descriptions

Field	Description
Server	Name of the Proxy-Call Session Control Function (P-CSCF) server.
Active Sessions	Number of active PDN sessions served per allocated P-CSCF IPv4/IPv6 address pair (primary and secondary servers).
Total servers matching specified criteria	Displays the total number of servers matching the specified criteria.

# show ims-authorization service statistics

Table 352: show ims-authorization service statistics Command Output Descriptions

Field	Description
<b>IMS Auth Service Statistics Summary</b>	
<b>Important</b> In StarOS release 14.0 and later, all these statistics will be incremented per control session (subscriber).	
Total Services	Total number of IMS authorization services running in the system.
<b>Control Session Statistics</b>	
Current Active	Total number of current sessions that are active.
Total Setup	Total number of sessions set up.
<b>Auth Session</b>	
Current Active	Total number of current sessions that are active.
Current Fallback Session	Total number of the sessions that are currently in local-fallback state.
Current PCRF Session	Total number of the sessions that are currently associated with PCRF.
Total Attempted	Total number of authorization sessions attempted.
Total Setup	Total number of sessions set up.
Total Failed	Total number of failed sessions.
Total Released	Total number of released sessions.
Total Fallback	Total number of sessions which fell back to the local policy.
<b>Setup Failures</b>	
Auth Failure	Total number of authorization failures.
PCRF Not Up	Total number of failures due to PCRF being down.
PCRF Selection Error	Total number of failures due to PCRF selection errors.
Table Change Init	Total number of failures due to table change initialization.
Server Discovery Failure	Total number of failures due to server discovery failure.
<b>Session Releases</b>	
Normal Released	Total number of normal session releases.
Abnormal Released	Total number of abnormal session releases.
Session Terminated	Total number of sessions aborted.

Field	Description
PCRF Down	Total number of sessions terminated when PCRF is not responding
Admin Release	Total number of sessions releases initiated by Administrator.
Server Re-selection	Total number of sessions terminated due to the server reselection.
Unusual Release	Displays the unusual logs. This counter will be incremented in places where ASSERT is replaced with call drop.  <b>Important</b> This counter will NOT be displayed if "service name" filter is given to the CLI command, as the counter is incremented per IMSA instance.
<b>Initial Authorization</b>	
Total Attempts	Total number of initial authorization attempts.
Total Successful	Total number of successful initial authorization attempts.
Total Failed	Total number of failed initial authorization attempts.
<b>Authorization Failures</b>	
Diameter Errors	Total number of authorization failures due to Diameter errors.
Policy Enforcement	Total number of authorization failures due to policy enforcement.
Validation Failure	Total number of authorization failures due to validation failure.
UE Not Served Reject	Total number of rejections due to PCRF reselection failures.
<b>Re-Authorization</b>	
Total Attempts	Total number of re-authorization attempts.
Total Successful	Total number of successful reauthorization attempts.
Total Failed	Total number of failed re-authorization attempts.
<b>Local-Fallback</b>	
CCRU received	Total number of CCRU-Us received when the call is with local-policy.
RAR received	Total number of RARs received when the call is with local-policy.
<b>Re-Authorization Failures</b>	
Validation Failure	Total number of validation failures.
<b>Re-Authorization Triggers</b>	
SGSN Change	Total number of re-authorizations triggered due to change in SGSN for subscriber node.

Field	Description
PLMN Change	Total number of re-authorizations triggered due to change in Public Land Mobile Network (PLMN).
RAT Change	Total number of re-authorizations triggered due to change in Radio Access Type (RAT) of subscriber node.
TFT Change	Total number of re-authorizations triggered due to change in Traffic Flow Template (TFT) of subscriber session.
TFT Delete	Total number of re-authorizations triggered due to deletion of TFT of subscriber session. <b>NOTE:</b> TFT Delete is no longer shown in StarOS release 11.0 and beyond.
Bearer Recovery	Total number of re-authorizations triggered due to bearer or service recovery after loss of bearer or service.
Bearer Loss	Total number of re-authorizations triggered due to loss of bearer or service.
QoS Change	Total number of re-authorizations triggered due to change in Quality of Service (QoS) level/rating of subscribers.
Policy Failure	Total number of re-authorizations triggered due to failure of credit and charging policy.
IP-CAN Change	Total number of re-authorizations triggered due to IP-CAN changes.
Resources Limitation	Total number of re-authorizations triggered due to resource limitations.
Max Num of Bearers Rchd	Total number of re-authorizations triggered due to maximum number of bearers allowed.
QoS Chng Exceeding Auth	Total number of re-authorizations triggered due to QoS Change exceeding authorization.
RAI Change	Total number of re-authorizations triggered due to RAI changes.
User Location Change	Total number of re-authorizations triggered due to user location changes.
TAI Change	Total number of times P-GW has reported TAI_CHANGE (26) event trigger to PCRF. This field is added in support of TAI and ECGI Change Reporting feature.
ECGI Change	Total number of times P-GW has reported ECGI_CHANGE (27) event trigger to PCRF. This field is added in support of TAI and ECGI Change Reporting feature.
PCRF Triggered ReAuth	Total number of re-authorizations triggered due to PCRF triggered reauthorization.
Preservation Changed	Total number of re-authorizations triggered due to preservation changes.
Reactivation Changed	Total number of re-authorizations triggered due to reactivation changes.

Field	Description
Revalidation Timeout	Total number of re-authorization messages that are sent to PCRF because of "REVALIDATION_TIMEOUT" event trigger.
AN GW Changed	Total number of re-authorization messages that are sent to PCRF because of "AN_GW_CHANGE" event trigger.
Out Of Credit Reauth	Total number of re-authorization messages that are sent to PCRF because of "OUT_OF_CREDIT" event trigger.
Reallocation Of Credit	Total number of re-authorization messages that are sent to PCRF because of "REALLOCATION_OF_CREDIT" event trigger.
Def EPS Bearer QoS Chng	Total number of re-authorization messages that are sent to PCRF because of "DEFAULT_EPS_BEARER_QOS_CHANGE" event trigger.
Successful Resource Alloc	Total number of re-authorization messages that are sent to PCRF because of "SUCCESSFUL_RESOURCE_ALLOCATION" event trigger.
Usage Report	Total number of re-authorization messages that are sent to PCRF because of "USAGE_REPORT" event trigger.
Service Flow Detection	Total number of re-authorization messages that are sent to PCRF because of "SERVICE_FLOW_DETECTION" event trigger.
UE Timezone Change	Total number of re-authorization messages that are sent to PCRF because of "UE_TIME_ZONE_CHANGE" event trigger.
UE IP Address Allocate	Total number of re-authorization messages that are sent to PCRF because of "UE_IP_ADDRESS_ALLOCATE" event trigger.
UE IP Address Release	Total number of re-authorization messages that are sent to PCRF because of "UE_IP_ADDRESS_RELEASE" event trigger.
Resource Modification Req	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "RESOURCE_MODIFICATION_REQUEST" event-trigger.
APN AMBR Modification Failure	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "APN_AMBR_MODIFICATION_FAILURE" event trigger.
Def Bearer QoS Mod Failure	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "DEFAULT_EPS_BEARER_QOS_MODIFICATION_FAILURE" event trigger.
Tethering Flow Detected	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "TETHERING_FLOW_DETECTED" event trigger.  <b>Important</b> This field is customer-specific. For more information, contact your local Cisco account representative.
Chrg Correlation Exchange	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "CHARGING_CORRELATION_EXCHANGE" event trigger.

Field	Description
Access Network Info Report	Total number of CCR-Us sent to PCRF because of "ACCESS_NETWORK_INFO_REPORT (45)" event trigger. This field is added in support of Network Provided Location Information (NPLI) Reporting feature.
Session Recovery	Total number of CCR-Us that were sent for session recovery.
Session Sync	Total number of CCR-Us sent for session synchronization.
DCCA Failure Report	Total number of reauthorization messages (CCR-U) that are sent to PCRF because of "Custom-Event-Trigger".
Application Start	Total number of CCR-Us sent to PCRF to notify the start of a specific protocol or a group of protocols through the event trigger "APPLICATION_START". This field is added in support of ADC rules over Gx feature.
Application Stop	Total number of CCR-Us sent to PCRF to notify the stop of a specific protocol or a group of protocols through the event trigger "APPLICATION_STOP". This field is added in support of ADC rules over Gx feature.
<b>Endpoint-Peer-Select</b>	
Host Select Failure	Total number of host select failures.
Inactive Host	Total number of inactive hosts.
<b>Packet Statistics</b>	
<b>Important</b> Packet Statistics are no longer shown in StarOS release 11.0 and beyond.	
Uplink Pkts Processed	Total number of uplink packets processed.
Downlink Pkts Processed	Total number of downlink packets processed.
Uplink Bytes Processed	Total number of uplink bytes processed.
Downlink Bytes Processed	Total number of downlink bytes processed.
Uplink Pkts Dropped	Total number of uplink packets dropped.
Downlink Pkts Dropped	Total number of downlink packets dropped.
Uplink Bytes Dropped	Total number of uplink bytes dropped.
Downlink Bytes Dropped	Total number of downlink bytes dropped.

# show ims-authorization sessions full all

Table 353: show ims-authorization sessions full all Command Output Descriptions

Field	Description
CallId	The call identifier.
Tertiary P-CSCF	The Tertiary P-CSF Address that are configured in IMSA.
Service Name	The IMS authorization service name.
IMSI	The International Mobile Subscriber Identity (IMSI) of subscriber.
Session ID	The session ID is of type UTF8String and is used to identify a specific session.
NSAPI	The Network Service Access Point Identifier (NSAPI) to a single PDP context of the subscriber.
Bearer Usage	Indicates the bearer usage for this session. <b>Important</b> This field is no longer available in 14.0 and later releases.
Bearer Type	Indicates the bearer type. <b>Important</b> This field is no longer available in 14.0 and later releases.
Bearer ID	Indicates the bearer identifier. <b>Important</b> This field is no longer available in 14.0 and later releases.
Context Type	Indicates the PDP context type: Primary or Secondary. <b>Important</b> This field is no longer available in 14.0 and later releases.
SGSN IP-Addr	IP address of the SGSN node.
APN	Indicates the Access Point Name (APN) for this service.
Bearer Control Mode	The bearer control mode: UE/NW <b>Important</b> Releases prior to 14.1, this field displays "None" for HA/MIPv6HA/PDSN service Gx calls. However, release 14.1 onwards, this field displays UE_ONLY for these calls.
State	Indicates the session state. Note that the state "Local fallback" will indicate that the IP CAN session has fallen back to local policy.
Primary PCRF Server	The primary Policy Control and Charging Rules Function (PCRF) server host name.

Field	Description
Secondary PCRF Server	The secondary PCRF server host name.
Primary P-CSCF	The primary Proxy-Call Session Control Function gateway address.  <b>Important</b> In 15.0 and later releases, P-CSCF server address after session recovery is removed as P-CSCF addresses are required only during call establishment and not required at later stages of the session. Hence, the server address will not be displayed post session manager recovery.
Secondary P-CSCF	The secondary P-CSCF gateway address.  <b>Important</b> In 15.0 and later releases, P-CSCF server address after session recovery is removed as P-CSCF addresses are required only during call establishment and not required at later stages of the session. Hence, the server address will not be displayed post session manager recovery.
UE IP Address	
UE IP Session Type	Specifies the type of the address assigned to the user. The possible valid values are IPv4, IPv6 and IPv4_IPv6.
IPv4 Address	Displays the IPv4 address assigned to the user.
IPv6 Address	Displays the IPv6 address assigned to the user.
Primary OCS	
<b>Important</b> In 16.0 and later releases, Primary OCS information such as Hostname, Port and Protocol are removed from the display as there is no value stored at IMSA module. When the downgrade occurs these fields will not be present and will be shown as NA.	
Hostname	Specifies the Primary-Event-Charging-Function-Name of type DiameterURI, or the address of primary online charging system.
Port	The port associated with the primary OCS.
Protocol	The protocol associated with the primary OCS.
Secondary OCS	
<b>Important</b> In 16.0 and later releases, Secondary OCS information such as Hostname, Port and Protocol are removed from the display as there is no value stored at IMSA module. When the downgrade occurs these fields will not be present and will be shown as NA.	
Hostname	Specifies the Secondary-Event-Charging-Function-Name of type DiameterURI, or the address of secondary online charging system.
Port	The port associated with the secondary OCS.
Protocol	The protocol associated with the secondary OCS.

Field	Description
Primary CCF	
<b>Important</b>	In 16.0 and later releases, Primary CCF information such as Hostname, Port and Protocol are removed from the display as there is no value stored at IMSA module. When the downgrade occurs these fields will not be present and will be shown as NA.
Hostname	Specifies the Primary-Charging-Collection-Function-Name of type DiameterURI or the address of primary offline charging system for the bearer.
Port	The port associated with the primary CCF.
Protocol	The protocol associated with the primary CCF.
Secondary CCF	
<b>Important</b>	In 16.0 and later releases, Secondary CCF information such as Hostname, Port and Protocol are removed from the display as there is no value stored at IMSA module. When the downgrade occurs these fields will not be present and will be shown as NA.
Hostname	Specifies the Secondary-Charging-Collection-Function-Name of type DiameterURI or the address of secondary offline charging system for the bearer.
Port	The port associated with the secondary CCF.
Protocol	The protocol associated with the secondary CCF.
Auth Decision	Parameters configured for authorization decision.
Event Triggers	Triggers for different events for Authorization decision.
Custom Event Triggers	This field indicates the registration of any custom event triggers. <b>Note</b> This field shows None when there is no custom event trigger.
Local Policy Enabled Event Triggers	This field indicates the list of event-triggers that are enabled from local-policy.
Event Report Indication	Specifies which type of changes will trigger an event report from the PCRF.
Negotiated Supported Features	Displays all the supported features that are actually applied to the session after negotiation with PCRF.
Negotiated QoS	Displays the negotiated QoS information for a specific session. <b>Note</b> When PCRF is down, the APN-AMBR value under the Negotiated QoS field in the <b>show ims-authorization sessions full all</b> output might not be the actual APN-AMBR applied to the subscriber as it could not be negotiated with PCRF. In this scenario, to check the applied APN-AMBR for the subscriber, verify the corresponding <b>show subscribers</b> command. For example, use the <b>show subscriber [ saegw-only   pgw-only   ggsn-only ] full [ options ]</b> command.
QoS Policy	Specifies QoS policy for specific session.

Field	Description
QoS Class	The QoS class applicable to this session.
APN AMBR Uplink(in bps)	The APN uplink AMBR, in bps.
APN AMBR Downlink(in bps)	The APN downlink AMBR, in bps.
MBR Uplink(in bps)	The maximum bandwidth for uplink direction, in bps.
MBR Downlink(in bps)	The maximum bandwidth for downlink direction, in bps.
GBR Uplink Bw(in bps)	The guaranteed bandwidth for uplink direction, in bps. <b>Important</b> This field will display "NA" for GBR values for non-GBR bearers.
GBR Downlink Bw(in bps)	The guaranteed bandwidth for downlink direction, in bps. <b>Important</b> This field will display "NA" for GBR values for non-GBR bearers.
Charging Rules	Dynamic charging rule applicable for specific session in IMSA service. <b>NOTE:</b> Charging Rules are no longer shown in StarOS release 11.0 and beyond.
Rule Name	Name of the applicable dynamic charging rule.
Precedence	Precedence of the applicable dynamic charging rule.
Revalidation Time	Specifies the time at which the next CCR-U will be sent out for the Re-validation Timeout EVENT TRIGGER.
Session Packet Statistics	Specifies the session data statistics. <b>NOTE:</b> Session Packet Statistics are no longer shown in StarOS release 11.0 and beyond.
Uplink Pkt Processed	Total number of packets processed in uplink direction.
Uplink Bytes Processed	Total number of bytes processed in uplink direction.
Uplink Pkt Dropped	Total number of packets dropped or not processed in uplink direction.
Uplink Bytes Dropped	Total number of bytes dropped or not processed in uplink direction.
Downlink Pkt Processed	Total number of packets processed in downlink direction.
Downlink Bytes Processed	Total number of bytes processed in downlink direction.
Downlink Pkt Dropped	Total number of packets dropped or not processed in downlink direction.
Downlink Bytes Dropped	Total number of bytes dropped or not processed in downlink direction.
Total sessions matching specified criteria	The total number of sessions matching the specified criteria.
multiple-pra	Multiple Presence Reporting Area Information Reporting.

show ims-authorization sessions full all

# CHAPTER 72

## show ip

This chapter describes the outputs of the **show ip** command.

- [show ip framed-prefixes](#), on page 1311
- [show ip interface](#), on page 1311
- [show ip interface gre-keepalive](#), on page 1312
- [show ip pool address pool-name](#), on page 1313
- [show ip pool summary](#), on page 1314
- [show ip pool verbose](#), on page 1315
- [show ip route](#), on page 1319
- [show ip traffic sctp](#), on page 1320

## show ip framed-prefixes

*Table 354: show ip framed-prefixes Command Output Descriptions*

Field	Description
session-id	Displays the session identifier for the session corresponding to the framed-prefix.
Address/Mask	Displays the IP address.
vrf-name	Displays the vrf routing information.
pool-name	Displays the pool name used for framed-prefixes.

## show ip interface

*Table 355: show ip interface Command Output Descriptions*

Field	Description
Intf Name	Indicates the name of the IP interface for which information is displayed.

Field	Description
Intf Type	Indicates the type of IP interface for which information is displayed. Possible types are: <ul style="list-style-type: none"> <li>• broadcast</li> <li>• loopback</li> <li>• point-to-point</li> <li>• tunnel</li> </ul>
Description	Indicates the provided description for specific interface name.
VRF	Indicates the name of the configured virtual routing and forwarding (VRF) table for this IP interface.
IP State	Indicates the state of the IP interface. Possible values are: <ul style="list-style-type: none"> <li>• UP</li> <li>• DOWN</li> </ul>
IP Address	Indicates the primary IP address bound with this IP interface in IPv4/IPv6 notation.
Number of Secondary Addresses	Indicates the total number of secondary IP addresses bound with this IP interface.
Secondary IP Addresses	Indicates the secondary IP address bound with this IP interface in IPv4/IPv6 notation. This will be display only when secondary IP addresses are configured for this interface.

## show ip interface gre-keepalive

*Table 356: show ip interface gre-keepalive Command Output Descriptions*

Field	Description
Intf Name	Indicates the name of the IP interface for which information is displayed.
Intf Type	Indicates the type of IP interface for which information is displayed. Possible types are: <ul style="list-style-type: none"> <li>• broadcast</li> <li>• loopback</li> <li>• point-to-point</li> <li>• tunnel</li> </ul>
Description	Indicates the provided description for specific interface name.
VRF	Indicates the name of the configured virtual routing and forwarding (VRF) table for this IP interface.

Field	Description
IP State	Indicates the state of the IP interface. Possible values are: <ul style="list-style-type: none"> <li>• UP</li> <li>• DOWN</li> </ul>
IP Address	Indicates the primary IP address bound with this IP interface in IPv4/IPv6 notation.
Number of Secondary Addresses	Indicates the total number of secondary IP addresses bound with this IP interface.
Secondary IP Addresses	Indicates the secondary IP address bound with this IP interface in IPv4/IPv6 notation. This will be displayed only when secondary IP address(es) are configured for this interface.
GRE Keepalives sent after receiving last response	Indicates the total number of GRE keepalive requests sent after last response was received.
Time remaining before sending next GRE Keepalive request	Indicates the time duration in seconds left after which next GRE keepalive request will be sent.
Time elapsed since last Keepalive from the remote	Indicates the time in seconds lapsed after last keepalive received from the remote node of GRE tunnel.
Total Number of GRE Keepalive requests sent	Indicates the total number of GRE keepalive requests sent by this node to remote GRE tunnel node during this session.
Total Number of GRE Keepalive responses received	Indicates the total number of GRE keepalive responses, in response to GRE keepalive requests from this node, received on this interface from remote GRE tunnel node during this session.
Total Number of GRE Keepalive requests received	Indicates the total number of GRE keepalive requests from remote GRE tunnel node, received by this node on this interface during this session.
Total Number of GRE Keepalive responses sent	Indicates the total number of GRE keepalive responses, in response to GRE keepalive requests from remote GRE tunnel node, sent by this node to remote GRE tunnel node during this session.

## show ip pool address pool-name

*Table 357: show ip pool address pool-name Command Output Descriptions*

Field	Description
Busyout	Defines whether or not the associated IP address is unavailable due to a busyout command having been applied to the entire pool or a range of addresses within the pool.

Field	Description
Status	Identifies the current condition of the IP address. Valid conditions are: (F) - Free: IP address is available for use. (U) - Used: IP address is currently in use and is unavailable. (H) - Hold: IP address is unavailable and on hold for the subscriber that just disconnected in case a reconnect occurs within the range of the <b>address-hold-timer</b> value configured in the <b>ip pool</b> command. (R) - Release: IP address is in the process of being released (from general use or the hold state).
Address	Displays the IP address.
NAI/MSID Hash	A 64-bit value identifying the subscriber's MN in order to reapply a specific IP address should the subscriber return within the hold timer range.
Hold Timer	Specifies the amount of time, in seconds, that the IP address is placed on hold in the event that the subscriber, who last used the address, reconnects.
Session Start/Disconnect	Displays the session start time for IP addresses in use and the session disconnect time for IP addresses on hold.

## show ip pool summary

**Note** This command must be executed from within the context in which the IP address pools are configured. As such, this command only provides information for the IP address pools configured in that context. Enter the **context** *context\_name* command at the Execute prompt to switch between contexts.

**Table 358: show ip pool summary Command Output Descriptions**

Field	Description
Type	Identifies the type of IP address pool. (P) - Public: Indicates that the pool is comprised of public IP addresses. (R) - Private: Indicates that the pool is comprised of private IP addresses. (S) - Static: Indicates that the pool is comprised of statically assigned IP addresses. (E) - Resource: Indicates that the pool is comprised of resource IP addresses. (N) - NAT: Indicates that the pool is comprised of NAT IP addresses.

Field	Description
State	Identifies the state of the IP address pool. (G) - Good: Indicates that the pool is ready to provide addresses. (D) - Pending Delete: Indicates that the pool is in the process of being deleted. (R) - Resizing: Indicates that the pool is in the process of being resized. (I) - Inactive: Indicates that the pool is not being used.
Priority	Specifies the priority use of a public or private pool. Pools with lower priority numbers are used first.
Busyout	Indicates whether or not the pool has been configured for busyout.
Pool Name	Identifies the name of the IP address pool.
Start Address	Identifies the starting IP address of the pool.
Mask/End Address	Identifies the subnet mask or the ending IP address of the pool.
Used	Specifies the number of IP addresses currently in use.
Avail	Specifies the number of IP addresses currently available for use.
Total Pool Count	Specifies the total number of IP address pools in the summary.
Total Pool Kernel Routes	Specifies the total number of Kernal routes that exist across all pools in the summary.
Max Pool Kernel Routes	Specifies the maximum number of IP pool routes supported by the system.
Total Pool Explicit Host Routes	Specifies the total number of pool explicit routes that exist across all pools in the summary.
Max Pool Explicit Host Routes	Specifies the maximum number of pool explicit host routes supported by the system.

## show ip pool verbose

**Note** This command must be executed from within the context in which the IP address pools are configured. As such, this command only provides information for the IP address pools configured in that context. Enter the **context** *context\_name* command at the Execute prompt to switch between contexts.

**Table 359: show ip pool verbose Command Output Descriptions**

Field	Description
Group	If there are IP address pools configured as part of a defined pool group, this field displays the name of the pool group.

Field	Description
Ungrouped Public Pools	Displays information for IP address pools not part of defined pool groups.
Pool	Identifies the name of the IP Pool.
Start Address/End Address or mask	Identifies the starting IP address and the ending IP address (or the subnet mask) of the pool.
Pool Status	Identifies the status if the IP address pool. Good: Indicates that the pool is ready to provide addresses. Pending Delete: Indicates that the pool is in the process of being deleted. Resizing: Indicates that the pool is in the process of being resized. Inactive: Indicates that the pool is not being used.
Type	Identifies the type of IP address pool. Public: Indicates that the pool is comprised of public IP addresses. Private: Indicates that the pool is comprised of private IP addresses. Static: Indicates that the pool is comprised of statically assigned IP addresses. Resource: Indicates that the pool is comprised of resource IP addresses. NAT: Indicates that the pool is comprised of NAT IP addresses.
Priority	Identifies the priority of the IP pool (0 = highest, 10 = lowest)
Group	Identifies the group to which the IP pool belongs.
VRF	Identifies the VRF name.
Used	Specifies the number of IP addresses currently in use in this pool.
Free	Specifies the number of IP addresses currently available for use in this pool.
Hold	Specifies the number of IP addresses currently unavailable and on hold for the subscribers that just disconnected in case a reconnect occurs within the range of the <b>address-hold-timer</b> value configured in the <b>ip pool</b> command.
Released	Specifies the number of IP addresses in this pool that are in the process of being released (from general use or the hold state).
Addr-Hold-Timer	Identifies the <b>address-hold-timer</b> value configured in the <b>ip pool</b> command.
Limit Exceeded	Specifies the number of times the hold timer limit was exceeded and the IP address being held was returned to an available or free state.
Addr-Quarantine-Timer	Identifies the <b>address-quarantine-timer</b> value configured in the <b>ip pool</b> command.
Quarantine	Specifies the number of times the quarantine timer limit was exceeded and the IP address being quarantined was returned to an available or free state.
Total Alloc Req	Specifies the total number of IP address requests made to this pool.

Field	Description
Total Rel Req	Specifies the total number of IP address release requests made to this pool.
Input Label	Identifies the input label for the VRF.
Output Label	Identifies the output label for the VRF.
Network Reachability Detection Server	Identifies the name of a configured network reachability server that is bound to the IP pool.
Unicast Gratuitous-ARP Address	Identifies if the ability to perform a unicast gratuitous ARP to the specified IP address rather than broadcast gratuitous ARP when gratuitous ARP generation is required is enabled for this pool.
Nexthop Forwarding Address	Identifies the IP address of the next hop gateway where a subscriber that is assigned an IP address from this pool is forwarded.
Vlan ID	Identifies the VLAN ID that enables over-lapping IP address pool support and associates the pool with the specified virtual LAN (VLAN).
Suppress-Switchover-ARPS	Identifies if the ability to suppress corresponding gratuitous ARP generation when a line card switchover occurs is enabled or disabled for this pool.
Send-ICMP-Dest-Unreachable	Specifies whether or not an ICMP destination unreachable PDU is generated when the system receives a PDU destined for an unused address within the pool.
Explicit-Route-Advertise	If a pool is configured with this option, then none of the fragment addresses for this pool are added to the kernel. However, the fragment addresses are added to the NPU. As the calls come up and addresses from this pool (with the new option) are used, these addresses are added to the kernel.
Advertise-if-used	Indicates if the option is enabled to use advertise address or not.
Include-Network-Broadcast-Address	Indicates whether IP pool is configured to include network broadcast address or not.
Allow-Static-Allocation	Indicates whether IP pool configured to allow static allocation of IP address or not.
Group Available Threshold	Specifies the low threshold IP pool utilization percentage that must be met or passed within the polling interval to generate an alert or alarm.  Clear: Specifies the high threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage rises above the high threshold within the polling interval, a clear alarm will be generated.
Pool-Free Threshold	Specifies the low threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.  Clear: Specifies the high threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage rises above the high threshold within the polling interval, a clear alarm will be generated.

Field	Description
Pool-Used Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
Pool-Release Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
Pool-Hold Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
Pool-Quarantine Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
cip-local-pool-used Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
cip-local-pool-in-use-addr Threshold	<p>Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.</p> <p>Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.</p>
<b>Group Summary</b>	This field and the related data are only displayed for pools that are part of a IP pool group.
Group Used	Specifies the number of IP addresses within the group that are currently in use.
Group Free	Specifies the number of IP addresses within the group that are currently available.
Group Hold	Specifies the number of IP addresses in the group that are unavailable and on hold for the subscribers that just disconnected in case a reconnect occurs within the range of the <b>address-hold-timer</b> value configured in the <b>ip pool</b> command.
Group Released	Specifies the number of IP addresses in the group that are in the process of being released (from general use or the hold state).

Field	Description
Group Effective Alarm Threshold %	Identifies the alarm threshold for the group. This parameter is based on the configured threshold of the first IP pool used in the group.
Group Effective Clear Threshold %	Identifies the clear threshold for the group. This parameter is based on the configured threshold of the first IP pool used in the group.
Group Current Usage %	Identifies the percentage of IP addresses currently in use within the group.
Group Status	Identifies the status of the group. (G) - Good: Indicates that the pool is ready to provide addresses. (D) - Pending Delete: Indicates that the pool is in the process of being deleted. (R) - Resizing: Indicates that the pool is in the process of being resized. (I) - Inactive: Indicates that the pool is not being used.
Total Pool Count	Specifies the total number of IP address pools in the summary.
Total Pool Kernel Routes	Specifies the total number of Kernel routes that exist across all pools in the summary.
Max Pool Kernel Routes	Specifies the maximum number of IP pool routes supported by the system.
Total Pool Explicit Host Routes	Specifies the total number of pool explicit routes that exist across all pools in the summary.
Max Pool Explicit Host Routes	Specifies the maximum number of pool explicit host routes supported by the system.

## show ip route

*Table 360: show ip route Command Output Descriptions*

Field	Description
Destination	Designating ip address prefix/length
kernel-only	Displays information for only kernel routes (ip route kernel).
Next hop	Address of the directly connected next hop interface
Protocol	Connected Unconnected
Prec	Number of precedence bits set
Cost	Number of router hops to destination address
Interface	Name of the next hop interface
Total Route Count	Total number of routes

Field	Description
Unique route count	Number of unique routes
Connected	Number of connected routes

## show ip traffic sctp

Table 361: show ip traffic sctp Command Output Descriptions

Field	Description
SctpCurrEstab	Displays the number of SCTP (Stream Control Transmission Protocol ) associations for which the current state is either ESTABLISHED, SHUTDOWN-RECEIVED or SHUTDOWN-PENDING.
SctpActiveEstabs	Displays the number of times that associations have made a direct transition to the ESTABLISHED state from the COOKIE-ECHOED state. The upper layer initiated the association attempt.
SctpPassiveEstabs	Displays the number of times that associations have made a direct transition to the ESTABLISHED state from the CLOSED state. The remote endpoint initiated the association attempt.
SctpAborted	Displays the number of times that associations have made a direct transition to the CLOSED state from any state using the primitive "ABORT". (Ungraceful termination of the association)
SctpShutdowns	Displays the number of times that associations have made a direct transition to the CLOSED state from either the SHUTDOWN-SENT state or the SHUTDOWN-ACK-SENT state. (Graceful termination of the association)
SctpOutOfBlues	Displays the number of out-of-the-blue packets received by the host. An out-of-the-blue packet is a correctly formed SCTP packet, including the proper checksum, but for which the receiver was unable to identify an appropriate association.
SctpChecksumErrors	Displays the number of SCTP packets received with an invalid checksum.
SctpOutCtrlChunks	Displays the number of SCTP control chunks sent; retransmissions are not included. Control chunks are those chunks different from DATA.
SctpOutOrderChunks	Displays the number of SCTP ordered data chunks sent; retransmissions are not included.
SctpOutUnorderChunks	Displays the the number of SCTP unordered chunks (data chunks in which the U bit is set to 1) sent; retransmissions are not included.
SctpInCtrlChunks	Displays the number of SCTP control chunks received; no duplicate chunks included.
SctpInOrderChunks	Displays the number of SCTP ordered data chunks received; no duplicate chunks included.

<b>Field</b>	<b>Description</b>
SctpInUnorderChunks	Displays the number of Sctp unordered chunks (data chunks in which the U bit is set to 1) received; no duplicate chunks are included.
SctpFragUsrMsg	Displays the number of user messages that have to be fragmented because of the MTU.
SctpReasmUsrMsgs	Displays the number of user messages reassembled, after conversion into DATA chunks.
SctpOutSCTPPacks	Displays the number of Sctp packets sent; retransmitted DATA chunks are included.
SctpInSCTPPacks	Displays the number of Sctp packets received; duplicates are included.

# CHAPTER 73

## show ipsg

This chapter describes the outputs of the **show ipsg** commands.

- [show ipsg service all](#), on page 1323
- [show ipsg sessions counters all](#), on page 1324
- [show ipsg statistics](#), on page 1325

## show ipsg service all

*Table 362: show ipsg service all Command Output Descriptions*

Field	Description
Service name	Name of the IPSG service.
Context	Name of the context in which the IPSG service is configured.
Bind	The binding status of the service. Indicates if the service has been bound to the appropriate interfaces (RADIUS-Server mode) or to any interface in the context (RADIUS-Snoop mode).
Max Subscribers	The total number of subscribers allowed for the service. This field displays a configured number or, if not configured, the total amount specified by the IPSG service license.
Mode	The IPSG service mode type: radius-server or radius-snoop
Address	The IP address of the interface where RADIUS Accounting-Request messages are received.
Port	The port number of the interface where RADIUS Accounting-Request messages are received.
Disconnect-Message	Displays whether the RADIUS Accounting disconnect-message option is enabled or disabled.
Source Port	The port number configured for the disconnect-message.
Source-Context	The source context with the interface where RADIUS Accounting-Request messages are received.

Field	Description
Overlapping IP address	Displays whether overlapping IP address is enabled or disabled.
Default Subscriber	The default subscriber for the context.
Service Status	The status of the IPSG service. Indicates if the service has been started.
SGTP Service	Name of the SGTP service associated with this service.
SGTP Service Context	Name of the context in which the SGTP service is configured.
Default APN Name	Name of the default APN to be used for this service.
PLMN Id	The Public Land Mobile Network (PLMN) identifier for the eWAG service.
MCC	The mobile country code (MCC) part of the PLMN ID.
MNC	The mobile network code (MNC) part of the PLMN ID.

## show ipsg sessions counters all

Table 363: show ipsg sessions counters all Command Output Descriptions

Field	Description
Username	The user name for the session.
Callid	The call ID number for the session.
MSID	The Mobile Station Identification number.
<b>RADIUS Accounting:</b>	
Total START Req rcvd	Total number of RADIUS Accounting-Start Request messages received since the last system restart or clear command.
Total START Req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-Start Request messages received.
Total START Rsp Sent	Total number of RADIUS Accounting-Start Response messages sent by this system.
Total INTERIM Updt rcvd	Total number of RADIUS Accounting-Interim Update messages received.
Total INTERIM Updt Rsp sent	Total number of RADIUS Accounting-Interim Update Response messages sent.
Total Acct On Req rcvd	Total number of RADIUS Accounting-On Request messages received.
Total Acct On Req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-On Request messages received.
Total Acct On Response sent	Total number of RADIUS Accounting-On Response messages sent.

Field	Description
Total Acct Off Req rcvd	Total number of RADIUS Accounting-Off Request messages received.
Total Acct Off Req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-Off Request messages received.
Total Acct Off Response sent	Total number of RADIUS Accounting-Off Response messages sent.
Total STOP Req rcvd	Total number of RADIUS Accounting-Stop Request messages received.
Total STOP Rsp sent	Total number of RADIUS Accounting-Stop Response messages sent.
Total Non-Existing STOP Rsp sent	Total number of RADIUS Accounting-Stop Response messages sent for a non-existing session.
Total ACCESS Req rcvd	Total number of IPSPG RADIUS Access-Request messages received.
Total ACCESS Req (Retransmitted) rcvd	Total number of retransmitted IPSPG RADIUS Access-Request messages received.
Total ACCESS Challenge sent	Total number of IPSPG RADIUS Access-Challenge messages sent.
Total Access-Accept sent	Total number of IPSPG RADIUS Access-Accept messages sent.
Total Access-Reject sent	Total number of IPSPG RADIUS Access-Reject messages sent.
Total Response sent	Total number of RADIUS accounting response messages sent.

## show ipsg statistics

Table 364: show ipsg statistics Command Output Descriptions

Field	Description
<b>Session Stats:</b>	
Total Current	Total number of current sessions.
Total Setup	Total number of sessions setup.
Total Released	Total number of sessions released.
Total Replaced	Total number of sessions replaced.
<b>RADIUS Message Statistics:</b>	
Total START Req rcvd	Total number of RADIUS Accounting-Start Request messages received since the last system restart or clear command.
Total START Req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-Start Request messages received.

Field	Description
Total START Rsp Sent	Total number of RADIUS Accounting-Start Response messages sent by this system.
Total INTERIM Updt rcvd	Total number of RADIUS Accounting-Interim Update messages received.
Total INTERIM Updt Rsp sent	Total number of RADIUS Accounting-Interim Update Response messages sent.
Total STOP Req rcvd	Total number of RADIUS Accounting-Stop Request messages received.
Total STOP Rsp sent	Total number of RADIUS Accounting-Stop Response messages sent.
Total Acct On req rcvd	Total number of RADIUS Accounting-On Request messages received.
Total Acct On req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-On Request messages received.
Total Acct On Response sent	Total number of RADIUS Accounting-On Response messages sent.
Total Acct Off Req rcvd	Total number of RADIUS Accounting-Off Request messages received.
Total Acct Off Req (Retransmitted) rcvd	Total number of retransmitted RADIUS Accounting-Off Request messages received.
Total Acct Off Response sent	Total number of RADIUS Accounting-Off Response messages sent.
Total ACCESS Req rcvd	Total number of IPSPG RADIUS Access-Request messages received.
Total ACCESS Req (Retransmitted) rcvd	Total number of retransmitted IPSPG RADIUS Access-Request messages received.
Total ACCESS Challenge sent	Total number of IPSPG RADIUS Access-Challenge messages sent.
Total Access-Accept sent	Total number of IPSPG RADIUS Access-Accept messages sent.
Total Access-Reject sent	Total number of IPSPG RADIUS Access-Reject messages sent.
Total UNKNOWN req rcvd	Total number of unknown request messages received.
Total Response sent	Total number of RADIUS accounting response messages sent.
Total Sessions Replaced	Total number of sessions replaced.
<b>Total Discarded</b>	Total number of messages discarded.
Mandatory Attr Missing	Total number of messages discarded because of missing mandatory attribute.
Interim For Non-Existing Session	Total number of RADIUS Accounting-Interim messages discarded, when there is no session existing.
Stop For Non-Existing Session	Total number of RADIUS Accounting-Stop messages discarded, when there is no session existing.
Unknown Client	Total number of messages discarded because they were received from an unknown client.
Interconnect shared secret	Total number of RADIUS requests discarded, because the shared secret was incorrect.

Field	Description
Stale Packets	Total number of stale Create Session Request packets discarded.
Service Not Supported	Total number of messages discarded due to service not being supported.
No Resource	Total number of messages discarded due to resource unavailability.
Internal Error	Total number of messages discarded due to internal errors. For example, when Demux fails to send notification to SessMgr, and other unexpected internal scenarios.
License Limit Exceeded	Total number of messages discarded due to license limit getting exceeded.
Service Limit Exceeded	Total number of messages discarded due to service limit for maximum number of sessions getting exceeded.
Congestion Policy Applied	Total number of messages discarded due to Congestion Policy.
DHCP Message Discarded	Total number of DHCP messages discarded by the IPSG service. It is the sum of all DHCP discard reasons.
MAX Size Exceeded	Total number of DHCP messages discarded by IPSG service due to maximum size exceeding. Maximum DHCP message size supported by IPSG service is (DHCP_MESSAGE_MAX_SIZE 1000 + UDP_HEADER_LEN 8 + IP_HEADER_LEN 20).
Non-Existing Session	Total number of DHCP messages ignored by IPSG since they were received for non-existing sessions.
GiAddr Mismatch	Total number of DHCP messages discarded by IPSG due to GiAddr field (Relay agent addr) not matching IP in DHCP message.
Unsupported HW Type/Length	Total number of messages discarded by IPSG due to congestion policy.

# CHAPTER 74

## show ipv6

This chapter describes the outputs of the **show ipv6** command.

- [show ipv6 interface summary, on page 1329](#)
- [show ipv6 neighbors, on page 1330](#)
- [show ipv6 pool summary, on page 1330](#)
- [show ipv6 pool verbose, on page 1331](#)
- [show ipv6 route, on page 1333](#)

## show ipv6 interface summary

*Table 365: show ipv6 interface summary Command Output Descriptions*

Field	Description
Intf name	Interface name
Intf Type	Interface type
Description	
Router Advertisement	Displays whether the system is sending router advertisements. Options are either enabled or disabled.
IP State	Displays the IP state (UP/DOWN) and binding detail
MTU	The subscriber's Maximum Transmission Unit (MTU) size in octets.
MRU	The subscriber's Maximum Receive Unit (MRU) size in octets.
IPv6 Link-Local Address:	Displays the IPv6 link-local address
IPv6 Global Unicast Address:	Displays the ipv6 Global Unicast Address address

## show ipv6 neighbors

Table 366: show ipv6 neighbors Command Output Descriptions

Field	Description
Address	IPv6 address from table
Type	Interface type: <ul style="list-style-type: none"> <li>• Broadcast (Ethernet)</li> <li>• Loopback</li> </ul>
Link address	MAC address
Flags	One of the following flag codes: <ul style="list-style-type: none"> <li>• I = Incomplete</li> <li>• R = Reachable</li> <li>• M = Permanent</li> <li>• S = Stale</li> <li>• D = Delay</li> <li>• P = Probe</li> <li>• F = Failed</li> </ul>
Interface	Interface name

## show ipv6 pool summary

Table 367: show ipv6 pool summary Command Output Descriptions

Field	Description
Type	Identifies the type of IP address pool. <p>(P) - Public: Indicates that the pool is comprised of public IP addresses.</p> <p>(R) - Private: Indicates that the pool is comprised of private IP addresses.</p> <p>(S) - Static: Indicates that the pool is comprised of statically assigned IP addresses.</p> <p>(E) - Resource: Indicates that the pool is comprised of resource IP addresses.</p> <p>(N) - NAT: Indicates that the pool is comprised of NAT IP addresses.</p>

Field	Description
State	Identifies the state of the IP address pool. (G) - Good: Indicates that the pool is ready to provide addresses. (D) - Pending Delete: Indicates that the pool is in the process of being deleted. (R) - Resizing: Indicates that the pool is in the process of being resized. (I) - Inactive: Indicates that the pool is not being used.
Priority	Specifies the priority use of a public or private pool. Pools with lower priority numbers are used first.
Busyout	Indicates whether or not the pool has been configured for busyout.
Pool Name	Identifies the name of the IP address pool.
Start Prefix	Identifies the starting IPv6 prefix of the pool.
End Prefix	Identifies the ending IPv6 prefix of the pool.
Used	Specifies the number of IP addresses currently in use.
Avail	Specifies the number of IP addresses currently available for use.
Total Pool Count	Specifies the total number of IP address pools in the summary.

## show ipv6 pool verbose

*Table 368: show ip pool verbose Command Output Descriptions*

Field	Description
Pool Name	Name of the IPv6 pool.
Group Name	Identifies the group to which the IP pool belongs.
Pool Type	Specifies the Type of IPv6 pool (Public, Private, Static, Resource) and its Priority (0 = highest, 10 = lowest).
Pool Status	Identifies the status of the group. Good: Indicates that the pool is ready to provide addresses. Pending Delete: Indicates that the pool is in the process of being deleted. Resizing: Indicates that the pool is in the process of being resized. Inactive: Indicates that the pool is not being used.
Start Prefix	Identifies the starting prefix of the pool.
End Prefix	Identifies the ending prefix of the pool.

Field	Description
Total Prefix Used Prefix Free Prefix	Total number of IPv6 prefixes with Used and Free sub-categories.
Pool Address Type	Type of IPv6 address pool.
Configured Prefix	
Busy-Out Range	Range of IPv6 addresses that have been busied out.
Total Busy-Out usage	
Used Free	Number of busy-out ranges currently being Used or Free.
Nexthop Forwarding Address	Identifies the IP address of the next hop gateway where a subscriber that is assigned an IP address from this pool is forwarded.  Status = Enabled or Disabled
Suppress-Switchover-ADVS	Identifies if the ability to suppress corresponding gratuitous ARP generation when a line card switchover occurs is enabled or disabled for this pool.  Status = Enabled or Disabled
Allow-Static-Allocation	Indicates whether IP pool configured to allow static allocation of IP address or not.  Status = Enabled or Disabled
Duplicate-Addr-Detection	Indicates whether or not a unicast IPv6 address will initiate an internal test for the uniqueness of its address using ICMPv6 type 135 and 136 messages.  Status = Enabled or Disabled
Group Available Threshold Clear	Specifies the low threshold IP pool utilization percentage that must be met or passed within the polling interval to generate an alert or alarm.  Clear: Specifies the high threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage rises above the high threshold within the polling interval, a clear alarm will be generated.  Status = Enabled or Disabled
Pool-Free Threshold Clear	Specifies the low threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.  Clear: Specifies the high threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage rises above the high threshold within the polling interval, a clear alarm will be generated.  Status = Enabled or Disabled

Field	Description
Pool-Used Threshold Clear	Specifies the high threshold IP pool utilization percentage that must be met or exceeded within the polling interval to generate an alert or alarm.  Clear: Specifies the low threshold IP pool utilization percentage that maintains a previously generated alarm condition. If the utilization percentage falls beneath the low threshold within the polling interval, a clear alarm will be generated.  Status = Enabled or Disabled

## show ipv6 route

*Table 369: show ipv6 route Command Output Descriptions*

Field	Description
Destination	Designating ipv6 address prefix/length
Next hop	Address of the directly connected next hop interface
Protocol	Connected Unconnected
Prec	Number of precedence bits set
Cost	Number of router hops to destination address
Interface	Name of the next hop interface
Total Route Count	Total number of routes Number connected Number of static routes

# CHAPTER 75

## show lawful-intercept

This chapter includes the **show lawful-intercept** command output tables.

- [show lawful-intercept statistics, on page 1335](#)

## show lawful-intercept statistics

*Table 370: show lawful-intercept statistics Command Output Descriptions*

Field	Description
Total currently active LI calls	The total number of calls on which Lawful Intercept is currently being performed.
Total current camp-on triggers	The total number of LI sessions
Total event packets sent	The total number of LI event packets sent.
Total event packets dropped	Specifies the total number of event packets dropped and the reason they were dropped: <ul style="list-style-type: none"><li>• no tcp connection with mediation:</li><li>• src-ip-addr not configured: Total number of event packets dropped because there was no source IP address configured for the LI session.</li></ul>
Total content packets dropped	Specifies the total number of content packets dropped and the reason why they were dropped: <ul style="list-style-type: none"><li>• no tcp connection with mediation:</li><li>• src-ip-addr not configured:</li><li>• LI-context mis-configured:</li></ul>
Current event packets sent	
Current content packets sent	
Total LI provisioning stats	This section provides details on Lawful Intercept provisioning statistics: <ul style="list-style-type: none"><li>• via active-only method:</li><li>• via camp-on method:</li></ul>

Field	Description
Total LI provisioning failure stats	This section provides details on Lawful Intercept provisioning failure statistics: <ul style="list-style-type: none"> <li>• LI-context not configured:</li> <li>• src-ip-addr not configured:</li> <li>• src-ip-addr mis-configured:</li> </ul>
Total LI session termination stats	This section provides details on Lawful Intercept session termination statistics: <ul style="list-style-type: none"> <li>• due to call disconnect: The total number of LI session which were terminated due to a call disconnect.</li> <li>• due to deletion of context: The total number of LI sessions which were terminated due to a context being deleted.</li> <li>• due to de-provisioning: The total number of LI sessions which were terminated due to de-provisioning of the LI service.</li> </ul>
Total LI sess recovery stats	This section provides details on Lawful Intercept session recovery statistics: <ul style="list-style-type: none"> <li>• recovery performed: The total number of LI sessions on which session recovery was performed.</li> </ul>
LI buffering stats	<b>SGSN service only.</b> This section provides details statistics for the Lawful Intercept buffering function: <ul style="list-style-type: none"> <li>• Total number of buffers: The total number of buffers available for the Lawful Intercept service.</li> <li>• number of free buffers: The total number of buffers available for the LI service.</li> <li>• number of used buffers: The total number of buffers in use by the LI service.</li> <li>• Total event packets dropped: Specifies the reasons for an LI event packet being dropped. <ul style="list-style-type: none"> <li>• due to buffer overflow: The total number of event packets dropped due to an LI buffer overflow.</li> <li>• due to memory failures: The total number of event packets dropped due to LI memory failures.</li> <li>• due to configuration changes: The total number of event packets dropped due to configuration changes.</li> </ul> </li> <li>• Total number of failures detected: The total number of LI buffering failures detected for all reasons.</li> </ul>

## CHAPTER 76

# show license

---

- [show license all](#), on page 1337
- [show license info](#), on page 1338
- [show license smart-tags](#), on page 1339
- [show license statistics](#), on page 1339
- [show license summary](#), on page 1341

## show license all

*Table 371: show license all Command Output Descriptions*

Field	Description
Smart Licensing Status	Display info of the device status like: <ul style="list-style-type: none"><li>• Enabled or Disabled</li><li>• Registration Status, EVALUATION or REGISTERED mode</li><li>• Smart Account, registered with which smart account</li><li>• Virtual Account, registered with which virtual account</li><li>• Time of registration</li><li>• Next renewal time</li><li>• When current registration will expire</li></ul>

Field	Description
License Usage	<p>Displays both the license name and the human readable portion of the entitlement tag in the following format:</p> <ul style="list-style-type: none"> <li>• LICENSE_NAME (readable tag portion): The LICENSE_NAME is the license name the customer sees on the CSSM. This name is only available to the agent after registration because it is sent to the agent from the CSSM.</li> <li>• Description: This is the license description user can sees on the CSSM. This description is only available to the agent after registration because it is sent to the agent from the CSSM.</li> <li>• Version of the license</li> <li>• The count that is in use</li> <li>• Status of the license</li> </ul>
Product Information	<p>Displays device-specific information, including:</p> <ul style="list-style-type: none"> <li>• Product ID</li> <li>• Serial Number</li> <li>• Version ID</li> </ul>
Agent Version	Displays which version of Smart Licensing agent is running on the product.

## show license info

*Table 372: show license info Command Output Descriptions*

Field	Description
Chassis Throughput	Indicates the committed chassis throughput of the chassis.
Comment	Comment line for appropriate license key information
Device 1	Model and Serial number for device running license.
Device 2	Same as Device 1 or Unspecified
Issued	Date license issued
Expires	Date license expires
Issued by	License issuing authority
Key number	License key number

Field	Description
Enabled features	Lists applications enabled by the license
Session limits	Shows maximum number of sessions and the session type permitted by this license
Unknown Items	Shows any unknown items
Status	Shows the following: <ul style="list-style-type: none"> <li>• Device 1: status match</li> <li>• Device 2: status match</li> </ul> License status: <ul style="list-style-type: none"> <li>• Expired/Not Valid (in grace period)</li> </ul> Grace Period Ends: end date
System SW - Base Throughput License	Indicates the System SW - Base Throughput License details per Gbps.

## show license smart-tags

*Table 373: show license smart-tags Command Output Descriptions*

Field	Description
Tag-Id	Displays Id of each service or on/off entitlement tag.
Feature / Service	Displays type of service or on/off feature.
Smart Entitlement Tags	Displays entitlement tag unique to each service or on/off feature.

## show license statistics

*Table 374: show license statistics Command Output Descriptions*

Field	Description
Smart Licensing Status	Displays whether Smart License is Enabled or Disabled.
Smart Licensing Mode	Displays whether the device is in EVALUATION or REGISTERED mode.
Total SL Enabled	Indicates total number of times Smart License enabled on this device.
Total SL Disabled	Indicates total number of times Smart License disabled on this device.
Report License Usage	Indicates if the timer is running for reporting license usage to CSSM

Field	Description
List of Timer Intervals	Different types of timers. <ul style="list-style-type: none"> <li>• Report License Usage – When this timer expires the current license usage change only will be reported to CSSM.</li> <li>• Enforce Policy – This is not used as of now (ignore).</li> <li>• OOC Retry – When this timer expires it reports to CSSM aggressively with current license usage even if the usage count is not changed.</li> </ul>
SLMGR - SLAGENT Messages	Indicates different types of message exchanged between internal process, this is only for debugging purpose for developers.
Event Notification Stats	Indicates different types of events received between internal process, this is only for debugging purpose for developers.
Service Level Stats Mode	Indicates is service level stats for EVALUATION and REGISTERED mode. <ul style="list-style-type: none"> <li>• TagId - Displays Id of each service or on/off entitlement tag</li> <li>• Policy – Current Enforcement Policy either ALLOW new calls or BLOCK incoming new calls</li> <li>• CurCallCnt – Current number of calls reported to CSSM</li> <li>• MaxCallCnt - Max number of calls reported to CSSM</li> <li>• LastLicCnt – Last reported number of Licenses usage to CSSM</li> <li>• MaxLicCnt – Max license usage reported to CSSM</li> <li>• ReportSucc – Inter process reporting success</li> <li>• ReportFail - Inter process reporting failure</li> <li>• PChgAllow – Number of times the particular tag policy changed to ALLOW</li> <li>• PChgBlock – Number of times the particular tag policy changed to BLOCK</li> <li>• PChgBounce – Number of times the message to demux to policy change has bounced</li> </ul>

Field	Description
Feature Level Stats Mode	<p>Indicates is feature level stats for EVALUATION and REGISTERED mode.</p> <ul style="list-style-type: none"> <li>• TagId - Displays Id of each service or on/off entitlement tag</li> <li>• Policy – Current Enforcement Policy either ALLOW new calls or BLOCK incoming new calls</li> <li>• Grace – time to expire grace period (grace*feature_report_time = in minutes)</li> <li>• Status – Current status of feature enabled or disabled</li> <li>• Once – Did this feature enabled atleast once?</li> <li>• Track – Multiple CLI can map same License needs tracking</li> <li>• Usage – Total CLI’s using same license</li> <li>• EnableCnt – Number of times this feature is enabled</li> <li>• DisableCnt – Number of times this feature is disabled</li> <li>• ReportSucc – Inter process reporting success</li> <li>• ReportFail - Inter process reporting failure</li> <li>• PReqAllow – Number of times the particular tag policy requested to ALLOW</li> <li>• PReqBlock – Number of times the particular tag policy requested to BLOCK</li> </ul>

## show license summary

*Table 375: show license summary Command Output Descriptions*

Field	Description
License	Displays is the license name the user sees on the CSSM. This name is only available to the agent after registration because it is sent to the agent from the CSSM. This field will be truncated to 23 letters and ‘...’ added if it is too long..
Entitlement Tag	Displays the human readable portion of the entitlement tag and is always available. This field will be truncated to 25 letters and ‘...’ added if it is too long.
Count	The count that is in use.
Status	Status of the license.

# CHAPTER 77

## show linecard

This chapter describes the outputs of the **show linecard** command. This command is only supported on the ASR 5000.

- [show linecard table, on page 1343](#)

## show linecard table

**Table 376: show linecard table Command Output Descriptions**

Field	Description
Slot	<p>Displays the chassis slot number and type. The slot type represents the type of card(s) that the slot supports. Possible slot types are: Ethernet 10/100, Ethernet 1000 line card, four-port Quad Gig-E (QGLC) line card (ASR 5000 only), and the 10 Gigabit Ethernet Line Card (XGLC) *</p> <p>Possible slot numbers are: 17 through 23, 26 through 39, and slots 42 through 48</p> <p>*The XGLC is a full-length line card. It only fits in upper slots 17 through 23 and 26 through 32. Slots 24 and 25 would support the Switch Processor Input/Output (SPIO) card associated for the XGLC.</p>
Card Type	<p>Displays the type of card installed. The possible card types supported for this release are: Ethernet 10/100 Line Card, Ethernet 1000 Line Card (QGLC), 10 Gig Ethernet Line Card (XGLC), Switch Processor Input/Output Card.</p>
# Ports	<p>Displays the maximum number of physical ports supported per card.</p> <ul style="list-style-type: none"><li>• The Ethernet 10/100 Line Card supports 8 ports.</li><li>• The Ethernet 1000 Line Card supports 1 port.</li><li>• The Quad Gig-E (QGLC) Line Card supports 4 ports</li><li>• The 10 Gig Ethernet Line Card (XGLC) supports 1 port</li><li>• The Switch Processor Input/Output Card supports 2 ports.</li></ul>

Field	Description
Oper State	<p>Displays the operational state of the card. The possible operational states are:</p> <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be due to the fact that it is not completely installed (i.e. the card interlock switch is not locked, refer to the <i>System Installation Guide</i> for information on installing cards in the system) or that its processes have been halted.</li> </ul>
SPOF	<p>Displays whether or not the component is a single point of failure (SPOF) in the system. If the component is an SPOF, then a Yes will appear in this column. If not, a No will be displayed.</p>
Attach	<p>Displays the PACs/PSC/PSC2s and SPCs/SMCs that the line cards are being associated with.</p>

# CHAPTER 78

## show link-aggregation

This chapter describes the outputs of the **show link-aggregation** command. These outputs are associated with a specified Link Aggregation Group (LAG).

- [show link-aggregation info](#), on page 1345
- [show link-aggregation lacp info](#), on page 1346
- [show link-aggregation statistics](#), on page 1346
- [show link-aggregation table](#), on page 1347

## show link-aggregation info

*Table 377: show link-aggregation info Command Output Descriptions*

Field	Description
Group info for group number = <value> (LAG group id - <group_id>)	
group state	Alphanumeric string indicating the current state of this LAG.
number of ports	Number of physical ports in this group.
number of masters	Number of master ports in this group.
min-link (ASR 5500 only)	Minimum number of links that must be available without causing a LAG switchover.
mode	Indicates redundant or non-redundant mode.
active master	Hexadecimal identifier/slot-port number of the active master port.
sysmac	MAC address assigned by the system to the LAG.
sysprio	System priority.

## show link-aggregation lacp info

Table 378: show link-aggregation lacp info Command Output Descriptions

Field	Description
LACP info for group number = <value> (LAG group id - <group_id>)	
Rx Counters	Number of LACP frames received from the peer network device.
Tx Counters	Number of LACP frames sent to the peer network device.

## show link-aggregation statistics

Table 379: show link-aggregation statistics Command Output Descriptions

Field	Description
Counters for LAG group <number>:	
Line Card <card_identifier>	
Rx Counter	
Bytes	Total number of bytes received from the peer network device.
Unicast frames	Total number of Unicast frames received from the peer network device.
Multicast frames	Total number of Multicast frames received from the peer network device.
Broadcast frames	Total number of Broadcast frames received from the peer network device.
Data	Count of bytes/frames received.
Tx Counter	
Bytes	Total number of bytes sent to the peer network device.
Unicast frames	Total number of Unicast frames sent to the peer network device.
Multicast frames	Total number of Multicast frames sent to the peer network device.
Broadcast frames	Total number of Broadcast frames sent to the peer network device.
Data	Count of bytes/frames sent.

## show link-aggregation table

*Table 380: show link-aggregation table Command Output Descriptions*

Field	Description
Grp	LAG number.
Port	Interface slot/port number of group member.
Type	Group type.
Admin	Current administrative state – Enabled or Disabled.
Oper	Current operational state – Up or Down.
Link	Current link state – Up or Down.
State	Current LAG state – Active or Standby.
Pair	Interface slot/port number of LAG peer port. LAG Port Status: <ul style="list-style-type: none"> <li>• LA+ = Port is actively used for distributing</li> <li>• LA- = Port failed to negotiate LACP</li> <li>• LA~(tilde) = Port negotiated LACP but another peer was selected</li> <li>• LA*(asterisk) = Port is (re)negotiating LACP</li> <li>• LA# = Port has been gone down because the min-link criteria is not met (ASR 5500 only)</li> </ul>
Redundant	Interface slot/port number of redundant LAG peer port.

show link-aggregation table

## CHAPTER 79

# show linkmgr

- [show linkmgr](#), on page 1349

## show linkmgr

This table provides information for counters displayed in the output of the SGSN **show linkmgr { all | instance } [ parser statistics ]** command.

**Table 381: show linkmgr instance <#> parser statistics all Command Output Descriptions**

Field	Description
Decode Statistics	For a given link manager instance, the decode statistics includes: <ul style="list-style-type: none"><li>• Decode Success</li><li>• Decode Failure</li></ul>
Decode Success	Total number of messages for which protocols were decoded successfully by the link manager parser to retrieve the de-multiplexing key.
Decode Failures	Total number of messages for which the link manager parser failed to successfully decode the protocols to retrieve the de-multiplexing key.

Field	Description
Demux Key	<p>The link manager parser extracts de-multiplexing key from the incoming Signaling Connection Control Part (SCCP) message or SCCP payload. Following are the categories of demux key:</p> <ul style="list-style-type: none"> <li>• IMSI</li> <li>• P-TMSI (local)</li> <li>• P-TMSI (non-local)</li> <li>• SSN</li> <li>• HLR Reset</li> <li>• SCCP DLR</li> <li>• TCAP DTID</li> <li>• XUDT LRN &amp; OPC</li> <li>• TLLI (non-local)</li> </ul>
IMSI	Total number of instances when the de-multiplexing key that is being used for parsing is International Mobile Subscriber Identity (IMSI).
P-TMSI (Local)	<p>Packet Temporary Mobile Subscriber Identity (P-TMSI) is assigned by the SGSN to UE to avoid transmission of TMSI over the air.</p> <p>Total number of instances where the de-multiplexing key used for parsing is local P-TMSI.</p>
P-TMSI (Non Local)	Total number of instances where the de-multiplexing key used for parsing is non- local P-TMSI.
SSN	<p>A Sub System Number (SSN) identifies a specific user function provided by an Signalling Connection Control Part (SCCP) node.</p> <p>Total number of instances where the de-multiplexing key used for parsing is the Sub System Number (SSN) associated with the message.</p>
HLR Reset	<p>Link manager uses the messenger based communication for all the messages except for HLR Reset. The HLR Reset messages are forwarded using CCPU TAPA driver task.</p> <p>Total number of instances where the de-multiplexing key used for parsing is HLR Rest message.</p>
SSCP DLR	<p>The Destination Local Reference (DLR) used by the SCCP connection oriented service.</p> <p>Total number of instances where the de-multiplexing key used for parsing is SSCP DLR.</p>
TCAP DTID	<p>Transaction Capacities Application Part (TCAP) is a protocol that is used to support Mobile Application Part (MAP). The MAP is used to exchange the control plane traffic between SGSN and HLR.</p> <p>Total number of instances where the de-multiplexing key used for parsing is the Transaction Capability Application Part Destination Id (TCAPDTID).</p>

Field	Description
XUDT, LRN & OPC	<p>eXtended Unit Data Message (XUDT), Local Reference Number (LRN) and Originating Point Code (OPC). These are the components of SSCP and Signaling System 7 architecture.</p> <p>Total number of instances where the de-multiplexing key used for parsing is XUDT, LRN and OPC associated with the message.</p>
TLLI (Non Local)	<p>Temporary Logical Link Identity (TLLI), is an identity used during the PDP session for identifying the MS on Um and Gb interface.</p> <p>Total number of instances where the de-multiplexing key used for parsing is the non-local Temporary Logical Link Identity (TLLI).</p>
TLLI (Local)	<p>Temporary Logical Link Identity (TLLI), is an identity used during the PDP session for identifying the MS on Um and Gb interface.</p> <p>Total number of instances where the de-multiplexing key used for parsing is the non-local Temporary Logical Link Identity (TLLI).</p>
SMGR Instance	<p>Total number of instances where the de-multiplexing key used for parsing is the session manager instance associated with the message.</p>
Memory (Mem cache usage)	<p>Memory cache or memory buffer usage describes the memory that is being used by link manager parameters. The memory buffer usage comprises:</p> <ul style="list-style-type: none"> <li>• Block size</li> <li>• Number of blocks</li> <li>• Total</li> <li>• Free</li> <li>• numAlloc</li> </ul> <p>Memory cache is being used by following link manager parameters:</p> <ul style="list-style-type: none"> <li>• LRN OPC table entry</li> <li>• LRN OPC entry</li> <li>• IMSI MGR Pending entry</li> <li>• Iups entry</li> <li>• RNC entry</li> <li>• RAI entry</li> <li>• PLMN entry</li> <li>• TLLI mapping entry</li> <li>• IMSI mapping entry</li> <li>• SGSN-EMPCR entry</li> </ul>

Field	Description
LRN OPC table entry	Local Routing Number (LRN) Originating Point Code (OPC), as per memory cache table entry.
LRN OPC entry	Local Routing Number (LRN) Originating Point Code (OPC) entry.
IMSI MGR Pending entry	Memory used by pending IMSI manager application.
Iups entry	Iu is the interface between Radio Network Subsystem (RNS) and core network. This is the memory used by Iups interface.
RNC entry	Memory used by the Radio Network Controller (RNC) entry.
RAI entry	Memory used by Routing Area Identity (RAI) entry.
PLMN entry	Memory used by Public Land Mobile Network (PLMN) entry.
TLLI mapping entry	Memory used by Temporary Logical Link Identity (TLLI) mapping entry.
IMSI mapping entry	Memory used by IMSI mapping entry.
SGSN-EMPCR entry	Memory used by SGSN-EMPCR entry.
Mbuf Counters	Total number of memory buffer counters, such as memory buffer overflows, associated with link manager parser instance.
Buffer Over flow	Total number of memory buffer overflows associated with this instance of link manager.
Messenger Counters	Link manager parser statistics includes message counters, indicating the messages that are being exchanged between link manager application and following manger applications: <ul style="list-style-type: none"> <li>• IMSI manager</li> <li>• Link manager</li> <li>• Master manager</li> <li>• ALCAP manager</li> <li>• HNB manager</li> <li>• Session manager</li> </ul>

Field	Description
IMSI Manager	<p>Link manager parser statistics includes following message counters related to IMSI Manager:</p> <ul style="list-style-type: none"> <li>• Forward requests sent</li> <li>• Forward requests queued</li> <li>• Forward response received</li> <li>• Forward requests d-queued</li> <li>• Forward request bounced</li> <li>• Query requests sent</li> <li>• Query requests queued</li> <li>• Query requests d-queued</li> <li>• Query requests bounced</li> <li>• Query success responses</li> <li>• Query failure responses</li> <li>• Bulk requests sent</li> <li>• Bulk requests received</li> <li>• Pending queue length</li> <li>• Pending queue hardware</li> <li>• Pending attach dropped</li> <li>• Pending RAU dropped</li> <li>• Pending attach / RAU length</li> </ul>
Forward Request Sent	Total number of forward requests sent to IMSI manager.
Forward Request Queued	Total number of forward requests queued for sending to IMSI manager.
Forward Response Received	Total number of forward responses received from IMSI manager.
Forward Request De-queued	Total number of forward request removed from the queue of the requests that are being sent to IMSI manager.
Forward Request Bounced	Total number of forward request that were bounced from the IMSI.
Query Request Sent	Total number of query requests sent to IMSI manager.
Query Request Queued	Total number of query requests queued for sending to IMSI manager.
Query success response	Total number of successful query responses received from IMSI manager.
Query request de-queued	Total number of query requests removed from the queue of the requests that are being sent to IMSI manager.

Field	Description
Query failure response	Total number of query failure response messages received from IMSI manager.
Query request bounced	Total number of query requests that were bounced by the IMSI manager.
Bulk request sent	Total number of bulk requests sent to IMSI manger.
Bulk response received	Total number of bulk response messages received from IMSI manger.
Window Size	The size of message window between link manger and IMSI manager instances.
Pending Attach dropped	Total number of pending attach requests dropped by IMSI manager.
Pending RAU dropped	Total number of pending Routing Area Updates (RAUs) dropped by IMSI manger.
Pending Attach/RAU queue length	The queue length of the pending attach and pending RAU messages that is being sent to IMSI manager.
Link Manager	<p>The link manager can handle following categories of signaling traffic:</p> <ul style="list-style-type: none"> <li>• SIGTRAN</li> <li>• Broadband</li> <li>• Narrow band</li> <li>• Gb over IP</li> <li>• Frame Relay</li> </ul> <p>Link manager parser statistics includes following parameters related to messages that are being broadcast using this link manager instance:</p> <ul style="list-style-type: none"> <li>• Broadcast sent</li> <li>• Broadcast received</li> <li>• Broadcast successful response received</li> <li>• Broadcast response received</li> <li>• Broadcast failure response received.</li> </ul>
Broadcast sent	Total number of broadcast messages sent by link manager instance.
Broadcast received	Total number of broadcast messages received by link manager instance.
Broadcast success response sent	Total number of messages sent by the link manager that indicate successful broadcast response.
Broadcast failure response received	Total number of broadcast failure messages received from the link manager.
Master Manager	<p>Link manager parser statistics includes following parameters that are related to master manager.</p> <ul style="list-style-type: none"> <li>• Messages sent</li> </ul>

Field	Description
Messages sent	Total number of messages sent to Master manager.
ALCAP Manager	Link manager parser statistics includes following parameters that are related to ALCAP manager. <ul style="list-style-type: none"> <li>• Messages sent</li> </ul>
Messages sent	Total number of messages sent to ALCAP manager.
HNB Manager	Link manager parser statistics includes following parameters that are related to Home NodeB (HNB) manager. <ul style="list-style-type: none"> <li>• Messages sent</li> </ul>
Messages sent	Total number of messages sent to HNB manager.
Session Manager	Link manager parser statistics includes following parameters that are related to session manager. <ul style="list-style-type: none"> <li>• Messages sent</li> </ul>
Messages sent per instance	Number of active link manger instances depends upon processing capacity of the PSC cards. These are total number of messages sent per each active instance of the link manager.
NPU Flash Counters	Total number of NPU flash counters associated with this instance of link manager parser.
Messages flushed due to tile limit	Total number of link manager messages flushed due to tile limit.
Messages flushed due to max packets	Total number of link manager messages flushed due to maximum number of packets.
SCCP	The Signaling Connection Control Part (SCCP) is a network layer protocol. It is used by Signaling System 7 (SS7) networks, to provide extended routing, flow control, segmentation, connection orientation and correction facilities. Link manager parser statistics includes SCCP message parameters such as: <ul style="list-style-type: none"> <li>• Connection request (CR)</li> <li>• Connection confirm (CC)</li> <li>• Release Confirm (RLC)</li> <li>• Data Form 1 (DT1)</li> <li>• Unit Data (UDT)</li> <li>• Extended Unit Data (XUDT)</li> </ul>

Field	Description
Connection Request (CR)	<p>In SS7 architecture, for a connection based transaction, a connection is requested using the SCCP Connection Request (CR) message. This message is sent by a calling SCCP to the called SCCP. The CR message parameters indicate various signaling characteristics. This message is used during connection establishment phase by connection oriented protocol class 2 or 3.</p> <p>Link manager parser statistics includes following parameters related with Connection Request (CR) message:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Empty message</li> <li>• Called party absent</li> <li>• Un supported SSN</li> <li>• IE missing</li> </ul>
rxCount	Total number of rx bytes sent by calling to called SCCP.
Empty Message	Total number of empty messages sent by calling to called SCCP.
Called Party Absent	Total number of messages sent from calling to called SCCP. These messages indicate absence of originating signaling point or SCCP node.
Unsupported SSN	A Sub System Number (SSN) identifies specific user function provided by SCCP node. These are total number of messages containing un-supported SSN, that are being sent from calling to called SCCP.
IE Missing	These are total number of messages with missing Information Elements (IEs). These messages are being sent from calling to called SCCP.
Connection Confirm (CC)	<p>The Connection Confirm (CC) message is sent by called SCCP to calling SCCP to indicate that it has performed the set-up for signaling connections. This message is used during connection establishment phase by connection oriented protocol class 2 or 3. Link manager parser statistics includes following parameters related with Connection Confirm (CC) message:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• IE missing</li> </ul>
rxCount	Total number of rx bytes sent by called to calling SCCP.
IE Missing	These are total number of messages with missing Information Elements (IEs). These messages are being sent from called to calling SCCP.

Field	Description
Release confirm (RLC)	<p>A Release message is sent in backward as well as forward direction, to indicate that the sending SCCP node, wants to release the signaling connection and associated resources. The Release Confirm or Release Complete (RLC) message is sent in response to such Release message, indicating that the Release message has been received and relevant procedures have been performed.</p> <p>Link manager parser statistics includes following parameters related with Release Confirm (RLC) message:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• DLR Key</li> <li>• IE Missing</li> </ul>
rxCount	Total number of Rx bytes sent by SCCP that are associated with RLC message.
DLR Key	The Destination Local Reference (DLR) associated with the RLC message.
IE Missing	These are total number of messages with missing Information Elements (IEs). These messages are being sent from called to calling SCCP.
Data form 1 (DT1)	<p>A Data Form 1 (DT1) message is sent by any of the two communicating SCCP nodes, to transparently pass the SCCP user data amongst them. The DT1 message is used during the data transfer phase in protocol class 2 only.</p> <p>Link manager parser statistics includes following parameters related with Data form 1(DT1) message:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• DLR key</li> <li>• IE missing</li> </ul>
rxCount	Total number of Rx bytes sent by SCCP that are associated with DT1 message.
DLR Key	The Destination Local Reference (DLR) associated with the DT1 message.
IE Missing	Total number of missing information Elements (IEs) associated with DT1 message.

Field	Description
Unit Data (UDT)	<p>A Unit Data (UDT) message is used by an SCCP node to indicate that it wants to transmit data in connection less mode. UDT messages are mostly used for Transaction Capabilities Application Part (TCAP) communication with Intelligent Network (IN) services. This message is used in connection-less protocol classes 0 and 1.</p> <p>Unit data includes following parameters:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Management message</li> <li>• Called party absent</li> <li>• Unsupported SSN</li> <li>• IE Missing</li> <li>• Bssap+ SSN Msg</li> </ul>
rxCount	Total number of Rx bytes sent by SCCP that are associated with UDT message.
Management Msg	<p>Management messages are generated by SCCP to maintain the network performance by throttling or re-routing the traffic in case of network congestion or media failure.</p> <p>Total number of management messages associated with the UDT message.</p>
Called Party Absent	<p>The called party absent message implies that not enough information is available to uniquely identify destination signaling point or SCCP access point.</p> <p>Total number of called party absent messages associated with UDT message.</p>
Unsupported SSN	<p>A Sub System Number (SSN) identifies specific user function provided by SCCP.</p> <p>These are total number of messages associated with UDT message and contain un-supported SSN.</p>
IE Missing	Total number of missing information Elements (IEs) associated with UDT message.
Bssap+ SSN Msg	Total number of Base Station Subsystem Application Part + (BSSAP+) SSN messages associated with UDT message.
Management Message Type	<p>Management messages are generated by SCCP to maintain the network performance by throttling or re-routing the traffic in case of network congestion or media failure.</p> <p>Link manager parser statistic s includes following categories of management messages:</p> <ul style="list-style-type: none"> <li>• SSA</li> <li>• SSP</li> <li>• SST</li> <li>• SOR</li> <li>• SOG</li> <li>• SSC</li> </ul>

Field	Description
SSA	<p>A Sub System Allowed (SSA) message to indicate that the sub system that was formerly prohibited or the SCCP node that was formerly not accessible is now available.</p> <p>These are total number of SSA messages associated with the link manager parser instance.</p>
SSP	<p>A Sub System Prohibited (SSP) message is sent to concerned destination to inform SSCP Management (SCMG) about sub system failure. The receiving SCCP can update its translation tables to re-route the traffic.</p> <p>These are total number of SSP messages associated with the link manager parser instance.</p>
SST	<p>A Sub System Test (SST) message is sent to verify the status of the sub system that was previously prohibited or the SCCP node that was previously unavailable.</p> <p>These are total number of SST messages associated with the link manager parser instance.</p>
SOR	<p>A Subsystem Out of service Request (SOR) is used by the sub systems to remain out of service without degrading the network performance. SOR is used to transmit the out of service request of the subsystem between SCCPs at the sub system and duplicate subsystem nodes.</p> <p>These are total number of SOR messages associated with the link manager parser instance.</p>
SOG	<p>A Subsystem Out of service Grant (SOG) message is sent to the requesting SCCP, in response to an SOR message. The SOG message is sent if both the requested SCCP and backup of the affected sub system agree to owner the request.</p> <p>These are total number of SOG messages associated with the link manager parser instance.</p>
SSC	
Extended Unit Data (XUDT)	<p>The SCCP segments an application layer message in into multiple or eXtended UDT messages, when it is not possible to send the application layer message in UDT format.</p> <p>Link manager parser statistics includes following parameters related with eXtended Unit Data (XUDT):</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Management message</li> <li>• Called party absent</li> <li>• Unsupported SSN</li> <li>• LRN and OPC key</li> <li>• IE missing</li> </ul>
rxCount	Total number of Rx bytes sent by SCCP that are associated with XUDT message.
Management Msg	<p>Management messages are generated by SCCP to maintain the network performance by throttling or re-routing the traffic in case of network congestion or media failure.</p> <p>Total number of management messages associated with the XUDT message.</p>

Field	Description
Called Party Absent	The called party absent message implies that not enough information is available to uniquely identify destination signaling point or SCCP access point. Total number of called party absent messages associated with unit data message.
Unsupported SSN	A Sub System Number (SSN) identifies specific user function provided by SCCP. These are total number of messages associated with XUDT message and contain un-supported SSN.
LRN & OPC Key	Total number of Local Reference Number (LRN) and Originating Point Code (OPC) keys associated with XUDT message.
IE Missing	Total number of missing information Elements (IEs) associated with XUDT message.
RANAP	Radio Access Network Application Part (RANAP) is a network layer protocol used for UMTS signaling between the core network such as MSC or SGSN and UTRAN. It resides in control plane. Link manager parser statistics includes RNAP parameters such as: <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Initial UE message</li> <li>• Reset</li> <li>• Overload control message</li> <li>• Unsupported connection oriented message</li> <li>• Unsupported connection less message</li> <li>• Pegging message</li> <li>• Relocation request message.</li> </ul>
rxCount	Total number of rxCount messages transmitted between core Network (CN) and Universal Terrestrial Radio Access Network (UTRAN).
Initial UE Message	Total number of initial User Equipment messages transmitted between CN and UTRAN.
Reset	Total number of reset messages transmitted between CN and UTRAN.
Overload Control Message	Total number of overload control messages transmitted between CN and UTRAN.
Unsupported Connection Oriented Message	Total number of un supported connection oriented messages transmitted between CN and UTRAN.
Unsupported Connection-less Message	Total number of un supported connection less messages transmitted between CN and UTRAN.
Paging Message	Total number of paging messages transmitted between CN and UTRAN.
Relocation Request Message	Total number of paging messages transmitted between CN and UTRAN.
RAN information management message	Total number of RAN information management messages transmitted between CN and UTRAN.

Field	Description
GMM	<p>Mobility Management (MM) is a means by which a mobile network such as GPRS can keep track of mobile subscriber's location while they are connected to the network. Gprs Mobility Management (GMM) provides mobility management functionality such as GPRS attach, GPRS detach, security, routing area update and location update.</p> <p>The link manager parser statistics includes GMM parameters such as:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Attach Req</li> <li>• Detach Req</li> <li>• RAU Req</li> <li>• Service Req</li> <li>• Unexpected Msg</li> <li>• IMSI Key</li> <li>• P-TMSI Key</li> </ul>
rxCount	Total number of bytes received count associated with the link manager parser instance.
Attach Req	Total numbers of MS attach requests associated with the link manager parser instance.
Detach Req	Total number of MS detaches requests associated with the link manager parser instance.
RAU Req	Total number of Routing Area Update (RAU) requests associated with the link manager parser instance.
Service Req	Total number of point to point or point to multi-point service requests associated with the link manager parser instance.
Unexpected Msg	Total number of un-expected messages associated with the link manager parser instance.
IMSI Key	<p>International Mobile Subscriber Identity (IMSI) is unique identification of a registered subscriber. Mobile Country Code (MCC) Mobile Network Code (MNC) and Mobile Subscriber Identification Number (MSIN) are the IMSI components.</p> <p>Total number of IMSI key associated with this instance of link manager parser.</p>
TMSI Key	Temporary International Mobile Subscriber Identity (TMSI) is the identity that is exchanged between MS and network. It is assigned by the VLR when a mobile in its area is switched on.
Add P-TMSI Key	<p>Packet Temporary Mobile Subscriber Identity (P-TMSI) is assigned by the SGSN to UE to avoid transmission of TMSI over the air.</p> <p>Total number of additional P-TMSI keys associated with this instance of link manager parser.</p>

Field	Description
TCAP	<p>Transaction Capacity Application Part (TCAP) is a protocol that allows the deployment of Intelligent Network (IN) services. This is done by exchanging non-circuit related information between the signaling points using SCCP connection-less service. The TCAP is used for dialog between to sub system components.</p> <p>Link manager parser statistics includes following parameters related with TCAP:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Unit tag</li> <li>• Begin tag</li> <li>• End tag</li> <li>• Abort tag</li> <li>• Continue tag</li> <li>• HLR reset</li> <li>• Empty begin</li> <li>• Unexpected tag</li> <li>• IMSI key</li> <li>• DTID key</li> <li>• Decode failure</li> <li>• Free dlg count</li> <li>• Forward count</li> <li>• Forward count error</li> </ul>
rxCount	Total number of Rx bytes transmitted by the signaling point that is associated with a TCAP message.
Unit Tag	<p>Unit tag is included in all messages associated with a transaction.</p> <p>Total number of messages with Unit tag that are associated with this instance of link manager.</p>
Begin Tag	<p>Begin tag is included in all messages associated with a transaction. A TCAP user can respond with End or Continue message. The begin tag initiates the dialog.</p> <p>Total number of messages with Begin tag those are associated with this instance of link manager parser.</p>
End Tag	<p>The End tag ends an existing transaction, transaction Id is released when end message is received. The End tag indicates last primitive of an existing dialog.</p> <p>Total number of messages with End tag those are associated with this instance of link manager parser.</p>

Field	Description
Abort Tag	<p>The Abort tag indicates that an abnormal condition has occurred ending the transaction and releasing all transaction ids.</p> <p>Total number of messages with Abort tag those are associated with this instance of link manager parser.</p>
Continue Tag	<p>Continue tag indicates that a TCAP transaction is established and further information exchange is required. A transaction id is allocated and used in all message related to this transaction.</p> <p>Total number of messages with Continue tag those are associated with this instance of link manager parser.</p>
HLR Reset	<p>Total number of messages with the radio system re-start indication, that are associated with this instance of link manager parser.</p>
Empty Begin	<p>Begin tag is included in all messages associated with a transaction. A TCAP user can respond with End or Continue message.</p> <p>Total number of messages with an empty begins tag that are associated with this instance of link manager parser.</p>
Unexpected Tag	<p>Total number of messages exchanged between signaling points that are associated with a tag other than begin and end.</p> <p>Total number of messages with an empty begins tag that are associated with this instance of link manager parser.</p>
IMSI Key	<p>International Mobile Subscriber Identity (IMSI) is unique identification of a registered subscriber. Mobile Country Code (MCC) Mobile Network Code (MNC) and Mobile Subscriber Identification Number (MSIN) are the IMSI components.</p> <p>Total number of messages exchanged between the signaling points and associated with IMSI key.</p>
T-IMSI key	<p>Temporary Mobile Subscriber Identity (TMSI) is the identity that is most commonly sent between the MS and network.</p> <p>Total number of messages exchanged between the signaling points and associated with Temporary IMSI key.</p>
Add P-TMSI Key	<p>The Packet Temporary Mobile Subscriber IDentity (P-TMSI) is a temporary identity issued to the GPRS enabled mobile and is unique within a Routing Area (RA).</p> <p>Total number of messages with additional p-TMSI key.</p>
DTID Key	<p>Total number of messages associated with TCAP transaction Destination Identifier (DTID).</p>
Decode Failure	<p>Total number of messages transmitted between the signaling points that were not decoded.</p>
Free Dlg Count	<p>Total number of messages indicating number of free dialog sessions between the subsystem components of TCAP.</p>

Field	Description
FWD Count	Total number of messages indicating forwarded dialogues between the subsystem components of TCAP.
RCD Count	Total number of messages indicating the received dialogs between the subsystem components of TCAP.
FWD Count Error	Total number of messages indicating the errors in the forwarded dialogs between the subsystem components of TCAP.
Bssap+	<p>Base Station System Application Part Plus (Bssap+) protocol. It defines usage of mobile resources when the MS is using GSM Packet Switched (PS) as well as Circuit Switched (CS) services.</p> <p>Link manager parser statistics includes following BSSAP+ parameters:</p> <ul style="list-style-type: none"> <li>• rxCount</li> <li>• Paging request</li> <li>• Down link Tunnel Request</li> <li>• Updated Location Accept</li> <li>• Updated Location Reject</li> <li>• Alert Request</li> <li>• Gprs Detach Indication</li> <li>• Imsi Detach Indication</li> <li>• MS Information Request</li> <li>• Reset Indication</li> <li>• Reset Acknowledgement</li> <li>• MM Information Request</li> <li>• Unknown Message</li> <li>• UnExpected Message</li> <li>• Decode Failure</li> </ul>
rxCount	Total number of rxCount messages transmitted between SGSN and MS.
Paging request	Total number of paging requests transmitted between SGSN and MS.
Down link Tunnel Request	Total number of down link tunnel requests transmitted between SGSN and MS.
Updated Location Accept	Total number of updated location messages accepted by SGSN.
Updated Location Reject	Total number of updated location requests rejected by SGSN.
Alert Request	Total number of alert requests transmitted between SGSN and MS.

Field	Description
Gprs Detach Indication	Total number of Gprs detach indication messages transmitted between SGSN and MS.
Imsi Detach Indication	Total number of IMSI detach indication messages transmitted between MS and SGSN.
MS Information Request	Total number of Mobile Station information request messages transmitted between MS and SGSN.
Reset Indication	Total number of reset indication messages transmitted between MS and SGSN.
Reset Acknowledgement	Total number of reset acknowledgment messages transmitted between MS and SGSN.
MM Info Req	Total number of Mobility Management (MM) information request messages transmitted between MS and SGSN.
Unknown Message	Total number of unknown category of messages transmitted between MS and SGSN.
UnExpected Message	Total number of un expected message i.e. messages not related to mobility management procedures and protocol, transmitted between MS and SGSN.
Decode Failure	Total number of decode failure messages transmitted between MS and SGSN.
GPRS-NS	<p>The Network Service (NS) transports the NS Service Delivery Units (SDUs) between SGSN and BSS. It also provides network condition as well as status indications.</p> <p>Link manager parser statistics includes following categories of statistics related to GPRS-NS messages:</p> <ul style="list-style-type: none"> <li>• GPRS-NS message forwarding statistics</li> <li>• GPRS-NS message receiving statistics</li> </ul>
GPRS-NS Message Forwarding Stats	<p>GPRS-NS message forwarding statistics includes:</p> <ul style="list-style-type: none"> <li>• Number of messages forwarded to master link manager.</li> <li>• Number of messages forwarded to session manager.</li> </ul>
Number of messages forwarded to master link Manager	Total number of GPRS-NS messages forwarded to master link manager by this link manager parser instance.
Number of messages forwarded to sessmgr	Total number of GPRS-NS messages forwarded to session manager by this link manager parser instance.
Number of messages forwarded to imsimgr	Total number of GPRS-NS messages forwarded to IMSI manager by this link manager parser instance.
Number of messages forwarded to stack	Total number of GPRS-NS messages forwarded to messaging event stack by this link manager parser instance.

Field	Description
GPRS-NS Message Rx Count Stats	GPRS- NS messages reception count statistics includes following messages: <ul style="list-style-type: none"><li>• NS Unit Data</li><li>• NS Alive</li><li>• NS Alive Acknowledgement</li></ul>
NS Unit Data	Total number of data units transmitted between SGSN and BSS.
NS Alive	Total number of Network System (NS) alive layer messages transmitted between SGSN and BSS.
NS Alive Ack	Total number of acknowledgements for NS layer alive message transmitted between BSS and SGSN.
BSSGP	The Base Station Subsystem GPRS Protocol (BSSGP) provides radio related QoS and routing information that is required to transmit data between BSS and SGSN.

Field	Description
BSSGP Statistics	<p>The link manager parser statistics related to BSSGP includes following parameters:</p> <ul style="list-style-type: none"> <li>• Count</li> <li>• decode failure</li> <li>• Unknown Msg</li> <li>• Unsupported Msg</li> <li>• Bssgp Msg with non llc payload</li> <li>• Bssgp bvc flow control aggregate bounces</li> <li>• Bssgp bvc flow control aggregate before expiry</li> <li>• Bssgp bvc flow control aggregate max count</li> <li>• Bssgp bvc flow control aggregate send count</li> <li>• Bssgp Udata with local Tlli</li> <li>• Bssgp Udata with non-local Tlli</li> <li>• Bssgp ra-cap-updt with Local Tlli</li> <li>• Bssgp ra-cap-updt with non-Local Tlli</li> <li>• Bssgp rad-status with Local Tlli</li> <li>• Bssgp rad-status with non-Local Tlli</li> <li>• Bssgp suspend with Local Tlli</li> <li>• Bssgp suspend with non-Local Tlli</li> <li>• Bssgp resume with Local Tlli</li> <li>• Bssgp resume with non-Local Tlli</li> <li>• Bssgp flc_ms with Local Tlli</li> <li>• Bssgp flc_ms with non-Local Tlli</li> <li>• Bssgp flush-ack with Local Tlli</li> </ul>
Count	Total number of BSSGP related messages transmitted between BSS and SGSN and are associated with this instance of link manager.
Decode Failure	Total number of BSSGP related messages transmitted between BSS and SGSN that were not decoded.
Unknown Msg	Total number of unknown BSSGP messages transmitted between BSS and SGSN that are associated with this instance of link manager.
Unsupported Msg	Total number of BSSGP messages transmitted between BSS and SGSN and are associated with this instance of link manager, but not supported by it.

Field	Description
Bssgp Msg with non llc payload	Total number of BSSGP messages with a payload not related to Logical Link Control (LLC), that are transmitted between BSS and SGSN.
Bssgp bvc flow control aggregate bounces	<p>The BSSGP Virtual Connection (BVC) identifies an end to end communication path between BSS and SGSN at the BSSGP layer. A BVC is identified by the BVC Identifier (BVCI).</p> <p>A flow control procedure between BSS and SGSN manages the BSS buffers. In most deployments BSS provisions at least one buffer for each BVC and in some case a buffer for each MS. The flow control procedure avoids down link LLC PDU packet loss.</p> <p>Total number of BSSGP messages related to BSSGP Virtual connection (BVC) flow control, and were bounced during transmission.</p>
Bssgp bvc flow control aggregate before expiry	Total number of BSSGP messages related to BVC flow control that are yet to be expired and are being transmitted between BSS and SGSN.
Bssgp bvc flow control aggregate max count	This is the maximum number of aggregated BVC flow control messages associated with this instance of link manager.
Bssgp bvc flow control aggregate send count	This is the number of aggregated BVC flow control messages sent and were associated with this instance of link manager.
Bssgp Udata with local Tlli	Total number of BSSGP unit data messages with local Temporary Logical Link Identity (TLLI), that were associated with this instance of link manager.
Bssgp Udata with non-local Tlli	Total number of BSSGP unit data messages with non-local Temporary Logical Link Identity (TLLI), that were associated with this instance of link manager.
Bssgp ra-cap-updt with Local Tlli	Total number of Radio Access Capability Update procedure messages with local TLLI, which were associated with this instance of link manager.
Bssgp ra-cap-updt with non-Local Tlli	Total number of Radio Access Capability Update procedure messages with non-local TLLI, which were associated with this instance of link manager.
Bssgp rad-status with Local Tlli	Total number of messages indicating status of radio communication between the BSS and MS with local TLLI, those were associated with this instance of link manager.
Bssgp rad-status with non-Local Tlli	Total number of messages indicating status of radio communication between the BSS and MS with non-local TLLI, those were associated with this instance of link manager.
Bssgp suspend with Local Tlli	Total number of messages sent by MS with local TLLI, to BSS requesting to suspend the GPRS service.
Bssgp suspend with non-Local Tlli	Total number of messages sent by MS with non- local TLLI, to BSS requesting to suspend the GPRS service.
Bssgp resume with Local Tlli	Total number of messages sent by MS with local TLLI, to BSS requesting to resume the GPRS service.
Bssgp resume with non-Local Tlli	Total number of messages sent by MS with non-local TLLI, to BSS requesting to resume the GPRS service.

Field	Description
Bssgp flc_ms with Local Tlli	Total number of messages sent by MS with local TLLI, to BSS that are related to flow control of the GPRS service.
Bssgp flc_ms with non-Local Tlli	Total number of messages sent by MS with non-local TLLI, to BSS that are related to flow control of the GPRS service.
Bssgp flush-ack with Local Tlli	Total number of flush acknowledgement messages sent by MS with local TLLI, to the BSS.
Bssgp flush-ack with non-Local Tlli	Total number of flush acknowledgement messages sent by MS with local non-local TLLI, to the BSS.
Bssgp llc-discarded with Local Tlli	Total number of Logical Link Control (LLC) discarded messages sent by MS with local TLLI to the BSS.
Bssgp llc-discarded with non-Local Tlli	Total number of Logical Link Control (LLC) discarded messages sent by MS with non-local TLLI to the BSS.
Bssgp RAN Information Management (RIM) messages	Total number of BSSGP Radio Access Network (RAN) information management (RIM) messages associated with this instance of link manager.
LLC	The Logical Link Control (LLC) protocol provides a logical link between the MS and SGSN. The LLC provides services to maintain a ciphered data link.
LLC Statistics	The link manager parser statistics includes following LLC related parameters: <ul style="list-style-type: none"> <li>• Count</li> <li>• Decode Failure</li> <li>• LLC Msg with non gmm payload</li> <li>• LLC Msg with unknown sapi payload</li> </ul>
Count	Total number of LLC messages associated with this instance of link manager parser.
Decode Failure	Total number of LLC related messages that the link manager parser failed to decode.
LLC messages with non gmm payload	Total number of LLC messages with the payload not related to Gprs Mobility Management.
LLC messages with unknown sapi payload	A Network layer Service Access Pointer Identifier (NSAPI) is used to identify the PDP context between MS and SGSN. Total number of LLC messages with the payload related to unknown (NSAPI).
SGSN Empty-CR Statistics	SGSN empty Connection Request (CR) statistics includes following parameters: <ul style="list-style-type: none"> <li>• Empty Cr sent to Imsimgr</li> </ul>
Empty-CR sent to Imsimgr	Total number of empty connection requests sent to IMIS manager by this instance of link manager.

Field	Description
Msg from Peer	<p>Messages from peer SCCP node include following parameters:</p> <ul style="list-style-type: none"> <li>• Release complete received</li> <li>• Released received</li> <li>• Error received</li> <li>• Inactivity received</li> <li>• DT1 received</li> <li>• DT1 decode attempt</li> </ul>
Released Complete Received	<p>A Release Complete message is sent by receiving SCCP to indicate that Release message is received and appropriate procedures are being performed.</p> <p>Total number of Release Complete messages received by the receiving SSCP.</p>
Released Received	<p>A Released message is sent, in the forward or backward direction, to indicate that the sending SCCP wants to release a signalling connection. Resources associated with this connection at the sending SCCP have been brought into the disconnect pending condition.</p> <p>Total number of release received messages associated with this instance of link manager parser.</p>
Error Received	Total number SCCP error messages associated with this instance of link manager parser.
Inactivity Received	Total number of inactivity messages associated with this instance of link manager parser.
DT1 Received	<p>A Data Form 1 (DT1) message is sent by any of the two communicating SCCP nodes, to transparently pass the SCCP user data amongst them.</p> <p>Total number of DT1 messages received that are associated with this link manger parser.</p>
DT1 Decode attempt	Total number of attempts performed by the link manager parser to decode the received DT1 messages.
Ranap Decode	<p>The Radio Access Network Application Part (RANAP) is a radio network layer signaling protocol for Iu interface, residing in UTRAN and core network. RANAP decode statistics include following parameters:</p> <ul style="list-style-type: none"> <li>• Init –UE received</li> <li>• Other received</li> </ul>
Init –UE Received	<p>RANAP can be used to separate each UE on protocol level for mobile related signal management.</p> <p>These are total number of initialized UE received messages related to the link manger parser instance.</p>
Other Received	Total number of other RANAP messages such as UTRAN radio access bearers or paging related messages that are associated with this instance of link manager parser.

Field	Description
Gmm Decode	Following GPRS Mobility Management (GMM) statistics can be used to decode the GMM associated with this instance of link manager: <ul style="list-style-type: none"> <li>• Gmm received</li> </ul>
Gmm Rcvd	GPRS Mobility Management (GMM) statistics includes following parameters: <ul style="list-style-type: none"> <li>• Attach received</li> <li>• RAU received</li> <li>• Detach received</li> <li>• Service request received</li> </ul>
Attach Rcvd	Total number of received MS attach requests that are associated with this instance of link manager.
RAU Rcvd	Total number of Routing Area Update (RAU) requests received that are associated with this instance of link manager.
Detach Rcvd	Total number of Routing Area Update (RAU) requests associated with the link manager parser instance.
Service Req Rcvd	Total number of point to point or point to multi-point service request messages associated with the link manager parser instance.
Decoded DT1 msg	Decoded DT1 message statistics included following parameters: <ul style="list-style-type: none"> <li>• RAU (non-local old) RAI</li> <li>• RAU (local old) RAI</li> <li>• RAU (LOR) different instance</li> <li>• RAU (LOR) same instance</li> <li>• Service/detach request</li> <li>• Service/detach same instance</li> </ul>
RAU (Non-Local Old RAI)	A Routing Area (RA) is a subset of location area. It is used by GPRS-attached MS for bursty data communication services. When an MS moves from one RA to another and identifies the difference in the RA code then it performs another update. Each RA is defined by a Routing Area Identifier (RAI). An RAI includes Location Area Identifier (LAI) and Routing Area Code (RAC). These are total number of RAU messages for non-local and old RAI, that are associated with link manager parser instance.
RAU (Local Old RAI)	Total number of RAU messages for local and old RAI that are associated with link manager parser instance.

Field	Description
RAU(LOR) diff Instance	Total number of RAU messages related to Loss of Radio coverage (LOR) that is associated with different link manager parser instance.
RAU (LOR) Same Instance	Total number of RAU messages related to Loss of Radio coverage (LOR) that is associated with same link manager parser instance.
Service/Detach Request	Total number of GRPS service request or service detach request messages associated with the link manager.
Serv/Detach Same Instance	Total number of GRPS service request or service detach request messages associated with the same instance of link manager.
Serv/Detach diff Instance	Total number of GRPS service request or service detach request messages associated with different instances of link manager.
DT1 to be Fwd on Host cc	Total number of DT1 messages that need to be forwarded depending upon their host SCCP Connection Confirm (CC) message.
Msg to Donor session manager	Donor session manager message statistics includes following messages received by the donor: <ul style="list-style-type: none"> <li>• Frizzed sent</li> </ul>
Frizzed Sent	Total number of frizzed messages that were sent to donor session manager.
Msg to Host session manager	Host session manager message statistics include following messages: <ul style="list-style-type: none"> <li>• CR sent</li> </ul>
CR Sent	Total number of Connection Request (CR) messages sent to host session manager that are associates with this link manger instance.
Msg from Donor session manager	Donor session manager message statistics includes following messages transmitted by the donor session manager: <ul style="list-style-type: none"> <li>• CC received</li> <li>• CREF received</li> <li>• Released received</li> <li>• Release complete received</li> <li>• Inactivity received</li> <li>• Error received</li> <li>• DT1 received</li> <li>• Others</li> </ul>
CC Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Connection Confirm (CC) message.

Field	Description
CREF Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Connection Refused (CREF) message.
Released Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Released message.
Rel Complete Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Release Complete (RLC) message.
Inactivity Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Inactivity messages.
Error Rcvd	Total number of messages sent from the donor session managers that indicate reception of SCCP Protocol Data Unit (PDU) error messages.
DT1 Rcvd	A Data Form 1 (DT1) message is sent by the communicating SCCP nodes to transparently pass the SCCP user data. Total number of messages sent from the donor session managers that indicate reception of SCCP DT1 message.
Others	Total number of messages sent from the donor session managers that indicate reception of any other category of message.
Msg from Host Smgr	Host session manager message statistics includes following messages transmitted by the host session manager: <ul style="list-style-type: none"> <li>• CC received</li> <li>• CREF received</li> <li>• Released received</li> <li>• Release complete received</li> <li>• Inactivity received</li> <li>• Error received</li> <li>• DT1 received</li> <li>• Others</li> </ul>
CC Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Connection Confirm (CC) message.
CREF Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Connection Refused (CREF) message.
Released Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Released message.
Release Complete (RCL) Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Release Complete (RLC) message.

Field	Description
Inactivity Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Inactivity messages.
Error Rcvd	Total number of messages sent from the host session managers that indicate reception of SCCP Protocol Data Unit (PDU) error messages.
DT1 Rcvd	A Data Form 1 (DT1) message is sent by the communicating SCCP nodes to transparently pass the SCCP user data. Total number of messages sent from the host session managers that indicate reception of SCCP DT1 message.
Others	Total number of messages sent from the host session managers that indicate reception of any other category of message.
Misc. Statistics	Miscellaneous statistics include following messages: <ul style="list-style-type: none"> <li>• CR excess length (&gt; 24)</li> <li>• Memory allocation failed Cb</li> <li>• Cb list interest failed</li> <li>• Duplicate connection</li> <li>• DLR modify buffer removal failed</li> <li>• DLR modify buffer addition failed</li> </ul>
CR Excess Len (>24)	Total number of messages where connection request length is more than twenty four characters.
Memory allocation fail Cb	Total number of messages indicating memory allocation failure for call barring or blocking.
Cb List insert fail	Total number of messages indicating failure to insert the call barring or call blocking list while transferring data from the SCCP.
Duplicate connection	Total number of messages indicating duplicate connection.
DLR modify Buffer Rem Fail	Total number of messages indicating the failure to remove the Destination Local Reference (DLR) modify buffer while data is being transferred by the SSCP.
DLR modify Buff Add Fail	Total number of messages indicating the failure to add the DLR buffer while data is being transferred by the SCCP.
Link Manager UDatInd Fail	Total number of messages indicating failure of link manager Udata.

Field	Description
Link Manager Empty-cr Cb release reason	ink manager empty- cr Cb release reason statistics includes following parameters: <ul style="list-style-type: none"> <li>• Attach request</li> <li>• RAU(non-local old RAI)</li> <li>• RAU (LOR) same instance</li> <li>• Service detach same instance</li> <li>• Release complete from peer</li> <li>• Release complete local</li> <li>• Local purge</li> <li>• CREF from donor manager</li> </ul>
Attach Request	Total number of attach request messages with empty Connection Requests (CR) and empty Call barring (Cb) release reason.
RAU (Non local Old RAI)	Total number of messages with Routing Area Updates (RAU) from non-local Routing Area Indicators (RAIs).
RAU (LOR)Same Instance	Total number of messages with Routing Area Updates (RAUs) due to Loss of Radio Coverage (LOR) from the same instance of the link manager.
Service/Detach Same Instance	Total number of GPRS service attach or GPRS service detach messages, from same instance of the link manager.
Release Complete (RCL) from Peer	Total number of release complete messages from peer link manager instance.
Release Complete (RCL) Local	Total number of release complete messages from local link manager instance.
Local Purge	Total number of local purge messages.
CREF from Donor session manager	Total number of Connection Refused (CREF) messages sent by the donor session manager.
CREF from Host session manager	Total number of Connection Refused (CREF) messages sent by the host session manager.
Guard timer Exp	Total number of messages with expired guard timer.
Recovery	Total number of recovery messages that are associated with this instance of link manager parser.
Others	Total number of messages of any other category, that are associated with this instance of link manger parser.

# CHAPTER 80

## show llc

## show llc statistics

### Note

- This table is relevant to 8.0 releases only.
- All statistics in this table are available per GPRS service.

**Table 382: show llc statistics Command Output Descriptions**

Field	Description
LLC SAP Statistics	
Data transfer	
Data requests Rx	Number of LLC data requests received from the MS.
Data confirms Tx	Number of LLC data requests confirmation sent to the MS.
Data indications Tx	Number of LLC data indications sent to the MS.
Data-Sent indications Tx	Number of LLC data sent indications sent to the MS.
Unit data requests Rx	Number of LLC unit data requests received from the MS.
Unit data requests Rx Drop	<p><b>Description:</b> This proprietary counter indicates the total number of unit data requests received from SMDCP layer and dropped at the LLC layer.</p> <p><b>Triggers:</b> Increments when LLC receives a downlink packet from SMDCP and the queue in LLC layer is full.</p>
Unit data indications Tx	Number of LLC unit data indications sent to the MS.
Errors reported	
Discarded frames Rx	Number of LLC discarded frames received from the MS.

Field	Description
Discarded frames Tx	Number of LLC discarded frames sent to the MS.
Error frames Rx	Number of LLC error frames received from the MS.
Unrecognised frames Rx	Number of LLC unrecognized frames received from the MS.
XID collisions	Number of LLC exchange identifier (XID) request collisions.
OC Increments done	This counter indicates how many times the OC value is incremented by "512". Overflow Counter (OC) is incremented by "512" every time the received LFN (LLC Frame Number -> N(U)) wraps around from "512" to "0", and re-starts counting from "0".
Ciphering errors	Number of LLC ciphering errors.
FCS errors	Number of LLC frame check sequence errors.
LLC Frame statistics	
Octets Rx	Number of bytes of LLC frames received from an MS.
Octets Tx	Number of bytes sent from the LLC layer to an MS from the SGSN.
Unack frames Rx	Number of unacknowledged UI frames received at the LLC layer from an MS.
Unack frames Tx	Number of unacknowledged UI frames sent from the LLC to an MS.
UI Rx	Number of LLC frames with unnumbered information received from the MS.
UI Tx	Number of LLC frames with unnumbered information sent to the MS.
UI Ciphered frames Rx	Number of LLC frames with ciphered unnumbered information received from the MS.
UI Ciphered frames Tx	Number of LLC frames with ciphered unnumbered information sent to the MS.
XID Rx	Number of XID-reset messages received from the MS.
XID Tx	Number of XID-reset messages sent to the MS.

# CHAPTER 81

## show lma-service

This chapter describes the outputs of the **show lma-service** command.

- [show lma-service statistics, on page 1379](#)

## show lma-service statistics

*Table 383: show lma-service statistics Command Output Descriptions*

Field	Description
<b>MIP AAA Authentication</b>	
Attempts	The total number of MIP AAA authentication attempts made by this system or the specified service.
Success	The total number of MIP AAA authentication attempts that were successful made by this system or the specified service.
Total Failures	The total number of MIP AAA authentication attempts that failed made by this system or the specified service.
Actual Auth Failures	The total number of actual MIP AAA authentication failures received by this system or the specified service.
Failures	The total number of failures received by this system or the specified service.
Misc Auth Failures	The total number of miscellaneous MIP AAA authentication failures received this system or the specified service.
<b>Binding Updates Received</b>	
Total Received	The total number of all binding updates received by this system or the specified service.
Total Accepted	The total number of all binding updates received and accepted by this system or the specified service.
Total Denied	The total number of all binding updates received and denied by this system or the specified service.

Field	Description
Total Discarded	The total number of all binding updates received and discarded by this
Initial Binding Update Requests	
Received	The total number of all initial binding updates received by this system or the specified service.
Accepted	The total number of initial binding updates received and accepted by this system or the specified service.
Denied	The total number of initial binding updates received and denied by this system or the specified service.
Refresh Binding Update Requests	
Received	The total number of all refresh binding updates received by this system or the specified service.
Accepted	The total number of refresh binding update requests received and accepted by this system or the specified service.
Denied	The total number of refresh binding update requests received and denied by this system or the specified service.
DeReg Requests	
Received	The total number of all deregistration request binding updates received by this system or the specified service.
Accepted	The total number of deregistration request binding updates received and accepted by this system or the specified service.
Denied	The total number of deregistration request binding updates received and denied by this system or the specified service.
Handoff Requests	
Received	The total number of all handoff request binding updates received by this system or the specified service.
Accepted	The total number of handoff request binding updates received and accepted by this system or the specified service.
Denied	The total number of handoff request binding updates received and denied by this system or the specified service.
<b>Binding Acknowledgements Sent</b>	
Total	The total number of all binding update acknowledgments sent by this system or the specified service.
Accepted Reg	The total number of accepted registration binding update acknowledgments sent by this system or the specified service.

Field	Description
Accepted DeReg	The total number of accepted deregistration binding update acknowledgments sent by this system or the specified service.
Denied	The total number of denied binding update acknowledgments sent by this system or the specified service.
Send Error	The total number of send error binding update acknowledgments sent by this system or the specified service.
Accepted Init Reg	The total number of initial binding acknowledgments sent by LMA with Success code.
<b>Binding Update Deny Reasons</b>	
Insufficient Resources	The total number of binding update deny messages, due to insufficient resources, sent by this system or the specified service.
Mismatched ID	The total number of binding update deny messages, due to mismatched IDs, sent by this system or the specified service.
MN Auth Failure	The total number of binding update deny messages, due to a mobile node authentication failure condition, sent by this system or the specified service.
Admin Prohibited	The total number of binding update deny messages, due to requiring a message ID, sent by this system or the specified service.
Msg ID Required	The total number of binding update deny messages, due to requiring a message ID, sent by this system or the specified service.
DAD Failed	The total number of binding update deny messages, due to DAD failure, sent by this system or the specified service.
Not Home Subnet	The total number of binding update deny messages, due to an incorrect home subnet, sent by this system or the specified service.
Sequence Out Of Window	The total number of binding update deny messages, due to sequence out of window, sent by this system or the specified service.
Reg Type Change Disallowed	The total number of binding update deny messages, due to a disallowed registration type change, sent by this system or the specified service.
Unspecified Reason	The total number of binding update deny messages, due to an unspecified reason, sent by this system or the specified service.
Service-Authorization Failed	The total number of binding update deny messages, due to a service authorization failure, sent by this system or the specified service.
Proxy Reg Not Enabled	The total number of binding update deny messages, due to a proxy registration not enabled error, sent by this system or the specified service.
Timestamp Mismatch	The total number of binding update deny messages, due to a timestamp mismatch error, sent by this system or the specified service.

Field	Description
Timestamp Lower Than Expected	The total number of binding update deny messages, due to a timestamp lower than expected reason, sent by this system or the specified service.
Missing MN-ID Option	The total number of binding update deny messages, due to a missing MN-ID option, sent by this system or the specified service.
Missing HNP Option	The total number of binding update deny messages, due to a missing HNP option, sent by this system or the specified service.
Missing Access Tech Option	The total number of binding update deny messages, due to a missing access technology option, sent by this system or the specified service.
Missing Handoff Ind Option	The total number of binding update deny messages, due to a missing handoff indicator option, sent by this system or the specified service.
Not Authorized For HNP	The total number of binding update deny messages, due to a not authorized for HNP reason, sent by this system or the specified service.
Not LMA For Mobile	The total number of binding update deny messages, due to a missing LMA for the MN reason, sent by this system or the specified service.
Not Authorized For Proxy Reg	The total number of binding update deny messages, due to a not authorized for proxy registration reason, sent by this system or the specified service.
BCE Prefix Do Not Match	The total number of binding update deny messages, due to a BCE prefix not matching, sent by this system or the specified service.
GRE Key Option Required	The total number of binding update deny messages, due to a GRE key option required reason, sent by this system or the specified service.
MCOA Unknown CoA:	The total number of binding update deny messages, due to a MCOA unknown CoA reason, sent by this system or the specified service.
<b>Update Denied - Insufficient Resource Reasons</b>	
No Session Manager	The total number of binding update deny messages, due to insufficient resources - no session manager, sent by this system or the specified service.
No Memory	The total number of binding update deny messages, due to insufficient resources - no memory, sent by this system or the specified service.
Session Manager Rejected	The total number of binding update deny messages, due to insufficient resources - session manager rejected, sent by this system or the specified service.
Input-Q Exceeded	The total number of binding update deny messages, due to insufficient resources - input queue exceeded, sent by this system or the specified service.
Simul Bindings Exceeded	The total number of binding update deny messages, due to insufficient resources - simultaneous bindings exceeded, sent by this system or the specified service.
Address Alloc Failed	The total number of binding update deny messages, due to insufficient resources - address allocation failed, sent by this system or the specified service.

Field	Description
<b>Update Denied - Admin Prohibited Reasons</b>	
MN-AAA Auth Option Missing	The total number of binding update deny messages, due to an administrator prohibited - MN-AAA auth option missing condition, sent by this system or the specified service.
H-bit Not Set	The total number of binding update deny messages, due to an administrator prohibited - H-bit not set condition, sent by this system or the specified service.
Invalid MN-AAA Option SPI	The total number of binding update deny messages, due to an administrator prohibited - invalid MN-AAA option SPI condition, sent by this system or the specified service.
Invalid MN-HA Option SPI	The total number of binding update deny messages, due to an administrator prohibited - invalid MN-HA option SPI condition, sent by this system or the specified service.
Congestion Control Denied	The total number of binding update deny messages, due to an administrator prohibited - congestion control denied condition, sent by this system or the specified service.
Policy Rejected	The total number of binding update deny messages, due to an administrator prohibited - policy rejected condition, sent by this system or the specified service.
HoA Not Authorized	The total number of binding update deny messages, due to an administrator prohibited - HoA not authorized condition, sent by this system or the specified service.
No Permission	The total number of binding update deny messages, due to an administrator prohibited - no permission condition, sent by this system or the specified service.
Bad Request	The total number of binding update deny messages, due to an administrator prohibited - bad request condition, sent by this system or the specified service.
<b>Update Denied - Unspecified Reason</b>	
Newer Session detected by AAA	The total number of binding update discarded messages, due to newer session detected by AAA, sent by this system or the specified service.
Newer Session detected by PCRF	The total number of binding update discarded messages, due to newer session detected by PCRF, sent by this system or the specified service.
Newer Session detected by PCS	The total number of binding update discarded messages, due to newer session detected by PCS, sent by this system or the specified service.
<b>Binding Updates Discard Reasons</b>	
Congestion Discarded	The total number of binding update discarded messages, due to congestion, sent by this system or the specified service.
Checksum Error	The total number of binding update discarded messages, due to checksum error(s), sent by this system or the specified service.
Initial Auth Pending	The total number of binding update discarded messages, due to an initial authentication pending condition, sent by this system or the specified service.
Session Not Found	The total number of binding update discarded messages, due to a session not found condition, sent by this system or the specified service.

Field	Description
HAMGR Not Ready	The total number of binding update discarded messages, due to an HA manager not found condition, sent by this system or the specified service.
Decode Failure	The total number of binding update discarded messages, due to a decode failure, sent by this system or the specified service.
Invalid Buffer Length	The total number of binding update discarded messages, due to an invalid buffer length, sent by this system or the specified service.
Revocation Pending	The total number of binding update discarded messages, due to pending revocations, sent by this system or the specified service.
<b>Binding Revocation</b>	
Sent	The total number of binding revocations sent by this system or the specified service.
Retries Sent	The total number of binding revocation retries sent by this system or the specified service.
Ack Rcvd	The total number of binding revocation acknowledgements received by this system or the specified service.
Not Acknowledged	The total number of binding revocations sent, but not acknowledged, by this system or the specified service.
Rcvd	The total number of binding revocations received by this system or the specified service.
Ack Sent	The total number of binding revocation acknowledgements sent by this system or the specified service.
<b>Sent Revocation Trigger Reasons</b>	
Unspecified	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Unspecified" revocation trigger reason.
Administrative Reason	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Administrative Reason" revocation trigger reason.
Inter-MAG Handoff-Same ATT	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Inter-MAG Handoff-Same ATT" revocation trigger reason.
Inter-MAG - Unknown Handoff	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Inter-MAG - Unknown Handoff" revocation trigger reason.
Inter-MAG Handoff-Diff ATT	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Inter-MAG Handoff-Diff ATT" revocation trigger reason.
Per-Peer Policy	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with a "Per-Peer Policy" revocation trigger reason.
Revoking Node Local Policy	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with a "Revoking Node Local Policy" revocation trigger reason.

Field	Description
User Initiated Session Term	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with a "User Initiated Session Term" revocation trigger reason.
Access Network Session Term	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Access Network Session Term" revocation trigger reason.
Out-of Sync BCE State	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Out-of Sync BCE State" revocation trigger reason.
Unknown	The total number of Binding Revocation Indication (BRI) messages sent by the LMA with an "Unknown" revocation trigger reason.
<b>Received Revocation ACK Status</b>	
Success	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Success" status.
Partial-Success	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Partial-Success" status.
Binding-Does-Not-Exist	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Binding-Does-Not-Exist" status.
No IPv4-HoA-Bind	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "No IPv4-HoA-Bind" status.
Global-Revoc-Not-Authorized	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Global-Revoc-Not-Authorized" status.
Revoc-MN-ID-Required	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Revoc-MN-ID-Required" status.
Revoc-Failed-MN-Attached	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Revoc-Failed-MN-Attached" status.
Trigger-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Trigger-Not-Supported" status.
Proxy-Bind-Rev-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Proxy-Bind-Rev-Not-Supported" status.
Revoc-Func-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with a "Revoc-Func-Not-Supported" status.
Unknown	The total number of Binding Revocation Acknowledgement (BRA) messages received by the LMA with an "Unknown" status.
<b>Binding Revocation ACK Discarded</b>	
Total	The total number of binding revocation acknowledgements received and discarded by this system or the specified service.

Field	Description
Session Not Found	The total number of binding revocation acknowledgements received and discarded, due to a session not found condition, by this system or the specified service.
Badly Formed Request	The total number of binding revocation acknowledgements received and discarded, due to a badly formed request condition, by this system or the specified service.
Decode Error	The total number of binding revocation acknowledgements received and discarded, due to a decode error condition, by this system or the specified service.
Checksum Error	The total number of binding revocation acknowledgements received and discarded, due to a checksum error condition, by this system or the specified service.
Invalid Message Type	The total number of binding revocation acknowledgements received and discarded, due to a invalid memory type condition, by this system or the specified service.
HAMGR Not Ready	The total number of binding revocation acknowledgements received and discarded, due to a HAMGR not ready condition, by this system or the specified service.
Matching Request Not Found	The total number of binding revocation acknowledgements received and discarded, due to a matching request not found condition, by this system or the specified service.
Invalid Buffer Length	The total number of binding revocation acknowledgements received and discarded, due to a invalid buffer length condition, by this system or the specified service.
<b>Tunnel Data Received</b>	
Total Packets	The total number of tunnel packets received by this system or the specified service.
6in6	The total number of IPv6-in-IPv6 tunnel packets received by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel packets received by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel packets received by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 GRE tunnel packets received by this system or the specified service.
4in4	The total number of IPv4-in-IPv4 tunnel packets received by this system or the specified service.
6in4	The total number of IPv6-in-IPv4 tunnel packets received by this system or the specified service.
IPv4 UDP (IPv4)	The total number of IPv4-in-IPv4 UDP tunnel packets received by this system or the specified service.
IPv4 UDP (IPv6)	The total number of IPv6-in-IPv4 UDP tunnel packets received by this system or the specified service.
Total Bytes	The total number of tunnel bytes received by this system or the specified service.

Field	Description
6in6	The total number of IPv6-in-IPv6 tunnel bytes received by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel bytes received by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel bytes received by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 GRE tunnel bytes received by this system or the specified service.
4in4	The total number of IPv4-in-IPv4 tunnel bytes received by this system or the specified service.
6in4	The total number of IPv6-in-IPv4 tunnel bytes received by this system or the specified service.
IPv4 UDP (IPv4)	The total number of IPv4-in-IPv4 UDP tunnel bytes received by this system or the specified service.
IPv4 UDP (IPv6)	The total number of IPv6-in-IPv4 UDP tunnel bytes received by this system or the specified service.
Errors	
Protocol Type Error	The total number of protocol type data errors received by this system or the specified service.
Invalid Pkt Length	The total number of invalid packet length data errors received by this system or the specified service.
No Session Found	The total number of no session found data errors received by this system or the specified service.
<b>Tunnel Data Sent</b>	
Total Packets	The total number of tunnel packets sent by this system or the specified service.
6in6	The total number of IPv6-in-IPv6 tunnel packets sent by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel packets sent by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel packets sent by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 GRE tunnel packets sent by this system or the specified service.
4in4	The total number of IPv4-in-IPv4 tunnel packets sent by this system or the specified service.

Field	Description
6in4	The total number of IPv6-in-IPv4 tunnel packets sent by this system or the specified service.
IPv4 UDP (IPv4)	The total number of IPv4-in-IPv4 UDP tunnel packets sent by this system or the specified service.
IPv4 UDP (IPv6)	The total number of IPv6-in-IPv4 UDP tunnel packets sent by this system or the specified service.
Total Bytes	The total number of tunnel bytes sent by this system or the specified service.
6in6	The total number of IPv6-in-IPv6 tunnel bytes sent by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel bytes sent by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel bytes sent by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 GRE tunnel bytes sent by this system or the specified service.
4in4	The total number of IPv4-in-IPv4 tunnel bytes sent by this system or the specified service.
6in4	The total number of IPv6-in-IPv4 tunnel bytes sent by this system or the specified service.
IPv4 UDP (IPv4)	The total number of IPv4-in-IPv4 UDP tunnel bytes sent by this system or the specified service.
IPv4 UDP (IPv6)	The total number of IPv6-in-IPv4 UDP tunnel bytes sent by this system or the specified service.
<b>Tunnel ICMPV6 Packets</b>	
Packet Too Big Rcvd	The total number of tunnel ICMP packets - too big received by this system or the specified service.
Packet Too Big Dropped	The total number of tunnel ICMP packets - too big dropped by this system or the specified service.
Packet Too Big Relayed	The total number of tunnel ICMP packets - too big relayed by this system or the specified service.
<b>Total Disconnects</b>	
Lifetime expiry	The total number of disconnects due to lifetime expiry initiated by this system or the specified service.
Deregistrations	The total number of disconnects due to deregistrations initiated by this system or the specified service.

Field	Description
Admin Drops	The total number of disconnects due to admin drops initiated by this system or the specified service.
Other Reasons	The total number of disconnects due to "other reasons" initiated by this system or the specified service.

## CHAPTER 82

# show local-policy

This chapter describes the outputs of the **show local-policy** command.

- [show local-policy statistics service, on page 1391](#)

## show local-policy statistics service

*Table 384: show local-policy statistics service Command Output Descriptions*

Field	Description
<b>Event Statistics</b>	
New Session	The total number of times a Local Policy new-call event rule is triggered.
Location Change	The total number of times a Local Policy location-change event rule is triggered.
Request Qos	The total number of times a Local Policy request-qos event rule is triggered.
Out of Credit	The total number of times a Local Policy out-of-credit event rule is triggered.
Reallocation of Credit	The total number of times a Local Policy realloc-of-credit event rule is triggered.
Local Fallback	The total number of times a Local Policy fallback from PCRF event rule is triggered.
Timer Expiry	The total number of times a Local Policy timer-expiry event rule is triggered.
Default Qos Change	The total number of times a Local Policy default-qos-change event rule is triggered.
Service Flow	The total number of times a Local Policy service-flow event rule is triggered.
Rule Report Status	The total number of times a Local Policy Rule Report Status is triggered to PCRF.
APN-AMBR Mod Failure	The total number of times a Local Policy APN-AMBR mode failure rule is triggered.
Def EPS bearer Qos Mod Failure	The total number of times a Def EPS bearer Qos Mode Failure rule is triggered.

Field	Description
ECGI Change	The total number of times the ECGI-CHANGE event trigger has been received by Local-Policy. This field is added to support Location-based Local-Policy Rule Enforcement.
3G-ULI Change	The total number of 3G-ULI-CHANGE event triggers that has been received by Local-Policy. This field is added to support Location-based QoS Override feature.
TAI Change	The total number of times the TAI-CHANGE event trigger has been received by Local-Policy. This field is added to support Location-based QoS Override feature.
<b>Action Statistics</b>	
Create Bearer	The total number of times a Local Policy create-bearer action is triggered.
Create Bearer failure	The total number of times a Local Policy create-bearer action fails.
Create Bearer Success	The total number of times a Local Policy create-bearer action succeeds.
Delete Bearer	The total number of times a Local Policy delete-bearer action is triggered.
Delete Bearer failure	The total number of times a Local Policy delete-bearer action fails.
Delete Bearer Success	The total number of times a Local Policy delete-bearer action succeeds.
Allow Session	The total number of times a Local Policy allow-session action is triggered.
Allow Session failure	The total number of times a Local Policy allow-session action fails.
Allow Session Success	The total number of times a Local Policy allow-session action succeeds.
Terminate Session	The total number of times a Local Policy terminate-session action is triggered.
Terminate Session failure	The total number of times a Local Policy terminate-session action fails.
Terminate Session Success	The total number of times a Local Policy terminate-session action succeeds.
Activate Rule	The total number of times a Local Policy activate-rule action is triggered.
Activate Rule failure	The total number of times a Local Policy activate-rule action fails.
Activate Rule Success	The total number of times a Local Policy activate-rule action succeeds.
Activate LP Rule	The total number of times the lp-activate-rule action is triggered by local-policy module.
Activate LP Rule failure	The total number of times the lp-activate-rule action fails.
Activate LP Rule Success	The total number of times the lp-activate-rule action succeeds.
Deactivate Rule	The total number of times a Local Policy deactivate-rule action is triggered.
Deactivate Rule failure	The total number of times a Local Policy deactivate-rule action fails.
Deactivate Rule Success	The total number of times a Local Policy deactivate-rule action succeeds.
Activate AMBR	The total number of times a Local Policy activate-ambr action is triggered.
Activate AMBR failure	The total number of times a Local Policy activate-ambr action fails.
Activate AMBR Success	The total number of times a Local Policy activate-ambr action succeeds.

Field	Description
Deactivate AMBR	The total number of times a Local Policy deactivate-ambr action is triggered.
Deactivate AMBR failure	The total number of times a Local Policy deactivate-ambr action fails.
Deactivate AMBR Success	The total number of times a Local Policy deactivate-ambr action succeeds.
Accept Req QoS	The total number of times a Local Policy allow-requested-qos action is triggered.
Accept Req QoS failure	The total number of times a Local Policy allow-requested-qos action fails.
Accept Req QoS Success	The total number of times a Local Policy allow-requested-qos action succeeds.
Reject Req QoS	The total number of times a Local Policy reject-requested-qos action is triggered.
Reject Req QoS failure	The total number of times a Local Policy reject-requested-qos action fails.
Reject Req QoS Success	The total number of times a Local Policy reject-requested-qos action succeeds.
Activate Rulebase	The total number of times a Local Policy activate-rulebase action is triggered.
Activate Rulebase failure	The total number of times a Local Policy activate-rulebase action fails.
Activate Rulebase Success	The total number of times a Local Policy activate-rulebase action succeeds.
Deactivate Rulebase	The total number of times a Local Policy deactivate-rulebase action is triggered.
Deactivate Rulebase failure	The total number of times a Local Policy deactivate-rulebase action fails.
Deactivate Rulebase Success	The total number of times a Local Policy deactivate-rulebase action succeeds.
Activate Policy Grp	The total number of times a Local Policy activate-policy-group action is triggered.
Activate PolicyGrp failure	The total number of times a Local Policy activate-policy-group action fails.
Activate PolicyGrp Grp Success	The total number of times a Local Policy activate-policy-group action succeeds.
Deactivate PolicyGrp	The total number of times a Local Policy deactivate-policy-group action is triggered.
Deactivate PolicyGrp failure	The total number of times a Local Policy deactivate-policy-group action fails.
Deactivate PolicyGrp Success	The total number of times a Local Policy deactivate-policy-group action succeeds.
Set Default QoS	The total number of times a Local Policy default-qos action is triggered.
Set Default QoS failure	The total number of times a Local Policy default-qos action fails.
Set Default QoS Success	The total number of times a Local Policy default-qos action succeeds.
Start Timer	The total number of times a Local Policy start-timer action is triggered.
Start Timer failure	The total number of times a Local Policy start-timer action fails.
Start Timer Success	The total number of times a Local Policy start-timer action succeeds.

Field	Description
Stop Timer	The total number of times a Local Policy stop-timer action is triggered.
Stop Timer failure	The total number of times a Local Policy stop-timer action fails.
Stop Timer Success	The total number of times a Local Policy stop-timer action succeeds.
Activate Detect Flow	Indicates the total number of times a Local Policy activate-flow-detection action is triggered.
Activate Detect Flow Failure	Indicates the total number of times a Local Policy activate-flow-detection action fails.
Activate Detect Flow Success	Indicates the total number of times a Local Policy activate-flow-detection action succeeds.
Deactivate Detect Flow	Indicates the total number of times a Local Policy deactivate-flow-detection action is triggered.
Deactivate Detect Flow Failure	Indicates the total number of times a Local Policy deactivate-flow-detection action fails.
Deactivate Detect Flow Success	Indicates the total number of times a Local Policy deactivate-flow-detection action succeeds.
Reconnect to Server	Indicates the total number of times a Local Policy reconnect-to-server action is triggered.
Reconnect to Server Failure	Indicates the total number of times a Local Policy reconnect-to-server action fails.
Reconnect to Server Success	Indicates the total number of times a Local Policy reconnect-to-server action succeeds.
Retry-Count Success	Indicates the total number of times the Local Policy retry action succeeds.
Enable Event Trigger	Indicates the total number of times the action is hit. This field is introduced to support the co-existence of local policy and PCRF.
Enable Event Trigger Failure	Indicates the total number of times enabling of Local Policy event triggers failed. This field is introduced to support the co-existence of local policy and PCRF.
Enable Event Trigger Success	Indicates the total number of times the Local Policy event triggers are enabled. This field is introduced to support the co-existence of local policy and PCRF.
<b>Variable Matching Statistics</b>	
3G-ULI	Total number of times the 3G-ULI value is matched and the specific action is applied based on the event.
IMSI	The total number of times the IMSI associated with the subscriber matched the Local Policy 'imsi' condition constraint.
MSISDN	The total number of times the MSISDN associated with the subscriber matched the Local Policy 'msisdn' condition constraint.
MEID	The total number of times the MEID associated with the subscriber matched the Local Policy 'meid' condition constraint.

Field	Description
IMEISV	The total number of times the IMEISV of the user equipment matched the Local Policy 'imeisv' condition constraint.
LOCAL POLICY MODE	Indicates the total number of times the Local Policy rule is hit. This field is introduced to support the co-existence of local policy and PCRF.
Access Tech	The total number of times the Radio access technology associated with the subscriber matched the Local Policy 'radio-access-technology' condition constraint.
Serving Node Addr	The total number of times the IP address associated with the current node matched the Local Policy 'serving-node-address' condition constraint.
Serving PLMN	The total number of times the PLMN associated with the current node serving the subscriber matched the Local Policy 'serving-plmn' condition constraint.
Access Point Name	The total number of times the APN associated with a session matched the Local Policy 'apn' condition constraint.
NAI	The total number of times the NAI associated with a session matched the Local Policy 'nai' condition constraint.
QoS Class Identifier	The total number of times the QoS Class Identifier associated with an event matched the Local Policy 'qci' condition constraint.
Alloc Retention Priority	The total number of times the Allocation Retention Priority associated with a session matched the Local Policy 'arp' condition constraint.
Day of Week	The total number of times the day of the week value matched the Local Policy 'day-of-week' condition constraint.
Day of month	The total number of times the day of the month value matched the Local Policy 'day-of-month' condition constraint.
Month of year	The total number of times the month of the year value matched the Local Policy 'month-of-year' condition constraint.
Date	The total number of times the date value matched the Local Policy 'date' condition constraint.
Time of Day	The total number of times the Time of Day value matched the Local Policy 'date' condition constraint.
Bearer Count	The total number of times the bearer count matches the specified constraint.
BSID	The total number of times the base station identifier matches the specified constraint.
RAI	The total number of times the Routing Area Identification matches the specified constraint.
Cause-Code	The total number of times the Failure Cause Code matches the specified constraint.
PDN Type	The total number of times the rules in actiondef matches with the UE PDN type/IP address allocated to the subscriber.

<b>Field</b>	<b>Description</b>
Local Policy Mode	Indicates the total number of times the Local Policy rule is hit. This field is introduced to support the co-existence of local policy and PCRF.
Final Unit Action	Indicates the total number of times the Final Unit Action (FUA) matches the specified constraint. This field is introduced to support FUA in local policy.
ECGI	The total number of times the E-UTRAN Cell Global Identification matches the specified constraint. This field is added to support Location-based Local-Policy Rule Enforcement.
TAI	Total number of times the TAI value is matched and the specific action is applied based on the event.

# CHAPTER 83

## show local-user

This chapter describes the outputs of the **show local-user** command.

**Important** In a release 20.0 or higher Trusted build, this command is not available.

- [show local-user username name verbose, on page 1397](#)
- [show local-user statistics verbose, on page 1398](#)
- [show local-user verbose, on page 1398](#)

## show local-user username name verbose

*Table 385: show local-user username name verbose Command Output Descriptions*

Field	Description
Username	The name of the local-user.
Auth Level	The authentication level for the local-user as one of the following: <ul style="list-style-type: none"><li>• secadmin</li><li>• admin</li><li>• operator</li><li>• inspector</li></ul>
Last Login	The time and date that the user last logged in.
Login Failures:	The number of login failures that occurred for the user.
Password Expired:	Indicates whether or not the password has expired.
Locked:	Indicates whether or not the account is locked.
Suspended	Indicates whether or not the account is suspended.
Lockout on Pw Aging	Indicates whether or not the account can be locked out due to the age of the password.

Field	Description
Lockout on Login Fail	Indicates whether or not the account can be locked out due to login failures.

## show local-user statistics verbose

*Table 386: show local-user statistics verbose Command Output Descriptions*

Field	Description
Number of login attempts	The number of login attempts for all local-user accounts.
Number of login success	The number of successful logins for all local-user accounts.
Number of login failures	The number of failed logins for all local-user accounts.
Bad username	The number of logins that failed due to invalid usernames.
Bad password	The number of logins that failed due to incorrect passwords.
Locked user	The number of logins that failed due to the account being locked.
Suspended user	The number of logins that failed due to the account being suspended.
Internal error	The number of logins that failed due to system internal errors.
Number of user lockouts	The number of local-user accounts currently in the locked-out state.
Internal errors	The number of internal errors that occurred.
Unable to accept request	The number of internal errors that occurred because the system could not accept a login request.
Unable to receive request	The number of internal errors that occurred because the system could not receive a login request.
Unable to sent response	The number of internal errors that occurred because the system could not send a response to a login request.
Last statistics reset	The last time and date that local-user statistics maintained by the system were cleared.

## show local-user verbose

*Table 387: show local-user verbose Command Output Descriptions*

Field	Description
Username	The name of the local-user.

Field	Description
Auth Level	The authentication level for the local-user as one of the following: <ul style="list-style-type: none"> <li>• secadmin</li> <li>• admin</li> <li>• operator</li> <li>• inspector</li> </ul>
Last Login	The time and date that the user last logged in.
Login Failures:	The number of login failures that occurred for the user.
Password Expired:	Indicates whether or not the password has expired.
Hash strength:	Indicates the hash strength.
Locked:	Indicates whether or not the account is locked.
Suspended:	Indicates whether or not the account is suspended.
Lockout on Pw Aging:	Indicates whether or not the account can be locked out due to the age of the password.
Lockout on Login Fail:	Indicates whether or not the account can be locked out due to login failures.
Console Allowed:	Indicates the total number of consoles allowed.
VTY Allowed:	Displays a reference for the virtual console device for the CLI instance.
Max Sessions:	Indicates the maximum number of local-user subscriber sessions allowed.

# CHAPTER 84

## show location-service

This chapter describes the output of the **show location-service** command.

- [show location-service service all](#), on page 1401
- [show location-service statistics all](#), on page 1402

## show location-service service all

Displays configuration information for all Location services (LCS) configured on the system.

**Table 388: show location-service service all Command Output Descriptions**

Field	Description
Service name	The name of the Location service configured on the system.
Context	The name of the context in which this Location service is configured on the system.
Status	The state of the Location service, either STARTED or NOT STARTED. The status will display STARTED if a valid diameter endpoint is associated with this locations service.
Diameter endpoint	The Diameter endpoint configured for this Location service.
Diameter dictionary	The Diameter dictionary configured for this Location service.
Map Service	The MAP service configured for this Location service.
SLS service	The name of the SLs service associated with this Location service.
LCSN timer	SGSN only: Displays the configuration of the Location service <b>timeout lcsn</b> command.
UE AVAILABLE GUARD timer	SGSN only: Displays the configuration of the Location service <b>timeout ue-available-guard-timer</b> command.
AREA EVENT INVOKE timer	SGSN only: Displays the configuration of the Location service <b>timeout area-event-invoke-timer</b> command.

Field	Description
PERIODIC EVENT INVOKE timer	SGSN only: Displays the configuration of the Location service <b>timeout periodic-event-invoke-timer</b> command.
Destination Host	Displays the configuration of the Location service <b>destination-host</b> command, showing either the configured destination host or NA if not configured. If this command is not configured, the peer host name configured in the diameter endpoint is encoded as destination-host AVP.
SLR trigger for Emergency calls	Displays the configuration of the Location Service <b>slr emergency dedicated-bearer-only</b> command. This field displays <b>Dedicated Bearer Only</b> when configuration is enabled and <b>Attach or PDN</b> when configuration is disabled.

## show location-service statistics all

Displays Location services (LCS) statistics for all Location services configured on the system.

**Table 389: show location-service statistics all Command Output Descriptions**

Field	Description
<b>Message Statistics</b>	
PSL Request	The total number of Provide Subscriber Location Request messages received.
PSL Answer	The total number of Provide Subscriber Location Answer messages sent.
PSL Request Dropped	The total number of Provide Subscriber Location Request messages dropped.
PSL Answer Dropped	The total number of Provide Subscriber Location Answer messages dropped.
LR Request	The total number of Network Induced Location Request (NI-LR) request messages initiated by the MME.
LR Request Dropped	The total number of Location Request messages that were dropped (could not be sent) as a result of the peer being down.
LR Answer	The total number of Location Request acknowledge messages received.
LR Answer Dropped	The total number of Location Request acknowledge messages dropped. This can occur when the user name in the acknowledge message does not match that sent in the request.  <b>Important</b> In Release 16.0 and later, this counter is deprecated.
LR Answer Timeout	The total number of Location Request acknowledge messages expected but not received before the timer expired.
<b>Message Error Statistics</b>	
User Unknown	The total number of times the PLR was received for an unknown user (Error code: 5001).

Field	Description
Unauthorized Requestion Network	The total number of times the requesting GMLC's network was not authorized to request UE location information (Error code: 5490).
Unreachable User	The total number of times a PLR was received for a user which could not be reached (Error code: 4221)
Suspended User	The total number of times the PLR was received for a user who is suspended in the MME (Error code: 4222).
Detached User	The total number of times where the PLR was received for a detached user (Error code: 4223).
Positioning Denied	The total number of times the positioning procedure was denied (Error code: 4224).
Positioning Failed	The total number of times the positioning procedure failed (Error code: 4225).
Unreachable LCS Client	The total number of times the GLMC indicated that the LCS Client was not known or could not be reached (Error code: 4226).
Other Errors	The total number of PLA messages received with other error result codes.
<b>Location Report Event Statistics</b>	
Events Sent:	
Call Origination	Total number of Call-Origination events sent when SLR message is triggered towards GMLC.
Call Release	Total number of Call-Release events sent when SLR message is triggered towards GMLC.
Call Handover	Total number of Call-Handover events sent when SLR message is triggered towards GMLC.
Events Dropped:	
Call Origination	Total number of Call-Origination events dropped when SLR message is triggered towards GMLC.
Call Release	Total number of Call-Release events dropped when SLR message is triggered towards GMLC.
Call Handover	Total number of Call-Handover events dropped when SLR message is triggered towards GMLC.

# CHAPTER 85

## show lte-policy

This chapter describes the output of the **show lte-policy** command.

- [show lte-policy congestion-action-profile name](#), on page 1405
- [show lte-policy cause-code-group name](#), on page 1406
- [show lte-policy foreign-plmn-guti-mgmt-db name](#), on page 1407
- [show lte-policy ho-restrict-list name](#), on page 1407
- [show lte-policy lte-emergency-profile name](#), on page 1407
- [show lte-policy tai-mgmt-db name](#), on page 1408
- [show lte-policy monitoring-event-profile](#), on page 1408
- [show lte-policy paging-map name](#), on page 1409
- [show lte-policy paging-profile name](#), on page 1409
- [show lte-policy tai-mgmt-db name](#), on page 1410

## show lte-policy congestion-action-profile name

**Important** In Release 20, 21.0 and 21.1, HeNBGW is not supported. For more information, contact your Cisco account representative.

**Table 390: show lte-policy congestion-action-profile name Command Output Descriptions**

Field	Description
handovers	Indicates the action the MME is configured to take for handovers when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
combined-attaches	Indicates the action the MME is configured to take for combined Attach requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
ps-attaches	Indicates the action the MME is configured to take for packet switched Attach requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.

Field	Description
addn-pdn-connects	Indicates the action the MME is configured to take for additional PDN context connections when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
addn-brr-requests	Indicates the action the MME is configured to take for additional bearer requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
brr-ctxt-mod-requests	Indicates the action the MME is configured to take for Bearer Resource Context Modification Requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
service-request	Indicates the action the MME is configured to take for service requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
tau-request	Indicates the action the MME is configured to take for TAU requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
s1-setup	Indicates the action the MME is configured to take for S1 setup attempts when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
init-ues	Indicates the action the HeNBGW is configured to take for Initial UE messages received when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
paging	Indicates the action the HeNBGW is configured to take for Paging requests when a congestion control threshold is reached. Possible actions are none (ignore), reject, drop.
exclude-emergency-events	Indicates whether the MME is configured to exclude emergency calls when a congestion control threshold is reached. This setting is disabled when 'no exclude-emergency-events' is displayed.
exclude-voice-events	Indicates whether the MME is configured to exclude voice calls when a congestion control threshold is reached. This setting is disabled when 'no exclude-voice-events' is displayed.
report-overload	Indicates whether the MME is configured to report overload conditions to eNodeBs to alleviate congestion scenarios.

## show lte-policy cause-code-group name

Table 391: show lte-policy cause-code-group name Command Output Descriptions

Field	Description
Cause Code Group <i>name</i>	
SIAP Protocol	

Field	Description
class	Lists the configuration of each cause code entry, organized by class (miscellaneous, nas, protocol, radio, transport), for this Cause Code Group.

## show lte-policy foreign-plmn-guti-mgmt-db name

Table 392: show lte-policy foreign-plmn-guti-mgmt-db name Command Output Descriptions

Field	Description
Foreign PLMN GUTI Management DB <i>name</i>	
PLMN	Lists the management database PLMN entries and the configuration of each entry.

## show lte-policy ho-restrict-list name

Table 393: show lte-policy ho-restrict-list name Command Output Descriptions

Field	Description
forbidden tracking areas	Lists the PLMN IDs which are part of the handover restriction list.
forbidden location areas	Lists the PLMN IDs which are part of the handover restriction list.

## show lte-policy lte-emergency-profile name

Table 394: show lte-policy lte-emergency-profile name Command Output Descriptions

Field	Description
ue-validation-level	Indicates the type of UE that can use the emergency bearer service through this profile.
apn	Indicates the name and PDN type of the access point name (APN) used for emergency PDN connections.  If enabled, the configured restoration priority of 1 through 16 is displayed (1 is highest priority, 16 is lowest).
qos	Indicates the quality of service (QoS) settings for this emergency bearer service.
ambr	Indicates the maximum aggregated uplink and downlink bitrate values for this profile.
FQDN PGW	Indicates the Fully Qualified Domain Name of the P-GW to be used for emergency bearer services through this profile.

Field	Description
STATIC PGW	Indicates the static IP address, protocol, and weight of the P-GW to be used for emergency bearer services through this profile.
LCS QOS	Indicates the configuration of the <b>lcs-qos</b> command for this LTE emergency profile. This displays the location service QoS settings to be used for this emergency profile. Horizontal Accuracy: The horizontal positioning accuracy value. Vertical Accuracy: The vertical positioning accuracy value.
UE Usage Type	Configures UE usage type for disconnecting PDN for up service area
Co-located Node	Configures the collocated node name to select the collocated SPGW node IP addresses.

## show lte-policy tai-mgmt-db name

Table 395: show lte-policy tai-mgmt-db name Command Output Descriptions

Field	Description
attach-only	Specifies the SGW preference for SGW-relocation.

## show lte-policy monitoring-event- profile

Table 396: show lte-policy monitoring-event-profile Command Output Descriptions

Field	Description
Loss of connectivity	Indicates the enabled events of Loss of connectivity event configuration.
UE Reachability	Indicates the enabled events of UE Reachability event configurations.
Location Reporting	Indicates the enabled events of reporting location event configurations.
Communication Failure	Indicates the current session statistics of Radio connection status failure events.
Availability after DDN Failure	Indicates the current session statistics of Availability after DDN Failure event configuration.
Idle Status Indication Failure	Indicates the enabled events of Idle status indication event configurations.
PDN Connectivity Status Report	Indicates that the enabled events of PDN connectivity status event configuration.
Number Of UE's in Geo Area	Indicates the received Number of UEs present in a geographic area event configuration.
Roaming Support	Indicates whether roaming support is enabled or disabled for Interworking SCEF destination host or realm.

## show lte-policy paging-map name

Table 397: show lte-policy paging-map name Command Output Descriptions

Field	Description
Paging Map <i>n</i>	
Precedence	Indicates the order in which the MME checks the entries for this paging-map.
Traffic Type	Indicates the traffic type such as CS, PS, SIGNALING and sub-type that is specified for this paging-map.
Paging profile	Indicates the paging-profile to be used for this traffic type.
Precedence	Displays the configured precedence value.
Packet-Switched(PS)	Displays the paging is for Packet-Switched traffic.
APN	Displays the configured APN profile name.
ARP	Displays the configured ARP value.
Paging is performed as per paging-profile <name>	Displays the paging profile name.

## show lte-policy paging-profile name

Table 398: show lte-policy paging-profile name Command Output Descriptions

Field	Description
Paging Profile <i>n</i>	
Paging Stage <i>n</i> :	Lists all Paging Stages configured for this Paging Profile.
Paging Action	Indicates how the paging request should be formed. Possible options are: <ul style="list-style-type: none"> <li>• all-enb-all-tai</li> <li>• all-enb-last-tai</li> <li>• last-n-enb-last-tai</li> </ul>
Match Criteria	Indicates the criteria for selecting a given paging stage. Possible options are: <ul style="list-style-type: none"> <li>• ue-contact-time</li> <li>• all</li> </ul>
T3413-Timeout	Indicates the time interval in seconds between paging requests.
Max Paging Retries	Indicates the number of paging requests to be sent out during this paging stage.

## show lte-policy tai-mgmt-db name

Table 399: show lte-policy tai-mgmt-db name Command Output Descriptions

Field	Description
TAI Management DB <i>n</i>	
Time Zone	Indicates the time zone settings to be used for the UE timezone in S11 and NAS messages.
Short Network Name	Indicates the short network name to be used in the Short network name IE in the EMM Information message sent by the MME.
Long Network Name	Indicates the full (long) network name to be used in the Long network name IE in the EMM Information message sent by the MME.
TAI Management Object	The name of the TAI management object and all configured options for the object. For each TAI Management Object, the following information is displayed, if configured: <ul style="list-style-type: none"> <li>• Time Zone</li> <li>• Zone Code</li> <li>• IMS Voice over PS support</li> <li>• LAI (Location Area Identifier)</li> <li>• TAI (Tracking Area Identifier)</li> <li>• RAI (Routing Area Identifier)</li> <li>• SGW IP address, protocol, and weight priority information</li> <li>• Full and/or Short Network Name</li> </ul>
Access-Type NB-IoT	Displays the configured access type. The show output displays whether all the TACs configured belong to either WB-EUTRAN or NB-IoT RAT. It is also possible that some of the configured TACs belong to WB-EUTRAN and the rest belong to NB-IoT RAT.
UE Usage Type	Configures UE usage type for disconnecting PDN for up service area
Co-located Node	Configures the collocated node name to select the collocated SPGW node IP addresses.

# CHAPTER 86

## show mag-service

This chapter includes the **show mag-service** command output tables.

- [show mag-service statistics, on page 1411](#)

## show mag-service statistics

*Table 400: show mag-service statistics Command Output Descriptions*

Field	Description
<b>Binding Update Sent</b>	
Total	The total number of all binding updates sent by this system or the specified service.
Init Request Xmit	The total number of initial request transmit binding updates sent by this system or the specified service.
Init Request Re-Xmit	The total number of initial request retransmit binding updates sent by this system or the specified service.
Renew Request Xmit	The total number of renew request transmit binding updates sent by this system or the specified service.
Renew Request Re-Xmit	The total number of renew request retransmit binding updates sent by this system or the specified service.
Dereg Request Xmit	The total number of deregistration request transmit binding updates sent by this system or the specified service.
Dereg Request Re-Xmit	The total number of deregistration request retransmit binding updates sent by this system or the specified service.
<b>Binding Acknowledgement Rcvd</b>	
Total	The total number of all binding acknowledgments received by this system or the specified service.
Errors	The total number of all binding acknowledgments, with errors, received by this system or the specified service.

Field	Description
Accepted	The total number of all binding acknowledgments received, and accepted by this system or the specified service.
Denied	The total number of all binding acknowledgments received, but denied by this system or the specified service.
Init Accepted	The total number of initial binding acknowledgments received at MAG with Success code.
Init Reply Rcvd	The total number of all binding acknowledgments - initial reply received by this system or the specified service.
Renew Reply Rcvd	The total number of all binding acknowledgments - renew reply received by this system or the specified service.
Dereg Reply Rcvd	The total number of all binding acknowledgments - deregistration reply received by this system or the specified service.
<b>Denied by LMA</b>	
Insufficient Resources	The total number of binding updates sent by this system or the specified service but denied by the LMA due to insufficient resources.
Mismatched ID	The total number of binding updates sent by this system or the specified service but denied by the LMA due to mismatched IDs.
MN Auth Failure	The total number of binding updates sent by this system or the specified service but denied by the LMA due to mobile node authorization failures.
Admin Prohibited	The total number of binding updates sent by this system or the specified service but denied by the LMA due to admin prohibited conditions.
Msg ID Required	The total number of binding updates sent by this system or the specified service but denied by the LMA due to missing message IDs.
DAD Failed	The total number of binding updates sent by this system or the specified service but denied by the LMA due to DAD failures.
Not Home Subnet	The total number of binding updates sent by this system or the specified service but denied by the LMA due to incorrect home subnet.
Sequence Out Of Window	The total number of binding updates sent by this system or the specified service but denied by the LMA due to sequence out of window conditions.
Reg Type Change Disallowed	The total number of binding updates sent by this system or the specified service but denied by the LMA due to registration type change disallowed.
Unspecified Reason	The total number of binding updates sent by this system or the specified service but denied by the LMA due to unspecified reasons.
Service-Authorization Failed	The total number of binding updates sent by this system or the specified service but denied by the LMA due to failed service authorizations.

Field	Description
Proxy Reg Not Enabled	The total number of binding updates sent by this system or the specified service but denied by the LMA due to proxy registration not being enabled.
Timestamp Mismatch	The total number of binding updates sent by this system or the specified service but denied by the LMA due to timestamp mismatches.
Timestamp Lower Than Expected	The total number of binding updates sent by this system or the specified service but denied by the LMA due to lower than expected timestamps.
Missing MN-ID Option	The total number of binding updates sent by this system or the specified service but denied by the LMA due to missing mobile node ID options.
Missing HNP Option	The total number of binding updates sent by this system or the specified service but denied by the LMA due to missing HNP options.
Missing Access Tech Option	The total number of binding updates sent by this system or the specified service but denied by the LMA due to missing access technology options.
Missing Handoff Ind Option	The total number of binding updates sent by this system or the specified service but denied by the LMA due to missing handoff indication options.
Not Authorized For HNP	The total number of binding updates sent by this system or the specified service but denied by the LMA due to not being authorized for HNP.
Not LMA For Mobile	The total number of binding updates sent by this system or the specified service but denied by the LMA due incorrect LMA for mobility.
Not Authorized For Proxy Reg	The total number of binding updates sent by this system or the specified service but denied by the LMA due to not being authorized for proxy registration.
BCE Prefix Do Not Match	The total number of binding updates sent by this system or the specified service but denied by the LMA due to BCE prefix mismatches.
<b>Binding Acknowledgement Error Reason</b>	
Missing HNP	The total number of binding acknowledgements with missing HNP errors received by this system or the specified service.
Missing NAI	The total number of binding acknowledgements with missing NAI errors received by this system or the specified service.
Home Address Conflict	The total number of binding acknowledgements with home address conflict errors received by this system or the specified service.
Matching Request Not Found	The total number of binding acknowledgements with matching requests not found errors received by this system or the specified service.
Badly Formed	The total number of binding acknowledgements with badly formed message errors received by this system or the specified service.
Checksum Error	The total number of binding acknowledgements with checksum errors received by this system or the specified service.

Field	Description
Session Not Found	The total number of binding acknowledgements with session not found errors received by this system or the specified service.
Wrong LMA Address	The total number of binding acknowledgements with wrong LMA address errors received by this system or the specified service.
<b>Binding Revocation</b>	
Sent	The total number of binding revocations sent by this system or the specified service.
Retries Sent	The total number of binding revocation retries sent by this system or the specified service.
Ack Rcvd	The total number of binding revocation acknowledgements received by this system or the specified service.
Not Acknowledged	The total number of binding revocations sent, but not acknowledged, by this system or the specified service.
Rcvd	The total number of binding revocations received by this system or the specified service.
Ack Sent	The total number of binding revocation acknowledgements sent by this system or the specified service.
<b>Received Binding Revocation Trigger Reasons</b>	
Unspecified	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Unspecified" revocation trigger reason.
Administrative Reason	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Administrative Reason" revocation trigger reason.
Inter-MAG Handoff-Same ATT	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Inter-MAG Handoff-Same ATT" revocation trigger reason.
Inter-MAG - Unknown Handoff	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Inter-MAG - Unknown Handoff" revocation trigger reason.
Inter-MAG Handoff-Diff ATT	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Inter-MAG Handoff-Diff ATT" revocation trigger reason.
Per-Peer Policy	The total number of Binding Revocation Indication (BRI) messages received by the MAG with a "Per-Peer Policy" revocation trigger reason.
Revoking Node Local Policy	The total number of Binding Revocation Indication (BRI) messages received by the MAG with a "Revoking Node Local Policy" revocation trigger reason.
User Initiated Session Term	The total number of Binding Revocation Indication (BRI) messages received by the MAG with a "User Initiated Session Term" revocation trigger reason.
Access Network Session Term	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Access Network Session Term" revocation trigger reason.

Field	Description
Out-of Sync BCE State	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Out-of Sync BCE State" revocation trigger reason.
Unknown	The total number of Binding Revocation Indication (BRI) messages received by the MAG with an "Unknown" revocation trigger reason.
<b>Sent Revocation ACK Status</b>	
Success	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Success" status.
Partial-Success	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Partial-Success" status.
Binding-Does-Not-Exist	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Binding-Does-Not-Exist" status.
No IPv4-HoA-Bind	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "No IPv4-HoA-Bind" status.
Global-Revoc-Not-Authorized	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Global-Revoc-Not-Authorized" status.
Revoc-MN-ID-Required	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Revoc-MN-ID-Required" status.
Revoc-Failed-MN-Attached	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Revoc-Failed-MN-Attached" status.
Trigger-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Trigger-Not-Supported" status.
Proxy-Bind-Rev-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Proxy-Bind-Rev-Not-Supported" status.
Revoc-Func-Not-Supported	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with a "Revoc-Func-Not-Supported" status.
Unknown	The total number of Binding Revocation Acknowledgement (BRA) messages sent by the MAG with an "Unknown" status.
<b>Binding Revocation Indication Discarded</b>	
Total	The total number of binding revocation acknowledgements received and discarded by this system or the specified service.
Session Not Found	The total number of binding revocation acknowledgements received and discarded, due to a session not found condition, by this system or the specified service.
Badly Formed Request	The total number of binding revocation acknowledgements received and discarded, due to a badly formed request condition, by this system or the specified service.

Field	Description
Decode Error	The total number of binding revocation acknowledgements received and discarded, due to a decode error condition, by this system or the specified service.
Checksum Error	The total number of binding revocation acknowledgements received and discarded, due to a checksum error condition, by this system or the specified service.
Invalid Message Type	The total number of binding revocation acknowledgements received and discarded, due to an invalid message type condition, by this system or the specified service.
No Memory	The total number of binding revocation acknowledgements received and discarded, due to insufficient memory, by this system or the specified service.
Wrong LMA Address	The total number of binding revocation acknowledgements received and discarded, due to wrong LMA address condition, by this system or the specified service.
<b>Tunnel Data Received</b>	
Total Packets	The total number of tunnel packets received by this system or the specified service.
6in6 4in6 IPv6 GRE (IPv4) IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 tunnel packets received by this system or the specified service. The total number of IPv4-in-IPv6 tunnel packets received by this system or the specified service. The total number of IPv4-in-IPv6 GRE tunnel packets received by this system or the specified service. The total number of IPv6-in-IPv6 GRE tunnel packets received by this system or the specified service.
Total Bytes	The total number of tunnel bytes received by this system or the specified service.
6in6 4in6 IPv6 GRE (IPv4) IPv6 GRE (IPv6)	The total number of IPv6-in-IPv6 tunnel bytes received by this system or the specified service. The total number of IPv4-in-IPv6 tunnel bytes received by this system or the specified service. The total number of IPv4-in-IPv6 GRE tunnel bytes received by this system or the specified service. The total number of IPv6-in-IPv6 GRE tunnel bytes received by this system or the specified service.
<b>Errors</b>	
Protocol Type Error	The total number of protocol type data errors received by this system or the specified service.
Invalid Pkt Length	The total number of invalid packet length data errors received by this system or the specified service.
No Session Found	The total number of no session found data errors received by this system or the specified service.

Field	Description
<b>Tunnel Data Sent</b>	
Total Packets	The total number of tunnel packets sent by this system or the specified service.
6in6	The total number of IPv6-in-IPv6 tunnel packets sent by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel packets sent by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel packets sent by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv4-in-IPv6 GRE tunnel packets sent by this system or the specified service. The total number of IPv6-in-IPv6 GRE tunnel packets sent by this system or the specified service.
Total Bytes	The total number of tunnel bytes sent by this system or the specified service.
6in6	The total number of IPv6-in-IPv6 tunnel bytes sent by this system or the specified service.
4in6	The total number of IPv4-in-IPv6 tunnel bytes sent by this system or the specified service.
IPv6 GRE (IPv4)	The total number of IPv4-in-IPv6 GRE tunnel bytes sent by this system or the specified service.
IPv6 GRE (IPv6)	The total number of IPv4-in-IPv6 GRE tunnel bytes sent by this system or the specified service. The total number of IPv6-in-IPv6 GRE tunnel bytes sent by this system or the specified service.
<b>LMA Fallback Support Stats</b>	
LMA Fallback Attempted	The total number of attempted P-GW fallbacks by this system or the specified service.
LMA Fallback Success	The total number of successful P-GW fallbacks by this system or the specified service.
LMA Fallback Failure	The total number of failed P-GW fallbacks by this system or the specified service.
Demux Update Failure	The total number of demux update failures during P-GW fallback by this system or the specified service.
Alternate PGW Not Found	The total number of times an alternate P-GW was not found during P-GW fallback by this system or the specified service.
PGW Rejects	The total number of P-GW rejections received during P-GW fallback by this system or the specified service.
PGW Timeouts	The total number of P-GW timeouts during P-GW fallback by this system or the specified service.
<b>Total Disconnects/Failures</b>	

<b>Field</b>	<b>Description</b>
Lifetime expiry	The total number of disconnects due to lifetime expiry initiated by this system or the specified service.
Access Initiated Term	The total number of disconnects due to deregistrations initiated by this system or the specified service.
Admin Drops	The total number of disconnects due to admin drops initiated by this system or the specified service.
Other Reasons	The total number of disconnects due to "other reasons" initiated by this system or the specified service.
LMA Revocations	The total number of disconnects due to LMA revocations received by this system or the specified service.

# CHAPTER 87

## show mbms bearer-service

This chapter includes the **show mbms bearer-service** command output tables.

- [show mbms bearer-service full all, on page 1419](#)

## show mbms bearer-service full all

*Table 401: show mbms bearer-service full all Command Output Descriptions*

Field	Description
MBMS Bearer Context ID	Specifies the identifier for bearer context used for MBMS service.
State	Specifies the state of bearer service instance.
Mcast Address	Specifies the IP address of BM-SC (Broadcast Multicast - Service Center) server bind to this instance.
APN	Specifies the name if the APN bind to this bearer instance.
Session Identity	Indicates the identifier for MBMS session active on system.
TMGI	indicates the globally unique Temporary Mobile Group Identity (TMGI) allocated by the BM-SC (Broadcast Multicast - Service Center) per MBMS bearer service.
MBMS Bearer Capabilities	Displays the value to indicate MBMS bearer capabilities in Activate MBMS Context Request message.
Service Area Length	Specifies the length of character string configured to indicate MBMS service area. Service area is the area within which data of a specific MBMS session are sent. Each individual MBMS session of an MBMS Bearer Service may be sent to a different MBMS Service Area.
MBMS 2G/3G indication	Displays the value to indicate type of service networks 2G GPRS network or 3G UMTS in Activate MBMS Context Request message.
Counting Info	Displays the value to indicate counting information for message broadcast in MBMS service area.
Session Repetition Number	Indicates the number or times the MBMS session retransmitted the broadcast message.

Field	Description
MBMS-Session-Identity	Specifies the MBMs session identifier.
MBMS-BMSC-SSM-IP	Indicates the IP address configured in IPv4 format with MBMS service and BM-SC server for interface.
Service Type	Specifies the type of service active for this instance of bearer service. Possible values are: UnicastMulticast
Session Started	Indicates whether MBMs service started or not.
BMSC supported user mode	Indicates the supported user mode on BM-SC for this instance of session. It can be Unicast (Broadcast) and/or Multicast.
GGSN selected user mode	Indicates the user mode selected by GGSN for this instance of session. It can be Ucast (Unicast) and/or Mcast (Multicast).
Time to Xfer	Indicates the time taken to transfer the message from system to UE.
Session Duration	Indicates the time elapsed after MBMS session started.
Num MBMS UEs	Indicates total number of UEs connected for this session.
Num MBMS Bearer	Indicates total number of MBMS bearer session instances active for this session.
Quality Of Service	Indicates the configured or updated QoS parameters for this bearer instance.
Traffic Classl	Specifies the class of traffic of active MBMS session. Possible values are: CoversationalStreaming
Maximum Bit Rate Uplink	Indicates the MBR supported/configured for data flow in uplink (to PDN) direction.
Maximum Bit Rate Downlink	Indicates the MBR supported/configured for data flow in downlink (from PDN) direction.
Guaranteed Bit Rate Uplink	Indicates the GBR supported/configured for data flow in uplink (to PDN) direction.
Guaranteed Bit Rate Downlink	Indicates the GBR supported/configured for data flow in downlink (from PDN) direction.
Total Number of MBMS Bearer Services	Indicates the total number of MBMS bearer instances are active.

# CHAPTER 88

## show mipfa

This chapter includes the **show mipfa** command output tables.

- [show mipfa full username](#), on page 1421
- [show mipfa peers fa-service](#), on page 1423

## show mipfa full username

*Table 402: show mipfa full username Command Output Descriptions*

Field	Description
Username	The subscriber's username.
Callid	The subscriber's call identification number (callid).
MSID	The subscriber's Mobile Station Identification number (MSID).
Num Agent Advt Sent	The total number of agent advertisement messages sent by the FA to the subscriber's mobile node.
Num Agent Solicit Rcvd	The total number of agent solicitation messages received by the FA from the subscriber's mobile node.
Home Address	The IP address assigned to the subscriber's mobile node for the duration of the session.
NAI	The subscriber's Network Access Identifier (NAI).
FA Address	The IP address of the FA that is facilitating the subscriber's Mobile IP session.
HA Address	The IP address of the Home Agent that is facilitating the subscriber's Mobile IP session.
Lifetime	The accepted lifetime interval for this session.
Remaining Lifetime	The amount of time that remains after which the session expires and is torn down.
Reverse Tunneling	Displays whether or not reverse tunneling is implemented for the subscriber's session.
Encapsulation Type	The encapsulation method used for the subscriber's session.

Field	Description
GRE Key	The key that uniquely identifies the subscriber session when the Generic Routing Encapsulation (GRE) protocol Encapsulation Type
IPSec Required	Indicates whether or not IPSec is required for the subscriber Mobile IP session.
IPSec Ctrl Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the control tunnel has been established.
IPSec Data Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the data tunnel has been established.
MN-AAA Removal	Shows if mn-aaa-removal-indication is enable or disabled. The possible values are: <ul style="list-style-type: none"> <li>• enabled</li> <li>• disabled</li> </ul>
Proxy MIP	Shows if Proxy Mobile IP is enabled or disabled for this subscriber session. Possible values are: <ul style="list-style-type: none"> <li>• enabled</li> <li>• disabled</li> </ul>
DMU Auth Failures	The total number of failed Dynamic MIP Key Update authentications for this subscriber session.
Send Terminal Verification	Shows if the FA is enabled to send the terminal verification NVSE in the RRQ. for this subscriber session. Possible values are: <ul style="list-style-type: none"> <li>• enabled</li> <li>• disabled</li> </ul>
Revocation Negotiated	Indicates whether or not MIP Registration Revocation was negotiated between the FA and the HA for this subscriber session. Possible values are : <ul style="list-style-type: none"> <li>• NO</li> <li>• YES</li> </ul>
Revocation I Bit Negotiated	Indicates whether or not the Revocation I bit was negotiated. Possible values are : <ul style="list-style-type: none"> <li>• NO</li> <li>• YES</li> </ul>
MN-HA-SPI Present	Status of dynamic MN-HA-SPI received from AAA in RRP for this subscriber session.
MN-HA-SPI	Specifies the dynamic MN-HA Security Parameter Index (SPI) number received from AAA in RRP for this subscriber session.
FA-HA-SPI Present	Status of dynamic FA-HA-SPI received from AAA in RRP for this subscriber session.

Field	Description
FA-HA-SPI	Specifies the dynamic FA-HA Security Parameter Index (SPI) number received from AAA in RRP for this subscriber session.
FA-HA-Key-Present	The security parameter index (SPI) key used to verify a trusted host environment and that communications are to be established between known hosts. Checks for presence of the FA - HA key. Options are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>
FA-HA-SPI	FA - HA security parameter index (SPI)
HA-RK-Key-Present	The HA root key (RK) received by the HA from the AAA in the Radius Access-Accept. Checks for presence of HA-RK key. Options are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul> <p>Note: True indicates a WiMAX session.</p>
HA-RK-SPI	HA - RK security parameter index (SPI) Note: This field applies to WiMAX sessions only.
HA-RK-Lifetime	The total lifetime applied to an HA-RK. Note: This field applies to WiMAX sessions only.
HA-RK-Remaining-Lifetime	The total remaining lifetime for the HA-RK. Note: This field applies to WiMAX sessions only.

## show mipfa peers fa-service

*Table 403: show mipfa peers fa-service Command Output Descriptions*

Field	Description
Context	The name of the context where the FA service is located.
FA Service	The name of the FA service.
Peer Address	The IP address of the peer.
Current Sessions	The number of sessions currently running on the peer.
Total Sessions	The total number of current and past sessions for the peer.
IP Security	Specifies if IP security is enabled or disabled on the peer.

<b>Field</b>	<b>Description</b>
FA-HA Authentication	Specifies if FA-HA authentication is enabled or disabled on the peer.
HA Monitor Status	Specifies if HA monitor is enabled or disabled on the peer.
Total Peers	The total number of peers in the output of this show command.
Total Current Sessions	The total number of sessions across all peers in the output of this show command.

## CHAPTER 89

# show mipha

This chapter includes the **show mipha** command output tables.

- [show mipha statistics ha-service](#), on page 1425
- [show mipha full username](#), on page 1430
- [show mipha peers ha-service](#), on page 1433

## show mipha statistics ha-service

*Table 404: show mipha statistics ha-service Command Output Descriptions*

Field	Description
HA Service	The name of the HA service for which the statistics are displayed.
MIP AAA Authentication	
Attempts	The number of authentication attempts by the HA including those that are authenticated locally.
Success	The number of authentication attempts completed successfully by the HA including those that are authenticated locally.
Total Failures	The total number of failed AAA authentication attempts that were facilitated.
Actual Auth Failures	The number of AAA authentication attempts that were rejected by the AAA server.
Misc Auth Failures	The number of miscellaneous authorization failures.
<b>Registration Request Received</b>	
Total Received Reg	The total number of registration requests received.
Total Accepted Reg	The total number of registration requests accepted.
<b>Total Denied Reg</b>	The total number of registration requests that were denied.
Total Discarded Reg	The total number of registration requests that were discarded.

Field	Description
Congestion Discarded Reg	The number of requests discarded when congestion control is enabled and the system is in a congested state.
Initial Reg Requests	
Received	The number of initial registration requests received.
Accepted	The number of initial registration requests accepted.
Denied	The number of initial registration requests denied.
Renew Reg Requests	
Received	The number of renewal registration requests received.
Accepted	The number of renewal registration requests accepted.
Denied	The number of renewal registration requests denied.
DeReg Requests	
Received	The number of requests for de-registration received.
<b>Accepted</b>	The number of requests for de-registration accepted.
Denied	The number of requests for de-registration denied.
Handoff Requests	The number of handoff requests by HA for an existing session. <ul style="list-style-type: none"> <li>• Total:</li> <li>• 3GPP2 =&gt; 3GPP2:</li> <li>• 3GPP2 =&gt; WiMax:</li> <li>• WiMax =&gt; 3GPP2:</li> <li>• WiMax =&gt; WiMax:</li> </ul>
Received	The number of handoff request received by HA for an existing session.
Accepted	The number of handoff request accepted by HA.
Denied	The number of handoff request denied by HA.
Registration Reply Sent	
Total	The number of registration replies sent.
Accepted Reg	The number of successful registration replies sent.
Accepted DeReg	The number of successful de-registration replies sent.
Denied	The number of denied registration replies sent.
<b>Bad Request</b>	The number of denied registration replies that were sent with a reply code of 86H (Registration Denied - poorly formed request).

Field	Description
Mismatched ID	The number of denied registration replies that were sent with a reply code of 85H (Registration Denied - registration identification mismatch).
MN Auth Failure	The number of denied registration replies that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).
<b>FA Auth Failure</b>	The number of denied registration replies that were sent with a reply code of 84H (Registration Denied - home agent failed authentication).
Admin Prohibited	The number of denied registration replies that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
No Resources	The number of denied registration replies that were sent with a reply code of 82H (Registration Denied - insufficient resources).
Simul Bindings Exceeded	The number of denied registration replies that were sent with a reply code of 87H (Registration Denied - too many simultaneous mobility bindings).
Unknown HA	The number of denied registration replies that were sent with a reply code of 88H (Registration Denied - unknown home agent address).
Rev Tunnel Unavailable	The number of denied registration replies that were sent with a reply code of 89H (Registration Denied - reverse tunneling unavailable).
Rev Tunnel Mandatory	The number of denied registration replies that were sent with a reply code of 8AH (Registration Denied - reverse tunneling mandatory).
Encap Unavailable	The total number of denied registration replies that were sent with a reply code of 8BH (Registration Denied - reverse tunneling encapsulation style unavailable).
Send Error	The total number of errors that occurred while sending replies.
<b>Unspecified Reason</b>	The total number of denied registration replies that were sent with a reply code of 80H (Registration Denied - reason unspecified).
Unknown CVSE Rcvd	The total number of messages discarded because of an FA reply code of 100 (Critical Vendor Specific Extension Received).
UDP Encap Unavailable	Indicates registration denial caused by unavailable (minimal or GRE) UDP tunnel encapsulation modes.
RRQ Denied Overload/Congestion Control	
Admin Prohibited(reject)	The number of RRQs rejected when congestion control is enabled and the system is in a congested state.
Unknown HA (redirect)	The number of RRQs redirected to an alternate HA when congestion control is enabled and the system is in a congested state.
Registration Revocation	
Sent	Total registration revocation messages sent to the FA.

Field	Description
Retries Sent	Total registration revocation messages re-sent to the FA.
Ack Rcvd	Total registration revocation request acknowledgements received from the FA.
Not Acknowledged	Total registration revocation request messages that timed-out before an acknowledgement was received from the FA.
Rcvd	Total registration revocation request messages received from the FA.
Ack Sent	Total registration revocation request acknowledgements sent to the FA.
P-AAA Messages:	
BC Query Requests:	
Received	The total number of Binding Cache requests received from the proxy-AAA server.
Accepted	The total number of Binding Cache requests received from the proxy-AAA server that were accepted.
Denied	The total number of Binding Cache requests from the proxy-AAA server that were denied.
Discarded	The total number of Binding Cache requests from the proxy-AAA server that were discarded.
BC Query Responses:	
Sent	The total number of Binding Cache responses that were sent to the proxy-AAA server.
BC Found	The total number of Binding Cache responses that were sent to the proxy-AAA server that indicated that the requested binding context was found.
BC Not Found	The total number of Binding Cache responses that were sent to the proxy-AAA server that indicated that the requested binding context was not found.
IP Pool Overflow	The total number of Binding Cache responses that were sent to the proxy-AAA server that indicated that there is an IP Pool overflow condition for the requested binding context.
Miscellaneous	The total number of Binding Cache responses that were sent to the proxy-AAA server that indicated other miscellaneous errors for the requested binding context.
HA-IPSEC Tunnels	
Requests Received	The total number of HA-IPSEC tunnel session requests received.
Initiated	The total number of HA-IPSEC session requests received and initiated.
Denied	The total number of HA-IPSEC session requests received and denied.
Discarded	The total number of HA-IPSEC sessions initiated and discarded.
Connected	The total number of HA-IPSEC sessions initiated and connected.

Field	Description
Failed	The total number of HA-IPSEC sessions initiated, connected and failed.
<b>Tunnel Data Received</b>	
Total Packets	Total number of encapsulated packets received by this system.
IPIP	Total number of IP-in-IP encapsulated packets received by this system.
GRE	Total number of GRE tunneled packets received by this system.
IP-UDP	Total number of IP-in-UDP packets received by the system.
MIP-IPSEC	Total Number of MIP IP Sec packets received by the system.
Total Bytes	Total number of encapsulated bytes received by this system.
IPIP	Total number of IP-in-IP encapsulated bytes received by this system.
GRE	Total number of GRE encapsulated bytes received by this system
IP-UDP	Total number of IP-in-UDP bytes received by the system.
MIP-IPSEC	Total Number of MIP IP Sec bytes received by the system.
<b>Errors</b>	
Protocol Type Error	Total number of encapsulated packets received with protocol type errors.
GRE Key Absent	Total number of GRE tunneled key absent errors received.
GRE Checksum Error	Total number of checksum errors that occurred in GRE tunnels received by this system.
Invalid Packet Length	Total number of encapsulated packets received with invalid packet lengths.
No Session Found	Total number of errors that occurred due to no session being present in received tunnels.
<b>Tunnel Data Sent</b>	
Total Packets	The total number of encapsulated packets sent by this system.
IPIP	The total number of IP-in-IP encapsulated packets sent by this system.
GRE	The total number of GRE encapsulated packets sent by this system.
IP-UDP	Total number of IP-in-UDP packets sent by the system.
MIP-IPSEC	Total Number of MIP IP Sec packets sent by the system.
Total Bytes	The total number of encapsulated bytes sent by this system.
IPIP	The total number of IP-in-IP encapsulated bytes sent by this system.
GRE	The total number of GRE encapsulated bytes sent by this system
IP-UDP	Total number of IP-in-UDP bytes sent by the system.

Field	Description
MIP-IPSEC	Total Number of MIP IP Sec bytes sent by the system.
Total Disconnects	The total number of sessions that were disconnected.
Lifetime expiry	The total number of sessions that were disconnected due to the expiration of their lifetime setting.
Deregistrations	The total number of sessions that were disconnected due to de-registrations.
Admin Drops	The total number of sessions that were disconnected due to an administrative clearing of calls (i.e. executing the <b>clear subscribers</b> command).
FA Revocations	The total number of disconnects that were due to revocations received from the FA.
IPSEC Tunnel Down	The total number of sessions that were disconnected due to IPSEC tunnels down.
Stale Key Disconnect ♦	The number of sessions that were disconnected due to a Stale Key ♦.
Other Reasons	The total number of disconnects that were due to reasons other than those already listed.
<b>HA Monitoring</b>	
Monitor RRQ Received	The total number of HA monitor request messages received by this HA due to inactivity.
Monitor RRP Sent	The total number of HA monitor response messages sent by this HA.
<b>DMU Refresh Key</b>	
Attempted	The number of Dynamic Mobile IP Key Update refreshes attempted ♦.
<b>Invalid Packets</b>	
Discarded	The number of invalid packets discarded ♦

## show mipha full username

Table 405: show mipha full username Command Output Descriptions

Field	Description
Username	Subscriber's username
Callid	Subscriber's call identification number
MSID	Subscriber's mobile station identification number (MSID)
Home Address	IP address assigned to the subscriber's mobile node for the session
HA Address	IP address of the HA facilitating the subscriber's MIP session

Field	Description
Send NAI Extension in Revocation Message	Indicates whether or not an NAI extension is sent in a revocation message for this user. Options are: <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>
Binding #	The mobility binding record (MBR) number associated with a particular subscriber session. Since it is possible for a single subscriber to have multiple bindings, information for each of the subscriber's binding records will be displayed according to the MBR number.
Care of Address	The IP address of the device terminating the tunnel to the mobile node. The address may belong to either a Foreign Agent that is facilitating the subscriber's Mobile IP session or another device that the mobile node is associated (co-located) with.
FA Address	The IP address of the Foreign Agent that is facilitating the subscriber's Mobile IP session.
Lifetime	The maximum amount of time that the subscriber's session can remain registered.
Remaining Life	The amount of time that is currently available to the subscriber to remain registered.
Reverse Tunneling	Displays whether or not reverse tunneling is enabled for the subscriber's session.
Encapsulation Type	The encapsulation method used for the subscriber's session.
GRE Key	The key that uniquely identifies the subscriber session when the Generic Routing Encapsulation (GRE) protocol Encapsulation Type
IPSec Required	Indicates whether or not IPSec is required for the subscriber Mobile IP session.
IPSec Ctrl Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the control tunnel has been established.
IPSec Data Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the data tunnel has been established.
Revocation Negotiated	Indicates whether or not MIP Registration Revocation was negotiated between the FA and the HA for this subscriber session. Options are: <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>
Rev I bit Negotiated	Indicates whether or not the Revocation I bit was negotiated. Possible values are : <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>

Field	Description
Colocated COA	Indicates whether or not the subscribers that registered a MIP colocated COA directly with the HA. Options are: <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>
NAT Detected	Indicates whether or not network address translation (NAT) is detected. Options are: <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>
MN-HA-Key-Present	The security parameter index (SPI) key used to verify a trusted host environment and that communications are to be established between known hosts. Checks for presence of mobile node (MN) - home agent (HA) key. Options are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>
MN-HA-SPI	Mobile node (MN) - home agent (HA) security parameter index (SPI).
FA-HA-Key-Present	The security parameter index (SPI) key used to verify a trusted host environment and that communications are to be established between known hosts. Checks for presence of the FA - HA key. Options are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul>
FA-HA-SPI	FA - HA security parameter index (SPI)
HA-RK-Key-Present	The HA root key (RK) received by the HA from the AAA in the Radius Access-Accept. Checks for presence of HA-RK key. Options are: <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul> <p>Note: True indicates a WiMAX session.</p>
HA-RK-SPI	HA - RK security parameter index (SPI) Note: This field applies to WiMAX sessions only.
HA-RK-Lifetime	The total lifetime applied to an HA-RK. Note: This field applies to WiMAX sessions only.
HA-RK-Remaining-Lifetime	The total remaining lifetime for the HA-RK. Note: This field applies to WiMAX sessions only.

# show mipha peers ha-service

*Table 406: show mipha peers ha-service Command Output Descriptions*

Field	Description
Context	The name of the context where the HA service is located.
HA Service	The name of the HA service.
Peer Address	The IP address of the peer.
Current Sessions	The number of sessions currently running on the peer.
Total Sessions	The total number of current and past sessions for the peer.
IP Security	Specifies if IP security is enabled or disabled on the peer.
FA-HA Authentication	Specifies if FA-HA authentication is enabled or disabled on the peer.
Total Peers	The total number of peers in the output of this show command.
Total Current Sessions	The total number of sessions across all peers in the output of this show command.

# CHAPTER 90

## show mipv6ha

This chapter includes the **show mipv6ha** command output tables.

- [show mipv6ha-service all, on page 1435](#)
- [show mipv6ha statistics, on page 1436](#)

## show mipv6ha-service all

*Table 407: show mipv6ha-service all Command Output Descriptions*

Field	Description
Service Name	The mipv6ha service name.
Context	The context in which the service is configured.
Bind	The bind status.
Max Subscribers	The maximum number of subscribers.
Local IPv6 Address	IPv6 address of the server where this service is located.
Lifetime	The accepted lifetime interval for this session.
Simul Bindings	Specifies the maximum number of "care-of" addresses that can simultaneously be bound for the same user as identified by NAI and Home address.
Setup Timeout	The session setup timeout duration.
Sequence Number Validation	Specifies the sequence number validation of the received MIPV6 control packet by the Home Agent (HA) as per RFC 3775.
Refresh Advice Option	Displays the refresh advice option in the binding acknowledgements sent by the home agent.
Refresh Interval Percent	Displays the amount of the granted lifetime to be used in the refresh interval mobility option in Binding Acknowledgement sent by the HA.
Timestamp Replay Protection	Displays the acceptable difference in timing (between timestamps) before rejecting packet.

Field	Description
Timestamp Tolerance	Total variation allowed in timestamp mismatch.
Default Subscriber	Name of the default subscriber.
AAA accounting	Displays if AAA accounting is enabled or disabled.
Service Status	Status of this service.
Newcall Policy	Specify that the new call policy enabled or disabled to handle new calls. Possible values are: <ul style="list-style-type: none"> <li>• NONE</li> <li>• REJECT</li> </ul>

## show mipv6ha statistics

Table 408: show mipv6ha statistics Command Output Descriptions

Field	Description
MIP AAA Authentication:	
Attempts:	Total MIP AAA Authentication attempts.
Success:	Total MIP AAA Authentication attempts that were successful.
Total Failures:	Total MIP AAA Authentication attempts that failed.
Actual Auth Failures:	Actual number of MIP AAA Authentication that failed.
Misc Auth Failures:	Total number of MIP AAA Authentication that failed.
Binding Updates Received:	
Total Received:	Total number of Binding Updates that were received.
Total Accepted:	Total number of Binding Updates that were accepted.
Total Denied:	Total number of Binding Updates that were denied.
Total Discarded:	Total number of Binding Updates that were discarded.
Congestion Discarded Reg:	The total number of requests discarded when congestion control is enabled and the system is in a congested state.
Initial Binding Update Requests:	
Received:	Total number of Initial Binding Update Requests that were received.
Accepted:	Total number of Initial Binding Update Requests that were accepted.

Field	Description
Denied:	Total number of Initial Binding Update Requests that were denied.
Refresh Binding Update Requests:	
Received:	Total number of Refresh Binding Update Requests that were received.
Accepted:	Total number of Refresh Binding Update Requests that were accepted.
Denied:	Total number of Refresh Binding Update Requests that were denied.
DeReg Requests:	
Received:	Total number of requests for de-registration that were received.
Accepted:	Total number of requests for de-registration that were accepted.
Denied:	Total number of requests for de-registration that were denied.
Handoff Requests:	
Received:	Total number of requests for handoffs that were received.
Accepted:	Total number of requests for handoffs that were accepted.
Denied:	Total number of requests for handoffs that were denied.
Binding Acknowledgements Sent:	
Total:	Total number of requests for Binding Acknowledgements.
Accepted Reg:	The total number of registration requests accepted.
Accepted DeReg:	The total number of deregistration requests accepted.
Denied:	The total number of registration requests denied.
Send Error:	The total number of errors that occurred while sending replies.
Binding Update Deny Reasons:	
Insufficient Resources:	The total number of binding update requests that were denied because of insufficient resources.
Mismatched ID:	The total number of binding update requests that were denied because of a mismatched ID.
MN Auth Failure:	The total number of binding update requests that were denied because of a MN authentication failure.
Admin Prohibited:	The total number of registration requests that were denied due to being administratively prohibited.
Msg ID Required:	The total number of bind update denied with status code 91H (Msg-Id-Required).

Field	Description
DAD Failed:	The total number of bind update denied with status code 86H (Duplicate Address Detection failed).
Not Home Subnet:	The total number of bind update denied with status code 84H (Not Home Subnet)
Sequence Out Of Window:	The total number of bind update denied with status code 87H (Sequence number Out of Window).
Reg Type Change Disallowed:	The total number of bind update denied with status code 8BH (Registration Type change disallowed).
Unspecified Reason:	The total number of bind update denied with status code 80H (Reason Unspecified).
Update Denied - Insufficient Resource Reasons:	The total number of binding update requests that were denied because of Insufficient Resources.
No Session Manager:	The total number of binding update requests that were denied due to the lack of available Session Manager tasks. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
Binding Updates Discard Reasons:	
Congestion Discarded:	HAMGR discards when configured to drop packets on congestion
Checksum Error:	v6HA driver discard on checksum failure for BU packet
Initial Auth Pending:	V6HA driver discard when retry BU's are received. Discarded packet is included as part of Init/Renew/Dereg/Handoff request counters as packet is discarded before processing them in detail.
Session Not Found:	When HAMGR forwards RRQ for existing session but session is not found in Sessmgr
HAMGR Not Ready:	When HAMGR is not yet ready and packet buffering limit is exceeded
Decode Failure:	When BU packet decoding fails in HAMGR.
Invalid Buffer Length:	When there is mismatch in BU packet buffer length and expected length.

## show mme-service all

**Table 409: show mme-service all Command Output Descriptions**

Field	Description
Service name	The name of the MME service configured and running on the system.

Field	Description
Context	The name of the VPN context in which MME service configured and running on the system.
Status	Indicates whether MME service is started or not.
Bind	Indicates whether an S1-MME reference point is bound to an interface in the configured MME service or not.
Dynamic TAL Depth	Displays the configured number of unique historic entries in a Tracking Area List (TAL).
S1-MME IP Address	The IP address of the chassis on which MME service is configured. This is the S1-MME interface IP address of MME service.
Crypto-Template Name	The configured crypto-template name associated with the MME service.
Max Subscribers	The configured number of subscribers allowed on the MME service.
S1-MME sctp port	The source port number for SCTP communication. This source SCTP port will be used for binding the SCTP socket to communicate with the eNodeB using S1-MME with this MME service
MME Code	The MME identifier in EPC networks. This is used to construct the MME identifier.
MME Group	The MME group identifier in EPC networks. This works as a group of MMEs in a shared network. The MME group is used to construct the MME identifier.
PLMN Id	The Public Land Mobile Network identifier of which this MME service belongs to. It contains Mobile Country Code (MCC) and Mobile Network Code (MNC).
PS-LTE Operation	Displays whether the MME service has been enabled for Public Service LTE (PS-LTE) mode (as configured by the <b>ps-lte</b> command).  If enabled, this field also displays the IPv4 or IPv6 address for the S11 interface of the co-located S-GW as configured by the same command.
Network-Global-MME-ID-Mgmt-DB	The LTE Network Global MME ID Management Database to which this MME Service is associated. This management database is used to manage associations between PLMN IDs and MME group ID ranges.
Foreign-PLMN-GUTI-Mgmt-DB	The LTE Foreign PLMN GUTI Management Database to which this MME Service is associated. This management database is used to control the acceptance or immediate reject of Attach Requests and TAU Requests containing a GUTI from a specific PLMN.
EGTP Context	The name of the VPN context in which Evolved GPRS Tunnelling Protocol (eGTP) service is configured and associated with this MME service to configure different interfaces with MME. Typically it is the destination context on system.
EGTP Service	The name of the Evolved GPRS Tunnelling Protocol (eGTP) service which is associated with this MME service to configure different interfaces with MME.
EGTP Sv Context	The name of the context in which the egtp-sv-service is configured.
EGTP Sv Service	The name of the eGTP Sv service associated with the MME service.
SGTPC Context	The name of the context in which the sgtpc-service is configured.

Field	Description
SGTPC Service	The name of the SGTPC service associated with the MME service.
MME HSS Context	The name of the context in which the HSS peer service is configured.
MME HSS Service	The name of the HSS peer service that communicates with an HSS associated with this MME service.
SGS Context	The name of the context in which the SGs service is configured.
SGS Service	The name of the SGs service associated with this MME service.
SMSC Context	The name of the context in which the SMSC service is configured.
SMSC Service	The name of the name of the SMSC service associated with the MME service.
Location Service	The name of the Location Service (SLg interface) associated with this MME service.
Max bearers per MS	The maximum number of bearers per MS allowed with in this MME service. This can be configured between 1 and 11. By default 11 bearers supported per MS.
Max PDNs per MS	The maximum number of PDNs per MS allowed with in this MME service. This can be configured between 1 and 3. By default 3 bearers supported per MS.
Peer MME GUMMEI	Displays the IP addresses of peer MMEs looked up using GUMMEI during handovers between any radio access technology and the E-UTRAN.
Peer MME TAI	Displays the configured TAI Management Database name associated with the service used for peer MME selection.
Peer SGSN RAI	Displays the parameters configured for peer SGSN discovery using the Routing Area Identity.
Peer SGSN RNCID	Displays the parameters configured for peer SGSN discovery using the Radio Network Controller ID.
NRI Length	Displays the NRI length entries configured for this MME service. If none are configured, the display shows "None".

Field	Description
PGW	<p>This group The parameters related to Packet Data Network Gateway (P-GW), which is selected by this MME service for providing PDN connectivity to subscribers. This group contains following parameters:</p> <ul style="list-style-type: none"> <li>• <b>Address:</b> The IP address of P-GW which is selected by this MME service for providing PDN connectivity to subscribers.</li> <li>• <b>S5-S8 Protocol:</b> The protocol configured to communicate between Serving Gateway (S-GW) and P-GW on S5 and S8 interface. P-MIP and GTP can be configured on this interface. By default GTP is supported on this interface.</li> <li>• <b>Ue-usage-Type:</b> Configures UE usage type for disconnecting PDN for up service area.</li> <li>• <b>Collocated-node:</b> Configures the Collocation name to select the collocated S/PGW node IP addresses and/or P-GW Node name for 5GS Interworking.</li> </ul> <p><b>Note</b> PGW Node name should be configured under <b>Collocated-node</b> for 5GS interworking with N26 interface. This configuration allows the <b>P-GW Node Name</b> to include the configured name in <b>Context Response</b> and <b>Forward relocation Request Response</b> messages from MME to AMF over N26 interface.</p> <ul style="list-style-type: none"> <li>• <b>Smf-combined:</b> Configures a combined P-GW and SMF.</li> <li>• <b>Weight:</b> The weight allotted the selected P-GW for selection of P-GW by MME service.</li> </ul>
SGW Pool	Displays the configured TAI Management Object name associated with the service used for creating S-GW pools that, in turn, are used for S-GW selection.
Peer MME DNS Context	The name of the context where the DNS configuration resides for peer MME associations and discoveries.
Peer SGSN DNS Context	The name of the context where the DNS configuration resides for peer SGSN associations and discoveries.
PGW DNS Context	The name of the context in which the DNS service configured to locate and select the P-GW by this MME Service.
Send EMM Info for Periodic TAU	Indicates whether the EMM information for periodic TAU is enabled or disabled.
Access Type	Indicates the access type—WB-EUTRAN, NB-IOT, or WB-EUTRAN and NB-IOT.
SGW DNS Context	The name of the context in which the DNS service is configured to locate and select the S-GW by this MME Service.
DNS MSC Context	The name of the context in which the DNS service is configured to locate and select the MSC by this MME Service.
SMSC Context	The name of the context in which the SMSC service is associated to the MME service.

Field	Description
Implicit Detach Timeout	<p>The timeout duration in seconds after which subscriber will implicitly be detached from the network if there is no activity. This value can be configured from 1 second to 3600 seconds. By default timeout duration for this timer is 3600 seconds.</p> <p>This timer starts when mobile reachable timer expires while the network is in EMM-IDLE mode and Idle mode Signaling Reduction (ISR) is activated and stops when NAS signalling connection established.</p> <p>Note: Generally this timer value is 240 seconds (4 minutes) more than the timeout value of T3423 timer.</p>
T3346 Timeout	<p>Displays the timeout duration configured for the T3346 timer. This timer can be configured to any value from 0 to 18600 seconds. Default: 1500 seconds (25 minutes).</p> <p>If an EMM request is rejected by MME because of congestion, it shall have EMM cause as congestion (#22) and shall include back-off timer (T3346) IE. The back-off timer shall be chosen randomly and shall be 10% below or above the configured T3346 timer value.</p>
T3412 Timeout	<p>Displays the timeout duration configured for the T3412 timer. This timer is used for periodic tracking area update (P-TAU). When this timer expires, the periodic tracking area updating procedure starts and the timer is set to its initial value for the next start. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the UE goes from EMM-CONNECTED to EMM-IDLE mode and stops when the UE returns to EMM-CONNECTED mode.</p>
T3412 Extended Timeout	<p>Displays the timeout duration configured for the T3412 extended timer. This timer is used for periodic tracking area update (P-TAU). This timer helps the MME to reduce network load from periodic TAU signaling and to increase the time until the UE detects a potential need for changing the RAT or PLMN. This timer can be configured to any value from 0 to 1116000 seconds. Default: 3600 seconds (60 minutes).</p>
T3413 Timeout	<p>Displays the timeout duration configured for the T3413 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>The timer starts when MME initiates the EPS paging procedure to the EMM entity in the network and requests the lower layer to start paging. This timer stops for the paging procedure when a response is received from the UE.</p>
T3422 Timeout	<p>Displays the timeout duration configured for the T3422 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the MME initiates the detach procedure by sending a DETACH REQUEST message to the UE and stops upon receipt of the DETACH ACCEPT message.</p>
T3423 Timeout	<p>Displays the timeout duration configured for the T3423 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the UE enters the EMM-DEREGISTERED state or when entering the EMM-CONNECTED mode. It stops while the UE is in EMM-REGISTERED-NO-CELL-AVAILABLE state and Idle mode Signaling Reduction (ISR) is activated.</p>

Field	Description
T3450 Timeout	<p>Displays the timeout duration configured for the T3450 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the MME initiates the Globally Unique Temporary Identifier (GUTI) reallocation procedure by sending a GUTI REALLOCATION COMMAND message to the UE and stops upon receipt of the GUTI REALLOCATION COMPLETE message.</p> <p>This timer is also used for tracking area update procedures.</p>
T3460 Timeout	<p>Displays the timeout duration configured for the T3460 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>The timers starts when the network initiates the authentication procedure by sending an AUTHENTICATION REQUEST message to the UE and stops upon receipt of the AUTHENTICATION RESPONSE message.</p>
T3470 Timeout	<p>Displays the timeout duration configured for the T3470 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>The timers starts when the network initiates the identification procedure by sending an IDENTITY REQUEST message to the UE and stops upon receipt of the IDENTITY RESPONSE message.</p>
ISDA Guard Timeout	Specifies the expiry time to wait to receive the UEs current location information.
ISDA Location Validity Time	Specifies the expiry time for the age of the UE's location information. During this time, if the EPS Location Information with current location is requested in the ISDR, the MME does not process a location procedure with the eNodeB, but sends the location information from the cache.
Mobile Reachable Timeout	Displays the timeout duration after which the reachability procedure will be discarded and a reattempt starts. This duration can be configured to any value between 1 and 20 seconds. By default it is 4 second.
T3396 Timeout	<p>Displays the timeout duration configured for the T3396 timer. This timer can be configured to any value from 0 to 18600 seconds. Default: 1500 seconds (25 minutes).</p> <p>If an ESM request is rejected because of congestion, the rejects shall have ESM cause #26: "Insufficient resources" and the MME will include the back-off timer IE (T3396). The back-off timer shall be chosen randomly and shall be 10% below or above the configured T3396 timer value.</p>
T3485 Timeout	<p>Displays the timeout duration configured for the T3485 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer is used for default EPS bearer context activation procedure.</p> <p>This timer starts when the MME sends an ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message to the UE and stops when it receives an ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT or ACTIVATE DEFAULT EPS BEARER CONTEXT REJECT message from the UE.</p>

Field	Description
T3486 Timeout	<p>Displays the timeout duration configured for the T3486 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the MME sends a MODIFY EPS BEARER CONTEXT REQUEST message to the UE and stops when it receives a MODIFY EPS BEARER CONTEXT ACCEPT or REJECT message from the UE.</p>
T3495 Timeout	<p>Displays the timeout duration configured for the T3495 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer is used for default EPS bearer context deactivation procedure.</p> <p>This timer starts when the MME sends a DEACTIVATE EPS BEARER CONTEXT REQUEST message to the UE and stops when it receives a DEACTIVATE EPS BEARER CONTEXT ACCEPT or DEACTIVATE EPS BEARER CONTEXT REJECT message from the UE.</p>
T3489 Timeout	<p>Displays the timeout duration configured for the T3489 timer. This timer can be configured to any value between 1 and 20 seconds. By default it is 6 second.</p> <p>This timer starts when the MME sends an ESM INFORMATION REQUEST message to the UE and stops when it receives an ESM INFORMATION RESPONSE message from the UE.</p>
TC1N Timeout	<p>Displays the timeout duration configured for the TC1N timer. This timer can be configured to any value between 1 and 20 seconds. By default, it is 5 seconds.</p>
TR1N Timeout	<p>Displays the timeout duration configured for the TR1N timer. This timer can be configured to any value between 1 and 300 seconds. By default, it is 30 seconds.</p>
TR2N Timeout	<p>Displays the timeout duration configured for the TR2N timer. This timer can be configured to any value between 1 and 300 seconds. By default, it is 30 seconds.</p>
MT Queue Timeout	<p>Displays the timeout duration configured for the MT Queue timer. This timer can be configured to any value between 1 and 300 seconds. By default, it is 30 seconds.</p>
CP Data Max Retransmissions Count	<p>Displays the number of times CP Data for SMS is retransmitted.</p>
HO Resource Release Timeout	<p>Displays the configuration of the <b>ho-resource-release-timeout</b> command.</p> <p>This is the amount of time in milliseconds that the MME will hold on to bearers and E-RABs after an S1-based handover has been initiated. When this timer expires, the source MME will send a UE Context Release to the source eNodeB. Refer to 3GPP TS 23.401 Section 5.5.1.2.2 for additional information about the use of this timer.</p>

Field	Description
Encryption Algorithms	<p>The encryption algorithm and its priority applied for security procedures through this MME service. It indicates following settings:</p> <ul style="list-style-type: none"> <li>• <b>Priority:</b> The priority set for applied encryption algorithm. The least value has the highest preference. Possible priority values are between 1 to 3.</li> <li>• <b>Algorithm:</b> The applied encryption algorithm. Possible algorithms are: <ul style="list-style-type: none"> <li>• <b>128-eea0:</b> Null ciphering algorithm (128-EEA0) for LTE encryption as the encryption algorithm for security procedures. This is the default encryption algorithm applicable for security procedures.</li> <li>• <b>128-eea1:</b> SNOW 3G synchronous stream ciphering algorithm (128-EEA1) for LTE encryption as the encryption algorithm for security procedures.</li> <li>• <b>128-eea2:</b> Advance Encryption Standard (AES) ciphering algorithm (128-EEA2) for LTE encryption as the encryption algorithm for security procedures.</li> <li>• <b>128-eea3:</b> ZUC algorithm (128-EEA3) for LTE encryption as the encryption algorithm for security procedures.</li> </ul> </li> </ul> <p>By default, the <b>128-eea0</b> encryption algorithm is applicable.</p>
Integrity Algorithms	<p>The priority and the integrity algorithm applied for security procedures through the MME service. It indicates the following settings:</p> <ul style="list-style-type: none"> <li>• <b>Priority:</b> The priority set for the applied integrity algorithm. The least value has the highest preference. Possible priority values are between 1 to 3.</li> <li>• <b>Algorithm:</b> The applied integrity algorithm. Possible algorithms are: <ul style="list-style-type: none"> <li>• <b>128-eia0:</b> Null ciphering algorithm (128-EIA0) for LTE integrity as the integrity algorithm for security procedures.</li> <li>• <b>128-eia1:</b> SNOW 3G synchronous stream ciphering algorithm (128-EIA1) for LTE integrity as the integrity algorithm for security procedures.</li> <li>• <b>128-eia2:</b> Advance Encryption Standard (AES) ciphering algorithm (128-EIA2) for LTE encryption as the integrity algorithm for security procedures. This is the default encryption algorithm applicable for security procedures.</li> <li>• <b>128-eia3:</b> ZUC algorithm (128-EIA3) for LTE integrity as the integrity algorithm for security procedures.</li> </ul> </li> </ul>
Setup Timeout	<p>The setup timeout duration configured for call setup for MME calls.</p> <p>Range: 1 to 10000.</p> <p>Default: 60 seconds</p>

Field	Description
UE DB Purge Timeout	<p>The configured timeout duration in minutes to purge UE record from UE database which is maintained by MME as cache of EPS context per UE keyed by IMSI/GUTI to allow UE to attach by GUTI and reuse previously established security parameters. This cache will be maintained in each session manager where the first attach occurred for an UE and purge after configured timeout period expires.</p> <p>Range: 1 to 20160. Default: 10080 mins</p>
Maximum paging attempts	<p>Indicates number of paging attempts configured in an MME service to send for an UE while in idle mode.</p> <p>Range: 1 to 10 Default: 3</p>
Policy for Idle Mode Detach	<p>Displays the configured user policy in an MME service for detach procedure when a UE is in IDLE mode. Possible actions are:</p> <ul style="list-style-type: none"> <li>• Explicit: Detach procedure starts after paging the UE</li> <li>• Implicit: Detach procedure starts without paging the UE</li> </ul> <p>Default: Implicit detach</p>
NAS Max Retransmissions Count	<p>Displays the configured maximum number of retransmissions for each configured NAS message.</p>
Set UE Time (attach processing)	<p>Displays the configuration of the <b>set-ue-time</b> keyword in the <b>policy attach</b> command. Possible states are Enabled or Disabled.</p> <p>If enabled, this field also shows the preference for delivery of EMM information message to the UE, either MME Preferred or MSC Preferred.</p>
Reject attach with non-3GPP char APN	<p>Displays whether the feature is enabled or disabled at MME to reject APNs with non-standard characters in Attach request.</p>
Reject pdn connect with non-3GPP char APN	<p>Displays whether the feature is enabled or disabled at MME to reject APNs with non-standard characters in PDN Connect request.</p>
IMEI Query (attach processing)	<p>Displays the mobile equipment identity query type for the UE related procedure configured in the attach policy in the MME service. Possible actions are:</p> <ul style="list-style-type: none"> <li>• IMEI: System configured to use International Mobile Equipment Identity as query type for UE related procedures.</li> <li>• IMEI-SV: System configured to use International Mobile Equipment Identity (IMEI) - Software Version (SV) as query type for UE related procedures.</li> <li>• None: System configured to not to use any type, neither IMEI or IMEI-SV, as query type for UE related procedures.</li> </ul> <p>Default: None</p>

Field	Description
EIR Query (attach processing)	Displays the Equipment Identity Register query status in the attach policy configuration for the MME service. Possible states are Enabled or Disabled.
Deny-greylisted (attach processing)	Displays whether the MME will deny a call if the equipment is determined to be on the grey list during the attach procedure. By default, this option is disabled; the MME will allow this call to go through.  To enable this option, refer to the verify-equipment-identity function of the <b>policy attach</b> command.
Deny-unknown (attach processing)	Displays whether the MME will deny a call if the Equipment Identity Register responds with EQUIPMENT STATUS UNKNOWN to a Mobile Identity Check Request during the attach procedure. By default, this option is disabled; the MME will allow the call to go through.  To enable this option, refer to the verify-equipment-identity function of the <b>policy attach</b> command.
Allow-ECA timeout (attach processing)	Displays whether the MME will allow a call to go through if no response is received from an Equipment Identity Register for a Mobile Identity Check Request during the attach procedure. By default, this option is disabled; the MME will deny this call.  To enable this option, refer to the verify-equipment-identity function of the <b>policy attach</b> command.
Verify Emergency (attach processing)	Displays whether the MME will query the EIR for equipment status during Emergency attach processing. By default, this option is disabled.  To enable this option, refer to the verify-equipment-identity function of the <b>policy attach</b> command.
Set UE Time (TAU processing)	Displays the configuration of the <b>set-ue-time</b> keyword in the <b>policy tau</b> command. Possible states are Enabled or Disabled.  If enabled, this field also shows the preference for delivery of EMM information message to the UE, either MME Preferred or MSC Preferred.
IMEI Query (TAU processing)	Displays the mobile equipment identity query type for the UE related procedure configured in the TAU policy in the MME service. Possible actions are: <ul style="list-style-type: none"> <li>• IMEI: System configured to use International Mobile Equipment Identity as query type for UE related procedures.</li> <li>• IMEI-SV: System configured to use International Mobile Equipment Identity (IMEI) - Software Version (SV) as query type for UE related procedures.</li> <li>• None: System configured to not to use any type, neither IMEI or IMEI-SV, as query type for UE related procedures.</li> </ul> Default: None
EIR Query (TAU processing)	Displays the Equipment Identity Register query status in the TAU policy configuration for the MME service. Possible states are Enabled or Disabled.

Field	Description
Deny-greylisted (TAU processing)	<p>Displays whether the MME will deny a call if the equipment is determined to be on the grey list during the TAU procedure. By default, this option is disabled; the MME will allow this call to go through.</p> <p>To enable this option, refer to the <code>verify-equipment-identity</code> function of the <b>policy attach</b> command.</p>
Deny-unknown (TAU processing)	<p>Displays whether the MME will deny a call if the Equipment Identity Register responds with EQUIPMENT STATUS UNKNOWN to a Mobile Identity Check Request during the TAU procedure. By default, this option is disabled; the MME will allow the call to go through.</p> <p>To enable this option, refer to the <code>verify-equipment-identity</code> function of the <b>policy attach</b> command.</p>
Allow-ECA timeout (TAU processing)	<p>Displays whether the MME will allow a call to go through if no response is received from an Equipment Identity Register for a Mobile Identity Check Request during the TAU procedure. By default, this option is disabled; the MME will deny this call.</p> <p>To enable this option, refer to the <code>verify-equipment-identity</code> function of the <b>policy attach</b> command.</p>
Verify Emergency (TAU processing)	<p>Displays whether the MME will query the EIR for equipment status during Emergency TAU processing. By default, this option is disabled.</p> <p>To enable this option, refer to the <b>verify-equipment-identity</b> option of the <b>policy attach</b> command.</p>
Initial Context Setup Failure-TAU	<p>Displays the behavior of the MME when an initial context failure is received from the eNodeB during the processing of a TAU request. By default, the MME moves the UE to IDLE MODE. The MME can optionally be configured to detach the UE when a specific cause code is returned from the eNodeB. The MME matches this cause code against those defined in the specified "Cause Code Group &lt;name&gt;".</p> <p>To configure this setting, refer to the <b>initial-context-setup-failure</b> option of the <b>policy tau</b> command.</p>
Initial Context Setup Failure-Svc Req	<p>Displays the behavior of the MME when an initial context failure is received from the eNodeB during the processing of a service request or extended service request. By default, the MME detaches the UE. The MME can optionally be configured to move the UE to Idle Mode when a specific cause code is returned from the eNodeB. The MME matches this cause code against those defined in the specified "Cause Code Group &lt;name&gt;".</p> <p>To configure this setting, refer to the <b>initial-context-setup-failure</b> option of the <b>policy tau</b> command.</p>
PDN reconnect type	<p>Displays the PDN reconnect type as configured for the MME service. Possible values are multiple, reject, or restart.</p>
Newcall Policy	<p>Indicates whether the policy to handle new call requests for busy-out conditions on MME service is configured or not. If configured, by default it will be set to reject the new calls during busy-out condition.</p>

Field	Description
Policy Overload	The configured policy for system to act on any new session/call request when system is crossing the threshold limits of sessions/calls in an MME service. Possible actions are: <ul style="list-style-type: none"> <li>• <b>Drop</b>: Drops the packets incoming with new session requests to avoid overload on MME node</li> <li>• <b>Reject</b>: Rejects the new session/call request and responds with a reject message when threshold for allowed call session is crossed on MME node</li> </ul>
Location Reporting	Displays the configuration of the Location Reporting function for the service. Possible configurations are Enabled or Disabled.
CSG Change Notification	Displays the configuration of Closed Subscriber Group notification to the SGW/PGW for the service. Possible configurations are Enabled or Disabled.
Heuristic Paging	Displays the configuration of the Heuristic Paging function for the service. Possible configurations are Enabled or Disabled.
Heuristic Paging Map	Displays the paging-map that is associated with the MME service.
ISR Capability	Displays the configuration of the Idle mode Signaling Reduction (ISR) feature. Possible configurations are Enabled or Disabled.
Policy Sctp-Down	Displays the configuration of the SCTP-Down policy function for the service. Possible configurations are Detach-UE or Idle-Mode-Entry.
Policy Inter-RAT Indirect Fwd Tunnels	Display whether indirect forwarding is allowed during 3G to 4G handovers. Possible states are Enabled or Disabled. This field shows the configuration of the <b>policy inter-rat indirect-forwarding-tunnels</b> command.
Policy Inter-RAT Ignore SGSN ContextID	Displays whether the MME to configured to ignore any Context-ID mismatch between HSS and HLR and to use the Context-ID from the HSS to override the Context-ID from the source SGSN. If this option is disabled (default), the MME will drop the PDN when there is a Context-ID mismatch. This field shows the configuration of the <b>policy inter-rat ignore-sgsn-context-id</b> command.
Policy Inter-RAT Select Topologic SGW	Displays whether the MME to configured to determine and select the topologically-closest S-GW to the P-GW for Gn/Gp handoff scenarios. This field shows the configuration of the <b>policy inter-rat select-topologic-sgw</b> command.
Policy S1-Reset	Displays the configuration of the S1-Reset policy function for the service. Possible configurations are Detach-UE or Idle-Mode-Entry.
Overcharge Protection	Displays the configuration of the Overcharging Protection feature, either "Not configured" or, when enabled, the configured S1-AP cause code group name.
Relative Capacity	Displays the configuration of the Relative Capacity function for the service. This field displays a number between 0 and 255 representing the weight of the MME to the eNodeB for load balancing pools of MMEs.
Trap S1 Initial Establishment	Displays whether traps will be sent for every initial S1 connection between the MME and the eNodeB. Possible states are Enabled or Disabled.

Field	Description
Trap S1 Path Establishment	Displays whether a trap will be sent when the S1 Path is established.
ENodeB Cache Timeout	Shows the time in minutes the ENodeB information is cached after the ENodeB terminates a connection.
Subscriber Map	Displays the name of the subscriber map associated with the service.
Lte Emergency Profile	Displays the name of the lte emergency profile associated with the mme-service. In order to support LTE emergency services, an lte emergency profile must be configured under lte-policy and be associated with the mme-services.
Network (Across All RATs)	Displays the configuration of the Network policy function for the service. Possible configurations are Dual Addressing Supported or Dual Addressing Not Supported.
Inter-RAT Mapping RNCID to eNBID	Displays the configuration specifying how Inter-RAT Target RNC-ID fields are mapped to Target eNodeB-ID fields. Possible values are matype-default-includes-only-enb (default) and matype1-includes-enb-tai.
MME Manager Recovery	Displays the configuration of the MME Manager Recovery function for the service. Possible configurations are Reset S1 Peers or No Reset S1 Peers.
GTPv2 Piggybacking	Displays the configuration of the GTPv2 Piggybacking function for the service. Possible configurations are Enabled or Disabled.
<b>Important</b> The following fields are only available in 12.2 and earlier releases.	
MME Offloading	Specifies if MME offloading is enabled or disabled.
MME Init Release Timeout	The timeout for triggering the IDLE MODE ENTRY procedure with cause "Load balancing TAU required" for UEs that are ECM_CONNECTED.  This field is only visible if MME offloading is enabled.
MME Paging Init Timeout	The timeout for triggering the PAGING procedure for UEs that are ECM_IDLE. After bringing the UE back to ECM_CONNECTED, the IDLE MODE ENTRY procedure is triggered with the cause "Load balancing TAU required".  This field is only visible if MME offloading is enabled.
<b>Important</b> The previous fields are only available in 12.2 and earlier releases.	
S1 MME IP QOS DSCP	Displays the diffserv code point marking to be used for sending packets of a particular QoS class between the MME and eNodeB as configured in the MME service.
<b>S1AP SCTP Parameters</b>	
SCTP Param Template Associated	Displays the name of the SCTP Parameter Template associated with the service.
SCTP Param Timestamp	Displays the time when the SCTP Parameter Template was associated with the MME service.
SCTP Alpha	Displays the SCTP Retransmission Timeout (RTO) alpha value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.

Field	Description
SCTP Beta	Displays the SCTP Retransmission Timeout (RTO) beta value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Checksum Type	Displays the SCTP checksum type as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section. Possible values are ADLER32 or CRC32.
SCTP Valid Cookie Lifetime	Displays the SCTP cookie lifetime value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Max Assoc Retrans	Displays the maximum number of retransmissions for SCTP associations value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Max Number of In Streams	Displays the maximum number of incoming streams for SCTP value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Init Retransmissions	Displays the maximum number of retransmissions for SCTP initiations value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Max MTU	Displays the maximum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Max Number of Out Streams	Displays the maximum number of outgoing streams for SCTP value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Path Retransmissions	Displays the maximum number of retransmissions for SCTP paths value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Min MTU	Displays the minimum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP RTO Initial	Displays the initial time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP RTO Max	Displays the maximum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP RTO Min	Displays the minimum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Sack Frequency	Displays the frequency for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Sack Period	Displays the period of time for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.

Field	Description
SCTP Start MTU	Displays the initial Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Heartbeat Status	Displays the SCTP heartbeat status as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section. Possible values are Enabled or Disabled.
SCTP HeartBeat Timer	Displays the SCTP heartbeat timer value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Bundle Status	Displays the SCTP data chunk bundle status as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section. Possible values are Enabled or Disabled.
SCTP Bundle Timer	Displays the SCTP data chunk bundle timer value as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section.
SCTP Alternate Accept Flag	Displays the SCTP additional lifetime accept flag status as configured in the SCTP Parameter Template defined at the beginning of the S1AP SCTP Parameters section. Possible values are Enabled or Disabled.
MSC	Configuration of the SRVCC MSC Server for this MME service. This is the MSC server that the MME will use to interface with for the Sv interface.  MSC selection using DNS will take precedence over locally configured MSCs. MSC address will be used only when DNS-based selection is not configured OR DNS selection fails.
MSC Echo Parameters	Indicates the MSC parameter value for the following: <ul style="list-style-type: none"> <li>• interval</li> <li>• retransmission timeout</li> <li>• max retransmissions</li> <li>• reconnect interval</li> </ul>
NAS GMM QOS Mapped From	Displays which QOS the MME uses in NAS GMM QoS IE and GTPv1 Context response messages when the subscriber comes to MME via a handover from a GN/GP SGSN.  Possible options are "Native EPS QOS" (default) or "Gn/Gp Peer SGSN QOS". Refer to the MME Service configuration command <b>nas gmm-qos-ie-mapping</b> for more information.
Condition Restricted zone code	Displays the emm-cause-code to be returned to the UE when the UE requests access to a restricted zone.  This field has been renamed to <i>Restricted Zone Code</i> in 15.0 and later releases.
Condition Congestion	Displays the emm-cause-code to be returned to the UE when the system has detected a congestion condition.  This field has been renamed to <i>Congestion</i> in 15.0 and later releases.

Field	Description
Condition Newcall policy restrict	Displays the emm-cause-code to be returned to the UE when the policy restricts new calls. This field has been renamed to <i>Newcall policy restrict</i> in 15.0 and later releases.
Restricted zone code	Displays the emm-cause-code to be returned to the UE when the UE requests access to a restricted zone during an EMM procedure.
Congestion	Displays the emm-cause-code to be returned to the UE when the system has detected a congestion condition during an EMM procedure.
Newcall policy restrict	Displays the emm-cause-code to be returned to the UE when the policy restricts new calls.
APN mismatch	Displays the emm-cause-code to be returned to the UE when the system has detected an APN mismatch condition during an EMM procedure.
VLR down	Displays the emm-cause-code to be returned to the UE when the system has detected a VLR down condition during an EMM procedure.
VLR unreachable	Displays the emm-cause-code to be returned to the UE when the system has detected a VLR unreachable condition during an EMM procedure.
Auth failure	Displays the emm-cause-code to be returned to the UE when an authentication failure occurs.
PEER NODE unknown	Displays the emm-cause-code to be returned to the UE when peer node resolution is not successful.
CTXT transfer fail SGSN	Displays the emm-cause-code to be returned to the UE when a UE context transfer failure from a peer SGSN occurs.
CTXT transfer fail MME	Displays the emm-cause-code to be returned to the UE when a UE context transfer failure from a peer MME occurs.
HSS unavailable	Displays the emm-cause-code to be returned to the UE when HSS resolution fails in the MME or the HSS does not respond in time.
SGW selection failure	Displays the emm-cause-code to be returned to the UE when a failure occurs during S-GW selection.
PGW selection failure	Displays the emm-cause-code to be returned to the UE when a failure occurs during P-GW selection.
GW unreachable Attach	Displays the emm-cause-code to be returned to the UE when a gateway (S-GW or P-GW) does not respond during an EMM Attach procedure.
GW unreachable TAU	Displays the emm-cause-code to be returned to the UE when a gateway (S-GW or P-GW) does not respond during an EMM TAU procedure.
NO bearers active	Displays the emm-cause-code to be returned to the UE when the context received from a peer SGSN (during a TAU procedure) does not contain any active PDP contexts
APN not supported PLMN-RAT esm-proc	Displays the configured cause code for APN not supported PLMN-RAT in esm-proc.

Field	Description
APN not supported PLMN-RAT Attach	Displays the configured cause code for APN not supported PLMN-RAT for attach requests.
APN not supported PLMN-RAT TAU	Displays the configured cause code for APN not supported PLMN-RAT for TAU requests.
S13-additional-id-check:	Displays the configuration for the S13 Additional IMEI check ID feature, which is disabled by default. The following fields the feature is configured to be performed during the listed UE procedure(s).
Attach:	Indicates if S13 Additional IMEI checking is to be performed during UE attaches.
TAU:	Indicates if S13 Additional IMEI checking is to be performed during tracking area updates.
Handover:	Indicates if S13 Additional IMEI checking is to be performed during UE handovers.
Extended DRX:	
H-SFN Start	Displays the start time at which H-SFN=0 starts in the GPS or UTC time format. The UTC time format is <b>YYYY:MM:DD:hh:mm:ss</b> . For example: 2016:03:01:12:34:56.
H-SFN UTC Reference	Displays the reference time at which H-SFN=0 starts in the UTC time format <b>YYYY:MM:DD:hh:mm:ss</b> . For example: 1982:1:1:1:1:1.
Adjusted time	Displays the number of leap seconds configured.
SGW Blacklist Parameters	Specifies the configured S-GW Blacklist parameters.
timeout	Specifies the period of time the blacklisted S-GW cannot be used for call procedures. The timeout value is an integer ranging from 5 to 86400 seconds.
msg-timeouts-per-min	Specifies the configured number of message timeouts to wait, before blacklisting an S-GW locally in a session manager instance. Only Create Session Response timeout is considered. The number of messages is an integer ranging from 1 to 5000.
<b>S1 UE Retention</b>	
<b>S1 UE Retention</b>	
S1 UE Retention Timer	Specifies the timer value for retaining an SCTP association.
DDN Delay Value	Specifies the downlink-data-notification delay value in multiples of 50 milliseconds.
<b>EPS Network</b>	
5GS to EPS handover using N26 interface	When this feature is enabled under N1 mode, the MME allows 5GS-EPS interworking with N26 interface.
Peer AMF GUAMI	Configures Globally Unique AMF Identifier for this Peer.
Peer AMF TAI	Configures 5GS Tracking Area Information match for this Peer AMF.
<b>buffer-ubreq-from-3g-to-4g</b>	Displays the enabled and disabled bearer response during 3G-4G GnGp HO and TAU process.

## show mme-service db record all

Displays the MME database records for all sessions.

Table 410: show mme-service db record imsi Command Output Descriptions

Field	Description
<b>DB Record State</b>	Displays the current state of the db record: <ul style="list-style-type: none"> <li>• (C) - Connected</li> <li>• (c) - Connecting</li> <li>• (D) - Detached</li> </ul>
<b>Integrity Algorithm</b>	Displays the integrity algorithm applied for security procedures for this subscriber: <ul style="list-style-type: none"> <li>• (S) - <b>EIA1</b>: SNOW 3G synchronous stream ciphering algorithm (128-EIA1).</li> <li>• (A) - <b>EIA2</b>: Advance Encryption Standard (AES) ciphering algorithm (128-EIA2).</li> <li>• (N) - <b>EIA0</b>: No integrity protection.</li> </ul>
<b>Encryption Algorithms</b>	Displays the encryption algorithm applied for security procedures for this subscriber. <ul style="list-style-type: none"> <li>• (S) - <b>EEA1</b>: SNOW 3G synchronous stream ciphering algorithm (128-EEA1) for LTE encryption.</li> <li>• (A) - <b>EEA2</b>: Advance Encryption Standard (AES) ciphering algorithm (128-EEA2) for LTE encryption.</li> <li>• (N) - <b>EEA0</b>: No encryption algorithm.</li> </ul>
Call ID	The unique call identifier value stored for a subscriber in MME database record as lookup key. Call identity is an 8 digit hex number of attached call to an MME service. Call-id will be zero if the db record is not bound to an attached call.
IMSI	The IMSI (International Mobile Subscriber Identity) value stored for a subscriber in MME database record as lookup key.
GUTI	The Globally Unique Temporary Identifier (GUTI) value stored for a subscriber in MME database record as lookup key. GUTI is constructed with following identifiers: <ul style="list-style-type: none"> <li>• PLMN (MMC and MNC)</li> <li>• MME Group ID (MMEGI)</li> <li>• MME Code (MMEC)</li> <li>• MME TMSI (M-TMSI)</li> </ul>
REALLOCATED GUTI	This parameter displays the reallocated GUTI if the reallocated GUTI is pending acknowledgement from UE.

## show mme-service db record imsi

Displays the MME database records for sessions grouped in session instances on this system and filtered by IMSI.

**Table 411: show mme-service db record imsi Command Output Descriptions 0**

Field	Description
Sessmgr Instance	The instance of the running Session Manager that serves this MME database.
MME Service	The name of the MME service associated with the database record.
<b>Lookup Keys</b>	This group displays the various lookup key information stored in MME database record for specific Session Manager instance.
IMSI	The IMSI (International Mobile Subscriber Identity) value stored for a subscriber in MME database record as lookup key. IMSI includes the Mobile Country Code (MCC) and Mobile Network Code (MNC).
Service-id	The system-generated service ID number.
GUTI	The Globally Unique Temporary Identifier (GUTI) value stored for a subscriber in MME database record as lookup key. GUTI is constructed with following identifiers: <ul style="list-style-type: none"> <li>• PLMN (MMC and MNC)</li> <li>• MME Group ID (MMEGI)</li> <li>• MME Code (MMEC)</li> <li>• MME TMSI (M-TMSI)</li> </ul>
Call-ID	The unique call identifier value stored for a subscriber in MME database record as lookup key. Call identity is an 8 digit hex number of attached call to an MME service. Call-id will be zero if the db record is not bound to an attached call.
<b>Subscription Data</b>	This group lists the subscription data available in database record for subscriber.
IMEI	The International Mobile Equipment Identity (IMEI) value stored for a subscriber in MME database record as subscription data of that subscriber.
MSISDN	The MSISDN value stored for a subscriber in MME database record as subscription data of that subscriber.
Context Identifier	Context-identifier sent by the HSS. This represents the default APN.
RFSP Index	Indicates the RAT/Frequency Selection Priority (RFSP) Index sent by the HSS and used to identify a specific Radio Resource Management (RRM) configuration.
Charging characteristic	Indicates the charging characteristics for this subscriber sent by the HSS, for example: normal, prepaid, flat rate.

Field	Description
APN OI Replacement	Indicates the domain name to replace the APN OI when constructing the PDN-GW FQDN upon which to perform DNS queries. This replacement applies for all the APNs in the subscriber's profile.
Oper Determined Barring	Indicates that the status of the operator determined barring.
ICS Indicator	The IMS Centralized Services indicator set in the ULA, either (0) false/disabled, or (1) true/enabled.
CSG IDs	A list of all CSG IDs from the subscription data.
Max Req Bandwidth UL	The maximum bandwidth requested for upload for this UE (UE_AMBR_UL).
Max Req Bandwidth DL	The maximum bandwidth requested for download for this UE (UE_AMBR_DL).
EMM backoff Expiry Time	Displays the configuration of the extended t3346 timer.
Subscribed Periodic RAU TAU Timer Value	Displays the configuration of the extended t3412 timer.
<b>ARD:</b>	The following fields display either 'True' or 'False' to indicate configured subscriber ARD values received from the HSS.
UTRAN-not-allowed	True or False
GERAN-not-allowed	True or False
GAN-not-allowed	True or False
I-HSPA-Evolution-not-allowed	True or False
E-UTRAN-not-allowed	True or False
HO-To-Non-3GPP-Access-not-allowed	True or False
Dual-connectivity-NR-not-allowed	Displays True or False to identify if the ARD received from HSS indicates the DCNR feature is allowed for the given IMSI or not.
NR-in-5GS-Not-Allowed	Displays True or False.
<b>Core Network Restrictions</b>	This group displays core network restrictions data stored in MME database record.
5GC-not-allowed	Displays True or False.
<b>Trace Data</b>	This group displays trace data if it is provided as part of the UE subscription data from the HSS. For information about the trace data provided, refer to section 5 of 3GPP TS 32.422.
<b>APN Config</b>	This group displays the APN configuration data stored in MME database record.
Service Selection	The name of the APN selected.
Max Req Bandwidth UL	The maximum bandwidth requested for upload for this APN.

Field	Description
Max Req Bandwidth DL	The maximum bandwidth requested for download for this APN.
QoS Class Id	The QoS Class Identifier (QCI) configured for this APN. If the MME has not received the QCI from the HSS, "Not Available" will be displayed.
Priority level	The traffic priority level configured for this APN.
Context Identifier	The context identifier where APN is configured.
VPLMN Dynamic ADDR allowed	Indicates whether dynamic address is allowed for visiting PLMN or not.
3GPP-Chrg Characteristics	The configured charging characteristics for this APN.
PDN-GW Name	The name of the P-GW where this APN is configured.
PDN-GW Realm	The realm of the P-GW which contains the configuration for this APN.
PDN-GW Address	The IP address of the P-GW which contains the configuration for this APN.
APN Restoration Priority	Displays the priority for reactivating impacted PDNs following a P-GW Restart Notification (PRN) where 1 is highest priority, 16 is lowest.
Interworking 5GS Indicator	Indicates whether the Interworking 5GS indicator is subscribed or not subscribed.
UE Tracking Information: Last Reported 5 eNBs (most recent first)	The following information is reported per eNB: <ul style="list-style-type: none"> <li>• IMSI</li> <li>• eNB</li> <li>• Last Reported ECI</li> <li>• Last Update</li> </ul>
UE Tracking Information: Last Reported 7 ECGIs (most recent first)	The following information is reported per ECGI: <ul style="list-style-type: none"> <li>• Last Reported ECI</li> <li>• eNB</li> <li>• IMSI</li> <li>• Last Update</li> </ul>
<b>HSS-DB Data</b>	This group displays HSS Database data information.
HSS Update Type	Displays the update type the MME must respond to when the HSS makes a request for UE reachability when the UE moves from idle-mode to connected mode. Possible update types are: <ul style="list-style-type: none"> <li>• Notify Request: Specifies that the HSS will send the MME a Notify Request message and expect a Notify Response message in return.</li> <li>• Update Location Request: Specifies that the HSS will send a Cancel Location Request or a Reset Request message and expect an Update Location Request message in return.</li> </ul> Cancel Location Request and Reset Request have a higher precedence than Notify Request, hence an Update Location Request is sent if a Cancel Location Request or Reset Request is received after a Notify Request, and a Notify Response is not sent.

Field	Description
ESMLC Location Estimate	This group shows information about the last known location of the UE that was derived using the E-SMLC. Refer to 3GPP TS 29.171 for more details about the information provided.
Location	Provides the Geographic Area information reported for this UE. <b>Type:</b> The Geographic Area Description (GAD) reported. <b>Co-ordinates:</b> Displays the geographical coordinates of the UE.
Positioning Data	This group displays information about the positioning estimates reported for this UE.
Positioning Data Set	Displays the following location estimate information for the UE: <b>Type:</b> Reserved, Reserved-n/w specific methods, Reserved-other technologies, CellId, E-CID, OTDOA, or U-TDOA. <b>Result:</b> Displays whether the positioning method was attempted successfully or unsuccessfully. <b>Used for computation:</b> Yes or No.
GNSS Positioning	Displays the following location estimate information provided by the Global Navigation Satellite System (GNSS): <b>Method:</b> Displays the positioning method used, such as Conventional, UE-Assisted, or UE-Based, or Reserved. <b>Type:</b> For example: Galileo, GLONASS, GPS, QZSS, Modernized GPS, SBAS, or Reserved. <b>Result:</b> Displays whether the positioning method was attempted successfully or unsuccessfully. <b>Used:</b> Displays whether the information reported was used: Yes, No, Multiple methods used, Cannot be determined, or Used to verify, but not to generate location.
Velocity Estimate	<b>Horizontal:</b> The reported Bearing and Velocity in kilometers per hour. <b>Vertical:</b> The reported Speed and Direction of travel (upward or downward).
Horizontal Uncertainty Speed	The uncertainty of the reported speed. The value gives the uncertainty speed in increments of 1 kilometer per hour, except for N=255 which indicates that the uncertainty is not specified.
Vertical Uncertainty Speed	The uncertainty of the reported speed. The value gives the uncertainty speed in increments of 1 kilometer per hour, except for N=255 which indicates that the uncertainty is not specified.
Requested Accuracy Fulfilled	Indicates if the requested accuracy is fulfilled, either Yes or No.
REALLOCATED GUTI	This group displays reallocated GUTI if the reallocated GUTI is pending acknowledgement from UE.
PLMN	Value of PLMN within the GUTI.
MME Group ID	Value of MME Group Id within the GUTI.

Field	Description
MME Code	Value MME Code within the GUTI.
M-TMSI	Value MTMSI within the GUTI.
GUTI Allocated time	Last GUTI allocated timestamp. This refers to reallocated GUTI time stamp if the Reallocated GUTI is being displayed.

## show mme-service db statistics

*Table 412: show mme-service db statistics Command Output Descriptions*

Field	Description
Total DB record allocated	The total number of database records allocated to MME calls/UE.
Total DB record reactivated	The total number of database records for reactivated MME sessions.
Total DB record detached	The total number of database records for detached MME sessions.
Total DB record purged	The total number of database records for purged MME sessions.
<b>Purge Type</b>	This group The database record statistics for purged session of various types.
Timeout	The total number of sessions purged due to Timeout reason.
DB record limit reached	The total number of sessions purged due to database record limit crossed.
UE not connected	The total number of sessions purged as UE was not connected.
HSS initiated	The total number of sessions purged where purging was initiated by HSS.
IMSI mgr initiated	The total number of sessions purged where purging was initiated by IMSI manager.
Others	The total number of sessions purged where purging was happened due to reasons other than listed in this table.
Current DB record count	The total record count in database including all states.
State Connecting	The total record count in database in connecting state.
State Connected	The total record count in database in connected state.
State Detached	The total record count in database in detached state.

# show mme-service enodeb-association full

**Important** In Release 20, 21.0 and 21.1, HeNBGW is not supported. For more information, contact your Cisco account representative.

**Table 413: show mme-service enodeb-association full Command Output Descriptions**

Field	Description
MMEMgr	The instance number MME Manager for which the information are displayed here.
Peerid	The identifier of peer MME of which statistic are displayed.
Global ENodeB ID	The global eNodeB identifier which is associated with this peer node.
Assoc Uptime	The uptime of the association between the MME and the eNodeB. The format is 0000d00h00m (where d= day, h=hour, m=minutes) when h > =24 hrs, otherwise it will be displayed as 00h00m00s.
eNodeB Name	The eNodeB name as reported by the eNodeB.
eNodeB Type	The NodeB type, either Home or Macro, as reported by the eNodeB. (HeNB-GW) is listed if this is a Home eNodeB Gateway.
MME Service Name	The name of the MME service running on peer node.
MME Service Address	The IP address which is used by MME service to connect with eNodeB.
MME Service Port	The port number which is used by MME service to connect with eNodeB.
eNodeB Port	The port number of eNodeB which is used by eNodeb to associate with MME service.
eNodeB IP Address(s)	The IP address of eNodeB which is used by eNodeb to associate with MME service.
Crypto-map Name	The name of the crypto map supporting this EnodeB association.
Paging DRX	The paging discontinuous reception set for paging procedure between eNodeB and MME.
Supported TAI(s)	The id of supported Tracking Area Identifier of which this eNodeB and MME belongs too. The Tracking Area Identity is constructed from the MCC (Mobile Country Code), MNC (Mobile Network Code) and TAC (Tracking Area Code).
CSG ID(s)	The closed subscriber groups Ids supported per eNodeB association with an MME service. A Closed Subscriber Group is a collection of cells within an eUTRAN and UTRAN that are open to only a certain group of subscribers. Within a PLMN, a Closed Subscriber Group is identified by a Closed Subscriber Group Identity (CSG-ID). The CSG ID shall be fix length 27 bit value.

Field	Description
S1 Paging Rate Limit	The S1 paging rate limit for the eNodeB as configured using the <b>network-overload-protection mme-tx-msg-rate-control enb s1-paging</b> command.
Path Source IP Address	The local MME address to establish the path towards VLR. In case of multiple addresses, the addresses will be shown as separated by space character.
Path Destination IP Address	The VLR (peer) address in the association. In case of multiple addresses, the addresses will be shown as separated by space character.
Path State	The state of the path (Up/Down) based on Heartbeat exchanged over the path.
Flow Id	The flow Id assigned by NPU manager to the path over which the packet will reach the MME manager. This flow ID will be in the range of Flow space created for specific application.

## show mme-service id summary

This command displays the current number of MME-assigned and eNodeB-assigned S1AP session IDs.

**Table 414: show mme-service id summary 1**

Field	Description
Total MME S1AP IDs	The number of MME-assigned session identifiers between the MME and the eNodeB on the S1AP interface.
Total eNB S1AP IDs	The number of eNodeB-assigned session identifiers between the eNodeB and the MME on the S1AP interface.

## show mme-service msc-status [ mme-service-name *name* | msc-name *name* ]

**Table 415: show mme-service msc-status [ mme-service-name *name* | msc-name *name* ] Command Output Descriptions**

Field	Description
MSC Status	Indicates the status of the MSC.
Name	Indicates the name of the configured MSC.
IP	Indicates the IP address of the MSC.
Node Status	Indicates the node status of the MSC.
Path State	Indicates the path state of the MSC.
MME service name	Indicates the MME service name of the MSC.

show mme-service name &lt;mme\_svc\_name&gt;

Field	Description
Static/DNS IP	Indicates if the MSC has a static IP address or a DNS IP address.

## show mme-service name <mme\_svc\_name>

Displays service and session state information for all sessions currently on the system.

**Table 416: show mme-service name <mme\_svc\_name> Command Output Descriptions**

Field	Description
Service name	The name of the MME service configured and running on the system.
Context	The name of the VPN context in which MME service configured and running on the system.
Status	Indicates whether MME service is started or not.
Access Policy	Displays the configured access-policy name. If access-policy is not associated with mme-service, this field displays "Not Defined".
Cell Tracing	Indicates whether realtime cell tracing is enabled or disabled.
Trace Extension	Indicates whether cell trace extension is enabled or disabled.
Non-Broadcast TAI	Displays the configured values for MCC, MNC, and TAC.
DCNR	Indicates whether the DCNR feature is enabled or disabled at MME service.
UE Usage Type	Configures UE usage type for disconnecting PDN for up service area
Co-located Node	Configures the collocated node name to select the collocated SPGW node IP addresses.

## show mme-service name <mme\_svc\_name> offload statistics

This section provides information regarding show commands and/or their outputs in support of load rebalancing (UE offload).

**Table 417: show mme-service name <mme\_svc\_name> offload statistics 2**

Field	Description
Current Offload Status	Current offload status of the specified mme-service. Possible values are Not Started, In Progress and Completed.
Implicit Detach Status	The Implicit Detach Status specified in the <b>mme offload</b> command. When enabled, if the UE context is not transferred to another MME within 5 minutes then it will be implicitly detached.

Field	Description
Preserve VoLTE subscribers Status	Is displayed as “Enabled” when the keyword <b>preserve-volte-subscribers</b> is configured in the mme offload command. The status is displayed as “Disabled”, when VoLTE preservation is not configured. By default VoLTE preservation is disabled.
Time Duration Requested	The time-duration value specified in the <b>mme offload</b> command (in seconds). This is the maximum allowed time for the offload procedure to complete.
Percentage of Subscribers Requested	The offload-percentage specified in the <b>mme offload</b> command (specified as a percentage of all UEs on this mme-service).
Total Number of Subscribers	The total number of UEs on the specified mme-service.
Total Number of Subscribers Marked for Offloading	Displays the total number of subscribers marked for offloading during the current MME offload.
Total Number of Subscribers to be Offloaded	Total number of UEs on the specified mme-service selected for offloading.
Total Cumulative Number of Subscribers Offloaded	Displays the cumulative count of subscribers offloaded.
Total Number of VoLTE Subscribers Preserved	Displays the number of preserved VoLTE subscribers during and after MME offload.
Total Cumulative Number of VoLTE Subscribers Preserved	Displays the total numbers of subscribers preserved before starting the offload timer when the <b>mme offload</b> command is executed.
Total Number of Subscribers Offloaded	The total number of UEs which have been successfully offloaded from this mme-service (UE offloading State/Event = Done).
Total Number of Subscribers Received Context Transfer	Total number of UEs which has been successfully context transferred to another MME.
Remaining Time	The number of seconds remaining to complete the offload procedure.

## show mme-service session all

Displays service and session state information for all sessions currently on the system.

Table 418: show mme-service session all Command Output Descriptions

Field	Description
<b>Attach Type</b>	Display the attach type that the subscriber is using. The possible access types are: <ul style="list-style-type: none"> <li>• <b>A:</b> Initial EPS</li> <li>• <b>B:</b> Combined EPS IMSI</li> <li>• <b>C:</b> Handover EPS</li> <li>• <b>D:</b> Combined Handover EPS IMSI</li> </ul>
<b>Security Status</b>	Displays the security status of the session. The possible call states are: <ul style="list-style-type: none"> <li>• <b>A:</b> No Integrity Check, No Cipherring</li> <li>• <b>B:</b> Integrity Check, No Cipherring</li> <li>• <b>C:</b> Integrity Check, Cipherring</li> </ul>
<b>ESM State</b>	Displays the ESM state of the session. The possible call states are: <ul style="list-style-type: none"> <li>• <b>C:</b> Connected</li> <li>• <b>I:</b> Idle</li> </ul>
<b>IKEv2/IPSec</b>	Displays if IPSec is used during the session.
<b>CALLID</b>	The EPS subscriber's call identity in 8 digit hex number of connected call to an MME service.
<b>MSID</b>	Displays the EPS subscriber's mobile station identification (MSID) number.
<b>Num PDNs</b>	Displays the total number of PDNs connected for a UE in this session.
<b>Num Bearers</b>	Displays the total number of bearers activated for a UE in this session.

## show mme-service session counters

Table 419: show mme-service session counters Command Output Descriptions

Field	Description
<b>Username</b>	Displays the EPS subscriber's username.
<b>Callid</b>	The EPS subscriber's call identity in 8 digit hex number of connected call to an MME service.
<b>MSID</b>	Displays the EPS subscriber's mobile station identification (MSID) number.
<b>EMM Events</b>	This group displays the statistics of all Evolved Mobility Management (EMM) events associated with all MME services on the system.

Field	Description
<b>Authentications</b>	This group displays the all EMM authentication attempts/successes/failures with EMM events associated with all MME services on the system.
Attempted	The total number of EMM authentication attempts made for all MME services on the system.
Success	The total number of successful EMM authentication attempts for all MME services on the system.
Failures	The total number of failed EMM authentication attempts for all MME services on the system.
<b>Tracking Area Update Events</b>	This group displays the all tracking area update (TAU) event attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of EMM TAU attempts made for all MME services on the system.
Success	The total number of successful EMM TAU attempts for all MME services on the system.
Failures	The total number of failed EMM TAU attempts for all MME services on the system.
<b>ECM Events</b>	This group displays the statistics of all EMM Control Management (ECM) events associated with all MME services on the system.
<b>Idle Mode Entry Events</b>	This group displays the all idle mode entry event attempts/successes/failures associated with all MME services on the system.
<b>Service Request Events</b>	This sub-group displays the ECM service request event attempts/successes/ failures associated with all MME services on the system.  <b>Important</b> In Release 14.0 and later, this group of counters is deprecated and replaced by the <b>UE Requested Service Request Events</b> and <b>NW Initiated Service Request Events</b> groups.
<b>UE Requested Service Request Events</b>	This group displays the ECM service request event attempts/successes/failures which have been requested by the UE for all MME services on the system.
<b>NW Initiated Service Request Events</b>	This group displays the ECM service request event attempts/successes/failures which have been initiated by the network for all MME services on the system.
<b>Paging Initiation Events</b>	This group displays the all paging initiation event attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for specific ECM event associated with all MME services on the system.
Success	The total number of successful attempts for specific ECM event associated with all MME services on the system.
Failures	The total number of attempts failed for specific ECM event associated with all MME services on the system.

Field	Description
<b>ESM Events</b>	This group displays the statistics of all EPS Session Management (ESM) events associated with all MME services on the system.
<b>PDN Connections</b>	This group displays the all statistics for PDN connection attempts/successes/failures associated with all MME services on the system.
<b>PDN Disconnections</b>	This group displays the all statistics for PDN disconnection attempts/successes/failures associated with all MME services on the system.
<b>Default Bearer Activation</b>	This group displays the all statistics of all default EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>NW Initiated Dedicated Bearer Activation</b>	This group displays the all statistics of all network-initiated dedicated EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Dedicated Bearer Activations</b>	This group displays the all statistics of all UE-initiated dedicated EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated Bearer Deactivations</b>	This group displays the all statistics of all P-GW/S-GW-initiated EPS bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>MME Initiated Bearer Deactivations</b>	This group displays the all statistics of all MME-initiated EPS bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Bearer Deactivations</b>	This group displays the all statistics of all UE-initiated EPS bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated Bearer Modifications</b>	This group displays the all statistics of all P-GW/S-GW-initiated EPS bearer modification attempts/successes/failures associated with all MME services on the system.
<b>HSS Initiated Bearer Modifications</b>	This group displays the all statistics of all HSS-initiated EPS bearer modification attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Bearer Modifications</b>	This group displays the all statistics of all UE-initiated EPS bearer modification attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for specific ESM event associated with all MME services on the system.
Success	The total number of successful attempts for specific ESM event associated with all MME services on the system.
Failures	The total number of attempts failed for specific ESM event associated with all MME services on the system.
<b>Handover Events</b>	This group displays the statistics of all handover events associated with all MME services on the system.
<b>X2-based handovers</b>	This group displays the all X2-based (intra-MME) handover attempt/success/failure events associated with all MME services on the system.
<b>S1-based handovers</b>	This group displays the all S1-based (Inter-MME) handover attempt/success/failure events associated with all MME services on the system.

Field	Description
Attempted	The total number of attempts made for specific EPS handover event associated with all MME services on the system.
Success	The total number of successful attempts for specific EPS handover event associated with all MME services on the system.
Failures	The total number of attempts failed for specific EPS handover event associated with all MME services on the system.
<b>Total NAS Control Messages</b>	This group displays the statistics of all NAS control messages sent or received by an MME services on the system.
<b>Sent</b>	This sub-group displays the statistics of all NAS control messages sent by an MME services on the system.
Clear-text messages	The total number of NAS control messages with "clear-text" flag received by all MME services on the system.
Integrity-check enabled	The total number of NAS control messages with "Integrity-Check Enabled" flag received by all MME services on the system.
Ciphered messages	The total number of NAS control messages with "Ciphered" flag received by all MME services on the system.
Retransmissions sent	The total number of NAS control messages with "retransmission-sent" flag sent by all MME services on the system.
Failures	The total number of NAS control messages with "failure" flag sent by all MME services on the system.
<b>Received</b>	This sub-group displays the statistics of all NAS control messages received by an MME services on the system.
Clear-text messages	The total number of NAS control messages with "clear-text" flag received by all MME services on the system.
Integrity-check enabled	The total number of NAS control messages with "Integrity-Check Enabled" flag received by all MME services on the system.
Ciphered messages	The total number of NAS control messages with "Ciphered" flag received by all MME services on the system.
Accepted	The total number of NAS control messages received with "Accepted" flag by all MME services on the system.
Discarded	The total number of NAS control messages received with "Discarded" flag by all MME services on the system.
Denied	The total number of NAS control messages received with "Denied" flag by all MME services on the system.
Decode failures	The total number of NAS control messages received with "Decode failure" flag by all MME services on the system.

## show mme-service session full

Table 420: show mme-service session full Command Output Descriptions

Field	Description
SessMgr Instance	The Session Manager instance managing this session.
MSID	The UE identity (MS Identity) of connected subscriber to an MME service, and whether the subscriber is unauthenticated (such as during emergency attach).
Callid	The call identity in 8 digit hex number of connected call to an MME service.
MME Service	The name of the serving MME service of which information is displayed.
MME HSS Service	The name of the serving MME-HSS service which is used for AAA for this subscriber with HSS on S6a interface.
EGTP S11 Service	The name of the serving eGTP service which is used for connectivity between MME and S-GW on S11 interface.
MME S1 Address	The IP address of MME used for connecting with eNodeB on S1-MME interface.
EGTP S11 Address	The IP address assigned to eGTP service which is used for connectivity between MME and S-GW on S11 interface.
ME Identity	The mobile equipment identity of connected UE.
GUTI	The Globally Unique Temporary Identifier (GUTI) used for this subscriber session. GUTI is constructed with following identifiers: <ul style="list-style-type: none"> <li>• PLMN (MMC and MNC)</li> <li>• MME Group ID (MMEGI)</li> <li>• MME Code (MMEC)</li> <li>• MME TMSI (M-TMSI)</li> </ul>
MSISDN	The Mobile Station International ISDN Number (MSISDN) of connected EPS subscriber to an MME service.
EMM State	The status of EPS Mobility Management (EMM) session of connected subscriber. Possible status are: <ul style="list-style-type: none"> <li>• Registered</li> <li>• Connected</li> </ul>

Field	Description
ECM State	The status of EPS Connection Management (ECM) session of connected subscriber. Possible status are: <ul style="list-style-type: none"> <li>• Registered</li> <li>• Connected</li> <li>• Idle</li> </ul>
Attach type	Indicate the type of UE attachment of active subscriber to MME service, for example: Emergency or Initial EPS.
Active SGW S11 Addr	The IP address of S-GW connected to MME on S11 interface.
SGW Control TEID	Displays the TEID of the S-GW currently serving the UE.
UE Offloading	Displays the UE offload state for load rebalancing. Possible values are None, Marked, In-Progress and Done.
UE Reachability Timer	The configured value of the mobile reachability timer set for tracking UE in EMM session.
Remaining Time	The remaining time in seconds out of the configured value of the mobile reachability timer in the EMM session.
Paging Proceed Flag (PPF)	The current state of the Paging Proceed Flag indicating whether or not the UE is sending periodic TAUs within the span of the mobile reachability timer. If the UE fails to send a TAU within the timer value, this flag is set to "Paging Disabled" indicating that the MME is no longer paging the UE.
ISR Status	Displays if the session is using Idle mode Signaling Reduction (ISR). Possible configurations are Activated or Not activated.
Low Access Priority Indication	Displays whether this session has LAPI indicator in any of attach/extended service/TAU/bearer resource allocation/bearer resource modification/PDN connectivity requests.
Initial UE establishment cause	Displays the establishment cause as set in the Initial UE message: Delay Tolerant Access / High Priority Access / Emergency / MT-Access / Unknown
Peer SGSN	Displays the IP address of the SGSN which has a context for this UE in support of Idle mode Signaling Reduction (ISR). A Peer SGSN address is only shown when ISR is activated for this session.
<b>UE Capability Information</b>	This group shows the UE Capability information for connected UE received by an MME service.
Radio Capability	The radio capability information received by an MME service for connected UE in UE capability exchange message.
Radio Capability for Paging	The radio capability information received by an MME service for paging the UE.  This field displays the value in hexadecimal format if the UE receives "UE Radio Capability for Paging" IE in S1 "UE-CAPABILITY-INFO-INDICATION" message from eNB. Otherwise, this field displays N/A.

Field	Description
Supported Codec List	The Supported Codec List information received by an MME service for connected UE in UE capability exchange message.
Mobile Station Classmark 2	The Mobile Station Classmark 2 information received by an MME service for connected UE in UE capability exchange message.
Mobile Station Classmark 3	The Mobile Station Classmark 3 information received by an MME service for connected UE in UE capability exchange message.
<b>Security Mode Information</b>	This group shows the status of NAS integrity check and NAS ciphering along with applicable algorithm as security mode information. It contains following information: <ul style="list-style-type: none"> <li>• NAS Integrity Check</li> <li>• NAS Integrity Check Algorithm</li> <li>• NAS Ciphering</li> <li>• NAS Ciphering Algorithm</li> </ul>
<b>Active ENodeB information</b>	This group shows the information of active eNodeB serving to this session.
Global ENodeB ID	The global identifier of active eNodeB serving to this session.
S1AP End Point	The IP address used by eNodeB on S1AP interface to connect with MME service.
Crypto-map Name	The name of the crypto map supporting this ENodeB association.
MME UE S1AP ID	Indicates the session identifier between MME and UE on S1AP interface serving to this session.
ENodeB UE S1AP ID	Indicates the session identifier between eNodeB and UE on S1AP interface serving to this session.
MME UE S1AP ID (stack):	Indicates up to three MME UE S1AP session identifiers present in this S1AP stack.
ENodeB UE S1AP ID (stack):	Indicates up to three eNodeB UE S1AP session identifiers present in this S1AP stack.
Total S1AP ID (stack)	Indicates the total count of S1AP session identifiers present in the stack.
<b>Idle Mode Information Data</b>	This group shows the information for the sessions in ECM idle mode.
Last TAI	Tracking Area Identity of the last Tracking Area visited by UE.
Last ECGI	E-UTRAN Cell Global Identifier of the last Cell visited by UE.
Last Connected ENodeB	Displays information about the ENodeB to which the session was last connected. <ul style="list-style-type: none"> <li>• <b>Global ENodeB ID:</b> Global ENodeB Identifier of the ENodeB to which the UE last connected.</li> <li>• <b>S1AP End Point:</b> End Point IP Address of the ENodeB to which the UE last connected.</li> </ul>

Field	Description
<b>UE Subscription Data</b>	This group shows the subscribed aggregate maximum bit rate applicable for connected UE in this session.
UE-UL-AMBR	The subscribed aggregate maximum bit rate in bits per second in upload traffic for connected UE in this session.
UE-DL-AMBR	The subscribed aggregate maximum bit rate in bits per second in download traffic for connected UE in this session.
Enforced UE-UL-AMBR at eNodeB	The enforced aggregate maximum bit rate in bits per second in upload traffic for connected UE at eNodeB in this session.
Enforced UE-DL-AMBR at eNodeB	The enforced aggregate maximum bit rate in bits per second in download traffic for connected UE at eNodeB in this session.
<b>PDN Information</b>	This group shows the information of PDNs connected for this session.
APN Name	The APN name which is serving for this PDN in this session.
UE Requested APN	Displays the UE requested APN with non-standard characters in hexadecimal format and standard characters in normal string format.
APN Restriction	The total number of APN restriction applied to this PDN.
PDN Type	The type of PDN (IPv4 and/or IPv6) which is serving in this session for PDN.
PGW Address	The IP address of the P-GW which is serving this session for connected PDN.
PGW control TEID	The control tunnel end identifier at P-GW on S5/S8 interface for control messaging serving to this session.
UE IPv4 Address	The IP address allocated to UE while connected to PDN in this session.
APN-UL-AMBR	The applicable aggregate maximum bit rate in bits per second in upload traffic for APN serving this PDN.
APN-DL-AMBR	The applicable aggregate maximum bit rate in bits per second in download traffic for APN serving this PDN.
Bearer Suspension State	The current suspension state of the bearer.
CSG Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a closed CSG cell.
CSG Subscribed Hybrid Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a hybrid cell as a subscribed member of the CSG in question.
CSG Unsubscribed Hybrid Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a hybrid cell with unsubscribed (non-member) status of the CSG in question
Marked for Deletion	Displays whether the PDN has marked for deletion flag set.

Field	Description
APN Restoration Priority	Displays the priority for reactivating impacted PDNs following a P-GW Restart Notification (PRN) where 1 is highest priority, 16 is lowest.
Low Access Priority Indication	Displays whether this PDN has LAPI indicator set as received in PDN connectivity requests.
Bearer Id	The identifier used for bearer between eNodeB and S-GW while connected to PDN in this session.
QCI	The quality class identifier applicable for this MME session.
AMBR	The applicable aggregate maximum bit rate in bits per second in download/upload direction for APN serving this PDN.
S1U ENodeB TEID	Indicate the tunnel end identifier at eNodeB on S1-U interface serving to this session.
S1U SGW TEID	Indicate the tunnel end identifier at S-GW on S1-U interface serving to this session.
S5S8 PGW TEID	Indicate the tunnel end identifier at P-GW on S5/S8 interface serving to this session.
S1U ENodeB IPv4 Addr	Indicate the IPv4 address used at eNodeB while connecting to S-GW on S1-U interface serving to this session.
S1U ENodeB IPv6 Addr	Indicate the IPv6 address used at eNodeB while connecting to S-GW on S1-U interface serving to this session.
S1U SGW IPv4 Addr	Indicate the IPv4 address used at S-GW while connecting to eNodeB on S1-U interface serving to this session.
S1U SGW IPv6 Addr	Indicate the IPv6 address used at S-GW while connecting to eNodeB on S1-U interface serving to this session.
S5S8 PGW Addr	Indicate the IP address used at P-GW while connecting to S-GW on S5/S8 interface serving to this session.
ESM State	The EPS session Management status serving to this session.
Bearer Type	The type of bearer used for this session. Possible values are: <ul style="list-style-type: none"> <li>• Default</li> <li>• Dedicated</li> </ul>
ARP	The Allocation Retention Priority value assigned to the bearer. The HSS assigns the value for default bearers and the P-GW assigns it for dedicated bearers.
PCI	Specifies the ARP Pre-emption Capability Indicator, either Enabled or Disabled.
PVI	Specifies the ARP Pre-emption Vulnerability Indicator, either Enabled or Disabled.
PGW-C+SMF Selected	Specifies that Combined PGW-C/SMF selection indicator, either Yes or No.
Marked for Deletion	Displays whether the bearer has marked for deletion flag set.
Total PDNs	The total number of PDNs connected through this session for a subscriber.

Field	Description
Total Bearers	The total number of bearers created for UE to use in this session.
Max APN Restrictions	The maximum number of APN restrictions applied to this PDN.
<b>Tracking Area Information</b>	This group displays the tracking area information available for this session.
TAI of last TAU	The tracking area identifier used in last Tracking Area Update (TAU) message received for TAU procedure in this session.
Current Tracking Area List	The tracking area list used for TAU procedure in this session.
<b>CSG Information</b>	This group displays Closed Subscriber Group information relating to this session.
CSG ID at Last Connection	Displays the CSG ID for this session. This is a unique identifier within the scope of PLMN which identifies a Closed Subscriber Group (CSG) in the PLMN.
CSG Cell Type	Displays the Closed Subscriber Group cell access mode (type) for this session, either Closed or Hybrid.
CSG Membership Status	Displays if the session is a member of the cell's CSG. Possible values are Member or Non-Member.
Operator Policy Association	The operator policy associated with this PDN.
<b>CSFB Information</b>	This group displays the Circuit-Switched Fall Back configuration associated with the session.
SGS Assoc State	The state of the SGs association with the VLR for the UE as determined by the MME. Possible states are: <ul style="list-style-type: none"> <li>• SGs-NULL: Specifies that there is no SGs association with the VLR for the UE. In this state, no fields in this group will display information.</li> <li>• LA_UPDATE_REQUESTED: Specifies that the MME has requested an update location from the VLR before sending a response to the UE</li> <li>• SGs-ASSOCIATED: Specifies that the MME has stored an SGs association for the UE.</li> </ul>
SGS Service	The name of the configured SGs service associated with the session.
VLR	The name of the VLR, as configured in the SGs service, associated with the session.
LAI	The Location Area Identifier to which the UE is mapped.
Pool Area	The name of the configured Location Area Code (LAC) pool area associated with the SGs service and the session.
P-TMSI	The Packet-Temporary Mobile Subscriber Identifier allocated by the MSC for the UE.

Field	Description
Flags	The current active variables associated with the UE. Possible states are: <ul style="list-style-type: none"> <li>• SMS-Only: Specifies that the UE is combined attached for SMS services only.</li> <li>• MME Reset Indicator: Specifies that the MME has restarted after a failure.</li> <li>• VLR Reliable Indicator: Specifies that the MME has received a reset indication from the VLR.</li> <li>• VLR Offload: Specifies that the UE is set to offload state.</li> <li>• Non-EPS Alert: Specifies that the VLR is requesting from the MME an indication when any signaling activity from the UE is detected.</li> </ul>
CIoT Optimisation Information	Displays the CIoT optimization information.
NB-IoT RAT	Displays if the RAT type NB-IoT is either enabled or disabled.
Attach Without PDN Support	Displays if attach without PDN support is either enabled or disabled.
UE capable of operating in CE-mode-B	Displays "TRUE" or "FALSE" to indicate if UE is operating in CE Mode-B.
Access Profile Association	Displays the configured access-profile name.
DECOR Information:	
UE Usage type	Displays the configured UE usage types.
DCN Id	Displays the configured DCN identifier.
UE DC-NR Information:	
DC-NR capable UE	Indicates whether the UE is DCNR capable.
DC-NR operation allowed	Indicates whether the DCNR operation is allowed by MME for the DCNR capable UE.
UE N1-Mode Information	
N1-mode capable UE	Indicates whether the UE N1 mode information is allowed by MME for the N1-mode capable UE.

## show mme-service session full all | grep Paging

Table 421: show mme-service session full all | grep Paging Command Output Descriptions

Field	Description
SessMgr Instance	The Session Manager instance managing this session.

Field	Description
Paging eDRX	The following are the paging eDRX parameters: <ul style="list-style-type: none"> <li>• eDRX cycle length</li> <li>• PTW</li> </ul>
MSID	The UE identity (MS Identity) of a connected subscriber to an MME service, and whether the subscriber is unauthenticated (such as during emergency attach).
Callid	The call identity in 8 digit hex number of connected calls to an MME service.
MME Service	The name of the serving MME service of which information is displayed.
MME HSS Service	The name of the serving MME-HSS service which is used for AAA for this subscriber with HSS on S6a interface.
EGTP S11 Service	The name of the serving eGTP service which is used for connectivity between MME and S-GW on S11 interface.
MME S1 Address	The IP address of MME used for connecting with eNodeB on S1-MME interface.
EGTP S11 Address	The IP address assigned to eGTP service which is used for connectivity between MME and S-GW on S11 interface.
ME Identity	The mobile equipment identity of connected UE.
GUTI	The Globally Unique Temporary Identifier (GUTI) used for this subscriber session. GUTI is constructed with following identifiers: <ul style="list-style-type: none"> <li>• PLMN (MMC and MNC)</li> <li>• MME Group ID (MMEGI)</li> <li>• MME Code (MMEC)</li> <li>• MME TMSI (M-TMSI)</li> </ul>
MSISDN	The Mobile Station International ISDN Number (MSISDN) of connected EPS subscriber to an MME service.
EMM State	The status of EPS Mobility Management (EMM) session of connected subscriber. Possible status are: <ul style="list-style-type: none"> <li>• Registered</li> <li>• Connected</li> </ul>
ECM State	The status of EPS Connection Management (ECM) session of connected subscriber. Possible status are: <ul style="list-style-type: none"> <li>• Registered</li> <li>• Connected</li> <li>• Idle</li> </ul>

Field	Description
Attach type	Indicates the type of UE attachment of active subscriber to MME service, for example: Emergency or Initial EPS.
Active SGW S11 Addr	The IP address of S-GW connected to MME on S11 interface.
SGW Control TEID	Displays the TEID of the S-GW currently serving the UE.
UE Offloading	Displays the UE offload state for load rebalancing. Possible values are None, Marked, In-Progress and Done.
UE Reachability Timer	The configured value of the mobile reachability timer set for tracking UE in EMM session.
Remaining Time	The remaining time in seconds out of the configured value of the mobile reachability timer in the EMM session.
Paging Proceed Flag (PPF)	The current state of the Paging Proceed Flag indicating whether or not the UE is sending periodic TAUs within the span of the mobile reachability timer. If the UE fails to send a TAU within the timer value, this flag is set to "Paging Disabled" indicating that the MME is no longer paging the UE.
ISR Status	Displays if the session is using Idle mode Signaling Reduction (ISR). Possible configurations are Activated or Not activated.
Low Access Priority Indication	Displays whether this session has LAPI indicator in any of attach/extended service/TAU/bearer resource allocation/bearer resource modification/PDN connectivity requests.
Initial UE establishment cause	Displays the establishment cause as set in the Initial UE message: Delay Tolerant Access / High Priority Access / Emergency / MT-Access / Unknown
Peer SGSN	Displays the IP address of the SGSN which has a context for this UE in support of Idle mode Signaling Reduction (ISR). A Peer SGSN address is only shown when ISR is activated for this session.
<b>UE Capability Information</b>	This group shows the UE Capability information for connected UE received by an MME service.
Radio Capability	The radio capability information received by an MME service for connected UE in UE capability exchange message.
Radio Capability for Paging	The radio capability information received by an MME service for paging the UE. This field displays the value in hexadecimal format if the UE receives "UE Radio Capability for Paging" IE in S1 "UE-CAPABILITY-INFO-INDICATION" message from eNB. Otherwise, this field displays N/A.
Supported Codec List	The Supported Codec List information received by an MME service for connected UE in UE capability exchange message.
Mobile Station Classmark 2	The Mobile Station Classmark 2 information received by an MME service for connected UE in UE capability exchange message.
Mobile Station Classmark 3	The Mobile Station Classmark 3 information received by an MME service for connected UE in UE capability exchange message.

Field	Description
<b>Security Mode Information</b>	This group shows the status of NAS integrity check and NAS ciphering along with applicable algorithm as security mode information. It contains following information: <ul style="list-style-type: none"> <li>• NAS Integrity Check</li> <li>• NAS Integrity Check Algorithm</li> <li>• NAS Ciphering</li> <li>• NAS Ciphering Algorithm</li> </ul>
<b>Active ENodeB information</b>	This group shows the information of active eNodeB serving to this session.
Global ENodeB ID	The global identifier of active eNodeB serving to this session.
S1AP End Point	The IP address used by eNodeB on S1AP interface to connect with MME service.
Crypto-map Name	The name of the crypto map supporting this ENodeB association.
MME UE S1AP ID	Indicates the session identifier between MME and UE on S1AP interface serving to this session.
ENodeB UE S1AP ID	Indicates the session identifier between eNodeB and UE on S1AP interface serving to this session.
MME UE S1AP ID (stack):	Indicates up to three MME UE S1AP session identifiers present in this S1AP stack.
ENodeB UE S1AP ID (stack):	Indicates up to three eNodeB UE S1AP session identifiers present in this S1AP stack.
Total S1AP ID (stack)	Indicates the total count of S1AP session identifiers present in the stack.
<b>Idle Mode Information Data</b>	This group shows the information for the sessions in ECM idle mode.
Last TAI	Tracking Area Identity of the last Tracking Area visited by UE.
Last ECGI	E-UTRAN Cell Global Identifier of the last Cell visited by UE.
Last Connected ENodeB	Displays information about the ENodeB to which the session was last connected. <ul style="list-style-type: none"> <li>• <b>Global ENodeB ID:</b> Global ENodeB Identifier of the ENodeB to which the UE last connected.</li> <li>• <b>S1AP End Point:</b> End Point IP Address of the ENodeB to which the UE last connected.</li> </ul>
<b>UE Subscription Data</b>	This group shows the subscribed aggregate maximum bit rate applicable for connected UE in this session.
UE-UL-AMBR	The subscribed aggregate maximum bit rate in bits per second in upload traffic for connected UE in this session.
UE-DL-AMBR	The subscribed aggregate maximum bit rate in bits per second in download traffic for connected UE in this session.

Field	Description
Enforced UE-UL-AMBR at eNodeB	The enforced aggregate maximum bit rate in bits per second in upload traffic for connected UE at eNodeB in this session.
Enforced UE-DL-AMBR at eNodeB	The enforced aggregate maximum bit rate in bits per second in download traffic for connected UE at eNodeB in this session.
<b>PDN Information</b>	This group shows the information of PDNs connected for this session.
APN Name	The APN name which is serving for this PDN in this session.
UE Requested APN	Displays the UE requested APN with non-standard characters in hexadecimal format and standard characters in normal string format.
APN Restriction	The total number of APN restriction applied to this PDN.
PDN Type	The type of PDN (IPv4 and/or IPv6) which is serving in this session for PDN.
PGW Address	The IP address of the P-GW which is serving this session for connected PDN.
PGW control TEID	The control tunnel end identifier at P-GW on S5/S8 interface for control messaging serving to this session.
UE IPv4 Address	The IP address allocated to UE while connected to PDN in this session.
APN-UL-AMBR	The applicable aggregate maximum bit rate in bits per second in upload traffic for APN serving this PDN.
APN-DL-AMBR	The applicable aggregate maximum bit rate in bits per second in download traffic for APN serving this PDN.
Bearer Suspension State	The current suspension state of the bearer.
CSG Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a closed CSG cell.
CSG Subscribed Hybrid Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a hybrid cell as a subscribed member of the CSG in question.
CSG Unsubscribed Hybrid Cell Change Notification	Displays CSG Information Reporting as specified by the PGW. If enabled, the MME sends notification when the UE enters or leaves a hybrid cell with unsubscribed (non-member) status of the CSG in question
Marked for Deletion	Displays whether the PDN has marked for deletion flag set.
APN Restoration Priority	Displays the priority for reactivating impacted PDNs following a P-GW Restart Notification (PRN) where 1 is highest priority, 16 is lowest.
Low Access Priority Indication	Displays whether this PDN has LAPI indicator set as received in PDN connectivity requests.
Bearer Id	The identifier used for bearer between eNodeB and S-GW while connected to PDN in this session.
QCI	The quality class identifier applicable for this MME session.

Field	Description
AMBR	The applicable aggregate maximum bit rate in bits per second in download/upload direction for APN serving this PDN.
S1U ENodeB TEID	Indicates the tunnel end identifier at eNodeB on S1-U interface serving to this session.
S1U SGW TEID	Indicates the tunnel end identifier at S-GW on S1-U interface serving to this session.
S5S8 PGW TEID	Indicates the tunnel end identifier at P-GW on S5/S8 interface serving to this session.
S1U ENodeB IPv4 Addr	Indicates the IPv4 address used at eNodeB while connecting to S-GW on S1-U interface serving to this session.
S1U ENodeB IPv6 Addr	Indicates the IPv6 address used at eNodeB while connecting to S-GW on S1-U interface serving to this session.
S1U SGW IPv4 Addr	Indicates the IPv4 address used at S-GW while connecting to eNodeB on S1-U interface serving to this session.
S1U SGW IPv6 Addr	Indicates the IPv6 address used at S-GW while connecting to eNodeB on S1-U interface serving to this session.
S5S8 PGW Addr	Indicates the IP address used at P-GW while connecting to S-GW on S5/S8 interface serving to this session.
ESM State	The EPS session Management status serving to this session.
Bearer Type	The type of bearer used for this session. Possible values are: <ul style="list-style-type: none"> <li>• Default</li> <li>• Dedicated</li> </ul>
ARP	The Allocation Retention Priority value assigned to the bearer. The HSS assigns the value for default bearers and the P-GW assigns it for dedicated bearers.
PCI	Specifies the ARP Pre-emption Capability Indicator, either Enabled or Disabled.
PVI	Specifies the ARP Pre-emption Vulnerability Indicator, either Enabled or Disabled.
PGW-C+SMF Selected	Specifies that Combined PGW-C/SMF selection indicator, either Yes or No.
Marked for Deletion	Displays whether the bearer has marked for deletion flag set.
Total PDNs	The total number of PDNs connected through this session for a subscriber.
Total Bearers	The total number of bearers created for UE to use in this session.
Max APN Restrictions	The maximum number of APN restrictions applied to this PDN.
<b>Tracking Area Information</b>	This group displays the tracking area information available for this session.
TAI of last TAU	The tracking area identifier used in last Tracking Area Update (TAU) message received for TAU procedure in this session.

Field	Description
Current Tracking Area List	The tracking area list used for TAU procedure in this session.
<b>CSG Information</b>	This group displays Closed Subscriber Group information relating to this session.
CSG ID at Last Connection	Displays the CSG ID for this session. This is a unique identifier within the scope of PLMN which identifies a Closed Subscriber Group (CSG) in the PLMN.
CSG Cell Type	Displays the Closed Subscriber Group cell access mode (type) for this session, either Closed or Hybrid.
CSG Membership Status	Displays if the session is a member of the cell's CSG. Possible values are Member or Non-Member.
Operator Policy Association	The operator policy associated with this PDN.
<b>CSFB Information</b>	This group displays the Circuit-Switched Fall Back configuration associated with the session.
SGS Assoc State	The state of the SGs association with the VLR for the UE as determined by the MME. Possible states are: <ul style="list-style-type: none"> <li>• SGs-NULL: Specifies that there is no SGs association with the VLR for the UE. In this state, no fields in this group will display information.</li> <li>• LA_UPDATE_REQUESTED: Specifies that the MME has requested an update location from the VLR before sending a response to the UE</li> <li>• SGs-ASSOCIATED: Specifies that the MME has stored an SGs association for the UE.</li> </ul>
SGS Service	The name of the configured SGs service associated with the session.
VLR	The name of the VLR, as configured in the SGs service, associated with the session.
LAI	The Location Area Identifier to which the UE is mapped.
Pool Area	The name of the configured Location Area Code (LAC) pool area associated with the SGs service and the session.
P-TMSI	The Packet-Temporary Mobile Subscriber Identifier allocated by the MSC for the UE.
Flags	The current active variables associated with the UE. Possible states are: <ul style="list-style-type: none"> <li>• SMS-Only: Specifies that the UE is combined attached for SMS services only.</li> <li>• MME Reset Indicator: Specifies that the MME has restarted after a failure.</li> <li>• VLR Reliable Indicator: Specifies that the MME has received a reset indication from the VLR.</li> <li>• VLR Offload: Specifies that the UE is set to offload state.</li> <li>• Non-EPS Alert: Specifies that the VLR is requesting from the MME an indication when any signaling activity from the UE is detected.</li> </ul>
CIoT Optimisation Information	Displays the CIoT optimization information.

Field	Description
NB-IoT RAT	Displays if the RAT type NB-IoT is either enabled or disabled.
Attach Without PDN Support	Displays if attach without PDN support is either enabled or disabled.
UE capable of operating in CE-mode-B	Displays "TRUE" or "FALSE" to indicate if UE is operating in CE Mode-B.
Access Profile Association	Displays the configured access-profile name.
DECOR Information:	
UE Usage type	Displays the configured UE usage types.
DCN Id	Displays the configured DCN identifier.
UE DC-NR Information:	
DC-NR capable UE	Indicates whether the UE is DCNR capable.
DC-NR operation allowed	Indicates whether the DCNR operation is allowed by MME for the DCNR capable UE.
UE N1-Mode Information	
N1-mode capable UE	Indicates whether the UE N1 mode information is allowed by MME for the N1-mode capable UE.

## show mme-service session summary

**Table 422: show mme-service session summary Command Output Descriptions**

Field	Description
Total connected sessions	The total number of MME sessions in ECM-CONNECTED mode.
Total idle-mode sessions	The total number of MME sessions in ECM-IDLE mode.
Total attached sessions	The total number of sessions attached to this MME.
Total LAPI sessions	The current number of sessions with LAPI indicator set.
Total connected PDNs	The total number of PDNs associated with UEs in ECM-CONNECTED mode.
Total idle-mode PDNs	The total number of PDNs associated with UEs in ECM-IDLE mode.
Total attached PDNs	The total number of PDNs present in this MME.
Total IPv4 PDNs	The total number of PDNs with IPv4 addresses.
Total IPv6 PDNs	The total number of PDNs with IPv6 addresses.
Total IPv4+IPv6 PDNs	The total number of PDNs with dual addressing.

```
show mme-service sgw-blockedlist [ mme-service-name ] [ smgr-instance ]
```

Field	Description
Total connected dedicated bearers	The total number of dedicated bearers associated with UEs in ECM-CONNECTED mode.
Total idle-mode dedicated bearers	The total number of dedicated bearers associated with UEs in ECM-IDLE mode.
Total attached dedicated bearers	The total number of dedicated bearers present in this MME.
Total combined-attached subscribers	The total number of MME sessions which are both PS and CS attached.
Total EPS-only attached subscribers	The total number of MME sessions which are PS attached only.
Total ISR-activated sessions	The total number of MME sessions which are activated for ISR.

## show mme-service sgw-blockedlist [ mme-service-name ] [ smgr-instance ]

Table 423: show mme-service sgw-blockedlist [ mme-service-name ] [ smgr-instance ] Command Output Descriptions

Field	Description
Node Level	Specifies the number of Blockedlisted SGWs at a Node Level.
Instance Level	Specifies the number of Blockedlisted SGWs at a Node Level.
SGW IP	Specifies the IP Address of the Blockedlisted SGW.
Blockedlist Type	Specifies if the Blockedlist Type is either Node level or Instance level.
Expiry Timestamp	Specifies the SGW Blockedlisting expiry time.
Blockedlist Time left	Specifies the time left for SGW blockedlisting .

## show mme-service statistics

Table 424: show mme-service statistics Output Descriptions

Field	Description
<b>SCTP Statistics</b>	
<b>Transmitted SCTP Data</b>	This sub-group displays the statistics of the total data processed and transmitted over Stream Control Transmission Protocol (SCTP) interface by this MME manager.

Field	Description
Init Chunks	The total SCTP packets with INIT transmitted over SCTP interface by this MME manager.
Init Ack Chunks	The total SCTP packets with INIT-ACK transmitted over SCTP interface by this MME manager.
Shutdown Chunks	The total SCTP packets with SHUTDOWN transmitted over SCTP interface by this MME manager.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK transmitted over SCTP interface by this MME manager.
Cookie Chunks	The total SCTP packets with COOKIE transmitted over SCTP interface by this MME manager.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK transmitted over SCTP interface by this MME manager.
Data Chunks	The total SCTP packets with DATA transmitted over SCTP interface by this MME manager.
Data Ack Chunks	The total SCTP packets with DATA-ACK transmitted over SCTP interface by this MME manager.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE transmitted over SCTP interface by this MME manager.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT transmitted over SCTP interface by this MME manager.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK transmitted over SCTP interface by this MME manager.
Abort Chunks	The total SCTP packets with ABORT transmitted over SCTP interface by this MME manager.
Error Chunks	The total SCTP packets with ERROR transmitted over SCTP interface by this MME manager.
<b>Received SCTP Data</b>	This sub-group displays the statistics of the total data received over SCTP interface and processed by this MME manager.
Init Chunks	The total SCTP packets with INIT received over SCTP interface by this MME manager.
Init Ack Chunks	The total SCTP packets with INIT-ACK received over SCTP interface by this MME manager.
Shutdown Chunks	The total SCTP packets with SHUTDOWN received over SCTP interface by this MME manager.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK received over SCTP interface by this MME manager.

Field	Description
Cookie Chunks	The total SCTP packets with COOKIE received over SCTP interface by this MME manager.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK received over SCTP interface by this MME manager.
Data Chunks	The total SCTP packets with DATA received over SCTP interface by this MME manager.
Data Ack Chunks	The total SCTP packets with DATA-ACK received over SCTP interface by this MME manager.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE received over SCTP interface by this MME manager.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT received over SCTP interface by this MME manager.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK received over SCTP interface by this MME manager.
Abort Chunks	The total SCTP packets with ABORT received over SCTP interface by this MME manager.
Error Chunks	The total SCTP packets with ERROR received over SCTP interface by this MME manager.
Receive Window Adjusted	The number of times the SCTP stack adjusts the SCTP peer receive window size.
<b>Retransmitted SCTP Data</b>	This sub-group displays the statistics of the total data processed and retransmitted over SCTP interface by this MME manager.
Init Chunks	The total SCTP packets with INIT retransmitted over SCTP interface by this MME manager.
Shutdown Chunks	The total SCTP packets with SHUTDOWN retransmitted over SCTP interface by this MME manager.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK retransmitted over SCTP interface by this MME manager.
Cookie Chunks	The total SCTP packets with COOKIE retransmitted over SCTP interface by this MME manager.
Data Chunks	The total SCTP packets with DATA transmitted over SCTP interface by this MME manager.
Total Bytes Sent	The total bytes processed and sent over SCTP interface by this MME manager.
Total Bytes Received	The total bytes received over SCTP interface by this MME manager for processing.
Total Packets Sent	The total packets processed and sent over SCTP interface by this MME manager.

Field	Description
Total Packets Received	The total packets received over SCTP interface by this MME manager for processing.
TAI Statistics	
PDN type IPv4 only	Counter for PDN Connectivity Reject with cause 50.
PDN type IPv6 only	Counter for PDN Connectivity Reject with cause 51.
<b>S1AP Statistics</b>	
<b>Transmitted S1AP Data</b>	This sub-group displays the statistics of the total data processed and transmitted over S1 Application Protocol (S1AP) interface by this MME manager to eNodeB.
S1 Setup Resp	The total number of S1 SETUP RESPONSE messages for S1 setup procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
S1 Setup Fail	The total number of S1 SETUP FAILURE messages for S1 setup procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
Reset	The total number of S1 RESET messages for S1 reset procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
Reset Ack	The total number of S1 RESET-ACK messages for S1 reset procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
Overload Start	The total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
Overload Stop	The total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
MME Dir Information Transfer	The total number of MME DIRECT INFORMATION TRANSFER messages for MME Direct Information Transfer procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
Paging	The total number of PAGING messages for paging procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
eNB Config Update Ack	The total number of ENB CONFIGURATION UPDATE ACK messages for eNodeB Configuration Update procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
eNB Config Update Fail	The total number of ENB CONFIGURATION UPDATE FAILURE messages for eNB Configuration Update procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
S1AP Msg Encode Fail	The total number of failure occurred during S1AP encode procedure and S1AP ENCODE FAILURE messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
E-RAB Setup Req	The total number of E-RAB setup request messages processed and transmitted over S1AP interface by this MME manager to eNodeB.

Field	Description
E-RAB Modify Req	The total number of E-RAB modify request messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
E-RAB Release Command	The total number of E-RAB release request messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
E-RAB Bearer Setup Attempted	The total number of bearers for which E-RAB setup request message was sent.
E-RAB Bearer Setup Success Rate	The percentage of total number of E-RABs successfully setup at RAN, as perceived on MME from S1-AP messages
E-RAB Bearer Setup Failure Rate	The percentage of total number of E-RABs failed to setup at RAN, as perceived on MME from S1-AP messages
E-RAB Bearer Modify Attempted	The total number of bearers for which E-RAB modification request message was sent.
E-RAB Bearer Modify Success Rate	The percentage of total number of E-RABs successfully modified at RAN, as perceived on MME from S1-AP messages
E-RAB Bearer Modify Failure Rate	The percentage of total number of E-RABs failure to modified at RAN, as perceived on MME from S1-AP messages
E-RAB Modification Cfm	Indicates the number of E-RAB Modification Confirm messages sent by MME upon successful E-RAB modification procedure.
Initial Ctxt Setup Req	The total number of initial context setup request messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
UE Ctxt Release Command	The total number of initial UE context release command messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
UE Context Modify Req	The total number of UE context modify request messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
Downlink NAS Transport	The total number of NAS Transport in downlink messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
Error Ind	The total number of S1AP messages with error-indication processed and transmitted over S1AP interface by this MME manager to eNodeB.
Handover Command	The total number of S1AP messages with handover command processed and transmitted over S1AP interface by this MME manager to eNodeB.
Handover Prep Fail	The total number of S1AP messages generated for handover preparation failure procedure and transmitted over S1AP interface by this MME manager to eNodeB.
Handover Request	The total number of S1AP messages with handover request processed and transmitted over S1AP interface by this MME manager to eNodeB.
Handover Cancel Ack	The total number of HANDOVER_CANCEL_ACK messages processed and transmitted over S1AP interface by this MME manager to eNodeB.

Field	Description
Path Switch Request Ack	The total number of PATH_SWITCH_REQ_ACK messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
Path Switch Request Fail	The total number of PATH_SWITCH_REQ_FAIL messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
Downlink S1 CDMA2000	The total number of CDMA2000 request messages processed and transmitted over S1AP interface by S1 tunneling to interact with cdma2000 network in downlink direction by this MME manager to eNodeB.
Trace Start	The total number of messages processed and transmitted over S1AP interface to indicate that Session Trace started for specific session by this MME manager to eNodeB.
Deactivate Trace	The total number of messages processed and transmitted over S1AP interface to indicate that Session Trace deactivated for specific session by this MME manager to eNodeB.
MME Status Transfer	The total number of messages processed and transmitted over S1AP interface to indicate the MME status by this MME manager to eNodeB.
Loc Report Control	The total number of LOCATION REPORT CONTROL messages sent by the MME to the eNodeB requesting the current location of the UE.
MME Config Update	The total number of MME CONFIGURATION UPDATE messages sent by the MME to the eNodeB for the purpose of updating the Transport Network Layer (TNL) association. The TNL association is required for the MME and eNodeB to interoperate correctly across the S1 interface.
S1AP Encode Fail	The total number of failure occurred during S1AP encode procedure and S1AP ENCODE FAILURE messages processed and transmitted over S1AP interface by this MME manager to eNodeB.
MME Config Transfer	The total number of MME CONFIGURATION TRANSFER messages sent by the MME to the eNodeB for the purpose of transferring RAN configuration information.
Paging Dropped	The total number of S1 Paging requests dropped for all MME services. This counter increments when an S1 paging request is dropped because the number of S1 paging requests received exceeded the S1 paging rate threshold as configured in the Global Config Mode command: <b>network-overload-protection mme-tx-msg-rate-control enb s1-paging</b> .
Downlink Non-UE LPPaTpt	The total number of non-UE downlink transport messages sent by the MME to the eNodeB for LPPa (LTE Positioning Protocol annex).
Downlink UE LPPaTpt	The total number of UE downlink transport messages sent by the MME to the eNodeB for LPPa.
Kill Request	The total number of CMAS Kill Request messages sent by the MME to the eNodeB. This message is forwarded by the MME to eNodeB to cancel an already ongoing broadcast of a warning message.

Field	Description
Write-Replace Warn Req	The total number of CMAS Write-Replace Warning Request messages sent by the MME to the eNodeB. This message is sent by the MME to request the start or overwrite of the broadcast of a warning message.
<b>Received S1AP Data</b>	This sub-group displays the statistics of the total data received over S1AP interface by this MME manager from eNodeB.
S1 Setup Req	The total number of S1 SETUP REQUEST messages for S1 setup procedure received over S1AP interface by this MME manager from eNodeB.
Reset	The total number of S1 RESET messages for S1 reset procedure received over S1AP interface by this MME manager from eNodeB.
Reset Ack	The total number of S1 RESET-ACK messages for S1 reset procedure received over S1-P interface by this MME manager from eNodeB.
eNB Dir Info Transfer	The total number of ENB DIRECT INFORMATION TRANSFER messages for eNodeB Direct Information Transfer procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
eNB Config Update	The total number of ENB CONFIGURATION UPDATE messages for eNB Configuration Update procedure processed and transmitted over S1AP interface by this MME manager to eNodeB.
S1AP Msg Decode Failure	The total number of failure occurred during S1AP control message decoding procedure by eNodeB and S1AP DECODE FAILURE messages received over S1AP interface by this MME manager from eNodeB.
S1AP Msg Unexpected	The total number of failure occurred due to unexpected events during S1AP control message procedure at eNodeB and S1AP UNEXPECTED EVENT messages received over S1AP interface by this MME manager from eNodeB.
E-RAB Setup Resp	The total number of E-RAB setup request response messages received over S1AP interface by this MME manager from eNodeB.
E-RAB Modify Resp	The total number of E-RAB modify request response messages received over S1AP interface by this MME manager from eNodeB.
E-RAB Release Resp	The total number of E-RAB release request response messages received over S1AP interface by this MME manager from eNodeB.
E-RAB Release Ind	The total number of E-RAB release indicator messages received over S1AP interface by this MME manager from eNodeB.
E-RAB Mod Ind	Indicates the number of E-RAB Modification Indication messages received from the master eNodeB.
Initial Ctxt Setup Resp	The total number of initial context setup request response messages received over S1AP interface by this MME manager from eNodeB.
Initial Ctxt Setup Fail	The total number of initial UE context setup failure messages received over S1AP interface by this MME manager from eNodeB.

Field	Description
UE Contxt Release Req	The total number of initial UE context release command messages received over S1AP interface by this MME manager from eNodeB.
UE Ctxt Release Comp	The total number of UE context release request messages received over S1AP interface by this MME manager from eNodeB.
UE Context Modify Resp	The total number of UE context modify request messages received over S1AP interface by this MME manager from eNodeB.
UE Ctxt Modify Fail	The total number of UE context modify request failure messages received over S1AP interface by this MME manager from eNodeB.
Initial UE Message	The total number of initial UE messages received over S1AP interface by this MME manager from eNodeB.
Uplink NAS Transport	The total number of NAS Transport in Uplink direction messages received over S1AP interface by this MME manager from eNodeB.
NAS Non-Delivery Ind	The total number of S1AP messages for NAS non delivery indication received over S1AP interface by this MME manager from eNodeB.
Error Indication	The total number of S1AP messages with error-indication received over S1AP interface by this MME manager from eNodeB.
Handover Request Ack	The total number of ACK messages for handover request received over S1AP interface by this MME manager from eNodeB.
Handover Cancel	The total number of handover cancel messages received over S1AP interface by this MME manager from eNodeB.
Handover Required	The total number of handover required messages received over S1AP interface by this MME manager from eNodeB.
Handover Fail	The total number of HANDBOVER_FAILURE messages received over S1AP interface by this MME manager from eNodeB.
Handover Notify	The total number of HANDBOVER_NOTIFY messages received over S1AP interface by this MME manager from eNodeB.
Path Switch Req	The total number of PATH_SWITCH_REQ messages received over S1AP interface by this MME manager from eNodeB.
eNB Status Transfer	The total number of messages received for eNodeB status transfer message over S1AP interface by this MME manager from eNodeB.
UE Capability Info Ind	The total number of messages with UE capability information indication received over S1AP interface by this MME manager from eNodeB.
Uplink S1 CDMA2000	The total number of response messages for S1 tunneling with cdma2000 network in uplink direction received over S1AP interface by this MME manager from eNodeB.

Field	Description
Trace Failure Ind	The total number of response messages with Session Trace failure indication for specific session received over S1AP interface by this MME manager from eNodeB.
Location Report	The total number of LOCATION REPORT messages sent by the eNodeB to the MME providing the UE's location.
Loc Report Fail Ind	The total number of LOCATION REPORT FAILURE INDICATION messages sent by the eNodeB to the MME indicating that a LOCATION REPORT CONTROL procedure has failed due to an interaction with a handover procedure.
S1AP Decode Fail	The total number of response message indicating S1AP decode failure received over S1AP interface by this MME manager from eNodeB.
MME Config Update Fail	The total number of MME CONFIGURATION UPDATE FAILURE messages sent by the eNodeB to the MME indicating an S1-MME configuration update failure.
MME Config Update Ack	The total number of MME CONFIGURATION UPDATE ACKNOWLEDGEMENT messages sent by the eNodeB indicating the receipt of the Transport Network Layer (TNL) association information.
S1AP Unexpected Event	The total number of message indicating failure due to unexpected event received over S1AP interface by this MME manager from eNodeB.
eNB Config Transfer	The total number of ENB CONFIGURATION TRANSFER message received by the MME from the eNodeB for the purpose of transferring RAN configuration information.
Uplink Non-UE LPPaTpt	The total number of non-UE uplink transport messages received by the MME from the eNodeB for LPPa (LTE Positioning Protocol annex).
Uplink UE LPPaTpt	The total number of UE uplink transport messages received by the MME from the eNodeB for LPPa.
Kill Response	The total number of CMAS Kill Response messages received by the MME from the eNodeB. This message is sent by the eNodeB to indicate the list of warning areas where cancellation of the broadcast of the identified message was successful and unsuccessful.
Write-Replace Warn Resp	The total number of CMAS Write-Replace Warning Response messages received by the MME from the eNodeB. This message is sent by the eNodeB to acknowledge the MME on the start or overwrite request of a warning message.
Cell Traffic Trace	The total number of Cell Traffic Trace messages by the MME from eNodeB.
<b>Radio Network Error Statistics</b>	This sub-group displays error indication statistics between the MME and the eNodeB.
Unknown MME UE S1AP Id	The total number of times an MME UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.
Unknown ENB UE S1AP Id	The total number of times an ENB UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.

Field	Description
Unknown UE S1AP Id Pair	The total number of times an ENB and MME UE S1AP ID was not included in an error indication message received by the MME from the eNodeB.
<b>Protocol Error Statistics</b>	This sub-group displays protocol error statistics for S1AP messages received by the MME.
Transfer Syntax Error	The total number of messages received by the MME from the eNodeB containing a Transfer Syntax Error.
Semantic Error	The total number of messages received by the MME from the eNodeB containing a Semantic Error.
Message Not Compatible	The total number of messages received by the MME from the eNodeB that were not compatible with the receiver state.
Abstract Syntax Error	This sub-group displays abstract syntax error statistics for S1AP messages received by the MME from the eNodeB.
Reject	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error with a criticality of "reject".
Ignore And Notify	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error with a criticality of "ignore and notify".
Falsely Constr Msg	The total number of S1AP messages received by the MME from the eNodeB containing an Abstract Syntax Error because the message contained IEs or IE groups in the wrong order or with too many occurrences.
<b>eNodeB Statistics</b>	This sub-group displays eNodeB statistics for S1AP messages received by the MME from the eNodeB.
Total eNodeB Associations	The total number of eNodeB associations
<b>EMM (Evolved Mobility Management) Statistics</b>	
<b>EPS Associations by Attach using IMSI</b>	This sub-group displays all EMM Evolved Packet System (EPS) IMSI attach association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations for Emergency Bearer Services</b>	This sub-group displays all EMM Emergency Bearer Service attach association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations by Attach using IMEI</b>	This sub-group displays all EMM IMEI (International Mobile Equipment Identity) attach association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations by Attach using Local GUTI</b>	This sub-group displays all EMM EPS local GUTI (Globally Unique Temporary ID) attach association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations by Attach using Foreign GUTI</b>	This sub-group displays all EMM EPS foreign GUTI attach association attempts/successes/failures associated with all MME services on the chassis.

Field	Description
<b>EPS Associations by Attach using P-TMSI</b>	This sub-group displays all EMM EPS P-TMSI (Packet Temporary Mobile Subscriber Identity) attach association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations by TAU using Foreign GUTI</b>	This sub-group displays all EMM EPS foreign GUTI tracking area update association attempts/successes/failures associated with all MME services on the chassis.
<b>EPS Associations by TAU using P-TMSI</b>	This sub-group displays all EMM EPS P-TMSI tracking area update association attempts/successes/failures associated with all MME services on the chassis.
<b>Associations by Combined Attach using IMSI</b>	This sub-group displays all EMM EPS IMSI combined attach association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.
<b>Associations by Combined Attach using Local GUTI</b>	This sub-group displays all EMM EPS local GUTI combined attach association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.
<b>Associations by Combined Attach using Foreign GUTI</b>	This sub-group displays all EMM EPS foreign GUTI combined attach association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.
<b>Associations by Combined Attach using P-TMSI</b>	This sub-group displays all EMM EPS P-TMSI combined attach association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.

Field	Description
<b>Associations by Combined TAU using Foreign GUTI</b>	This sub-group displays all EMM EPS foreign GUTI combined tracking area update association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.
<b>Associations by Combined TAU using P-TMSI</b>	This sub-group displays all EMM EPS P-TMSI combined tracking area update association attempts, successes, EPS Only successes, and failures associated with all MME services on the chassis.  "Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.
<b>Authentications</b>	This sub-group displays all EMM authentication attempts/successes/failures associated with all MME services on the system.
<b>Identity</b>	This sub-group displays all EMM identity event attempts/successes/failures associated with all MME services on the system.
<b>Security</b>	This sub-group displays all EMM security event attempts/successes/failures associated with all MME services on the system.
Dynamic TAI List Periodic TAU	This sub-group displays the number of attempts, successes, and failures of Dynamic TAI list periodic tracking area update (TAU).
Dynamic TAI List Normal TAU without SGW Relocation	This sub-group displays the number of Dynamic TAI List Normal TAU, without S-GW relocation, attempts, successes, or failures associated with all MME services.
Dynamic TAI List TAU with Bearer Activation	This sub-group displays the number of Dynamic TAI list TAU, with bearer activation, attempts, successes, or failures associated with all MME services.
Dynamic TAI List TAU with SGW Relocation	This sub-group displays the number of Dynamic TAI List TAU, with S-GW relocation, attempts, successes, or failures associated with all MME services.
<b>ESM (Evolved S Management) Statistics</b>	
PDN type IPv4 only	Counter for PDN Connectivity Reject with cause 50.
PDN type IPv6 only	Counter for PDN Connectivity Reject with cause 51.
<b>GUTI Relocation</b>	This sub-group displays all GUTI relocation event attempts/successes/failures associated with all MME services on the system.
<b>Periodic TAU</b>	This sub-group displays all periodic tracking area update (TAU) attempts/successes/failures associated with all MME services on the system.

Field	Description
<b>Normal TAU without SGW Relocation</b>	This sub-group displays all EMM normal tracking area update, without S-GW relocation, attempts/successes/failures associated with all MME services on the chassis.  <b>Important</b> In Release 15.0 and later, this counter will only display EPC related TAU.
<b>TAU with Bearer Activation</b>	This sub-group displays all EMM tracking area update, with bearer activation, attempts/successes/failures associated with all MME services on the chassis.
<b>TAU with SGW Relocation</b>	This sub-group displays all EMM tracking area update, with S-GW relocation, attempts/successes/failures associated with all MME services on the chassis.  <b>Important</b> In Release 15.0 and later, this counter will only display EPC related TAU.
<b>Combined TA/LA Updating without SGW Relocation</b>	This sub-group displays all TAU procedures with update type "combined TA/LA updating" and the signaled Tracking area did not need SGW relocation.
Attempted	The total number of TAU procedures with update type "combined TA/LA updating" attempted by the UE and the signaled Tracking area does not need SGW relocation.
Success	The total number of TAU procedures with update type "combined TA/LA updating" that is executed successfully by the MME.
Success EPS Only	The total number of TAU procedures with update type "combined TA/LA updating" that failed during updating the VLR.
Failure	The total number of TAU procedures with update type "combined TA/LA updating" that failed. Usually, this would be the case where no SGW could be found for the tracking area.
<b>Combined TA/LA Updating with SGW Relocation</b>	This sub-group displays all TAU procedures with update type "combined TA/LA updating" and the signaled Tracking area required change of the SGW.
Attempted	The total number of TAU procedures with update type "combined TA/LA updating" attempted by the UE and the signaled Tracking area required change of the SGW.
Success	The total number of TAU procedures with update type "combined TA/LA updating" successfully attempted by the UE and the signaled Tracking area required change of the SGW.
Success EPS Only	The total number of TAU procedures with update type "combined TA/LA updating" attempted by the UE and the signaled Tracking area required change of the SGW, and failed during updating the VLR.
Failure	The total number of TAU procedures with update type "combined TA/LA updating" attempted by the UE and the signaled Tracking area required change of the SGW, and failed during EPC procedures. Usually, during SGW relocation procedure.

Field	Description
<b>TAU with IMSI attach without SGW Relocation</b>	This sub-group displays all TAU procedures with update type "combined TA/LA updating with IMSI attach" and the signaled Tracking area did not require change of the SGW.
Attempted	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area did not require change of the SGW.
Success	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" successfully attempted by the UE and the signaled Tracking area did not require change of the SGW.
Success EPS Only	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area did not require change of the SGW, and failed during updating the VLR.
Failure	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area did not require change of the SGW, and failed during EPC procedures. Usually, during SGW relocation procedure.
<b>TAU with IMSI attach and SGW Relocation</b>	This sub-group displays all TAU procedures with update type "combined TA/LA updating with IMSI attach" and the signaled Tracking area required change of the SGW
Attempted	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area required change of the SGW.
Success	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" successfully attempted by the UE and the signaled Tracking area required change of the SGW.
Success EPS Only	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area required change of the SGW, and failed during updating the VLR.
Failure	The total number of TAU procedures with update type "combined TA/LA updating with IMSI attach" attempted by the UE and the signaled Tracking area required change of the SGW, and failed during EPC procedures. Usually, during SGW relocation procedure.
<b>Detaches UE Initiated</b>	This sub-group displays all UE-initiated detach attempts/successes/failures associated with all MME services on the system.
<b>Detaches NW Initiated</b>	This sub-group displays all network-initiated detach attempts/successes/failures associated with all MME services on the system.
<b>Detaches HSS Initiated</b>	This sub-group displays all HSS-initiated (Home Subscriber Server) detach attempts/successes/failures associated with all MME services on the system.

Field	Description
<b>Mobile Terminated Location Service</b>	This sub-group displays all Mobile Terminated Location Request (MT-LR) Location Service (LCS) attempts/successes/failures associated with all MME services on the system.
<b>Network Induced Location Request</b>	This sub-group displays all Network Induced Location Request (NI-LR) Location Service (LCS) attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for specific EMM event associated with all MME services on the system.
Success	The total number of successful attempts for specific EMM event associated with all MME services on the system.
Success EPS Only	The total number of successful, EPS-only, attempts for specific EMM event associated with all MME services on the system.
Failures	The total number of attempts failed for specific EMM event associated with all MME services on the system.
<b>SGW Selection</b>	Specifies the Blackisted SGW selected.
Blacklisted SGW chosen	specifies the number of times a blacklisted SGW is selected when all SGWs are blacklisted.
<b>ECM Statistics</b>	This group displays the statistics of all EMM Control Management (ECM) events associated with all MME services on the system.
<b>Idle Mode Entry Events</b>	This sub-group displays all idle mode entry event attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts made for the specific ECM event associated with all MME services on the system.
Success	The total number of successful attempts for the specific ECM event associated with all MME services on the system.
Failures	The total number of attempts failed for the specific ECM event associated with all MME services on the system.
<b>Service Request Events</b>	This sub-group displays the ECM service request event attempts/successes/ failures associated with all MME services on the system.  <b>Important</b> In Release 14.0 and later, this group of counters is deprecated and replaced by the <b>UE Requested Service Request Events</b> and <b>NW Initiated Service Request Events</b> groups.
<b>UE Initiated Service Request Events</b>	This group displays the ECM service request event attempts/successes/failures which have been initiated by the UE for all MME services on the system.
<b>NW Initiated Service Request Events</b>	This group displays the ECM service request event attempts/successes/failures which have been initiated by the network for all MME services on the system.

Field	Description
<b>Paging Initiation Events</b>	This group displays all paging initiation event attempts/successes/failures associated with all MME services on the system.  <b>Important</b> In Release 15.0 and later, this group of counters is deprecated and replaced by the more granular groups, such as: <b>Paging Initiation Events for PS QCI-<i>n</i> Events, Paging Initiation Events for CS Voice Events, Paging Initiation Events for CS SMS Events, and Paging Initiation Events for CS Other Events.</b>
Attempted	The total number of attempts made for the specific ECM event associated with all MME services on the system.
Success	The total number of successful attempts for the specific ECM event associated with all MME services on the system.
Failures	The total number of attempts failed for the specific ECM event associated with all MME services on the system.
Success at Last eNBs	The total number of successful pages where the UE responded at the last known eNodeB.  <b>Important</b> In Release 14.0 and later, this output field has been replaced by the following "Success at Last n eNBs" output field.
Success at Last n eNBs	The total number of successful pages where the UE responded at the last n known eNodeBs.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked.
<b>Paging Initiation for PS QCI-<i>n</i> Events</b>	This group displays the ECM Paging Initiation Events for PS Event attempts/successes/failures associated with all MME services on the system.  Statistics are grouped according to the QoS Class Identifier (QCI) value, where <i>n</i> represents the specific QCI value.
Attempted	The total number of attempts made for PS events.
Success	The total number of successful attempts made for PS events.
Failures	The total number of attempts failed for PS events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for PS events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for PS events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for PS events.

Field	Description
<b>Paging Initiation for CS Voice Events</b>	This group displays the ECM Paging Initiation Events for CS Voice Event attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts made for CS Voice events.
Success	The total number of successful attempts made for CS Voice events.
Failures	The total number of attempts failed for CS Voice events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for CS Voice events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for CS Voice events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for CS Voice events.
<b>Paging Initiation for CS SMS Events</b>	This group displays the ECM Paging Initiation Events for CS SMS Event attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts made for CS SMS events.
Success	The total number of successful attempts made for CS SMS events.
Failures	The total number of attempts failed for CS SMS events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for CS SMS events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for CS SMS events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for CS SMS events.
<b>Paging Initiation for CS Other Events</b>	This group displays the ECM Paging Initiation Events for CS Other Event attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts made for CS Other events.
Success	The total number of successful attempts made for CS Other events.
Failures	The total number of attempts failed for CS Other events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for CS Other events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for CS Other events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for CS Other events.

Field	Description
Paging Initiation for CS Unknown UE:	
Attempted	Displays the number of times when the session manager sends paging request to at least 1 MME manager.
Skipped	Displays the number of times when the session manager skips sending paging request to at least 1 busy MME manager.
<b>Paging Initiation for SIGNALING IDR Events</b>	This group displays the ECM Paging Initiation Events for IDR Signaling attempts/successes/failures associated with all MME services on the system
Attempted	The total number of attempts made for IDR Signaling events.
Success	The total number of successful attempts made for IDR Signaling events.
Failures	The total number of attempts failed for IDR Signaling events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for IDR Signaling events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for IDR Signaling events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for IDR Signaling events.
<b>Paging Initiation for SIGNALING DETACH Events</b>	This group displays the ECM Paging Initiation Events for Detach Signaling attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for Detach Signaling events.
Success	The total number of successful attempts made for Detach Signaling events.
Failures	The total number of attempts failed for Detach Signaling events.
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for Detach Signaling events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for Detach Signaling events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for Detach Signaling events.
<b>Paging Initiation for SIGNALING LCS Events</b>	This group displays the ECM Paging Initiation Events for Location Services Signaling attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for Location Services Signaling events.
Success	The total number of successful attempts made for Location Services Signaling events.
Failures	The total number of attempts failed for Location Services Signaling events.

Field	Description
Success at Last n eNB	The total number of successful pages where the UE responded at the last n known eNodeBs for Location Services Signaling events.
Success at Last TAI	The total number of successful pages where the UE responded at the last known Tracking Area Identifier for Location Services Signaling events.
Success at TAI List	The total number of successful pages where the UE responded after the entire TAI list was checked for Location Services Signaling events.
<b>Paging Initiation for SIGNALING Node Restoration Events</b>	This group displays the ECM Paging Initiation Events for Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) Signaling attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that were attempted.
Success	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that were successful.
Failures	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that failed.
Success at Last n eNB	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that succeeded at the last known eNodeB (paging profile used: last-n-enb-last-tai).
Success at Last TAI	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that succeeded at an eNodeB in the TAI from which the UE was last heard (paging profile used: all-enb-last-tai).
Success at TAI List	The total number of ECM Statistics-related Paging requests to deactivate a PDN due to Node Restoration (P-GW Restart Notification) that succeeded at an eNodeB in all TAIs present in the TAI list assigned to the UE (paging profile used: all-enb-all-tai).
<b>S1 release for load rebalancing</b>	The number of S1 releases occurring due to IDLE MODE ENTRY procedure with a load rebalancing cause.
<b>CSFB Statistics</b>	
<b>UE Initiated Voice Procedures</b>	This group displays the total number of CSFB Statistics-related UE initiated Voice procedures attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts for UE initiated Voice procedures.
Success	The total number of successful attempts for UE initiated Voice procedures.
Failures	The total number of failed attempts for UE initiated Voice procedures.
<b>NW Initiated Voice Procedures</b>	This group displays the total number of CSFB Statistics-related network initiated Voice procedures attempts/successes/ failures associated with all MME services on the system.

Field	Description
Attempted	The total number of attempts for network initiated Voice procedures.
Success	The total number of successful attempts for network initiated Voice procedures.
Failures	The total number of failed attempts for network initiated Voice procedures.
<b>UE Initiated SMS Procedures</b>	This group displays the total number of CSFB Statistics-related UE initiated SMS procedures attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts for UE initiated SMS procedures.
Success	The total number of successful attempts for UE initiated SMS procedures.
Failures	The total number of failed attempts for UE initiated SMS procedures.
<b>NW Initiated SMS Procedures</b>	This group displays the total number of CSFB Statistics-related network initiated SMS procedures attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts for network initiated SMS procedures.
Success	The total number of successful attempts for network initiated SMS procedures.
Failures	The total number of failed attempts for network initiated SMS procedures.
<b>UE Initiated IMSI Detaches</b>	This group displays the total number of CSFB Statistics-related UE initiated IMSI detaches attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts for UE initiated IMSI detaches.
Success	The total number of successful attempts for UE initiated IMSI detaches.
Failures	The total number of failed attempts for UE initiated IMSI detaches.
<b>NW Initiated IMSI Detaches</b>	This group displays the total number of CSFB Statistics-related network initiated IMSI detaches attempts/successes/ failures associated with all MME services on the system.
Attempted	The total number of attempts for network initiated IMSI detaches.
Success	The total number of successful attempts for network initiated IMSI detaches.
Failures	The total number of failed attempts for network initiated IMSI detaches.
<b>Total EMM Control Messages</b>	
<b>Sent</b>	This sub-group displays the total number of EPS Mobility Management (EMM) control messages sent for specific event associated with all MME services on the system.
Clear-text messages	The total number of plain EMM messages (neither integrity protected nor ciphered) sent by all MME services on the system.

Field	Description
Integrity-check enabled	The total number of integrity protected EMM messages sent by all MME services on the system.
Ciphered messages	The total number of ciphered EMM messages sent by all MME services on the system.
Retransmissions sent	The total number of EMM retransmission messages sent by all MME services on the system. For example, an Attach Accept may be retransmitted $n$ number of times if no response (Attach Complete) is received from the UE.
Failures	The total number of EMM control messages not sent due to lower layer failure for all MME services on the system.
Attach Accept	The total number of EMM Attach Accept messages sent for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM Attach Accept messages sent for a specific ECM event associated with all MME services on the system.
IMSI Unknown in HSS	The total number of EMM Control messages sent – Attach Accept with a cause code of IMSI unknown.
MSC Unreachable	The total number of EMM Control messages sent – Attach Accept with a cause code of MSC not available.
Network Failure	The total number of EMM Control messages sent – Attach Accept with a cause code of Network Failure.
CS Domain Not Available	The total number of EMM Control messages sent – Attach Accept with a cause code of CS domain not available.
Congestion	The total number of EMM Control messages sent – Attach Accept with a cause code of Congestion.
Attach Reject	The total number of EMM Attach Reject messages sent.
IMSI Unknown in HSS	The total number of EMM Attach Reject messages sent, with the cause code #2: "IMSI Unknown in HSS".
Illegal UE	The total number of EMM Attach Reject messages sent with the cause code #3: "Illegal UE".
Illegal ME	The total number of EMM Attach Reject messages sent with the cause code #6: "Illegal ME".
EPS Not Allowed	The total number of EMM Attach Reject messages sent with the cause code #7: "EPS Services Not Allowed".
Network Failure	The total number of EMM Attach Reject messages sent with the cause code #17: "Network Failure".
CSG Not Subscribed	The total number of EMM Attach Reject messages sent with the cause code of #25: "Not authorized for this CSG".

Field	Description
Decode Failure	The total number of EMM Attach Reject messages sent with the cause code #23: "Decode Failure".
IMEI Not Accepted	The total number of EMM Attach Reject messages sent with the cause code #5: "IMEI Not Accepted".
Roaming restricted TA	The total number of EMM Attach Reject messages sent with the cause code #13: "Roaming restricted in TA".
PLMN not allowed	The total number of EMM Attach Reject messages sent with the cause code #11: "PLMN not allowed".
TA not allowed	The total number of EMM Attach Reject messages sent with the cause code #12: "Tracking Area not allowed".
No suitable cells in TA	The total number of EMM Attach Reject messages sent with the cause code #15: "No suitable cells in TA".
EPS non-EPS Not Allwd	The total number of EMM Attach Reject messages sent with the cause code #8: "EPS services and non-EPS services not allowed".
No EPS Svc in this PLMN	The total number of EMM Attach Reject messages sent with the cause code #14: "EPS service not allowed in this plmn".
Congestion	The total number of EMM Attach Reject messages sent with cause #22: "Congestion".
Severe Network Failure	The total number of EMM Attach Reject messages sent with cause #42: "Severe Network Failure".
ESM Failure	The total number of EMM Attach Reject messages sent with the cause "ESM Failure" for a specific ECM event associated with all MME services on the system.
Rejected by PGW/SGW	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #30: "Rejected by PGW/SGW".
Authentication Failed	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #29: "Authentication Failed".
Svc Opt Not Supported	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #32: "Svc Opt Not Supported".
Svc Opt Not Subscribed	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #33: "Svc Opt Not Subscribed".
Unknown APN	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #27: "Unknown or Missing APN".
Opr Determined Barring	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #8: "Operator Determined Barring".
Insufficient Resource	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #26: "Insufficient Resources".

Field	Description
Activation Rejected	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #31: "Request rejected, unspecified".
Svc Opt Tmp OutofOrder	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #34: "Service Option Temporarily Out of Order".
Protocol Errors	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with any of the following Protocol Error cause codes: #95-101, or #111.
APN Restrict Incomt	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #112: "APN Restriction Value Incompatible with Active EPS Bearer Content".
No Attach Reject/Accept	The total number of Attach Accept or Reject messages not sent for Attach requests.
Authentication Fail	The total number of authentication failed and an Attach Accept or Reject message is not sent.
UE initiated detach	The total number of attach requests failed due to collision between an attach request and UE initiated detach and an Attach Accept or Reject message is not sent.
Detach in progress	The total number of attach requests failed due to collision between an attach request and NW initiated detach and an Attach Accept or Reject message is not sent.
Different Attach Recvd	The total number of attach request failed due to collision between two different attach requests with different IEs and the first attach request is dropped and an Attach Accept or Reject message is not sent.
Authentication Reject	The total number of EMM Attach Reject messages sent with the cause "Authentication Reject".
Authentication Request	The total number of EMM Authentication Request messages sent.
Retransmissions	The total number of retransmitted EMM Authentication Request messages sent.
Detach Request	The total number of EMM Detach Request messages sent for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM Detach Request messages sent for a specific ECM event associated with all MME services on the system.
Reattach Required	The total number of EMM Detach Request messages sent, with the reason "Reattach Required", for a specific ECM event associated with all MME services on the system.
Reattach Not Required	The total number of EMM Detach Request messages sent, with the reason "Reattach Not Required", for a specific ECM event associated with all MME services on the system.

Field	Description
IMSI Detach	The total number of EMM Detach Request messages sent, with the reason "IMSI Detach", for a specific ECM event associated with all MME services on the system. <b>Important</b> This statistic is available in Releases prior to 12.2 as well as 15.0 and later.
CSG Not Subscribed	The total number of EMM Detach Request messages sent with the cause code of #25: "Not authorized for this CSG".  This occurs when the Initial UE Message sent from the eNodeB specifies a non-hybrid CSG cell whose CSG ID is not included in the UE's CSG subscription list. In this circumstance, the MME initiates a Detach procedure with this cause code.
Detach Accept	The total number of EMM Detach Accept messages sent for a specific ECM event associated with all MME services on the system.
Downlink NAS Transport	The total number of EMM Downlink NAS Transport messages sent for a specific ECM event associated with all MME services on the system.
EMM Information	The total number of EMM Information messages sent for a specific ECM event associated with all MME services on the system.
EMM Status	The total number of EMM Status messages sent for a specific ECM event associated with all MME services on the system.
GUTI Relocation	The total number of EMM GUTI Relocation messages sent for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM GUTI Relocation messages sent for a specific ECM event associated with all MME services on the system.
Identity Request	The total number of EMM Identity Request messages sent for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM Identity Request messages sent for a specific ECM event associated with all MME services on the system.
Security Mode Command	The total number of EMM Security Mode Command messages sent for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM Security Mode Command messages sent for a specific ECM event associated with all MME services on the system.
Service Reject	The total number of EMM Service Reject messages sent.
UE Identity Unknown	The total number of EMM Service Reject messages sent, with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of EMM Service Reject messages sent, with a cause code of #10: "Implicitly Detached".

Field	Description
No Bearer Active	The total number of EMM Service Reject messages sent, with a cause code of #40: "No EPS bearer context activated".
CSG Not Subscribed	The total number of EMM Service Reject messages sent, with a cause code of #25: "Not authorized for this CSG".
Roaming Restricted TA	The total number of EMM Service Reject messages sent, with a cause code of #13: "Roaming not allowed in this tracking area".
No suitable cells in TA	The total number of EMM Service Reject messages sent, with a cause code of #15: "No suitable cells in tracking area".
TA Not Allowed	The total number of EMM Service Reject messages sent, with a cause code of #12: "Tracking area not allowed".
Congestion	The total number of EMM Service Reject messages sent with cause #22: "Congestion".
TAU Accept Total	The total number of EMM TAU Accept messages sent (for either an Inter- or Intra-MME TAU request). <b>Note:</b> If the MME retransmits a TAU Accept message, only the "Retransmissions" counter will be incremented.
Retransmissions	The total number of EMM TAU Accept messages retransmitted (for either an Inter- or Intra-MME TAU request).
IMSI Unknown in HSS	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #2: "IMSI unknown in HSS".
MSC Unreachable	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #16: "MSC temporarily not reachable".
Network Failure	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #22: "Congestion".
TAU Accept Intra MME	The total number of TAU Accept messages sent for an Intra-MME TAU request.
Retransmissions	The total number of TAU Accept messages retransmitted for an Intra-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".
MSC Unreachable	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #16: "MSC temporarily not reachable".

Field	Description
Network Failure	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #22: "Congestion".
TAU Accept Inter MME	The total number of TAU Accept messages sent for an Inter-MME TAU request.
Retransmissions	The total number of TAU Accept messages retransmitted for an Inter-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".
MSC Unreachable	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #16: "MSC temporarily not reachable".
Network Failure	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #22: "Congestion".
TAU Reject Total	The total number of EMM TAU Reject messages sent.
IMSI Unknown in HSS	The total number of EMM TAU Reject messages sent with the cause code #2: "IMSI unknown in HSS".
Illegal UE	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #3: "Illegal UE".
Illegal ME	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #6: "Illegal ME".
EPS Not Allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #5: "IMEI not accepted".
ESM Failure	The total number of EMM TAU Reject messages sent with the cause "ESM Failure". <b>Important</b> This statistic has been deprecated in Release 12.2.

Field	Description
Decode Failure	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #25: Not authorized for this CSG.
EPS non-EPS not Allwd	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #8: EPS services and non-EPS services not allowed.
Congestion	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with cause #22: "Congestion".
Severe Network Failure	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with cause #42: "Severe Network Failure".
TAU Reject Intra MME	The total number of TAU Reject messages sent for an Intra-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #2: IMSI unknown in HSS.
Illegal UE	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #3: "Illegal UE".
Illegal ME	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #6: "Illegal ME".

Field	Description
EPS Not Allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent for an Intra-MME TAU request with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #5: "IMEI not accepted".
Decode Failure	The total number of TAU Reject messages sent for an Intra-MME TAU request with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #25: "Not authorized for this CSG".
EPS non-EPS not Allwd	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #8: "EPS services and non-EPS services not allowed".
Congestion	The total number of TAU Reject messages sent for an Intra-MME TAU request, with cause #22: "Congestion".
Severe Network Failure	The total number of TAU Reject messages sent for an Intra-MME TAU request, with cause #42: "Severe Network Failure".
TAU Reject Inter MME	The total number of TAU Reject messages sent for an Inter-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".

Field	Description
Illegal UE	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #3: "Illegal UE".
Illegal ME	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #6: "Illegal ME".
EPS Not Allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #5: "IMEI not accepted".
Decode Failure	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #25: "Not authorized for this CSG".
EPS non-EPS not Allwd	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #8: "EPS services and non-EPS services not allowed".
Congestion	The total number of TAU Reject messages sent for an Inter-MME TAU request, with cause #22: "Congestion".
Severe Network Failure	The total number of TAU Reject messages sent for an Inter-MME TAU request, with cause #42: "Severe Network Failure".

Field	Description
No TAU Rej/Accept Total	The total number of TAU Accept or Reject messages not sent for TAU (Intra-MME + Inter-node) requests.
Authentication Failed	The total number of TAU (Intra-MME + Inter-node) requests failed due to authentication failures and no TAU Accept or Reject message is sent.
UE initiated detach	The total number of TAU (Intra-MME + Inter-node) requests failed due to collision between a TAU (Intra-MME or Inter-node) request and UE initiated detach and no TAU Accept or Reject message is sent.
Detach in progress	The total number of TAU (Intra-MME + Inter-node) requests failed due to collision between a TAU (Intra-MME or Inter-node) request and NW initiated detach and no TAU Accept or Reject message is sent.
Different TAU Recvd	The total number of TAU (Intra-MME + Inter-node) requests failed due to collision between two different TAU (Intra-MME or Inter-node) requests with different IEs and the first TAU request is dropped and no TAU Accept or Reject message is sent.
Attach awaits MBResp	The total number of TAU (Intra-MME + Inter-node) requests failed due to collision between a TAU (Intra-MME or Inter-node) request and an Attach waiting for a Modify Bearer Response and no TAU Accept or Reject message is sent.
No IntraMME TAU Rej/Act	The total number TAU Accept or Reject messages not sent for Intra-MME TAU requests.
Authentication Failed	The total number Intra-MME TAU requests failed due to authentication failures and no TAU Accept or Reject message is sent.
UE initiated detach	The total number of Intra-MME TAU requests failed due to collision between an Intra-MME TAU request and UE initiated detach and no TAU Accept or Reject message is sent.
Detach in progress	The total number of Intra-MME TAU requests failed due to collision between an Intra-MME TAU request and NW initiated detach and no TAU Accept or Reject message is sent.
Different TAU Recvd	The total number of Intra-MME TAU requests failed due to collision between two different Intra-MME TAU requests with different IEs and the first TAU request is dropped and no TAU Accept or Reject message is sent.
Attach awaits MBResp	The total number of Intra-MME TAU requests failed due to collision between an Intra-MME TAU request and an Attach waiting for a Modify Bearer Response and no TAU Accept or Reject message is sent.
No InterNode TAU Rej/Act	The total number of TAU Accept or Reject messages not sent for Inter-node TAU requests.
Authentication Failed	The total number of Inter-node TAU requests failed due to authentication failure and a TAU Accept or Reject message is not sent.

Field	Description
UE initiated detach	The total number of Inter-node TAU requests failed due to collision between an Inter-node TAU request and UE initiated detach and a TAU Accept or Reject message is not sent.
Different TAU Recvd	The total number of Inter-node TAU requests failed due to collision between two different Inter-node TAU requests with different IEs and the first TAU request is dropped and a TAU Accept or Reject message is not sent.
CS Service Notification	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #100: "CS Service notification".
<b>Received</b>	This sub-group displays the statistics of all EPS Mobility Management (EMM) control messages received by an MME services on the system.
Clear-text messages	The total number of plain EMM messages (neither integrity protected nor ciphered) received by all MME services on the system.
Integrity-check enabled	The total number of integrity protected EMM messages received by all MME services on the system.
Ciphered messages	The total number of ciphered EMM messages received by all MME services on the system.
Accepted	The total number of EMM messages received by all MME services on the system and accepted for further processing.
Ignored messages	The total number of EMM control messages received by all MME services on the system, but were ignored because the MME was busy processing some other procedure.
Denied	The total number of EMM control messages received by all MME services on the system, but the security check failed for the EMM message.
Decode failures	The total number of EMM control messages received by all MME services on the system, but the MME was unable to decode the EMM message as per 3GPP TS 24.301.
Attach Complete	The total number of EMM Attach Complete messages received for a specific ECM event associated with all MME services on the system.
Attach Request	The total number of EMM Attach Request messages received for a specific ECM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted EMM Attach Request messages received for a specific ECM event associated with all MME services on the system.  <b>Important</b> This field was deprecated in Release 14.0. It was introduced again in Release 15.0.
Authentication Failure	The total number of EMM Authentication Failure messages received for a specific ECM event associated with all MME services on the system.

Field	Description
Authentication Response	The total number of EMM Authentication Response messages received for a specific ECM event associated with all MME services on the system.
Identity Response	The total number of IMSI Identity Response messages received for a specific ECM event associated with all MME services on the system.
Detach Request	The total number of EMM Detach Request messages received for a specific ECM event associated with all MME services on the system.
Switch Off	The total number of EMM Detach Request messages received, with the reason "Switch Off", for a specific ECM event associated with all MME services on the system.
Not Switch Off	The total number of EMM Detach Request messages received, with the reason "Not Switch Off", for a specific ECM event associated with all MME services on the system.
IMSI Detach	The total number of EMM Detach Request messages received, with the reason "IMSI Detach", for a specific ECM event associated with all MME services on the system.
EMM Status	The total number of EMM Status messages received for a specific ECM event associated with all MME services on the system.
GUTI Reloc Complete	The total number of EMM GUTI Reloc Complete messages received for a specific ECM event associated with all MME services on the system.
Security Mode Complete	The total number of EMM Security Mode Complete messages received for a specific ECM event associated with all MME services on the system.
Security Mode Reject	The total number of EMM Security Mode Reject messages received for a specific ECM event associated with all MME services on the system.
Service Request	The total number of EMM Service Request messages received for a specific ECM event associated with all MME services on the system.
TAU Request Total	The total number of TAU Request messages received (either an Inter- or Intra-MME TAU request). <b>Note:</b> If the MME receives a TAU Request message for the same UE while the first TAU Request is in process, both the "TAU Request Total" and "Retransmissions" counters will be incremented.
Retransmissions	The total number of retransmitted TAU Request messages received (includes both Inter- and Intra-MME TAU requests). <b>Important</b> This field was deprecated in Release 14.0. It was introduced again in Release 15.0.
TAU Request Intra-MME	The total number of Intra-MME TAU Request messages received.
Retransmissions	The total number of retransmitted Intra-MME TAU Request messages received.

Field	Description
TAU Request Inter-MME	The total number of Inter-MME TAU Request messages received.
Retransmissions	The total number of retransmitted Inter-MME TAU Request messages received.
TAU Complete	The total number of EMM TAU Complete messages received for a specific ECM event associated with all MME services on the system.
Extended Service Request	The total number of EMM Extended Service Request messages received for a specific ECM event associated with all MME services on the system.
<b>ESM Statistics</b>	
<b>PDN Connections</b>	This group displays the statistics for PDN connection attempts/successes/failures associated with all MME services on the system.
<b>PDN Connections with PDN-type Override to IPv4</b>	This group displays the statistics for PDN connection attempts/successes/failures associated with all MME services on the system which have had the requested PDN-type overridden to IPv4.
<b>PDN Connections with PDN-type Override to IPv6</b>	This group displays the statistics for PDN connection attempts/successes/failures associated with all MME services on the system which have had the requested PDN-type overridden to IPv6.
<b>UE Initiated PDN Disconnections</b>	This group displays the statistics for UE-initiated PDN disconnection attempts/successes/failures associated with all MME services on the system.
<b>MME Initiated PDN Disconnections</b>	This group displays the statistics for MME-initiated PDN disconnection attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated PDN Disconnections</b>	This group displays the statistics for P-GW/S-GW-initiated PDN disconnection attempts/successes/ failures associated with all MME services on the system.
<b>HSS Initiated PDN Disconnections</b>	This group displays the statistics for HSS-initiated PDN disconnection attempts/successes/ failures associated with all MME services on the system.
<b>Default Bearer Activations</b>	This group displays the statistics of all default EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>NW Initiated Dedicated Bearer Activations</b>	This group displays the statistics of all network-initiated dedicated EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Dedicated Bearer Activations</b>	This group displays the statistics of all UE-initiated dedicated EPS bearer activation attempts/successes/failures associated with all MME services on the system.
<b>MME Initiated Dedicated Bearer Deactivations</b>	This group displays the statistics of all MME-initiated dedicated bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated Dedicated Bearer Deactivations</b>	This group displays the statistics of all P-GW/S-GW-initiated dedicated bearer deactivation attempts/successes/failures associated with all MME services on the system.

Field	Description
<b>UE Initiated Dedicated Bearer Deactivations</b>	This group displays the statistics of all UE-initiated dedicated bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>MME Initiated Default Bearer Deactivations</b>	This group displays the statistics of all MME-initiated default bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated Default Bearer Deactivations</b>	This group displays the statistics of all P-GW/S-GW-initiated default bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Default Bearer Deactivations</b>	This group displays the statistics of all UE-initiated default bearer deactivation attempts/successes/failures associated with all MME services on the system.
<b>MME Initiated Bearer Deactivations</b>	This group displays the statistics of all MME-initiated bearer deactivation attempts/successes/failures associated with all MME services on the system.  <b>Important</b> In Release 14.0 and later, this group of counters is deprecated and replaced by the <b>MME Initiated Dedicated Bearer Deactivations</b> and <b>MME Initiated Default Bearer Deactivations</b> groups.
<b>PGW/SGW Initiated Bearer Deactivations</b>	This group displays the statistics of all P-GW/S-GW-initiated bearer deactivation attempts/successes/failures associated with all MME services on the system.  <b>Important</b> In Release 14.0 and later, this group of counters is deprecated and replaced by the <b>PGW/SGW Initiated Dedicated Bearer Deactivations</b> and <b>PGW/SGW Initiated Default Bearer Deactivations</b> groups.
<b>UE Initiated Bearer Deactivations</b>	This group displays the statistics of all UE-initiated bearer deactivation attempts/successes/failures associated with all MME services on the system.  <b>Important</b> In Release 14.0 and later, this group of counters is deprecated and replaced by the <b>UE Initiated Dedicated Bearer Deactivations</b> and <b>UE Initiated Default Bearer Deactivations</b> groups.
<b>HSS Initiated Bearer Modifications</b>	This group displays the statistics of all HSS-initiated bearer modification attempts/successes/failures associated with all MME services on the system.
<b>PGW/SGW Initiated Bearer Modifications</b>	This group displays the statistics of all P-GW/S-GW-initiated bearer modification attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Bearer Modifications</b>	This group displays the statistics of all UE-initiated bearer modification attempts/successes/failures associated with all MME services on the system.
<b>UE Initiated Emergency PDN Connections</b>	This group displays the statistics of all UE-initiated emergency PDN connection attempts/successes/failures associated with all MME services on the system.
<b>DCNR User PDN Connections</b>	This group displays the statistics of all DCNR user PDN connection attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for specific ESM event associated with all MME services on the system.

Field	Description
Success	The total number of successful attempts for specific ESM event associated with all MME services on the system.
Failures	The total number of attempts failed for specific ESM event associated with all MME services on the system.
<b>Total ESM Control Messages</b>	
<b>Sent</b>	This sub-group displays the statistics of all EPS Session Management (ESM) control messages sent by an MME services on the system.
Clear-text messages	The total number of plain ESM messages (neither integrity protected nor ciphered) sent by all MME services on the system.
Integrity-check enabled	The total number of integrity protected ESM messages sent by all MME services on the system.
Ciphered messages	The total number of ciphered ESM messages sent by all MME services on the system.
Retransmissions sent	The total number of ESM retransmission messages sent by all MME services on the system. For example, an Attach Accept may be retransmitted $n$ number of times if no response (Attach Complete) is received from the UE.
Failures	The total number of ESM control messages not sent due to lower layer failure for all MME services on the system.
Act Dedicated Bearer	The total number of ESM Activate Dedicated Bearer messages sent for a specific ESM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted ESM Activate Dedicated Bearer messages sent for a specific ECM event associated with all MME services on the system.
Act Default Bearer	The total number of ESM Activate Default Bearer messages sent for a specific ESM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted ESM Activate Default Bearer messages sent for a specific ECM event associated with all MME services on the system.
Bearer Alloc Reject	The total number of ESM Bearer Allocate Reject messages sent for a specific ESM event associated with all MME services on the system.
PTI Already in Use	The total number of ESM Bearer Allocate Reject messages sent, with the cause "PTI Already in Use", for a specific ESM event associated with all MME services on the system.
Semantic Error TFT	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Semantic Error TFT", for a specific ESM event associated with all MME services on the system.
Syntactic Error TFT	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Syntactic Error TFT", for a specific ESM event associated with all MME services on the system.

Field	Description
Invalid Bearer Id	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Invalid Bearer Id", for a specific ESM event associated with all MME services on the system.
Collision with NW Op	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Collision with NW Op", for a specific ESM event associated with all MME services on the system.
Rejected By PGW/SGW	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Rejected By PGW/SGW", for a specific ESM event associated with all MME services on the system.
Invalid PTI	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Invalid PTI", for a specific ESM event associated with all MME services on the system.
Insufficient Resources	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Insufficient Resources", for a specific ESM event associated with all MME services on the system.
Authentication failed	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Authentication failed", for a specific ESM event associated with all MME services on the system.
Sv opt not supported	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Service Option Not Supported", for a specific ESM event associated with all MME services on the system.
Svc opt not subscribed	The total number of ESM Bearer Allocate Reject messages sent, with the cause "Service Option Not Subscribed", for a specific ESM event associated with all MME services on the system.
EPS QoS Not Accepted	The total number of ESM Bearer Allocate Reject messages sent, for bearer allocation failures, with the cause "EPS QoS Not Accepted".
Bearer Modify Reject	The total number of ESM Bearer Modify Reject messages sent for a specific ESM event associated with all MME services on the system.
PTI Already in Use	The total number of ESM Bearer Modify Reject messages sent, with the cause "PTI Already in Use", for a specific ESM event associated with all MME services on the system.
Semantic Error TFT	The total number of ESM Bearer Modify Reject messages sent, with the cause "Semantic Error TFT", for a specific ESM event associated with all MME services on the system.
Syntactic Error TFT	The total number of ESM Bearer Modify Reject messages sent, with the cause "Syntactic Error TFT", for a specific ESM event associated with all MME services on the system.

Field	Description
Invalid Bearer Id	The total number of ESM Bearer Modify Reject messages sent, with the cause "Invalid Bearer Id", for a specific ESM event associated with all MME services on the system.
Collision with NW Op	The total number of ESM Bearer Modify Reject messages sent, with the cause "Collision with NW Op", for a specific ESM event associated with all MME services on the system.
Rejected By PGW/SGW	The total number of ESM Bearer Modify Reject messages sent, with the cause "Rejected By PGW/SGW", for a specific ESM event associated with all MME services on the system.
Invalid PTI	The total number of ESM Bearer Modify Reject messages sent, with the cause "Invalid PTI", for a specific ESM event associated with all MME services on the system.
Insufficient Resources	The total number of ESM Bearer Modify Reject messages sent, with the cause "Insufficient Resources", for a specific ESM event associated with all MME services on the system.
Authentication failed	The total number of ESM Bearer Modify Reject messages sent, with the cause "Authentication failed", for a specific ESM event associated with all MME services on the system.
Sv opt not supported	The total number of ESM Bearer Modify Reject messages sent, with the cause "Service Option Not Supported", for a specific ESM event associated with all MME services on the system.
Svc opt not subscribed	The total number of ESM Bearer Modify Reject messages sent, with the cause "Service Option Not Subscribed", for a specific ESM event associated with all MME services on the system.
EPS QoS Not Accepted	The total number of ESM Bearer Modify Reject messages sent, for bearer modification failures, with the cause "EPS QoS Not Accepted".
Deactivate Bearer	The total number of ESM Deactivate Bearer messages sent for a specific ESM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted ESM Deactivate Bearer messages sent for a specific ECM event associated with all MME services on the system.
ESM Information Req	The total number of ESM Information Request messages sent for a specific ESM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted ESM Information Request messages sent for a specific ECM event associated with all MME services on the system.
Modify Bearer	The total number of ESM Modify Bearer messages sent for a specific ESM event associated with all MME services on the system.
Retransmissions	The total number of retransmitted ESM Modify Bearer messages sent for a specific ECM event associated with all MME services on the system.

Field	Description
PDN Connectivity Reject	The total number of ESM PDN Connectivity Reject messages sent.
PTI Already in Use	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #35: "PTI Already in Use".
Unknown or Missing APN	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #27: "Unknown or Missing APN".
Unknown PDN Type	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #28: "Unknown PDN Type".
Invalid Bearer Id	The total number of ESM PDN Connectivity Reject messages sent, with the cause code code #43: "Invalid EPS Bearer Id".
Invalid PTI	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #81: "Invalid PTI value".
Rejected By PGW/SGW	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #30: "Rejected By SGW or PGW".
Authentication failed	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #29: "User Authentication failed".
Sv opt not supported	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #32: "Service Option Not Supported".
Svc opt not subscribed	The total number of ESM PDN Connectivity Reject messages sent, with the cause code #33: "Service Option Not Subscribed".
Opr Determined Barring	The total number of ESM PDN Connectivity Reject messages sent with cause code #8: "Operator Determined Barring".
Insufficient Resource	The total number of ESM PDN Connectivity Reject messages sent with cause code #26: "Insufficient Resources".
Activation Rejected	The total number of ESM PDN Connectivity Reject messages sent with cause code #31: "Request rejected, unspecified".
Svc Opt Tmp OutofOrder	The total number of ESM PDN Connectivity Reject messages sent with cause code #34: "Service Option Temporarily Out of Order".
Protocol Errors	The total number of ESM PDN Connectivity Reject messages sent with any of the following Protocol Error cause codes: #95-101, or #111.
APN Restrict Incomt	The total number of ESM PDN Connectivity Reject messages sent with cause code #112: "APN Restriction Value Incompatible with Active EPS Bearer Content".
PDN Disconnect Reject	The total number of ESM PDN Disconnect Reject messages sent for a specific ESM event associated with all MME services on the system.
PTI Already in Use	The total number of ESM PDN Disconnect Reject messages sent, with the cause "PTI Already in Use", for a specific ESM event associated with all MME services on the system.

Field	Description
Last PDN Disconnection	The total number of ESM PDN Disconnect Reject messages sent, with the cause "Last PDN Disconnection", for a specific ESM event associated with all MME services on the system.
Invalid PTI	The total number of ESM PDN Disconnect Reject messages sent, with the cause "Invalid PTI", for a specific ESM event associated with all MME services on the system.
Invalid Bearer Id	The total number of ESM PDN Disconnect Reject messages sent, with the cause "Invalid Bearer Id", for a specific ESM event associated with all MME services on the system.
<b>Received</b>	This sub-group displays the statistics of all EPS Session Management (ESM) control messages received by an MME services on the system.
Clear-text messages	The total number of plain ESM messages (neither integrity protected nor ciphered) received by all MME services on the system.
Integrity-check enabled	The total number of integrity protected ESM messages received by all MME services on the system.
Ciphered messages	The total number of ciphered ESM messages received by all MME services on the system.
Accepted	The total number of ESM messages received by all MME services on the system and accepted for further processing.
Decode failures	The total number of ESM control messages received by all MME services on the system which the MME was unable to decode the message as per 3GPP TS 24.301.
Act Dedicated Brr Accept	The total number of ESM Activate Dedicated Bearer Accept messages received for a specific ESM event associated with all MME services on the system.
Act Dedicated Brr Reject	The total number of ESM Activate Dedicated Bearer Reject messages received for a specific ESM event associated with all MME services on the system.
Act Default Brr Accept	The total number of ESM Activate Default Bearer Accept messages received for a specific ESM event associated with all MME services on the system.
Act Default Brr Reject	The total number of ESM Activate Default Bearer Accept messages received for a specific ESM event associated with all MME services on the system.
Deactivate Brr Accept	The total number of ESM Deactivate EPS Bearer Context Accept messages received for a specific ESM event associated with all MME services on the system.
Brr Rsrc Alloc Request	The total number of ESM Bearer Resource Allocation Request messages received for a specific ESM event associated with all MME services on the system.
Brr Rsrc Modify Request	The total number of ESM Bearer Resource Modify Request messages received for a specific ESM event associated with all MME services on the system.
ESM Information Response	The total number of ESM Information Response messages received for a specific ESM event associated with all MME services on the system.

Field	Description
ESM Status	The total number of ESM Status messages received for a specific ESM event associated with all MME services on the system.
Modify Brr Ctxt Accept	The total number of ESM Modify Bearer Context Accept messages received for a specific ESM event associated with all MME services on the system.
Modify Brr Ctxt Reject	The total number of ESM Modify Bearer Context Reject messages received for a specific ESM event associated with all MME services on the system.
PDN Connectivity Request	The total number of ESM PDN Connectivity Request messages received for a specific ESM event associated with all MME services on the system.
PDN Disconnect Request	The total number of ESM PDN Disconnect Request messages received for a specific ESM event associated with all MME services on the system.
<b>Handover Statistics</b>	
<b>Intra MME Handover</b>	This sub-group displays statistics of intra-MME handovers associated with all MME services on the system.
Path Update procedures	This sub-group under "Intra MME Handover" displays statistics of E-RAB Modification Indication procedures (procedure level stats) associated with all MME services on the system.
<b>X2-based handovers</b>	This sub-group displays the all X2-based (intra-MME) handover attempts/successes/failures associated with all MME services on the system.
<b>S1-based handovers</b>	This sub-group displays the all S1-based (Inter-MME) handover attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; EUTRAN using S10 Interface</b>	This sub-group displays the all S10-based (Inter-MME) handover attempts/successes/failures associated with all MME services on the system.
<b>Outbound relocation using TAU procedure</b>	This sub-group displays the all S10-based (Inter-MME) handover attempts/successes/failures based on outbound relocation using TAU (Tracking Area Update) procedures and associated with all MME services on the system.
<b>Outbound relocation using S1 HO procedure</b>	This sub-group displays the all S10-based (Inter-MME) handover attempts/successes/failures based on outbound relocation using S1 handover procedures and associated with all MME services on the system.
<b>Inbound relocation using TAU procedure</b>	This sub-group displays the all S10-based (Inter-MME) handover attempts/successes/failures based on inbound relocation using TAU procedures and associated with all MME services on the system.

Field	Description
<b>Inbound relocation using S1 HO procedure</b>	This sub-group displays the all S10-based (Inter-MME) handover attempts/successes/failures based on inbound relocation using S1 handover procedures and associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; UTRAN (Iu mode) SRNS Relocations using GnGp Interface</b>	This sub-group displays the all GnGp-based (MME-3G/SGSN) attempts/successes/failures for SRNS (Serving Radio Network Subsystem) relocations associated with all MME services on the system.
<b>Outbound relocation</b>	This sub-group displays the all GnGp-based (MME-3G/SGSN) attempts/successes/failures for outbound SRNS relocations associated with all MME services on the system.
<b>Inbound relocation</b>	This sub-group displays the all GnGp-based (MME-3G/SGSN) attempts/successes/failures for inbound SRNS relocations associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; GERAN (A/Gb Mode) PS Handovers using GnGp Interface</b>	This sub-group displays the all GnGp-based (MME-2G/SGSN) packet-switched handover via A/Gb mode attempts/successes/failures associated with all MME services on the system.
<b>Outbound relocation</b>	This sub-group displays the all GnGp-based (MME-2G/SGSN) packet-switched handover attempts/successes/failures based on outbound relocation and associated with all MME services on the system.
<b>Inbound relocation</b>	This sub-group displays the all GnGp-based (MME-2G/SGSN) packet-switched handover attempts/successes/failures based on inbound relocation and associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.

Field	Description
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; UTRAN (Iu or A/Gb Mode) Cell Reselections using GnGp Interface</b>	This sub-group displays the all GnGp-based (MME-R8/SGSN) cell reselection attempts/successes/failures associated with all MME services on the system.
<b>Outbound relocation using RAU procedure</b>	This sub-group displays the all GnGp-based (MME-R8/SGSN) cell reselection attempts/successes/failures based on outbound relocation using RAU procedures and associated with all MME services on the system.
<b>Inbound relocation using TAU procedure</b>	This sub-group displays the all GnGp-based (MME-R8/SGSN) cell reselection attempts/successes/failures based on inbound relocation using TAU procedures and associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; UTRAN (Iu mode) Inter-RAT Handovers using S3 Interface</b>	This sub-group displays the all S3-based (MME-R8/SGSN) Inter-RAT handover attempts/successes/failures via Iu mode associated with all MME services on the system.
<b>Outbound relocation</b>	This sub-group displays the all S3-based (MME-R8/SGSN) Inter-RAT handover attempts/successes/failures based on outbound relocation and associated with all MME services on the system.
<b>Inbound relocation</b>	This sub-group displays the all S3-based (MME-R8/SGSN) Inter-RAT handover attempts/successes/failures based on inbound relocation and associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; GERAN (A/Gb mode) Inter-RAT Handovers using S3 Interface</b>	This sub-group displays the all S3-based (MME-2.5G/SGSN) Inter-RAT handover attempts/successes/failures via A/Gb mode associated with all MME services on the system.
<b>Outbound relocation</b>	This sub-group displays the all S3-based (MME-2.5G/SGSN) Inter-RAT handover attempts/successes/failures via A/Gb mode based on outbound relocation and associated with all MME services on the system.
<b>Inbound relocation</b>	This sub-group displays the all S3-based (MME-2.5G/SGSN) Inter-RAT handover attempts/successes/failures via A/Gb mode based on inbound relocation and associated with all MME services on the system.
Attempted	The total number of attempts made for the specific EPS handover type associated with all MME services on the system.

Field	Description
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; UTRAN/GERAN (Iu or A/Gb Mode) Cell Reselections using S3 Interface</b>	This group displays the all S3-based (MME-R8/2.5G/SGSN) cell reselection via Iu or A/Gb mode attempts/successes/failures associated with all MME services on the system.
<b>Outbound relocation using RAU procedure</b>	This sub-group displays the all GnGp-based (MME-R8/2.5G/SGSN) cell reselection attempts/successes/failures based on outbound relocation using RAU procedures and associated with all MME services on the system.
<b>Inbound relocation using TAU procedure</b>	This sub-group displays the all GnGp-based (MME-R8/2.5G/SGSN) cell reselection attempts/successes/failures based on inbound relocation using TAU procedures and associated with all MME services on the system.
Attempted	The total number of attempts that are made for the specific EPS handover type that is associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific EPS handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; UTRAN/GERAN using Sv Interface</b>	This group displays the all Sv-based (MME-R8/2.5G/SGSN) handover attempts/successes/failures associated with all MME services on the system.
<b>CS only handover with no DTM support</b>	This sub-group displays the all Sv-based (MME-R8/2.5G/SGSN) circuit-switched, non-DTM (Dual Transfer Mode) handover attempts/successes/failures and associated with all MME services on the system.
<b>CS only handover</b>	This sub-group displays the all Sv-based (MME-R8/2.5G/SGSN) circuit-switched handover attempts/successes/failures associated with all MME services on the system.
<b>CS and PS handover</b>	This sub-group displays the all Sv-based (MME-R8/2.5G/SGSN) circuit-switched and packet-switched handover attempts/successes/failures associated with all MME services on the system.
Attempted	The total number of attempts made for the specific handover type associated with all MME services on the system.
Success	The total number of successful handovers for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed for the specific handover associated with all MME services on the system.
<b>EUTRAN&lt;-&gt; Non-3GPP Unoptimized Handovers</b>	This group displays all non-3GPP non-optimized handover attempts/successes/failures associated with all MME services on the system.

Field	Description
<b>Outbound relocation (Per PDN)</b>	This sub-group displays all outbound non-3GPP handover attempts/successes/failures associated with all MME services on the system. These counters increment on a per-PDN basis.
<b>Inbound relocation (Per PDN)</b>	This sub-group displays the all outbound non-3GPP handover attempts/successes/failures associated with all MME services on the system. These counters increment on a per-PDN basis.
Attempted	The total number of attempts made for the specific handover type associated with all MME services on the system.
Success	The total number of successful handovers made for the specific handover type associated with all MME services on the system.
Failures	The total number of attempts that failed made for the specific handover type associated with all MME services on the system.
<b>PDN Statistics</b>	
All PDNs	Displays statistics for all PDNs, connected and idle, through the MME service(s) on the system.
Connected PDNs	Displays statistics for connected PDNs through the MME service(s) on the system.
Idle PDNs	Displays statistics for idle PDNs through the MME service(s) on the system.
<b>Emergency PDN Statistics</b>	
All PDNs	Displays statistics for all emergency PDNs, connected and idle, through the MME service(s) on the system.
Connected PDNs	Displays statistics for connected emergency PDNs through the MME service(s) on the system.
Idle PDNs	Displays statistics for idle emergency PDNs through the MME service(s) on the system.
<b>DCNR User PDN Statistics</b>	
All PDNs	Displays statistics for all DCNR user PDNs, connected and idle, through the MME service(s) on the system.
Connected PDNs	Displays statistics for connected DCNR user PDNs through the MME service(s) on the system.
Idle PDNs	Displays statistics for idle DCNR user PDNs through the MME service(s) on the system.
<b>Bearer Statistics</b>	
All Bearers	This sub-group displays statistics for all bearers, connected and idle, through the MME service(s) on the system.

Field	Description
Connected Bearers	This sub-group displays statistics for connected bearers through the MME service(s) on the system.
Idle Bearers	This sub-group displays statistics for idle bearers through the MME service(s) on the system.
Bearers Using Operator-Specific QCI	This sub-group displays statistics for all bearers, connected and idle, through the MME service(s) on the system, using operator specific QCI values.
<b>ERAB Modification Indication:</b>	
Attempted	Indicates the number of bearers for which the E-RAB Modification Indication procedure is attempted (bearer level stats).
Success	Indicates the number of bearers for which the E-RAB Modification Indication procedure has succeeded (bearer level stats).
Failures	Indicates the number of bearers for which the E-RAB Modification Indication procedure has failed (bearer level stats).
<b>Session Statistics</b>	
Attached Calls	This sub-group displays statistics for all calls, connected and idle, through the MME service(s) on the system.
Connected Calls	This sub-group displays statistics for connected calls through the MME service(s) on the system.
Idle Calls	This sub-group displays statistics for idle calls through the MME service(s) on the system.
<b>Emergency Session Statistics</b>	
Attached Calls	This sub-group displays statistics for all emergency calls, connected and idle, through the MME service(s) on the system.
Connected Calls	This sub-group displays statistics for connected emergency calls through the MME service(s) on the system.
Idle Calls	This sub-group displays statistics for idle emergency calls through the MME service(s) on the system.
<b>Unauthenticated Session Statistics</b>	
Attached Calls	This sub-group displays statistics for all unauthenticated calls, connected and idle, through the MME service(s) on the system.
Connected Calls	This sub-group displays statistics for connected and unauthenticated calls through the MME service(s) on the system.
Idle Calls	This sub-group displays statistics for idle unauthenticated calls through the MME service(s) on the system.

Field	Description
<b>Disconnect Statistics</b>	
UE detached	The total number of disconnected sessions, with the reason "UE detached", originally connected through the MME service(s) on the system.
PGW detached	The total number of disconnected sessions, with the reason "PGW detached", originally connected through the MME service(s) on the system.
HSS detached	The total number of disconnected sessions, with the reason "HSS detached", originally connected through the MME service(s) on the system.
MME detached	The total number of disconnected sessions, with the reason "MME detached", originally connected through the MME service(s) on the system.
Implicit detach	The total number of disconnected sessions, with the reason "Implicit detach", originally connected through the MME service(s) on the system.
Local abort	The total number of disconnected sessions, with the reason "Local abort", originally connected through the MME service(s) on the system.
Authentication failure	The total number of disconnected sessions, with the reason "Authentication failure", originally connected through the MME service(s) on the system.
Sub parameter failure	The total number of disconnected sessions, with the reason "Sub parameter failure", originally connected through the MME service(s) on the system.
Other reasons	The total number of disconnected sessions, with the reason "Other reasons", originally connected through the MME service(s) on the system.
<b>ISR Deactivation Statistics</b>	
S3 path failure	The total number of Idle mode Signaling Reduction (ISR) deactivations due to failure in the S3 interface.
SGSN local detach	The total number of Idle mode Signaling Reduction (ISR) deactivations due to SGSN detach notification.
SGW relocation	The total number of Idle mode Signaling Reduction (ISR) deactivations due to SGW relocation of the session to an MME/SGSN which does not support ISR.
CN Node relocation	The total number of Idle mode Signaling Reduction (ISR) deactivations due to CN Node relocation of the session to an MME/SGSN which does not support ISR.
Implicit detach	The total number of Idle mode Signaling Reduction (ISR) deactivations due to an idle timeout (implicit detach) initiated by either the MME or Peer SGSN.
Other detach procedures	The total number of Idle mode Signaling Reduction (ISR) deactivations due to an idle timeout (implicit detach) initiated by either the MME or Peer SGSN.
Other reasons	The total number of Idle mode Signaling Reduction (ISR) deactivations due to a reason not otherwise classified by one of the other ISR Deactivation Statistics categories.

Field	Description
GUTI Reallocation	This group displays policy triggered GUTI re-allocation procedure statistics.
Attempted	The total number of GUTI Reallocation procedures attempted for this MME service.
Failures	The total number of GUTI Reallocation procedure failures for this MME service.
Success	The total successful number of GUTI Reallocations procedures completed successfully for this MME service.
GUTI Reallocation	This group displays message statistics for policy triggered GUTI re-allocation.
Attach Accept	Number of non-retransmitted NAS Attach Accept messages sent that contained the reallocated GUTI identifier.
Retransmissions	Number of retransmitted NAS Attach Accept messages sent that contained the reallocated GUTI identifier.
TAU Accept	Number of non-retransmitted NAS TAU Accept messages sent that contained the reallocated GUTI identifier.
Retransmissions	Number of retransmitted NAS TAU Accept messages sent that contained the reallocated GUTI identifier.
GUTI Reallocation cmd	Number of non-retransmitted NAS GUTI Reallocation Command messages sent.
Retransmissions	Number of retransmitted NAS GUTI Reallocation Command messages sent.
Paging Initiation for PS ARP-N Events	Displays paging initiation information for packet switched ARP events.
Attempted	Displays the number of paging events attempted.
Success	Displays the number of successful paging events.
Failures	Displays the number of failed paging events.
Success at Last n eNB	Displays the number of successful paging events at the last known eNodeB.
Success at Last TAI	Displays the number of successful paging events at the last TAI.
Success at TAI List	Displays the number of S13 additional IMEI checks that timed out during attach procedures.
Paging Initiation for PS APN-Profile Events	Displays paging initiation information for packet switched APN profile events.
Attempted	Displays the number of paging events attempted.
Success	Displays the number of successful paging events.
Failures	Displays the number of failed paging events.
Success at Last n eNB	Displays the number of successful paging events at the last known eNodeB.
Success at Last TAI	Displays the number of successful paging events at the last TAI.

Field	Description
Success at TAI List	Displays the number of successful paging events at the TAI list.
Paging Initiation for PS SMS Events:	
Attempted	The total number of ECM statistics-related PS SMS Paging Initiation events that were attempted.
Success	The total number of ECM statistics-related PS SMS Paging Initiation events that were successful.
Failures	The total number of ECM statistics-related PS SMS Paging Initiation events that failed.
Success at Last n eNB	The total number of ECM statistics-related PS SMS Paging Initiation events that succeeded at the last known eNodeB.
Success at Last TAI	The total number of ECM statistics-related PS SMS Paging Initiation events that succeeded at an eNodeB in the TAI from which the UE was last heard.
Success at TAI List	The total number of ECM statistics-related PS SMS Paging Initiation events that succeeded at an eNodeB in all TAIs present in the TAI list assigned to the UE.
<b>S13 Statistics:</b>	
Additional ME Identity Check Procedures (Attach):	
Requests:	Displays the number of S13 additional IMEI checks requested during attach procedures.
Answer:	Displays the number of S13 additional IMEI checks answered during attach procedures.
Success:	Displays the number of S13 additional IMEI checks that were successful during attach procedures.
Failure:	Displays the number of S13 additional IMEI checks that failed during attach procedures.
Additional ME Identity Check Procedures (TAU):	
Requests:	Displays the number of S13 additional IMEI checks requested during a TAU.
Answer:	Displays the number of S13 additional IMEI checks answered during a TAU.
Success:	Displays the number of S13 additional IMEI checks that were successful during TAU.
Failure:	Displays the number of S13 additional IMEI checks that failed during TAU.
Timeout:	Displays the number of S13 additional IMEI checks that timed out during TAU.
Additional ME Identity Check Procedures (Handover):	

Field	Description
Requests:	Displays the number of S13 additional IMEI checks requested during handover procedures.
Answer:	Displays the number of S13 additional IMEI checks answered during handover procedures.
Success:	Displays the number of S13 additional IMEI checks that were successful during handover procedures.
Failure:	Displays the number of S13 additional IMEI checks that failed during handover procedures.
Timeout:	Displays the number of S13 additional IMEI checks that timed out during handover procedures.
EDRX Subscribers	Displays information about the eDRX subscribers.
Attached Calls	Displays the number of attached subscribers for which eDRX is enabled.
DDN Rejects	Displays the number of DDNs rejected when eDRX subscribers cannot be paged (UE is out of the paging window).
NB-IoT Subscribers	Displays information about NB-IoT subscribers
Attached Calls	Displays the number of attached calls for NB-IoT subscribers.
Connected Calls	Displays the number of connected calls for NB-IoT subscribers.
Idle Calls	Displays the number of idle calls for NB-IoT subscribers.
Attach Without PDN Subscribers	Displays information about the Attach without PDN subscribers.
Attached Calls	Displays the number of attached calls for Attach without PDN subscribers.
Connected Calls	Displays the number of connected calls for Attach without PDN subscribers.
Idle Calls	Displays the number of idle calls for Attach without PDN subscribers.
Low Power Subscribers:	
NB-IoT Attached Calls	The current total number of attached low power subscribers which are operating in NB-IoT.
EUTRAN Attached Calls	The current total number of attached low power subscribers which are operating in E-UTRAN.
CE-mode-B Capable Subscribers:	
Attached Calls	Displays the number of attached calls by CE Mode-B subscribers.
Connected Calls	Displays the number of connected calls by CE Mode-B subscribers.
Idle Calls	Displays the number of idle calls by CE Mode-B subscribers.

Field	Description
NB-IoT Statistics	<p data-bbox="594 285 1032 317">Displays the following NB-IoT statistics:</p> <ul data-bbox="630 331 1162 1241" style="list-style-type: none"><li data-bbox="630 331 837 363">• Handover Denied</li><li data-bbox="630 384 818 415">• Path Sw Failure</li><li data-bbox="630 436 824 468">• HO Prep Failure</li><li data-bbox="630 489 1003 520">• Inter MME Denied (TAU Reject)</li><li data-bbox="630 541 915 573">• Src Peer Node Gn SGSN</li><li data-bbox="630 594 911 625">• Src Peer Node S3 SGSN</li><li data-bbox="630 646 862 678">• NB-IoT RAT as Src</li><li data-bbox="630 699 862 730">• NB-IoT RAT as Tgt</li><li data-bbox="630 751 1003 783">• Intra MME Denied (TAU Reject)</li><li data-bbox="630 804 862 835">• NB-IoT RAT as Src</li><li data-bbox="630 856 862 888">• NB-IoT RAT as Tgt</li><li data-bbox="630 909 1040 940">• Inter MME Denied (Context Failure)</li><li data-bbox="630 961 915 993">• Tgt Peer Node Gn SGSN</li><li data-bbox="630 1014 911 1045">• Tgt Peer Node S3 SGSN</li><li data-bbox="630 1066 862 1098">• NB-IoT RAT as Src</li><li data-bbox="630 1119 862 1150">• NB-IoT RAT at Tgt</li><li data-bbox="630 1171 1162 1203">• Inter MME Denied (Forward Relocation Reject)</li><li data-bbox="630 1224 862 1255">• NB-IoT RAT as Tgt</li></ul>

Field	Description
Attach Without PDN Statistics	<p>Displays the following Attach without PDN statistics:</p> <ul style="list-style-type: none"> <li>• Attach Procedure</li> <li>• Attach Request Rcvd</li> <li>• Attach Accept Sent</li> <li>• Attach Complete Rcvd</li> <li>• Attach Reject Sent</li> <li>• Config Err NB-IoT</li> <li>• Config Err WB-Eutran</li> <li>• Intra MME TAU Procedure</li> <li>• TAU Request Rcvd</li> <li>• TAU Accept Sent</li> <li>• TAU Complete Rcvd</li> <li>• Inter MME TAU Procedure</li> <li>• TAU Request Rcvd</li> <li>• TAU Accept Sent</li> <li>• TAU Complete Rcvd</li> <li>• TAU Reject Sent</li> <li>• Config Err NB-IoT</li> <li>• Config Err WB-Eutran</li> <li>• PDN Procedure</li> <li>• PDN Conn Req after wopdn</li> <li>• PDN Conn Succ wopdn</li> <li>• Last PDN Del wo Detach</li> <li>• Inter MME Denied (Context Failure)</li> <li>• No WOPDN sup by S3 SGSN</li> <li>• No WOPDN sup by Peer MME</li> <li>• No WOPDN sup by MME</li> </ul>
<b>S-GW Restoration</b>	
Attempted	Indicates the total number of PDNs attempted for S-GW restoration at a service level.

Field	Description
Down	Indicates the total number of PDNs attempted for S-GW restoration at service level due to an S-GW being down.
Restart	Total number of PDNs attempted for S-GW restoration at service level due to an S-GW being restarted.
<b>UE PDN Restored</b>	
Emergency	Indicates the number of emergency PDNs restored during S-GW restoration.
IMS	Indicates the number of IMS PDNs restored during S-GW restoration
Normal	Indicates the number of normal PDNs restored during S-GW restoration
<b>UE PDN Failed</b>	
Emergency	Indicates the number of unsuccessful emergency PDNs during S-GW restoration.
IMS	Indicates the number of unsuccessful IMS PDNs during S-GW restoration.
Normal	Indicates the number of unsuccessful IMS PDNs during S-GW restoration.
<b>SGW Restoration Failure</b>	
Invalid UE S-GW context	Indicates S-GW restoration procedure failure due to invalid S-GW context.
No EPS Bearer Active	Indicates S-GW restoration procedure failure because of unavailable EPC bearers active for the UE.
S-GW Selection Failure	Indicates S-GW restoration procedure failure due to S-GW selection failure for a UE.
S-GW Reloc Proc Failed	Indicates S-GW restoration procedure failure when the procedure responsible to trigger S-GW relocation has failed.
Create Session Failure	Indicates S-GW restoration procedure failure when a Create Session Response failure message is received from a peer.
Abort	Indicates S-GW restoration procedure failure due to timeout or high priority procedure.
<b>Decor Statistics</b>	
Attached Calls	Indicates the number of MME sessions attached that have an associated UE usage type.
Initial Requests:	
ATTACH	
Accepts	Indicates the total number of Initial Attach Requests accepted by the MME, which functions as a DCN.

Field	Description
Reroutes	Indicates the total number of Initial Attach Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial Attach Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Initial TAU Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial TAU Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial TAU Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
Rerouted Requests:	
ATTACH	
Accepts	Indicates the total number of Rerouted Attach Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted Attach Requests rejected by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Rerouted TAU Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted TAU Requests rejected by the MME, which functions as a DCN.
UE-Usage-Type Source	
HSS	Indicates the number of MME subscriber sessions, where UE usage type was obtained from HSS/AUC.
UE Context	Indicates the number of MME subscriber sessions, where UE usage type was obtained from MME DB record.
Peer MME	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer MME as part of handover.
Peer SGSN	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer SGSN as part of handover.
Config	Indicates the number of MME subscriber sessions, where UE usage type was obtained from local configuration.

Field	Description
eNodeB	Indicates the number of MME subscriber sessions, where UE usage type was obtained from the eNodeB, in the S1 message as part of reroute.
GUTI Reallocation Cmd due to UE-Usage-Type Change	
Attempted	Tracks the number of GUTI Reallocation procedures attempted due to UE-Usage-Type Change from HSS through ISDR OR after connected mode handover and UE-Usage-Type not served by the MME (NAS GUTI Reallocation Command message was sent by MME).
Success	Tracks the number of successful GUTI Reallocation procedures.
Failures	Tracks the number of GUTI Reallocation procedure failures.
Handover from service area	
DCN	Indicates the total number of inbound handovers from the service area where DCN is supported.
Non DCN	Indicates the total number of inbound handovers from the service area where DCN is not supported.
Explicit AIR	
Attach	Indicates the number of explicit AIR messages during Attach.
Inbound relocation	Indicates the number of explicit AIR messages during inbound relocation.
Inbound relocation using TAU procedure	Indicates the number of explicit AIR messages during inbound relocation using TAU.
ISDR UE-Usage-Type Change	Tracks the number of ISDR Messages received with different UE-Usage-Type from the HSS.
MMEGI Selection	
DNS	Indicates the total number of times MMEGI is selected through DNS from a dedicated pool (DNS records having UE Usage Type which is matching).
Local	Indicates the total number of times MMEGI is selected from local configuration.
Failure	Indicates the total number of times MMEGI is selected from failure.
Node Selection	
S-GW DNS: Common	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR excluding UE usage type. This counter increments only when the DNS RR with UE usage type is absent.
S-GW DNS: Dedicated	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR including UE usage type parameter(s). This counter increments only when the DNS RR with UE usage type is present.

Field	Description
SGW Local Config: Common	Indicates the number of times S-GW selection procedures were performed with locally configured S-GW address, without considering the UE usage type.
PGW DNS: Common	Indicates the number of times PGW DNS selection procedures were performed with DNS RR <i>excluding</i> UE usage type. This counter increments only when the DNS RR with UE usage type is <i>absent</i> .
PGW DNS: Dedicated	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR <i>including</i> UE usage type parameter(s). This counter increments only when the DNS RR with UE usage type is <i>present</i> .
PGW Local Config: Common	Indicates the number of times P-GW selection procedures were performed with locally configured P-GW address without considering the UE usage type.
MME DNS: Common	Indicates the number of times MME DNS selection procedures were performed with DNS RR <i>excluding</i> UE usage type. This counter increments only when the DNS RR with UE usage type is <i>absent</i> .
MME DNS: Dedicated	Indicates the number of times MME DNS selection procedures were performed with DNS RR <i>including</i> UE usage type parameter(s). This counter increments only when the DNS RR with UE usage type is <i>present</i> .
MME Local Config: Common	Indicates the number of times MME selection procedures were performed with locally configured MME address without considering the UE usage type.
SGSN DNS: Common	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR <i>excluding</i> UE usage type. This counter increments only when the DNS RR with UE usage type is <i>absent</i> .
SGSN DNS: Dedicated	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR <i>including</i> UE usage type parameter(s). This counter increments only when the DNS RR with UE usage type is <i>present</i> .
SGSN Local Config: Common	Indicates the number of times SGSN selection procedures were performed with locally configured SGSN address without considering the UE usage type.
Dual Connectivity with NR Statistics:	
Attach Procedure	
Attach Request Rcvd	Indicates the number of Attach Requests received with UE advertising DCNR support.
Attach Acc DCNR allowed	Indicates the number of Attach Accept messages sent by the MME acknowledging the DCNR support for the UE (Restrict DCNR bit not set in Attach Accept).
Attach Acc DCNR denied	Indicates the number of Attach Accept messages sent by the MME rejecting the DCNR support for the UE (Restrict DCNR bit set in Attach Accept).

Field	Description
Attach Reject Sent	Indicates the number of Attach Reject messages sent by MME whose corresponding Attach Request messages have DCNR support capability.
Attach Complete Rcvd	Indicates the number of Attach Complete messages received by MME whose corresponding Attach Request messages have DCNR support capability.
Intra MME TAU Procedure	
TAU Request Rcvd	Indicates the number of TAU Request messages received for Intra-MME TAU procedure with UE advertising DCNR support.
TAU Accept DCNR allowed	Indicates the number of TAU Accept messages sent by the MME acknowledging the DCNR support for the UE (Restrict DCNR bit not set in TAU Accept) for Intra-MME TAU procedure.
TAU Accept DCNR denied	Indicates the number of TAU Accept messages sent by the MME rejecting the DCNR support for the UE (Restrict DCNR bit set in TAU Accept) for Intra-MME TAU procedure.
TAU Complete Rcvd	Indicates the number of TAU Complete messages received by the MME whose corresponding Intra-MME TAU Requests have DCNR support capability.
Inter MME TAU Procedure	
TAU Request Rcvd	Indicates the number of TAU Request messages received for Inter-MME TAU procedure with UE advertising DCNR support.
TAU Accept DCNR allowed	Indicates the number of TAU Accept messages sent by the MME acknowledging the DCNR support for the UE (Restrict DCNR bit not set in TAU Accept) for Inter-MME TAU procedure.
TAU Accept DCNR denied	Indicates the number of TAU Accept messages sent by the MME rejecting the DCNR support for the UE (Restrict DCNR bit set in TAU Accept) for Inter-MME TAU procedure.
TAU Reject Sent	Indicates the number of TAU Reject messages sent by the MME whose corresponding Inter-MME TAU Requests have DCNR support capability.
TAU Complete Rcvd	Indicates the number of TAU Complete messages received by MME whose corresponding Inter-MME TAU Request have DCNR support capability.
Dual Connectivity with NR Subscribers	
Attached Calls	Indicates the number of DCNR supported UEs attached with the MME.
Connected Calls	Indicates the number of DCNR supported UEs in connected mode at MME.
Idle Calls	Indicates the number of DCNR supported UEs in idle mode at MME.
Node Selection	
SGW DNS:	

Field	Description
Common	Indicates the number of times S-GW DNS selection procedures are performed with DNS RR excluding the NR network capability.
NR Capable	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR including the NR network capability.
SGW Local Config:	
Common	Indicates the number of times S-GW selection procedures were performed with locally configured S-GW address, without considering the NR network capability.
PGW DNS:	
Common	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR excluding the NR network capability.
NR Capable	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR including the NR network capability.
PGW Local Config:	
Common	Indicates the number of times P-GW selection procedures were performed with locally configured P-GW address, without considering the NR network capability.
<b>EUTRAN&lt;-&gt;NGRAN Using N26 Interface</b>	
Outbound relocation using EPS-5GS Mobility procedure	Indicates the number of attempts, successes, and failures of outbound relocation using EPS-5GS mobility procedure.
Outbound relocation using EPS-5GS HO procedure	Indicates the number of attempts, successes, and failures of outbound relocation using EPS-5GS handover procedure.
Inbound relocation using EPS-5GS Mobility procedure	Indicates the number of attempts, successes, and failures of Inbound relocation using EPS-5GS mobility procedure.
Inbound relocation using EPS-5GS HO procedure	Indicates the number of attempts, successes, and failures of Inbound relocation using EPS-5GS handover procedure.
<b>Monitoring Event Profile mon</b>	
Loss of connectivity	Indicates the current session statistics of Loss of connectivity event configuration.
UE Reachability	Indicates the current session statistics of UE Reachability event configurations
Location Reporting	Indicates the current session statistics of reporting location event configurations.
Communication Failure	Indicates the current session statistics of Radio connection status failure events.
Availability after DDN Failure	Indicates the current session statistics of Availability after DDN Failure event configuration.
UE Reachability and Idle status indication	Indicates the current session statistics of UE Reachability and Idle status indication event configurations.

Field	Description
Availability after DDN Failure and Idle Status indication	Indicates the current session statistics of Availability after DDN Failure and Idle Status indication event configuration.
PDN connectivity status	Indicates that the current session statistics of PDN connectivity status event configuration.
<b>Monitoring Report Config Rx Count:</b>	
Loss of connectivity	Indicates that the number of Loss of connectivity event configuration received.
UE Reachability	Indicates that the number of UE reachability event configurations received .
Location Reporting	Indicates that the number of reporting location event configurations received.
Availability after DDN Failure	Indicates that the number of Availability after DDN Failure event configuration received.
Number of UE in a geographic area	Indicates the received Number of UEs present in a geographic area event configuration is either in Progress, Pending or in Dropped status.
Idle status indication	Indicates that the number of Idle status event configurations received.
PDN connectivity status	Indicates that the PDN connectivity status event configuration received.
<b>Monitoring Report Config Tx Count</b>	
Loss of connectivity	Indicates the number of loss of connectivity reports sent.
UE Reachability	Indicates the number of UE reachability reports sent.
Location Reporting	Indicates that the number of Location reports sent.
Communication Failure	Indicates that the number of communication failure reports sent.
Availability after DDN Failure	Indicates that the number of Availability after DDN Failure reports sent.
Number of UE in a geographic area	Indicates that the number of UE in a geographical area report is either in successful, failed or in dropped status.
UE Reachability and idle status indication	Indicates that the number of UE Reachability and idle status indication report sent.
Availability after DDN Failure and idle status indication	Indicates that the Availability after DDN Failure and idle status indication report sent.
PDN connectivity status	Indicates that the number of PDN connectivity statuses report sent.
<b>Monitoring Event Configuration Deleted Count</b>	
Loss of connectivity	Indicates the number of deleted loss of connectivity monitoring events.
UE Reachability	Indicates the number of deleted UE Reachability monitoring events.
Location Reporting	Indicates the number of deleted location reporting monitoring events.

Field	Description
Communication Failure	Indicates the number of deleted communication failure monitoring events.
Availability after DDN Failure	Indicates number of deleted availability after DDN failure monitoring events.
UE Reachability and idle status indication	Indicates the number of deleted UE reachability and idle status indication monitoring events.
PDN connectivity status	Indicates the number of deleted pdn connectivity status monitoring events.
ULA received without monte cfg	Indicates the number of deleted monitoring events configurations when ULA received with updated set of configurations.
HSS update received with different scéf ref id	Indicates the number of deleted monitoring events with HSS update received with different SCEF Reference Id.
HSS update received with same scéf ref id	Indicates the number of deleted monitoring events with HSS update received with same SCEF Reference Id.
HSS abort except subs withdrawn	The total number of Attach Reject messages sent for an Attach Request with a cause code Network Failure, when the rejection is due to HSS abort except subscription withdrawn.
<b>Monitoring Event Roaming Statistics</b>	
CIR sent	Indicates the number of CIR messages sent for roaming subscribers.
CIA received	Indicates the number of CIA message received from roaming subscribers.
CIR timeout	Indicates the CIR timeout value if there is no response for the CIR messages sent.
RIR sent	Indicates the number of RIR messages that are sent for roaming subscribers.
CIR denied by IWK-SCEF	Indicates the number of CIR messages denied through IWK-SCEF.

## show mme-service statistics 5gs-interworking

Table 425: show mme-service statistics 5gs-interworking Command Output Descriptions

Field	Description
Attach Request Rcvd	Displays the number of Attach Request messages received with UE advertising N1 Mode support.
TAU Request Rcvd	Displays the number of TAU Request messages received with UE advertising N1 Mode support.
SMF-Combined	Displays the number of times P-GW DNS selection procedures performed with DNS RR including the N1 Mode network capability.

Field	Description
NR Capable	Displays the number of times P-GW DNS selection procedures performed with DNS RR including the NR network capability.
Common	Displays the number of times P-GW DNS selection procedures performed with DNS RR excluding the N1 Mode network capability.
PGW Local Config	Displays the number of times P-GW selection procedures performed with locally configured P-GW address, without considering the N1 Mode network capability.

## show mme-service statistics decor

*Table 426: show mme-service statistics decor Command Output Descriptions*

Field	Description
Decor Statistics:	
Attached Calls	Indicates the number of MME sessions attached that have an associated UE usage type.
Initial Requests:	
ATTACH	
Accepts	Indicates the total number of Initial Attach Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial Attach Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial Attach Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Initial TAU Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial TAU Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial TAU Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
Rerouted Requests:	
ATTACH	
Accepts	Indicates the total number of Rerouted Attach Requests accepted by the MME, which functions as a DCN.

Field	Description
Rejects	Indicates the total number of Rerouted Attach Requests rejected by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Rerouted TAU Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted TAU Requests rejected by the MME, which functions as a DCN.
UE-Usage-Type Source	
HSS	Indicates the number of MME subscriber sessions, where UE usage type was obtained from HSS/AUC.
UE Context	Indicates the number of MME subscriber sessions, where UE usage type was obtained from MME DB record.
Peer MME	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer MME as part of handover.
Peer SGSN	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer SGSN as part of handover.
Config	Indicates the number of MME subscriber sessions, where UE usage type was obtained from local configuration.
eNodeB	Indicates the number of MME subscriber sessions, where UE usage type was obtained from the eNodeB, in the S1 message as part of reroute.
GUTI Reallocation Cmd due to UE-Usage-Type Change	
Attempted	Tracks the number of GUTI Reallocation procedures attempted due to UE-Usage-Type Change from HSS through ISDR OR after connected mode handover and UE-Usage-Type not served by the MME (NAS GUTI Reallocation Command message was sent by MME).
Success	Tracks the number of successful GUTI Reallocation procedures.
Failures	Tracks the number of GUTI Reallocation procedure failures.
Handover from service area	
DCN	Indicates the total number of inbound handovers from the service area where DCN is supported.
Non DCN	Indicates the total number of inbound handovers from the service area where DCN is not supported.
Explicit AIR	
Attach	Indicates the number of explicit AIR messages during Attach.

Field	Description
Inbound relocation	Indicates the number of explicit AIR messages during inbound relocation.
Inbound relocation using TAU procedure	Indicates the number of explicit AIR messages during inbound relocation using TAU.
ISDR UE-Usage-Type Change	Tracks the number of ISDR Messages received with different UE-Usage-Type from the HSS.
MMEGI Selection	
DNS	Indicates the total number of times MMEGI is selected through DNS from a dedicated pool (DNS records having UE Usage Type which is matching).
Local	Indicates the total number of times MMEGI is selected from local configuration.
Failure	Indicates the total number of times MMEGI is selected from failure.
Node Selection	
SGW DNS	
Common	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
SGW Local Config	
Common	Indicates the number of times S-GW selection procedures were performed with locally configured S-GW address, without considering the UE usage type.
PGW DNS	
Common	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
PGW Local Config	
Common	Indicates the number of times P-GW selection procedures were performed with locally configured P-GW address, without considering the UE usage type.
MME DNS	
Common	Indicates the number of times MME DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times MME DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
MME Local Config	

```
show mme-service statistics decor decor-profile <profile_name>
```

Field	Description
Common	Indicates the number of times MME selection procedures were performed with locally configured MME address, without considering the UE usage type.
SGSN DNS	
Common	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
SGSN Local Config	
Common	Indicates the number of times SGSN selection procedures were performed with locally configured SGSN address, without considering the UE usage type.

## show mme-service statistics decor decor-profile <profile\_name>

Table 427: show mme-service statistics decor decor-profile <profile\_name> Command Output Descriptions

Field	Description
Decor Statistics:	
Attached Calls	Indicates the number of MME sessions attached that have an associated UE usage type.
Initial Requests:	
ATTACH	
Accepts	Indicates the total number of Initial Attach Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial Attach Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial Attach Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Initial TAU Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial TAU Requests rerouted by the MME, which functions as a DCN.

Field	Description
Rejects	Indicates the total number of Initial TAU Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
Rerouted Requests:	
ATTACH	
Accepts	Indicates the total number of Rerouted Attach Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted Attach Requests rejected by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Rerouted TAU Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted TAU Requests rejected by the MME, which functions as a DCN.
UE-Usage-Type Source	
HSS	Indicates the number of MME subscriber sessions, where UE usage type was obtained from HSS/AUC.
UE Context	Indicates the number of MME subscriber sessions, where UE usage type was obtained from MME DB record.
Peer MME	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer MME as part of handover.
Peer SGSN	Indicates the number of MME subscriber sessions, where UE usage type was obtained from peer SGSN as part of handover.
Config	Indicates the number of MME subscriber sessions, where UE usage type was obtained from local configuration.
eNodeB	Indicates the number of MME subscriber sessions, where UE usage type was obtained from the eNodeB, in the S1 message as part of reroute.
GUTI Reallocation Cmd due to UE-Usage-Type Change	
Attempted	Tracks the number of GUTI Reallocation procedures attempted due to UE-Usage-Type Change from HSS through ISDR OR after connected mode handover and UE-Usage-Type not served by the MME (NAS GUTI Reallocation Command message was sent by MME).
Success	Tracks the number of successful GUTI Reallocation procedures.
Failures	Tracks the number of GUTI Reallocation procedure failures.
Handover from service area	

Field	Description
DCN	Indicates the total number of inbound handovers from the service area where DCN is supported.
Non DCN	Indicates the total number of inbound handovers from the service area where DCN is not supported.
Explicit AIR	
Attach	Indicates the number of explicit AIR messages during Attach.
Inbound relocation	Indicates the number of explicit AIR messages during inbound relocation.
Inbound relocation using TAU procedure	Indicates the number of explicit AIR messages during inbound relocation using TAU.
ISDR UE-Usage-Type Change	Tracks the number of ISDR Messages received with different UE-Usage-Type from the HSS.
MMEGI Selection	
DNS	Indicates the total number of times MMEGI is selected through DNS from a dedicated pool (DNS records having UE Usage Type which is matching).
Local	Indicates the total number of times MMEGI is selected from local configuration.
Failure	Indicates the total number of times MMEGI is selected from failure.
Node Selection	
SGW DNS	
Common	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times S-GW DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
SGW Local Config	
Common	Indicates the number of times S-GW selection procedures were performed with locally configured S-GW address, without considering the UE usage type.
PGW DNS	
Common	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times P-GW DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
PGW Local Config	
Common	Indicates the number of times P-GW selection procedures were performed with locally configured P-GW address, without considering the UE usage type.

Field	Description
MME DNS	
Common	Indicates the number of times MME DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times MME DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
MME Local Config	
Common	Indicates the number of times MME selection procedures were performed with locally configured MME address, without considering the UE usage type.
SGSN DNS	
Common	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR excluding UE usage type.
Dedicated	Indicates the number of times SGSN DNS selection procedures were performed with DNS RR including UE usage type parameter(s).
SGSN Local Config	
Common	Indicates the number of times SGSN selection procedures were performed with locally configured SGSN address, without considering the UE usage type.

## show mme-service statistics paging-profile profile-name <paging\_profile\_name>

Table 428: show mme-service statistics paging-profile profile-name <paging\_profile\_name> Command Output Descriptions

Field	Description
Paging Profile Level Statistics:	
Profile name	Displays the name of the configured paging profile.
Stage-1 / Stage-2 / Stage-3 / Stage-4 / Stage-5:	
Attempted	Displays the number of times when the session manager sends paging request to at least 1 MME manager for the stage.
Skipped	Displays the number of times when the session manager skips sending paging request to at least 1 busy MME manager for the stage.
Success	Displays the number of times when the paging procedure has completed successfully while the corresponding paging stage is awaiting UE response.

Field	Description
Failure	Displays the number of times when the paging procedure moves to next paging stage and/or paging procedure completes with failure.

## show mme-service statistics recovered-values

Table 429: show mme-service statistics recovered-values Command Output Descriptions

Field	Description
Decor Statistics:	
Initial Requests:	
ATTACH	
Accepts	Indicates the total number of Initial Attach Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial Attach Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial Attach Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Initial TAU Requests accepted by the MME, which functions as a DCN.
Reroutes	Indicates the total number of Initial TAU Requests rerouted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Initial TAU Rejects due to No Reroute data and not handled by the MME, which functions as a DCN.
Rerouted Requests:	
ATTACH	
Accepts	Indicates the total number of Rerouted Attach Requests accepted by the MME, which functions as a DCN.
Rejects	Indicates the total number of Rerouted Attach Requests rejected by the MME, which functions as a DCN.
TAU	
Accepts	Indicates the total number of Rerouted TAU Requests accepted by the MME, which functions as a DCN.

Field	Description
Rejects	Indicates the total number of Rerouted TAU Requests rejected by the MME, which functions as a DCN.
<b>EUTRAN&lt;-&gt;NGRAN Using N26 Interface</b>	
Outbound relocation using EPS-5GS Mobility procedure	Indicates the number of attempts, successes, and failures of outbound relocation using EPS-5GS mobility procedure.
Outbound relocation using EPS-5GS HO procedure	Indicates the number of attempts, successes, and failures of outbound relocation using EPS-5GS handover procedure.
Inbound relocation using EPS-5GS Mobility procedure	Indicates the number of attempts, successes, and failures of outbound relocation using EPS-5GS mobility procedure.
Inbound relocation using EPS-5GS HO procedure	Indicates the number of attempts, successes, and failures of Inbound relocation using EPS-5GS handover procedure.

## show mme-service statistics tai

**Important** For the MME to report these TAI level statistics, you must first issue the MME Service Configuration Mode command: **statistics collection-mode tai**. Only those MME Services which are configured accordingly will provide TAI based statistics.

**Caution** Changing this collection mode will restart the MME service and will clear all statistics at the MME service and eNodeB level.

*Table 430: show mme-service statistics tai Output Descriptions*

Field	Description
<b>EMM Statistics</b>	
<b>Attach Request: EPS Only</b>	This sub-group displays all EMM Evolved Packet System (EPS) attach request statistics (attempts/successes/failures) for the specified TAIs.  This is the sum of all IMSI, IMEI, local GUTI, Foreign GUTI, and P-TMSI attach request statistics.

Field	Description
<b>Attach Request: Combined</b>	<p>This sub-group displays all EMM EPS combined attach statistics (attempts, successes, EPS Only successes, and failures) for the specified TAIs.</p> <p>This is the sum of all IMSI, local GUTI, Foreign GUTI, and P-TMSI attach request statistics.</p> <p>"Success EPS Only" shows when a UE has requested a Combined Attach/TAU but the MME sent a Successful EPS-ONLY result, such as when the UE requests a Combined Attach but the SGs interface is down and the MME sent back an Attach Accept but with EPS-ONLY.</p>
<b>Attach Request: Emergency</b>	This sub-group displays all EMM Emergency Bearer Service attach request statistics (attempts/successes/failures) for the specified TAIs.
<b>Intra MME TAU Request</b>	This group displays all Intra-MME tracking area update statistics.
<b>TA Updating</b>	<p>This sub-group displays all Intra-MME tracking area update statistics (attempts/successes/failures) for the specified TAIs.</p> <p>This is a sum of all "Normal TAU without SGW Relocation" + "TAU with SGW Relocation" statistics.</p>
<b>TA/LA Updating</b>	<p>This sub-group displays all Intra-MME tracking area update statistics (attempts, successes, EPS Only successes, and failures) with update type "combined TA/LA updating" for the specified TAIs.</p> <p>This is a sum of all "Combined TA/LA Updating without SGW Relocation" + "Combined TA/LA Updating with SGW Relocation" statistics.</p>
<b>TA Updating with IMSI Attach</b>	<p>This sub-group displays all Intra-MME tracking area update statistics (attempts, successes, EPS Only successes, and failures) with update type "combined TA/LA updating with IMSI attach" for the specified TAIs.</p> <p>This is a sum of all "TAU with IMSI attach without SGW Relocation" + "TAU with IMSI attach and SGW Relocation" statistics.</p>
<b>Periodic TAU</b>	This sub-group displays all Intra-MME periodic tracking area update statistics (attempts/successes/failures) for the specified TAIs.
<b>Inter MME TAU Request</b>	This group displays all Inter-MME tracking area update statistics.
<b>TA Updating</b>	<p>This sub-group displays all Inter-MME tracking area update statistics (attempts/successes/failures) for the specified TAIs.</p> <p>This is a sum of all "EPS Associations by TAU using Foreign GUTI" + "EPS Associations by TAU using P-TMSI" statistics.</p>
<b>TA/LA Updating</b>	<p>This sub-group displays all Inter-MME tracking area update statistics (attempts/successes/failures) with update type "combined TA/LA updating" for the specified TAIs.</p> <p>This is a sum of all "Associations by Combined TAU using Foreign GUTI" + "Associations by Combined TAU using P-TMSI" statistics.</p>

Field	Description
<b>Detaches UE Initiated</b>	This group displays all UE-initiated detach statistics (attempts/successes/failures) for the specified TAIs.
<b>NB-IOT</b>	Displays the count for NB-IoT access type.
<b>WB-EUTRAN</b>	Displays the count for WB-EUTRAN access type.
<b>ECM Statistics</b>	
<b>UE Initiated Service Request Event</b>	This group displays all ECM service request event statistics (attempts/successes/failures) which have been initiated by the UE for the specified TAIs.
<b>NW Initiated Service Request Event</b>	This group displays all ECM service request event statistics (attempts/successes/failures) which have been initiated by the Network for the specified TAIs.
<b>Handover Statistics</b>	
<b>X2-based handovers</b>	This group displays the all X2-based (intra-MME) handover attempt/success/failure events for the specified TAIs.
<b>S1-based handovers</b>	This group displays the all S1-based (Inter-MME) handover attempt/success/failure events for the specified TAIs.
<b>ESM Statistics</b>	
<b>NW Initiated Dedicated Bearer Activations</b>	
Attempted	This sub-group displays the total number of attempted ESM network initiated dedicated bearer activations for each TAI.
Success	This sub-group displays the total number of successful ESM network initiated dedicated bearer activations for each TAI.
Failures	This sub-group displays the total number of failed ESM network initiated dedicated bearer activations for each TAI.
<b>Session Statistics</b>	
<b>Total Subscribers</b>	
Attached Calls	The total number of EPS Mobility Management call-line statistics on attached current calls for each TAI.
Connected Calls	The total number of EPS Mobility Management call-line statistics on connected current calls for each TAI.
Idle Calls	The total number of EPS Mobility Management call-line statistics for each TAI indicating idle current calls.
<b>EMM Control Messages</b>	
<b>Sent</b>	

Field	Description
Attach Accept	The total number of EMM Attach Accept messages sent for a specific ECM event for the specified TAIs.
Retransmissions	The total number of retransmitted EMM Attach Accept messages sent for a specific ECM event.
IMSI Unknown in HSS	The total number of EMM Control messages sent – Attach Accept with a cause code of IMSI unknown.
MSC Unreachable	The total number of EMM Control messages sent – Attach Accept with a cause code of MSC not available.
Network Failure	The total number of EMM Control messages sent – Attach Accept with a cause code of Network Failure.
CS Domain Not Available	The total number of EMM Control messages sent – Attach Accept with a cause code of CS domain not available.
Congestion	The total number of EMM Control messages sent – Attach Accept with a cause code of Congestion.
Attach Reject	The total number of EMM Attach Reject messages sent for the specified TAIs.
IMSI Unknown in HSS	The total number of EMM Attach Reject messages sent, with the cause code #2: "IMSI Unknown in HSS".
Illegal UE	The total number of EMM Attach Reject messages sent with the cause code #3: "Illegal UE".
Illegal ME	The total number of EMM Attach Reject messages sent with the cause code #6: "Illegal ME".
EPS Not Allowed	The total number of EMM Attach Reject messages sent with the cause code #7: "EPS Services Not Allowed".
Network Failure	The total number of EMM Attach Reject messages sent with the cause code #17: "Network Failure".
CSG Not Subscribed	The total number of EMM Attach Reject messages sent with the cause code of #25: "Not authorized for this CSG".
Decode Failure	The total number of EMM Attach Reject messages sent with the cause code #23: "Decode Failure".
IMEI Not Accepted	The total number of EMM Attach Reject messages sent with the cause code #5: "IMEI Not Accepted".
Roaming restricted TA	The total number of EMM Attach Reject messages sent with the cause code #13: "Roaming restricted in TA".
PLMN not allowed	The total number of EMM Attach Reject messages sent with the cause code #11: "PLMN not allowed".

Field	Description
TA not allowed	The total number of EMM Attach Reject messages sent with the cause code #12: "Tracking Area not allowed".
No suitable cells in TA	The total number of EMM Attach Reject messages sent with the cause code #15: "No suitable cells in TA".
EPS non-EPS Not Allwd	The total number of EMM Attach Reject messages sent with the cause code #8: "EPS services and non-EPS services not allowed".
No EPS Svc in this PLMN	The total number of EMM Attach Reject messages sent with the cause code #14: "EPS service not allowed in this plmn".
ESM Failure	The total number of EMM Attach Reject messages sent with the cause "ESM Failure" for a specific ECM event for the specified TAIs.
Rejected by PGW/SGW	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #30: "Rejected by PGW/SGW".
Authentication Failed	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #29: "Authentication Failed".
Svc Opt Not Supported	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #32: "Svc Opt Not Supported".
Svc Opt Not Subscribed	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #33: "Svc Opt Not Subscribed".
Unknown APN	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #27: "Unknown or Missing APN".
Insufficient Resource	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #26: "Insufficient Resources".
Activation Rejected	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #31: "Request rejected, unspecified".
Svc Opt Tmp OutofOrder	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #34: "Service Option Temporarily Out of Order".
Protocol Errors	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with any of the following Protocol Error cause codes: #95-101, or #111.
APN Restrict Incomt	The total number of EMM Attach Reject messages sent due to an ESM procedure failure with cause code #112: "APN Restriction Value Incompatible with Active EPS Bearer Content".
Service Reject	The total number of EMM Service Reject messages sent.
UE Identity Unknown	The total number of EMM Service Reject messages sent, with a cause code of #9: "UE identity cannot be derived by the network".

Field	Description
Implicitly Detached	The total number of EMM Service Reject messages sent, with a cause code of #10: "Implicitly Detached".
No Bearer Active	The total number of EMM Service Reject messages sent, with a cause code of #40: "No EPS bearer context activated".
CSG Not Subscribed	The total number of EMM Service Reject messages sent, with a cause code of #25: "Not authorized for this CSG".
Roaming Restricted TA	The total number of EMM Service Reject messages sent, with a cause code of #13: "Roaming not allowed in this tracking area".
No suitable cells in TA	The total number of EMM Service Reject messages sent, with a cause code of #15: "No suitable cells in tracking area".
TA Not Allowed	The total number of EMM Service Reject messages sent, with a cause code of #12: "Tracking area not allowed".
TAU Accept Total	The total number of EMM TAU Accept messages sent (for either an Inter- or Intra-MME TAU request). <b>Note:</b> If the MME retransmits a TAU Accept message, only the "Retransmissions" counter will be incremented.
Retransmissions	The total number of EMM TAU Accept messages retransmitted (for either an Inter- or Intra-MME TAU request).
IMSI Unknown in HSS	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #2: "IMSI unknown in HSS".
MSC Unreachable	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #16: "MSC temporarily not reachable".
Network Failure	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #22: "Congestion".
TAU Accept Intra MME	The total number of TAU Accept messages sent for an Intra-MME TAU request.
Retransmissions	The total number of TAU Accept messages retransmitted for an Intra-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".

Field	Description
MSC Unreachable	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #16: "MSC temporarily not reachable".
Network Failure	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent for an Intra-MME TAU request, with a cause code of #22: "Congestion".
TAU Accept Inter MME	The total number of TAU Accept messages sent for an Inter-MME TAU request.
Retransmissions	The total number of TAU Accept messages retransmitted for an Inter-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".
MSC Unreachable	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #16: "MSC temporarily not reachable".
Network Failure	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #17: "Network failure".
CS Domain Not Available	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #18: "CS Domain not available".
Congestion	The total number of TAU Accept messages sent for an Inter-MME TAU request, with a cause code of #22: "Congestion".
TAU Reject Total	The total number of EMM TAU Reject messages sent.
IMSI Unknown in HSS	The total number of EMM TAU Reject messages sent with the cause code #2: "IMSI unknown in HSS".
Illegal UE	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #3: "Illegal UE".
Illegal ME	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #6: "Illegal ME".
EPS Not Allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #5: "IMEI not accepted".

Field	Description
Decode Failure	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #25: Not authorized for this CSG.
EPS non-EPS not Allwd	The total number of TAU Reject messages sent (for either an Inter- or Intra-MME TAU request), with a cause code of #8: EPS services and non-EPS services not allowed.
TAU Reject Intra MME	The total number of TAU Reject messages sent for an Intra-MME TAU request.
IMSI Unknown in HSS	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #2: IMSI unknown in HSS.
Illegal UE	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #3: "Illegal UE".

Field	Description
Illegal ME	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #6: "Illegal ME".
EPS Not Allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent for an Intra-MME TAU request with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #5: "IMEI not accepted".
Decode Failure	The total number of TAU Reject messages sent for an Intra-MME TAU request with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #25: "Not authorized for this CSG".
EPS non-EPS not Allwd	The total number of TAU Reject messages sent for an Intra-MME TAU request, with a cause code of #8: "EPS services and non-EPS services not allowed".
TAU Reject Inter MME	The total number of TAU Reject messages sent for an Inter-MME TAU request.

Field	Description
IMSI Unknown in HSS	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #2: "IMSI unknown in HSS".
Illegal UE	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #3: "Illegal UE".
Illegal ME	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #6: "Illegal ME".
EPS Not Allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #7: "EPS services not allowed".
Network Failure	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #17: "Network failure".
IMEI not accepted	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #5: "IMEI not accepted".
Decode Failure	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #23: "UE security capabilities mismatch".
No Bearer Active	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #40: "No EPS bearer context activated".
UE Identity Unknown	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #9: "UE identity cannot be derived by the network".
Implicitly Detached	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #10: "Implicitly detached".
Roaming Restricted TA	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #13: "Roaming not allowed in this tracking area".
PLMN not allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #11: "PLMN not allowed".
TA not allowed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #12: "Tracking area not allowed".
No suitable cells in TA	The total number of TAU Reject messages sent for an Inter-MME TAU request with a cause code of #15: "No suitable cells in tracking area".
No EPS Svc in PLMN	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #14: "EPS services not allowed in this PLMN".
CSG Not Subscribed	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #25: "Not authorized for this CSG".

Field	Description
EPS non-EPS not Allwd  <b>Received</b>	The total number of TAU Reject messages sent for an Inter-MME TAU request, with a cause code of #8: "EPS services and non-EPS services not allowed".
Attach Complete	Displays total number of EMM Attach Complete message received from UE indicating increments for each Attach Complete message received from UE.
Attach Request	Displays total number of EMM Attach Requests received from UE indicating increments for each Attach Request message received from UE.
<b>PDN Connectivity Reject:</b>	
Other Reasons	Displays total number of ESM messages sent for each TAI by the MME. This indicates that the PDN connection has been rejected for a cause other than one of those listed in the output generated by the <b>show mme-service statistics esm-only</b> command.

## show update-bearer-request-stats

The output of this command displays the update bearer Response Cause Code (CC16) statistics during HO/3G-4G TAU:

Field	Description
For_UBR_CC16_during_HO_3G_4G_TAU_TX	The total number of counts of update bearer response during 3G-4G GnGp HO TAU and TX proces.
Current Nb of UBRs buffered at mme app	The current number of UBR buffered at MME application.

## CHAPTER 92

# show module

---

- [show module](#), on page 1563

## show module

*Table 431: show module Command Output Descriptions*

Field	Description
Priority	Displays the module priority number.
Version	Displays the version number of the plugin.
Loaded	Displays the status of the plugin, if loaded or not (yes/no).
Location	Displays the location where the patch is copied.
Update/Rollback Time	Displays the timestamp when the plugin was updated or rolled back.
Status	Displays the status of plugin installation (success/failed). An error message is displayed if installation fails.

## CHAPTER 93

# show mpls

- [show mpls cross-connect](#), on page 1565
- [show mpls ftn](#), on page 1566
- [show mpls ilm](#), on page 1566
- [show mpls ldp bindings](#), on page 1567
- [show mpls ldp discovery](#), on page 1568
- [show mpls ldp neighbor](#), on page 1568
- [show mpls ldp neighbor detail](#), on page 1568
- [show mpls nexthop-label-forwarding-entry](#), on page 1569

## show mpls cross-connect

*Table 432: show mpls cross-connect Command Output Descriptions*

Field	Description
Cross connect ix	Displays the table index for the cross-connect.
in labelspace	Indicates that all MPLS interfaces will use the platform-wide label space ("0").
in label	Displays the ingress (incoming interface) label for this segment.
out-segment ix	Displays the outbound segment index.
Owner	Displays the creator of this segment, typically a protocol such as BGP
Persistent	Displays whether the tunnel is persistent – Yes or No.
Admin Status	Indicates whether the user can administratively disable a peer while still preserving its configuration. Up = Yes, Down = No.
Oper Status	Displays the current status of the cross-connect segment – Up or Down.

## show mpls ftn

Table 433: show mpls ftn Command Output Descriptions

Field	Description
Prefix/mask	Displays the IP address and mask stored in for this FEC-to-NHLFE table entry.
Nhlfe-ix	Displays the index number for the Next-Hop Label Forwarding Entry.
opcode	PUSH = Replace the top label with another and then push one or more additional labels onto the label stack SET = Set the next hop label.
label/ifindex	Displays the label associated with the interface.
nh-addr	Displays the IP address of the next hop.

## show mpls ilm

Table 434: show mpls ilm Command Output Descriptions

Field	Description
Label	Displays the label ID for this entry in the Incoming Label Map table.
Opcode	POP = Remove label from packet. CONTEXT-CHANGE = &quest;&quest;&quest; DELIVER = &quest;&quest;&quest;
nhlfe-ix/context-id	Displays the Next-Hop Label Forwarding Entry (NHLFE) index or context ID for this entry.

Table 435: show mpls ilm fec Command Output Descriptions

Field	Description
Label	Displays the label ID for this entry in the Incoming Label Map table.
VRF	Displays the Virtual Routing and Forwarding information for this entry.
FEC	Displays the Forward Equivalency Class (FEC) for this entry.

**Table 436: show mpls ilm label Command Output Descriptions**

Field	Description
Label	Displays the label ID for this entry in the Incoming Label Map table.
Opcode	Displays the Opcode that identifies the specific PDU for this entry.
nhlfe-ix/context-id	Displays the NHLFE/ Context ID for this entry.

**Table 437: show mpls ilm verbose Command Output Descriptions**

Field	Description
In-segment entry with in label:	Displays the label ID for this entry in the Incoming Label Map table.
id:	Displays the Opcode that identifies the specific PDU for this entry.
row status:	Displays the Next-Hop Label Forwarding Entry/ Context ID for this entry.
Owner:	Ownership of the management plane.
# of pops:	Number of pops (TTL)
Index:	Index number
FEC:	Forward Equivalency Class

## show mpls ldp bindings

**Table 438: show mpls ldp bindings Command Output Descriptions**

Field	Description
Prefix	Displays the IP address and mask for a particular destination.
LPD ID	LDP identifier (IP address).
Label	Displays the label associated with this entry.
Nexthop	Displays the IP address of the next hop.
Egress_if_index	Displays the interface index for egress messages.

## show mpls ldp discovery

Table 439: show mpls ldp discovery Command Output Descriptions

Field	Description
Peer LDP ID	LDP ID of the peer router.
Hold Time (seconds)	Period of time (in seconds) a discovered LDP neighbor is remembered without receipt of an LDP hello message from the neighbor.
Proposed Local/Peer (seconds)	Hold times (in seconds) proposed for LDP hello timer by the local router and the peer router. LDP uses the lower of these two values as the hold time.
Remaining (seconds)	Time remaining time before the hello timer expires.

## show mpls ldp neighbor

Table 440: show mpls ldp neighbor Command Output Descriptions

Field	Description
Peer LDP ID	LDP ID of the peer router.
State	Specifies the state of the LDP session.
Hold Time (seconds)	Period of time (in seconds) a discovered LDP neighbor is remembered without receipt of an LDP hello message from the neighbor.
Proposed Local/Peer (seconds)	Hold times (in seconds) proposed for LDP hello timer by the local router and the peer router. LDP uses the lower of these two values as the hold time.
Remaining (seconds)	Time remaining time before the hello timer expires.

## show mpls ldp neighbor detail

Table 441: show mpls ldp neighbor detail Command Output Descriptions

Field	Description
Local LDP Identifier	LDP identifier(IP address) for the local router.
Peer LDP ID	LDP ID of the peer router.
Transport Address	Specifies the named IP address as the transport address in the LDP discovery hello messages.

Field	Description
State	Specifies the state of the LDP session.
Role	Specifies ACTIVE or PASSIVE role for the LSR.
Uptime	Specifies the length of time the LDP session has existed.
Keepalive Negotiated Hold Time	Indicates the time that an LDP session is to be maintained with an LDP peer without receiving LDP traffic or an LDP keepalive message from the peer.
Proposed Local/Peer	Hold times (in seconds) proposed for LDP hello timer by the local router and the peer router. LDP uses the lower of these two values as the hold time.
Remaining Keepalive hold time	Time remaining time before the keepalive timer expires.
Address advertised	Identifies the neighbor with this IP address.

## show mpls nexthop-label-forwarding-entry

*Table 442: show mpls nexthop-label-forwarding-entry Command Output Descriptions*

Field	Description
Nhlfe-ix	Displays the index number for the Next-Hop Label Forwarding Entry.
Opcode	PUSH = Replace the top label with another and then push one or more additional labels onto the label stack SET = Set the next hop label.
label/ifindex	Displays the label associated with the interface.
nh-addr	Displays the IP address of the next hop.

## CHAPTER 94

# show multicast-sessions

---

This chapter includes the **show multicast-sessions** command output tables.

- [show multicast-sessions all](#), on page 1572
- [show multicast-sessions full all](#), on page 1573

# show multicast-sessions all

Table 443: show multicast-sessions all Command Output Descriptions

Field	Description
vvvvv	<p>Displays service and session state information. This column provides a code consisting of three characters.</p> <p>From left-to-right, the first character represents the <b>Session Type</b> that the subscriber is using. The possible session types are:</p> <ul style="list-style-type: none"> <li>• <b>B</b>: BCMCS</li> <li>• <b>M</b>: MBMS Multicast</li> <li>• <b>R</b>: MBMS Broadcast</li> </ul> <p>From left-to-right, the second character represents the <b>Framing Type</b>. The possible framing types are:</p> <ul style="list-style-type: none"> <li>• <b>H</b>: HDLC Like</li> <li>• <b>S</b>: Segment Based</li> <li>• <b>x</b>: Not Applicable</li> </ul> <p>From left-to-right, the third character represents the <b>Flow Type</b>. The possible flow types are:</p> <ul style="list-style-type: none"> <li>• <b>F</b>: Flow</li> <li>• <b>P</b>: Program</li> <li>• <b>u</b>: Unknown</li> </ul> <p>From left-to-right, the fourth character represents the <b>Call State</b> of the session. The possible call states are:</p> <ul style="list-style-type: none"> <li>• <b>C</b>: Connected</li> <li>• <b>c</b>: Connecting</li> <li>• <b>D</b>: Disconnecting</li> <li>• <b>u</b>: Unknown</li> </ul> <p>From left-to-right, the fifth character represents the <b>Link Status</b> of the session. The possible idle states are:</p> <ul style="list-style-type: none"> <li>• <b>A</b>: Online/Active</li> <li>• <b>D</b>: Dormant/Idle</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number.

Field	Description
FLOW ID	Displays the flow identification for multicast service session.
MCAST ADDR	Displays the IP address of Broadcast Multicast service center.
APN/PORT	Displays the APN name or port number through which the multicast services is provided.
PEER ADDR	Displays the IP address of Access Gateway to which the subscriber is attached.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

## show multicast-sessions full all

*Table 444: show multicast-sessions full all Command Output Descriptions*

Field	Description
Flow Id	Hex value indicating the Flow ID.
state	Indicates the status of session. The possible status are: <ul style="list-style-type: none"> <li>• Connected</li> <li>• Connecting</li> <li>• Disconnecting</li> <li>• Unknown</li> </ul>
Access Type	Indicates the access type of broadcast-multicast service. Possible values are: <ul style="list-style-type: none"> <li>• mbms-bearer: access through MBMS bearer context</li> <li>• mbms-ue: access through MBMS UE context</li> </ul>
Flow ID Type	Indicates the Flow ID type.
callid	Displays the call identification number (callid).
connect time	Displays the time of connection starts.
call duration	Specifies total duration of call session in hh:mm:ss format
idle time	Displays the amount of time that the multicast session has been idle either in an active or dormant state.
idle time left	Shows the amount of idle time left before timeout.
session time left	How much session time is left for the specified multicast session.
Multicast ip address	The IP address of the interface in the session.

Field	Description
peer address	The IP address of the peer in the session.
source context	Specifies the name of a configured source context from which the session was initiated.
destination context	Specifies the name of a configured destination context through which the subscribers are provided access to the packet data network.
output pkts	Indicates the number of packets transmitted.
output bytes	Indicates the number of bytes transmitted.
outputs pkts dropped	Indicates the number of packets that were dropped while receiving data for this multicast session.
pk rate to peer (bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period.
pk rate to peer (pps)	The peak data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period.
ave rate to peer (bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period.
ave rate to peer (pps)	The average data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period.
sust rate to peer (bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods.
sust rate to peer (pps)	The mean data rate, in packets per second, obtained for data received from the network by the subscriber during the last three sampling periods.

## CHAPTER 95

# show network-overload-protection

This chapter describes the output of the **show network-overload-protection** command variants.

- [show network-overload-protection mme configuration, on page 1575](#)

## show network-overload-protection mme configuration

*Table 445: show network-overload-protection mme configuration Command Output Descriptions*

Field	Description
MME message rate control	
S1 paging per eNodeB	Displays the configured S1 paging rate limit applicable to all eNodeBs connected all MME services. S1 Paging requests to an eNodeB will be rate limited at this threshold value.
EGTP path failure ECM-Idle	Displays the configured UE deactivation pacing rate for MME S11/S10/S3 interfaces (any EGTPC service with interface type "interface-mme") for UEs in ECM Idle state.
EGTP path failure ECM-Connected	Displays the configured UE deactivation pacing rate for MME S11/S10/S3 interfaces (any EGTPC service with interface type "interface-mme") for UEs in ECM Connected state.

# CHAPTER 96

## show npu

This chapter describes the output of the **show npu** command.

- [show npu tm queue](#), on page 1577
- [show npu tm statistics](#), on page 1577
- [show npu utilization table](#), on page 1578

## show npu tm queue

*Table 446: show npu tm queue Command Output Descriptions (ASR 5500 only)*

Field	Description
PORT	Interface port identified by Slot/Port
COS	Class of Service (COS0 to COS7) as mapped to 6-bit DSCP value via Global Configuration mode <b>qos ip-dscp-iphb-mapping dscp</b> command.
Current Queue Depth (256B Buffers)	Displays queue depth globally and for each COS in units of 256-byte buffers.

## show npu tm statistics

*Table 447: show npu tm statistics Command Output Descriptions (ASR 5500 only)*

Field	Description
PORT	Interface port identified by Slot/Port
Pri	Displays Priority as COS0 to COS7.
TX Frames	Number of transmitted frames.
WRED Frames	Number of Weighted Random Early Detection (WRED) discarded frames.
WRED Bytes	Number of WRED discarded bytes.

# show npu utilization table

*Table 448: show npu utilization table Command Output Descriptions for ASR 5500 and ASR 5000*

Field	Description
npu	Identifies NPU location as slot/CPU/NPU.
now	Displays percentage of NPU utilization occurring now.
5min	Displays percentage of NPU utilization over the past 5 minutes.
15min	Displays percentage of NPU utilization over the past 15 minutes.

*Table 449: show npu utilization table Command Output Descriptions for VPC*

Field	Description
lcore	Identifies IFTASK core location as slot/CPU/core.
now	Displays percentage of IFTASK utilization occurring now.
5min	Displays percentage of IFTASK utilization over the past 5 minutes.
15min	Displays percentage of IFTASK utilization over the past 15 minutes.

# CHAPTER 97

## show ntp

This chapter describes the output of the **show ntp** command.

- [show ntp status, on page 1579](#)

## show ntp status

*Table 450: show ntp status Command Output Descriptions*

Field	Description
system peer	The current synchronization source.
system peer mode	The mode of the association between the system and the synchronization source. The association can operate in one of the following modes as defined in RFC 1305: <ul style="list-style-type: none"><li>• symmetric active</li><li>• symmetric passive</li><li>• client server</li><li>• broadcast</li></ul>
leap indicator	The two-bit code that will be used to indicate the insertion of a leap second in the NTP timescale.
stratum	The quality level of the system clock.
precision	A signed integer that indicates the precision of the system clock.
root distance	The round-trip packet delay to the primary reference source. The delay is measured in seconds.
root dispersion	The maximum error relative to the primary reference source. The error is measured in seconds.
reference ID	The code that identifies the current synchronization source.
reference time	The local time that the system was last updated using NTP.

Field	Description
system flags	<p>Indicates various communication parameters between the system and the server. The possible flags are as follows:</p> <p><b>auth:</b> Enables the server to synchronize with unconfigured peers only if the peer has been correctly authenticated using either public key or private key cryptography.<b>bclient:</b> Enables the server to listen for a message from a broadcast or multicast server, as in the multicast client command with default address.<b>calibrate:</b> Enables the calibrate feature for reference clocks.<b>kernel:</b> Enables the kernel time discipline, if available.<b>monitor:</b> Enables the monitoring facility.<b>ntp:</b> Enables time and frequency discipline. In effect, this switch opens and closes the feedback loop, which is useful for testing.<b>pps:</b> Enables the pulse-per-second (PPS) signal when frequency and time is disciplined by the precision time kernel modifications.<b>stats:</b> Enables the statistics facility.</p>
jitter	The maximum amount of fluctuation within the synchronization source due to random noise.
stability	The stability of the clocking source in parts per million (ppm).
broadcastdelay	The round-trip delay for broadcast messages in seconds.
authdelay	The round-trip delay for authentication messages in seconds.

## CHAPTER 98

# show nw-reachability

- [show nw-reachability server all](#), on page 1581

## show nw-reachability server all

*Table 451: show nw-reachability server Command Output Descriptions*

Field	Description
Server	The name that was configured for this server in the current context.
remote-addr	The IP address to which ping packets are sent in order to determine network reachability.
local-addr	The IP address that is used as the source address of ping packets sent to the reachability server.
state	The state of the network reachability server. Either Up or Down. Up: The server is responding to ping packets. Down: The server is not responding to ping packets.
Total Network Reachability Servers:	The total number of network reachability servers that are configured in the current context.
Up:	The number of network reachability servers that are responding.

show nw-reachability server all

# CHAPTER 99

## show operator-policy

This chapter describes the output of the **show operator-policy** command.

- [show operator-policy full name](#), on page 1583

### show operator-policy full name

Displays detailed configuration information for a specific operator policy configured on the system. While operator policies can be configured on SGSN, MME, and S-GW products, the information provided below only applies to SGSN.

**Table 452: show operator-policy full name Command Output Descriptions**

Field	Description
Operator Policy Name	The name of the operator policy you chose to view.
Call Control Profile Name	The name of the call control profile associated with this operator policy (only one call control profile per operator policy) or <b>none-associated</b> if no profile has been associated with this operator policy.
Validity	Indicates whether the profile name listed above already exists ( <b>Valid</b> ) or has not been created yet ( <b>Invalid</b> ).
APN Remap Table Name	The name of the access point name (APN) remap table associated with this operator policy (only one APN remap table per operator policy) or <b>none-associated</b> if no APN remap table has been associated with this operator policy.
Validity	Indicates whether the APN remap table name listed above already exists ( <b>Valid</b> ) or has not been created yet ( <b>Invalid</b> ).
IMEI Range	A range of international mobile equipment identity numbers associated with this operator policy or <b>none-associated</b> if no ranges have been associated with this operator policy. Up to 10 IMEI ranges can be associated with an operator policy.
IMEI Profile Name	The name of the IMEI profile associated with the IMEI number range above or <b>none</b> if no profile is associated with this range.

Field	Description
Include/Exclude	Indicates whether the IMEI range is associated with an IMEI profile ( <b>Include</b> ) or not associated with any IMEI profile ( <b>Exclude</b> ).
APN Associations	If no APN parameters are associated with this operator policy, this entry appears with the value <b>none-associated</b> .
APN NI	
APN Profile Name	The name of the APN profile associated with the APN network identifier show above.
Validity	Indicates whether the APN profile name listed above already exists ( <b>Valid</b> ) or has not been created yet ( <b>Invalid</b> ).
APN OI	
APN Profile Name	The name of the APN profile associated with the APN operator identifier show above.
Validity	Indicates whether the APN profile name listed above already exists ( <b>Valid</b> ) or has not been created yet ( <b>Invalid</b> ).
Default APN	
APN Profile Name	The name of the APN profile associated with the default access point name.
Validity	Indicates whether the APN profile name listed above already exists ( <b>Valid</b> ) or has not been created yet ( <b>Invalid</b> ).

# CHAPTER 100

## show orbem

This chapter describes the output of the **show orbem** command.

- [show orbem client id](#), on page 1585
- [show orbem status](#), on page 1585
- [show orbem session table](#), on page 1587

## show orbem client id

*Table 453: show orbem client id Command Output Descriptions*

Field	Description
Application Server ID	The name of the ORBEM client as configured by the <b>client</b> command in the ORBEM configuration mode.
State	The status of the ORBEM client as "Enabled" or "Disabled". This indicates whether or not the system is manageable by the external Web Element Manager server: enabled indicates that it can be managed, disabled indicates that it is unmanageable.  If the status is "Disabled", it can be enabled by executing the <b>activate client id</b> command in the ORBEM Configuration Mode.
Privileges	The management capabilities of the client as "FCAPS" (Fault, Configuration, Accounting, Performance, and Security).

## show orbem status

*Table 454: show orbem status Command Output Descriptions*

Field	Description
Service State	Indicates whether the service state of the ORBEM client on the system is enabled (on) or disabled (off).

Field	Description
Management Functions	Indicates which management functions ORBEM is currently allowing. Possible values for this field are: <ul style="list-style-type: none"> <li>• Fault</li> <li>• Configuration</li> <li>• Accounting</li> <li>• Performance</li> <li>• Security</li> </ul>
IOP URL	The universal resource locator (URL) of the system interface over which the Inter-ORB Protocol (IOP) will communicate.
SSL Port	The Secure Socket Layer Inter-ORB Protocol (SIOP) TCP port that will be used by the ORB server (that runs on the system) to communicate with the client.
TCP port	The Internet Inter-ORB Protocol (IIOP) Transport Control Protocol (TCP) port that will be used by the ORB server (that runs on the system) to communicate with the client. This is only used if IIOP transport is needed in addition to SIOP.
Session Timeout	The amount of time an ORBEM client-session can be open and remain idle before ORBEM terminates the session. This value is a global value that is applied to all configured ORBEM clients.
Max Login Attempts	The maximum number of times a client can attempt to login before ORBEM de-activates the client id.
IIOP Transport	Indicates whether the Internet Inter-ORB Protocol (IIOP) transport is enabled (on) or disabled (off).
Notification	Indicates whether the CORBA event notification service on the system is enabled (on) or disabled (off).
Number of Current Sessions	The number of ORBEM sessions that currently exist.
Number of Event Channels Open	The number of ORBEM event channels that are currently open.
Number of Operations Completed	The number of ORBEM operations that have been completed.
Number of Events Processed	The number of ORBEM events that have been processed.
Avg Operation Processing time	The average processing time in seconds of recent ORBEM events.
(last 1000)	The average processing time in seconds of the last 1000 ORBEM events.

## show orbem session table

*Table 455: show orbem session table Command Output Descriptions*

Field	Description
Session ID	The identification number for the ORBEM session. This is a number used within the system to reference the session.
Application Server	The server that the ORBEM session is established with by the client id that was configured for the server.
IP-Address	The IP address associated with the ORBEM session.
Notify Status	The status of the notification associated with the ORBEM session.
Context Name	The name of the context on the system that is facilitating the ORBEM configuration.
Last transaction	The date and time of the last transaction between the system and the application server.

# CHAPTER 101

## show pcc-af

This chapter describes the output of the **show pcc-af** command.

- [show pcc-af service all](#), on page 1589
- [show pcc-af service statistics](#), on page 1590

## show pcc-af service all

*Table 456: show pcc-af service all Command Output Description*

Variables	Description
Service Name	The name of the PCC-AF service for which statistics are collected or displayed.
Context	The name of the context in which PCC-AF service is configured.
Service State	Indicates the state of PCC-AF service.
Diameter	This group indicates the Diameter endpoint configuration information for Rx interface.
Origin	Indicates the name of the Diameter origin endpoint configured for PCC-AF service.
Dictionary	Indicates the name of the Diameter dictionary configured for Rx interface in PCC-AF service. By default it is "Standard" dictionary.
Associated PCC-Service	Indicates the name of the PCC-Service associated with PCC-AF service.
Max Charging Sessions	Indicates the maximum number of charging sessions allowed in this PCC-AF service instance. By default it is 10000.
Newcall Policy	Indicates the new call policy configured to manage the congestion control on a PCC-AF service.

## show pcc-af service statistics

*Table 457: show pcc-af service statistics Command Output Description*

Variables	Description
Service Name	The name of the PCC-AF service for which statistics are collected or displayed.
Inbound Messages	Indicates the total number of Rx messages received.
AAR Messages	Indicates the total number of Rx AAR messages received.
STR Messages	Indicates the total number of Rx STR messages received.
RAR Messages	Indicates the total number of Rx RAR request received.
ASR Messages	Indicates the total number of Rx ASR request received.
Outbound Messages	Indicates the total number of Rx messages sent.
Accepted AAR Messages	Indicates the total number of Rx AAR-Accepted messages sent.
Accepted STR Messages	Indicates the total number of Rx STR-Accepted messages sent.
RAA Messages	Indicates the total number of Rx RAA messages sent.
ASA Messages	Indicates the total number of Rx ASA sent.
Unknown Messages	Indicates the total number of unknown type of Rx messages received.

# CHAPTER 102

## show pcc-policy

This chapter describes the output of the **show pcc-policy** command.

- [show pcc-policy service all](#), on page 1591
- [show pcc-policy service statistics](#), on page 1593
- [show pcc-policy session full all](#), on page 1601

## show pcc-policy service all

*Table 458: show pcc-policy service all Command Output Description*

Field	Description
Service name	Indicates the name of the PCC-Policy service instance for which counters are displayed.
Context name	Indicates the name of the context in which the PCC-Policy service instance is configured and running.
Service State	Displays the state of PCC-Policy service instance on an IPCF node. Possible states are: <ul style="list-style-type: none"><li>• Initial</li><li>• Connected</li><li>• Disconnected</li></ul>
Diameter	This group displays information of Diameter configuration parameters configured in this PCC-Policy service instance.
Origin	Indicates the name of the Diameter origin host configured in this PCC-Policy service instance.
Dictionary	Indicates the Diameter dictionary configured and used for Diameter session (Gx) in this PCC-Policy service instance.
Associate PCC-Service	Indicates the name of the PCC service which is associated with this PCC-Policy service instance.

Field	Description
Max Policy Sessions	Indicates the maximum limit of policy (Gx) sessions allowed in this PCC-Policy service instance.
Newcall Policy	Indicates the action configured when new calls arrived after reaching a threshold limit in this PCC-Policy service instance to manage the congestion control. If configured possible actions are: <ul style="list-style-type: none"> <li>• drop</li> <li>• reject</li> </ul>
GPRS-Access-BCM	Indicates the Bearer Control Mode configured in PCC-Policy service instance to access the PCEF in GPRS network. If configured possible modes are: <ul style="list-style-type: none"> <li>• <b>as-requested</b>: the PCC-Policy service is configured to accept the BCM request from Application Server (AS) for PCEF access over <b>Gx</b> interface on IPCF node. This is the default mode.</li> <li>• <b>ue-nw</b>: the PCC-Policy service is configured to accept the BCM request from UE and/or network element for PCEF access over <b>Gx</b> interface on IPCF node.</li> <li>• <b>ue-only</b>: the PCC-Policy service is configured to accept the BCM request from UE only for PCEF access over <b>Gx</b> interface on IPCF node.</li> </ul>
eHRPD-Access-BCM	Indicates the Bearer Control Mode configured in PCC-Policy service instance to access the PCEF in eHRPD network. If configured possible modes are: <ul style="list-style-type: none"> <li>• <b>as-requested</b>: the PCC-Policy service is configured to accept the BCM request from Application Server (AS) for PCEF access over <b>Gxa</b> interface on IPCF node. This is the default mode.</li> <li>• <b>ue-nw</b>: the PCC-Policy service is configured to accept the BCM request from UE and/or network element for PCEF access over <b>Gxa</b> interface on IPCF node.</li> <li>• <b>ue-only</b>: the PCC-Policy service is configured to accept the BCM request from UE only for PCEF access over <b>Gxa</b> interface on IPCF node.</li> </ul>
Subscriber Binding ID	Indicates the subscriber binding identifier used by <b>bindmux</b> for binding subscriber session to PCC-Policy service instance. If configured possible binding identifiers are: <ul style="list-style-type: none"> <li>• IMSI</li> <li>• MSISDN</li> <li>• NAI</li> <li>• SIP-URI</li> </ul>

Field	Description
Subscription-ID Absence Action	<p>Indicateges the action configured for PCC Policy when CCR-I message is received by IPCF/PCRF without a valid Subscription id (IMSI, NAT, E164 etc.).</p> <p>Possible actions are:</p> <ul style="list-style-type: none"> <li>• Continue</li> <li>• Reject</li> </ul>

## show pcc-policy service statistics

*Table 459: show pcc-policy service statistics Command Output Description*

Field	Description
Total Services	Indicates the total number of PCC-Policy services for which counters are displayed.
Messages Statistics	This group displays the summary statistics of messages in a PCC Policy service instance.
Total Messages Recv	Indicates total number of inbound messages received (CCR + RAA).
Total Messages sent	Indicates total number of outbound messages sent (CCA + RAR).
Total CCR	Indicates total number of known (I/U/T) and unknown CCR received.
CCR-Initial	Indicates total number of CCR-I messages received.
CCR-Updates	Indicates total number of CCR-U messages received.
CCR-Terminate	Indicates total number of CCR-T messages received..
Unknown CCR	Indicates total number of CCR messages received with type not determined.
Total CCA	Indicates total number of known (I/U/T) and unknown CCA sent..
CCA-Initial	Indicates total number of CCA-I messages sent.
CCA-Updates	Indicates total number of CCA-U messages sent.
CCA-Terminate	Indicates total number of CCA-T messages sent.
Unknown CCA	Indicates total number of CCA messages sent as response to CCR with type not determined..
CCA with Success	Indicates total number of CCA messages sent with Result-Code as DIAMETER_SUCCESS(2001).

Field	Description
CCA-I with Success	Indicates total number of CCA-I messages sent with Result-Code as DIAMETER_SUCCESS(2001).
CCA-U with Success	Indicates total number of CCA-U messages sent with Result-Code as DIAMETER_SUCCESS(2001).
CCA-T with Success	Indicates total number of CCA-T messages sent with Result-Code as DIAMETER_SUCCESS(2001).
CCA with Failures	Indicates total number of CCA messages rejected.
CCA-I with Failures	Indicates total number of CCA-I messages rejected.
CCA-U with Failures	Indicates total number of CCA-U messages rejected.
CCA-T with Failures	Indicates total number of CCA-T messages rejected.
Total RAA	Indicates total RAA messages received.
Total RAR	Indicates total RAR messages sent.
RAA with Success	Indicates total RAA messages with Result-Code or Experimental-Result-Code as SUCCESS..
RAA with Failure	Indicates total RAA messages with Result-Code or Experimental-Result-Code depicting FAILURE..
RAA without Result	Indicates total RAA messages with both Result-Code or Experimental-Result-Code absent..
Unexpected RAA	Indicates total RAA messages for the non-existing sessions.
RAA parse Success	Indicates total RAA messages with parsing SUCCESS..
RAA parse Failure	Indicates total RAA messages with parsing FAILURE.
Reauth probes	Indicates total RAA messages with reauthorization triggers for subscriber session due to expiry idle timeout timer.
RAR for Sess Release	Indicates total RAR message with Session Release-Cause.
Unspecified	Indicates total RAR message with Session Release-Cause AVP as UNSPECIFIED (0).
UE-subscription-Reason	Indicates total RAR message with Session Release-Cause AVP as UE_SUBSCRIPTION_CHANGED (1).
Insuff Server Resources	Indicates total RAR message with Session Release-Cause AVP as INSUFFICIENT_SERVER_RESOURCES (2).
Total RAR Timeouts	Indicates total RAR messages for which no RAA response was received from PCEF.

Field	Description
Update RAR Timeouts	Indicates total Timed-out RAR messages which were sent by PCRF for session updates (e.g. RAR with new / modified PCC rules / QoS).
Release RAR Timeouts	Indicates total Timed-out RAR messages which were sent by PCRF for session termination (RAR with Session-Release-Cause AVP).
Session-Level Statistics	This group displays the session level statistics of messages in a PCC Policy service instance.
Current Sessions	Indicates the session counter which keeps track of existing sessions under this PCC-Policy service.
Total Session Created	Indicates cumulative number of sessions created at the PCC-Policy service.
Total Session Updates	Indicates cumulative number of sessions updates at the PCC-Policy service. This will include both PCRF-initiated and PCEF initiated updates.
PCEF-Initiated	Indicates cumulative number of PCEF-initiated sessions updates at the PCC-Policy service. This will include session updates through CCR-U message.
PCRF-Initiated	Indicates cumulative number of PCRF-initiated sessions updates at the PCC-Policy service. This will include session updates through RAR.
Total Session Deleted	Indicates cumulative number of session deletion at the PCC-Policy service.
PCEF-Initiated	Indicates cumulative number of PCEF-initiated session terminations at the PCC-Policy service initiated through CCR-T message.
PCRF-Initiated	Indicates cumulative number of PCRF-initiated session termination at the PCC-Policy service initiated through RAR messages with Session-Release-Cause AVP.
Peer Down Initiated	Indicates cumulative number of sessions terminations due to peer disconnect at the PCC-Policy service..
Initial Reject	Indicates cumulative number of sessions terminations at the PCC-Policy service initiated through CCR-I rejection.
Idle Timeout	Indicates the idle session timeout duration set for a subscriber session timer. Possible range of duration is 1 to 4294967295 in seconds. Special value of 0 indicates that timer is disabled and it is the default behavior.
Setup Timeout	Indicates IPCF setup timeout duration set on a system for setup timer. Possible range of duration is 1 to 120 in seconds. By default Setup timeout value is 60 seconds. Special value of 0 indicates that timer is disabled.

Field	Description
Long-duration Timeout	Indicates the long duration idle session timeout set for a subscriber session timer. Possible range of duration is 1 to 4294967295 in seconds.  Special value of 0 indicates that timer is disabled and it is the default behavior.
Failure Statistics	This group displays the statistics of various failure reasons in a PCC Policy service instance.
Missng CCR-Type	Indicates total number of CCR messages with mandatory CC-Request-Type AVP missing.
Unexpected CCR-I	Indicates total number of CCR-I message for existing session.
Unexpected CCR-U	Indicates total number of CCR-U message for non-existing session.
Unexpected CCR-T	Indicates total number of CCR-T message for non-existing session.
Missng CCR-Num	Indicates total number of CCR messages with mandatory CC-Request-Number missing.
Out-of-Order CCR	Indicates total number of CCR messages with out-of-order CC-Request-Number.
PCC-Sess Create Fail	Indicates total number of PCC Session Creation Failure after receiving CCR-I due to miscellaneous reasons.
Policy-Sess Create Fail	Indicates total number of PCC Policy Session Creation Failure after receiving CCR-I due to miscellaneous reasons.
PCC-Sess Lookup Fail	Indicates total number of PCC Session Creation Failure after receiving CCR-U/T due to miscellaneous reasons.
Policy-Sess Lookup Fail	Indicates total number of PCC Policy Session Creation Failure after receiving CCR-U/T due to miscellaneous reasons.
Missing Origin-Host	Indicates total number of CCR messages with mandatory Origin-Host AVP missing.
Invalid Origin-Host	Indicates total number of CCR messages with mandatory Origin-Host AVP invalid.
Missing Origin-Realm	Indicates total number of CCR messages with mandatory Origin-Realm AVP missing.
Invalid Origin-Realm	Indicates total number of CCR messages with mandatory Origin-Realm AVP invalid.
Missing Dest-Realm	Indicates total number of CCR messages with mandatory Destination-Realm AVP missing.
Invalid Dest-Realm	Indicates total number of CCR messages with mandatory Destination-Realm AVP invalid.

Field	Description
Unsubscribed Triggers	Indicates total number of Event-Trigger received from PCEF for which PCRF has not subscribed (E.g. RAT_CHANGE received from PCEF even though it is not supplied previously by PCRF).
Unknwown Triggers	Indicates total number of Event-Trigger received from PCEF which is undefined for the policy version. (E.g. Defaul-EPS-Bearer-QoS-Change received for R7-Gx).
Non-Applicable Triggers	Indicates total number of Event-Trigger received from PCEF which is not applicable for the access-type. (E.g. Defaul-EPS-Bearer-QoS-Change received for R8 GGSN with 3GPP-GPRS access).
Missing Trigger-Param	Indicates total number of Event-Trigger received from PCEF without the related parameter (E.g. PCEF sending RAT_CHANGE without the RAT-Type value).
Invalid Trigger-Param	Indicates total number of Event-Trigger received from PCEF with invalid related parameter (E.g. PCEF sending RAT_CHANGE by RAT-Type reported is same as previous one).
Event-Trigger in CCR-I	Indicates total number of Event-Trigger received from PCEF in CCR-I message.
Event-Trigger in CCR-T	Indicates total number of Event-Trigger received from PCEF in CCR-T message.
Invalid BCM Request	Indicates total number of failure cases where PCEF requests bearer control mode (BCM) as UE-ONLY by sending Network-Request-Not-Supported in CCR-I. However, operator configured BCM is UE-NW. Thus, BCM is not provisioned and PCRF rejects this CCR.
QoS-Auth Fail	Indicates total number of failure when PCRF rejects the CCR in case of QoS-authorization failure in CCR-I message.
Invalid Initial Param	Indicates total number of failure when PCRF rejects the CCR with Experimental Result-Code DIAMETER_ERROR_INITIAL_PARAMETERS due to incorrect information in the request.
Invalid AVP Value	Indicates total number of failure when PCRF rejects the CCR with Result-Code DIAMETER_INVALID_AVP_VALUE due to incorrect AVP value in the request.
Unsupported AVP	Indicates total number of failure when PCRF rejects the CCR with Result-Code DIAMETER_AVP_UNSUPPORTED due to incorrect AVP value in the request.
Missing AVP	Indicates total number of failure when PCRF rejects the CCR with Result-Code DIAMETER_MISSING_AVP due to incorrect AVP value in the request.

Field	Description
Session-Linking Failurre	Indicates total number of failure when PCRF rejects the CCR-I with Result-Code DIAMETER_AUTHORIZATION_REJECTED due to Session Linking failure.
Unavail Srv Credits	Indicates total number of session failure due to unavailability of enough service credits for PCC-Policy Session creation.
Multiple Policy Sess Reject	Indicates total number of session rejection due to no-support for multiple PCC session per subscriber available but attempted by PCEF.
Diameter Statistics	This group displays the statistics of various Diameter interface messages in a PCC Policy service instance.
App Register Success	Indicates total number of successful diabase registrations at this PCC-Policy service due to service addition.
App Register Fail	Indicates total number of failed diabase registrations performed at this PCC-Policy service due to service addition.
App Unregister Success	Indicates total number of successful diabase deregistration at this PCC-Policy service due to service removal.
App Unregister Fail	Indicates total number of failed diabase deregistration performed at this PCC-Policy service due to service removal.
App Reregister Success	Indicates total number of successful diabase re-registrations at this PCC-Policy service due to service modification.
App Reregister Fail	Indicates total number of failed diabase registrations performed at this PCC-Policy service due to service modification.
Total Msg Create Fail	Indicates total number of failure to create diabase messages for CCA and RAR.
CCA Create Fail	Indicates total number of failure to create diabase messages for CCA.
RAR Create Fail	Indicates total number of failure to create diabase messages for RAR.
Total Msg Encode Fail	Indicates total number of failure to encode diabase message AVP for CCA and RAR.
CCA Encode Fail	Indicates total number of failure to encode diabase message AVP for CCA.
RAR Encode Fail	Indicates total number of failure to encode diabase message AVP for RAR.
Total Msg Send Fail	Indicates total number of failure to send diabase messages for CCA and RAR.
CCA Send Fail	Indicates total number of failure to send diabase messages for CCA.
RAR Send Fail	Indicates total number of failure to send diabase messages for RAR.

Field	Description
Termination Cause Statistics	This group displays the statistics of various causes for session termination in a PCC Policy service instance.
Diameter Logout	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_LOGOUT (1).
Serv	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_SERVICE_NOT_PROVIDED (2).
Bad Answer	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_BAD_ANSWER (3).
Administrative	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_ADMINISTRATIVE (4).
Link Broken	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_LINK_BROKEN (5).
Auth Expired	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_AUTH_EXPIRED (6).
User Moved	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_USER_MOVED (7).
Session Timeout	Indicates total number of session termination happened due to CCR-T with Termination-Cause AVP set to value DIAMETER_SESSION_TIMEOUT (8).
Rule Report Statistics	This group displays the statistics of various Rule Reports in a PCC Policy service instance.
Total Rules Reports	Indicates total number of rule-reports received for various PCC/QoS rules.
Total Install Failures	Indicates total number of rule-reports received for various PCC/QoS rule installation failures.
Total Install Success	Indicates total number of rule-reports received for various successful PCC rule installation.
Total Credit Exhaustion	Indicates total number of rule-reports received for various PCC rule out-of-credit.
Total Credit Reallocs	Indicates total number of rule-reports received for various PCC rule credit reallocation.

Field	Description
Unknown Rule-Names	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as UNKNOWN_RULE_NAME (1).
Rating Group Errors	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as RATING_GROUP_ERROR (2).
Service-ID Errors	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as SERVICE_IDENTIFIER_ERROR (3).
GW-PCEF Malfunctions	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as GW/PCEF_MALFUNCTION (4).
Resource Limitations	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as RESOURCES_LIMITATIONS (5).
Max-NR-Bearers Reached	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as MAX_NR_BEARERS_REACHED (6).
Unknown Bearer ID	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as UNKNOWN_BEARER_ID (7).
Missing BearerID	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as MISSING_BEARER_ID (8).
Missing Flow-Desc	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as MISSING_FLOW_DESCRIPTION (9).
Resource Alloc Fail	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as RESOURCE_ALLOCATION_FAILURE (10).
QoS Validation Fail	Indicates total number of rule-reports received for various PCC rule installation failures with Rule-Failure-Code as UNSUCCESSFUL_QOS_VALIDATION (11).
Usage Statistics	This group displays the usage statistics in a PCC Policy service instance.
Total Usage Thresholds	Indicates total number of usage thresholds supplied to PCEF for various monitoring instances.
Rule-Level Thresholds	Indicates total number of PCC-Rule-Level usage thresholds supplied to PCEF for various monitoring instances.

Field	Description
Sess-Level Thresholds	Indicates total number of Session-Level usage thresholds supplied to PCEF for various monitoring instances.
Rule-Level Report Req	Indicates total number of PCRF initiated PCC-Rule-Level usage report requests supplied to PCEF for various monitoring instances.
Sess-Level Report Req	Indicates total number of PCRF initiated session-level usage report requests supplied to PCEF for various monitoring instances.
Rule-Level Disable Requests	Indicates total number of PCRF initiated PCC-Rule-level usage report disable requests supplied to PCEF for various monitoring instances.
Sess-Level Disable Req	Indicates total number of PCRF initiated session-level usage report disable requests supplied to PCEF for various monitoring instances.
SPR Statistics	This group displays the statistics related to SSC/SPR instances and procedures associated with a PCC Policy service instance.
Profile Register	Indicates total messages sent to SPR for Subscriber Profile Registration.
Profile Deregister	Indicates total messages sent to SPR for Subscriber Profile Deregistration.
Usage Register	Indicates total messages sent to SPR for Subscriber Usage Registration.
Usage Deregister	Indicates total messages sent to SPR for Subscriber Usage Deregistration.
Usage Updates	Indicates total messages sent to SPR for Subscriber Usage Update.
RAR-CCR	Indicates total RAR and CCR message collisions.
Update RAR-CCR-U	Indicates total message collision between CCR-U message from PCEF and RAR message sent by PCRF for policy update.
Update RAR-CCR-T	Indicate total message collision between CCR-T message from PCEF and RAR message sent by PCRF for policy update.
Update RAR-CCR-U	Indicates total message collision between CCR-U message from PCEF and RAR message sent by PCRF for session release.
Update RAR-CCR-T	Indicates total message collision between CCR-T message from PCEF and RAR message sent by PCRF for session release.

## show pcc-policy session full all

Table 460: show pcc-policy session full all Command Output Description

Field	Description
Callid	Indicates the identity number of the IP-CAN call registered on the PCC-Policy service instance for which counters are displayed.

Field	Description
Session ID	Indicates the identity number of the IP-CAN session active on the PCC-Policy service instance for which counters are displayed.
Peer ID	Indicates the identity number (IP address) of the PCEF node used in IP-CAN session within the PCC-Policy service instance for which counters are displayed.
Service Name	Indicates the name of the PCC-Policy service instance for which counters are displayed.
Service Type	Indicates the type of IP-CAN session on the PCC-Policy service instance for which counters are displayed.
IMSI	Indicates the IMSI number of subscriber used by <b>bindmux</b> for binding subscriber session to PCC-Policy service instance.
MSISDN	Indicates the MSISDN number of subscriber used by <b>bindmux</b> for binding subscriber session to PCC-Policy service instance.
APN Name	Indicates the name of the APN used by IP-CAN session to serve subscriber in the PCC-Policy service instance.
IMEI	Indicates the IMEI number of UE used by <b>bindmux</b> for binding subscriber session to PCC-Policy service instance.
Session State	Indicates the state of the IP-CAN session on PCC-Policy service instance. Possible states are: <ul style="list-style-type: none"> <li>• Initial</li> <li>• Connected</li> <li>• Disconnected</li> </ul>
Framed-IPv4	Indicates the IPv4 address, if used, for frame route relay prefix in IP-CAN session on PCC-Policy service instance.
Framed-IPv6	Indicates the IPv6 address, if used, for frame route relay prefix in IP-CAN session on PCC-Policy service instance.
RAT-Type	Indicates the Radio Access Type used for this IP-CAN session. Possible RAT types are: <ul style="list-style-type: none"> <li>• UTRAN</li> <li>• E-UTRAN</li> <li>• GPRS</li> </ul>
SGSN_MCC	Indicates the Mobile Country Code used in IP-CAN session on PCC-Policy service instance.
SGSN_MNC	Indicates the Mobile Network Code used in IP-CAN session on PCC-Policy service instance.
IP-CAN-Type	Indicates the type of IP-CAN session active on PCC-Policy service instance.

Field	Description
BCM	<p>Indicates the Bearer Control Mode configured in PCC-Policy service instance to access the PCEF in GPRS/eHRPD network. If configured possible modes are:</p> <ul style="list-style-type: none"> <li>• <b>as-requested</b>: the PCC-Policy service is configured to accept the BCM request from Application Server (AS) for PCEF access over <b>Gx</b> interface on IPCF node. This is the default mode.</li> <li>• <b>ue-nw</b>: the PCC-Policy service is configured to accept the BCM request from UE and/or network element for PCEF access over <b>Gx</b> interface on IPCF node.</li> <li>• <b>ue-only</b>: the PCC-Policy service is configured to accept the BCM request from UE only for PCEF access over <b>Gx</b> interface on IPCF node.</li> </ul>
ANC-Address	Indicates the IP address of the Access Network Controller node of the IP-CAN session on the PCC-Policy service instance for which counters are displayed.
ANC-Identifier	Indicates the identity number of the Access Network Controller node used in IP-CAN session within the PCC-Policy service instance for which counters are displayed.
Event-Trigger	Indicates the event triggers configured/activated for IP-CAN session within the PCC-Policy service instance for which counters are displayed.

# CHAPTER 103

## show pcc-service

This chapter describes the output of the **show pcc-service** command.

- [show pcc-service all](#), on page 1605
- [show pcc-service session all](#), on page 1607
- [show pcc-service session full](#), on page 1608
- [show pcc-service statistics](#), on page 1610

## show pcc-service all

*Table 461: show pcc-service all Command Output Description*

Field	Description
Service name	Indicates the name of the PCC service for which counters are displayed.
Context name	Indicates the name of the context in which the PCC service is configured and running.
Charging-Method	Indicates the charging methods communicated to PCEF at command level for this PCC service. Possible methods are: <ul style="list-style-type: none"><li>• None</li><li>• Offline</li><li>• Online</li><li>• Offline and Online</li></ul> By default "None" is the enabled option.
Online Charging-Server(s)	This group displays information of online charging servers (primary and secondary) configured and used in this PCC service.
Primary	Indicates the name of the primary online charging server configured and used in this PCC service.
Secondary	Indicates the name of the secondary online charging server configured and used in this PCC service.

Field	Description
Offline Charging-Server(s)	This group displays information of offline charging servers (primary and secondary) configured and used in this PCC service.
Primary	Indicates the name of the primary offline charging server configured and used in this PCC service.
Secondary	Indicates the name of the secondary offline charging server configured and used in this PCC service.
Subscriber-Profile Refresh Interval (sec)	Indicates the interval duration in seconds after which Subscriber profile is refreshed from SSC/SPR in a PCC service.
Multiple PCEF Per Subscriber	Indicates status of support for more than one Gx-session for single subscriber session coming from multiple PCEF in this PCC service instance. By default this feature is enabled.
Setup Timeout	Indicates IPCF setup timeout duration set on a system for setup timer. Possible range of duration is 1 to 120 in seconds. By default Setup timeout value is 60 seconds. Special value of 0 indicates that timer is disabled.
Idle Timeout	Indicates the idle session timeout duration set for a subscriber session timer. Possible range of duration is 1 to 4294967295 in seconds. Special value of 0 indicates that timer is disabled and it is the default behavior. It also displays the action configured for initiation when idle timer expires. Possible actions are: <ul style="list-style-type: none"> <li>• None</li> <li>• Reauthorization of session.</li> <li>• Disconnection of session if reauthorization of session fails.</li> </ul>
Long-duration Timeout	Indicates the long duration idle session timeout set for a subscriber session timer. Possible range of duration is 1 to 4294967295 in seconds. Special value of 0 indicates that timer is disabled and it is the default behavior. It also displays the action configured for initiation when long duration timeout timer expires. Possible actions are: <ul style="list-style-type: none"> <li>• None</li> <li>• Detection of idle session and sending of SNMP traps or CORBA notification.</li> <li>• Detection of idle session and then disconnect the session after sending of SNMP traps or CORBA notification</li> </ul>

## show pcc-service session all

Table 462: show pcc-service session all Command Output Descriptions

Field	Description
vvvv	<p>Displays service and session state information. This column provides a code consisting of four characters.</p> <p>From left-to-right, the first character represents the <b>Session State</b> that the subscriber is using. The possible call types are:</p> <ul style="list-style-type: none"> <li>• <b>c</b>: Closed</li> <li>• <b>C</b>: Connected</li> <li>• <b>D</b>: Disconnected</li> <li>• <b>o</b>: Open</li> <li>• <b>S</b>: Waiting on SPR</li> <li>• <b>r</b>: Waiting on DREG</li> <li>• <b>s</b>: Waiting on STR</li> <li>• <b>e</b>: Waiting on deallocate</li> <li>• <b>t</b>: Waiting on CCR-T</li> <li>• <b>A</b>: Waiting on ASR</li> <li>• <b>R</b>: Waiting on RAR</li> </ul> <p>From left-to-right, the second character represents the <b>Gx Session Count</b>. It indicates the total number of Gx sessions between PCEF and IPCF active in this session.</p> <p>From left-to-right, the third character represents the <b>Gy Session Count</b>. It indicates the total number of Gy sessions active in this session.</p> <p>From left-to-right, the second character represents the <b>Gxa Session Count</b>. It indicates the total number of Gx sessions between PCEF (eHRPD) and IPCF active in this session.</p>
CALLID	Indicates the IP-CAN session subscriber's call identification number.
IMSI/MSID	Indicates the IP-CAN session subscriber's IMSI/MSID number used in this session in <b>bindmux</b> .
User Name	Indicates the user name used in IP-CAN session to identify the subscriber in this session in <b>bindmux</b> . This is typically used in IP-CAN session between PDSN and IPCF/PCRF over Gx interface.
Total number of PCC sessions	The total number of PCC sessions on chassis including all modes.

# show pcc-service session full

Table 463: show pcc-service session full Command Output Descriptions

Field	Description
CALLID	Indicates the IP-CAN session subscriber's call identification number.
IMSI/MSID	Indicates the IP-CAN session subscriber's IMSI/MSID number used in this session in <b>bindmux</b> .
User Name	Indicates the user name used in IP-CAN session to identify the subscriber in this session in <b>bindmux</b> . This is typically used in IP-CAN session between PDSN and IPCF/PCRF over Gx interface.
Profile Name	Indicates the name of the subscriber used in IP-CAN session to provide QoS parameters.
Default-EPS-Bearer	Indicates whether default EPS bearer is provisioned for subscriber in IP-CAN session for which information is displayed
APN-AMBR	Indicates whether an Aggregate Maximum Bit Rate (AMBR) associated with APN is provisioned for subscriber in IP-CAN session for which information is displayed.
Authorized QCIs	This group displays the parameters for authorized Quality Class Identifiers (QCIs) used in IP-CAN session for which information is displayed.
QCI	Indicates the Quality Class Identifier (QCI) authorized and used in IP-CAN session for which information is displayed.
Uplink	Indicates the uplink bit rate provisioned in authorized QCI for IP-CAN session for which information is displayed.
Downlink	Indicates the downlink bit rate provisioned in authorized QCI for IP-CAN session for which information is displayed.
Total Predefined Rules	Indicates the total predefined Rules applicable for IP-CAN session for which information is displayed.
Predefined Rules	Indicates the name of the predefined Rules, if applicable, for IP-CAN session for which information is displayed.
Rule Status	Indicates the status of the predefined Rules, if applicable, for IP-CAN session for which information is displayed.  Possible status are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Temporarily Active</li> </ul>

Field	Description
Rule Failure Code	<p>Indicates the predefined Rule failure codes, if applicable, for IP-CAN session for which information is displayed.</p> <p>Possible failure codes are:</p> <ul style="list-style-type: none"> <li>• Out-of-credit</li> <li>• Reallocation-of-credit</li> <li>• Unknown rule name</li> <li>• Invalid Rating Group</li> <li>• Invalid Service Identifier</li> <li>• GW/PCEF Malfunction</li> <li>• Limited Resources</li> <li>• Max No. of Bearers Reached</li> <li>• Unknown Bearer Id</li> <li>• Missing Bearer Id</li> <li>• Missing Flow Description</li> <li>• Resource Allocation Failure</li> <li>• QoS Validation Failure</li> </ul>
Rule Activation Time	Indicates the time configured to activate predefined Rule for IP-CAN session for which information is displayed.
Rule deactivation Time	Indicates the time configured to deactivate predefined Rule for IP-CAN session for which information is displayed.
Total Dynamic Rules	Indicates the total dynamic Rules applicable for IP-CAN session for which information is displayed.
Dynamic Rules	Indicates the name of the dynamic Rules, if applicable, for IP-CAN session for which information is displayed.
Rating-Group	Indicates the rating group configured to the dynamic Rules, if applicable, for IP-CAN session for which information is displayed.
Precedence	Indicates the precedence configured to the dynamic Rules, if applicable, for IP-CAN session for which information is displayed.
Gate Status	Indicates the status of the Gate configured to the dynamic Rules, if applicable, for IP-CAN session for which information is displayed.
QoS Profile	Indicates the QoS profile configured to the dynamic Rules, if applicable, for IP-CAN session for which information is displayed.
Flow	Indicates the total number of flows applicable for IP-CAN session for which information is displayed.
AF Information	Indicates the Application Function information for dynamic Rules, if applicable, for IP-CAN session for which information is displayed.

Field	Description
Rule Status	Indicates the status of the predefined Rules, if applicable, for IP-CAN session for which information is displayed.  Possible status are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Temporarily Active</li> </ul>
Rule Failure Code	Indicates the predefined Rule failure codes, if applicable, for IP-CAN session for which information is displayed.  Possible failure codes are: <ul style="list-style-type: none"> <li>• Out-of-credit</li> <li>• Reallocation-of-credit</li> <li>• Unknown rule name</li> <li>• Invalid Rating Group</li> <li>• Invalid Service Identifier</li> <li>• GW/PCEF Malfunction</li> <li>• Limited Resources</li> <li>• Max No. of Bearers Reached</li> <li>• Unknown Bearer Id</li> <li>• Missing Bearer Id</li> <li>• Missing Flow Description</li> <li>• Resource Allocation Failure</li> <li>• QoS Validation Failure</li> </ul>
Rule Activation Time	Indicates the time configured to activate dynamic Rule for IP-CAN session for which information is displayed.
Rule deactivation Time	Indicates the time configured to deactivate dynamic Rule for IP-CAN session for which information is displayed.
Quota Information	This group displays the Quota related information applicable for IP-CAN session for which information is displayed.
Usage Monitor Information	Indicates the Usage Monitor status applicable for IP-CAN session for which information is displayed.
Total number of PCC sessions	The total number of PCC sessions on chassis including all modes.

## show pcc-service statistics

*Table 464: show pcc-service statistics Command Output Description*

Field	Description
Service name	Indicates the name of the PCC service for which counters are displayed.

Field	Description
Total Gx req processed	Indicates the total number of Gx request messages from PCEF processed by PCC-service node.
Total Gy req processed	Indicates the total number of Gy request messages from OCS processed by PCC-service node.
Total SSC req processed	Indicates the total number of request messages from SSC/SPR processed by PCC-service node.
Total Unknown requests	Indicates the total number of unknown type of request messages from network nodes received by PCC-service node.
PUR Updates	Indicates the total number of Profile-Update-Request update messages from network nodes received at PCC-service node.
SNR Updates	Indicates the total number of Subscribe-Notifications-Request update messages from network nodes received at PCC-service node.
PNR Updates	Indicates the total number of Push-Notifications-Request update messages from network nodes received at PCC-service node.
Total Profile Hits	Indicates the total number of Subscribe profiles accessed by PCC-service node.
Total Profile Miss	Indicates the total number of Subscribe profiles missed by PCC-service node.
Total Quota Reports	Indicates the total number of quota reports processed by PCC-service node.
Total Unknown rating-groups	Indicates the total number of unknown type of rating groups received by PCC-service node.
Total Rules Activated	Indicates the total number of Rules at PCEF activated by PCC-service node.
Total Rules Deactivated	Indicates the total number of Rules at PCEF deactivated by PCC-service node.
Total Rulebases Activated	Indicates the total number of Rulebases at PCEF activated by PCC-service node.
Total Rulebases Deactivated	Indicates the total number of Rulebases at PCEF deactivated by PCC-service node.
Total Rules Installed	Indicates the total number of Rules installed at PCEF by PCC-service node.
Total Rules Uninstalled	Indicates the total number of Rules installed at PCEF by PCC-service node.
Profile Name	Indicates the name of the subscriber profiles accessed by PCC-service node.

Field	Description
Profile Hits	Indicates the total number of hits received by specific subscriber profile at PCC-service node.
Eval-Priority Hits	This group displays the statistics of Evaluation Priority hits at PCC-service node.
Action Statistics	This group displays the statistics of actions triggered at PCC-service node.
Default EPS Bearer Auth	Indicates the total number of authorization action processed for the default EPS bearer authorization on PCC-service node.
APN AMBR Auth	Indicates the total number of authorization action processed for the APN associated Aggregate Maximum Bit Rate (AMBR) on PCC-service node.
QCI Auth	Indicates the total number of authorization action processed for the Quality Class Indicator (QCI) on PCC-service node.
Event-trigger Statistics	This group displays the statistics of event triggers at PCC-service node.
SGSN Change	Indicates the total number of "SGSN change" events triggered on PCC-service node.
QoS Change	Indicates the total number of "QoS change" events triggered on PCC-service node.
RAT Change	Indicates the total number of "RAT (Radio Access Technology) change" events triggered on PCC-service node.
TFT Change	Indicates the total number of "TFT (traffic flow template) change" events triggered on PCC-service node.
PLMN Change	Indicates the total number of "PLMN change" events triggered on PCC-service node.
Loss of flow	Indicates the total number of "Loss of Flow" events triggered on PCC-service node.
Recovery of flow	Indicates the total number of "Recovery of Flow" events triggered on PCC-service node.
IP-CAN Change	Indicates the total number of "IP-CAN Change" events triggered on PCC-service node.
Qos Change Exceeding Auth	Indicates the total number of QoS change event triggers exceeded from authorized limit on PCC-service node.
RAI Change	Indicates the total number of "RAI (Routing Area Indicator) Change" events triggered on PCC-service node.
User Location Change	Indicates the total number of "User Location Change" events triggered on PCC-service node.

Field	Description
Out Of Credit	Indicates the total number of "Out of Credit" events triggered on PCC-service node.
Reallocation of Credit	Indicates the total number of "Reallocation of Credit" events triggered on PCC-service node.
Revalidation timeout	Indicates the total number of timeout events triggered for "Revalidation" on PCC-service node.
IP Address Allocation	Indicates the total number of "IP Address Allocation" events triggered on PCC-service node.
IP Address Release	Indicates the total number of "IP Address Release" events triggered on PCC-service node.
Def EPS Bearer QoS Change	Indicates the total number of QoS change events triggered for Default EPS bearer on PCC-service node.
AN-GW Change	Indicates the total number of "AN-GW (Access Network Gateway)" events triggered on PCC-service node.
Successful Resource Alloc	Indicates the total number of "Successful Resource Allocation" events triggered on PCC-service node.
Resource Modification Req	Indicates the total number of resource modification request messages received by PCC-service node.
PGW Trace Control	Indicates the status of subscriber session trace control reported on PCC-service node for P-GW.
UE Timezone Change	Indicates the total number of "UE Timezone Change" events triggered on PCC-service node.
Usage Report	Indicates the total number of Usage Reports processed on PCC-service node.

# CHAPTER 104

## show pcc-sp-endpoint

This chapter describes the output of the **show pcc-sp-endpoint** command.

- [show pcc-sp-endpoint all](#), on page 1615

## show pcc-sp-endpoint all

*Table 465: show pcc-sp-endpoint all Command Output Description*

Variables	Description
SP Endpoint Name	The name of the PCC-Sp-Endpoint instance for which statistics are displayed.
Context	The name of the context in which PCC-Sp-Endpoint instance is configured.
Address	Indicates the local IP address of PCC-Sp-Endpoint instance.
Access Type	Indicates the type of access, Diameter or Lightweight Directory Access Protocol (LDAP) used by a PCC-Sp-Endpoint instance for Sp interface procedures. By default it is Diameter.
SPR Subscriber Identifier	Indicates the subscriber identifier (imsi / msisdn / nai) used by PCC-Sp-Endpoint instance in SSC database while requesting subscriber data from SSC.
User-Name	Indicates the subscriber user name used by PCC-Sp-Endpoint instance in SSC database while requesting subscriber data from SSC.
Password	Indicates the password used by PCC-Sp-Endpoint instance in SSC database while requesting subscriber data from SSC.
LDAP Dn	Indicates the name of the LDAP Dn used by PCC-Sp-Endpoint instance.
Diameter Endpoint	Indicates the name of the Diameter origin endpoint configured for PCC-Sp-Endpoint instance.
Profile update notification	Indicates whether profile update notifications is allowed or not for a PCC-Sp-Endpoint instance.

Variables	Description
Profile-data key data-reference	Indicates the data-reference values used in UDR/SNR message for profile data sent over Sp endpoint when access type is set to Diameter.
Profile-data key service-indication	Indicates the service indication values used in UDR/SNR message for profile data sent over Sp endpoint when access type is set to Diameter.

# CHAPTER 105

## show pdg-service

This chapter describes the output of the **show pdg-service** command.

- [show pdg-service all](#), on page 1617
- [show pdg-service statistics](#), on page 1620

## show pdg-service all

*Table 466: show pdg-service all Command Output Description*

Field	Description
Service name	The name of the PDG service.
Context name	The name of the context in which the PDG service resides.
Bind	Displays the bind status for the PDG service for binding the service to a crypto template.
Max sessions	The maximum number of sessions supported by the PDG service.
IP address	The IPv4 address of the PDG service.
UDP Port	The UDP port number associated with the IP address.
Service State	The current state of the PDG service.
Crypto-template	The name of the crypto template bound to the FNG service.
SSL-template	The name of the SSL template bound to the FNG service. This is a customer-specific field.
SGTP Service	The name of the SGTP service bound to the PDG service.
SGTP Service context	The name of the context in which the SGTP service was created.
Session Setup Timeout (sec)	The maximum time allowed to set up a session in seconds.
Certificate Selection	The selection method for selecting the certificate to be included in the first IKE-AUTH message. Can be APN-based or crypto template-based.

Field	Description
PLMN Id	The PLMN identifiers for the PDG/TTG.
Duplicate Session Detection Type	The duplicate session detection type.
IP Source Violation - Drop Limit	The drop-limit value, which is the maximum number of allowed IP source violations within the detection period before dropping a call.
IP Source Violation - Period	The detection period in seconds for IP source violations.
IP Source Violation - Clear On Valid Packet	Displays whether the option to reset the drop-limit counters upon receipt of a properly addressed packet is enabled or disabled.
3gpp qos to dscp Downlink mapping	This group indicates the 3GPP QoS to DSCP downlink mapping information.
conversational	Indicates the DSCP configured for conversational type of traffic.
streaming	Indicates the DSCP configured for streaming type of traffic.
interactive (TP 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1.
interactive (TP 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2.
interactive (TP 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3.
background	Indicates the DSCP configured for background type of traffic.
3GPP qos to dscp Downlink mapping based on Alloc. Prio	This group indicates the 3GPP QoS to DSCP downlink mapping information based on allocation priority.
interactive (TP 1, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 1.
interactive (TP 1, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 2.
interactive (TP 1, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 3.
interactive (TP 2, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 1.
interactive (TP 2, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 2.
interactive (TP 2, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 3.
interactive (TP 3, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 1.
interactive (TP 3, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 2.

Field	Description
interactive (TP 2, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 2.
3gpp qos to dscp Uplink mapping (TTG only)	This group indicates the 3GPP QoS to DSCP uplink mapping information.
conversational	Indicates the DSCP configured for conversational type of traffic.
streaming	Indicates the DSCP configured for streaming type of traffic.
interactive (TP 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1.
interactive (TP 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2.
interactive (TP 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3.
background	Indicates the DSCP configured for background type of traffic.
3GPP qos to dscp Uplink mapping based on Alloc. Prio	This group indicates the 3GPP QoS to DSCP downlink mapping information based on allocation priority.
interactive (TP 1, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 1.
interactive (TP 1, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 2.
interactive (TP 1, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 3.
interactive (TP 2, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 1.
interactive (TP 2, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 2.
interactive (TP 2, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 3.
interactive (TP 3, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 1.
interactive (TP 3, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 2.
interactive (TP 3, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 3.

# show pdg-service statistics

Table 467: show pdg-service statistics Command Output Description

Field	Description
<b>Session Stats</b>	
Current sessions total	Total number of sessions in progress including transient sessions.
Direct-IP-IPv4 current	Total number of currently active Direct IP IPv4 sessions.
TTG-IPv4 current	Total number of currently active TTG IPv4 sessions.
Active current	Total number of currently active sessions.
Dormant current	Total number of currently dormant sessions.
Active IPv4 current	Total number of currently active IPv4 sessions.
Active IPv6 current	Total number of currently active IPv6 sessions.
Dormant IPv4 current	Total number of currently dormant IPv4 sessions.
Dormant IPv6 current	Total number of currently dormant IPv6 sessions.
Total Direct-IP IPv4	Total number of Direct IP IPv4 sessions.
Total TTG IPv4	Total number of TTG IPv4 sessions.
Direct-IP IPv4 attempts	Total number of Direct IP IPv4 attempts.
Direct-IP IPv4 successes	Total number of Direct IP IPv4 successes.
Direct-IP IPv4 failures	Total number of Direct IP IPv4 failures.
TTG IPv4 attempts	Total number of TTG IPv4 attempts.
TTG IPv4 successes	Total number of TTG IPv4 successes.
TTG IPv4 failures	Total number of TTG IPv4 failures.
Total setup attempts	Total number of session setup attempts.
Total setup success	Total number of successful session attempts.
Total Attempts Failed	Total number of failed session attempts.
Total disconnected	Total number of sessions released locally and remotely.
Disconnect locally	Total number of sessions released locally.
Disconnect remotely	Total number of sessions released remotely.
Disconnect remotely before connect	Total number of sessions released remotely before connecting.

Field	Description
<b>Reauthentication Stats</b>	
Total reauth attempts	Total number of reauthentication attempts.
Total reauth success	Total number of reauthentication successes.
Total reauth failure	Total number of reauthentication failures.
<b>Session Attempts Failed Disconnect reason</b>	
Remote disconnect	Number of session attempts failed before the call is in the CONNECTED state due to a remote disconnect.
Admin disconnect	Number of session attempts failed before the call is in the CONNECTED state due to a disconnect by the administrator.
Session setup timeout	Number of session attempts failed before the call is in the CONNECTED state because the Session Manager's session setup timer has timed out.
No resource	Number of session attempts failed before the call is in the CONNECTED state because the system has run out of resources (flows, memory resources, etc.).
Auth failure	Number of session attempts failed before the call is in the CONNECTED state because of an AAA authentication failure.
Flow add failure	Number of session attempts failed before the call is in the CONNECTED state because a flow could not be added on the NPU.
Invalid dest-context	Number of session attempts failed before the call is in the CONNECTED state because the destination context received from the AAA server is invalid.
GTP	Number of session attempts failed before the call is in the CONNECTED state because of a GTP failure.
Duplicate request	Number of session attempts failed before the call is in the CONNECTED state because of duplicate requests.
Addr assign failure	Number of session attempts failed before the call is in the CONNECTED state because no remote IP address has been assigned.
Miscellaneous reasons	Number of session attempts failed because of miscellaneous reasons, including all session setup failures due to SSL failures (for example, handshake failures, ssl-alert, ssl-bad-message), or an unknown APN case in which the TTG is unable to resolve the APN, and all remaining disconnect reasons before the call is in the CONNECTED state.
<b>Session Disconnect reason</b>	
Remote disconnect	Number of sessions disconnected after the call is in the CONNECTED state because of a remote disconnect.

Field	Description
Admin disconnect	Number of sessions disconnected after the call is in the CONNECTED state by the administrator.
Idle timeout	Number of sessions disconnected after the call is in the CONNECTED state because the Idle timer has timed out.
Absolute timeout	Number of sessions disconnected after the call is in the CONNECTED state because the Absolute timer has timed out.
Long duration timeout	Number of sessions disconnected after the call is in the CONNECTED state because the Long Duration timer has timed out.
Re-Auth failure	Number of sessions disconnected after the call is in the CONNECTED state because of a re-authentication failure.
Source address violation	Number of sessions disconnected after the call is in the CONNECTED state because the source IP address is invalid.
GTP	Number of GTP sessions disconnected after the call is in the CONNECTED state.
Duplicate request	Number of sessions disconnected after the call is in the CONNECTED state because of duplicate requests.
Miscellaneous reasons	Number sessions disconnected after the call is in the CONNECTED state because of miscellaneous reasons.
<b>Data Stats</b>	
Total Bytes Sent	Total number of bytes sent.
Total Packets Sent	Total number of packets sent.
Total Bytes Rcvd	Total number of bytes received.
Total Packets Rcvd	Total number of packets received.
Total Packets Violations	Total number of packet violations.
<b>EAP Server Statistics</b>	
Total Received	Total number of EAP messages received from the EAP server in pass-through mode.
Success Received	Total Number of EAP success messages received from the EAP server in pass-through mode.
Challenge Received	Total number of EAP challenge messages received from the EAP server in pass-through mode.
Failures Received	Total number of EAP failure messages received from the EAP server in pass-through mode.

<b>Field</b>	<b>Description</b>
Total Sent	Total number of EAP messages transmitted to the EAP server in pass-through mode.
Initial Requests	Total number of initial EAP messages transmitted to the EAP server in pass-through mode.
Requests Forwarded	Total number of EAP requests forwarded to the EAP server in pass-through mode.
<b>EAP Mobile Stats</b>	
Total Received	Total number of EAP messages received from the UEs in pass-through mode.
Discarded	Total number of EAP messages received from the UEs in pass-through mode.

# CHAPTER 106

## show pdif-service

This chapter describes the output of the **show pdif-service** command.

- [show pdif-service statistics, on page 1625](#)

## show pdif-service statistics

*Table 468: show pdif-service statistics Command Output Descriptions*

Field	Description
<b>Session Statistics</b>	
Current sessions total	Total number of current sessions.
Simple-IPv4 current	Number of current Simple-IPv4 sessions.
Mobile-IPv4 current	Number of current Mobile-IPv4 sessions.
Proxy-Mobile-IPv4 current	Number of current Proxy-Mobile-IPv4 sessions.
Data-Clients	Total number of subscriber sessions originating from data clients.
Active current	Total number of currently active sessions.
Dormant current	Total number of currently dormant sessions.
Active IPv4 current	Total number of currently active IPv4 sessions.
Active IPv6 current	Total number of currently active IPv6 sessions.
Dormant IPv4 current	Total number of currently dormant IPv4 sessions.
Dormant IPv6 current	Total number of currently dormant IPv6 sessions.
Total Simple-IP IPv4	Total number of Simple-IP IPv4 sessions.
Total Mobile-IP IPv4	Total number of Mobile-IP IPv4 sessions.
Total Proxy-Mobile-IP IPv4	Total number of Proxy-Mobile-IP IPv4 sessions.

Field	Description
Mobile-IP IPv4 attempts	Total number of Mobile-IP IPv4 session attempts.
Mobile-IP IPv4 successes	Number of successful Mobile-IP IPv4 session attempts.
Mobile-IP IPv4 failures	Number of failed Mobile-IP IPv4 session attempts.
Proxy-Mobile-IP IPv4 attempts	Total number of Proxy-Mobile-IP IPv4 session attempts.
Proxy-Mobile-IP IPv4 succ	Number of successful Proxy-Mobile-IP IPv4 session attempts.
Proxy-Mobile-IP IPv4 fails	Number of failed Proxy-Mobile-IP IPv4 session attempts.
Simple-IP-Fallback attempts	Total number of Simple-IP fallback attempts.
successes	Number of successful Simple-IP fallback sessions.
failures	Number of failed Simple-IP fallback sessions.
<b>Simple-IP-Fallback Failure Reasons</b>	
No Mobile-IP RRQ Rx	Mobile-IP RRQ request not received.
Not allowed	Simple-IP fallback not allowed by configuration.
Tagged Pool Address	Address is in a pool and tagged not to allow Simple-IP fallback.
Misc	
Simple-IP IPv4 attempts	Total number of Simple-IP IPv4 session attempts.
Simple-IP IPv4 successes	Number of successful Simple-IP IPv4 attempts.
Simple-IP IPv4 failures	Number of failed Simple-IP IPv4 attempts.
Total setup attempts	Total number of session setup attempts.
Total setup success	Number of successful session setup attempts.
Total Attempts Failed	Number of failed session setup attempts.
Total disconnected	Total number of disconnected sessions.
Disconnected locally	Number of sessions disconnected locally.
Disconnected remotely	Number of sessions disconnected remotely.
Disconnect remotely before connect	Number of sessions disconnected remotely before the session was fully connected.
<b>Session Disconnect Reasons</b>	
Remote disconnect ipsec	Number of sessions disconnected because of remote party (mobile) hang-up.
Admin disconnect	Number of sessions disconnected by the Admin.

Field	Description
Idle timeout	Number of sessions disconnected because the Idle timer has timed out.
Absolute timeout	Number of sessions disconnected because the Absolute timer has timed out.
Long duration timeout	Number of sessions disconnected because the Long Duration timer has timed out.
Session setup timeout	Number of sessions disconnected because the Session Setup timer has timed out.
No resource	Number of sessions disconnected because the system has run out of resources (flows, memory, etc.).
Auth failure	Number of sessions disconnected because of an authentication failure.
Flow add failure	Number of sessions disconnected because flow could not be added on NPU.
Invalid dest-context	Number of sessions disconnected because the destination context coming from AAA server is invalid.
Source address violation	Number of sessions disconnected because the source IP address is invalid.
MIP Remote	Number of Mobile-IP sessions disconnected because of remote mobile user hang-up.
MIP Local	Number of Mobile-IP sessions disconnected locally.
Duplicate Request	Number of sessions disconnected because of a duplicate request when there is already a session with the same NAI.
MAC validation failure	Number of sessions disconnected because the HSS cannot validate MAC address from remote user.
Addr assign failure	Number of sessions disconnected because no address has been assigned.
Miscellaneous reasons	Number of Mobile-IP sessions disconnected for other reasons.
<b>MAC Address Validation Statistics</b>	
Validation attempted	Total number of MAC address validation attempts.
Validation succeeded	Number of successful MAC address validation attempts.
Validation failed	Number of failed MAC address validation attempts.
<b>MAC Address Validation Successes</b>	
MAC Address matches	Number of successful HSS server MAC address matches.
HSS failure continued	HSS is configured to continue the session after a failure is registered.
<b>MAC Address Validation Failure Reasons</b>	
Diameter Error	Validation failed because of a problem with the Diameter server.

Field	Description
User Unknown	Validation failed because of an unknown user.
Malformed MAC Address	Validation failed because of a malformed MAC address from the mobile subscriber.
No MAC Address provided	Validation failed because the mobile subscriber does not supply a MAC address.
Unauthorized MAC Address	Validation failed because the MAC address is not authorized by the HSS.
Sh Interface unavailable	Validation failed because of a problem with the interface to the HSS.
Timeout	Validation failed because of a problem with a session setup timeout.
Others	Validation failed because of other reasons.
<b>Data Stats</b>	
Total Bytes Sent	Total number of bytes sent.
Total Packets Sent	Total number of packets sent.
Total Bytes Rcvd	Total number of bytes received.
Total Packets Rcvd	Total number of packets received.
Total Pkts Violations	Total number of packets received from UEs and destined for the Internet that do not match any of the configured traffic selectors.
<b>EAP Server Statistics</b>	
Total Received	Total number of EAP Success+ EAP Challenge + EAP Failures, coming from EAP server.
Success Received	Number of EAP successes received.
Challenge Received	Number of EAP challenges received.
Failures Received	Number of EAP failures received.
Discarded	Number of EAP server messages discarded.
Total Sent	Total number of EAP server messages sent.
Initial Requests	Number of initial requests.
Requests Forwarded	Number of requests forwarded.
<b>EAP Mobile Statistics</b>	
Total Received	Total number of EAP Requests coming from mobile subscriber.
Discarded	Number of EAP mobile messages discarded.

# CHAPTER 107

## show pgw

This chapter describes the output of the **show pgw** command.

- [show pgw-service all](#), on page 1629
- [show pgw-service name](#), on page 1631
- [show pgw-service statistics all](#), on page 1635
- [show pgw-service statistics all-name](#), on page 1663

## show pgw-service all

Displays configuration information for all P-GW services configured on the system.

**Table 469: show pgw-service all Command Output Descriptions**

Field	Description
Service name	The name of the P-GW service configured and running on the system.
Service-ID	The system-generated identification number associated with the P-GW service name.
Context	The context name where the P-GW service is configured.
Status	Indicates whether the P-GW service is started or not.
EGTP Service	The eGTP service name configured for use by this service.
LMA Service	The LMA service name configured for use by this service.
GGSN Service	The GGSN service name associated with this service.
IPNE Service	Not supported in this release.
S-GW Interface Excluded	Excludes the specified interface.
Priority message Excluded:	Indicates if the priority message is specified. The valid values are Yes and No. The default value is No.
Session-Delete-Delay Timer	Indicates whether there is a delay in terminating a session.

Field	Description
Session-Delete-Delay Timeout	Specifies the time (msecs) to retain a session before terminating it.
PLMN ID List	The Public Land Mobile Network identifier list associated with this P-GW service. A PLMN contains a Mobile Country Code (MCC) and Mobile Network Code (MNC). Up to five PLMN IDs can be configured for each P-GW service.
Newcall Policy	The newcall policy configured for this P-GW service. Specifies whether the P-GW will accept or reject requests for a static IP address if the address is already in use by another session
dns-client Context Name	The context where the DNS client is configured and used by this service.
gx-li context	Refer to the <i>Lawful Intercept Configuration Guide</i> .
gx-li transport	Refer to the <i>Lawful Intercept Configuration Guide</i> .
QCI-QoS Mapping Table Name	The QoS Class Index to QoS mapping table configured for use with this service.
Authorize	Enables/disables subscriber session authorization with HSS over S6b Diameter interface.
S6b IPv6 Reporting	Specifies whether IPv6 address reporting through AAR towards the S6b interface is enabled or disabled.
Duplicate Subscriber Addr Request	Specifies whether the P-GW will accept or reject requests for a static IP address if the address is already in use by another session.
Fqdn-name	The name of Fully Qualified Domain Name (FQDN) which is used for authorization over S6b interface between P-GW and 3GPP AAA/HSS.
SAEGW service	Specifies whether P-GW service is part of SAEGW service.
EGTP Cause Code Handling	Specifies whether eGTP cause handling has been enabled for this P-GW service.
Temp Failure	Specifies whether eGTP cause handling for temporary failure (cause code 110) has been enabled for this P-GW service.
Retry Timeout	Specifies the time to wait (in seconds) before reattempting Create Bearer Request (CBR)/Modify Bearer Request (MBR)/Update Bearer Request (UBR) when the P-GW receives a temporary failure response from a peer.
Maximum Retry	Specifies the maximum number of retries to attempt. The P-GW discards CBR/MBR/UBR after the maximum number of retries are exceeded.
EGTP Modify bearer res with CHARGING-ID	Indicates whether Modify Bearer Response message with Charging-ID is enabled or disabled.
EGTP Modify bearer res with CHARGING-FQDN or CHARGING-GW-ADDRESS	Indicates whether Modify Bearer Response message with Charging FQDN or Charging Gateway address is enabled or disabled.
EGTP Modify bearer res with MSISDN	Indicates whether Modify Bearer Response message with MSISDN is enabled or disabled.

Field	Description
<b>EGTP SGW Restoration Handling</b>	
Session Hold Timer	Displays if the session Hold Timer is valid or not.
Timeout	Displays the Configured Session Hold Timer timeout value in seconds.
EGTP Modify bearer cmd negotiate qos	Displays the configuration of the egtp modify-bearer-cmd-negotiate-qos command, either Enabled (P-GW ignores the new QoS value in the modify bearer command and uses old QoS value which is already applied) or Disabled (Default, P-GW accepts new QoS value from modify bearer command while PCRF is unreachable or disabled).
EGTP Bit Rate in Rounded Kpbs	Enable/Disable rounded down Kbps value of Bit Rate on GTP interface.
EGTP Suppress Update Bearer Request (no bitrate change)	Indicates if the UBR Suppression feature is enabled or disabled.
P-CSCF Restoration solution	Indicates the type of mechanism being used for P-CSCF failure detection. Can be either HSS-based (Private Extn) or HSS-Based MME-Triggered (Rel12).
P-CSCF Restoration supported for Emergency PDNs	Indicates whether P-CSCF Restoration is enabled for Emergency PDNs. <b>Important</b> This functionality is license dependent. For more information, contact your Cisco account representative.
Re-Auth After s6b Triggered P-CSCF Restoration	Indicates whether Re-Auth after S6b triggered P-CSCF Restoration of WLAN is enabled. <b>Important</b> This functionality is license dependent. For more information, contact your Cisco account representative.

## show pgw-service name

Displays configuration information for all P-GW services configured on the system.

**Table 470: show pgw-service name Command Output Descriptions**

Field	Description
Service name	The name of the P-GW service configured and running on the system.
Service-ID	The system-generated identification number associated with the P-GW service name.
Context	The context name where the P-GW service is configured.
Status	Indicates whether the P-GW service is started or not.
EGTP Service	The eGTP service name configured for use by this service.

Field	Description
LMA Service	The LMA service name configured for use by this service.
GGSN Service	The GGSN service name associated with this service.
IPNE Service	Not supported in this release.
Peer Map	
Session-Delete-Delay Timer	Indicates whether there is a delay in terminating a session.
Session-Delete-Delay Timeout	Specifies the time (msecs) to retain a session before terminating it.
PLMN ID List	The Public Land Mobile Network identifier list associated with this P-GW service. A PLMN contains a Mobile Country Code (MCC) and Mobile Network Code (MNC). Up to five PLMN IDs can be configured for each P-GW service.
Newcall Policy	The newcall policy configured for this P-GW service. Specifies whether the P-GW will accept or reject requests for a static IP address if the address is already in use by another session
dns-client Context Name	The context where the DNS client is configured and used by this service.
gx-li context	Refer to the <i>Lawful Intercept Configuration Guide</i> .
gx-li transport	Refer to the <i>Lawful Intercept Configuration Guide</i> .
Internal QoS Application	The QoS application configured for use with this service.
QCI-QoS Mapping Table Name	The QoS Class Index to QoS mapping table configured for use with this service.
Authorize	Enables/disables subscriber session authorization with HSS over S6b Diameter interface.
Setup Timeout	Specifies the maximum amount of time the P-GW service allows for the setting up of PDP contexts.
Message Timestamp Drift	Specifies the drift time configuration to take care of NTP drift issues.
S6b IPv6 Reporting	Specifies if the IPv6 address reporting through AAR towards the S6b interface is enabled or disabled.
Retain MDN	Enables MDN/MSISDN value to be retained as negotiated during the call setup (retrieved from S6b interface or Create Session Request).
Duplicate Subscriber Addr Request	Specifies whether the P-GW will accept or reject requests for a static IP address if the address is already in use by another session.
Duplicate Subscriber Addr Request IPv6	Specifies whether the P-GW will accept or reject requests for an IPv6 IP address if the address is already in use by another session.
Qos Negotiation Profile Rel8 for Gy interface	
DCNR	Enables 5G New radio Functionality for subscriber session in the PGW service.

Field	Description
Fqdn-name	The name of Fully Qualified Domain Name (FQDN) which is used for authorization over S6b interface between P-GW and 3GPP AAA/HSS.
SAEGW service	Specifies whether P-GW service is part of SAEGW service.
EGTP Overcharging Protection	
EGTP Cause Code Handling	Specifies whether eGTP cause handling has been enabled for this P-GW service.
Temp Failure	Specifies whether eGTP cause handling for temporary failure (cause code 110) has been enabled for this P-GW service.
Retry Timeout	Specifies the time to wait (in seconds) before reattempting Create Bearer Request (CBR)/Modify Bearer Request (MBR)/Update Bearer Request (UBR) when the P-GW receives a temporary failure response from a peer.
Maximum Retry	Specifies the maximum number of retries to attempt. The P-GW discards CBR/MBR/UBR after the maximum number of retries are exceeded.
EGTP SGW Restoration Handling	Specifies if the eGTP S-GW restoration handling is enabled or not.
Session Hold Timer	Displays if the session Hold Timer is valid or not.
Timeout	Displays the Configured Session Hold Timer timeout value in seconds.
EGTP Modify bearer cmd negotiate qos	Displays the configuration of the egtp modify-bearer-cmd-negotiate-qos command, either Enabled (P-GW accepts new QoS value from modify bearer command while PCRF is unreachable; or Disabled (Default, P-GW ignores the new QoS value in the modify bearer command and uses stored QoS value from PCRF).
EGTP GnGp Modify bearer res with APN-AMBR	
EGTP Modify bearer res with CHARGING-ID	Indicates whether Modify Bearer Response message with Charging-ID is enabled or disabled.
EGTP Modify bearer res with CHARGING-FQDN or CHARGING-GW-ADDRESS	Indicates whether Modify Bearer Response message with Charging FQDN or Charging Gateway address is enabled or disabled.
EGTP Modify bearer res with MSISDN	Indicates whether Modify Bearer Response message with MSISDN is enabled or disabled.
EGTP Modify Bearer Response with Context Not Found cause if IMEI/IMEISV mismatch	
EGTP Bit Rate in Rounded Down Kbps	Enable/Disable rounded down Kbps value of Bit Rate on GTP interface.
EGTP Suppress Update Bearer Request (no bitrate change)	Indicates if the UBR Suppression feature is enabled or disabled.

Field	Description
EGTP Create Session Response with APN-AMBR IE	
EGTP Ignore ULI IE with SAI/RAI/CGI in Change Notification Req for EUTRAN	Indicates that <b>egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi</b> CLI is enabled or disabled under P-GW services.
GTP-C Load Control Profile	Indicates the GTP-C load control profile.
GTP-C Overload Control Profile	Indicates the GTP-C overload control profile.
P-CSCF Restoration solution	Indicates the type of mechanism being used for P-CSCF failure detection. Can be either HSS-based (Private Extn) or HSS-Based MME-Triggered (Rel12).
P-CSCF Restoration supported for Emergency PDNs	Indicates whether P-CSCF Restoration is enabled for Emergency PDNs. <b>Note</b> This functionality is license dependent. For more information, contact your Cisco account representative.
Re-Auth After s6b Triggered P-CSCF Restoration	Indicates whether Re-Auth after S6b triggered P-CSCF Restoration of WLAN is enabled. <b>Note</b> This functionality is license dependent. For more information, contact your Cisco account representative.
GTP-C Cause Code Mapping (Gx Failure)	
eMPS Profile Name	Indicates the eMPS Profile name used to define attributes of an eMPS session.
GTPC Outgoing Throttling	Specifies if outgoing throttling has been enabled, which indicates the number of messages that were removed from the queue (due to any collision, or max retransmission expired).
RLF Template Name	Specifies the template name for RLF for throttling support.
Throttling override	
Throttling override Policy	Configures the Throttling Override Policy that can be used at the GGSN/P-GW nodes to selectively bypass throttling for a configured message type or for all messages in emergency call or priority call or call for the configured APN.
GTPC Incoming Throttling Params	Specifies if the incoming throttling of GTPC has been configured. It includes following parameters.
Message Rate (per sec)	Indicates the number of messages per second. Default: 20000
Delay Tolerance (secs)	Indicates the delay tolerance in seconds. Default: 5
Queue Size	Indicates the queue size. Default: 10000
S-GW Interface Excluded	Excludes the specified interface.
Priority message Excluded:	Indicates if the priority message is specified. The valid values are Yes and No. The default value is No.

# show pgw-service statistics all

The following command output applies to release 14.0 and higher.

**Table 471: show pgw-service statistics all Command Output Descriptions**

Field	Description
VPN Name	The name of the context in which the P-GW service is configured.
<b>Subscribers Total:</b>	
Active	The total number of active subscribers.
Total S6b Assume Positive	The total number of subscribers in the assume positive state.
<b>PDNs Total:</b>	
Active	The total number of active PDN sessions.
Setup	The total number of setup PDN sessions.
Released	The total number of released PDN sessions.
Rejected	The total number of rejected PDN sessions.
<b>PDNs By PDN-Type:</b>	
<b>IPv4 PDNs:</b>	
Active	The total number of active PDN sessions using IPv4.
Setup	The total number of setup PDN sessions using IPv4.
Released	The total number of released PDN sessions using IPv4.
<b>IPv6 PDNs:</b>	
Active	The total number of active PDN sessions using IPv6.
Setup	The total number of setup PDN sessions using IPv6.
Released	The total number of released PDN sessions using IPv6.
<b>IPv4v6 PDNs:</b>	
Active	The total number of active PDN sessions using IPv4v6.
Setup	The total number of setup PDN sessions using IPv4v6.
Released	The total number of released PDN sessions using IPv4v6.
<b>DCNR Secondary RAT Data PDN Statistics</b>	

Field	Description
Active	<p>The total number of currently active P-GW DCNR Secondary RAT-Data PDN Sessions.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p> <p>Counter is decremented when the identified DCNR Secondary RAT Data session gets released.</p> <p><b>Note</b> DCNR Secondary RAT Data statistics will be decremented only when the session gets released. There might be also a scenario where DCNR session receives Secondary RAT Data once or twice only and if it is not reported in the subsequent messages from MME / P-GW, as per current proposed solution, DCNR Secondary RAT Data statistics will not be decremented till the session is released.</p>
Setup	<p>The total number of cumulative P-GW DCNR Secondary RAT-Data PDN Sessions setup.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p>
Released	<p>The total number of cumulative P-GW DCNR Secondary RAT Data PDNs sessions released.</p> <p>Counter is incremented when the DCNR Secondary RAT Data PDN Session release.</p> <p>It is a cumulative counter, so it will not be decremented</p>
<b>PDNs By PLMN-Type:</b>	
<b>Home Subscriber PDNs:</b>	
Active	Subscriber PLMN Statistics - Home subscribers sessions active
Setup	Subscriber PLMN Statistics - Home subscribers sessions setup
Released	Subscriber PLMN Statistics - Home subscribers sessions released
<b>Visiting Subscriber PDNs:</b>	
Active	Subscriber PLMN Statistics - Visiting subscribers sessions active
Setup	Subscriber PLMN Statistics - Visiting subscribers sessions setup

Field	Description
Released	Subscriber PLMN Statistics - Visiting subscribers sessions released
<b>Roaming Subscriber PDNs:</b>	
Active	Subscriber PLMN Statistics - Roaming subscribers sessions active
Setup	Subscriber PLMN Statistics - Roaming subscribers sessions setup
Released	Subscriber PLMN Statistics - Roaming subscribers sessions released
<b>PDNs By Emergency-Type:</b>	
<b>Emergency PDNs:</b>	
Active	Total Active Emergency PDNs
Authentic IMSI	Total Active Emergency PDNs (Auth-IMSI)
Un-Authentic IMSI	Total Active Emergency PDNs (Unauth-IMSI)
Only IMEI	Total Active Emergency PDNs (Only IMEI)
Setup	Total Emergency PDNs setup
Authentic IMSI	Total Emergency PDNs (Auth-IMSI) setup
Un-Authentic IMSI	Total Emergency PDNs (Unauth-IMSI) setup
Only IMEI	Total Emergency PDNs (Only IMEI) setup
Rejected	Total Emergency PDNs rejected
<b>Non-Emergency PDNs:</b>	
Active	The total number of active non-emergency PDNs.
Setup	The total number of setup non-emergency PDNs.
<b>PDNs Rejected By Reason:</b>	
No Resource	The total number of PDNs rejected - No Resource.
Missing or unknown APN	The total number of PDNs rejected - Missing or unknown APN.
APN sel-Mode mismatch	The total number of PDNs rejected - APN selection-mode mismatch.
PDN-Type not supported	The total number of PDNs rejected - Preferred PDN-Type not supported.
APN restr violation	The total number of PDNs rejected - APN restriction violation .
Subs auth failed	The total number of PDNs rejected - Subscriber authentication failed.
static addr not allow	The total number of PDNs rejected - Subscriber static address not allowed.
static addr not alloc	The total number of PDNs rejected - Subscriber static address not allocated.

Field	Description
Dynamic addr not alloc	The total number of PDNs rejected - Dynamic address not allocated.
static addr not present	The total number of PDNs rejected - Subscriber static address not present.
Invalid QCI Value	The total number of PDNs rejected - Due to the receipt of invalid QoS Class Identifiers (QCIs).
Apn-Denied No Subscription	The total number of subscriber sessions disconnected due to denial of APN as requested APN was not subscribed to subscriber.
System Failure	The total number of PDNs to ease debugging.
<b>PDNs Released By Reason:</b>	
Network initiated release	The total number of PDNs released due to a network-initiated release.
Admin disconnect	The total number of PDNs released due to an administrative disconnect.
GTP-U error ind	The total number of PDNs released due to a GTP-U error indication.
SGW path failure	The total number of PDNs released due to an S-GW path failure.
Local fallback timeout	The total number of PDNs released due to the local policy timeout when Gx is not reachable.
UE P-CSCF Reselect not supported	The total number of UEs released due to P-CSCF Re-selection not being supported.
MME initiated release	The total number of PDNs released due to an MME initiated release.
S4 SGSN initiated release	The total number of PDNs released due to an S4 SGSN initiated release
<b>Bearerers Total:</b>	
Active	The total number of active bearers.
Setup	The total number of bearers setup.
Released	The total number of number of bearers released.
Rejected	The total number of rejected bearers.
<b>Bearers By Emergency-Type:</b>	
<b>Emergency Bearerers:</b>	
Active	The total number of Active Emergency bearers.
Authentic IMSI	The total number of Active Emergency bearers (Authentic-IMSI).
Un-Authentic IMSI	The total number of Active Emergency bearers (Unauthentic-IMSI).
Only IMEI	The total number of Active Emergency bearers (Only IMEI).
Setup	The total number of Emergency bearers setup.

Field	Description
Authentic IMSI	The total number of Emergency bearers (Authentic-IMSI) setup.
Un-Authentic IMSI	The total number of Emergency bearers (Unauthentic-IMSI) setup.
Only IMEI	The total number of Emergency bearers (Only IMEI) setup.
Rejected	The total number of Emergency bearers rejected.
<b>Non-Emergency Bearers:</b>	
Active	The total number of Active Non-Emergency bearers
Setup	The total number of Setup Non-Emergency bearers
<b>eMPS PDN</b>	
Current Active	
Cumulative Activated	
Cumulative De-activated	
<b>DCNR PDN Statistics</b>	
Active	The total number of current active SGW DCNR PDNs.
Setup	The total number of SGW PDNs that are setup as DCNR PDN.
Released	The total number of SGW DCNR PDNs released.
<b>Bearers by QoS characteristics</b>	
Active: QCI n	The total number of active bearers for QCI n. Where n is a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-Std QCI (Non-GBR)	The total number of active non-standard non-GBR bearers.
Non-Std QCI (GBR)	The total number of active non-standard GBR bearers
Setup: QCI n	The total number of bearers setup for QCI n. Where n is a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-Std QCI (Non-GBR)	The total number of non-standard non-GBR bearers setup.
Non-Std QCI (GBR)	The total number of non-standard GBR bearers setup.
Released: QCI n	The total number of released bearers for QCI n. Where n is a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
<b>Dedicated Bearers By Type:</b>	
<b>UE-initiated:</b>	
Active	Total bearers active - UE-initiated

Field	Description
Setup	Total bearers setup - UE-initiated
<b>Network-initiated:</b>	
Active	Total bearers active - Network-initiated
Setup	Total bearers setup - Network-initiated
<b>Bearer Modifications:</b>	
<b>UE-initiated:</b>	
QoS Modifications	Total bearers modified - UE-initiated Quality of Service (QoS)modification
TFT Modifications	Total bearers modified - UE-initiated Traffic Flow Template modification
<b>Network-initiated:</b>	
QoS Modifications	Total bearers modified - Network-initiated Quality of Service modification
TFT Modifications	Total bearers modified - Network-initiated Traffic Flow Template modification
<b>Failures:</b>	
UE-initiated-mod-fail:	Total bearers modification failure - UE-initiated modification failed
QOS changed	Total bearer modification failures - UE-initiated Quality of Service
No res available	Total bearer modification failures - UE-initiated Quality of Service - No resource available
Semantic err in TFT	Total bearers modification failures - UE-initiated Quality of Service - Semantic error in Traffic Flow Template operation
Syntact err in TFT	Total bearer modification failures - UE-initiated Quality of Service - Syntax error in Traffic Flow Template operation
Semantic err in fltr	Total bearer modification failures - UE-initiated Quality of Service - Semantic error in packet filter
Syntact err in fltr	Total bearer modification failures - UE-initiated Quality of Service - syntax error in packet filter
No memory available	Total bearer modification failures - UE-initiated Quality of Service - No resource available
System failure	Total bearers modification failure - UE-initiated Quality of Service - System failure
No QOS changed	Total bearer modification failures - UE-initiated
No res available	Total bearer modification failures - UE-initiated - No resource available

Field	Description
Semantic err in TFT	Total bearers modification failures - UE-initiated - Semantic error in Traffic Flow Template operation
Syntact err in TFT	Total bearer modification failures - UE-initiated - Syntax error in Traffic Flow Template operation
Semantic err in fltr	Total bearer modification failures - UE-initiated - Semantic error in packet filter
Syntact err in fltr	Total bearer modification failures - UE-initiated - syntax error in packet filter
No memory available	Total bearer modification failures - UE-initiated - No resource available
System failure	Total bearers modification failure - UE-initiated - System failure
NW-initiated-mod-fail:	Total bearers modification failure - Network-initiated modification failed
QOS changed	Total bearer modification failures - Network-initiated Quality of Service
No res available	Total bearers modification failure - Network-initiated Quality of Service - No resource available
Semantic err in TFT	Total bearers modification failure - Network-initiated Quality of Service - Semantic error in Traffic Flow Template operation
Syntact err in TFT	Total bearers modification failure - Network-initiated Quality of Service - syntax error in Traffic Flow Template operation
Semantic err in fltr	Total bearers modification failure - Network-initiated Quality of Service - Semantic error in packet filter
Syntact err in fltr	Total bearers modification failure - Network-initiated Quality of Service - syntax error in packet filter
No memory available	Total bearers modification failure - Network-initiated Quality of Service - No memory available
System failure	Total bearers modification failure - Network-initiated Quality of Service - System failure
No QOS changed	Total bearer modification failures - Network-initiated
No res available	Total bearers modification failure - Network-initiated - No resource available
Semantic err in TFT	Total bearers modification failure - Network-initiated - Semantic error in Traffic Flow Template operation
Syntact err in TFT	Total bearers modification failure - Network-initiated - syntax error in Traffic Flow Template operation
Semantic err in fltr	Total bearers modification failure - Network-initiated - Semantic error in packet filter
Syntact err in fltr	Total bearers modification failure - Network-initiated - syntax error in packet filter
No memory available	Total bearers modification failure - Network-initiated - No memory available

Field	Description
System failure	Total bearers modification failure - Network-initiated - System failure
<b>Dedicated Bearers Rejected By Reason:</b>	
UE-initiated Bearer Rejects	Total dedicated bearers rejected - UE-initiated
No resource	Total dedicated bearers rejected - UE-initiated - No resource
NW-initiated Bearer Rejects	Total dedicated bearers rejected - Network-initiated
No resource	Total dedicated bearers rejected - Network-initiated - No resource
No mem available	Total dedicated bearers rejected - Network-initiated - No memory available
System failure	Total dedicated bearers rejected - Network-initiated - System failure
<b>Dedicated Bearers Released By Reason:</b>	
Network initiated release	Total dedicated bearers released - Network-initiated
Admin disconnect	Total dedicated bearers released - Network-initiated - Admin disconnect
GTP-U error ind	Total dedicated bearers released - Network-initiated - GTP-U error
MME initiated release	Total dedicated bearers released - Network-initiated - MME initiated release
Default Bearer release	Total dedicated bearers released - Network-initiated - Default bearer release
<b>IP Address Allocation Statistics:</b>	
Total IPv4 adrs allocated	Total IPv4 addresses allocated
Local pool assignment	Total IPv4 addresses allocated - Local pool address assignment
Static addr assignment	Total IPv4 addresses allocated - Static address assignment
Radius provided assignment	Total IPv4 addresses allocated - RADIUS provided address assignment
Total IPv6 adrs allocated	Total IPv6 addresses allocated
Stateless auto config	Total IPv6 address allocated - Stateless auto config
Local pool assignment	Total IPv6 addresses allocated - Local pool address assignment
Static addr assignment	Total IPv6 addresses allocated - Static address assignment
Radius provided assignment	Total IPv6 addresses allocated - RADIUS provided address assignment
<b>SGi tunneling statistics:</b>	
<b>Total IPv4 tunnel sessions:</b>	
<b>IP-in-IP Tunnels:</b>	
Active	SGi tunneling Statistics - IPv4 IP-in-IP tunnel sessions active

Field	Description
Setup	SGi tunneling Statistics - IPv4 IP-in-IP tunnel sessions setup
Released	SGi tunneling Statistics - IPv4 IP-in-IP tunnel sessions released
<b>GRE Tunnels:</b>	
Active	SGi tunneling Statistics - IPv4 GRE tunnel sessions active
Setup	SGi tunneling Statistics - IPv4 GRE tunnel sessions setup
Released	SGi tunneling Statistics - IPv4 GRE tunnel sessions released
<b>Total IPv6 tunneled sessions:</b>	
<b>6to4 Tunnels:</b>	
Active	SGi tunneling Statistics - IPv6 6to4 tunnel sessions active
Setup	SGi tunneling Statistics - IPv6 6to4 tunnel sessions setup
Released	SGi tunneling Statistics - IPv6 6to4 tunnel sessions released
<b>Handover Statistics:</b>	
<b>Intra Technology handover:</b>	
<b>Inter SGSN handover:</b>	
Attempted	Total number of inter-SGSN handover attempts
Succeeded	Total number of successful inter-SGSN handovers
Failed	Total number of failed inter-SGSN handovers
<b>Inter SGW handover:</b>	
Attempted	Total number of inter-SGW handover attempts
Succeeded	Total number of successful inter-SGW handovers
Failed	Total number of failed inter-SGW handovers
<b>Inter HSGW handover:</b>	
Attempted	Total number of inter-HSGW handover attempts
Succeeded	Total number of successful inter-HSGW handovers
Failed	Total number of failed inter-HSGW handovers
<b>Inter Technology handover:</b>	
<b>GNGP-to-LTE handover:</b>	
Attempted	Total number of Gn/Gp to LTE attempted handovers

Field	Description
Succeeded	Total number of Gn/Gp to LTE successful handovers
Failed	Total number of Gn/Gp to LTE failed handovers
<b>LTE-to-GNGP handover:</b>	
Attempted	Total number of LTE to Gn/Gp attempted handovers
Succeeded	Total number of LTE to Gn/Gp successful handovers
Failed	Total number of LTE to Gn/Gp failed handovers
<b>LTE-to-eHRPD handover:</b>	
Attempted	Total number of LTE to eHRPD attempted handovers
Succeeded	Total number of LTE to eHRPD successful handovers
Failed	Total number of LTE to eHRPD failed handovers
<b>eHRPD-to-LTE handover:</b>	
Attempted	Total number of eHRPD to LTE attempted handovers
Succeeded	Total number of eHRPD to LTE successful handovers
Failed	Total number of eHRPD to LTE failed handovers
<b>LTE-to-S2bPMIP handover:</b>	
Attempted	Total number of LTE to S2bPMIP attempted handovers
Succeeded	Total number of LTE to S2bPMIP successful handovers
Failed	Total number of LTE to S2bPMIP failed handovers
<b>S2bPMIP-to-LTE handover:</b>	
Attempted	Total number of S2bPMIP to LTE attempted handovers
Succeeded	Total number of S2bPMIP to LTE successful handovers
Failed	Total number of S2bPMIP to LTE failed handovers
<b>eHRPD-to-S2bPMIP handover:</b>	
Attempted	Total number of eHRPD to S2bPMIP attempted handovers
Succeeded	Total number of eHRPD to S2bPMIP successful handovers
Failed	Total number of eHRPD to S2bPMIP failed handovers
<b>S2bPMIP-to-eHRPD handover:</b>	
Attempted	Total number of S2bPMIP to eHRPD attempted handovers

Field	Description
Succeeded	Total number of S2bPMIP to eHPRD successful handovers
Failed	Total number of S2bPMIP to eHPRD failed handovers
<b>S2bGTP-to-LTE handover:</b>	
Attempted	Total number of S2bGTP to LTE attempted handovers
Succeeded	Total number of S2bGTP to LTE successful handovers
Failed	Total number of S2bGTP to LTE failed handovers
<b>LTE-to-S2bGTP handover:</b>	
Attempted	Total number of LTE to S2bGTP attempted handovers
Succeeded	Total number of LTE to S2bGTP successful handovers
Failed	Total number of LTE to S2bGTP failed handovers
<b>S2bGTP-to-EHRPD handover:</b>	
Attempted	Total number of S2bGTP to eHPRD attempted handovers
Succeeded	Total number of S2bGTP to eHPRD successful handovers
Failed	Total number of S2bGTP to eHPRD failed handovers
<b>EHRPD-to-S2bGTP handover:</b>	
Attempted	Total number of eHPRD to S2bGTP attempted handovers
Succeeded	Total number of eHPRD to S2bGTP successful handovers
Failed	Total number of eHPRD to S2bGTP failed handovers
<b>GNGP-to-S4SGSN handover:</b>	
Attempted	Total number of GNGP-to-S4SGSN attempted handovers
Succeeded	Total number of GNGP-to-S4SGSN successful handovers
Failed	Total number of GNGP-to-S4SGSN failed handovers
<b>S4SGSN-to-GNGP handover:</b>	
Attempted	Total number of S4SGSN-to-GNGP attempted handovers
Succeeded	Total number of S4SGSN-to-GNGP successful handovers
Failed	Total number of S4SGSN-to-GNGP failed handovers
<b>S4SGSN-to-LTE handover:</b>	
Attempted	Total number of S4SGSN-to-LTE attempted handovers

Field	Description
Succeeded	Total number of S4SGSN-to-LTE successful handovers
Failed	Total number of S4SGSN-to-LTE failed handovers
<b>LTE-to-S4SGSN handover:</b>	
Attempted	Total number of LTE-to-S4SGSN attempted handovers
Succeeded	Total number of LTE-to-S4SGSN successful handovers
Failed	Total number of LTE-to-S4SGSN failed handovers
<b>P-CSCF Restoration Indications received:</b>	The total number of P-CSCF Restoration indications received (HSS Triggered and PCRF Triggered) at service level.  The total number of triggers received on any interface (MME/PCRF/S6b) = Basic + Extended + Ignored (ignored for reasons such as restoration already in progress, license not present, validation check fails, or call not connected).
<b>HSS Triggered Restoration:</b>	
MME Triggered Restoration	Tracks the number of occurrences of P-CSCF Restoration Required Indications received from the MME/S-GW through a modify bearer request.
Basic Restoration Performed	The total number of basic P-CSCF Restorations performed for restoration indications received from the MME/S-GW.
Extension Restoration Performed	The total number of extended P-CSCF Restorations performed for restoration indications received from the MME/S-GW.
S6b Triggered Restoration	The total number of P-CSCF Restoration Required Indications received from the s6b AAA server through a RAR for a WLAN.
Basic Restoration Performed	The total number of basic P-CSCF Restorations performed for restoration indications received from an s6b AAA server through a RAR for a WLAN.
Extension Restoration Performed	The total number of extended P-CSCF Restorations performed for restoration indications received from an s6b AAA server through a RAR for a WLAN.
<b>PCRF Triggered Restoration:</b>	The total number of P-CSCF Restoration Required Indications received from the PCRF through RAR.
Basic Restoration Performed	The total number of basic P-CSCF Restorations performed for restoration indications received from PCRF through a RAR.
Extension Restoration Performed	The total number of extended P-CSCF Restorations performed for restoration indications received from a PCRF through a RAR.
<b>Data Statistics Per Interface:</b>	
<b>S5U/S8U/S2bU/Gn/Gp Total Data Statistics:</b>	
<b>Uplink:</b>	

Field	Description
Total Pkts	The total number of uplink packets forwarded.
Std QCI (Non-GBR)	The total number of uplink packets forwarded with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of uplink packets forwarded with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of uplink packets forwarded with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of uplink packets forwarded with a non-standard QoS Class Index (GBR).
Total Bytes	The total number of uplink bytes forwarded.
Std QCI (Non-GBR)	The total number of uplink bytes forwarded with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of uplink bytes forwarded with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of uplink bytes forwarded with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of uplink bytes forwarded with a non-standard QoS Class Index (GBR).
Total Dropped Pkts	The total number of uplink packets dropped.
Std QCI (Non-GBR)	The total number of uplink packets dropped with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of uplink packets dropped with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of uplink packets dropped with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of uplink packets dropped with a non-standard QoS Class Index (GBR).
Total Dropped Bytes	The total number of uplink bytes dropped.
Std QCI (Non-GBR)	The total number of uplink bytes dropped with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of uplink bytes dropped with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of uplink bytes dropped with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of uplink bytes dropped with a non-standard QoS Class Index (GBR).
Dropped Pkts MBR Excd	The total number of uplink packets dropped due to MBR exceeded.

Field	Description
Std QCI (Non-GBR)	The total number of uplink packets dropped with a standard QoS Class Index (non-GBR) due to MBR exceeded.
Std QCI (GBR)	The total number of uplink packets dropped with a standard QoS Class Index due to MBR exceeded.
Non-Std QCI (Non-GBR)	The total number of uplink packets dropped with a non-standard QoS Class Index (non-GBR) due to MBR exceeded.
Non-Std QCI (GBR)	The total number of uplink packets dropped with a non-standard QoS Class Index (GBR) due to MBR exceeded.
Dropped Bytes MBR Excd	The total number of uplink bytes dropped due to MBR exceeded.
Std QCI (Non-GBR)	The total number of uplink bytes dropped with a standard QoS Class Index (non-GBR) due to MBR exceeded.
Std QCI (GBR)	The total number of uplink bytes dropped with a standard QoS Class Index due to MBR exceeded.
Non-Std QCI (Non-GBR)	The total number of uplink bytes dropped with a non-standard QoS Class Index (non-GBR) due to MBR exceeded.
Non-Std QCI (GBR)	The total number of uplink bytes dropped with a non-standard QoS Class Index (GBR) due to MBR exceeded.
Drops Due To APN AMBR Rate Limit	
Packets	The total number of uplink packets dropped due to APN AMBR rate limit.
Bytes	The total number of uplink bytes dropped due to APN AMBR rate limit.
<b>Downlink:</b>	
Total Pkts	The total number of downlink packets forwarded.
Std QCI (Non-GBR)	The total number of downlink packets forwarded with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of downlink packets forwarded with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of downlink packets forwarded with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of downlink packets forwarded with a non-standard QoS Class Index (GBR).
Total Bytes	The total number of downlink bytes forwarded.
Std QCI (Non-GBR)	The total number of downlink bytes forwarded with a standard QoS Class Index (non-GBR).

Field	Description
Std QCI (GBR)	The total number of downlink bytes forwarded with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of downlink bytes forwarded with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of downlink bytes forwarded with a non-standard QoS Class Index (GBR).
Total Dropped Pkts	The total number of downlink packets dropped.
Std QCI (Non-GBR)	The total number of downlink packets dropped with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of downlink packets dropped with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of downlink packets dropped with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of downlink packets dropped with a non-standard QoS Class Index (GBR).
Total Dropped Bytes	The total number of downlink bytes dropped.
Std QCI (Non-GBR)	The total number of downlink bytes dropped with a standard QoS Class Index (non-GBR).
Std QCI (GBR)	The total number of downlink bytes dropped with a standard QoS Class Index.
Non-Std QCI (Non-GBR)	The total number of downlink bytes dropped with a non-standard QoS Class Index (non-GBR).
Non-Std QCI (GBR)	The total number of downlink bytes dropped with a non-standard QoS Class Index (GBR).
Dropped Pkts MBR Excd	The total number of downlink packets dropped due to MBR exceeded.
Std QCI (Non-GBR)	The total number of downlink packets dropped with a standard QoS Class Index (non-GBR) due to MBR exceeded.
Std QCI (GBR)	The total number of downlink packets dropped with a standard QoS Class Index due to MBR exceeded.
Non-Std QCI (Non-GBR)	The total number of downlink packets dropped with a non-standard QoS Class Index (non-GBR) due to MBR exceeded.
Non-Std QCI (GBR)	The total number of downlink packets dropped with a non-standard QoS Class Index (GBR) due to MBR exceeded.
Dropped Bytes MBR Excd	The total number of downlink bytes dropped due to MBR exceeded.

Field	Description
Std QCI (Non-GBR)	The total number of downlink bytes dropped with a standard QoS Class Index (non-GBR) due to MBR exceeded.
Std QCI (GBR)	The total number of downlink bytes dropped with a standard QoS Class Index due to MBR exceeded.
Non-Std QCI (Non-GBR)	The total number of downlink bytes dropped with a non-standard QoS Class Index (non-GBR) due to MBR exceeded.
Non-Std QCI (GBR)	The total number of downlink bytes dropped with a non-standard QoS Class Index (GBR) due to MBR exceeded.
<b>Drops Due To APN AMBR Rate Limit</b>	
Packets	The total number of downlink packets dropped due to APN AMBR rate limit.
Bytes	The total number of downlink bytes dropped due to APN AMBR rate limit.
<b>Data Statistics Per PDN-Type:</b>	
<b>IPv4 PDNs:</b>	
<b>Uplink:</b>	
Total Pkts	The total number of IPv4 PDN uplink packets (from user).
Total Bytes	The total number of IPv4 PDN uplink bytes (from user).
<b>Downlink:</b>	
Total Pkts	The total number of IPv4 PDN downlink packets (to user).
Total Bytes	The total number of IPv4 PDN downlink bytes (to user).
<b>IPv6 PDN Data Statistics:</b>	
<b>Uplink:</b>	
Total Pkts	The total number of IPv6 PDN uplink packets (from user).
Total Bytes	The total number of IPv6 PDN uplink bytes (from user).
<b>Downlink:</b>	
Total Pkts	The total number of IPv6 PDN downlink packets (to user).
Total Bytes	The total number of IPv6 PDN downlink bytes (to user).
<b>IPv4v6 PDN Data Statistics:</b>	
<b>Uplink:</b>	
Total Pkts v4	The total number of IPv4 PDN uplink packets (from user).
Total Bytes v4	The total number of IPv4 PDN uplink bytes (from user).

Field	Description
Total Pkts v6	The total number of IPv6 PDN uplink packets (from user).
Total Bytes v6	The total number of IPv6 PDN uplink bytes (from user).
<b>Downlink:</b>	
Total Pkts v4	The total number of IPv4 PDN downlink packets (to user).
Total Bytes v4	The total number of IPv4 PDN downlink bytes (to user).
Total Pkts v6	The total number of IPv6 PDN downlink packets (to user).
Total Bytes v6	The total number of IPv6 PDN downlink bytes (to user).
Packets: QCI n	The total number of uplink packets transmitted for QCI n. Where n is a QCI value of 1 through 9, or a QCI value of 65, 66, 69, or 70.
Non-Std QCI	The total number of non-standard QCI uplink packets transmitted.
Packets: QCI n	The total number of downlink packets transmitted for QCI n. Where n is a QCI value of 1 through 9, or a QCI value of 65, 66, 69, or 70.
Non-Std QCI	The total number of non-standard QCI downlink packets transmitted.
<b>802.1p priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
<b>Priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with an internal QoS priority.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with an internal QoS priority.
<b>Dedicated Bearer Released due to Idle-Inactivity timeout:</b>	
Std QCI (Non-GBR)	The number of dedicated non-Guaranteed bit rate (non-GBR) bearers with a standard QCI value that were released due to an idle-inactivity timeout.
Non-Std QCI (Non-GBR)	The number of dedicated non-Guaranteed bit rate (non-GBR) bearers with a non-standard QCI value that were released due to an idle-inactivity timeout.
Std QCI (GBR)	The number of dedicated Guaranteed Bit Rate (GBR) bearers with a standard QCI value that were released due to an idle-inactivity timeout.
Non-std QCI (GBR)	The number of dedicated Guaranteed Bit Rate (GBR) bearers with a non-standard QCI value that were released due to an idle-inactivity timeout.

Field	Description
<b>PDNs by RAT-Type:</b>	
EUTRAN	The total number of EUTRAN PDNs by RAT-Type.
UTRAN	The total number of UTRANs PDNs by RAT-Type.
GERAN	The total number of GERANs PDNs by RAT-Type.
WLAN	The total number of WLANs PDNs by RAT-Type.
Other	The total number of Others PDNs by RAT-Type.
<b>SGW Restoration Statistics:</b>	
<b>PDNs Total:</b>	
<b>In Restoration State:</b>	
Recovered	The total number of PDN session recovered during SGW Restoration.
Released	The total number of PDN sessions released during SGW Restoration.
<b>Drops during SGW Restoration:</b>	
Packets	The total number of packets dropped during SGW Restoration.
Bytes	The total number of bytes dropped uring SGW Restoration.
<b>P-CSCF Restoration Indications received: (Count at Service Level)</b>	
Data Statistics Per Interface	Total number of occurrences of P-CSCF Restoration Required Indications received from the MME/S-GW through a modify bearer request
<b>S2bGTP-to-eHRPD handover:</b>	
Attempted	Total number of S2bGTP-to-eHRPD handover attempts
Succeeded	Total number of successful S2bGTP-to-eHRPD handovers
Failed	Total number of failed S2bGTP-to-eHRPD handovers
<b>eHRPD-to-S2bGTP handover:</b>	
Attempted	Total number of eHRPD-to-S2bGTP handover attempts
Succeeded	Total number of successful eHRPD-to-S2bGTP handovers
Failed	Total number of failed eHRPD-to-S2bGTP handovers

The following command output applies to releases prior to 14.0.

*Table 472: show pgw-service statistics all Command Output Descriptions 0*

Field	Description
<b>PGW Node Level Statistics</b>	

Field	Description
VPN Name	The name of the context in which the P-GW service is configured.
Total Active UE	The total number of active subscribers.
Total bearers active	
Default bearers	The total number of active default bearers using the P-GW node.
Non-Emergency	The total number of active default non-emergency bearers using the P-GW node.
Emergency	The total number of active default emergency bearers using the P-GW node.
Dedicated bearers	The total number of active dedicated bearers using the P-GW node.
UE-initiated	The total number of active UE-initiated dedicated bearers using the P-GW node.
Network-initiated	The total number of active network-initiated dedicated bearers using the P-GW node.
Non-Emergency	The total number of active non-emergency dedicated bearers using the P-GW node.
Emergency	The total number of active emergency dedicated bearers using the P-GW node.
Emergency bearers (Auth-IMSI)	The total number of authorized International Mobile Subscriber Identity (IMSI) emergency bearers active using the P-GW node.
Emergency bearers (Unauth-IMSI)	The total number of unauthorized International Mobile Subscriber Identity (IMSI) emergency bearers active using the P-GW node.
Emergency bearers (Only IMEI)	The total number of International Mobile Equipment Identity (IMEI) emergency bearers active using the P-GW node.
Total bearers setup	
Default bearers	The total number of default bearers set up using the P-GW node.
Non-Emergency	The total number of default non-emergency bearers set up using the P-GW node.
Emergency	The total number of default emergency bearers set up using the P-GW node.
Dedicated bearers	The total number of dedicated bearers set up using the P-GW node.
UE-initiated	The total number of UE-initiated dedicated bearers set up using the P-GW node.
Network-initiated	The total number of network-initiated dedicated bearers set up using the P-GW node.
Non-Emergency	The total number of non-emergency dedicated bearers set up using the P-GW node.
Emergency	The total number of emergency dedicated bearers set up using the P-GW node.
Total bearers released	
Default bearers	The total number of default bearers released using the P-GW node.
Network init release	The total number of default bearers released due to an network-initiated release using the P-GW node.

Field	Description
MME init release	The total number of default bearers released due to an MME-initiated release using the P-GW node.
Dedicated bearers	The total number of dedicated bearers released using the P-GW node.
Network initiated release	The total number of dedicated bearers released due to an network-initiated release using the P-GW node.
S4 SGSN initiated release	The total number of dedicated bearers released due to an S4-SGSN-initiated release using the P-GW node.
MME initiated release	The total number of dedicated bearers released due to an MME-initiated release using the P-GW node.
Default bearer release	The total number of dedicated bearers released due to a default bearer release using the P-GW node.
Total bearers release failure	
Default bearers	The total number of default bearer release failures using the P-GW node.
Dedicated bearers	The total number of dedicated bearer release failures using the P-GW node.
Total bearers rejected	
Default bearers	The total number of default bearers rejected using the P-GW node.
Dedicated bearers	The total number of dedicated bearers rejected using the P-GW node.
UE-req reject	The total number of UE-requested bearers rejected using the P-GW node.
Network-req reject	The total number of network-requested bearers rejected using the P-GW node.
Total Emergency default bearer rejected	The total number of emergency default bearer rejected using the P-GW node.
Total Emergency dedicated bearers rejected	The total number of emergency dedicated bearer rejected using the P-GW node.
Total bearers modified	
UE-initiated mod	The total number of UE-initiated bearers modified using the P-GW node.
Network-initiated mod	The total number of network-initiated bearers modified using the P-GW node.
Total bearers modification failure	
UE-initiated mod fail	The total number of UE-initiated bearer modification failures using the P-GW node.
Network-initiated mod fail	The total number of network-initiated bearer modification failures using the P-GW node.
<b>Subscriber session statistics</b>	
Total bearers active	

Field	Description
Default bearers	The total number of active default bearers using the P-GW service(s) on this system.
Dedicated bearers	The total number of active dedicated bearers using the P-GW service(s) on this system. This counter increments for both network and UE-initiated dedicated bearers.
Total bearers setup	
Default bearers	The total number of default bearers setup using the P-GW service(s) on this system.
Dedicated bearers	The total number of dedicated bearers setup using the P-GW service(s) on this system. This counter increments for both network and UE-initiated dedicated bearer setup.
Total bearers released	
Default bearers	The total number of default bearers released using the P-GW service(s) on this system.
Network initiated release	
Admin disconnect	The total number of default bearers released due to an administrative disconnect using the P-GW service(s) on this system.
GTP-U error ind	The total number of default bearers released due to a GTP-U error indication using the P-GW service(s) on this system.
SGW Path failure	The total number of default bearers released due to an S-GW path failure using the P-GW service(s) on this system.
MME Initiated release	The total number of default bearers released due to an MME initiated release using the P-GW service(s) on this system.
Dedicated bearers	The total number of dedicated bearers released using the P-GW service(s) on this system.
Network initiated release	
Admin disconnect	The total number of dedicated bearers released due to an administrative disconnect using the P-GW service(s) on this system.
GTP-U error ind	The total number of dedicated bearers released due to a GTP-U error indication using the P-GW service(s) on this system.
MME initiated release	The total number of dedicated bearers released due to an MME initiated release using the P-GW service(s) on this system.
Default bearer release	The total number of dedicated bearers released due to a default bearer release using the P-GW service(s) on this system.
Total bearers release failure	
Default bearers	The total number of default bearer release failures using the P-GW service(s) on this system.
Dedicated bearers	The total number of dedicated bearer release failures using the P-GW service(s) on this system.

Field	Description
Total bearers rejected:	
Default bearers	The total number of default bearers rejected using the P-GW service(s) on this system.
No Resource	The total number of default bearers rejected due to a no resource condition using the P-GW service(s) on this system.
Missing or unknown APN	The total number of default bearers rejected due to a missing or unknown APN using the P-GW service(s) on this system.
APN selection-Mode mismatch	The total number of default bearers rejected due to an APN selection mode mismatch using the P-GW service(s) on this system.
Pref PDN-Type not supported	The total number of default bearers rejected due to a preferred PDN type not supported condition using the P-GW service(s) on this system.
APN restr violation	The total number of default bearers rejected due to an APN restriction violation using the P-GW service(s) on this system.
Subs auth failed	The total number of default bearers rejected due to a subscriber authentication failure using the P-GW service(s) on this system.
Subs static addr not allowed	The total number of default bearers rejected due to a disallowed subscriber static IP address using the P-GW service(s) on this system.
Subs static addr not alloc	The total number of default bearers rejected due to an unallocated subscriber static IP address using the P-GW service(s) on this system.
Dynamic addr not alloc	The total number of default bearers rejected due to an unallocated dynamic IP address using the P-GW service(s) on this system.
Subs static addr not present	The total number of default bearers rejected due to a missing subscriber static IP address using the P-GW service(s) on this system.
Dedicated bearers	The total number of dedicated bearers rejected using the P-GW service(s) on this system.
UE-req reject	The total number of UE-requested dedicated bearers rejected using the P-GW service(s) on this system.
Network-req reject	The total number of network-requested dedicated bearers rejected using the P-GW service(s) on this system.
Total bearers modified	
UE-initiated modification	The total number of UE-initiated bearers modified using the P-GW service(s) on this system.
QoS modification	The total number of UE-initiated bearers with a QoS modification using the P-GW service(s) on this system.
TFT modification	The total number of UE-initiated bearers with a TFT modification using the P-GW service(s) on this system.

Field	Description
Network-initiated modification	The total number of network-initiated bearers modified using the P-GW service(s) on this system.
QoS modification	The total number of network-initiated bearers with a QoS modification using the P-GW service(s) on this system.
TFT modification	The total number of network-initiated bearers with a TFT modification using the P-GW service(s) on this system.
Total bearers modification failure	
UE-initiated mod failed	The total number of UE-initiated bearer modification failures using the P-GW service(s) on this system.
QoS mod fail	The total number of UE-initiated bearer modification failures due to QoS modification failures using the P-GW service(s) on this system.
Semantic err in TFT oper	The total number of UE-initiated bearer modification failures due to semantic errors in a TFT operation using the P-GW service(s) on this system.
Syntact err in TFT oper	The total number of UE-initiated bearer modification failures due to syntactic errors in a TFT operation using the P-GW service(s) on this system.
Semantic err in pkt filter	The total number of UE-initiated bearer modification failures due to semantic errors in a packet filter using the P-GW service(s) on this system.
Syntact err in pkt filter	The total number of UE-initiated bearer modification failures due to syntactic errors in a packet filter using the P-GW service(s) on this system.
Network-initiated mod failed	The total number of network-initiated bearer modification failures using the P-GW service(s) on this system.
QoS mod fail	The total number of network-initiated bearer modification failures due to QoS modification failures using the P-GW service(s) on this system.
Semantic err in TFT oper	The total number of network-initiated bearer modification failures due to semantic errors in a TFT operation using the P-GW service(s) on this system.
Syntact err in TFT oper	The total number of network-initiated bearer modification failures due to syntactic errors in a TFT operation using the P-GW service(s) on this system.
Semantic err in pkt filter	The total number of network-initiated bearer modification failures due to semantic errors in a packet filter using the P-GW service(s) on this system.
Syntact err in pkt filter	The total number of network-initiated bearer modification failures due to syntactic errors in a packet filter using the P-GW service(s) on this system.
Total PDN-Type stats	
PDN-Type IPv4 sessions	The total number of PDN-type IPv4 sessions using the P-GW service(s) on this system.

Field	Description
Active	The total number of active PDN-type IPv4 sessions using the P-GW service(s) on this system.
Setup	The total number of setup PDN-type IPv4 sessions using the P-GW service(s) on this system.
Released	The total number of released PDN-type IPv4 sessions using the P-GW service(s) on this system.
PDN-Type IPv6 sessions	The total number of PDN-type IPv6 sessions using the P-GW service(s) on this system.
Active	The total number of active PDN-type IPv6 sessions using the P-GW service(s) on this system.
Setup	The total number of setup PDN-type IPv6 sessions using the P-GW service(s) on this system.
Released	The total number of released PDN-type IPv6 sessions using the P-GW service(s) on this system.
PDN-Type IPv4v6 sessions	The total number of PDN-type IPv4v6 sessions using the P-GW service(s) on this system.
Active	The total number of active PDN-type IPv4v6 sessions using the P-GW service(s) on this system.
Setup	The total number of setup PDN-type IPv4v6 sessions using the P-GW service(s) on this system.
Released	The total number of released PDN-type IPv4v6 sessions using the P-GW service(s) on this system.
<b>IP address allocation statistics</b>	
Total IPv4 addrs allocated	The total number of IPv4 addresses allocated using the P-GW service(s) on this system.
Local pool addr assign	The total number of local IP pool IPv4 addresses allocated using the P-GW service(s) on this system.
Static addr assign	The total number of static IPv4 addresses allocated using the P-GW service(s) on this system.
Radius provided addr assign	The total number of RADIUS-provided IPv4 addresses allocated using the P-GW service(s) on this system.
Total IPv6 addrs allocated	The total number of IPv6 addresses allocated using the P-GW service(s) on this system.
Stateless auto config	The total number of stateless address auto configuration IPv6 addresses allocated using the P-GW service(s) on this system.

Field	Description
Local pool add assign	The total number of local IP pool IPv6 addresses allocated using the P-GW service(s) on this system.
Static addr assign	The total number of static IPv6 addresses allocated using the P-GW service(s) on this system.
Radius provided addr assign	The total number of RADIUS-provided IPv6 addresses allocated using the P-GW service(s) on this system.
<b>SGi tunneling statistics</b>	
Total IPv4 tunnel sessions	The total number of IPv4 tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
IP-in-IP tun sessn active	The total number of active IP-in-IP tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
IP-in-IP tun sessions setup	The total number of setup IP-in-IP tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
IP-in-IP tun sessions released	The total number of released IP-in-IP tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
GRE-tun sessions active	The total number of active GRE tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
GRE-tun sessions setup	The total number of setup GRE tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
GRE-tun session release	The total number of released GRE tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
Total IPv6 tunneled sessions	The total number of IPv6 tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
6to4 tun sessions active	The total number of active IPv4-in-IPv6 tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
6to4 tun session setup	The total number of setup IPv4-in-IPv6 tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
6to4 tun sessions released	The total number of released IPv4-in-IPv6 tunnel sessions using the P-GW service(s) SGi interface(s) on this system.
<b>Subscriber PLMN Statistics</b>	
Home subscribers sessions	The total number of home subscriber sessions using the P-GW service(s) on this system.
Sessions active	The total number of active home subscriber sessions using the P-GW service(s) on this system.

Field	Description
Sessions setup	The total number of setup home subscriber sessions using the P-GW service(s) on this system.
Sessions released	The total number of released home subscriber sessions using the P-GW service(s) on this system.
Roaming subscribers sessions	The total number of roaming subscriber sessions using the P-GW service(s) on this system.
Sessions active	The total number of active roaming subscriber sessions using the P-GW service(s) on this system.
Sessions setup	The total number of setup roaming subscriber sessions using the P-GW service(s) on this system.
Sessions released	The total number of released roaming subscriber sessions using the P-GW service(s) on this system.
Visiting subscribers sessions	The total number of visiting subscriber sessions using the P-GW service(s) on this system.
Sessions active	The total number of active visiting subscriber sessions using the P-GW service(s) on this system.
Sessions setup	The total number of setup visiting subscriber sessions using the P-GW service(s) on this system.
Sessions released	The total number of released visiting subscriber sessions using the P-GW service(s) on this system.
<b>Subscriber QoS Statistics</b>	
Total bearers active	
QCI 1 - 9	The total number of active bearers with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of active bearers with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of active bearers with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total bearers setup	
QCI 1 - 9	The total number of setup bearers with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of setup bearers with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of setup bearers with a non-standard QCI (GBR) using the P-GW service(s) on this system.

Field	Description
Total bearers released	
QCI 1 - 9	The total number of released bearers with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of released bearers with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of released bearers with a non-standard QCI (GBR) using the P-GW service(s) on this system.
<b>Subscriber Data Statistics</b>	
Total Uplink packets forwarded	
QCI 1 - 9	The total number of uplink packets forwarded with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of uplink packets forwarded with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of uplink packets forwarded with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Uplink bytes forwarded	
QCI 1 - 9	The total number of uplink bytes forwarded with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of uplink bytes forwarded with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of uplink bytes forwarded with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Downlink packets forwarded	
QCI 1 - 9	The total number of downlink packets forwarded with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of downlink packets forwarded with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of downlink packets forwarded with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Downlink bytes forwarded	
QCI 1 - 9	The total number of downlink bytes forwarded with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of downlink bytes forwarded with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.

Field	Description
Non-Std QCI (GBR)	The total number of downlink bytes forwarded with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Uplink packets dropped	
QCI 1 - 9	The total number of uplink packets dropped with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of uplink packets dropped with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of uplink packets dropped with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Uplink bytes dropped	
QCI 1 - 9	The total number of uplink bytes dropped with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of uplink bytes dropped with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of uplink bytes dropped with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Downlink packets dropped	
QCI 1 - 9	The total number of downlink packets dropped with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of downlink packets dropped with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of downlink packets dropped with a non-standard QCI (GBR) using the P-GW service(s) on this system.
Total Downlink bytes dropped	
QCI 1 - 9	The total number of downlink bytes dropped with a QoS Class Index using the P-GW service(s) on this system.
Non-Std QCI (Non-GBR)	The total number of downlink bytes dropped with a non-standard QCI (non-GBR) using the P-GW service(s) on this system.
Non-Std QCI (GBR)	The total number of downlink bytes dropped with a non-standard QCI (GBR) using the P-GW service(s) on this system.
<b>802.1p priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with a specific (0-7) 802.1p priority. Deprecated in release 16.0 and later.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with a specific (0-7) 802.1p priority. Deprecated in release 16.0 and later.

Field	Description
<b>Priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with an internal QoS priority.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with an internal QoS priority.
<b>Session Discovery Req statistics</b>	
Total IMSI+IP lookup	This sub-group displays the total number of event information attempted, successful, and failed for the defined session discovery request rule.
<b>External-Id Present Session Statistics</b>	
Active Sessions	The total number of active External-Id sessions using the P-GW service(s) on this system.
Total Created Sessions	The total number of created External-Id sessions using the P-GW service(s) on this system.
Released Sessions	The total number of released External-Id sessions using the P-GW service(s) on this system.

## show pgw-service statistics all-name

Displays statistics information for all P-GW services configured on the system.

Field	Description
<b>Initiated PDNs By RAT-Type:</b>	
EUTRAN	The total number of EUTRAN PDNs by RAT-Type.
UTRAN	The total number of UTRANs PDNs by RAT-Type.
GERAN	The total number of GERANs PDNs by RAT-Type.
S2A GTP	The total number of S2A GTP PDNs by RAT-Type.
S2B GTP	The total number of S2B GTP PDNs by RAT-Type.
S2B PMIP	The total number of S2B PMIP PDNs by RAT-Type.
NB-IoT	The total number of NB-IoT PDNs.
LTE-M	The total number of LTE-M initiated PDNs.
WLAN	The total number of WLANs PDNs by RAT-Type.
Other	The total number of Others PDNs by RAT-Type.

Field	Description
<b>Current PDNs by RAT-Type:</b>	
EUTRAN	The total number of active EUTRAN PDNs by RAT-Type.
UTRAN	The total number of active UTRANs PDNs by RAT-Type.
GERAN	The total number of active GERANs PDNs by RAT-Type.
WLAN	The total number of active WLAN PDNs by RAT-Type.
NB-IoT	The total number of active NB-ToT PDNs.
LTE-M	The total number of active LTE-M PDNs.
Other	The total number of Others PDNs by RAT-Type

# CHAPTER 108

## show pilot-packet statistics

This chapter describes the output of the **show pilot-packet statistics** command.

- [show pilot-packet statistics](#), on page 1665
- [show pilot-packet statistics all](#), on page 1665

## show pilot-packet statistics

This chapter describes the output of the **show pilot-packet statistics** command.

## show pilot-packet statistics all

Displays statistical information for all Pilot Packet operations on the system.

*Table 473: show pilot-packet statistics all Command Output Descriptions*

Field	Description
Session manager instance	The sessmgr instance number.
Server name	The name of the server.
NAT Alloc	The total number of Pilot Packets sent for every IP/Port allocation for all NAT enabled calls.
NAT De Alloc	The total number of Pilot Packets sent for every IP/Port deallocation for all NAT enabled calls.
Non NAT Alloc	The total number of Pilot Packets sent for every IP/Port allocation for all non-NAT calls.
Non NAT De Alloc	The total number of Pilot Packets sent for every IP/Port deallocation for all non-NAT calls.
Total Alloc	The total number of Pilot Packets sent for every IP/Port allocation for all call types.

<b>Field</b>	<b>Description</b>
Total De Alloc	The total number of Pilot Packets sent for every IP/Port deallocation for all call types.
RAT-Change-User-Info	The total number of Pilot Packets sent for every subscriber IP allocation on RAT type change.
RAT-Change-NAT-Info	The total number of Pilot Packets sent for every NAT port chunk allocation on RAT type change.

## CHAPTER 109

# show plugin

---

- [show plugin, on page 1667](#)

## show plugin

*Table 474: show plugin Command Output Descriptions*

Field	Description
Patch-directory	Displays the patch directory location.
Base-directory	Displays the base directory location.
Base-version	Displays the base version (default).
Module Priority	Displays the module priority number.
Version	Displays the version number of the plugin.

# CHAPTER 110

## show port

This chapter describes the output of the **show port** command.

**Important** The outputs of **show port** commands vary based on platform ASR 5000 or ASR 5500, VPC (virtualized), card type and the StarOS release.

- [show port datalink counters \(ASR 5000\)](#), on page 1669
- [show port datalink counters \(ASR 5500\)](#), on page 1672
- [show port datalink counters \(VPC-SI, VPC-DI\)](#), on page 1674
- [show port dinet](#), on page 1676
- [show port info](#), on page 1676
- [show port npu counters](#), on page 1685
- [show port table](#), on page 1688
- [show port transceiver \(ASR 5500\)](#), on page 1689
- [show port utilization table](#), on page 1691

## show port datalink counters (ASR 5000)

*Table 475: show port datalink counters Command Output Descriptions (ASR 5000)*

Field	Description
Counters for port	The port for which the counters are displayed. The very next line displays the type of line card to which that port belongs.
Line Card	Line card type displayed as a text string
<b>RX Counters</b>	
RX Bytes	The number of received bytes.
RX BAD frames	The number of received frames with errors.
RX Runt frames	The number of received frames of less that expected size.
RX Oversize frames	The number of received oversize frames.

Field	Description
RX Good frames	The number of received frames with no errors.
RX Unicast frames	The number of Unicast frames received.
RX Multicast frames	The number of Multicast frames received.
RX Broadcast frames	The number of Broadcast frames received.
RX Size	The number of times that data was received according to number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1518 - Greater than 1518
RX OverSize frames	The number of oversized frames received.
RX Bytes OK	The number of bytes that were received without error.
RX Bytes BAD <b>ASR 5000 only</b>	The number of bytes that were received with errors.
RX OVF	The number of overflows received.
RX SHORT OK	The number of frames, less than 64 bytes in length, received without any error.
RX SHORT CRC	The number of frames, less than 64 bytes in length, received with cyclical redundancy check (CRC) error.
RX NO SFD	The number of frames received without start frame delimiter (SFD) detection but with carrier assertion.
RX NORM CRC	The number of frames, with lengths between 64 bytes and the maximum frame size, received with an integral number of bytes and a cyclical redundancy check (CRC) error.
RX NORM ALI	The number of frames, with lengths between 64 bytes and the maximum frame size, received with a non-integral number of bytes and a cyclical redundancy check (CRC) error.
RX LONG OK	The number of frames, larger than the maximum frame size, received without any error.

Field	Description
RX LONG CRC	The number of frames, larger than the maximum frame size, received with CRC error.
RX PAUSE	The number of correct received flow-control frames.
RX FALS CRS	The number of false carrier events detected.
RX SYM ERR	The number of received frames during which physical (PHY) symbol errors were detected.
RX GPCS ERR	The number of received frames during which physical (PHY) symbol errors were detected.
<b>Tx Counters</b>	
TX Unicast frames	The number of Unicast frames transmitted.
TX Multicast frames	The number of Multicast frames transmitted.
TX Broadcast frames	The number of Broadcast frames transmitted.
TX Size	The number of times that data was transmitted according to the number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1518 - Greater than 1518
TX Bytes OK	The number of bytes that were transmitted without error.
TX Bytes BAD	The number of bytes that were transmitted with errors.
TX DEFER	The number of frames deferred upon the first transmit attempt due to a busy line.
TX COL	The number of regular collision events occurring during transmission.
TX SCOL	The number of frames transmitted without any error following a single collision.
TX MCOL	The number of frames transmitted without any error following multiple collision.
TX XCOL	The number of frames that have experienced 16 consecutive collisions or more.

Field	Description
TX LCOL	The number of transmission abortion due to a collision occurring after transmission of packets that are 64 bytes in length.
TX PAUSE	The number of correct transmitted flow-control frames.
TX ERR	The number of frames transmitted with an error due to transmit FIFO underflow or TXERR signal assertion

## show port datalink counters (ASR 5500)

Table 476: show port datalink counters Command Output Descriptions (ASR 5500)

Field	Description
Counters for port	The port for which the counters are displayed. The very next line displays the type of line card to which that port belongs.
Line Card	Line card type displayed as a text string
<b>RX Counters</b>	
RX Bytes	The number of received bytes.
RX Unicast frames	The number of Unicast frames received.
RX Multicast frames	The number of Multicast frames received.
RX Broadcast frames	The number of Broadcast frames received.
RX Size	The number of times that data was received according to number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1518 - Greater than 1518
RX OverSize frames	The number of oversized frames received.
RX Undersize frames	The number of undersized frames received.
RX ExceededMaxSize frames	The number of frames received that exceeded maximum size.

Field	Description
RX Fragment frames	The number of fragmented frames received.
RX Jabber frames	The number of frames that exceeded 1518 bytes with a bad CRC (long packet error).
RX Control frames	The number of control frames received
RX Pause frames	The number of pause frames received.
RX FCS Error frames	The number of Frame Check Sequence error frames received.
RX Length Error frames	The of frames received with length errors.
RX Code Error frames	The number of frames received with code errors.
RX ExMaxSize Err frames	The number of frames received that included exceeded maximum size errors.
<b>Tx Counters</b>	
TX Bytes	
TX Unicast frames	The number of Unicast frames transmitted.
TX Multicast frames	The number of Multicast frames transmitted.
TX Broadcast frames	The number of Broadcast frames transmitted.
TX Size	The number of times that data was transmitted according to the number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1518 - Greater than 1518
TX OverSize frames	The number of oversized frames transmitted.
TX Undersize frames	The number of undersized frames transmitted.
TX Fragment frames	The number of fragmented frames transmitted.
TX Jabber frames	The number of frames transmitted that exceeded 1518 bytes with a bad CRC (long packet error).
TX Control frames	The number of control frames transmitted

Field	Description
TX Pause frames	The number of pause frames transmitted.
TX FCS Error frames	The number of Frame Check Sequence error frames transmitted.
TX Length Error frames	The of frames transmitted with length errors.

## show port datalink counters (VPC-SI, VPC-DI)

Table 477: show port datalink counters Command Output Descriptions (VPC-SI, VPC-DI)

Field	Description
Counters for port	The port for which the counters are displayed. The very next line displays the type of line card to which that port belongs.
Line Card	Line card type displayed as a text string
<b>RX Counters</b>	
RX Unicast frames	The number of Unicast frames received.
RX Multicast frames	The number of Multicast frames received.
RX Broadcast frames	The number of Broadcast frames received.
RX Size	The number of times that data was received according to number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1522
RX Bytes OK	The number of bytes that were received without error.
RX Bytes BAD	The number of bytes that were received with errors.
RX SHORT OK	The number of frames, less than 64 bytes in length, received without any error.
RX SHORT CRC	The number of frames, less than 64 bytes in length, received with cyclical redundancy check (CRC) error.
RX OVF	The number of overflows received.

Field	Description
RX NORM CRC	The number of frames, with lengths between 64 bytes and the maximum frame size, received with an integral number of bytes and a cyclical redundancy check (CRC) error.
RX LONG OK	The number of frames, larger than the maximum frame size, received without any error.
RX LONG CRC	The number of frames, larger than the maximum frame size, received with CRC error.
RX PAUSE	The number of correct received flow-control frames.
RX FALS CRS	The number of false carrier events detected.
RX SYM ERR	The number of received frames during which physical (PHY) symbol errors were detected.
<b>Tx Counters</b>	
TX Unicast frames	The number of Unicast frames transmitted.
TX Multicast frames	The number of Multicast frames transmitted.
TX Broadcast frames	The number of Broadcast frames transmitted.
TX Size	The number of times that data was transmitted according to the number of frames that comprised it. The number of frames are categorized into the following ranges: - 64 - 65 through 127 - 128 through 255 - 256 through 511 - 512 through 1023 - 1024 through 1522 - Greater than 1522
TX Bytes OK	The number of bytes that were transmitted without error.
TX Bytes BAD	The number of bytes that were transmitted with errors.
TX PAUSE	The number of correct transmitted flow-control frames.
TX ERR	The number of frames transmitted with an error due to transmit FIFO underflow or TXERR signal assertion

## show port dinet

Displays the DI-network port statistics.

**Table 478: show port dinet Command Output Descriptions**

Field	Description
counters	
SLOT/CPU/NPU	Displays the slot, CPU, NPU details of the DI-network port.
utilization	
SLOT/CPU/NPU	Displays the slot, CPU, NPU details of the DI-network port.
bps	Displays bits per second.
pps	Displays packets per second.
verbose	Displays the option to view complete port details.

## show port info

Displays detailed configuration and functional information for a specified interface port.

The command output varies depending on the type of port interface configured. Three tables are provided for the various port interface types available:

- Ethernet
- Frame Relay (ASR 5000 only)
- ATM (ASR 5000 only)

**Table 479: show port info Command Output Descriptions for Ethernet Port Line Card**

Field	Description
Port Type	The configured port type. Supported Ethernet port types and data transfer rates.
Role	The communication role played by this port. <ul style="list-style-type: none"> <li>• <b>Management Port:</b> Port has been designated for remote management access.</li> <li>• <b>Service Port:</b> Port handles subscriber traffic.</li> </ul>
Description	The textual description given to the port during software configuration. If no description was configured, ( <b>None Set</b> ) appears in this field.
Controlled By Card ASR 5000 only	The slot number and type of the front-installed application card to which this Ethernet line card is mapped.

Field	Description
Redundancy Mode	The redundancy mode configured for this Ethernet line card port. Possible redundancy modes are: <ul style="list-style-type: none"> <li>• <b>Card</b>: No redundancy will be used.</li> <li>• <b>Port</b>: Port redundancy will be used.</li> </ul>
Framing Mode <b>ASR 5x00 only</b>	Ethernet
Redundant With	The slot number and port number of the Ethernet card that is redundant with this Ethernet line card. If a redundant port is not available, <b>Not Redundant</b> appears in this field.
Preferred Port <b>Not for VPC-DI, CF</b>	Indicates if this card will assume revertive (auto-recovery) redundancy functionality should this line card be brought back into service after a failure.
Physical ifIndex	The static identification number for the slot/port combination on this Line Card. This ID is used in SNMP traps sent when the link status of the Ethernet port goes up or down.
Administrative State	<b>Enabled</b> indicates that this card has been configured for use via software.
Configured Duplex <b>ASR 5x00 only</b>	Indicates the port's configured duplex mode. Possible modes are: <ul style="list-style-type: none"> <li>• <b>Auto</b>: The port auto-detects the appropriate mode (Full- or Half-duplex) for communicating with the network.</li> <li>• <b>Full duplex</b></li> <li>• <b>Half duplex</b></li> </ul>
Configured Speed <b>ASR 5x00 only</b>	The maximum data rate configured for this port. Possible rates are: <ul style="list-style-type: none"> <li>• <b>Auto</b>: The port auto-detects the appropriate data rate for communicating on the network.</li> <li>• <b>10 Mbps</b></li> <li>• <b>100 Mbps</b></li> <li>• <b>1000 Mbps</b> (ASR 5000: supported on Ethernet 1000 Line Cards, Quad Gigabit Ethernet Line Cards, and SPIO Cards)</li> </ul>
Configured Flow Control <b>ASR 5000 only</b>	<b>Quad Gigabit Ethernet Line Card (QGLC) only: Enabled</b> indicates that Ethernet MAC level flow control has been enabled for this Ethernet port. Note that this is not necessarily the operational state of flow control, as both sides of the connection must agree to flow control during Ethernet negotiation.
Interface MAC Address <b>ASR 5500 only</b>	The interface media access control (MAC) address for the port.

Field	Description
Fixed MAC Address <b>ASR 5500 only</b>	The fixed media access control (MAC) address for the port.
MAC Address <b>ASR 5000 and VPC-SI/VPC-DI</b>	The media access control (MAC) address for the port. If Virtual MAC addressing is enabled, the MAC address is followed by ( <b>Virtual</b> ).
Boxer Interface TAP <b>ASR 5000 only</b> <b>VPC-DI, SF only</b>	Indicates whether this interface has been tapped for debugging or simulation purposes.
Link State	The port's link status: <b>Up</b> or <b>Down</b> .
Link Duplex <b>ASR 5x00 only</b>	The actual duplex mode ( <b>Auto</b> , <b>Full</b> or <b>Half</b> ) currently being used for the link.
Link Speed <b>ASR 5x00 only</b>	The actual data rate currently being supported by the port.
Flow Control <b>ASR 5x00 only</b>	Indicates the current <i>negotiated</i> state of Ethernet MAC level flow control ( <b>Enabled</b> or <b>Disabled</b> . Also see <b>Configured Flow Control</b> above).
Link Aggregation Group	If this port is configured as part of a Link Aggregation Group (LAG), this field indicates the group number to which this port belongs and whether the port is a Master or a Member. If the port is not configured as part of a Link Aggregation Group, <b>None</b> appears in this field.
(min_link) <b>ASR 5500 only</b>	Indicates the minimum number of links that must be available for this LAG to be up (usable).
(mode)	Indicates whether this LAG is redundant or non-redundant.
LAG Toggle Link <b>ASR 5000 only</b>	<b>Yes</b> indicates that the QGLC will generate "port link down" and "port link up" events for this LAG port.
LAG Redundancy Mode	If this port is configured as part of a LAG, this field indicates the Redundancy Mode configured for this Link Aggregation Group: <ul style="list-style-type: none"> <li>• <b>Standard</b>: During failover to the redundant card the amount of bandwidth available will be reduced from what was available for the original LAG.</li> <li>• <b>Switched</b>: Used when the Active LAG ports and are connected to different external switches in the service provider's network.</li> </ul>
LAG Hold Time	If <i>LAG Redundancy Mode</i> is set to <b>Switched</b> , this field indicates the time, in seconds, that will elapse before the system determines that the failover LAG ports must be switched again. This prevents the system from switching rapidly back and forth between the cards during routine maintenance (for example when Ethernet cables are being removed and reconnected between cards).

Field	Description
Link Aggregation Master	If this port is configured as part of a LAG, this field identifies the slot and port number that is the Master of this Link Aggregation Group.
Link Aggregation State	Indicates the result of the LACP negotiation.
Untagged: <i>(No VLAN IDs have been configured)</i>	
Logical ifIndex	The dynamically assigned identification number for the IP interface bound to this port. This ID is used in SNMP traps sent when the IP interface goes up or down or switches between top and bottom line cards.
Operational State	<p>The operational state and mode of the card, in the format &lt;state, mode&gt;. Possible operational states are Up or Down.</p> <p>Possible operational modes are:</p> <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because the card is not installed correctly (for example, the card interlock switch is not locked) or that its software processes have been halted.</li> </ul>
Tagged VLAN: <i>(VLAN IDs have been configured)</i>	
Logical ifIndex	The dynamically assigned identification number for the IP interface bound to this port. This ID is used in SNMP traps sent when the IP interface goes up or down or switches between top and bottom line cards.
VLAN Type	<b>Subscriber</b> indicates that the VLAN has been associated with a subscriber. <b>Standard</b> is not associated with a subscriber.
VLAN Priority	The value of the 802.1p priority bit as an integer from 0 through 7, with 7 being the highest priority. (ASN-GW only)
Administrative State	<b>Enabled</b> indicates that this card has been configured for use via software.

Field	Description
Operational State	<p>The operational state and mode of the VLAN, in the format &lt;state, mode&gt;. Possible operational states are Up or Down.</p> <p>Possible operational modes are:</p> <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because the card is not installed correctly (for example, the card interlock switch is not locked) or that its software processes have been halted.</li> </ul>
Number of VLANs	The total number of VLANs associated with this port.
SFP Module <b>ASR 5x00 only</b>	<b>NOTE:</b> This field appears only for Ethernet line cards that support the use of a small form-factor pluggable (SFP) transceiver module. Refer to the <b>show hardware card</b> command for additional information.

Table 480: show port info Command Output Descriptions for Frame Relay Port Line Card (ASR 5000)

Field	Description
Port Type	The configured port type: <b>STM1/OC3 Channelized</b>
Description	The textual description given to the port during software configuration. If no description was configured, <b>(None Set)</b> appears in this field.
Controlled By Card	The slot number and card type of front-installed application card to which this line card is mapped.
Redundancy Mode	<p>The redundancy mode configured for this line card. Possible redundancy modes are:</p> <ul style="list-style-type: none"> <li>• <b>Card Mode:</b> No redundancy will be used.</li> <li>• <b>Port Mode:</b> Port redundancy will be used.</li> </ul>
Framing Mode	<b>SDH</b> (default is E1) or <b>SONET</b> (default is DS1)
Redundant With	The slot number and port number of the line card that is redundant with this line card. If a redundant port is not available, <b>None</b> appears in this field.
Preferred Port	Indicates whether or not this card will assume revertive (auto-recovery) redundancy functionality should this card be brought back into service after a failure.

Field	Description
Physical ifIndex	The static identification number for the slot/port combination on this Line Card. This ID is used in SNMP traps sent when the link status of the Ethernet port goes up or down.
Administrative State	<b>Enabled</b> indicates that this card has been configured for use via software.
Link State	The port's link status: <b>Up</b> or <b>Down</b> .
Line Timing	Indicates whether or not this port has been configured to recover a timing clock from the line or port on the peer end of the connection for distribution to all chassis line cards. Line timing can be obtained from the following sources: <ul style="list-style-type: none"><li>• <b>BITS</b>: Line timing is recovered from the BITS port on the SPIO card</li><li>• <b>line-timing</b>: Line timing is obtained through the line or port connected to the far end port.</li><li>• <b>internal clock</b>: The line timing is obtained from the chassis' internal clock source. This internal clock is configured and enabled via the <b>clock-source internal</b> CLI command.</li></ul>
SFP Module	This field indicates if a small form-factor pluggable (SFP) module is installed on the card and its type. Possible SFP types are M5 or M6.

Field	Description
Path x e1 y <b>or</b> Path x ds1 y	<p>Identifies a specific routing path configuration (configured with the <b>path</b> command) associated with a frame relay DLCI (data link connection identifier, configured with the <b>dcli</b> command). Information provided includes:</p> <ul style="list-style-type: none"> <li>• The exact mapping of containers (C), virtual containers (VC), tributary units (TU) and/or tributary unit groups (TUG) that is/are appropriate for the configured channel characteristics. For example: <b>tu12-au3 1/1</b>.</li> <li>• The framing mode being used. For <b>ds1</b> the options are: <b>esf</b> (extended superframe), <b>sf</b> (superframe), and <b>unframed</b>. For <b>e1</b> the options are: <b>cas</b> (standard mapping with CAS), <b>cas-crc4</b> (CRC4 mapping with CAS), <b>crc4</b> mapping and <b>standard</b> mapping.</li> <li>• The mapping mode being used (<b>bit-sync</b> or <b>byte-sync</b>).</li> </ul> <p>For each configured path being utilized, the following additional information also is provided (for release 8.1 and later, the following items are configured with the <b>frame-relay</b> command):</p> <ul style="list-style-type: none"> <li>• <b>Timeslots</b>: Identifies the number of timeslot groupings for multiple fractional DS1/E1 channels. The maximum number of timeslots that can be defined is 8.</li> <li>• <b>Frame Relay Intf Type</b>: Indicates the frame relay interface type: <b>DCE</b> (Data Communication Equipment), <b>DTE</b> (Data Terminal Equipment), or <b>NNI</b> (Network to Network interface). The default is <b>DTE</b>.</li> <li>• <b>Frame Relay LMI Type</b>: Indicates the frame relay local management interface (LMI) protocol type: <b>ANSI</b>, <b>CISCO</b>, <b>Q933a</b>, or <b>None</b>. The default is <b>None</b>.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>• <b>Frame Relay LMI n391:</b> Indicates the number of keep-alive exchanges that will occur before the system requests a full status through the n391 local management interface. Possible values are 1 through 255. The default is 6.</li> <li>• <b>Frame Relay LMI n392:</b> Indicates the Error threshold value. It specifies the total number of errors within the event count specified by n393 local management interface to bring down the link. Possible values are 1 through 10 and default is 2.</li> <li>• <b>Frame Relay LMI n393:</b> Indicates the Monitored Events count. This monitored event count is set for the n392 local management interface. Possible values are 1 through 10. The default is 2.</li> <li>• <b>Frame Relay DLCI:</b> The specific Frame Relay PVC DLCI ID descriptor number associated with this path.</li> <li>• <b>Logical ifindex:</b> The dynamically assigned identification number for the IP interface bound to this Frame Relay PVC DLCI. This ID is used in SNMP traps sent when the IP interface goes up or down or switches between top and bottom line cards.</li> <li>• <b>Admin State: Enabled</b> Indicates that this Frame Relay DLCI PVC has been configured for use via software.</li> <li>• <b>Operational State:</b> The operational state and mode of the Frame Relay PVC DLCI, in the format &lt;state, mode&gt;. Possible operational states are <b>Up</b> or <b>Down</b>. Possible operational modes are: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the Frame Relay PVC DLCI is an active component that will be used to process subscriber data sessions.</li> </ul> </li> </ul>
	<ul style="list-style-type: none"> <li>• <b>Standby:</b> Indicates that the Frame Relay PVC DLCI is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be due to the fact that the card is not installed correctly (e.g., the card interlock switch is not locked) or that its software processes have been halted.</li> <li>• <b>Shaping:</b> Indicates the type of egress traffic shaping being used to control flow for this DLCI. Possible values are: <b>cir</b> (Committed Info Rate), <b>cir-eir</b> (Committed Info Rate with Excess Rate), <b>ppr</b> (Peak Packet Rate), and <b>wfq</b> (Weighted Fair Queueing).</li> <li>• <b>Number of DLCI:</b> The number of the Data Link Connection Identifier(s) (DLCI) associated with this timeslot. The DLCI is configured via the <b>dcli</b> command. The DLCI identifies the virtual connection so the receiving end knows which information connection a frame belongs to.</li> <li>• <b>Reserved Bandwidth:</b> The amount of bandwidth (in bits per second) reserved for this E1 or DS1 path.</li> <li>• <b>Number of DLCI:</b> The total number of DLCIs associated with this port</li> </ul>

Table 481: show port info Command Output Descriptions for ATM Line Card (ASR 5000)

Field	Description
Port Type	The configured port type: <b>STM1/OC3 ATM</b> .
Description	The description given to the port during software configuration. If no description was configured, ( <b>None Set</b> ) will be displayed.
Controlled By Card	The slot number and type of front installed application card to which this line card is mapped.
Redundancy Mode	The redundancy mode of the card. The possible modes are: <ul style="list-style-type: none"> <li>• <b>Normal</b>: Normal card redundancy.</li> <li>• <b>Port</b>: Port redundancy will be used.</li> </ul>
Framing Mode	<b>SDH</b> (default for E1) or <b>SONET</b> (default for DS1)
Redundant With	The slot number and port number of the line card that is redundant with this line card. If a redundant port is not available, <b>None</b> appears in this field.
Preferred Port	Indicates whether or not this card will assume revertive (auto-recovery) redundancy functionality should this card be brought back into service after a failure.
Physical ifIndex	The static identification number for a slot/port combination. This ID is used in SNMP traps sent when the link status of the port goes up or down.
Administrative State	Indicates whether or not the card has been configured for use via software. If it has been configured, <b>Enabled</b> appears in this field.
Link State	The link status, either <b>Up</b> or <b>Down</b> .
Line-timing	Indicates whether or not this port has been configured to recover a timing clock from the line or port on the peer end of the connection for distribution to all chassis line cards. Line timing can be obtained from the following sources: <ul style="list-style-type: none"> <li>• <b>BITS</b>: Line timing is recovered from the BITS port on the SPIO card</li> <li>• <b>line-timing</b>: Line timing is obtained through the line or port connected to the far end port.</li> <li>• <b>internal clock</b>: The line timing is obtained from the chassis' internal clock source. This internal clock is configured and enabled via the <b>clock-source internal</b> CLI command.</li> </ul>
SFP Module	This field indicates if a small form-factor pluggable (SFP) module is installed on the card and its type. Possible SFP types are M5 or M6.

Field	Description
PVC VPI xxx VCI yyy	<p>Indicates the virtual path identifier (VPI) and virtual connection identifier (VCI) numbers configured for a Permanent Virtual Connection (PVC).</p> <p>For each defined PVC VPI and VCI, the following associated information also is provided:</p> <ul style="list-style-type: none"> <li>• <b>Traffic Type:</b> Either <b>AAL2</b> (ATM Adaptation Layer 2) or <b>AAL5</b> (ATM Adaptation Layer 5). The default is <b>AAL5</b>.</li> <li>• <b>Logical ifIndex:</b> The dynamically assigned identification number for the IP interface bound to this port. This ID is used in SNMP traps sent when the IP interface goes up or down or switches between top and bottom line cards.</li> <li>• <b>Admin State:</b> <b>Enabled</b> indicates that this port has been configured for use via software.</li> <li>• <b>Operational State:</b> The operational state and mode of the card, in the format &lt;state, mode&gt;. Possible operational states are <b>Up</b> or <b>Down</b>. Possible operational modes are: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be due to the fact that the card is not installed correctly (such as, the card interlock switch is not locked) or that its software processes have been halted.</li> </ul> </li> <li>• <b>Encapsulation:</b> <b>AAL5 llc-snap</b> (logical link layer encapsulation) or <b>AAL5 vc-mux</b> (virtual circuit multiplexing).</li> </ul>
	<ul style="list-style-type: none"> <li>• <b>Shaping:</b> The type of traffic shaping (rates) configured for this PVC: <b>cbr</b> (constant bit rate), <b>ubr</b> (unspecified bit rate), <b>ubr+</b> (unspecified bit rate with minimum cell rate) or <b>vbr</b> (variable bit rate).</li> </ul>
Number of PVCs/CCs	The total number of PVCs configured for this port.
Reserved Bandwidth	The amount of bandwidth (in cells/second) reserved. The bandwidth can be utilized by a single PVC or it can span across multiple PVCs.

## show port npu counters

The output of this command displays four types of counters per counter type:

- Rx Frames
- Rx Bytes

- Tx Frames
- Tx Bytes

Table 482: show port npu counters Command Output Descriptions

Field	Description
Counters for port	The port for which the counters are displayed. The very next line displays the type of line card that the port belongs to.
Unicast	The number of Unicast frames and bytes received and transmitted.
Multicast	The number of Multicast frames and bytes received and transmitted.
Broadcast	The number of Broadcast frames and bytes received and transmitted.
IPv4 unicast	The number of Unicast IP version 4 frames and bytes received and transmitted.
IPv4 non-unicast	The number of non-Unicast IP version 4 frames and bytes received and transmitted.
IPv6 unicast	The number of Unicast IP version 6 frames and bytes received and transmitted.
IPv6 non-unicast	The number of non-Unicast IP version 6 frames and bytes received and transmitted.
Fragments received	The number of packet fragments qualified for re-assembly.
Packets reassembled	The number of packets that were successfully re-assembled.
Fragments to kernel	The number of qualified packet fragments that were sent to the kernel for re-assembly.
HW error	The number of packets discarded due to first-in, first-out (FIFO) overrun or underrun.
Port non-operational	The number of packets discarded due to port not operational.
SRC MAC is multicast	The number of packets discarded due to source MAC address is multicast.
Unknown VLAN tag	The number of packets discarded due to an unrecognized virtual local area network (VLAN) tag.
Other protocols	The number of packets discarded due to incorrect protocol type (neither IP or ARP).
Not IPv4	The number of packets discarded due to non IPv4
Bad IPv4 header	The number of packets discarded due to invalid IPv4 header
IPv4 MRU exceeded	The number of packets discarded due to packet length is too long.
MRU exceeded	<b>Note</b> From 21.20.19 release onwards, the <b>IPv4 MRU exceeded</b> counter has been changed to <b>MRU exceeded</b> . MRU exceeded is a generic counter for all types of packets.
TCP tiny fragment	The number of packets discarded due to TCP tiny fragment
No ACL match	The number of packets discarded due to not match from ACL lookup
Filtered by ACL	The number of packets discarded due to ACL filter

Field	Description
TTL expired	The number of packets discarded because their time-to-live parameter was exceeded.
Flow lookup twice	The number of packets discarded due to flow lookup to be performed twice (prevent microcode from looping)
Unknown IPv4 class	The number of packets discarded due to unknown classification received from hardware
Too short: IP	The number of packets discarded due to IP packet too short
Too short: ICMP	The number of packets discarded due to ICMP packet too short for lookup key
Too short: IGMP	The number of packets discarded due to IGMP packet too short for lookup key
Too short: TCP	The number of packets discarded due to TCP packet too short for lookup key
Too short: UDP	The number of packets discarded due to UDP packet too short for lookup key
Too short: IPIP	The number of packets discarded due to UDP packet too short for lookup key
Too short: GRE	The number of packets discarded due to GRE header size < 8 bytes
Too short: GRE key	The number of packets discarded due to GRE header says key present but header size < 13 bytes
Don't frag discards	Packets requiring fragmentation that are discarded by the NPU because the IP header don't fragment bit is set.
Fragment packets	Packets fragmented by the NPU due to exceeding MTU of egress port.
Fragment fragments	Total number of fragments fragmented by the NPU and sent to the egress port.
IPv4VlanMap dropped	Total number of IPv4 VLAN map packets that were dropped.
IPSec NATT keep alive	Total number of NAT-Traversal keep alive packets.
MPLS Flow not found	Total number of packets dropped when an MPLS flow was not found.
MPLS unicast	The number of MPLS Multicast frames and bytes received and transmitted.

Field	Description
Size <b>ASR 5000 and VPC-SI</b>	The number of frames and bytes that were received and transmitted according to the following size ranges: <ul style="list-style-type: none"> <li>- Less than 17</li> <li>- 17 through 64</li> <li>- 65 through 127</li> <li>- 128 through 255</li> <li>- 256 through 511</li> <li>- 512 through 1023</li> <li>- 1024 through 2047</li> <li>- 2048 through 4095</li> <li>- 4096 though 4500</li> <li>- Greater than 4500</li> </ul>
Size <b>ASR 5500 only</b>	The number of frames and bytes that were received and transmitted according to the following size ranges: <ul style="list-style-type: none"> <li>- 0 through 63</li> <li>- 64 through 127</li> <li>- 128 through 255</li> <li>- 256 through 511</li> <li>- 512 through 1023</li> <li>- 1024 through 2047</li> <li>- 2048 through 4095</li> <li>- 4096 though 8191</li> </ul>

## show port table

Table 483: show port table Command Output Descriptions

Field	Description
Port	Specifies the chassis slot and port numbers (<slot>/<port>) for all installed line cards.
Role	The communication role played by this port. <ul style="list-style-type: none"> <li>• <b>Mgmt</b>: Port has been designated for remote management access.</li> <li>• <b>Srvc</b>: Port handles subscriber traffic.</li> </ul>

Field	Description
Type	The card type descriptor.
Admin	Indicates whether or not the card has been configured for use via software. If it has been configured, <b>Enabled</b> will be displayed. If not, <b>Disabled</b> will be displayed.
Oper	The operational state of the card – <b>Up</b> or <b>Down</b> .
Link	The link status – <b>Up</b> or <b>Down</b> .
State	The operational mode of the card that the port belongs to. The card can be in one of the following modes: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because it is not completely installed (for example, the card interlock switch is not locked). Refer to the <i>Installation Guide</i> for additional information.</li> </ul>
Pair	Interface slot/port number of LAG peer port. LAG Port Status: <ul style="list-style-type: none"> <li>• LA+ = Port is actively used for distributing</li> <li>• LA- = Port failed to negotiate LACP</li> <li>• LA~(tilde) = Port negotiated LACP but another peer was selected</li> <li>• LA*(asterisk) = Port is (re)negotiating LACP</li> <li>• LA# = Port has been gone down because the min-link criteria is not met (ASR 5500 only)</li> </ul>
Redundant	Interface slot/port number of redundant LAG peer port.
Untagged:	Indicates the administrative, operational, link and active/standby states of an untagged (non-VLAN) port.
Tagged: VLAN <vlan_id>	Indicates the administrative, operational, link and active/standby states of a VLAN port.

## show port transceiver (ASR 5500)

Table 484: show port transceiver Command Output Descriptions (ASR 5500)

Field	Description
Port <slot/port>	Specifies the chassis slot and port number for the port.

Field	Description
SFP Transceiver info	Identifies the type of transceiver installed in the port.
SFP Vendor info	<b>Vendor Name:</b> Identifies the vendor's name <b>Vendor IEEE ID:</b> Displays the module vendor's IEEE ID.
SFP Vendor Rev. info	Displays the revision level for this vendor's module.
SFP Parts info	<b>P/N:</b> Displays the vendor's part number for this transceiver. <b>S/N:</b> Displays the vendor's serial number for this module. <b>Date:</b> Displays the vendor's manufacturing date for this module.
Nominal Bitrate	Displays the nominal bitrate for this module in megabits per second,
Length 50/125um	Core size = 50/125 microns
Length 62.5/125um	Core size = 62.5/125 microns
Wavelength	Displays the wavelength in nanometers (nm).
Diagnostic Monitor	Indicates whether diagnostic monitoring is supported (Yes/No).
Internally Calibrated	Indicates whether this module is internally calibrated (Yes/No).
Externally Calibrated	Indicates whether this module is externally calibrated (Yes/No).
SFF-8472 Compliance	Indicates whether this module complies with SFF-8472 – Diagnostic Monitoring Interface for Optical Transceivers (Yes/No).
Alarms	<b>Low Alarm Threshold</b> – trigger value for Low Alarm parameter <b>Low Warn Threshold</b> – trigger value for Low Warning Alarm parameter <b>Actual Value</b> – current actual parameter value <b>High Warn Threshold</b> – trigger value for High Warning Alarm parameter <b>High Alarm Threshold</b> – trigger value for High Alarm parameter
Alarm Threshold Parameters	<b>Temp (C)</b> – temperature (Centigrade) <b>Voltage (V)</b> – DC voltage <b>Bias (mA)</b> – laser bias current in milliamperes <b>TxPower (dBm)</b> – transmit power in decibels <b>RxPower (dBm)</b> – receive power in decibels

# show port utilization table

**Important** The **verbose** option for this command displays port utilization with kilobit accuracy using decimal points.

**Table 485: show port utilization table Command Output Descriptions**

Field	Description
Port <slot/port>	Specifies the chassis slot and port number for the port.
Type	Identifies the port type.
Average Port Utilization (in mbps)	
Current	Displays average current port utilization in megabits per second (Mbps).
5min	Displays average port utilization over the last 5-minute interval in Mbps.
15min	Displays average port utilization over the last 15-minute interval in Mbps.
Rx	Displays port utilization for received packets.
Tx	Displays port utilization for transmitted packets.

# CHAPTER 111

## show ppp

This chapter describes the output of the **show ppp** command.

- [show ppp](#), on page 1693
- [show ppp full username](#), on page 1694
- [show ppp statistics pdsn-service](#), on page 1697

## show ppp

*Table 486: show ppp Command Output Descriptions*

Field	Description
PPP Summary	The total number of PPP sessions that are in progress (either active, dormant, being set up, and being disconnected).
Layer Info	<p>The layer status for the various control protocols used in the establishing of the PPP status. Information is displayed for the following:</p> <ul style="list-style-type: none"><li>• <b>LCP:</b> Link Control Protocol</li><li>• <b>IPCP:</b> Internet Protocol Control Protocol</li><li>• <b>CCP:</b> PPP Compression Control Protocol</li></ul> <p>The information provided represents the total number of sessions that have successfully negotiated the specified control protocol.</p>

Field	Description
Compression	<p>The total number of PPP sessions that meet of each of the following specified characteristics:</p> <p>Sessions using Van Jacobsen (VJ) header compression in either direction (local to remote or remote to local).</p> <p>Sessions using Robust Header Compression (ROHC) in either direction (local to remote or remote to local).</p> <p>Sessions using either the Normal or Stateless compression modes.</p> <p>Sessions using no compression or one of the following compression protocols in either direction (local to remote or remote to local):</p> <ul style="list-style-type: none"> <li>• STAC</li> <li>• MPPC</li> <li>• DEFLATE</li> </ul>
Errors	<p>The total number of errors recorded for all of the PPP sessions that are in progress (either active, dormant, being set up, and being disconnected). Many of the error statistics are recorded for the receiving (indicated by In) and transmission (indicated by Out) of data packets.</p>
Data Stats	<p>Displays cumulative statistics for all of the data received (indicated by In) and transmitted (indicated by Out).</p>

## show ppp full username

Table 487: show ppp full username Command Output Descriptions

Field	Description
Username	The subscriber's username.
Callid	The subscriber's call identification (callid) number.
Msid	The subscriber's mobile station identification (MSID) number.
LCP State	Indicates whether or not the Link Control Protocol (LCP) was successfully negotiated (Opened). If not, Not Opened will be displayed.
mtu	The subscriber's maximum transmission unit (MTU) size in octets.
mru	The subscriber's maximum reception unit (MRU) size in octets.
auth algorithm	<p>The protocol the subscriber used for authentication. Possible protocols are:</p> <ul style="list-style-type: none"> <li>• <b>CHAP:</b> Challenge Handshake Authentication Protocol</li> <li>• <b>PAP:</b> Password Authentication Protocol</li> </ul>

Field	Description
PFC (loc to rem): (rem to loc):	<p>The PPP PFC transmit and receive settings.</p> <p>(loc to rem): Specifies how Protocol field Compression is applied for PPP packets transmitted to the Peer. Possible values are:</p> <ul style="list-style-type: none"> <li>• ignore</li> <li>• apply</li> <li>• reject</li> </ul> <p>(rem to loc): Specifies whether Protocol Field Compressed PPP packets can be received from the Peer. Possible values are:</p> <ul style="list-style-type: none"> <li>• allow</li> <li>• deny</li> </ul>
ACFC (loc to rem): (rem to loc):	Information is displayed for both directions of the session (remote-to-local and local-to-remote).
async map	The PPP asynchronous control character mapping (a 32-bit map). Information is displayed for both directions of the session (remote-to-local and local-to-remote).
IPCP State	Indicates whether or not the Internet Protocol Control Protocol (IPCP) was successfully negotiated (Opened). If not, Not Opened will be displayed.
IP Header comp	<p>Indicates whether or not Van Jacobsen (VJ) header compression or Robust Header Compression (ROHC) is being implemented for the subscriber's session. If neither, none is displayed.</p> <p>Information is displayed for both directions of the session (remote-to-local and local-to-remote).</p>
Local Address	The PPP local address for the subscriber session.
Remote Address	The IP address assigned to the subscriber's mobile device for the duration of the session.
Primary DNS	Indicates the IP address of the primary Domain Name Server (DNS) assigned to the subscriber.
Secondary DNS	Indicates the IP address of the secondary Domain Name Server (DNS) assigned to the subscriber.
Primary NBNS	Indicates the IP address of the primary NetBIOS Name Server (NBNS) assigned to the subscriber.
Secondary NBNS	Indicates the IP address of the secondary NetBIOS Name Server (NBNS) assigned to the subscriber.
IPV6CP State	Indicates whether or not the Internet Protocol v6 Control Protocol (IPv6CP) was successfully negotiated (Opened). If not, Not Opened will be displayed.
In octs(unframed)	The total number of unframed octets received.

Field	Description
In pkts	The total number of packets received
Out octs(unframed)	The total number of unframed octets sent
Out pkts	The total number of packets sent
In ctrl octs	The total number of control octets received
In ctrl pkts	The total number of control packets received
Out ctrl octs	The total number of control octets sent
Out ctrl pkts	The total number of control packets sent
In framed octs	The total number of framed octets received
Out framed octs	The total number of framed octets sent
In data (unfr/data-cmp) octs	The total number of unframed data compressed data octets received
Out data (unfr/data-cmp) octs	The total number of unframed data compressed data octets sent
In data (iphdr-cmp) octs	The total number of data octets with IP header compression received
Out data (iphdr-cmp) octs	The total number of data octets with IP header compression sent
In data (iphdr-cmp-fail) octs	The total number of data octets with failed IP header compression received
In data (iphdr-cmp-fail) pkts	The total number of data packets with failed IP header compression received
In data (iphdr-rohc) octs	The total number of data octets with ROHC IP header compression received
Out data (iphdr-rohc) octs	The total number of data octets with ROHC IP header compression sent
In data (iphdr-rohc-fail) octs	The total number of data octets with failed ROHC IP header compression received
In data(iphdr-rohc-fail) pkts	The total number of data packets with failed ROHC header compression received
In discards	The total number of input discards
In errors	The total number of input errors
Out discards	The total number of output discards
Out errors	The total number of output errors
Bad address	The total number of bad addresses
Bad control	The total number of bad control messages
Pkt too long	The total number of packets that were too long
Bad FCS	The total number of bad Frame Check Sequences (FCS)
Bad pkt length	The total number of bad packet lengths

Field	Description
Echo req rcvd	The total number of echo requests received
Echo rsp rcvd	The total number of echo responses received
Echo req sent	The total number of echo requests sent
Echo rsp sent	The total number of echo responses sent
Invalid magic-number rcvd	The total number of invalid magic numbers received

## show ppp statistics pdsn-service

*Table 488: show ppp statistics pdsn-service Command Output Descriptions*

Field	Description
PPP statistics for pdsn-service	Indicates the name of the PDSN service for which PPP statistics are being displayed.
total sessions initiated	Indicates the total number of subscriber sessions that have been received by the by the system for processing.
session re-negotiated	Indicates the total number of subscriber sessions that have been re-negotiated by the by the system.
successful sessions	Indicates the total number of subscriber sessions that have been successfully connected by the by the system.
failed sessions	Indicates the total number of subscriber sessions that the system has/have failed to process.
total sessions released	Indicates the total number of subscriber sessions that have been disconnected.
failed re-negotiations	Indicates the number of PPP calls that failed while LCP or IPCP was being re-negotiated.
released by local side	Indicates the total number of subscriber sessions that have been dropped by the system.
released by remote side	Indicates the total number of subscriber sessions that have been dropped by the mobile nodes.
<b>Session Failures</b>	
LCP failure max-retry	Indicates the number of sessions that were released during setup due to the system not receiving a response prior to the expiration of the maximum number of Link Control Protocol (LCP) retries.
LCP failure option-issue	Indicates the number of sessions that were released during setup due to failed negotiations between the system and the mobile nodes over Link Control Protocol (LCP) options.
LCP failure unknown	Indicates the number of calls that failed because of miscellaneous LCP failures.

Field	Description
IPCP failure max-retry	Indicates the number of sessions that were released during setup due to the system not receiving a response prior to the expiration of the maximum number of Internet Protocol Control Protocol (IPCP) retries.
IPCP failure option-issue	Indicates the number of sessions that were released during setup due to failed negotiations between the system and the mobile nodes over Internet Protocol Control Protocol (IPCP) options.
IPCP failure unknown	Indicates the number of calls that failed because of miscellaneous IPCP related failures.
IPv6CP failure max-retry	Indicates the number of IPv6CP calls that failed after the maximum number of retries.
IPv6CP failure option issue	Indicates the number of sessions that were released during setup due to failed negotiations between the system and the mobile nodes over IPv6CP options.
IPv6CP failure unknown	Indicates the number of calls that failed because of miscellaneous IPv6CP related failures.
Authentication failures	Indicates the number of sessions that were released during setup due to subscriber authentication failures
Authentication aborted	Indicates the number of times that authentication was not successful because the peer failed to provide the required request or response packet in time.
remote terminated	Indicates the number of sessions that were released by the mobile node.
lower layer disconnected	Indicates the number of times that the peer terminated the lower protocol layer.
miscellaneous failures	Indicates the number of session failures that occurred due to reasons other than those listed here.
<b>Session Progress</b>	
sessions (re)entered LCP	Indicates the number of sessions entering or re-entering the Link Control Protocol (LCP) phase of call setup.
sessions (re)entered Auth	Indicates the number of sessions entering or re-entering the authentication phase of call setup.
sessions (re)entered IPCP	Indicates the number of sessions entering or re-entering the Internet Protocol Control Protocol (IPCP) phase of call setup.
sessions (re)entered IPv6CP	Indicates the number of sessions entering or re-entering the IPv6CP phase of call setup.
successful LCP	Indicates the number of calls that completed LCP successfully.
successful Authentication	Indicates the number of calls that completed authentication successfully.
<b>Session Re-negotiations</b>	
initiated by local	Indicates the number of session re-negotiations initiated by the system.
initiated by remote	Indicates the number of session re-negotiations initiated by the mobile nodes.

Field	Description
address mismatch	Indicates the number of session re-negotiations that occurred due to mis-matched IP addresses.
lower layer handoff	Indicates the number of times that the PDSN service renegotiated PPP because of a suspicious RP handoff.
parameter update	Indicates the number of times that the PDSN service renegotiated PPP to update some PPP parameters (e.g. DNS address obtained from HA for regular MIP)
other reasons	Indicates the number of session re-negotiations that occurred due to reasons other than those listed here.
connected session re-neg	Indicates the number of PPP renegotiation happened for sessions which are already in connected/established state.
<b>Session Authentication</b>	
CHAP auth attempt	Indicates the number of sessions that attempted to authenticate using the Challenge Handshake Authentication Protocol (CHAP).
CHAP auth success	Indicates the number of sessions that successfully authenticated using the Challenge Handshake Authentication Protocol (CHAP).
CHAP auth failure	Indicates the number of sessions that failed authentication using the Challenge Handshake Authentication Protocol (CHAP).
CHAP auth aborted	Indicates the number of times that CHAP authorization was aborted due to the fact that the peer failed to provide the required CHAP response packet in time.
PAP auth attempt	Indicates the number of sessions that attempted to authenticate using the Password Authentication Protocol (PAP).
PAP auth success	Indicates the number of sessions that successfully authenticated using the Password Authentication Protocol (PAP).
PAP auth failure	Indicates the number of sessions that failed authentication using the Password Authentication Protocol (CHAP).
PAP auth aborted	Indicates the number of times that PAP authorization was aborted due to the fact that the peer failed to provide the required PAP response packet in time.
MSCHAP auth attempt	Indicates the number of sessions that attempted to authenticate using MicroSoft CHAP (MS CHAP).
MSCHAP auth success	Indicates the number of sessions that successfully authenticated using MicroSoft CHAP (MS CHAP).
MSCHAP auth failure	Indicates the number of sessions that failed authentication using MicroSoft CHAP (MS CHAP).
MSCHAP auth aborted	Indicates the number of times that MSCHAP authorization was aborted due to the fact that the peer failed to provide the required CHAP response packet in time.

Field	Description
sessions skipped PPP Auth	Indicates the number of sessions that skipped PPP authorization.
<b>Session Disconnect reason</b>	
remote initiated	Indicates the number of sessions for which the mobile node initiated the disconnection.
remote disc. lower layer	Indicates the number of sessions in which the mobile node disconnected the lower layers of the protocol stack.
admin disconnect	Indicates the number of sessions for which the system initiated the disconnection.
local disc. lower layer	Indicates the number of sessions in which the system disconnected the lower layers of the protocol stack.
idle timeout	Indicates the number of sessions disconnected due to exceeding their idle timeout limit.
absolute timeout	Indicates the number of sessions disconnected due to exceeding their absolute timeout limit.
keep alive failure	Indicates the number of sessions disconnected due to keep alive failures.
no resource	Indicates the number of sessions disconnected due to lack of resources on the local side (CPU and memory).
flow add failure	Indicates the number of sessions for which the Network Processor Unit (NPU) failed to add a flow.
exceeded max LCP retries	Indicates the number of sessions disconnected due to exceeding their maximum number of Link Control Protocol (LCP) retries.
exceeded max IPCP retries	Indicates the number of sessions disconnected due to exceeding their maximum number of Internet Protocol Control Protocol (IPCP) retries.
exceeded max setup timer	Indicates the number of sessions disconnected due to exceeding their maximum amount of time allotted for session setup.
invalid dest-context	Indicates the number of sessions disconnected due to the specification of an invalid destination context.  <b>NOTE:</b> Refer to the System Administration and Administration Reference for additional information about destination contexts and how they are determined.
LCP option-neg failed	Indicates the number of sessions that were disconnected due to failed negotiations between the system and the mobile nodes over Link Control Protocol (LCP) options.
IPCP option-neg failed	Indicates the number of sessions that were disconnected due to failed negotiations between the system and the mobile nodes over Internet Protocol Control Protocol (IPCP) options.
no remote-ip address	Indicates the number of sessions that were disconnected due to the lack of an IP address for the mobile node.

Field	Description
call type detect failed	Indicates the number of sessions that were disconnected due to the system not being able to determine what type of service to provide for the session. The possible services are: <ul style="list-style-type: none"> <li>• pdsn-simple-ip</li> <li>• pdsn-mobile-ip</li> <li>• ha-mobile-ip</li> </ul>
source address violation	Indicates the number of sessions that were disconnected due to source address violations.
exceeded max IPv6CP retries	Indicates the number of sessions disconnected due to exceeding their maximum amount of time allotted for IPv6CP setup.
IPv6CP option-neg failed	Indicates the number of sessions that were disconnected due to failed negotiations between the system and the mobile nodes over IPv6CP options.
remote disc. upper layer	Indicates the number of times a session was disconnected because the remote peer disconnected the upper protocol layer.
long duration timeout	The number of sessions disconnected due to expiration of the long duration timer.
PPP auth failures	The number of sessions that failed due to PPP authorization failures.
miscellaneous reasons	Indicates the number of sessions that were disconnected for reasons other than those listed here.
<b>Session Data Compression</b>	
sessions negotiated comp	Indicates the total number of sessions that negotiated the use data compression.
STAC Compression	Indicates the total number of sessions that negotiated the use data compression using the STAC protocol.
MPPC compression	Indicates the total number of sessions that negotiated the use data compression using the MPPC protocol.
Deflate Compression	Indicates the total number of sessions that negotiated the use data compression using the DEFLATE protocol.
CCP negotiation failures	Indicates the number of Compression Control Protocol negotiation failures.
<b>Session Header Compression</b>	
VJ compression	Indicates the total number of sessions that negotiated the use of Van Jacobsen (VJ) header compression.
ROHC Compression	Indicates the total number of sessions that negotiated the use of Robust Header Compression (ROHC).
LCP Echo Statistics	
total LCP Echo Req. sent	The total number of LCP Echo requests sent to the peer.

<b>Field</b>	<b>Description</b>
LCP Echo Req. resent	The total number of LCP echo requests retransmitted to the peer.
LCP Echo Reply received	The total number of LCP echo replies received from the peer.
LCP Echo Request timeout	The total number of LCP Echo timeouts that occurred since a Reply was not received.
<b>Receive Errors</b>	
bad FCS errors	Indicates the number of packets received with an invalid Frame Check Sequence (FCS).
unknown protocol errors	Indicates the number of packets received with an invalid protocol type.
bad Address errors	Indicates the number of packets received with a bad address field.
bad control field errors	Indicates the number of packets received with a bad control field.
bad pkt length	Indicates the number of packets received with an invalid packet length.

# CHAPTER 112

## show prepaid

This chapter describes the output of the **show prepaid** command.

- [show prepaid 3gpp2 statistics, on page 1703](#)
- [show prepaid wimax statistics asngw-service, on page 1704](#)

## show prepaid 3gpp2 statistics

*Table 489: show prepaid 3gpp2 statistics Command Output Descriptions*

Field	Description
Total pre-paid sessions	The total number of Pre-paid sessions counted since the last system restart or since the last clear prepaid 3gpp2 statistics command was issued.
Current pre-paid sessions	The number of currently active Pre-paid sessions.
Total online-auth success	The total number of successful online pre-paid authorizations (credit updates).
Total online-auth failure	The total number of failed online pre-paid authorizations (credit updates).
Online prepaid errors	The number of online prepaid messaging errors.
Initial auth prepaid err❖	The number of errors, while processing radius responses, specific to radius protocol violations such as authenticator attribute failed validation.❖
Total ptt sessions	The total number of PTT sessions counted since the last system restart or since the last clear prepaid 3gpp2 statistics command was issued.
Current ptt sessions	The number of currently active PTT sessions.
Total ptt filtering sess	The total number of PTT filtering sessions counted since the last system restart or since the last clear prepaid 3gpp2 statistics command was issued.  NOTE: A PTT filtering session discards all user traffic that is not sent directly to, or from, the PTT switch.
Current ptt filtering sess	The number of currently active PTT filtering sessions.  NOTE: A PTT filtering session discards all user traffic that is not sent directly to, or from, the PTT switch.

Field	Description
Total non ptt sessions	The total number of non-PTT sessions counted since the last system restart or since the last clear prepaid 3gpp2 statistics command was issued.
Current non ptt sessions	The number of currently active sessions that are not PTT sessions.
Total non determined sess	The total number of sessions counted since the last system restart or since the last clear prepaid 3gpp2 statistics command was issued that can not be determined whether or not they are PTT sessions.
Curr non determined sess	The number of currently active sessions that can not be determined whether or not they are PTT sessions.

## show prepaid wimax statistics asngw-service

*Table 490: show prepaid wimax statistics asngw-service Command Output Descriptions*

Field	Description
Total prepaid sessions	The total cumulative prepaid sessions processed by this service.
Current prepaid sessions	The number of prepaid sessions currently active in this service.
Total online-auth success	The total number of authentication success for online prepaid authentication requests.
Total online-auth failures	The total number of authentication failures/rejects received for online authentication requests.
Online prepaid errors	The number of errors encountered due to the prepaid response message (success) being discarded due to problems like missing appropriate attributes or wrong attribute values though we had received it as access accept from radius server.
Initial auth prepaid err	The number of errors, while processing radius responses, specific to radius protocol violations such as authenticator attribute failed validation.

# CHAPTER 113

## show process

This chapter describes the output of the **show process** command.

- [show process status, on page 1705](#)

## show process status

Displays process listings in the system. The process listing information can be viewed for a card or CPU (or both).

**Table 491: show process status Command Output Descriptions for Card or CPU**

Field	Description
USER	Indicates the internal Linux system user, that is, either "root" or "cli". <b>Note</b> The "user" referred here is not the same as context users, local users, or TACACS+ users that are configured in the system.
PID	Indicates the process ID.
PPID	Indicates the parent process ID.
STARTED	Indicates the process starting time.
%CPU	Indicates the CPU percentage that the process has used.
%MEM	Indicates the memory percentage that the process has used.
COMMAND	Displays the command that was used to start the process, along with the arguments used.

# CHAPTER 114

## show ps-network

This chapter includes the **show ps-network** command output tables.

- [show ps-network all status, on page 1707](#)
- [show ps-network statistics ranap-only, on page 1709](#)
- [show ps-network statistics sccp-only, on page 1713](#)
- [show ps-network statistics gtpu-only, on page 1715](#)

## show ps-network all status

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 492: show ps-network all status Command Output Descriptions**

Field	Description
PS Network name	Indicates the name of the Packet Switched (PS) network instance for which status is displayed.
Associated SCCP-Network	Indicates the name of the Signalling Connection Control Part (SCCP) network service instance which in associated with referenced PS network instance.
Associated GTPU Service	Indicates the name of the GTP-U service instance which in associated with referenced PS network instance.
GTPU Context Name	Indicates the name of the context in which GTP-U service instance is configured.
SGSN Point Code	Indicates the address of SGSN in SS7 point code notation which is serving the referenced PS network instance.
Status	Indicates the status of SGSN which is serving the referenced PS network instance.
Network Status	Indicates the status of network in which the referenced PS network instance is placed.
NRI	Indicates the Network Resource Identification (NRI) bit configuration status for the referenced PS network.

Field	Description
IDNNS	Indicates the Intra-Domain NAS Node Selector (IDNNS) configuration status for the referenced PS network to transport the NRI value.
CORE NODE MAP	Indicates the core node mapping configuration status for the referenced PS network.
Initiated Ranap Reset	Indicates if the HNB-GW Initiated RANAP Reset function is enabled or disabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Ack Timer	The timer value, in seconds, that defines how long the HNB-GW waits for a RESET ACK message from the SGSN after transmitting a RESET message. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Maximum Retransmissions	Sets the maximum number of retries allowed for the HNB-GW to transmit a RANAP RESET message to the SGSN if the RESET ACK timer expires. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Guard Timer	The timer that the HNB-GW starts after receiving a RESET message from the PS core network. While this timer is running, the HNB-GW discards any new RESET messages that it receives. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Global RNC-Id	This group displays the information related to global Radio Network Controller settings for use by the PS core network for HNB-GW service(s) on a chassis. It is configured under the PLMN-ID.
MCC	The Mobile Country Code defined for use with this HNB-GW service. It consists of the first 3 digits of the Available Radio Network PLMN ID.
MNC	The Mobile Network Code defined for use with this HNB-GW service. It consists of the last 3 digits of the Available Radio Network PLMN ID.
Id	The Radio Network Controller ID provided to HNBs for use by the PS core network for this HNB-GW service. It is configured under the PLMN-ID

## show ps-network statistics ranap-only

Table 493: show ps-network statistics ranap-only Command Output Descriptions

Field	Description
RANAP	This group displays the statistics of RANAP in a PS network on chassis.
Initial UE Tx	Total number of initial UE requests transmitted.
Direct Transfer Rx	Total number of Direct Transfer requests received.
Direct Transfer Tx	Total number of Direct Transfer responses sent.
Reset Rx	Total number of RESET requests received.
Reset Tx	Total number of RESET responses sent.
Reset Ack Rx	Total number of RESET Ack requests received.
Reset Ack Tx	Total number of responses against RESET Ack request sent.
Reset Resource Rx	Total number of RESET RESOURCE requests received.
Reset Resource Tx	Total number of RESET RESOURCE responses sent.
Reset Resource Ack Rx	Total number of RESET RESOURCE Ack requests received.
Reset Resource Ack Tx	Total number of responses against RESET RESOURCE Ack request sent.
Iu Release Request Tx	Total number of Iu RELEASE requests sent.
Iu Release Command Rx	Total number of Iu RELEASE command received.
Iu Release Complete Tx	Total number of Iu RELEASE Complete response sent.
Paging Request Rx	Total number of Paging requests received.
RAB Assignment Request Rx	Total number of RAB assignment requests received.
RAB Setup/Mod Rx	Total number of RAB setup or modification requests received.
RAB Release Rx	Total number of RAB Release requests received.
RAB Assignment Response Tx	Total number of responses against RAB assignment requests sent.
RAB Setup/Mod Success Tx	Total number of RAB setup or modification Success response sent.
Total RAB Setup/Mod Fail Tx	Total number of RAB setup or modification Fail response sent.
RAB Setup/Mod Fail(Local) Tx	Total number of RAB setup or modification Fail response sent where RAB setup or modification failed due to local reason/cause.
RAB Release Success Tx	Total number of RAB Release Success response sent.

Field	Description
Total RAB Release Fail Tx	Total number of RAB Release Success response sent.
RAB Release Fail(Local) Tx	Total number of RAB Release Fail response sent where RAB Release failed due to local reason/cause.
RAB Queued Tx	Total number of RAB messages queued for transmission.
RAB Setup/Mod Timer Exp	Total number of instances where RAB setup/modification timer expired before process of request.
RAB Release Timer Exp	Total number of instances where RAB Release timer expired before process of request.
RAB Set/Mod/Rel Local Fail	This group displays the total number of RAB setup or modification or release requests failed due to local reason/cause.
Local Failure Cause	This group identifies the local cause for RAB setup or modification or release request failure.
Radio Network Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in radio network layer.
Invalid Rab Id	Total number of RAB setup or modification or release requests failed due to invalid RAB id in radio network layer.
Interaction With Other Proc	Total number of RAB setup or modification or release requests failed as system was interacting with another process.
Transport Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Transport layer.
Sig Trans Res Fail	Total number of RAB setup or modification or release requests failed due to Sig trans Resource failure in transport layer.
Iu Tran Conn failed to Estab	Total number of RAB setup or modification or release requests failed where Iu Transmission connection failed to establish in transport layer.
Protocol Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Protocol layer.
Transfer syntax error	Total number of RAB setup or modification or release requests failed due to transfer syntax error in Protocol layer.
Asn error(Reject)	Total number of RAB setup or modification or release requests failed due to ASN (Reject) syntax error in Protocol layer.
Asn error	Total number of RAB setup or modification or release requests failed due to ASN syntax error in Protocol layer.
Msg not comp with Rcvr state	Total number of RAB setup or modification or release requests failed as message was not compatible with Recovery state in Protocol layer.
Semantic error	Total number of RAB setup or modification or release requests failed due to semantic error in Protocol layer.

Field	Description
Asn error(Falsey const msg)	Total number of RAB setup or modification or release requests failed due to ASN error (falsely constructed messages) in Protocol layer.
Miscellaneous Cause	This group identifies the total number of RAB setup or modification or release request failure due to miscellaneous cause (not listed in this table).
No Resource Available	Total number of RAB setup or modification or release requests failed due to non availability of resource.
Unspecified	Total number of RAB setup or modification or release request failure due to unspecified cause (not listed in this table).
<class_name> Class	This group displays the total number of RAB setup or modification or release request failure grouped in Class name <class_name>. <p>Following groups are supported:</p> <ul style="list-style-type: none"> <li>• Conversational Class</li> <li>• Streaming Class</li> <li>• Interactive Class</li> <li>• Background Class</li> <li>• Unknown Class</li> </ul>
RAB Setup/Mod Rx	Total number of RAB setup or modification requests received for specific class.
RAB Setup/Mod Success Tx	Total number of RAB setup or modification success messages sent for specific class.
RAB Release Rx	Total number of RAB Release requests received for specific class.
Total RAB Setup/Mod Fail Tx	Total number of RAB setup or modification failure messages sent for specific class.
RAB Setup/Mod Fail(Local) Tx	Total number of RAB setup or modification failure messages sent for specific class where RAB setup or modification failed due to local reason/cause.
RAB Release Success Tx	Total number of RAB Release success messages sent for specific class.
Total RAB Release Fail Tx	Total number of RAB Release fail messages sent for specific class.
RAB Release Fail(Local) Tx	Total number of RAB Release fail messages sent for specific class where RAB setup or modification failed due to local reason/cause.
RAB Queued Tx	Total number of RAB messages queued for processing or transmission.
Relocation Request Rx	Total number of RAB Relocation request received by system for this PS network.
RAB Setup Rx	Total number of RAB Relocation setup request received by system for this PS network.
Relocation Request ACK Tx	Total number of RAB Relocation Ack messages sent against setup request received by system for this PS network.
RAB Setup Success Tx	Total number of RAB setup success messages sent against setup request received by system for this PS network.

Field	Description
Total RAB Setup Fail Tx	Total number of RAB setup fail messages sent against setup request received by system for this PS network.
RAB Setup Fail(Local) Tx	Total number of RAB setup failure messages sent from this system where RAB setup or modification failed due to local reason/cause.
Local Failure Cause	This group identifies the local cause for RAB setup or modification or release request failure.
Radio Network Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in radio network layer.
Invalid Rab Id	Total number of RAB setup or modification or release requests failed due to invalid RAB id in radio network layer.
Interaction With Other Proc	Total number of RAB setup or modification or release requests failed as system was interacting with another process.
Transport Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Transport layer.
Sig Trans Res Fail	Total number of RAB setup or modification or release requests failed due to Sig trans Resource failure in transport layer.
Iu Tran Conn failed to Estab	Total number of RAB setup or modification or release requests failed where Iu Transmission connection failed to establish in transport layer.
Protocol Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Protocol layer.
Transfer syntax error	Total number of RAB setup or modification or release requests failed due to transfer syntax error in Protocol layer.
Asn error(Reject)	Total number of RAB setup or modification or release requests failed due to ASN (Reject) syntax error in Protocol layer.
Asn error	Total number of RAB setup or modification or release requests failed due to ASN syntax error in Protocol layer.
Msg not comp with Revr state	Total number of RAB setup or modification or release requests failed as message was not compatible with Recovery state in Protocol layer.
Semantic error	Total number of RAB setup or modification or release requests failed due to semantic error in Protocol layer.
Asn error(Falsely const msg)	Total number of RAB setup or modification or release requests failed due to ASN error (falsely constructed messages) in Protocol layer.
Miscellaneous Cause	This group identifies the total number of RAB setup or modification or release request failure due to miscellaneous cause (not listed in this table).
No Resource Available	Total number of RAB setup or modification or release requests failed due to non availability of resource.

Field	Description
Unspecified	Total number of RAB setup or modification or release request failure due to unspecified cause (not listed in this table).
<class_name> Class	This group displays the total number of RAB Setup request grouped in Class name <class_name>.
RAB Setup Rx	Total number of RAB setup requests received for specific class.
RAB Setup Success Tx	Total number of RAB setup success messages sent for specific class.
Total RAB Setup Fail Tx	Total number of RAB setup failure messages sent for specific class.
RAB Setup Fail(Local) Tx	Total number of RAB setup failure messages sent for specific class where RAB setup failed due to local reason/cause.
Relocation Detect Tx	Total number of RAB Relocation Detect messages sent by system in this PS network.
Relocation Required Tx	Total number of RAB Relocation Required request messages sent by system in this PS network.
Fwd SRNS Context Request Tx	Total number of FWD SRNS Context request messages sent by system in this PS network.
Relocation Prep Failure Rx	Total number of Relocation Preparation failure response messages sent by system in this PS network.
Relocation Cancel Tx	Total number of Relocation cancel command messages received by system in this PS network.
Relocation Command Rx	Total number of Relocation command messages received by system in this PS network.
Srns Context Request Rx	Total number of SRNS Context Request messages received by system in this PS network.
Srns Context Response Tx	Total number of response sent for SRNS Context Request messages received by system in this PS network.
<class_name> Class	This group displays the total number of RAB Setup request grouped in Class name <class_name>.
RAB Setup Rx	Total number of RAB setup requests received for specific class.

## show ps-network statistics sccp-only

### Important

In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

Table 494: show ps-network statistics sccp-only Command Output Descriptions

Field	Description
SCCP	This group displays the statistics of SCCP in a PS network on chassis.
SCCP Connection Request Rx	Total number of SCCP connection Request received by HNB-GW from the Core Node. This counter changes when Core Node initiates SCCP connection during Relocation.
SCCP Connection Request Tx	Total number of SCCP connection Request sent by HNB-GW towards the CN after getting RUA Connect Request for a Registered UE. This counter changes when RUA Connect Request sent for a Registered UE.
SCCP Connection Confirm Rx	Total number of SCCP Connection Confirmation messages received by HNB-GW from the Core Node. This counter changes when CN sends the SCCP connection confirmation for a requested SCCP Connection Request.
SCCP Connection Confirm Tx	Total number of SCCP Connection Confirmation response messages sent by HNB-GW to the Core Node. This counter changes when HNB-GW sends the SCCP connection confirmation response for a requested SCCP Connection Request to CN.
SCCP Connection Reject Rx	Total number of SCCP Connection Reject messages received by HNB-GW from the Core Node. This counter changes when Core node Rejects the SCCP Conn Request due to some parameter mismatch, etc.
SCCP Connection Reject Tx	Total number of SCCP Connection Rejection response messages sent by HNB-GW to the Core Node. This counter changes when HNBGW initiates the tear Down on receiving RUA disconnect from HNB which doesn't contain RANAP Iu-release complete message and other failure scenarios.
SCCP Connection Data Rx	Total data received by HNB-GW over SCCP connection between HNB-GW and Core Node. This counter changes when CN sends the data towards HNB-GW over SCCP connection.
SCCP Connection Data Tx	Total data sent by HNB-GW over SCCP connection between HNB-GW and Core Node. This counter changes when HNB-GW sends the data towards CN over SCCP connection.
SCCP Disconnect Rx	Total number of SCCP Disconnect messages received by HNB-GW from Core Node. This counter changes when CN initiate tear-down procedure for SCCP connection.
SCCP Disconnect Tx	Total number of SCCP Disconnect response messages sent by HNB-GW to Core Node. This counter changes when HNBGW initiates the tear-down procedure on receiving RUA disconnect from HNB which doesn't contain RANAP Iu-release complete message and other failure scenarios.

Field	Description
SCCP Uni Data Rx	Total Connection-less data, like paging, received by HNB-GW over SCCP connection between HNB-GW and Core Node.  This counter changes when CN sends any connection-less data, like paging, towards HNB-GW over SCCP connection.
SCCP Uni Data Tx	Total Connection-less data, RANAP Reset, RANAP reset Resource, sent by HNB-GW over SCCP connection between HNB-GW and Core Node.  This counter changes when HNB-GW sends or forward any Connection-less data, like RANAP reset, RANAP Reset Resource, towards CN over SCCP connection.

## show ps-network statistics gtpu-only

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 495: show ps-network statistics gtpu-only Command Output Descriptions**

Variables	Description
GTPU	This group displays the statistics of SCCP in a PS network on chassis.
GTPU Fwd Packets Tx	Indicates the total number of packets forwarded by HNB-GW to SGSN over GTP-U connection during a session.  This counter increments when a GTP-U packet forwarded by HNB-GW to CN.
GTPU Fwd Bytes Tx	Indicates the total number of Bytes forwarded by HNB-GW to SGSN over GTP-U connection during a session.  This counter increments when a GTP-U Byte forwarded by HNB-GW to CN.
GTPU Packets Rx	Indicates the total number of packets received by HNB-GW from SGSN over GTP-U connection during a session.  This counter increments when a packet received by HNB-GW from CN.
GTPU Packets Tx	Indicates the total number of packets sent by HNB-GW towards SGSN over GTP-U connection during a session.  This counter increments when a GTP-U packet sent by HNB-GW to CN.

Variables	Description
GTPU Bytes Rx	Indicates the total number of bytes received by HNB-GW from SGSN over GTP-U connection during a session.  This counter increments when a byte received by HNB-GW from CN.
GTPU Bytes Tx	Indicates the total number of bytes sent by HNB-GW towards SGSN over GTP-U connection.  Trigger: Increments when a byte sent by HNB-GW to CN.  Availability: Across PS Networks

## CHAPTER 115

# show quality-of-service-profile

This chapter describes the output of the **show quality-of-service-profile** command.

- [show quality-of-service-profile full name](#), on page 1717

## show quality-of-service-profile full name

*Table 496: show quality-of-service-profile full name Command Output Descriptions*

Field	Description
QoS Profile Name	Displays the name of the QoS Profile.
Description	Displays the description of the QoS Profile.
Preferred Traffic Class	Displays the configured preferred traffic class. The preferred traffic class can be: <ul style="list-style-type: none"><li>• Background</li><li>• Conversational</li><li>• Interactive</li><li>• Streaming</li></ul>
Quality of Service Capping	
Prefer Type	Displays the configured preferred type of Quality of Service capping, the preferred type can be: <ul style="list-style-type: none"><li>• Subscription and Local</li><li>• Subscription</li><li>• Local</li></ul>
Traffic Class	Displays the configured Traffic Class, the configured Traffic Class can be: <ul style="list-style-type: none"><li>• Background</li><li>• Conversational</li><li>• Interactive</li><li>• Streaming</li></ul>
Sdu delivery order	Displays if the SDU delivery order is specified or not.

Field	Description
Delivery Of Erroneous Sdus	Displays if delivery of erroneous SDUs is configured or not.
Max Bit Rate Uplink	Displays the configured Maximum Kbps rate for the uplink direction.
Max Bit Rate Downlink	Displays the configured Maximum Kbps rate for the downlink direction.
Allocation/Retention Priority	Displays the configured Allocation/Retention priority.
Guaranteed Bit Rate Uplink	Displays the Guaranteed Kbps rate for the uplink direction.
Guaranteed Bit Rate Downlink	Displays the Guaranteed Kbps rate for the downlink direction.
Sdu Max Size	Displays the maximum number of octets (size) of the SDU
Minimum Transfer delay	Displays the configured Minimum transfer delay.
Sdu Error Ratio	Displays the configured SDU error ratio.
Residual BER	Displays the configured residual bit error rate.
QoS APN-AMBR	
Max uplink	Indicates the aggregate maximum bit rate (AMBR) for uplink (subscriber to network) traffic.
Max downlink	Indicates the aggregate maximum bit rate (AMBR) for downlink (network to subscriber) traffic.
Sending of epc-qos-params to GGSN	This parameter is used to verify the configuration for EPC QoS support on SGSN. The <b>epc-qos-params-in-gtpv1</b> command is used to enable or disable the SGSN to send EPC QoS parameters to GGSN. On enabling this command E-ARP and APN-AMBR parameters are included in the GTPV1 SM messages towards the GGSN. The parameter <b>Enabled with GPRS Subs</b> is displayed if the keyword <b>gprs-subscription</b> is selected in the <b>epc-qos-params-in-gtpv1</b> command.
Operator Defined QCI	Indicates if the Operator Specific QCI values are enabled or disabled.

# CHAPTER 116

## show radius

This chapter describes the output of the **show radius** command.

- [show radius client status](#), on page 1719
- [show radius counters all](#), on page 1719
- [show radius servers](#), on page 1728

## show radius client status

*Table 497: show radius client status verbose Command Output Descriptions*

Field	Description
RADIUS Client Status	The RADIUS client's status as "UP" or "DOWN".
Active nas-ip-address	The NAS IP address configured for the client that is currently active. The NAS IP address is in IPv4 dotted-decimal notation or IPv6 colon-separated hexadecimal notation. <b>NOTE:</b> If the RADIUS Client Status is "DOWN", then this field displays "NONE".
Configured Primary nas-ip-address	The NAS IP address configured as the primary and the interface's current status as "UP" or "Down".
Configured Backup nas-ip-address	The NAS IP address configured as the backup and the interface's current status as "UP" or "Down".

## show radius counters all

*Table 498: show radius counters all Command Output Descriptions*

Field	Description
<b>Per-Context RADIUS Authentication Counters</b>	
<b>Access-Request Response</b>	
Invalid Source Address Received	The number of Access-Request responses received from invalid source addresses.

Field	Description
Responses Dropped due to Closed Sockets	The number of responses dropped due to closed sockets.
Response Dropped No Matching Request found	The number of responses dropped due to no matching requests.
<b>Per-Context Change-of-Authorization Counters</b>	
Invalid Source Address Received (RPF check failed)	The number of responses received from invalid source addresses.
<b>Server-specific Change-of-Authorization Counters</b>	
Change-of-Authorization server address	The IP address and port number of the Change-of-Authorization server.
Change-of-Authorization Request received	The number of CoA requests received.
Change-of-Authorization Ack sent	The number of CoA acknowledgements sent.
Change-of-Authorization Nak sent	The number of CoA negative acknowledgements sent.
Change-of-Authorization Nak Unsupported Attribute sent	The number of CoA negative acknowledgements sent with unsupported attribute.
Change-of-Authorization Nak Missing Attribute sent	The number of CoA negative acknowledgements sent with missing attribute.
Change-of-Authorization Nak NAS Id Mismatch sent	The number of CoA negative acknowledgements with NAS ID mismatch sent.
Change-of-Authorization Nak Invalid Request sent	The number of CoA negative acknowledgements with invalid request sent.
Change-of-Authorization Nak Unsupported Service sent	The number of CoA negative acknowledgements with unsupported service sent.
Change-of-Authorization Nak Sess Context Not Found sent	The number of CoA negative acknowledgements with session context not found sent.
Change-of-Authorization Nak Resource Unavailable sent	The number of CoA negative acknowledgements with resource unavailable sent.
Change-of-Authorization Malformed Packet Rcvd	The number of CoA message disconnected due to malformed message.
Change-of-Authorization Msg-Authenticator Mismatch	The number of CoA message disconnected due to message authenticator failure.
Change-of-Authorization Duplicate Request	The number of CoA requests dropped due to duplicate message.
Change-of-Authorization Event-Timestamp Check Failed	The number of CoA requests dropped due to Event-Timestamp attribute issues.
Change-of-Authorization Request Initiated sent	The number of CoA request Initiated sent.

Field	Description
Disconnect-Message Request received	The number of Disconnect-Message Requests received.
Disconnect-Message Ack sent	The number of Disconnect-Message Acknowledgements sent.
Disconnect-Message Ack Residual Session Removed sent	The number of Disconnect-Message Acknowledgements Residual Session Removed sent.
Disconnect-Message Nak sent	The number of Disconnect-Message Negative Acknowledgment sent.
Disconnect-Message Nak Unsupported Attribute sent	The number of Disconnect-Message Negative Acknowledgment with unsupported attributes sent.
Disconnect-Message Nak Missing Attribute sent	The number of Disconnect-Message Negative Acknowledgment with missing attributes sent.
Disconnect-Message Nak NAS Id Mismatch sent	The number of Disconnect-Message Negative Acknowledgment with NAS ID mismatch sent.
Disconnect-Message Nak Invalid Request sent	The number of Disconnect-Message Negative Acknowledgment with invalid requests sent.
Disconnect-Message Nak Unsupported Service sent	The number of Disconnect-Message Negative Acknowledgment with unsupported service sent.
Disconnect-Message Nak Session Context Not Found sent	The number of Disconnect-Message Negative Acknowledgment with session context not found sent.
Disconnect-Message Nak Context Not Removable sent	The number of Disconnect-Message Negative Acknowledgment with context not removable sent.
Disconnect-Message Nak Context Not Removable Dormant	The number of Disconnect-Message Negative Acknowledgment with context not removable dormant.
Disconnect-Message Nak Resource Unavailable sent	The number of Disconnect-Message Negative Acknowledgment with resource unavailable sent.
Disconnect-Message Malformed Packet Rcvd	The number of Disconnect-Message with malformed packet received.
Disconnect-Message Msg-Authenticator Mismatch	The number of Disconnect-Message with message authenticator mismatch.
Disconnect-Message Duplicate Request	The number of Disconnect-Message duplicate requests.
Disconnect-Message Event-Timestamp Check Failed	The number of Disconnect-Message with event timestamp check failed.
Disconnect-Message Request Initiated sent	The number of Disconnect-Message with request initiated sent.
Change-of-Authorization/Disconnect-Message timeout	The number of messenger timeouts while processing the CoA/Dm messages. This will be displayed only in the hidden mode.

Field	Description
Change-of-Authorization/Disc-Message messenger bounce	The number of messenger bounces while processing the CoA/Dm messages. This will be displayed only in the hidden mode.
<b>Server-specific Authentication Counters</b>	
Authentication server address	The IP address, port number, and server group of the RADIUS authentication server. The IP address is in IPv4 dotted-decimal notation or IPv6 colon-separated hexadecimal notation.
Access-Request Sent	The total number of Access Request messages sent by the system to the server.
Access-Request with DMU Attributes Sent	The total number of Access Request messages that have been sent to the server with DMU attributes present.
Access-Request Pending	The total number of Access Request messages that have been sent to the server that are pending a response.
Access-Request Retried	The total number of Access Request messages that have been re-transmitted due to the expiration of the RADIUS timeout parameter.
Access-Request with DMU Attributes Retried	The total number of Access Request messages with DMU attributes present that have been re-transmitted due to the expiration of the RADIUS timeout parameter.
Access-Challenge Received	The total number of Access Challenges received from the server as part of the authentication process.
Access-Accept Received	The total number of Access Accept messages received by the system from the server.
Access-Reject Received	The total number of Access Reject messages received by the system from the server.
Access-Reject Received with DMU Attributes	The total number of Access Reject messages with DMU attributes present received by the system from the server.
Access-Request Timeouts	The total number of times that the configured RADIUS timeout parameter was exceeded causing the system to have to re-send an Access Request message.
Access-Request Current Consecutive Failures in a mgr	The current maximum number of consecutive failures that occurred for a single AAA manager while initiating Access-Request messages.
Access-Request Response Bad Authenticator Received	The total number of Accept Request responses received by the system from the server that contains a incorrect Authenticator field, thereby failing message authentication. The system drops these messages.
Access-Request Response Malformed Received	The total number of Accept Request responses received by the system from the server that were malformed. The system drops these messages.
Access-accept Malformed Rulebase Received	The total number of authentication responses received with multiple rulebase attributes.
Access-Request Response Malformed Attribute Received	The total number of malformed or invalid attributes received in Access-Request response messages.

Field	Description
Access-Request Response Unknown Type Received	The total number of Accept Request responses received by the system from the server that contained an unknown message type. The system drops these messages.
Access-Request Response Dropped	The total number of Accept Request responses from the server that were dropped.
Access-Request Response Last Round Trip Time	The time it took for the system to receive a valid response from the server for the last authentication request.
Access-Request Response Average Round Trip Time	The average time it took for the system to receive a valid response from the server for Access Request Response.
<b>Prepaid Related Statistic Counters</b>	
Online Access-Request Sent	The total number of Online Access Request messages sent.
Online Access-Request Pending	The total number of Online Access Request messages pending.
Online Access-Request Retried	The total number of Online Access Request messages retried.
Online Access-Accept Received	The total number of Online Access Accept messages received.
Online Access-Reject Received	The total number of Online Access Reject messages received.
Online Access-Request Timeouts	The total number of Online Access Request message timeouts.
Online Access-Request Response Bad Authenticator Received	The total number of Online Access Request messages that failed with a bad authenticator.
Online Access-Request Response Malformed Received	The total number of Online Access Request Response messages that were malformed.
Online Access-Request Response Malformed Attr Received	The total number of Online Access Request Response messages that contained a malformed attribute.
Online Access-Request Response Unknown Type Received	The total number of Online Access Request Response messages that are of an unknown type.
Online Access-Request Response Bad Message Authenticator	The total number of Online Access Request Response messages that contained a bad message authenticator.
Online Access-Request Response NO Message Authenticator	The total number of Online Access Request Response messages that contained no message authenticator.
<b>Server-specific Probing Counters</b>	
State	The state of the RADIUS server. Enabled or Disabled.
Number of transactions issued	The total number of transactions issued to the RADIUS server.
Number of successful transactions	The total number of complete successful transactions to the RADIUS server.
Number of failed transactions	The total number of failed transactions to the RADIUS server.

Field	Description
Last successful transaction time	The time of day that the last successful transaction was completed with the RADIUS server.
Last failed transaction time	The time of day that the last failed transaction with the RADIUS Server occurred.
Last roundtrip time	The amount of time, in milliseconds, that it took from when a request was sent to and acknowledgement was received from the RADIUS server.
<b>Server-specific Keepalive Auth Counters</b>	
Keepalive Access-Request Sent	The number of keepalive access requests that were sent.
Keepalive Access-Request Retried	The number of keepalive access-requests that were retried.
Keepalive Access-Request Timeouts	The number of keepalive access-requests that timed out.
Keepalive Access-Accept Received	The number of keepalive access-accept messages that were received.
Keepalive Access-Reject Received	The number of keepalive access-reject messages that were received
Keepalive Access-Response Bad Authenticator Received	The number of bad authenticator keepalive access-response that were received.
Keepalive Access-Response Malformed Received	The number of malformed keepalive-access responses that were received.
Keepalive Access-Response Malformed Attribute Received	The number of malformed attributes for keepalive-access responses that were received.
Keepalive Access-Response Unknown Type Received	The number of unknown keepalive-access responses that were received.
Keepalive Access-Response Dropped	The number of keepalive-access responses that were dropped.
<b>Per-Context RADIUS Accounting Counters</b>	
<b>Accounting Response</b>	
Invalid Source Address Received	The number of Accounting responses received from invalid source addresses.
Responses Dropped due to Closed Sockets	The number of responses dropped due to closed sockets.
Response Dropped No Matching Request found	The number of responses dropped due to no matching requests.
<b>Server-specific Accounting Counters</b>	
Accounting server address	The IP address, port number, and server group of the RADIUS accounting server, and the UDP port over which the system exchanges accounting data with the server. The IP address is in IPv4 dotted-decimal notation or IPv6 colon-separated hexadecimal notation.
Accounting-Request Sent	The total number of Accounting Request messages sent by the system to the server.

Field	Description
Accounting-Start Sent	The total number of Accounting sessions that have been established.
Accounting-Stop Sent	The total number of Accounting sessions that have been stopped.
Accounting-Interim Sent	The total number of Accounting Interim messages that have been sent to the server. This mainly contains the accumulated packets/bytes counts.
Accounting-On Sent	The total number of Accounting-on sessions that have been sent.
Accounting-Off Sent	The total number of Accounting-off sessions that have been stopped.
Accounting-Request Pending	The total number of Accounting Request messages that have been sent to the server that are pending a response.
Accounting-Request Retried	The total number of Accounting-requests that have been retried.
Accounting-Start Retried	The total number of Accounting-start messages that have been retried
Accounting-Stop Retried	The total number of Accounting-stop messages that have been retried.
Accounting-Interim Retried	The total number of Accounting-interim messages that have been retried.
Accounting-On Retried	The total number of Accounting-on messages that have been retried.
Accounting-Off Retried	The total number of Accounting-off messages that have been retried.
Accounting-Response Received	The total number of Accounting-response messages that have been received.
Accounting-Request Timeouts	The total number of Accounting-request messages that have timed out.
Accounting-Request Current Consecutive Failures in a mgr	The current maximum number of consecutive failures that occurred for a single AAA manager while initiating Accounting-Request messages.
Accounting-Response Bad Response Received	The total number of Accounting-Response messages that failed with a bad authenticator.
Accounting-Response Malformed Received	The total number of Accounting-Response responses received by the system from the server that were malformed.
Accounting-Response Unknown Type Received	The total number of Accounting-Response responses received by the system from the server that contained an unknown message type.
Accounting-Response Dropped	The total number of keepalive Accounting Response messages that were dropped.
Accounting-Response Last Round Trip Time	The time it took for the system to receive a valid response from the server for the last Accounting Response.
Accounting-Response Average Round Trip Time	The average time it took for the system to receive a valid response from the server for Accounting Responses.
Accounting Total G1 (Acct-Output-Octets)	The total number of accounted bytes outputted to user.
Accounting Total G2 (Acct-Input-Octets)	The total number of accounted bytes as user input.

Field	Description
<b>Server-specific Keepalive Acct Counters</b>	
Keepalive Accounting-Request Sent	The total number of keepalive accounting request messages sent.
Keepalive Accounting-Request Retried	The total number of keepalive accounting messages retried.
Keepalive Accounting-Request Successful	The total number of successful keepalive accounting messages.
Keepalive Accounting-Request Timeouts	The total number of keepalive accounting timeout messages.
Keepalive Accounting-Response Bad Response Received	The total number of keepalive accounting request response messages that failed with a bad authenticator.
Keepalive Accounting-Response Malformed Received	The total number of keepalive accounting request response messages that were malformed.
Keepalive Accounting-Response Unknown Type Received	The total number of keepalive accounting request response messages that failed with an unknown type.
Keepalive Accounting-Response Dropped	The total number of keepalive accounting request response messages that were dropped.
<b>Per-Context RADIUS Mediation Accounting Counters</b>	
<b>Accounting Response</b>	
Invalid Source Address Received	The number of Mediation Accounting responses received from invalid source addresses.
Responses Dropped due to Closed Sockets	The number of responses dropped due to closed sockets.
Response Dropped No Matching Request found	The number of responses dropped due to no matching requests being found.
<b>Server-specific Mediation Accounting Counters</b>	
Mediation Accounting server address	The IP address of the RADIUS Mediation accounting server, and the UDP port over which the system exchanges accounting data with the mediation server. The IP address is in IPv4 dotted-decimal notation or IPv6 colon-separated hexadecimal notation.
Accounting-Request Sent	Indicates the total number of Accounting-Request messages sent by the system to the Mediation server.
Accounting-Start Sent	Indicates the total number of Accounting sessions that have been established with Mediation server.
Accounting-Stop Sent	The total number of Accounting sessions that have been stopped by Mediation server.
Accounting-Interim Sent	The total number of Accounting-Interim messages that have been sent to the Mediation server. This mainly contains the accumulated packets/bytes counts.
Accounting-On Sent	The total number of Accounting-On sessions that have been sent.

Field	Description
Accounting-Off Sent	The total number of Accounting-Off sessions that have been stopped.
Accounting-Request Pending	The total number of Accounting-Request messages that have been sent to the mediation server that are pending a response.
Accounting-Request Retried	The total number of Accounting-Requests that have been retried.
Accounting-Start Retried	The total number of Accounting-Start messages that have been retried
Accounting-Stop Retried	The total number of Accounting-Stop messages that have been retried.
Accounting-Interim Retried	The total number of Accounting-Interim messages that have been retried.
Accounting-On Retried	The total number of Accounting-On messages that have been retried.
Accounting-Off Retried	The total number of Accounting-Off messages that have been retried.
Accounting-Response Received	The total number of Accounting-Response that were received.
Accounting-Request Timeouts	The total number of Accounting-Request timeouts.
Accounting-Request Current Consecutive Failures in a mgr	The current maximum number of consecutive failures that occurred for a single AAA manager while initiating Accounting-Request messages.
Accounting-Response Bad Response Received	The total number of Accounting-Response messages that failed with a bad authenticator.
Accounting-Response Malformed Received	The total number of Accounting-Response responses received by the system from the server that were malformed.
Accounting-Response Unknown Type Received	The total number of Accounting-Response messages received by the system from the Mediation server that contained an unknown message type. The system drops these messages.
Accounting-Response Dropped	The total number of Accounting-Response messages from the server that were dropped.
Access-Response Last Round Trip Time	The amount of time it took for the system to receive a valid response from the mediation server for the last Access-Response messages.
Accounting-Response Average Round Trip Time	The average time it took for the system to receive a valid response from the server for Accounting-Response messages.

# show radius servers

Table 499: show radius servers detail Command Output Descriptions

Field	Description
VVVVV	

Field	Description
	<p>Displays information about the type and state of the RADIUS server.</p> <p>From left-to-right, the first character represents the RADIUS server <b>Type</b> as one of the following:</p> <ul style="list-style-type: none"> <li>• (A) - Authentication</li> <li>• (a) - Accounting</li> <li>• (C) - Charging</li> <li>• (c) - Charging Accounting</li> <li>• (M) - Mediation</li> <li>• (m) - Mediation Accounting</li> </ul> <p>From left-to-right, the second character represents the RADIUS server <b>Preference</b> as one of the following:</p> <ul style="list-style-type: none"> <li>• (P) - Primary</li> <li>• (S) - Secondary</li> </ul> <p>From left-to-right, the third character represents the RADIUS server <b>State</b> as one of the following:</p> <ul style="list-style-type: none"> <li>• (A) - Active</li> <li>• (N) - Not Responding</li> <li>• (D) - Down</li> <li>• (W) - Waiting Accounting-On</li> <li>• (I) - Initializing</li> <li>• (w) - Waiting Accounting-Off</li> <li>• (a) Active Pending</li> <li>• (U) - Unknown</li> </ul> <p>From left-to-right, the fourth character indicates the RADIUS server <b>Administrative Status</b> (which is saved in the configuration file for re-establishment at reboot) as one of the following:</p> <p>(E) - Enabled (D) - Disabled</p> <p>From left-to-right, the fifth character indicates whether the RADIUS server's saved <b>Administrative Status</b> may be overridden at the next reboot:</p> <p>(O) - Overridden: (Note: to preserve the desired Administrative State, use the appropriate configuration mode radius [accounting charging charging accounting] server command to reset the admin-status.) (.) - Not Overridden</p>

Field	Description
IP	Displays the IP address of the RADIUS server. The IP address is in IPv4 dotted-decimal notation or IPv6 colon-separated hexadecimal notation.
Port	Displays the UDP port used to communicate with the RADIUS server.
Group	Display the RADIUS server group to which the server belongs.
Event History	Displays a historical record of state information for the server including a time/date stamp.
Total servers matching specified criteria	Displays the total number of RADIUS servers returned by the execution of the command.

# CHAPTER 117

## show rct stats

This chapter describes the output of the `show rct stats` command. RCT refers to the Recovery Control Task that controls automatic failover and restart of other tasks within StarOS.

- [show rct stats](#), on page 1731
- [show rct stats verbose](#), on page 1732

## show rct stats

*Table 500: show rct stats Command Output Descriptions*

Field	Description
RCT stats details (Last <i>n</i> Actions)	
#	Action number.
Action	Text describing the type of action. For example, Migration, Switchover, Shutdown.
From	Slot number of the card initiating the action.
To	Slot number of the destination card.
Start Time	Timestamp for when the action was initiated in the format YYYY-MMM-DD+hh:mm:ss.sss.
Duration	Duration of the action in seconds.
Status	Indicates Success or Failure.
RCT stats summary	
Migrations	Total number of task migrations.
Management Card:	Number of management card migrations.
Average time:	Average migration time expressed as n.nnn seconds.
Packet Card:	Number of packet card migrations.

Field	Description
Average time:	Average migration time expressed as n.nnn seconds.
Switchovers	Total number of switchovers (unplanned and planned) between cards.
Average time:	Average switchover time expressed as n.nnn seconds.

## show rct stats verbose

Table 501: show rct stats verbose Command Output Descriptions

Field	Description
RCT stats details (Last <i>n</i> Actions)	
#	Action number.
Action	Text describing the type of action. For example, Migration, Switchover, Shutdown.
Type	Planned or Unplanned
From	Slot number of the card initiating the action.
To	Slot number of the destination card.
Start Time	Timestamp for when the action was initiated in the format YYYY-MM-DD+hh:mm:ss.sss.
Duration	Duration of the action in seconds.
Graceful	Displays that Graceful Card Migration functionality (available in Release 21.3 and higher) is enabled or disabled for the given RCT Stat number. In 21.3 and higher releases this functionality is enabled by default and cannot be disabled.
Recovered[n]	If any task (sessmgr or aaamgr) is failed during the migration and recovered, this field reports the details like facility, instance, cpu id and pid number.
Status	Indicates Success or Failure.
RCT stats summary	
Migrations	Total number of task migrations.
Management Card:	Number of management card migrations.
Average time:	Average migration time expressed as n.nnn seconds.
Packet Card:	Number of packet card migrations.
Average time:	Average migration time expressed as n.nnn seconds.
Switchovers	Total number of switchovers (unplanned and planned) between cards.

Field	Description
Average time:	Average switchover time expressed as n.nnn seconds.
RCT stats verbose (Last <i>n</i> Actions)	
Stats <n>	Action number.
Action	Text describing the type of action. For example, Migration, Switchover, Shutdown.
Type	Planned or Unplanned.
From	Slot number of the card initiating the action.
To	Slot number of the destination card.
Start Time	Timestamp for when the action was initiated in the format YYYY- <i>MMM</i> - <i>DD</i> + <i>hh</i> : <i>mm</i> : <i>ss</i> . <i>sss</i> format.
Failure Reason	Text string indicating the reason for the failure. For example: "CPU_CRITICAL_TASK_FAILURE".
Failure Device	Text string indicating device associated with the failure. For example: "CPU_0".
Is Card Usable	Yes or No.
Recovery Status	Success or Failure.
Facility	Task facility name that caused migration failure. (Success = "N.A.").
Instance	Task instance number that caused migration failure. (Success = "N.A.").
Duration	Event duration in format: n.nnn sec.
Graceful	Displays whether Graceful Card Migration is Enabled (default) or Disabled. Contact Cisco to disable this functionality.
Recovered [1]	Displays graceful recovery stats information during card migration, for example: [f:sessmgr, i:6, cpu:50, pid:13170].
Recovered [2]	Displays graceful recovery stats information during card migration, for example: [f:sessmgr, i:3, cpu:50, pid:13167].

# CHAPTER 118

## show resources

This chapter describes the output of the **show resources** command.

- [show resources cpu](#), on page 1735
- [show resources session](#), on page 1736

## show resources cpu

*Table 502: show resources cpu Command Output Descriptions*

Field	Description
Active CPUs	Displays information for CPUs on packet processing cards and management cards that are in the active mode.
Total CPUs	The total number of CPUs on active cards.
Highest Load	The highest loading of a processor among all of the active processors. The processor that experienced the loading is identified in the format: (CPU <slot_number>/<processor_number>)
Total Memory	The total amount of memory available for all active processors in gigabytes.
Total Used	The total amount of memory (in gigabytes) used for all active processors.
Least Free	The lowest amount of memory (in megabytes) available to an active processor. The processor with the lowest amount of available memory is identified in the format: (CPU <slot_number>/<processor_number>)
Total Temporary Files	The total amount of space for temporary files being maintained in memory.
Most Temporary Files	The maximum amount of memory used for temporary files on a specific active processor. The processor on which the memory is being used is identified in the format: (CPU <slot_number>/<processor_number>)
Standby CPUs	Displays information for CPUs on packet processing cards and management cards that are in the standby mode.
Total CPUs	The total number of CPUs on standby cards.

Field	Description
Highest Load	The highest loading of a processor among all of the standby processors. The processor that experienced the loading is identified in the following format: (CPU <slot_number>/<processor_number>)
Total Memory	The total amount of memory (in gigabytes) available for all standby processors.
Total Used	The total amount of memory (in gigabytes) used for all standby processors.
Least Free	The lowest amount of memory (in megabytes) available to an standby processor. The processor with the lowest amount of available memory is identified in the format: (CPU <slot_number>/<processor_number>)
Total Temporary Files	The total amount of space for temporary files being maintained in memory.
Most Temporary Files	The maximum amount of memory used for temporary files on a specific standby processor. The processor on which the memory is being used is identified in the format: (CPU <slot_number>/<processor_number>)

## show resources session

Table 503: show resources session Command Output Descriptions

Field	Description
<b>In-Use Session Managers</b>	
Number of Managers	The total number of Session Managers currently in use on processing calls.
Capacity	The allowed call capacity for all of the Session Managers currently in use.
Usage	The total number of sessions currently active.
<b>Busy-Out Session Managers</b>	
Number of Managers	The number of Session Manager tasks in a busied-out state and not available to service new sessions.
Capacity	Indicates the total session capacity of the system.
Usage	The number of Session Manager tasks in use.
<b>Standby Session Managers:</b>	
Number of Managers	The total number of Session Managers currently in standby mode waiting to process calls.
<b>&lt;XXXX&gt; Service:</b>	
In Use	The total number of configured service sessions that are currently in use processing subscriber sessions.

Field	Description
Max Used	The maximum number of service sessions used in processing subscriber sessions. This field displays a timestamp on each peak value and identifies the last time (if any) the peaks were cleared.
Limit	The total number of sessions that can be processed by all configured services of this type. This value is based on session capacity licenses and the configuration of the <b>max-subscribers</b> parameter for the services. <b>Note:</b> Not applicable for ASN PC Service.
License Status	Indicates whether or not the number of sessions being processed by all configured services of this type within the system falls within the range granted by the session capacity license installed. If it is within the range, "Within Acceptable Limits" is displayed. If not, "Exceeded Acceptable Limits" is displayed. <b>NOTE:</b> Not applicable for ASN PC Service.
<b>ECS Information:</b>	<b>NOTE:</b> This information is displayed only if Active Charging Service is configured in the non-unified mode.
<b>In-Use ACS Managers:</b>	
Number of Managers	The total number of ACS Managers currently active processing calls.
Capacity	Indicates call capacity of the system as <math>\diamond</math> min (minimum available ECS sessions), <math>\diamond</math> typical, and <math>\diamond</math> max (maximum possible ECS sessions).
Usage	The total number of ACS Manager tasks in use.
<b>Standby ACS Managers:</b>	
Number of Managers	The total number of ACS Managers currently in standby mode.
<b>Enhanced Charging Service Service:</b>	
In Use	The total number of service sessions that are currently in use.
Max Used	The maximum number of service sessions used.
Limit	The total number of sessions that can be processed by all configured services of this type. This value is based on session capacity license.
License Status	Indicates whether or not the number of sessions being processed by all configured services of this type within the system falls within the range granted by the session capacity license installed. If it is within the range, "Within Acceptable Limits" is displayed. If not, "Exceeded Acceptable Limits" is displayed.
<b>ECS Information:</b>	<b>NOTE:</b> This information is displayed only if Active Charging Service is configured in the unified mode.
Capacity	Indicates capacity of the system as <math>\diamond</math> est (estimated available ECS sessions) and <math>\diamond</math> max (maximum possible ECS sessions).
<b>Enhanced Charging Service Service:</b>	

<b>Field</b>	<b>Description</b>
In Use	The total number of ECS service sessions that are currently in use.
Max Used	The maximum number of ECS service sessions used.
Limit	The total number of sessions that can be processed by all configured services of this type. This value is based on session capacity license.
License Status	Indicates whether or not the number of sessions being processed by all configured services of this type within the system falls within the range granted by the session capacity license installed. If it is within the range, "Within Acceptable Limits" is displayed. If not, "Exceeded Acceptable Limits" is displayed.
<b>P2P information:</b>	
<b>P2P Service:</b>	
In Use	The total number of P2P service sessions that are currently in use.
Max Used	The maximum number of P2P service sessions used.
Limit	The total number of sessions that can be processed by all configured services of this type.
License Status	Indicates whether or not the number of sessions being processed by all configured services of this type within the system falls within the range granted by the session capacity license installed. If it is within the range, "Within Acceptable Limits" is displayed. If not, "Exceeded Acceptable Limits" is displayed.

## CHAPTER 119

# show rlf

This chapter includes the **show rlf** command output tables.

- [show rlf-template all](#), on page 1739
- [show rlf-template name](#), on page 1740
- [show rlf-context-statistics diamproxy verbose](#), on page 1740
- [show rlf-memcache-statistics diamproxy](#), on page 1741

## show rlf-template all

*Table 504: show rlf-template all Command Output Descriptions*

Field	Description
RLF-Template	The name of the configured RLF Template.
Transactions Per Second	Indicates the configured Transactions Per Second (TPS) i.e. the number of messages that can be processed per second.
Burst Size	Indicates the configured maximum number of messages (burst) that can be sent out together, at an instant of time.
Thresholds (Upper-Lower)	Indicates the configured threshold for rate-limiting the outgoing messages.
Delay Tolerance	Indicates the configured maximum number of seconds the messages can be queued before it is processed.
Total RLF Templates Found	Indicates the total number of RLF templates being configured.

## show rlf-template name

Table 505: show rlf-template name Command Output Descriptions

Field	Description
Transactions Per Second	Indicates the configured Transactions Per Second (TPS) i.e. the number of messages that can be processed per second.
Burst Size	Indicates the configured maximum number of messages (burst) that can be sent out together, at an instant of time.
Thresholds (Upper-Lower)	Indicates the configured threshold for rate-limiting the outgoing messages.
Delay Tolerance	Indicates the configured maximum number of seconds the messages can be queued before it is processed.

## show rlf-context-statistics diamproxy verbose

Table 506: show rlf-context-statistics diamproxy verbose Command Output Descriptions

Field	Description
RLF Context Stats	The name of the context for which the RLF statistics is collected.
Template Name	The name of the configured RLF template.
Configured TPS	Indicates the configured Transactions Per Second (TPS) for throttling.
State	Indicates the current state of the RLF context.
Storage	Indicates the method of access to messages.
Direction	Indicates the traffic direction.
Active Duration In Sec	Total active time since RLF context was created.
Current Queue Size	Indicates the outstanding messages in the RLF queue.
Average TPS	This is the sum average TPS since RLF became active.
Trend TPS	Indicates the trend TPS value for the configured context.
Maximum TPS	Indicates the maximum TPS value for the configured context.
Minimum TPS	Indicates the minimum TPS value for the configured context.
Last 10 Secs Average TPS	Average value of TPS computed for the last 10 seconds.
Last 20 Secs Average TPS	Average value of TPS computed for the last 20 seconds.

Field	Description
Last 60 Secs Average TPS	Average value of TPS computed for the last 60 seconds.
Last 5 Mins Average TPS	Average value of TPS computed for the last 5 minutes.
Last 10 Mins Average TPS	Average value of TPS computed for the last 10 minutes.
Average executed Bypass TPS	Indicates the effective TPS when "rlf-bypass" is configured.
Last 10 Secs Average executed Bypass TPS	Average value of TPS computed for the last 10 seconds when RLF bypass is executed.
Last 30 Secs Average executed Bypass TPS	Average value of TPS computed for the last 30 seconds when RLF bypass is executed.
Last 60 Secs Average executed Bypass TPS	Average value of TPS computed for the last 60 seconds when RLF bypass is executed.
Last 5 Mins Average executed Bypass TPS	Average value of TPS computed for the last 5 minutes when RLF bypass is executed.
Last 10 Mins Average executed Bypass TPS	Average value of TPS computed for the last 10 minutes when RLF bypass is executed.
Num of times threshold exceeded	Number of times messages queued when RLF was in "OVER THRESHOLD" state.
Num of times queued	Number of times the messages are queued in RLF module.
Num of times dropped	Number of times the messages are dropped due to the RLF being full.
Num of times msg sent out directly	Number of times the messages that are sent directly when RLF bypass is not executed.
Num of times queue bypassed	Number of messages sent out when "rlf-bypass" was configured.
Num of times send message cb failed	Number of times the registered application callbacks failed after sending out a RLF message.
Num of times rlf status update cb failed	Number of times the registered application callbacks failed after sending out a RLF status update.
Diamproxy Instance Level Details	Shows the statistics details at each Diamproxy instance level.

## show rlf-memcache-statistics diamproxy

*Table 507: show rlf-memcache-statistics diamproxy Command Output Descriptions*

Field	Description
Cache Pool For RLF Messages	

<b>Field</b>	<b>Description</b>
Block-Size	The size of block.
Blocking-Factor	Number of elements in block.
Blocks-In-Use	Number of blocks in use.
Total-Blocks	Total number of elements that are currently used.
Free-Blocks	Total number of elements that are currently unused.
Frequency	Indicates how many times the memory direct allocate is used.
Current Memory in Use	Indicates the current memory used for direct allocation.

# CHAPTER 120

## show rohc

This chapter describes the output of the **show rohc** command variants.

- [show rohc statistics, on page 1743](#)

## show rohc statistics

*Table 508: show rohc statistics Command Output*

Field	Description
Compressor Statistics:	
Active contexts:	Number of active ROHC (Robust Header Compression) contexts currently available in the system
Total setup:	Total number of Contexts created till now since the time the stats were being collected.
Total deleted:	Total number of Contexts destroyed till now since the time the stats were being collected.
Messages(TX):	Messages that were sent from the Compressor
IR:	Number of ROHC IR packets
IR-DYN:	Number of ROHC IR Dynamic packets
Type0:	Number of ROHC Type -0 packets
Type1:	Number of ROHC Type-1 packets
Type2:	Number of ROHC Type-2 packets
Normal:	Number of ROHC Uncompressed packets
Feedback(RX):	All Feedback messages received by compressors
ACK:	Number of ROHC Feedback Ack received
NACK:	Number of ROHC Feedback NACK received
Static-NACK:	Number of ROHC Feedback STATIC NACK received

Field	Description
Error:	Number of Feedback packets that had errors.
Misc:	
Mode change:	Number of ROHC Mode changes
Profile change:	Number of ROHC Profile changes
State change:	Number of ROHC state changes
Pkts(TX):	Packets Transmitted
Pkts Sent:	Number of Packets sent
Bytes Sent:	Number of bytes sent
Pkts Processed:	Number of input packets discarded
Pkts Discarded:	Number of input packets processed.
Segmentation:	Number of input packets that were segmented.
Segment Pkts:	Number of ROHC segment packets
Only Feedback:	Number of ROHC feedbacks that were NOT piggybacked to other ROHC packets
Piggyback FB:	Number of ROHC feedbacks that were piggybacked to other ROHC packets
Only FB packets:	Number of ROHC packets that carry ONLY multiple ROHC feedbacks.
Efficiency(TX):	Transmission Efficiency
Uncomp Hdr:	Number of uncompressed headers
Compressed Hdr:	Number of compressed headers
Percentage comp:	Percentage comparison
Histogram(TX):	Transmission Histogram
Size: < 2:	Number less than 2
Size: < 4:	Number less than 4
Size: < 8:	Number less than 8
Size: < 16:	Number less than 16
Size: > 16:	Number greater than 16
Decompressor Statistics:	
Active contexts:	Number of active ROHC contexts currently available in the system
Total setup:	Total number of Contexts created till now since the time the stats were being collected.

Field	Description
Total deleted:	Total number of Contexts destroyed till now since the time the stats were being collected.
Messages(RX):	Received ROHC messages
IR:	Number of ROHC IR packets
IR-DYN:	Number of ROHC IR Dynamic packets
Type0:	Number of ROHC Type -0 packets
Type1:	Number of ROHC Type-1 packets
Type2:	Number of ROHC Type-2 packets
Normal:	Number of ROHC Uncompressed packets
Feedback(TX):	
ACK:	Number of ROHC Feedback Ack received
NACK:	Number of ROHC Feedback NACK received
Static-NACK:	Number of ROHC Feedback STATIC NACK received
Error:	Number of Feedback packets that had errors.
Errors(RX):	Errors in received ROHC pkts
Checksum:	Number of packets discarded due to checksum errors
State mismatch:	Number of packets discarded due to state mismatch
Parse error:	Number of packets discarded due to parsing errors
Memory:	Number of packets discarded due to memory constraints
Other error:	Number of packets discarded due to unclassified errors
Reassembly errors:	Number of packets discarded due to reassembly errors
Misc:	
Mode change:	Number of ROHC Mode changes
Profile change:	Number of ROHC Profile changes
State change:	Number of ROHC state changes
Pkts(RX):	Received ROHC packets
Pkts Rcvd:	Number of Packets received
Bytes Rcvd:	Number of bytes received
Decomp Pkts:	Number of decompressed packets sent out

Field	Description
Pkts Discarded:	Number of received packets discarded
Segmentation:	Number of output packets that got segmented.
Segment Pkts:	Number of ROHC segment packets received
Only Feedback:	Number of ROHC feedbacks that were NOT piggybacked to other ROHC packets
Piggyback FB:	Number of ROHC feedbacks that were piggybacked to other ROHC packets
Only FB packets:	Number of ROHC packets that carry ONLY multiple ROHC feedbacks.
Pkts(TX):	Transmitted ROHC packets
Pkts Sent:	Number of ROHC packets sent out
Bytes Sent:	Number of bytes sent out
Piggyback FB:	Number of Feedback packets sent as piggy back
Direct FB:	Number of Feedback packets sent without piggy back
Efficiency(RX):	Transmission Efficiency
Uncomp Hdr:	Number of uncompressed headers
Compressed Hdr:	Number of compressed headers
Percentage comp:	Percentage comparison
Histogram(RX):	Transmission Histogram
Size: < 2:	Number less than 2
Size: < 4:	Number less than 4
Size: < 8:	Number less than 8
Size: < 16:	Number less than 16
Size: > 16:	Number greater than 16

# CHAPTER 121

## show rp

This chapter describes the output of the **show rp** command.

- [show rp](#), on page 1747
- [show rp full username](#), on page 1750
- [show rp statistics pdsn-service](#), on page 1755

## show rp

*Table 509: show rp Command Output Descriptions*

Field	Description
<b>RP Summary</b>	
RP Sessions In Progress	Indicates the total number of sessions being facilitated.
<b>Registration Request/Reply</b>	
Renew RRQ Accepted	Indicates the total number of registration request renewals accepted.
Discarded	Indicates the total number of registration requests that have been discarded.
Intra PDSN Active H/O RRQ Accept	The number of intra PDSN handoffs accepted for the session when it was active.
Intra PDSN Dormant H/O RRQ Accept	The number of intra PDSN handoffs accepted for the session when it was dormant. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Inter PDSN Handoff RRQ Accepted	Indicates the total number of registration requests for inter-PDSN handoffs that have been accepted.
Reply Send Error	Indicates the total number of registration replies for which errors were experienced during transmission.
<b>Registration Update/Ack</b>	
Initial Update Transmitted	Indicates the total number of registration updates that have been transmitted.

Field	Description
Update Retransmitted	Indicates the total number of registration updates that have been re-transmitted.
Denied	Indicates the total number of registration updates that have been denied by the PCF.
Not Acknowledged	Indicates the total number of registration updates and/or acknowledgements that have not been acknowledged by the PCF.
Reg Ack Received	Indicates the total number of registration acknowledgements that have been discarded.
Reg Ack Discarded	Indicates the total number of registration acknowledgements that have been received.
Update Send Error	Indicates the total number of registration updates for which errors were experienced during transmission.
<b>Registration Update Send Reason</b>	
Lifetime Expiry	Indicates the total number of registration updates that were sent due to the expiration of a lifetime timer during a subscriber session.
Upper Layer Initiated	Indicates the total number of registration updates that were initiated by upper processing layers.
Other Reasons	Indicates the total number of registration updates that were sent due to reasons other than those listed here.
Handoff Release	Indicates the total number of registration updates that were sent due to handoff releases.
Session Manager Died	Indicates the total number of registration updates that were sent due to the termination of Session Manager tasks.  <b>NOTE:</b> If any data is reported for this field, there may be an issue with either the software or hardware. If you continue to experience problems, refer to the System Administration and Administration Reference for information on troubleshooting the problem.
<b>Registration Update Denied</b>	
Reason Unspecified	Indicates the total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).
Admin Prohibited	Indicates the total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
PDSN Failed Authentication	Indicates the total number of denied registration updates that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Update	Indicates the total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).
<b>Session Update/Ack</b>	
Initial Update Transmitted	Indicates the total number of session updates that have been transmitted.

Field	Description
Update Retransmitted	Indicates the total number of session updates that have been re-transmitted.
Denied	Indicates the total number of session updates that have been denied by the PCF.
Not Acknowledged	Indicates the total number of session updates that have not been acknowledged by the PCF.
Sess Update Ack Received	Indicates the total number of session acknowledgements that have been received.
Sess Update Ack Discarded	Indicates the total number of session acknowledgements that have been discarded.
Sess Update Send Error	Indicates the total number of session updates for which errors were experienced during transmission.
Session Update Send Reason	
Always On	Session Update message was sent to the PCF to notify the PCF that the subscriber has the Always On feature.
QoS Info	This is a session update statistic that is not supported at this time.
QoS Update Reason	
TFT Violation	Indicates that a TFT violation is the reason for QoS update.
Traffic Violation	Indicates that a traffic violation is the reason for the QoS update.
Traffic Policing	Indicates that a traffic policing action is the reason for the QoS update
Operator Triggered	Indicates that an operator triggered the QoS update.
Session Update Denied	
Reason Unspecified	Indicates the total number of session updates denied with a code of 80H (Session Denied - reason unspecified).
Insufficient Resources	Indicates the total number of session updates denied with a status code of 82H (Session Denied - insufficient resources).
Admin Prohibited	Indicates the total number of denied session updates denied with a status code of 81H (Session Denied - administratively prohibited).
Parameter not updated	Indicates the total number of session updates denied with a status code of 82H (Session Denied - insufficient resources).
PDSN Failed Authentication	Indicates the total number of denied session updates denied with a status code of 83H (Session Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of denied session updates denied with a status code of 85H (Session Denied - identification mismatch).
Poorly Formed Update	Indicates the total number of denied session updates denied with a status code of 86H (Session Denied - poorly formed request).

Field	Description
<b>Data</b>	
GRE Packets Received	Indicates the total number of Generic Routing Encapsulation (GRE) packets received.
GRE Bytes Received	Indicates the total number of Generic Routing Encapsulation (GRE) bytes received.
GRE Packets Sent	Indicates the total number of Generic Routing Encapsulation (GRE) packets transmitted.
GRE Bytes Sent	Indicates the total number of Generic Routing Encapsulation (GRE) bytes transmitted.
GRE Packets Sent in SDB Form	This indicates the total Packets sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
GRE Bytes Sent in SDB Form	This indicates the total Bytes sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
<b>GRE Segmentation</b>	
Total Packets Received with segmentation indication	Indicates the total number of Generic Routing Encapsulation (GRE) packets received with segmentation indication.
Total Packets Sent with segmentation indication	Indicates the total number of Generic Routing Encapsulation (GRE) packets sent with segmentation indication.
Total successful reassembly	Indicates the total number of Generic Routing Encapsulation (GRE) packets that were successfully reassembled.
Total packets processed without proper reassembly	Indicates the total number of Generic Routing Encapsulation (GRE) packets that were processed without proper reassembly.

## show rp full username

Table 510: show rp full username Command Output Descriptions

Field	Description
Username	The subscriber's username.
Callid	The subscriber's call identification (callid) number.
Msid	The subscriber's mobile station identification (MSID) number.
MN Sess Ref ID	The reference identification (Ref ID) number received from the mobile node.
GRE Key	The Generic Routing Encapsulation (GRE) key used with the subscribers session.
PCF Address	The IP address of the Packet Control Function (PCF) facilitating the subscriber's session.
PDSN Address	The IP address of the R-P interface on the Packet Data Service Node's that is facilitating the subscriber's session.

Field	Description
Lifetime	The maximum time that the session A10 connection can exist before it becomes expired. This value is assigned by the PDSN.
Remaining Lifetime	Remaining RP lifetime for the session.
SPI	The particular Security Parameter Index (SPI) that associates the PDSN and the PCF facilitating the session.
Service Option	RP service option for the session.
Flow Control State	Displays the Flow Control State for the session.
Prev System Id	System ID of the previous PCF for the session.
Current System Id	System ID of the current PCF for the session.
Prev Network Id	Network ID of the previous PCF for the session.
Current Network Id	Network ID of the current PCF for the session.
Prev Packet Zone Id	Packet zone ID of the previous PCF for the session.
Current Packet Zone Id	Packet zone ID of the current PCF for the session.
BSID	Base transceiver Station ID (Base Station ID) of the current PCF
A 10 Connection	
GRE Receive	
Total Packets Rcvd	The total number of packets received for the A10 connection.
Total Bytes Rcvd:	The total number of bytes received for the A10 connection.
GRE Send	
Total Packets Sent	The total number of packets sent for the A10 connection.
Total Bytes Sent:	The total number of bytes sent for the A10 connection.
Data Over Signaling Packets:	The total number of Data Over Signaling packets sent for the A10 connection.
Data Over Signaling Bytes:	The total number of Data Over Signaling bytes sent for the A10 connection.
<b>Registration Request/Reply</b>	
Renew RRQ Accepted	The total number of registration request renewals accepted.
Discarded	The total number of registration requests replies that have been discarded.
Intra PDSN Active H/O RRQ Accept	The number of intra PDSN handoffs accepted for the session when it was active.

Field	Description
Intra PDSN Dormant H/O RRQ Accept	The number of intra PDSN handoffs accepted for the session when it was dormant. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Inter PDSN Handoff RRQ Accepted	The total number of registration requests for inter-PDSN handoffs that have been accepted.
Reply Send Error	The total number of registration replies for which errors were experienced during transmission.
<b>Registration Update/Ack</b>	
Initial Update Transmitted	The total number of registration updates that have been transmitted.
Update Retransmitted	The total number of registration updates that have been re-transmitted.
Denied	The total number of registration updates that have been denied by the PCF.
Not Acknowledged	The total number of registration updates and/or acknowledgements that have not been acknowledged by the PCF.
Reg Ack Received	The total number of registration acknowledgements that have been received.
Reg Ack Discarded	The total number of registration acknowledgements that have been received.
Update Send Error	The total number of registration updates for which errors were experienced during transmission.
<b>Registration Update Send Reason</b>	
Lifetime Expiry	The total number of registration updates that were sent due to the expiration of a lifetime timer during a subscriber session.
Upper Layer Initiated	The total number of registration updates that were initiated by upper processing layers.
Other Reasons	The total number of registration updates that were sent due to reasons other than those listed here.
Handoff Release	The total number of registration updates that were sent due to handoff releases.
Session Manager Exited	The total number of registration updates that were sent due to the termination of Session Manager tasks. <b>NOTE:</b> If any data is reported for this field, there may be an issue with either the software or hardware. If you continue to experience problems, refer to the System Administration and Administration Reference for information on troubleshooting the problem.
<b>Registration Update Denied</b>	
Reason Unspecified	The total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).

Field	Description
Admin Prohibited	The total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
PDSN Failed Authentication	The total number of denied registration updates that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).
Identification Mismatch	The total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Update	The total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).
Session Update/Ack	
Initial Update Transmitted	Indicates the total number of session updates that have been transmitted.
Update Retransmitted	Indicates the total number of session updates that have been re-transmitted.
Denied	Indicates the total number of session updates that have been denied by the PCF.
Not Acknowledged	Indicates the total number of session updates that have not been acknowledged by the PCF.
Sess Update Ack Received	Indicates the total number of session acknowledgements that have been received.
Sess Update Ack Discarded	Indicates the total number of session acknowledgements that have been discarded.
Sess Update Send Error	Indicates the total number of session updates for which errors were experienced during transmission.
Session Update Send Reason	
Always On	Session Update message was sent to the PCF to notify the PCF that the subscriber has the Always On feature.
QoS Info	This is a session update statistic that is not supported at this time.
QoS Update Reason	
TFT Violation	Indicates that a TFT violation is the reason for QoS update.
Traffic Violation	Indicates that a traffic violation is the reason for the QoS update.
Traffic Policing	Indicates that a traffic policing action is the reason for the QoS update
Operator Triggered	Indicates that an operator triggered the QoS update.
Session Update Denied	
Reason Unspecified	Indicates the total number of session updates denied with a code of 80H (Session Denied - reason unspecified).
Insufficient Resources	Indicates the total number of session updates denied with a status code of 82H (Session Denied - insufficient resources).

Field	Description
Admin Prohibited	Indicates the total number of denied session updates denied with a status code of 81H (Session Denied - administratively prohibited).
Parameter not updated	Indicates the total number of session updates denied with a status code of 82H (Session Denied - insufficient resources).
PDSN Failed Authentication	Indicates the total number of denied session updates denied with a status code of 83H (Session Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of denied session updates denied with a status code of 85H (Session Denied - identification mismatch).
Poorly Formed Update	Indicates the total number of denied session updates denied with a status code of 86H (Session Denied - poorly formed request).
Profile ID Not Supported	Indicates that the profile ID is not supported.
Handoff in Progress	Indicates that a handoff is in progress.
<b>GRE Receive</b>	
Total Packets Received	The total number of Generic Routing Encapsulation (GRE) packets received.
Protocol Type Error	The total GRE packets received with an unsupported protocol field in the header.
Total Bytes Received	The total number of Generic Routing Encapsulation (GRE) bytes received.
GRE Key Absent	The number of GRE packets received without a GRE key in the header.
GRE Checksum Error	GRE packets received that had a checksum error.
Invalid Packet Length	GRE packets received with invalid packet length.
<b>GRE Send</b>	
Total Packets Sent	The total number of Generic Routing Encapsulation (GRE) packets transmitted.
Total Bytes Sent	The total number of Generic Routing Encapsulation (GRE) bytes transmitted.
Total Packets Sent in SDB	The total Packets sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
Total Bytes Sent in SDB	The total Bytes sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
<b>GRE Flow Control</b>	
Total Packets Received with XOFF	The total number of packets received for this username while the flow control was set to XOFF.
Total Packets Received with XON	The total number of packets received for this username while the flow control was set to XON.

Field	Description
Total XON->XOFF Transactions	The total number of times the flow control indicator was changed from XON to XOFF for sessions involving this username.
Total Output Packets Dropped on XOFF	The total number of packets dropped after receiving an XOFF flow control command from the RAN.
Total Output Bytes Dropped on XOFF	The total number of bytes dropped after receiving an XOFF flow control command from the RAN.
Total RP sessions matching specified criteria	The total number of sessions that had the username specified on the command line.

## show rp statistics pdsn-service

*Table 511: show rp statistics pdsn-service Command Output Descriptions*

Field	Description
PDSN Service	Displays the name of the PDSN services for which the statistics were gathered.
<b>Session Stats</b>	
Total Sessions Current	Indicates the total number of sessions that are in progress. These could be either active, dormant, being set up, or being disconnected.
Total Setup	Indicates the total number of sessions that have been successfully set up since system started.
Total Released	Indicates the total number of sessions that have successfully been disconnected.
Total Rev-A Sessions Current	Indicates the total number of Rev-A sessions that are in progress.
Total Rev-A Setup	Indicates the total number of Rev-A sessions that have been successfully set up since system started.
Total Rev-A Released	Indicates the total number of Rev-A sessions that have successfully been disconnected.
Total Downgraded from Rev-A to Rev-0	Indicates the total number of Rev-A sessions that have successfully been downgraded from Rev-A to Rev-0.
<b>Session Releases</b>	
De-registered	Indicates the total number of sessions that were disconnected through a normal de-registration process.
Lifetime Expiry	Indicates the total number of sessions that were disconnected due to the expiration of their lifetime timer.
PPP Layer Command	Indicates the number of sessions disconnected due to PPP initiating a tear-down.

Field	Description
PCF-Monitor Fail	The total number of sessions disconnected because the PCF monitor function detected that the PCF was down.
GRE Key Mismatch	The total number of sessions disconnected because the GRE key changed for a session.
Purged via Audit	The total number of sessions disconnected due to audit failures on session recovery.
Other Reasons	Indicates the number of sessions disconnected due to reasons other than those listed here.
<b>Registration Request/Reply</b>	
Total RRQ/Renew/Dereg RX	The total number of registration requests, renewals, and de-registrations received.
Total Accept	The total number of registration requests that have been accepted.
Total Denied	The total number of registration requests that have been rejected.
Total Discard	The total number of registration requests that have been discarded.
Init RRQ RX	The total number of initial registration requests that have been received.
Init RRQ Accept	The total number of initial registration requests received and accepted.
Init RRQ Denied	The total number of initial registration requests received and rejected.
Init RRQ Discard	The total number of initial registration requests that have been received and discarded.
Init Setup/Start RRQ RX	The total number of initial setup or start registration requests that have been received.
Init Setup/Start RRQ Denied	The total number of initial start or setup registration requests that have been received and rejected.
Init Setup/Start RRQ Acc	The total number of initial start or setup registration requests that have been received and accepted.
Init Setup/Start RRQ Dis	The total number of initial start or setup registration requests that have been received and discarded.
Renew RRQ RX	The total number of registration request renewals received.
Renew RRQ Accept	The total number of registration request renewals received and accepted.
Renew RRQ Denied	The total number of registration request renewals received and rejected.
Renew RRQ Discard	The total number of registration request renewals received and discarded
Renew No Airlink RX	The total number of registration request renewals received due to "No airlink".
Renew No Airlink Accept	The total number of registration request renewals received due to "No airlink" and accepted.
Renew No Airlink Denied	The total number of registration request renewals received due to "No airlink" and denied.

Field	Description
Renew No Airlink Discard	The total number of registration request renewals received due to "No airlink" and discarded.
Renew Actv Start RX	The total number of RRQ renewals with an Active Start record received.
Renew Actv Start Accept	The total number of RRQ renewals with an Active Start record received and accepted.
Renew Actv Start Denied	The total number of RRQ renewals with an Active Start record received and denied.
Renew Actv Start Discard	The total number of RRQ renewals with an Active Start record received and discarded.
Renew Actv Stop RX	The total number of RRQ renewals with an Active Stop record received.
Renew Actv Stop Accept	The total number of RRQ renewals with an Active Stop record received and accepted.
Renew Actv Stop Denied	The total number of RRQ renewals with an Active Stop record received and denied.
Renew Actv Stop Discard	The total number of RRQ renewals with an Active Stop record received and discarded.
Dereg Active Stop Accept	The total number of de-registration requests with an active stop that were accepted.
Dereg RRQ RX	The total number of de-registration requests that have been received.
Dereg RRQ Accept	The total number of de-registration requests received and accepted.
Dereg RRQ Denied	The total number of de-registration requests received and rejected
Dereg RRQ Discard	The total number of de-registration requests received and discarded.
Dereg No Active Stop RX	The total number of de-registration requests with a No Active Stop record received.
Dereg No Active Stop Accp	The total number of de-registration requests with a No Active Stop record received and accepted.
Dereg No Active Stop Denied	The total number of de-registration requests with a No Active Stop record received and denied
Dereg No Active Stop Disc	The total number of de-registration requests with a No Active Stop record received and discarded.
Dereg Active Stop RX	The total number of de-registration request with an Active Stop record received.
Dereg Active Stop Accp	The total number of de-registration request with an Active Stop record received and accepted.
Reply Send Error	The total number of registration replies for which errors were experienced during transmission.
Airlink Seq Num Invalid	The total number of replies sent when an invalid airlink sequence number is received in RRQ.
Intra PDSN Active ANID Handoff RRQ RX	The total number of intra PDSN handoff RRQs with active Access Network IDentifier (ANID) received.

Field	Description
Intra PDSN Active ANID Handoff RRQ Accepted	The total number of intra PDSN handoff RRQs with active ANID received and accepted.
Intra PDSN Active ANID Handoff RRQ Denied	The total number of intra PDSN handoff RRQs with active ANID received and denied.
Intra PDSN Active ANID Handoff RRQ Discarded	The total number of intra PDSN handoff RRQs with active ANID received and discarded.
Intra PDSN Dormant ANID Handoff RRQ RX	The total number of intra PDSN handoff RRQs with dormant ANID received. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Intra PDSN Dormant ANID Handoff RRQ Accepted	The total number of intra PDSN handoff RRQs with dormant ANID received and accepted. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Intra PDSN Dormant ANID Handoff RRQ Denied	The total number of intra PDSN handoff RRQs with dormant ANID received and denied. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Intra PDSN Dormant ANID Handoff RRQ Discarded	The total number of intra PDSN handoff RRQs with dormant ANID received and discarded. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Inter PDSN Active MEI ANID Handoff RRQ RX	The total number of inter PDSN handoff RRQs with active Mobility Event Indicator (MEI) and ANID received.
Inter PDSN Active MEI ANID Handoff RRQ Accepted	The total number of inter PDSN handoff RRQs with active MEI and ANID received and accepted.
Inter PDSN Active MEI ANID Handoff RRQ Denied	The total number of inter PDSN handoff RRQs with active MEI and ANID received and denied.
Inter PDSN Active MEI ANID Handoff RRQ Discarded	The total number of inter PDSN handoff RRQs with active MEI and ANID received and discarded.
Intra PDSN Active Handoff RRQ Accepted	Indicates the total number of registration requests received for active sessions going through an intra-PDSN handoff.

Field	Description
Intra PDSN Dormant Handoff RRQ Accepted	Indicates the total number of registration requests received for dormant sessions going through an intra-PDSN handoff.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Inter PDSN Handoff RRQ Accepted	Indicates the total number of registration requests received for sessions going through an inter-PDSN handoff.
Reply Send Error	Indicates the total number of registration replies for which errors were experienced during transmission.
<b>Registration Request Denied</b>	
Unspecified Reason	Indicates the total number of registration requests that were denied using reply code of 80H (Registration Denied - reason unspecified)
Admin Prohibited	Indicates the total number of registration requests that were denied using reply code of 81H (Registration Denied - administratively prohibited).
Insufficient Resources	Indicates the total number of registration requests that were denied using reply code of 82H (Registration Denied - insufficient resources).
PCF Failed Auth	Indicates the total number of registration requests that were denied using reply code of 83H (Registration Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of registration requests that were denied using reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Request	Indicates the total number of registration requests that were denied using reply code of 86H (Registration Denied - poorly formed request).
Unknown PDSN Address	Indicates the total number of registration requests that were denied using reply code of 88H (Registration Denied - unknown PDSN address)
Reverse Tunnel Unavail	Indicates the total number of registration requests that were denied using reply code of 89H (Registration Denied - requested reverse tunnel unavailable).
Reverse Tunnel Required	Indicates the total number of registration requests that were denied using reply code of 8AH (Registration Denied - reverse tunnel is mandatory and "T"-bit not set).
Unrecognized Vendor Id	Indicates the total number of registration requests that were denied using reply code of 8DH (Registration Denied - unsupported vendor ID or unable to interpret data in the CVSE).
Session Already Closed	Renew and RRQ denied due to the session not present in the PDSN Dereg. Error code 0x8e.
<b>RRQ Denied - Insufficient Resource Reasons</b>	

Field	Description
No Session Manager	Indicates the total number of registration requests that were denied due to the lack of available Session Manager tasks. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
No Memory	Indicates the total number of registration requests that were denied due to insufficient memory.
Session Managers Retried	Indicates that the system unsuccessfully attempted to try multiple Session Manager tasks to establish a session.
Input-Q Exceeded	Indicates that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
Policy Rejected	The Registration Request was denied because the policy was rejected.
Session Manager Rejected	The Registration Request was rejected by the Session Manager.
A11 Manager Rejected	The Registration Request was rejected by the A11 Manager.
<b>RRQ Denied - Poorly Formed Request Reasons</b>	
Session Already Dormant	The number of RRQs that had Active Stop for a session that was already dormant. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Already Active	The number of RRQs that had Active Start for a session that was already active.
Airlink Setup Absent	The number of RRQs denied due to an absent connection-setup record in the initial RRQ.
Mismatched CoA/Src addr	The number of RPs denied due to a mismatch in the care-of-address field and the request source address.
Other Reasons	The number of RRQs denied due to other reasons for a badly formed RRQ.
<b>RRQ Denied - Overload/Congestion Control</b>	
Admin Prohibited (reject)	RRQs denied with error code 0x81h due to congestion control mechanism.
Unknown PDSN (redirect)	RRQs denied with error code 0x88 due to congestion control mechanism.
<b>Registration Request Discard Reasons</b>	
No Session Manager	Indicates the total number of registration requests that were discarded due to the lack of available Session Manager tasks. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
No Memory	Indicates the total number of registration requests that were discarded due to insufficient memory.
Malformed	Indicates the total number of registration requests that were discarded due to being poorly formed.

Field	Description
Auth Failure	Indicates the total number of registration requests that were discarded due to the mobile node failing authentication.
Session Manager Dead	Indicates the total number of registration requests that were discarded due to the termination of Session Manager tasks.  <b>NOTE:</b> If any data is reported for this field, there may be an issue with either the software or hardware. If you continue to experience problems, refer to the System Administration and Administration Reference for information on troubleshooting the problem.
Admin Prohibited	Indicates the total number of registration requests that were discarded due to being administratively prohibited.
Session Manager NotReady	Indicates the total number of registration requests that were discarded due to a Session Manager task not being ready. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
Unknown PDSN	Indicates the total number of registration requests that were discarded due to the request specifying an unknown PDSN address.
Internal Bounce Error	Indicates that an internal communication message between an A11 Manager task and a Session Manager task bounced was not successfully sent.
Input-Q Exceeded	Indicates that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
Max Sessions Reached	Indicates the total number of registration requests that were discarded due to the PDSN service reaching its configured maximum number of subscribers or the exceeding of the system's session capacity license.
Invalid Pkt Len	Indicates the total number of registration requests that were discarded due to having an invalid packet length.
GRE Key Changed	RRQs discarded due to GRE key change in RRQ message.
Overload/Congestion	RRQs discarded due to congestion control mechanism.
Dropped During Handoff	RRQs dropped during handoff.
Misc Reasons	Indicates the number of registration requests that were discarded due to reasons other than those listed here.
<b>Registration Update/Ack</b>	
Reg Update Transmitted	Indicates the total number of registration updates that were transmitted.
Accepted	Indicates the total number of registration updates that were accepted by the PCF.
Denied	Indicates the total number of registration updates that were denied.
Not Acknowledged	Indicates the total number of registration updates that were not acknowledged.
Initial Update TX	Indicates the total number of initial registration updates that were transmitted.

Field	Description
Update Re-TX	Indicates the total number of registration updates that were re-transmitted.
Reg Ack Received	Indicates the total number of registration acknowledgements that were received.
Reg Ack Discard	Indicates the total number of registration acknowledgements that were discarded.
Update Send Error	Indicates the total number of registration updates for which errors were experienced during transmission.
<b>Registration Update Send Reason</b>	
Lifetime Expiry	Indicates the total number of registration updates that were sent due to the expiration of a lifetime timer during a subscriber session.
Other Reasons	Indicates the total number of registration updates that were sent due to reasons other than those listed here.
Upper Layer Initiated	Indicates the total number of registration updates that were initiated by upper processing layers.
Handoff Release	Indicates the number of registration updates that were sent due to handoff releases.
Session Manager Exited	Indicates the number of registration updates that were sent due to the termination of a Session Manager task.
<b>Registration Update Denied</b>	
Reason Unspecified	Indicates the total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).
Admin Prohibited	Indicates the total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
PDSN Failed Auth	Indicates the total number of denied registration updates that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Update	Indicates the total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).
<b>Registration Ack Discard Reasons</b>	
Session Absent	Indicates the total number of registration acknowledgements that were discarded due to the session having been already ended because the acknowledgement was late.
No Memory	Indicates the total number of registration acknowledgements that were discarded due to insufficient memory.
Malformed	Indicates the total number of registration acknowledgements that were discarded due to being poorly formed.

Field	Description
Auth Failure	Indicates the total number of registration acknowledgements that were discarded due to the mobile node failing authentication.
Internal Bounce Error	Indicates that an internal communication message between an A11 Manager task and a Session Manager task bounced (was not successfully sent).
Input-Q Exceeded	Indicates the number of times that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
Mismatched Id	Indicates the total number of discarded registration acknowledgements due to reply code 85H (Registration Denied - identification mismatch).
Invalid Pkt Len	Indicates the total number of registration acknowledgements that were discarded due to having an invalid packet length.
Misc Reasons	Indicates the number of registration acknowledgements that were discarded due to reasons other than those listed here.
Session Update/Ack	
Sess Update Transmitted	This is a session update statistic that is not supported at this time.
Accepted	This is a session update statistic that is not supported at this time.
Denied	This is a session update statistic that is not supported at this time.
Not Acknowledged	This is a session update statistic that is not supported at this time.
Initial Update TX	This is a session update statistic that is not supported at this time.
Update Retransmitted	This is a session update statistic that is not supported at this time.
Sess Ack Received	This is a session update statistic that is not supported at this time.
Sess Ack Discarded	This is a session update statistic that is not supported at this time.
Sess Update Send Error	This is a session update statistic that is not supported at this time.
Session Update Send Reason	
Always On	Session Update message was sent to the PCF to notify the PCF that the subscriber has the Always On feature.
QoS Info	This is a session update statistic that is not supported at this time.
Session Update Denied	
Reason Unspecified	This is a session update statistic that is not supported at this time.
Insufficient Resources	This is a session update statistic that is not supported at this time.
Admin Prohibited	This is a session update statistic that is not supported at this time.
Parameter not updated	This is a session update statistic that is not supported at this time.

Field	Description
PDSN Failed Auth	This is a session update statistic that is not supported at this time.
Identification Mismatch	This is a session update statistic that is not supported at this time.
Poorly Formed Update	This is a session update statistic that is not supported at this time.
<b>Session Update Ack Discard Reasons</b>	
Session Absent	Indicates the total number of session acknowledgements that were discarded due to the session having been already ended because the acknowledgement was late.
No Memory	Indicates the total number of session acknowledgements that were discarded due to insufficient memory.
Malformed	Indicates the total number of session acknowledgements that were discarded due to being poorly formed.
Auth Failure	Indicates the total number of session acknowledgements that were discarded due to the mobile node failing authentication.
Internal Bounce Error	Indicates that an internal communication message between an A11 Manager task and a Session Manager task bounced (was not successfully sent).
Input-Q Exceeded	Indicates the number of times that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
Mismatched Id	Indicates the total number of discarded session acknowledgements due to reply code 85H (Registration Denied - identification mismatch).
Invalid Packet Length	Indicates the total number of session acknowledgements that were discarded due to having an invalid packet length.
Misc Reasons	Indicates the number of session acknowledgements that were discarded due to reasons other than those listed here.
<b>Security Violations</b>	
Total Violations	Indicates the total number of security violations that occurred.
Bad SPI #	Indicates the total number of security violations that occurred due to the receipt of a Security Parameter Index (SPI) that was in the reserved range (0 through 255).
Bad Authenticator	Indicates the total number of security violations that occurred due to a mis-computed authentication field.
Unknown SPI #	Indicates the total number of security violations that occurred due to the receipt of a Security Parameter Index (SPI) that is not configured on the PDSN.
Missing MN-HA Auth Extension	Indicates the total number of security violations that occurred due to missing mobile node-home agent authentication extensions.
Missing Reg Update Auth Extension	Indicates the total number of security violations that occurred due to missing registration update authentication extensions

Field	Description
<b>GRE Receive</b>	
Total Packets Received	Indicates the total number of Generic Routing Encapsulation (GRE) packets received.
Protocol Type Error	Indicates the total number of GRE packets received with an unsupported protocol type field in the header.
Total Bytes Received	Indicates the total number of Generic Routing Encapsulation (GRE) bytes received.
GRE Key Absent	Indicates the total number of GRE packets received with no GRE key in the header.
GRE Checksum Error	Indicates the number of errors that occurred in GRE packets.
Invalid Packet Length	Indicates the total number of GRE packets received with invalid packet lengths.
No Session Found	Indicates the total number of GRE packets received for which no sessions can be found.
<b>GRE Send</b>	
Total Packets Sent	Indicates the total number of Generic Routing Encapsulation (GRE) packets transmitted.
Total Bytes Sent	Indicates the total number of Generic Routing Encapsulation (GRE) bytes transmitted.
GRE Packets Sent in SDB Form	This indicates the total Packets sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
GRE Bytes Sent in SDB Form	This indicates the total Bytes sent with the Short Data Burst indication in the A10 data stream from the PDSN to the PCF.
<b>GRE Flow Control</b>	
Total Packets Received with XOFF	The total number of packets received for this username while the flow control was set to XOFF.
Total Packets Received with XON	The total number of packets received for this username while the flow control was set to XON.
Total XON->XOFF Transactions	The total number of times the flow control indicator was changed from XON to XOFF for sessions involving this username.
Total Output Packets Dropped on XOFF	The total number of packets dropped after receiving an XOFF flow control command from the RAN.
Total Output Bytes Dropped on XOFF	The total number of bytes dropped after receiving an XOFF flow control command from the RAN.
Total RP sessions matching specified criteria	The total number of sessions that had the username specified on the command line.
<b>GRE Segmentation</b>	
Total Packets Received with segmentation indication	Indicates the total number of Generic Routing Encapsulation (GRE) packets received with segmentation indication.

<b>Field</b>	<b>Description</b>
Total Packets Sent with segmentation indication	Indicates the total number of Generic Routing Encapsulation (GRE) packets sent with segmentation indication.
Total successful reassembly	Indicates the total number of Generic Routing Encapsulation (GRE) packets that were successfully reassembled.
Total packets processed without proper reassembly	Indicates the total number of Generic Routing Encapsulation (GRE) packets that were processed without proper reassembly.

# CHAPTER 122

## show s4sgsn

- [show s4-sgsn statistics all, on page 1767](#)

## show s4-sgsn statistics all

*Table 512: show s4-sgsn statistics all Command Output Descriptions*

Field	Description
<b>SGW Relocations:</b>	
3G Intra SGSN RAU	Total number of Intra-SGSN RAUs involving SGW relocation for 3G.
2G Intra SGSN RAU	Total number of Intra-SGSN RAUs involving SGW relocation for 2G.
3G Inter SGSN RAU (S16)	Total number of Inter-SGSN RAUs on the S16 interface involving SGW relocation in 3G.
2G Inter SGSN RAU (S16)	Total number of Inter-SGSN RAUs involving SGW relocation on the S16 interface for 2G.
3G MME-SGSN RAU (S3)	The total number of MME-SGSN RAUs on the S3 interface involving SGW relocation in 3G.
2G MME-SGSN RAU (S3)	The total number of MME SGSN RAUs on the S3 interface involving SGW relocation in 2G.
Intra SGSN 2G to 3G RAU	Total number of intra-SGSN 2G to 3G RAUs involving SGW relocation.
Intra SGSN 3G to 2G RAU	Total number of Intra SGSN 3G to 2G RAUs involving SGW relocation.
3G Intra SGSN SRNS Relocation	Total number of intra SGSN SRNS relocations involving SGW relocation in 3G.

Field	Description
3G Inter SGSN SRNS Relocation (S16)	Total number of inter SGSN SRNS relocations across the S16 interface involving SGW relocation in 3G.
MME-SGSN SRNS Relocation (S3)	Total number of MME to SGSN SRNS relocations across the S3 interface involving SGW relocation.
<b>ISR Deactivations:</b>	
3G Intra RAU with SGW Relocation	Total number of ISR deactivations that occurred due to SGW relocation during an intra RAU in 3G.
3G NW Initiated Detach	Total number of ISR deactivations that occurred during the SGSN initiated detach procedure.
3G MR IDT Expiry	Total number of ISR deactivations that occurred if the user was implicitly detached due to a mobile reachability timer expiry.
3G MS Initiated Detach	Total number of ISR deactivations that occurred during the MS initiated detach procedure.
3G Cancel Location from HSS/HLR	Total number of ISR deactivations that occurred when a Cancel-Location request was received from the HLR/HSS.
3G SRNS Abort	Total number of ISR deactivations that occurred during the SRNS abort procedure.
3G Local Admin Detach	Total number ISR deactivations that occurred when an operator executed the <b>clear subscribers all local-purge</b> command.
3G SGW Change During SRNS	Total number of ISR deactivations that occurred when the SGW changes during SRNS.
2G Intra RAU with SGW Relocation	Total number of ISR deactivations that occurred due to SGW relocation during an intra RAU in 2G.
2G Implicit Detach	Total number of ISR deactivations that occurred due to an implicit detach in 2G.
Detach Notification from MME to 2G	Total number of ISR deactivations that occurred due to a detach notification message being received from MME in 2G.
<b>S3 Interface Selection Statistics:</b>	
3G S3 Selections from Standard Mapping	Total number of times that the MME address was selected based on the standard mapping (MSB bit of LAC is set) in 3G.
3G S3 Selections from Custom Mapping	Total number of times that the MME address was selected based on the custom-based mapping (using GUTI DB) in 3G.
2G S3 Selections from Standard Mapping	Total number of times that the MME address was selected based on the standard mapping (MSB bit of LAC is set) in 2G.

Field	Description
2G S3 Selections from Custom Mapping	Total number of times that the MME address was selected based on the custom-based mapping (using GUTI DB) in 2G.
<b>Procedure Abort Statistics:</b>	
3G Intra SRNS Abort Due to Total CSR Failure	Total number of intra SGSN SRNS relocations aborted if the intra SGSN SRNS relocation initiated an SGW relocation and the new SGW did not respond to the Create Session Request.
3G New SGSN SRNS Abort Due to Total CSR Failure	Total number of new SGSN SRNS relocations aborted if the new SGSN SRNS relocation initiated an SGW relocation and the new SGW did not respond to the Create Session Request.
<b>PDP Deletion Statistics:</b>	
DBR from new SGW during Intra SRNS	Indicates the total number of PDPs removed upon receiving a DBR from a new SGW during Intra SRNS relocation. This scenario can occur if a DBR is initiated from a new SGW before a Modify is received at its end.
<b>GTPU Statistics:</b>	
Total Packets Rcvd	The sum total of the <b>Total Packets from SGW</b> and <b>IDFT packets from SGW</b> counter values.
Total Packets from SGW	The total number of downlink packets received from the SGW (excluding indirect data forwarded packets).
Pkts queued	The total number of downlink packets queued by the S4-SGSN.
Pkts forward from queue	The total number of downlink packets queued, and successfully forwarded by the S4-SGSN.
Pkts dropped	The total number of downlink queued packets dropped by the S4-SGSN without forwarding due to various reasons. This total equals the sum of the following statistics: <ul style="list-style-type: none"> <li>• Queue Full</li> <li>• Sess Dealloc Started</li> <li>• Paging Failure</li> <li>• Iu Release</li> <li>• BVC Reset / Block Rcvd</li> </ul>
Queue Full	Total number of packets dropped due to the queue being full.
Sess Dealloc Started	Total number of packets dropped because the PDP session for which the data is queued is being de-allocated.
Paging Failure	Total number of packets dropped because of a paging failure.
Traffic Policing	Total number of packets dropped because of downlink traffic policing.

Field	Description
BVC Reset/Block Rcvd	Total number of packets dropped in a 2G S4-SGSN when a BVC Reset / Block is received.
Total Bytes Rcvd	The sum total of the <b>Total Bytes from SGW</b> and <b>IDFT bytes from SGW</b> counter values.
Total Bytes from SGW	The total number of downlink bytes received from the SGW (excluding indirect data forwarded bytes).
Bytes queued	The total number of downlink bytes queued by the S4-SGSN.
Bytes forward from queue	The total number of downlink bytes queued and successfully forwarded by the S4-SGSN.
Bytes dropped	The total number of downlink queued bytes dropped by the S4-SGSN without forwarding due to various reasons. This total is the sum of the values for the following statistics: <ul style="list-style-type: none"> <li>• Queue Full</li> <li>• Sess Dealloc Started</li> <li>• Paging Failure</li> <li>• Traffic Policing</li> <li>• Iu release</li> <li>• BVC Reset / Block Rcvd)</li> </ul>
Queue Full	Total number of bytes dropped due to queue being full.
Sess Dealloc Started	Number of bytes dropped because the PDP session for which the data is queued is being deallocated.
Paging Failure	Total number of bytes dropped because of paging failure.
Traffic Policing	Total number of bytes dropped because of downlink traffic policing.
BVC Reset/Block Rcvd	Total number of bytes dropped in 2G S4-SGSN when a BVC Reset / Block is received.
<b>IDFT Statistics:</b>	
IDFT packets to SGW	Total number of old SGSN connected mode handovers when indirect data forwarding is enabled at the old SGSN to retransmit the queued downlink packets from RNC to eNodeB. During this scenario, the RNC sends the queued downlink packets to SGSN and SGSN sends it through IDFT to the SGW and SGW forwards it to eNodeB. This statistics denotes the number of packets sent through SGSN by RNC to SGW for indirect data forwarding

Field	Description
IDFT packets from SGW	Total number of new SGSN connected mode handovers when indirect data forwarding is enabled at the new SGSN to retransmit the queued downlink packets from eNodeB to RNC. During this scenario, the eNodeB sends the queued downlink packets to SGW through an IDFT setup by MME and SGW sends it through IDFT to the SGSN and SGSN forwards it to RNC. This stat denotes the number of packets sent through SGSN by SGW to RNC for indirect data forwarding.
IDFT bytes to SGW	This counter is incremented during old SGSN SRNS relocation when indirect data forwarding is enabled at the old SGSN to retransmit the queued downlink packets from RNC to eNodeB. During this scenario, the RNC sends the queued downlink packets to SGSN and SGSN sends it through IDFT to the SGW and SGW forwards it to eNodeB. This stat denotes the number of bytes sent through SGSN by RNC to SGW for indirect data forwarding
IDFT bytes from SGW	The total number of new SGSN connected mode handovers when indirect data forwarding is enabled at the new SGSN to retransmit the queued downlink packets from eNodeB to RNC. During this scenario, the eNodeB sends the queued downlink packets to SGW through an IDFT setup by MME and SGW sends it through IDFT to the SGSN and SGSN forwards it to RNC. This stat denotes the number of bytes sent through SGSN by SGW to RNC for indirect data forwarding.
<b>S4 Overcharge Protection Statistics</b>	
3G Release Access Bearer with ARRL bit set	Indicates the total number of Release Access Bearer messages sent within UMTS with ARRL bit set.
2G Release Access Bearer with ARRL bit set	Indicates the total number of Release Access Bearer messages sent within GPRS with ARRL bit set.

# CHAPTER 123

## show saegw

This chapter describes the output of the **show saegw** command.

- [show saegw-service statistics all-name](#) , on page 1773
- [show saegw-service statistics all](#), on page 1774

## show saegw-service statistics all-name

Displays statistics information for SAEGW services.

Field	Description
<b>Current Subscribers By RAT-Type:</b>	
EUTRAN	The total number of EUTRAN PDNs by RAT-Type.
UTRAN	The total number of UTRANs PDNs by RAT-Type.
GERAN	The total number of GERANs PDNs by RAT-Type.
NB-IoT	The total number of NB-ToT PDNs.
LTE-M	The total number of LTE-M initiated PDNs.
Other	The total number of Others PDNs by RAT-Type.
<b>Current PDNs by RAT-Type:</b>	
EUTRAN	The total number of active EUTRAN PDNs by RAT-Type.
UTRAN	The total number of active UTRANs PDNs by RAT-Type.
GERAN	The total number of active GERANs PDNs by RAT-Type.
NB-IoT	The total number of active NB-IoT PDNs.
LTE-M	The total number of active LTE-M PDNs.
Other	The total number of Others PDNs by RAT-Type

# show saegw-service statistics all

Identifies the real usage of 5G Data DCNR sessions for SAEGW.

Table 513: show saegw-service statistics all Command Output Descriptions

Field	Description
DCNR Secondary RAT Data PDN Statistics	
<b>Collocated PDNs:</b>	
Active	<p>The total number of currently active SAEGW DCNR Secondary RAT-Data PDN Sessions.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p> <p>Counter is decremented when the identified DCNR Secondary RAT Data session gets released.</p> <p><b>Note</b> DCNR Secondary RAT Data statistics will be decremented only when the session gets released. There might be also a scenario where DCNR session receives Secondary RAT Data once or twice only and if it is not reported in the subsequent messages from MME / SAEGW, as per current proposed solution, DCNR Secondary RAT Data statistics will not be decremented till the session is released.</p>
Setup	<p>The total number of cumulative SAEGW DCNR Secondary RAT-Data PDN Sessions setup.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p>
Released	<p>The total number of cumulative SAEGW DCNR Secondary RAT Data PDNs sessions released.</p> <p>Counter is incremented when the DCNR Secondary RAT Data PDN Session release.</p> <p>It is a cumulative counter, so it will not be decremented</p>
<b>PGW-Anchor PDNs:</b>	
Active	The total number of active sessions using P-GW anchor PDNs.

<b>Field</b>	<b>Description</b>
Setup	The total number of setup sessions using P-GW anchor PDNs.
Released	The total number of releases sessions using P-GW anchor PDNs.
<b>SGW-Anchor PDNs:</b>	
Active	The total number of active sessions using S-GW anchor PDNs.
Setup	The total number of setup sessions using S-GW anchor PDNs.
Released	The total number of releases sessions using S-GW anchor PDNs.

# CHAPTER 124

## show samog-services

This chapter describes the output of the **show samog-services** command variants.

- [show samog-service statistics](#), on page 1777
- [show samog-service name](#), on page 1802

## show samog-service statistics

*Table 514: show samog-service statistics*

Field	Description
<b>SaMOG Statistics for all services</b>	
<b>MRME Service Stats</b>	
<b>Session Stats</b>	
Total Attempted	Total number of sessions attempted.
Total Setup	Total number of sessions setup.
Total Current	Total number of sessions that are currently active.
Total Released	Total number of sessions released
Total Aborted	Total number of sessions aborted.
<b>Total Disconnected</b>	
Disconnected locally	Total number of sessions that were disconnected locally.
Disconnected by UE	Total number of sessions that were disconnected by the UE.
Disconnected by NAS	Total number of sessions that were disconnected by NAS.
Disconnected by CGW	Total number of sessions that were disconnected CGW.
Disconnected by AAA	Total number of sessions that were disconnected by AAA.

Field	Description
<b>Radius Message Stats</b>	
Total Start Req rcvd	Total number of RADIUS start request message received.
Total Start Req (Retransmitted) rcvd	Total number of RADIUS retransmitted start request message received.
Total Start Rsp sent	Total number of RADIUS start response message sent.
Total Interim Updt rcvd	Total number of RADIUS interim update received.
Total Interim Updt (Retransmitted) rcvd	Total number of RADIUS retransmitted interim update received.
Total Interim Updt Rsp sent	Total number of RADIUS interim update response sent.
Total Stop Req rcvd	Total number of RADIUS stop request message received.
Total Stop Req (Retransmitted) rcvd	Total number of RADIUS retransmitted stop request message received.
Total Stop Rsp sent	Total number of RADIUS stop response sent.
Total Accounting On rcvd	Total number of accounting on message received.
Total Accounting Off rcvd	Total number of accounting off message received.
Total Access Req rcvd	Total number of access request message received.
Total Access Req (Retransmitted) rcvd	Total number of retransmitted access request message received.
Total Access Challenge sent	Total number of Access Challenge message sent.
Total Access Accept sent	Total number of Access Accept sent due to congestion policy.
Total Access Reject sent	Total number of Access Rejected sent due to congestion policy.
<b>Congestion control policy applied</b>	
Total Unknown Req rcvd	Total number of unknown requests received for congestion control policy.
Total Send Failure	Total number of congestion control policy sent that failed.
Total Discarded	Total number of congestion control policy discarded.
Mandatory Attr Missing	Total number of missing mandatory attributes.
Start For Non-Existing Session	Total number of start messages sent to non-existing sessions.
Interim For Non-Existing Session	Total number of interim messages sent to non-existing sessions.
Stop For Non-Existing Session	Total number of stop messages sent to non-existing sessions.
Unknown Client	Total number of unknown client.

Field	Description
Invalid Authenticator	Total number of authenticators that is invalid
Stale Packets	Total number of stale packets.
Service Not Supported	Total number of services that are not supported.
No Resource	Total number of resources that are not available.
Internal Error	Total number of internal errors that occurred.
License Limit Exceeded	Total number of license limit exceeded.
Service Limit Exceeded	Total number of license limit exceeded.
Invalid Length	Total number of call control profiles with invalid length.
Invalid EAP	Total number of call control profiles with invalid EAP.
Pending Server Response	Total number of call control profiles with server response pending.
Congestion control policy applied	Total number of congestion control policies applied.
No Policy Match	Total number of Access-Requests dropped due to non-availability of matching PLMN based local policy.
<b>DHCP Message Stats</b>	
DHCP Messages Discarded	Total number of DHCP messages discarded.
Max Size Exceeded	Total number of DHCP messages discarded due to the maximum size exceeded.
Non-Existing Session	Total number of DHCP messages discarded due to a non-existing session.
GiAddr Mismatch	Total number of DHCP messages due to a Gi address mismatch.
Unsupported HW Type or Length	Total number of DHCP messages due to an unsupported hardware type or length.
Stale Packets	Total number of DHCP messages discarded due to stale packets.
Service Not Supported	Total number of DHCP messages discarded due to an unsupported service.
<b>Reauthorization Stats</b>	
Attempts	Total number of reauthorization attempts.
Success	Total number of reauthorization succeeded.
Failure	Total number of reauthorization failure.
<b>Reauthentication Stats</b>	
Attempts	Total number of reauthentication attempts.

Field	Description
Success	Total number of reauthentication succeeded.
Failure	Total number of reauthentication failure.
<b>Handoff Stats</b>	
With Authentication	
Attempts	Total number of sessions attempted for handoff using authentication mechanism.
Success	Total number of sessions with successful handoff using authentication mechanism.
Failure	Total number of handoff failure sessions using authentication mechanism.
With Accounting Start	
Attempts	Total number of sessions attempted for handoff using accounting mechanism.
Success	Total number of sessions with successful handoff using accounting mechanism.
Failure	Total number of sessions with handoff failure using accounting mechanism.
With Accounting Interim	
Attempts	Total number of sessions attempted for handoff using accounting interim mechanism.
Success	Total number of sessions with successful handoff using accounting interim mechanism.
Failure	Total number of sessions with handoff failure using accounting interim mechanism.
<b>DHCP to DHCP Handoff Statistics</b>	
Received	Total number of DHCP to DHCP handoff statistics received.
Accepted	Total number of DHCP to DHCP handoff statistics accepted.
Denied	Total number of DHCP to DHCP handoff statistics denied.
<b>EAP Client Stats</b>	
<b>Initial Identity Msgs</b>	
NAI Formats	
Root NAI	Total number of UE Identity that uses the root NAI format.
Decorated NAI	Total number of UE Identity that uses the decorated NAI format.

Field	Description
UE Identity formats	
IMSI Identity	Total number of UE Identity that uses an IMSI identity.
Fast Reauth	Total number of UE Identity that uses the fast reauth NAI format.
Pseudonym	Total number of UE Identity that uses the pseudonym NAI format.
Emergency	Total number of UE Identity that uses the emergency NAI format.
Unknown NAI	Total number of UE Identity that uses an NAI format that is unknown.
<b>EAP type</b>	
EAP-AKA	Total number of Extensible Authentication Protocol AKA.
EAP-SIM	Total number of Extensible Authentication Protocol SIM.
EAP-AKA'	Total number of Extensible Authentication Protocol AKA'.
EAP-TLS	Total number of Extensible Authentication Protocol TLS.
EAP-TTLS	Total number of Extensible Authentication Protocol TTLS.
EAP-PEAP	Total number of Extensible Authentication Protocol PEAP.
EAP Unsupported	Total number of Extensible Authentication Protocol that is unsupported. <b>Important</b> This counter has been removed in Release 18 and later.
EAP Other	Total number of Extensible Authentication Protocol MSCHAPv2/other. Total number of Extensible Authentication Protocol EAP-TLS or EAP-TTLS/MSCHAPv2.
<b>Initial Non-Identity Msgs</b>	
Total Requested	Total number of initial non-identity messages requested.
Total Rejected	Total number of initial non-identity messages rejected.
Invalid Len	Total number of initial non-identity messages with invalid length.
Invalid Code	Total number of initial non-identity messages with invalid code.
Id Mismatch	Total number of initial non-identity messages with ID mismatch.
Invalid NAI	Total number of initial non-identity messages with invalid NAI.
Invalid IMSI	Total number of initial non-identity messages with invalid IMSI number.
Total Dropped	Total number of initial non-identity messages that were dropped.
Invalid code	Total number of initial non-identity messages with invalid code.

Field	Description
<b>EAP Server Stats</b>	
Total Sent	Total number of EAP server status sent.
Total Received	Total number of EAP server status received.
Success	Total number of EAP server connections succeeded.
Request	Total number of EAP server requests sent.
Failure	Total number of EAP server requests failed.
Drop	Total number of EAP server requests dropped.
Total Received- AKA	Total number of EAP AKA received.
Success	Total number of EAP AKA connections succeeded.
Request	Total number of EAP AKA requested.
Failure	Total number of EAP AKA requests failed.
Drop	Total number of EAP AKA requests dropped.
Total Received- AKA'	Total number of EAP AKA' received.
Success	Total number of EAP AKA' connections succeeded.
Request	Total number of EAP AKA' requested.
Failure	Total number of EAP AKA' requests failed.
Drop	Total number of EAP AKA' requests dropped.
Total Received- SIM	Total number of EAP SIM received.
Success	Total number of EAP SIM connections succeeded.
Request	Total number of EAP SIM requested.
Failure	Total number of EAP SIM requests failed.
Drop	Total number of EAP SIM requests dropped.
Total Received- TLS	Total number of EAP TLS received.
Success	Total number of EAP TLS connections succeeded.
Request	Total number of EAP TLS requested.
Failure	Total number of EAP TLS requests failed.
Drop	Total number of EAP TLS requests dropped.
Total Received- TTLS	Total number of EAP TTLS received.

Field	Description
Success	Total number of EAP TTLS connections succeeded.
Request	Total number of EAP TTLS requested.
Failure	Total number of EAP TTLS requests failed.
Drop	Total number of EAP TTLS requests dropped.
Total Received- PEAP	Total number of EAP PEAP received.
Success	Total number of EAP PEAP connections succeeded.
Request	Total number of EAP PEAP requested.
Failure	Total number of EAP PEAP requests failed.
Drop	Total number of EAP PEAP requests dropped.
Total Discarded	Total number of EAP server requests discarded
Framed MTU	Total number of framed MTUs sent.
<b>Non-EAP Session Stats</b>	
Attempted	Total number of non-EAP sessions attempted.
AAA Rejects	Total number of non-EAP sessions rejected by AAA server or rejected during AAA auth response parsing in SaMOG (invalid attributes, missing mandatory AVPs etc.)
<b>Pre-authentication Calls</b>	
Success	Total number of non-EAP sessions successfully established during the pre-authentication phase.
Failure	Total number of non-EAP sessions failed to be created during the pre-authentication phase. Possible reasons: internal errors, missing pre-auth phase configs, missing ACL/pool/rulebase etc.
AAA Disconnect with IMSI	Total number of AAA disconnects with IMSI during the pre-authentication phase.
AAA Disconnect without IMSI	Total number of AAA disconnects without IMSI during pre-authentication phase.
AAA Disconnect timeout	Total number of AAA disconnects due to a timeout during the pre-authentication phase.
<b>Authentication &amp; Authorization Calls</b>	
Success	Total number of non-EAP sessions successfully established after UE is authenticated and authorized by AAA (i.e. TAL phase, wherein AAA provides User Identity).

Field	Description
Failure	Total number of non-EAP sessions failed to be created after UE is authenticated and authorized by AAA (i.e. TAL phase, wherein AAA provides User Identity). Possible reasons are network type selection failure, PGW selection failure, multi-device demux failure, internal errors etc.
Abort	Total number of non-EAP sessions aborted specifically due to IPSG demux failure, when multiple devices of same user are connected.
<b>PGW/GGSN Selection Stats</b>	
IP Address	Total number of PGW/GGSN IP addresses resolved during PGW selection.
Hostname	
SNAPTR Procedure	
Success	Total number of Snaptr queries that are successful for the given hostname for PGW selection.
Failure	Total number of Snaptr queries that failed for the given hostname for PGW selection.
APN FQDN	
SNAPTR Procedure	
Success	Total number of Snaptr queries that are successful for given APN FQDN for PGW selection.
Failure	Total number of Snaptr queries that failed for a given APN FQDN for PGW selection.
A/AAAA Procedure	
Success	Total number of A/AAAA queries that are successful for given APN FQDN for PGW selection.
Failure	Total number of A/AAAA queries that failed for a given APN FQDN for PGW selection.
<b>Network Access Mode Stats</b>	
Local Offload	Total number of sessions selected for local offload network access mode.
GTPv1	Total number of sessions selected with network access mode as GTPv1.
GTPv2	Total number of sessions selected with network access mode as GTPv2.
PMIP	Total number of sessions selected with network access mode as PMIP.
<b>Local Offload Flow Stats</b>	
GTPv1	Total number of local offload flows with network mode as GTPv1.

Field	Description
GTPv2	Total number of local offload flows with network mode as GTPv2.
PMIP	Total number of local offload flows with network mode as PMIP.
Disconnect Messages Stats	
Disconnect Messages Sent	Total number of disconnect messages sent.
Disconnect Response Received	Total number of disconnect responses received.
Disconnect Response Ack Received	Total number of disconnect response acknowledgement received.
Residual Session Removed	Total number of residual sessions removed.
Disconnect Response Nack Received	Total number of disconnect response acknowledgement received.
Unsupported Attribute	Total number of unsupported attribute.
Missing Attribute	Total number of missing attribute.
NAS Id Mismatch	Total number of mismatch in the NAS ID.
Invalid Request	Total number of invalid requests.
Unsupported Service	Total number of unsupported services.
Unsupported Extension	Total number of unsupported extensions.
Admin Prohibited	Total number of administration prohibited.
Session Context Not Found	Total number of session context not found.
Session Context Not Removable	Total number of session context not removable.
Resource Unavailable	Total number of unavailable resources.
CGW Service Stats	
Subscribers Total	
Active	Total number of active subscribers.
Setup	Total number of subscribers setup.
Released	Total number of subscribers released.
PDNs Total	
Active	Total number of PDN connections active.
Setup	Total number of PDN connections setup.
Released	Total number of PDN connections released.

Field	Description
Rejected	Total number of PDN connections rejected.
<b>PDNs By PDN-Type</b>	
IPv4 PDNs	
Active	Total number of IPv4 PDNs active.
Setup	Total number of IPv4 PDNs connected.
Released	Total number of IPv4 PDNs released.
Rejected	Total number of IPv4 PDNs rejected.
IPv6 PDNs	
Active	Total number of IPv6 PDNs active.
Setup	Total number of IPv6 PDNs connected.
Released	Total number of IPv6 PDNs released.
Rejected	Total number of IPv6 PDNs rejected.
IPv4v6 PDNs	
Active	Total number of IPv4v6 PDNs active.
Setup	Total number of IPv4v6 PDNs connected.
Released	Total number of IPv4v6 PDNs released.
Rejected	Total number of IPv4v6 PDNs rejected.
<b>PDNs By Network-Type</b>	
GTPv1 PDNs	
Active	Total number of current active GTPv1 PDN connections.
Setup	Total number of GTPv1 PDN connections created.
Released	Total number of GTPv1 PDN connections released.
Rejected	Total number of GTPv1 PDN connections rejected.
GTPv2 PDNs	
Active	Total number of current active GTPv2 PDN connections.
Setup	Total number of GTPv2 PDN connections created.
Released	Total number of GTPv2 PDN connections released.
Rejected	Total number of GTPv2 PDN connections rejected.

Field	Description
<b>Gi Redirect PDNs</b>	
Active	Total number of locally offloaded PDN (including Pre-authentication) calls that are currently active.
Setup	Total number of locally offloaded PDN (including Pre-authentication) calls setup on SaMOG after a chassis reboot.
Released	Total number of locally offloaded PDN (including Pre-authentication) calls released by the SaMOG service.
Rejected	Total number of locally offloaded PDN (including Pre-authentication) calls rejected by the SaMOG service.
<b>PDNs Released By Reason</b>	
MAG Ini	Total number of PDN connections released by MAG.
PGW Ini	Total number of PDN connections released by PGW.
DHCP Client Ini	Total number of PDN connections released by DHCP.
GGSN Ini	Total number of PDN connections released by GGSN.
GTPC Path Failure	Total number of PDN connections released because of GTPC path failure.
GTPU Path Failure	Total number of PDN connections released because of GTPU path failure.
GTPU Error Ind	Total number of PDN connections released because of GTPU Error Indication.
Local	Total number of PDN connections released Locally.
Other	Total number of PDN connections released by reason undefined.
<b>PDNs Aborted By Reason</b>	
IP Allocation Failure	Total number of PDN connections aborted due to an IP allocation failure.
Bearer Id Alloc Failure	Total number of PDN connections aborted due to a bearer ID allocation failure.
<b>IPv6 Neighbor Discovery Statistics</b>	
IPv6 RS Received	Total number of IPv6 Router Solicitation messages received.
IPv6 RS Dropped	Total number of IPv6 Router Solicitation messages dropped.
IPv6 RA Sent	Total number of IPv6 Router Advertisement messages sent.
<b>Data Statistics Per Interface</b>	
<b>S2A-GTP Total Data Statistics</b>	

Field	Description
Uplink	
Total Pkts	
IPv4 Pkts(IPv4)	Total number of IPv4 payload packets sent over the IPv4 GTP tunnel towards P-GW.
IPv4 Pkts(IPv6)	Total number of IPv6 payload packets sent over the IPv4 GTP tunnel towards P-GW.
IPv6 Pkts(IPv4)	Total number of IPv4 payload packets sent over the IPv6 GTP tunnel towards P-GW.
IPv6 Pkts(IPv6)	Total number of IPv6 payload packets sent over the IPv6 GTP tunnel towards P-GW.
Total Bytes	
IPv4 Bytes(IPv4)	Total number of IPv4 payload bytes sent over the IPv4 GTP tunnel towards P-GW.
IPv4 Bytes(IPv6)	Total number of IPv6 payload bytes sent over the IPv4 GTP tunnel towards P-GW.
IPv6 Bytes(IPv4)	Total number of IPv4 payload bytes sent over the IPv6 GTP tunnel towards P-GW.
IPv6 Bytes(IPv6)	Total number of IPv6 payload bytes sent over the IPv6 GTP tunnel towards P-GW.
Dropped Pkts	
IPv4 Pkts(IPv4)	Total number of dropped IPv4 payload packets that were sent over the IPv4 GTP tunnel towards P-GW.
IPv4 Pkts(IPv6)	Total number of dropped IPv6 payload packets that were sent over the IPv4 GTP tunnel towards P-GW.
IPv6 Pkts(IPv4)	Total number of dropped IPv4 payload packets that were sent over the IPv6 GTP tunnel towards P-GW.
IPv6 Pkts(IPv6)	Total number of dropped IPv6 payload packets that were sent over the IPv6 GTP tunnel towards P-GW.
Dropped Bytes	
IPv4 Bytes(IPv4)	Total number of dropped IPv4 payload bytes that were sent over the IPv4 GTP tunnel towards P-GW.
IPv4 Bytes(IPv6)	Total number of dropped IPv6 payload bytes that were sent over the IPv4 GTP tunnel towards P-GW.

Field	Description
IPv6 Bytes(IPv4)	Total number of dropped IPv4 payload bytes that were sent over the IPv6 GTP tunnel towards P-GW.
IPv6 Bytes(IPv6)	Total number of dropped IPv6 payload bytes that were sent over the IPv6 GTP tunnel towards P-GW.
Downlink	
Total Pkts	Total number of downlink packets sent on S2a Interface.
IPv4 Pkts(IPv4)	Total number of IPv4 payload packets received over the IPv4 GTP tunnel towards P-GW.
IPv4 Pkts(IPv6)	Total number of IPv6 payload packets received over the IPv4 GTP tunnel towards P-GW.
IPv6 Pkts(IPv4)	Total number of IPv4 payload packets received over the IPv6 GTP tunnel towards P-GW.
IPv6 Pkts(IPv6)	Total number of IPv6 payload packets received over the IPv6 GTP tunnel towards P-GW.
Total Bytes	
IPv4 Bytes(IPv4)	Total number of IPv4 payload bytes received over the IPv4 GTP tunnel towards P-GW.
IPv4 Bytes(IPv6)	Total number of IPv6 payload bytes received over the IPv4 GTP tunnel towards P-GW.
IPv6 Bytes(IPv4)	Total number of IPv4 payload bytes received over the IPv6 GTP tunnel towards P-GW.
IPv6 Bytes(IPv6)	Total number of IPv6 payload bytes received over the IPv6 GTP tunnel towards P-GW.
Dropped Pkts	
IPv4 Pkts(IPv4)	Total number of dropped IPv4 payload packets that were received over the IPv4 GTP tunnel towards P-GW.
IPv4 Pkts(IPv6)	Total number of dropped IPv6 payload packets that were received over the IPv4 GTP tunnel towards P-GW.
IPv6 Pkts(IPv4)	Total number of dropped IPv4 payload packets that were received over the IPv6 GTP tunnel towards P-GW.
IPv6 Pkts(IPv6)	Total number of dropped IPv6 payload packets that were received over the IPv6 GTP tunnel towards P-GW.
Dropped Bytes	

Field	Description
IPv4 Bytes(IPv4)	Total number of dropped IPv4 payload bytes that were received over the IPv4 GTP tunnel towards P-GW.
IPv4 Bytes(IPv6)	Total number of dropped IPv6 payload bytes that were received over the IPv4 GTP tunnel towards P-GW.
IPv6 Bytes(IPv4)	Total number of dropped IPv4 payload bytes that were received over the IPv6 GTP tunnel towards P-GW.
IPv6 Bytes(IPv6)	Total number of dropped IPv6 payload bytes that were received over the IPv6 GTP tunnel towards P-GW.
<b>S2A-PMIP Total Data Statistics</b>	
Uplink	
Total Pkts	Total number of Uplink packets sent on S2a PMIP Interface.
Total Bytes	Total number of Uplink bytes sent on S2a PMIP Interface.
Dropped Pkts	Total number of Uplink packets dropped on S2a PMIP Interface.
Dropped Bytes	Total number of Uplink bytes dropped on S2a PMIP Interface.
Downlink	
Total Pkts	Total number of downlink packets sent on S2a PMIP Interface.
Total Bytes	Total number of downlink bytes sent on S2a PMIP Interface.
Dropped Pkts	Total number of downlink packets dropped on S2a PMIP Interface.
Dropped Bytes	Total number of downlink bytes dropped on S2a PMIP Interface.
<b>Gn-U Total Data Statistics</b>	
Uplink	
Total Pkts	Total number of Uplink packets sent on Gn-U Interface.
Total Bytes	Total number of Uplink data bytes sent on Gn-U Interface.
Dropped Pkts	Total number of Uplink packets dropped on Gn-U Interface.
Dropped Bytes	Total number of Uplink data bytes dropped on Gn-U Interface.
Downlink	
Total Pkts	Total number of Downlink packets sent on Gn-U Interface.
Total Bytes	Total number of Downlink data bytes sent on Gn-U Interface.
Dropped Pkts	Total number of Downlink packets dropped on Gn-U Interface.

Field	Description
Dropped Bytes	Total number of Downlink data bytes dropped on Gn-U Interface.
<b>Data Statistics Per PDN-Type</b>	
IPv4 PDNs	
Uplink	
Total Pkts	Total number of uplink packets sent for IPv4 PDNs.
Total Bytes	Total number of uplink bytes sent for IPv4 PDNs.
Downlink	
Total Pkts	Total number of downlink packets sent for IPv4 PDNs.
Total Bytes	Total number of downlink bytes sent for IPv4 PDNs.
<b>IPv6 PDN</b>	
Uplink	
Total Pkts	Total number of uplink packets sent for IPv6 PDNs.
Total Bytes	Total number of uplink bytes sent for IPv6 PDNs.
Downlink	
Total Pkts	Total number of downlink packets sent for IPv6 PDNs.
Total Bytes	Total number of downlink bytes sent for IPv6PDNs.
<b>IPv4v6 PDNs</b>	
<b>Uplink v4</b>	
Total Pkts	Total number of downlink packets sent for IPv4 PDNs.
Total Bytes	Total number of downlink bytes sent for IPv4PDNs.
<b>Downlink v4</b>	
Total Pkts	Total number of downlink packets sent for IPv4 PDNs.
Total Bytes	Total number of downlink bytes sent for IPv4 PDNs.
<b>Uplink v6</b>	
Total Pkts	Total number of downlink packets sent for IPv6 PDNs.
Total Bytes	Total number of downlink bytes sent for IPv6 PDNs.
<b>Downlink v6</b>	
Total Pkts	Total number of downlink packets sent for IPv6 PDNs.

Field	Description
Total Bytes	Total number of downlink bytes sent for IPv6 PDNs.
<b>MIP AAA Authentication</b>	
Attempts	Total number of sessions for MIP authentication attempts.
Success	Total number of successful MIP authentication sessions.
Total Failures	Total number of MIP authentication failures.
Actual Auth Failures	Total number of actual MIP Authentication failures.
Misc Auth Failures	Total number of Miscellaneous MIP Authentication failures.
<b>Binding Updates Received</b>	
Total Received	Total number of PMIPv6 PBUs received.
Total Accepted	Total number of PMIPv6 PBUs accepted.
Total Denied	Total number of PMIPv6 PBUs denied/failed during processing.
Total Discarded	Total number of PMIPv6 PBUs discarded or dropped.
<b>Initial Binding Update Requests</b>	
Received	Total number of initial binding update requests received.
Accepted	Total number of initial binding update requests accepted.
Denied	Total number of initial binding update requests denied.
<b>Refresh Binding Update Requests</b>	
Received	Total number of PMIPv6 PBUs received for renew.
Accepted	Total number of PMIPv6 PBUs for renew accepted.
Denied	Total number of PMIPv6 PBUs for renew denied/failed during processing.
<b>DeReg Requests</b>	
Received	Total number of PMIPv6 PBUs received for Deregistration.
Accepted	Total number of PMIPv6 PBUs for Deregistration accepted.
Denied	Total number of PMIPv6 PBUs for deregistration denied.
<b>Handoff Requests</b>	
Received	Total number of PMIPv6 PBUs received for Handoff.
Accepted	Total number of PMIPv6 PBUs for Handoff accepted.
Denied	Total number of PMIPv6 PBUs for handoff denied.

Field	Description
<b>DHCP Discover Handoff Stats</b>	
Received	Total number of DHCP Discover messages received during handoff.
Accepted	Total number of DHCP Discover messages accepted during handoff.
Denied	Total number of DHCP Discover messages denied during handoff.
<b>Binding Acknowledgements Sent</b>	
Total	Total number of PMIPv6 PBAs sent.
Accepted Reg	Total number of PMIPv6 PBAs sent accepting registrations and renew.
Accepted DeReg	Total number of PMIPv6 Deregistration PBUs accepted sending PBAs.
Denied	Total number of PMIPv6 PBUs denied sending PBAs.
Send Error	Total number of PMIPv6 PBAs failed to send.
<b>Binding Update Deny Reasons</b>	
Insufficient Resource	Total number of PMIPv6 PBUs rejected with insufficient resources.
Mismatched ID	Total number of PMIPv6 PBUs rejected for mismatch in ID.
MN Auth Failure	Total number of PMIPv6 PBUs rejected for MN Authentication failure.
Admin Prohibited	Total number of PMIPv6 PBUs rejected for Administratively Prohibited reason.
Msg ID Required	Total number of PMIPv6 PBUs rejected for Message ID Required.
DAD Failed	Total number of PMIPv6 PBUs rejected for requested Home Address allocation failure.
Not Home Subnet	Total number of PMIPv6 PBUs rejected for address allocation failure from address pool.
Sequence Out Of Window	Total number of PMIPv6 PBUs rejected for incorrect sequence number.
Reg Type Change Disallowed	Total number of PMIPv6 PBUs rejected for renews.
Unspecified Reason	Total number of PMIPv6 PBUs rejected for other reasons.
Service-Authorization Failed	Total number of PMIPv6 PBUs rejected for authorization failure.
Proxy Reg Not Enabled	Total number of PMIPv6 PBUs rejected when proxy registrations are not enabled.
Timestamp Mismatch	Total number of PMIPv6 PBUs rejected when timestamp in PBU is incorrect.
Timestamp Lower Than Expected	Total number of PMIPv6 PBUs rejected when timestamp in PBU is in past.

Field	Description
Missing MN-ID Option	Total number of PMIPv6 PBUs rejected when MN NAI Extension is missing.
Missing HNP Option	Total number of PMIPv6 PBUs rejected when Home Network Prefix Extension is missing.
Missing Access Tech Option	Total number of PMIPv6 PBUs rejected when Access Tech Type Extension is missing.
Missing Handoff Ind Option	Total number of PMIPv6 PBUs rejected when Handoff Indicator is missing.
Not Authorized For HNP	Total number of PMIPv6 PBUs rejected when Requested Home Address Prefix is not authorized.
Not LMA For Mobile	Total number of PMIPv6 PBUs rejected when LMA for Mobile is incorrect.
Not Authorized For Proxy Reg	Total number of PMIPv6 PBUs rejected when Proxy registrations are not allowed.
BCE Prefix Do Not Match	Total number of PMIPv6 PBUs rejected when requested Prefix session is not found.
GRE Key Option Required	Total number of PMIPv6 PBUs rejected when GRE key option is not found.
MCOA Unknown CoA	Total number of PMIPv6 PBUs rejected when Care of Address is incorrect.
<b>Update Denied - Insufficient Resource Reasons</b>	
No Session Manager	Total number of Binding Update Request Denied because of no Session Manager is available.
No Memory	Total number of Binding Update Request Denied because of no Memory available.
Session Manager Rejected	Total number of Binding Update Request Denied because of Session Manager Rejection.
Input-Q Exceeded	Total number of Binding Update Request Denied because of Input queue size is exceeded.
Simul Bindings Exceeded	Total number of Binding Update Request Denied because of number of simultaneous Binding Updates exceeded.
Address Alloc Failed	Total number of Binding Update Request Denied because of address allocation failed.
<b>Update Denied - Admin Prohibited Reasons</b>	
MN-AAA Auth Option Missing	Total number of PMIPv6 PBUs denied due to MN AAA Authentication mobility option missing.
H-bit Not Set	Total number of PMIPv6 PBUs are denied due to H (Home Registration)-Bit not set.

Field	Description
Invalid MN-AAA Option SPI	Total number of PMIPv6 PBUs denied due to invalid MN-AAA Authentication mobility option.
Invalid MN-HA Option SPI	Total number of PMIPv6 PBUs are denied due to invalid MN-HA Authentication mobility option.
Congestion Control Denied	Total number of PMIPv6 PBUs denied due to overload congestion control.
Policy Rejected	Total number of PMIPv6 PBUs are denied due to policy rejection.
HoA Not Authorized	Total number of PMIPv6 PBUs are denied as Home Address is not authorized.
No Permission	Total number of PMIPv6 PBUs denied with no permission.
Bad Request	Total number of PMIPv6 PBUs denied due to bad request.
<b>Binding Updates Discard Reasons</b>	
Congestion Discarded	Total number of PMIPv6 PBUs discarded due to overload congestion.
Checksum Error	Total number of PMIPv6 PBUs discarded due to checksum errors.
Initial Auth Pending	Total number of PMIPv6 PBUs are discarded due to initial authentication pending.
Session Not Found	Total number of PMIPv6 PBU denied and discarded due to session not found.
HAMGR Not Ready	Total number of PMIPv6 PBUs discarded as HAMgr is not ready.
Decode Failure	Total number of PMIPv6 PBUs discarded due to failure to decode.
Invalid Buffer Length	Total number of PMIPv6 PBUs discarded due to invalid buffer length.
Revocation Pending	Total number of PMIPv6 PBUs discarded due to revocation pending for the session.
<b>Binding Revocation</b>	
Sent	Total number of PMIPv6 Binding Revocations sent.
Retries Sent	Total number of PMIPv6 Binding Revocation retries sent.
Ack Rcvd	Total number of PMIPv6 Binding Revocation Ack Messages received.
Not Acknowledged	Total number of PMIPv6 Binding Revocation Ack Timeouts.
Rcvd	Total number of PMIPv6 Binding Revocations received.
Ack Sent	Total number of PMIPv6 Binding Revocation Ack sent.
<b>Sent Revocation Trigger Reasons</b>	

Field	Description
Unspecified	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Unspecified (0).
Administrative Reason	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Administrative Reason (1).
Inter-MAG Handoff-Same ATT	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Inter-MAG Handover - same Access Type (2).
Inter-MAG - Unknown Handoff	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Inter-MAG Handover - Unknown (4).
Inter-MAG Handoff-Diff ATT	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Inter-MAG Handover - different Access Type (3).
Per-Peer Policy	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Per-Peer Policy (128).
Revoking Node Local Policy	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Revoking Mobility Node Local Policy (129).
User Initiated Session Term	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason User-Initiated Session(s) Termination (5).
Access Network Session Term	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Access Network Session(s) Termination (6).
Out-of Sync BCE State	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason Possible Out-of-Sync BCE State (7).
Unknown	Total number of Binding Revocation Indications(BRI) sent with Revocation Trigger Reason other than defined values.
<b>Received Revocation ACK Status</b>	
Success	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as success (0).
Partial-Success	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as partial success (1).
Binding-Does-Not-Exist	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Binding Does NOT Exist (128).
No IPv4-HoA-Bind	Total number of Binding Revocation Acknowledgements (BRA) received with Status Code as IPv4 Home Address Option Required (129).
Global-Revoc-Not-Authorized	Total number of Binding Revocation Acknowledgements (BRA) received with Status Code as Global Revocation NOT Authorized (130).
Revoc-MN-ID-Required	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Revoked Mobile Nodes Identity Required (131).

Field	Description
Revoc-Failed-MN-Attached	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Revocation Failed - MN is Attached (132).
Trigger-Not-Supported	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Revocation Trigger NOT Supported (133).
Proxy-Bind-Rev-Not-Supported	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Proxy Binding Revocation NOT Supported (135).
Revoc-Func-Not-Supported	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code as Revocation Function NOT Supported (134).
Unknown	Total number of Binding Revocation Acknowledgements(BRA) received with Status Code other than defined values.
<b>Binding Revocation ACK Discarded</b>	
Total	Total number of received Binding Revocation Acknowledgements(BRA) discarded.
Session Not Found	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to corresponding Session Not Found for the BRA.
Badly Formed Request	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to Badly Formed message.
Decode Error	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to Decode failure.
Checksum Error	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to Checksum Error.
Invalid Message Type	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to Invalid Message Type.
HAMGR Not Ready	Total number of received Binding Revocation Acknowledgements (BRA) discarded due to HAMGR Not Ready to process requests (recovering).
Matching Request Not Found	Total number of received Binding Revocation Acknowledgements(BRA) discarded due to matching revocation request not found.
Invalid Buffer Length	Total number of received Binding Revocation Acknowledgements (BRA) discarded due to Invalid Buffer Length found while decoding the message.
<b>PMIPv6 Data Statistics</b>	
Tunnel Data Received	
Total Packets	
IPv4 GRE(IPv4)	Total number of IPv4 data packets received on IPv4 GRE tunnel.
IPv4 GRE(IPv6)	Total number of IPv6 data packets received on IPv4 GRE tunnel.

Field	Description
IPv6 GRE(IPv4)	Total number of IPv4 data packets received on IPv6 GRE tunnel.
IPv6 GRE(IPv6)	Total number of IPv6 data packets received on IPv6 GRE tunnel.
Total Bytes	
IPv4 GRE(IPv4)	Total bytes of IPv4 bytes received on IPv6 GRE tunnel.
IPv4 GRE(IPv6)	Total bytes of IPv6 bytes received on IPv6 GRE tunnel.
IPv6 GRE(IPv4)	Total number of IPv4 bytes received on IPv6 GRE tunnel.
IPv6 GRE(IPv6)	Total number of IPv6 bytes received on IPv6 GRE tunnel.
Total Errors	
Protocol Type Error	Total number of data packets received on IPv6 GRE tunnel with invalid next header.
Invalid Pkt Length	Total number of data packets received on IPv6 GRE tunnel with invalid length.
No Session Foun	Total number of data packets received on IPv6 GRE tunnel for which binding is not found at SaMOG based on CoA address.
Tunnel Data Sent	
Total Packets	
IPv4 GRE(IPv4)	Total number of IPv4 data packets sent on IPv4 GRE tunnel.
IPv4 GRE(IPv6)	Total number of IPv6 data packets sent on IPv4 GRE tunnel.
IPv6 GRE(IPv4)	Total number of IPv4 data packets sent on IPv6 GRE tunnel.
IPv6 GRE(IPv6)	Total number of IPv6 data packets sent on IPv6 GRE tunnel.
Total Bytes	
IPv4 GRE(IPv4)	Total bytes of IPv4 bytes sent on IPv4 GRE tunnel.
IPv4 GRE(IPv6)	Total bytes of IPv6 bytes sent on IPv4 GRE tunnel.
IPv6 GRE(IPv4)	Total number of IPv4 bytes sent on IPv6 GRE tunnel.
IPv6 GRE(IPv6)	Total number of IPv6 bytes sent on IPv6 GRE tunnel.
<b>EoGRE Data Statistics</b>	
Tunnel Data Received	
Total Packets	

Field	Description
IPv4 EoGRE(IPv4)	Total number of IPv4 payload packets received over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport).
IPv4 EoGRE(IPv6)	Total number of IPv6 payload packets received over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport)
IPv6 EoGRE(IPv4)	Total number of IPv4 payload packets received over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
IPv6 EoGRE(IPv6)	Total number of IPv6 payload packets received over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
Total Bytes	
IPv4 EoGRE(IPv4)	Total number of IPv4 payload bytes received over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport).
IPv4 EoGRE(IPv6)	Total number of IPv6 payload bytes received over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport)
IPv6 EoGRE(IPv4)	Total number of IPv4 payload bytes received over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
IPv6 EoGRE(IPv6)	Total number of IPv6 payload bytes received over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
Total Errors	
Drop Error	Total number of Data Packets dropped on EoGRE Tunnel.
Dest MAC Violation	Total number of destination MAC address in the packet received over the EoGRE tunnel that does not match with SaMOG's virtual MAC, broadcast, or multicast address.
<b>Tunnel Data Sent</b>	
Total Packets	Total number of IPv4 payload packets sent over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport).
IPv4 EoGRE(IPv4)	Total number of IPv6 payload packets sent over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport)
IPv4 EoGRE(IPv6)	Total number of IPv4 payload packets sent over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
IPv6 EoGRE(IPv4)	Total number of IPv6 payload packets sent over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
IPv6 EoGRE(IPv6)	Total number of IPv4 payload packets sent over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport).
Total Bytes	Total number of data bytes sent on the EoGRE tunnel.

Field	Description
IPv4 EoGRE(IPv4)	Total number of IPv4 payload bytes sent over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport).
IPv4 EoGRE(IPv6)	Total number of IPv6 payload bytes sent over the IPv4 GRE tunnel (EoGRE tunnel with v4 transport)
IPv6 EoGRE(IPv4)	Total number of IPv4 payload bytes sent over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)
IPv6 EoGRE(IPv6)	Total number of IPv6 payload bytes sent over the IPv6 GRE tunnel (EoGRE tunnel with v6 transport)

**show samog-service statistics plmn mcc <mcc1> mnc <mnc1>**

*Table 515:*

Field	Description
<b>System Statistics</b>	
Active GTPv2 PDNs	Total number of active GTPv2 PDN sessions received.
GTPv2 Sessions	Total number of GTPv2 sessions received.
<b>EAP Session Statistics</b>	
Attempted	Total number of EAP sessions attempted.
Success	Total number of EAP sessions succeeded.
Failure	Total number of failed EAP sessions.
Current	Total number of active EAP sessions.
<b>S2A Statistics</b>	
Create Session Request TX	Total number of Create Session Request sessionstransmitted on S2A interface.
Create Session Response Accept RX	Total number of create session response accept messages received based on S2A interface.
Create Bearer Request RX	Total number of Create bearer Request messages received.
Create Bearer Response Accept TX	Total number of Create Bearer Response Accept sessions transmitted.
Delete Session Request TX	Total number of Delete session requests transmitted.
Delete Session Response Accept RX	Total number of Delete session responses received.
Delete Bearer Request RX	Total number of Delete Bearer request messages received.

Field	Description
Delete Bearer Response Accept TX	Total number of Delete Bearer response messages transmitted.
<b>Diameter Authentication Statistics</b>	
DER TX	Total number of DER messages transmitted.
DEA Accept RX	Total number of DEA Accept messages received.
RAR RX	Total number of RAR messages received.
RAA TX	Total number of RAA messages transmitted.
ASR RX	Total number of ASA messages received.
ASA TX	Total number of ASA messages transmitted.
STR TX	Total number of STR messages transmitted.
STA RX	Total number of STA messages received.
<b>DHCPv6 Statistics</b>	
IPV6 RA TX	Total number of IPV6 RA messages transmitted.
<b>DHCP Statistics</b>	
DHCP Sessions Active	Total number of active DHCP sessions.
DHCP Sessions Setup	Total number of DHCP sessions set up.
DHCP Sessions Released	Total number of DHCP session released.
DHCP DISCOVER RX	Total number of DHCP discover messages received.
DHCP OFFER TX	Total number of DHCP offer messages transmitted.
DHCP REQUEST RX	Total number of DHCP request messages received.
DHCP ACK TX	Total number of DHCP acknowledgment messages transmitted.
DHCP NAK TX	Total number of DHCP NAK messages transmitted.
<b>RADIUS Accounting Statistics</b>	
Accounting-Request TX	Total number of RADIUS accounting request DHCP messages transmitted.
Accounting-Response RX	Total number of RADIUS accounting response messages received..
Accounting-Start TX	Total number of RADIUS accounting start messages transmitted.
Accounting-Stop TX	Total number of RADIUS accounting stop messages transmitted.
Accounting-Request Timeout	Total number of RADIUS accounting request messages that are timedout.

# show samog-service name

*Table 516: show samog-service name Command Output Descriptions*

Field	Description
<b>Reporting Action</b>	
Event Record	Indicates if RTT feature is enabled or not.

# CHAPTER 125

## show sbc

This chapter includes the **show sbc** command output tables.

- [show sbc-service all](#), on page 1803
- [show sbc-service cbc-associations all](#), on page 1805
- [show sbc-service cbc-associations path-info all](#), on page 1805
- [show sbc-service statistics all](#), on page 1806

## show sbc-service all

*Table 517: show sbc-service all Command Output Descriptions*

Field	Description
Service name	The name of the service for which SBc statistics are being displayed.
Context	The name of the context configured on the system that is currently facilitating the SBc service.
Service-Id	The identification number of the service.
Status	The Operational status of the SBc service.
Bind	The Bind status of the SBc service.
SBc-MME IP Address	Displays the IP address of SBc interface on the MME side.
SCTP Port	Displays the SCTP Port number of the SBc interface on MME side.
Max SBc Associations Allowed	Displays the maximum number of CBC association allowed per SBc service.
SCTP Parameters	Displays the SCTP parameter template associated to SBc service.
SCTP Alpha	Displays the SCTP Retransmission Timeout (RTO) alpha value as configured in the SCTP Parameter Template.

Field	Description
SCTP Beta	Displays the SCTP Retransmission Timeout (RTO) beta value as configured in the SCTP Parameter Template.
SCTP Checksum Type	Displays the SCTP checksum type as configured in the SCTP Parameter Template.
SCTP Valid Cookie Lifetime	Displays the SCTP cookie lifetime value as configured in the SCTP Parameter Template.
SCTP Max Assoc Retrans	Displays the maximum number of retransmissions for SCTP associations value as configured in the SCTP Parameter Template.
SCTP Max Number of In Streams	Displays the maximum number of incoming streams for SCTP value as configured in the SCTP Parameter Template.
SCTP Init Retransmissions	Displays the maximum number of retransmissions for SCTP initiations value as configured in the SCTP Parameter Template.
SCTP Max MTU	Displays the maximum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.
SCTP Max Number of Out Streams	Displays the maximum number of outgoing streams for SCTP value as configured in the SCTP Parameter Template.
SCTP Path Retransmissions	Displays the maximum number of retransmissions for SCTP paths value as configured in the SCTP Parameter Template.
SCTP Min MTU	Displays the minimum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.
SCTP RTO Initial	Displays the initial time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP RTO Max	Displays the maximum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP RTO Min	Displays the minimum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP Sack Frequency	Displays the frequency for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template.
SCTP Sack Period	Displays the period of time for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template.
SCTP Start MTU	Displays the initial Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.

Field	Description
SCTP Heartbeat Status	Displays the SCTP heartbeat status as configured in the SCTP Parameter Template.
SCTP HeartBeat Timer	Displays the SCTP heartbeat timer value as configured in the SCTP Parameter Template.
SCTP Bundle Status	Displays the SCTP data chunk bundle status as configured in the SCTP Parameter Template.
SCTP Bundle Timer	Displays the SCTP data chunk bundle timer value as configured in the SCTP Parameter Template.
SCTP Alternate Accept Flag	Displays the SCTP additional lifetime accept flag status as configured in the SCTP Parameter Template.

## show sbc-service cbc-associations all

*Table 518: show sbc-service cbc-associations all Command Output Descriptions*

Field	Description
MM	Indicates the MME Manager instance (showing first 2 characters).
PEERID	Displays the Peer ID number of the Cell Broadcast Center (CBC) association.
Sbc Service Name	Displays the SBc service name to which the CBC is associated.
Assoc UpTime	Displays the total uptime of the association between the MME and the CBC.
CBC IP:Port	Displays the IP address and port number of the CBC. Up to 2 IPv4 or 2 IPv6 addresses can be used by the same CBC with SCTP multi-homing.

## show sbc-service cbc-associations path-info all

*Table 519: show sbc-service cbc-associations path-info all Command Output Descriptions*

Field	Description
MMS	Indicates the MME Manager instance (showing first 2 characters). S - indicates the status of the path, either (D) Disabled or (A) Active.

Field	Description
PEERID	Displays the Peer ID number of the Cell Broadcast Center (CBC) association.
Source IP:Port	Displays the IP address and port number of the MME.
Dest IP:Port	Displays the IP address and port number of the CBC.

## show sbc-service statistics all

Table 520: show sbc-service statistics all Command Output Descriptions

Field	Description
Total Services(SBc)	Total number of SBc services configured on this system.
SBc Statistics	This group includes counters for data transmitted and received for all SBc services.
Transmitted SBc Data	This subgroup includes counters for data transmitted for all SBc services.
Total Transmitted	Total number of messages transmitted from the MME to all CBCs.
Transmit Errors	This subgroup includes counters for errors encountered while transmitting SBc messages towards CBC.
Transport Errors	Total number of failures, due to SCTP, while transmitting SBc messages towards CBC.
Encode Failures	Total number of failures in sending messages to CBC due to message encoding failures
No buffers	Total number of failures in sending messages to CBC due to memory allocation failures.
Transport Buffer Failure	Total memory allocation failures during sending of SBc message over SCTP.
Encode Buffer Failure	Total memory allocation failures during encoding of IEs for SBc message.
Write Replace Warning Response	The total number of Write-Replace Warning Responses sent for all SBc services (Tracking Area Not Valid + MME Capacity Exceeded + Warn Bcast Not Operational + Message Accepted).
Tracking Area Not Valid	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Tracking Area Not Valid.
MME Capacity Exceeded	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause MME Capacity Exceeded.

Field	Description
Warn Bcast Not Operational	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Warning Broadcast Not Operational.
Message Accepted	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Message Accepted.
Stop Warning Response	The total number of Stop Warning Responses sent for all SBc services (Tracking Area Not Valid + MME Capacity Exceeded + Warn Bcast Not Operational + Message Accepted)
Tracking Area Not Valid	The total number of Stop Warning Response messages sent from the MME to the CBC with cause Tracking Area Not Valid.
MME Capacity Exceeded	The total number of Stop Warning Response messages sent from the MME to the CBC with cause MME Capacity Exceeded.
Warn Bcast Not Operational	The total number of Stop Warning Response messages sent from the MME to the CBC with cause Warning Broadcast Not Operational.
Message Accepted	The total number of Write Replace Warning Response messages sent from the MME to the CBC with cause Message Accepted.
Error Indication	The total number of Error Indication messages sent from the MME to the CBC.
Received SBc Data	This subgroup includes counters for data received for all SBc services.
Total Received PDUs	The total number of messages received from all CBCs.
PDU Decode Success	The total number of successful PDU decodes.
Receive Errors	This subgroup includes counters for PDU receive errors.
No Sbc Association	The total number of received SBc messages dropped due to no matching association.
PDU Decode Failures	The total number of received SBc messages dropped due to PDU decode failure.
Write Replace Warning Request	The total number of Write Replace Warning Request messages received from the CBC.
TAI List Not Present	The total number of Write Replace Warning Request messages received from the CBC without a List-Of-TAIs IE.
Stop Warning Request	The total number of Stop Warning Request messages received from the CBC.
TAI List Not Present	The total number of Stop Warning Request messages received from the CBC without a List-Of-TAIs IE.
Error Indication	The total number of Error Indication messages received from the CBC.

Field	Description
IE Errors	The total number of CBC IE failures.
Protocol Error Statistics	This subgroup includes counters for Protocol Errors for all SBc services.
Unknown Procedures	The total number of messages encountered with Unknown Procedure codes.
Unknown IEs	The total number of messages encountered with Unknown IEs.
Unknown Messages	The total number of unrecognized messages encountered.
Missing Mandatory IEs	The total number of messages encountered with Missing Mandatory IE.
Transfer Syntax Error	The total number of messages encountered with a Transfer Syntax Error.
Semantic Error	The total number of messages encountered with a Semantic Error
Message Not Compatible	The total number of messages encountered with error: Message Not Compatible.
Others	The total number of parser internal messages.
Abstract Syntax Errors	This subgroup includes counters for Abstract Syntax Errors for all SBc services.
Reject	The total number of messages encountered with Abstract Syntax Error with Criticality: Reject.
Ignore and notify	The total number of messages encountered with Abstract Syntax Error with Criticality: Ignore and Notify.
Ignore	The total number of messages encountered with Abstract Syntax Error with Criticality: Ignore.
Falsely Constr Message	The total number of messages encountered with Abstract Syntax Error: Falsely Constructed message.
SBc Association Statistics	This subgroup includes counters related to SBc Associations for all SBc services.
Total Active	The total number of SBc Associations currently Active.
Total Created	The total number of SBc Associations created.
Total Closed	The total number of SBc Associations closed.
Total Rejected	The total number of SBc Associations rejected.
CBC Transactions Created	The total number of CBC transactions created.
CBC Transaction Failed	The total number of CBC transactions failed.
CBC Transaction Timeout	The total number of CBC transactions timed out.

Field	Description
SCTP Statistics	This group displays the statistics captured over the SCTP interface and processed by this SBc service.
Transmitted SCTP Data	This sub-group displays the statistics of the total data processed and transmitted over SCTP interface by this SBc service.
Init Chunks	Indicates the total SCTP packets with INIT transmitted over SCTP interface by this SBc service.
Init Ack Chunks	Indicates the total SCTP packets with INIT-ACK transmitted over SCTP interface by this SBc service.
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN transmitted over SCTP interface by this SBc service.
Shutdown Ack Chunks	Indicates the total SCTP packets with SHUTDOWN-ACK transmitted over SCTP interface by this SBc service.
Cookie Chunks	Indicates the total SCTP packets with COOKIE transmitted over SCTP interface by this SBc service.
Cookie Ack Chunks	Indicates the total SCTP packets with COOKIE-ACK transmitted over SCTP interface by this SBc service.
Data Chunks	Indicates the total SCTP packets with DATA transmitted over SCTP interface by this SBc service.
Data Ack Chunks	Indicates the total SCTP packets with DATA-ACK transmitted over SCTP interface by this SBc service.
Shutdown Complete Chunks	Indicates the total SCTP packets with SHUTDOWN-COMPLETE transmitted over SCTP interface by this SBc service.
Heartbeat Chunks	Indicates the total SCTP packets with HEARTBEAT transmitted over SCTP interface by this SBc service.
HeartBeat Ack Chunks	Indicates the total SCTP packets with HEARTBEAT-ACK transmitted over SCTP interface by this SBc service.
Abort Chunks	Indicates the total SCTP packets with ABORT transmitted over SCTP interface by this SBc service.
Error Chunks	Indicates the total SCTP packets with ERROR transmitted over SCTP interface by this SBc service.
Received SCTP Data	This sub-group displays the statistics of the total data received over SCTP interface and processed by this SBc service.
Init Chunks	Indicates the total SCTP packets with INIT received over SCTP interface by this SBc service.
Init Ack Chunks	Indicates the total SCTP packets with INIT-ACK received over SCTP interface by this SBc service.

Field	Description
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN received over SCTP interface by this SBc service.
Shutdown Ack Chunks	Indicates the total SCTP packets with SHUTDOWN-ACK received over SCTP interface by this SBc service.
Cookie Chunks	Indicates the total SCTP packets with COOKIE received over SCTP interface by this SBc service.
Cookie Ack Chunks	Indicates the total SCTP packets with COOKIE-ACK received over SCTP interface by this SBc service.
Data Chunks	Indicates the total SCTP packets with DATA received over SCTP interface by this SBc service.
Data Ack Chunks	Indicates the total SCTP packets with DATA-ACK received over SCTP interface by this SBc service.
Shutdown Complete Chunks	Indicates the total SCTP packets with SHUTDOWN-COMPLETE received over SCTP interface by this SBc service.
Heartbeat Chunks	Indicates the total SCTP packets with HEARTBEAT received over SCTP interface by this SBc service.
HeartBeat Ack Chunks	Indicates the total SCTP packets with HEARTBEAT-ACK received over SCTP interface by this SBc service.
Abort Chunks	Indicates the total SCTP packets with ABORT received over SCTP interface by this SBc service.
Error Chunks	Indicates the total SCTP packets with ERROR received over SCTP interface by this SBc service.
Retransmitted Sctp Data	This sub-group displays the statistics of the total data processed and retransmitted over SCTP interface by this SBc service.
Init Chunks	Indicates the total SCTP packets with INIT retransmitted over SCTP interface by this SBc service.
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN retransmitted over SCTP interface by this SBc service.
Shutdown Ack Chunks	indicates the total SCTP packets with SHUTDOWN-ACK retransmitted over SCTP interface by this SBc service.
Cookie Chunks	Indicates the total SCTP packets with COOKIE retransmitted over SCTP interface by this SBc service.
Data Chunks	Indicates the total SCTP packets with DATA transmitted over SCTP interface by this SBc service.
Total Bytes Sent	Indicates the total bytes processed and sent to lower layer over SCTP interface by this SBc service.

Field	Description
Total Bytes Received	Indicates the total bytes received from lower layer over SCTP interface by this SBc service for processing.
Total Packets Sent	Indicates the total packets processed and sent to lower layer over SCTP interface by this SBc service.
Total Packets Received	Indicates the total packets received from lower layer over SCTP interface by this SBc service for processing.

# CHAPTER 126

## show security

This chapter includes the **show security** command output tables.

**Important** The outputs of **show security** commands vary based on platform ASR 5000 or ASR 5500, VPC (virtualized), card type and the StarOS release.

- [show security server talos-intelligence](#) , on page 1813

## show security server talos-intelligence

*Table 521: show security server talos-intelligence*

Field	Description
State Information	
State	The current state of the TSI controller, such as RUNNING, or NOT RUNNING.
Last DB Update	UTC time of most recent DB update.
Next DB Update	UTC time of next scheduled update.
Statistics	
Connect Attempts	Total number of attempted connections to the Mediator.
Connect Failures	Total number of failed connection attempts to the Mediator.
Message Failures	Total number of errors in response to message request to the mediator (ie, ECHO, VERDICT, MANIFEST).
FTP Failures	Total number of times the system failed to download a file via SFTP.
Message Timeouts	Total number of timeouts awaiting a message reply.
Storage Timeouts	Total number of timeouts waiting for local storage access.
Database Updates	Total number of times a successful set of DB updates was applied to SAS.

Field	Description
File Downloads	Total number of successful database file downloads.
Unexpected	Total number of unexpected conditions hit (Each results in a TSI controller error log message).

## CHAPTER 127

# show session

---

This chapter describes the output of the **show session** command variants.

- [show session counters historical all](#), on page 1816
- [show session disconnect-reasons](#), on page 1817
- [show session disconnect-reasons buckets](#), on page 1817
- [show session disconnect-reasons verbose](#), on page 1818
- [show session progress](#), on page 1864
- [show session recovery status verbose](#), on page 1867
- [show session subsystem](#), on page 1868
- [show session subsystem full](#), on page 1869
- [show session subsystem verbose](#), on page 1869
- [show session subsystem debug-info](#), on page 1870
- [show session subsystem facility a1lmgr all](#), on page 1870
- [show session subsystem facility aaamgr all](#), on page 1871
- [show session subsystem facility aaaproxy all](#), on page 1878
- [show session subsystem facility asngwmgr all](#), on page 1879
- [show session subsystem facility asnpcmgr all](#), on page 1880
- [show session subsystem facility egtpegmgr all](#), on page 1881
- [show session subsystem facility egtpinmgr all](#), on page 1882
- [show session subsystem facility famgr all](#), on page 1882
- [show session subsystem facility gtpcmgr all](#), on page 1883
- [show session subsystem facility hamgr all](#), on page 1884
- [show session subsystem facility ipsgmgr](#), on page 1884
- [show session subsystem facility mmedemux](#), on page 1885
- [show session subsystem facility mmemgr all](#), on page 1886
- [show session subsystem facility sessmgr all](#), on page 1894
- [show session summary](#), on page 1902
- [show session trace statistics](#), on page 1904
- [show session trace subscriber](#), on page 1905
- [show session fp-flow-state-change statistics](#), on page 1906

# show session counters historical all

Table 522: show session counters historical all Command Output Descriptions

Header	Description
Intv	The identification number of the sample interval.
Timestamp	The approximate time the data was gathered. It is in the format YYYY:MM:DD:HH:MM:SS.
<b>Number of Calls</b>	
Arrived	Displays data for "total calls arrived" counters.
Rejected	Displays data for "total calls rejected" counters.
Connected	Displays data for "total calls connected" counters.
Disconn	Displays data for "total calls disconnected" counters.
Failed	Displays data for "total calls failed" counters.
Handoffs	Displays data for "total handoffs" counters.
Renewals	Displays data for "total renewal" counters.
(A+R+D+F+H+R) CallOps	Displays data for all call operations. This is a calculated value based on the following formula:  (arrived + rejected + disconnected + failed + handoffs + renewals)
<b>Access Technology Categories</b>	
Number of Calls 2G (GERAN)	The number of calls using 2G GERAN (GSM/EDGE Radio Access Network) technology.
Number of Calls 3G (UTRAN)	The number of calls using 3G UTRAN (UMTS Terrestrial Radio Access Network) technology.
Number of Calls 4G (EUTRAN)	The number of calls using 4G EUTRAN (Enhanced UMTS Terrestrial Radio Access Network) technology.
Number of Calls eHRPD	The number of eHRPD (evolved High Rate Packet Data [3GPP2]) calls.
Number of Calls WiFi (Wireless LAN)	The number of WiFi calls.

## show session disconnect-reasons

Table 523: show session disconnect-reasons Header Descriptions

Field	Description
<b>Session Disconnect Statistics</b>	
Total Disconnects	The total number of sessions disconnected since the system was started or since the last time that session disconnect reasons was cleared.
Disconnect Reason	The reason sessions were disconnected. Only reasons that have disconnects associated with them are listed.
Num Disc	The number of sessions disconnected for the reason.
Percentage	The percentage of total disconnects.
mme-reselection-to-amf	This disconnect reason is incremented, if the subscriber reselects to AMF as part of EPS to 5GS Idle Mobility Registration procedure.
mme-relocation-to-amf	This disconnect reason is incremented, if the subscriber relocates to AMF as part of EPS to 5GS Handover procedure

## show session disconnect-reasons buckets

This command only displays output if bucket interval CONNECTION\_TIME has been configured via the Global Configuration mode **session disconnect-reasons bucket-interval** command.

This feature is configured via the CLI command which sets a time interval value that is sent to all sessmgrs. Each sessmgr fills buckets with disconnect reason counts indexed by the time interval. The time interval for filling the buckets is indexed relative to time hh:00. For example: if the time interval is 5 minutes, the bucket is filled at hh:00, hh:05, hh:10, hh:15. So if current time is 06:57, buckets with values will be 06:55:00, 06:50:00 and 06:45:00.

Table 524: show session disconnect-reasons buckets Header Descriptions

Header	Description
Total Disconnects	The total number of sessions disconnected since the system was started or since the last time that session disconnect reasons was cleared.  If CONNECTION_TIME is recently configured and the first timer has not expired (no buckets are filled yet), "NA" is displayed in place of timestamps for those buckets which are not filled. "NA" also appears if the buckets have been cleared with the <b>clear session disconnect-reasons [buckets]</b> command.
Disconnect Reason	The reason sessions were disconnected. Only reasons that have disconnects associated with them are listed.

Header	Description
<i>interval</i>	Month-Day-Timestamp of the bucket interval. This column displays the cumulative count of disconnect reasons at that timestamp calculated since beginning.
Num Disc	The number of sessions disconnected for the associated reason during this bucket interval.
Percentage	The percentage of total disconnects for the associated reason during this bucket interval.

## show session disconnect-reasons verbose

**Important** In Release 20, 21.0 and 21.1, HeNBGW is not supported. For more information, contact your Cisco account representative.

**Table 525: show session disconnect-reasons verbose Header Descriptions**

Header	Description
Total Disconnects	The total number of sessions disconnected since the system was started or since the last time that session disconnect reasons was cleared.
Disconnect Reason	The reason sessions were disconnected. Only reasons that have disconnects associated with them are listed unless the verbose keyword is specified.
Num Disc	The total number of sessions disconnected for the associated reason.
Percentage	The percentage of total disconnects for the associated reason.

In the following table, the indicator number at the end of the disconnect field name will vary depending upon the software build in which the **show session disconnect-reason** command is issued.

**Table 526: show session disconnect-reasons Field Descriptions**

Field	Description
Unknown (0)	The total number of sessions disconnected due to unknown reason.

Field	Description
Admin-disconnect (1)	<p>The total number of sessions disconnected due to any of the following reasons:</p> <ul style="list-style-type: none"> <li>• Sessions disconnected when the Administrator issues the <b>clear subscribers all</b> CLI command.</li> <li>• Sessions disconnected by ECS due to any of the following reasons: <ul style="list-style-type: none"> <li>• Bearer does not contain active rules—when the last bearer has no rules left as part of some PCRF trigger.</li> <li>• Charging-action has the <b>flow action</b> parameter configured as <b>terminate-session</b>.</li> </ul> </li> <li>• Sessions disconnected by Diameter Credit Control Application (DCCA) due to any of the following reasons: <ul style="list-style-type: none"> <li>• Result code 4010 or 4012 is received at the command level, and for CCR-Initial and CCR-Update Credit Control Failure Handling (CCFH) is configured as Terminate or Retry-and-Terminate.</li> <li>• Result code 5003 or 5030 is received at the command level.</li> <li>• Abort-Session-Request message is received.</li> </ul> </li> </ul>
Remote-disconnect (2)	The total number of sessions disconnected by the remote system.
Local-disconnect (3)	The total number of sessions disconnected by local system.
No-resource (4)	The total number of sessions disconnected due to non-availability of resources.
Service-limit-exceeded (5)	The total number of sessions disconnected due to exceed in service limit.
PPP-LCP-negotiation-failed (6)	The total number of sessions disconnected due to LCP negotiation failed.
PPP-LCP-no-response (7)	The total number of sessions disconnected due to no response in PPP-LCP session.
PPP-LCP-loopback-detected (8)	The total number of sessions disconnected due to loop back detected in PPP-LCP.
PPP-LCP-max-retry-reached (9)	The total number of sessions disconnected due to maximum retries in PPP-LCP session.
PPP-LCP-echo-failed (10)	The total number of sessions disconnected due to PPP-LCP echo not received.

Field	Description
PPP-Auth-failed (11)	The total number of sessions disconnected due to authorization failed in PPP.
PPP-Auth-failed-no-AAA-response (12)	The total number of sessions disconnected due to authorization failed by no response on AAA server.
PPP-Auth-failed-no-peer-response (13)	The total number of sessions disconnected due to PPP authorization failed on no peer response.
PPP-Auth-failed-max-retry-reached (14)	The total number of sessions disconnected due to PPP authorization failed and reaching maximum retries limit.
Invalid-APN	If ePDG will receive APN-NI that is not according to 3GPP standard then ePDG will reject the call.
Invalid-AAA-attr-in-auth-response (15)	The total number of sessions disconnected due to invalid AAA attributes in authorization response.
Could-not-apply-subscriber-ACL (16)	The total number of sessions disconnected due to inability in applying subscriber's Access Control List (ACL).
Could-not-provide-service (17)	The total number of sessions disconnected due to service is not available.
AAA-return-IP-address-not-valid (18)	The total number of sessions disconnected due to return IP address from AAA server is invalid.
Pool-IP-address-not-valid (19)	The total number of sessions disconnected due to IP address in pool is invalid.
PPP-IPCP-negotiation-failed (20)	The total number of sessions disconnected due to PPP-IPCP negotiation failed.
PPP-IPCP-no-response (21)	The total number of sessions disconnected due to no response in PPP-IPCP.
PPP-IPCP-max-retry-reached (22)	The total number of sessions disconnected due to maximum retries in PPP-IPCP session.
No-IPV4-address-for-subscriber (23)	The total number of sessions disconnected due to no IPv4 address are available for subscriber.
Inactivity-timeout (24)	The total number of sessions disconnected due to system time out limit for silence (ideal) reached.
Absolute-timeout (25)	The total number of sessions disconnected due to timeout in complete session.
Max-data-limit-exceeded (26)	The total number of sessions disconnected due to maximum data limit exceeded.
Invalid-source-IPV4-address (27)	The total number of sessions disconnected due to invalid IPv4 address of subscriber.

Field	Description
MSID-auth-failed (28)	The total number of sessions disconnected due to MSID authentication failed.
MSID-auth-failed-no-aaa-response (29)	The total number of sessions disconnected due to MSID authentication failed and/or no response from AAA server.
A11-max-retry-reached (30)	The total number of sessions disconnected due to maximum limit for retries reached for A11 interface.
A11-lifetime-expired (31)	The total number of sessions disconnected due to A11 interface lifetime expired.
A11-msg-integrity-failure (32)	The total number of sessions disconnected due to failure in message integrity in A11 interface.
PPP-LCP-remote-disconnect (33)	The total number of sessions disconnected due to PPP-LCP remote disconnect.
Session-setup-timeout (34)	The total number of sessions disconnected due to timeout in setting up of session.
PPP-keepalive-failure (35)	The total number of sessions disconnected due to PPP keepalive attribute failure.
Flow-add-failed (36)	The total number of sessions disconnected due to fail in adding flow to session.
Call-type-detection-failed (37)	The total number of sessions disconnected due to failure in call type detection.
Wrong-ipcp-params (38)	The total number of sessions disconnected due to IPCP parameters are wrong.
MIP-remote-dereg (39)	The total number of sessions disconnected due to de-registration of Mobile IP on remote system.
MIP-lifetime-expiry (40)	The total number of sessions disconnected due to expiry of Mobile IP life time.
MIP-proto-error (41)	The total number of sessions disconnected due to protocol error in Mobile IP.
MIP-auth-failure (42)	The total number of sessions disconnected due to Mobile IP authentication failure.
MIP-reg-timeout (43)	The total number of sessions disconnected due to registration request timeout.
Invalid-dest-context (44)	The total number of sessions disconnected due to invalid destination context.
Source-context-removed (45)	The total number of sessions disconnected due to source context is removed from system.

Field	Description
Destination-context-removed (46)	The total number of sessions disconnected due to destination context is removed from system.
Required-service-address-unavailable (47)	The total number of sessions disconnected due to unavailability of required service address.
demux-mgr-failed-could-not-restart (48)	The total number of sessions disconnected due to failure in demux-mgr.
internal-error (49)	The total number of sessions disconnected due to some internal system error.
AAA-context-removed (50)	The total number of sessions disconnected due to AAA context is removed from system.
invalid-service-type (51)	The total number of sessions disconnected due to invalid service type.
mip-relay-req-failed (52)	The total number of sessions disconnected due to failure in Mobile IP relay request.
mip-rcvd-relay-failure (53)	The total number of sessions disconnected due to failure in Mobile IP received.
ppp_restart_inter_pdsn_handoff (54)	The total number of sessions disconnected due to restart in inter PDSN handoff.
gre-key-mismatch (55)	The total number of sessions disconnected due to mismatch in Generic Routing Encapsulation (GRE) key.
invalid-tunnel-context (56)	The total number of sessions disconnected due to invalid Tunnel context.
no-peer-lns-address (57)	The total number of sessions disconnected due to no peer LNS address
failed-tunnel-connect (58)	The total number of sessions disconnected due to failure in Tunnel connect.
l2tp-tunnel-disconnect-remote (59)	The total number of sessions disconnected due to tunnel disconnected by remote system.
l2tp-tunnel-timeout (60)	The total number of sessions disconnected due to tunnel timeout.
l2tp-protocol-error-remote (61)	The total number of sessions disconnected due to protocol error on remote system.
l2tp-protocol-error-local (62)	The total number of sessions disconnected due to protocol error on local system.
l2tp-auth-failed-remote (63)	The total number of sessions disconnected due to authorization failed on remote system.
l2tp-auth-failed-local (64)	The total number of sessions disconnected due to authorization failed on local system

Field	Description
l2tp-try-another-lns-from-remote (65)	The total number of sessions disconnected due to remote system tried for another LNS.
l2tp-no-resource-local (66)	The total number of sessions disconnected due to non-availability of resource on local system.
l2tp-no-resource-remote (67)	The total number of sessions disconnected due to non-availability of resource on remote system.
l2tp-tunnel-disconnect-local (68)	The total number of sessions disconnected due to tunnel disconnected on local system.
l2tp-admin-disconnect-remote (69)	The total number of sessions disconnected by administrator on remote system.
l2tpmgr-reached-max-capacity (70)	The total number of sessions disconnected due to L2TP Manager logging facility reached to maximum logging capacity.
MIP-Reg-Revocation (71)	The total number of sessions disconnected due to a failure in Mobile IP registration revocation.
path-failure (72)	The total number of sessions disconnected due to path failure in connecting session.
Dhcp-Relay-IP-Validation-Failed (73)	The total number of sessions disconnected due to a failure with the validation of the IP addresses with DHCP relay method.
Gtp-unknown-pdp-addr-or-pdp-type (74)	The total number of sessions disconnected due to unknown PDP address or PDP type.
Gtp-all-dynamic-pdp-addr-occupied (75)	The total number of sessions disconnected due to all dynamic PDP addresses are occupied and no PDP address is available to allocate.
Gtp-no-memory-is-available (76)	The total number of sessions disconnected due to out of memory problem.
dhcp-relay-static-ip-addr-not-allowed (77)	The total number of sessions disconnected due to the mobile requesting the use of a static IP address when static IP address requests are not allowed.
dhcp-no-ip-addr-allocated (78)	The total number of sessions disconnected as no IP address is allocated on DHCP Server.
dhcp-ip-addr-allocation-tmr-exp (79)	The total number of sessions disconnected due to time expired for IP address allocation on DHCP Server.
dhcp-ip-validation-failed (80)	The total number of sessions disconnected due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.

Field	Description
dhcp-static-addr-not-allowed (81)	The total number of sessions disconnected due to a failure with IP address in the static pool on destination context is not allowed by DHCP Server.
dhcp-ip-addr-not-available-at-present (82)	The total number of sessions disconnected due to non availability of IP address on DHCP Server.
dhcp-lease-expired (83)	The total number of sessions disconnected due to expiration of IP address lease time.
lpool-ip-validation-failed (84)	The total number of sessions disconnected due to validation failure of IP address in IP pool.
lpool-static-ip-addr-not-allowed (85)	The total number of sessions disconnected due to specified static IP address is not allowed in IP pool.
static-ip-validation-failed (86)	The total number of sessions disconnected due to a failure in validation of static IP address on remote system.
static-ip-addr-not-present (87)	The total number of sessions disconnected due to allocated static address is removed or not available.
static-ip-addr-not-allowed (88)	The total number of sessions disconnected due to prohibition of defined static IP address.
radius-ip-validation-failed (89)	The total number of sessions disconnected due to a failure in IP address validation on RADIUS.
radius-ip-addr-not-provided (90)	The total number of sessions disconnected due to IP address is not provided by RADIUS.
invalid-ip-addr-from-sgsn (91)	The total number of sessions disconnected due to invalid IP address received from SGSN.
no-more-sessions-in-aaa (92)	The total number of sessions disconnected due to sessions cleared in AAA.
ggsn-aaa-auth-req-failed (93)	The total number of sessions disconnected due to authentication request failure between GGSN and AAA server.
conflict-in-ip-addr-assignment (94)	The total number of sessions disconnected due to conflict in IP address assignment.
apn-removed (95)	The total number of sessions disconnected due to APN removed during session.
credits-used-bytes-in (96)	The total number of sessions disconnected due to exceeding the incoming data/bytes credit.
credits-used-bytes-out (97)	The total number of sessions disconnected due to exceeding the outgoing data/bytes credit.

Field	Description
credits-used-bytes-total (98)	The total number of sessions disconnected due to exceeding the total data/bytes credit.
prepaid-failed (99)	The total number of sessions disconnected due to a failure in processing prepaid account information.
l2tp-ipsec-tunnel-failure (100)	The total number of sessions disconnected due to the IPSec tunnel being failed to connect.
l2tp-ipsec-tunnel-disconnected (101)	The total number of sessions disconnected due to the IPSec tunnel being disconnected.
mip-ipsec-sa-inactive (102)	The total number of sessions disconnected due to in active security association (sa) of IPSec for specific Mobile IP address.
Long-duration-timeout (103)	The total number of sessions disconnected due to the expiration of the configured long-duration timer.
proxy-mip-registration-failure (104)	The total number of Proxy Mobile IP sessions disconnected due to Registration failures.
proxy-mip-binding-update (105)	The total number of Proxy Mobile IP sessions disconnected due to errors occurring during binding updates.
proxy-mip-inter-pdsn-handoff-require-ip-address (106)	The total number of Proxy Mobile IP sessions disconnected due to the mobile not providing the IP address it was assigned during IPCP negotiations resulting from inter-PDSN handoffs.
proxy-mip-inter-pdsn-handoff-mismatched-address (107)	The total number of Proxy Mobile IP sessions disconnected due to the mobile providing an IP address other than what it was assigned during IPCP negotiations resulting from inter-PDSN handoffs.
Local-purge (108)	The total number of sessions disconnected due to a locally-initiated purge.
failed-update-handoff (109)	The total number of sessions disconnected due to failure in update handoff.
closed_rp-handoff-complete (110)	The total number of sessions disconnected due to handoff completed.
closed_rp-duplicate-session (111)	The total number of sessions disconnected due to duplicate session.
closed_rp-handoff-session-not-found (112)	The total number of sessions disconnected due to hand off session not found.
closed_rp-handoff-failed (113)	The total number of sessions disconnected due to handoff failed for session.
pcf-monitor-keep-alive-failed (114)	The total number of sessions disconnected due to the expiration of the configured max-inactivity timer indicating that the PCF was unavailable.

Field	Description
call-internal-reject (115)	The total number of sessions disconnected due to call rejected internally.
call-restarted (116)	The total number of sessions disconnected due to call restarted on unknown reason.
all-mn-ha-auth-failure (117)	The total number of sessions disconnected due to failure in authentication between Mobile node and Home Agent (HA).
all-badly-formed (118)	The total number of sessions disconnected as A11 interface is formed badly.
all-t-bit-not-set (119)	The total number of sessions disconnected due to t-bit is not set in interface.
all-unsupported-vendor-id (120)	The total number of sessions disconnected due to unsupported vendor Id in interface.
all-mismatched-id (121)	The total number of sessions disconnected due to mismatched Id in A11 interface.
mipha-dup-home-addr-req (122)	The total number of sessions disconnected due to duplicate home address request on HA.
mipha-dup-imsi-session (123)	The total number of sessions disconnected due to duplicate IMSI in session on HA.
ha-unreachable (124)	The total number of sessions disconnected due to unreachable HA.
IPSP-addr-in-use (125)	The total number of sessions disconnected due to IP Pool Sharing Protocol address is in use/not free on HA.
mipfa-dup-home-addr-req (126)	The total number of sessions disconnected due to duplicate home address request on FA.
mipha-ip-pool-busyout (127)	The total number of sessions disconnected due to IP pool busyout.
inter-pdsn-handoff (128)	The total number of sessions disconnected due to inter-PDSN handoff failure.
active-to-dormant (129)	The total number of sessions disconnected due to system enters to dormant state from active state.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
ppp-renegotiation (130)	The total number of sessions disconnected due to failure/conflict in PPP renegotiation.
active-start-parameter-change (131)	The total number of sessions disconnected due to change in start parameters.

Field	Description
accounting-tariff-boundary (132)	The total number of sessions disconnected due to the closure of an accounting record based configured tariff time.
all-disconnect-no-active-stop (133)	The total number of sessions disconnected due to A11 interface is not active or stopped.
nw-reachability-failed-reject (134)	The total number of sessions disconnected due to failure in network reachability and request rejected.
nw-reachability-failed-redirect (135)	The total number of sessions disconnected due to failure in network reachability and request redirected.
container-max-exceeded (136)	The total number of sessions disconnected due to the closure of an accounting record based on the configured maximum number of container changes being exceeded.
static-addr-not-allowed-in-apn (137)	The total number of sessions disconnected due to static IP address is not allowed in APN.
static-addr-required-by-radius (138)	The total number of sessions disconnected due to static IP address required by RADIUS.
static-addr-not-allowed-by-radius (139)	The total number of sessions disconnected due to static IP address is not allowed by RADIUS.
mip-registration-dropped (140)	The total number of sessions disconnected due to registration dropped for Mobile IP address.
counter-rollover (141)	The total number of sessions disconnected due to counter rollover.
constructed-nai-auth-failed (142)	The total number of sessions disconnected due to authentication failure in subscriber's Network Access Identifier (NAI).
inter-pdsn-service-optimize-handoff-disabled (143)	The total number of sessions disconnected due to disabled inter-PDSN service optimization handoff.
gre-key-collision (144)	The total number of sessions disconnected due to collision in Generic Routing Encapsulation (GRE) key.
inter-pdsn-service-optimize-handoff-triggered (145)	The total number of sessions disconnected when inter PDSN service optimization handoff triggered.
intra-pdsn-handoff-triggered (146)	The total number of sessions disconnected when intra-PDSN service optimization handoff triggered.
delayed-abort-timer-expired (147)	The total number of sessions disconnected due to abort timer duration expired.
Admin-AAA-disconnect (148)	The total number of sessions disconnected as AAA server disconnected Administratively.
Admin-AAA-disconnect-handoff (149)	The total number of sessions disconnected due to AAA handoff disconnected Administratively.

Field	Description
PPP-IPV6CP-negotiation-failed (150)	The total number of sessions disconnected due to IPv6CP negotiation failed.
PPP-IPV6CP-no-response (151)	The total number of sessions disconnected due to no response during IPv6CP negotiation.
PPP-IPV6CP-max-retry-reached (152)	The total number of sessions disconnected due to maximum retries failed on IPv6CP negotiation.
PPP-Restart-Invalid-source-IPV4-address (153)	The total number of sessions disconnected due to PPP restarted by invalid Pv4 address of source.
a11-disconnect-handoff-no-active-stop (154)	The total number of sessions disconnected due to handoff in A11 interface is not active or stopped.
call-restarted-inter-pdsn-handoff (155)	The total number of sessions disconnected due to call restarted during inter PDSN handoff.
call-restarted-ppp-termination (156)	The total number of sessions disconnected due to call restarted on PPP termination.
mipfa-resource-conflict (157)	The total number of sessions disconnected due to resource conflict on FA.
failed-auth-with-charging-svc (158)	The total number of sessions disconnected due to authentication failure in charging services.
mipha-dup-imsi-session-purge (159)	The total number of sessions disconnected due to clearing of duplicate IMSI in session on HA.
mipha-rev-pending-newcall (160)	The total number of sessions disconnected due to revival of pending new calls.
volume-quota-reached (161)	The total number of sessions disconnected due to allocated data quota volume reached.
duration-quota-reached (162)	The total number of sessions disconnected due to time-out reached.
gtp-user-auth-failed (163)	The total number of sessions disconnected due to a failure in user/subscriber authentication.
MIP-Reg-Revocation-no-lcp-term (164)	The total number of sessions disconnected due to termination of an MIP Session for a Revocation being received from the HA and the PDSN is not configured to send a LCP Terminate Request.
MIP-private-ip-no-rev-tunnel (165)	The total number of sessions disconnected due to no reverse tunnel for MIP.
Invalid-Prepaid-AAA-attr-in-auth-response (166)	The total number of sessions disconnected due to invalid Prepaid attribute in authentication response.
mipha-prepaid-reset-dynamic-newcall (167)	The total number of MIP HA sessions disconnected due to receiving MIP registration with a home address of 0.0.0.0.

Field	Description
gre-flow-control-timeout (168)	The total number of RP sessions disconnected due to the PCF not removing flow control for a specified amount of time if GRE flow control for RP sessions is enabled.
mip-paaa-bc-query-not-found (169)	The total number of sessions that were disconnected because the binding cache was not found.
mipha-dynamic-ip-addr-not-available (170)	The total number of MIP HA sessions that were disconnected because a dynamic IP address was not available.
a11-mismatched-id-on-handoff (171)	The total number of sessions disconnected due to a mismatched ID in the A11 interface during a handoff.
a11-badly-formed-on-handoff (172)	The total number of sessions disconnected because the A11 interface is formed badly during a handoff.
a11-unsupported-vendor-id-on-handoff (173)	The total number of sessions disconnected due to unsupported vendor Id in the A11 interface during a handoff.
a11-t-bit-not-set-on-handoff (174)	The total number of sessions disconnected due to t-bit is not set in the A11 interface during a handoff.
MIP-Reg-Revocation-i-bit-on (175)	The total number of Mobile IP sessions disconnected at the PDSN/FA due to Revocation received from HA (with I bit set).
a11-RRQ-Deny-Max-Count (176)	The total number of sessions disconnected due to failures in processing A11-Registration-Request despite retries of the message by the PCF.
Dormant-Transition-During-Session-Setup (177)	The total number of sessions disconnected because they entered the dormant state during session setup.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
PPP-Rem-Reneg-Disc-Always-Cfg (178)	The total number of PPP sessions disconnected because they were renegotiated by the remote side by sending LCP Conf-req/nak/ack and the "always" option was used for the <b>remote-renegotiation disconnect</b> command/attribute.
PPP-Rem-Reneg-Disc-NAI-MSID-Mismatch (179)	The total number of PPP sessions disconnected because they were renegotiated by the remote side by sending LCP Conf-req/nak/ack and the "nai-prefix-msid-mismatch" option was used for the <b>remote-renegotiation disconnect</b> command/attribute.
mipha-subscriber-ipsec-tunnel-down (180)	The total number of subscribers disconnected because the IPSec tunnel facilitating their sessions went down.
mipha-subscriber-ipsec-tunnel-failed (181)	The total number of subscribers disconnected because an IPSec tunnel failed to be established.
mipha-subscriber-ipsecmgr-death (182)	The total number of subscribers disconnected because the IPSec Manager software task facilitating their sessions crashed.

Field	Description
flow-is-deactivated (183)	The total number of sessions disconnected because their respective flow was deactivated.
ecs-license-exceeded (184)	The total number of sessions disconnected because the licensed session capacity for the Enhanced Charging Service feature has been exceeded.
IPSG-Auth-failed (185)	The total number of sessions disconnected because IPSG authentication failed.
driver-initiated (186)	The total number of sessions disconnected due to driver initiation.
ims-authorization-failed (187)	The total number of sessions disconnected because of IMS authorization failures.
service-instance-released (188)	The total number of sessions disconnected because they were released by the service instances facilitating them.
flow-released (189)	The total number of sessions disconnected because their respective flows were released.
ppp-renego-no-ha-addr (190)	The total number of sessions disconnect because no HA address was supplied during PPP renegotiation.
intra-pdsn-handoff (191)	The total number of sessions disconnected during an intra-PDSN service handoff.
overload-disconnect (192)	The total number of sessions disconnected because the configured overload-disconnect threshold has been exceeded.
css-service-not-found (193)	The total number of sessions because the CSS service specified for handling the session was not found.
Auth-failed (194)	Total number of session authorizations failed due to rejection at OCS (Gy) or other AAA servers.
dhcp-client-sent-release (195)	The total number of sessions disconnected because the DHCP client sent a release.
dhcp-client-sent-nak (196)	The total number of sessions disconnected because the DHCP client sent a negative acknowledge message.
msid-dhcp-chaddr-mismatch (197)	The total number of sessions disconnected because the DHCP Client Hardware (MAC) Address (CHADDR) does not match with MSID of the ASN-GW session.
link-broken(198)	The total number of sessions disconnected because the link between the SGSN and the GGSN is broken resulting in the termination of ongoing Diameter Credit-Control sessions with the DIAMETER_LINK_BROKEN termination-cause.
prog-end-timeout(199)	The total number of sessions disconnected because the allowed BCMCS program limit time expires.

Field	Description
qos-update-wait-timeout(200)	The total number of sessions disconnected because the PDSN failed to update QoS for them.
css-synch-cause(201)	The total number of sessions disconnected because the session-audit between the ACS Manager task and Session Manager disconnects any dangling sessions in the Session Manager.
Gtp-context-replacement(202)	The total number of sessions disconnected due to GTP context replacement.
PDIF-Auth-failed(203)	The total number of sessions disconnected due to PDIF authentication process unable to set up a secure IPSec tunnel to subscriber.
l2tp-unknown-apn(204)	The total number of sessions disconnected due to unknown APN in L2TP message.
ms-unexpected-network-reentry(205)	The total number of sessions disconnected due unexpected network reentry by MS in WiMAX network.
r6-invalid-nai(206)	The total number of sessions disconnected due invalid NAI in R6 message in WiMAX network.
eap-max-retry-reached(207)	The total number of sessions disconnected due maximum retry limit for EAP authentication exhausted in WiMAX network.
vbm-hoa-session-disconnected(208)	vbm-hoa-session-disconnected
vbm-voa-session-disconnected(209)	vbm-voa-session-disconnected
in-acl-disconnect-on-violation(210)	in-acl-disconnect-on-violation
eap-msk-lifetime-expiry(211)	The total number of sessions disconnected due to EAP Master Session Key lifetime expiry in WiMAX network.
eap-msk-lifetime-too-low(212)	The total number of sessions disconnected due to EAP Master Session Key lifetime is too less to allow session.
inter-service-handoff(213)	The total number of sessions disconnected due to inter-service handoff in WiMAX network.
r6-max-retry-reached(214)	The total number of sessions disconnected due to maximum retry limit for R6 message exhausted in WiMAX network.
r6-nwexit-recd(215)	The total number of sessions disconnected due to network exit message received on R6 interface in WiMAX network.
r6-dereg-req-recd(216)	The total number of sessions disconnected due to de-registration message received on R6 interface in WiMAX network.
r6-remote-failure(217)	The total number of sessions disconnected due to remote peer failure on R6 interface in WiMAX network.

Field	Description
r6r4-protocol-errors(218)	The total number of sessions disconnected due to protocol error on R6 and/or R4 interface in WiMAX network.
wimax-qos-invalid-aaa-attr(219)	The total number of sessions disconnected due to invalid AAA attributes for QoS to a subscriber in WiMAX network.
npu-gre-flows-not-available(220)	The total number of sessions disconnected due to requested NPU GRE flow is not available for a subscriber in WiMAX network.
r4-max-retry-reached(221)	The total number of sessions disconnected due to maximum retry limit for R4 message exhausted in WiMAX network.
r4-nwexit-recd(222)	The total number of sessions disconnected due to network exit message received on R4 interface in WiMAX network.
r4-dereg-req-recd(223)	The total number of sessions disconnected due to de-registration message received on R4 interface in WiMAX network.
r4-remote-failure(224)	The total number of sessions disconnected due to remote peer failure on R4 interface in WiMAX network.
ims-authorization-revoked(225)	The total number of sessions disconnected due to IMS authorization revoked.
ims-authorization-released(226)	The total number of sessions disconnected due to IMS authorization released.
ims-auth-decision-invalid(227)	The total number of sessions disconnected due to invalid IMS authorization decision.
mac-addr-validation-failed(228)	The total number of sessions disconnected due to MAC address validation failure in WiMAX network.
excessive-wimax-pd-flows-configured(229)	The total number of sessions disconnected due to excessive packet data flows are configured in WiMAX network.
sgsn-cancel-location-subs-withdrawn(230)	The total number of sessions disconnected due to cancellation of the request to location substitution withdrawn.
sgsn-cancel-location-update(231)	The total number of sessions disconnected because the cancellation of the location update.
sgsn-mnr-expiry(232)	The total number of sessions disconnected due to manager expiry.
sgsn-identity-failure(233)	The total number of sessions disconnected due to identity check failure.
sgsn-security-failure(234)	The total number of sessions disconnected due to security verification failure.
sgsn-auth-failure(235)	The total number of sessions disconnected due to authentication failure.

Field	Description
sgsn-glu-failure(236)	The total number of sessions disconnected due to GLU failure.
sgsn-implicit-detach(237)	<b>Description:</b> The total number of sessions disconnected due to an implicit detach. <b>Trigger:</b> Pegs when the 2G-SGSN rejects an Attach Request due to same Random-TLLI collision If handling of Random-TLLI collision is enabled via the SGSN Global Configuration mode command 'gmm-message attach-with-tlli-in-use discard-message [ only-on-same-nsei ]'.
sgsn-subscriber-moved-to-different-smgr-instanc(238)	The total number of sessions disconnected due to subscriber moving to a different SMGR instance.
sgsn-subscriber-moved-to-peer-sgsn(239)	The total number of sessions disconnected due to subscriber moving to a peer SGSN.
sgsn-dns-failure-inter-rau(240)	The total number of sessions disconnected due to DNS failure during Inter-RAU.
sgsn-context-response-failure(241)	The total number of sessions disconnected due to context response failure.
sgsn-hlr-not-found-for-imsi(242)	The total number of sessions disconnected due to HLR not found for particular IMSI.
sgsn-ms-init-detach(243)	The total number of sessions disconnected due to MS initiated detach.
sgsn-roaming-not-allowed(244)	The total number of sessions disconnected because MS was not allowed to roam.
sgsn-duplicate-context(245)	The total number of sessions disconnected due to duplicate context.
hss-profile-update-failed(246)	The total number of sessions disconnected due to failure of profile update.
inactive-without-activating-any-pdp(247)	The total number of sessions disconnected where session is inactive and no PDP context is activated from this session.
asnpc-idle-mode-timeout(248)	The total number of sessions disconnected due to configured idle mode timeout duration is exhausted for ASN paging controller in WiMAX network.
asnpc-idle-mode-exit(249)	The total number of sessions disconnected due to idle mode exit message for ASN paging controller in WiMAX network.
asnpc-idle-mode-entry-auth-failed(250)	The total number of sessions disconnected due to authentication failure during idle mode entry for ASN paging controller in WiMAX network.
asngw-invalid-qos-configuration(251)	The total number of sessions disconnected due to invalid QoS configuration for subscriber in WiMAX network.

Field	Description
sgsn-dsd-allgprswithdrawn(252)	The total number of sessions disconnected due to the SGSN receiving a DSD message from the HLR, with the "All GPRS subscription withdrawn" flag set to true. The SGSN responds as if receiving a cancel location (subscription withdrawn) and clears the subscriber fully using this disconnect reason.
r6-pmk-key-change-failure(253)	The total number of sessions disconnected due to primary master key change failure on R6 interface in WiMAX network.
sgsn-illegal-me(254)	The total number of sessions disconnected because the ME was illegal.
sess-termination-timeout(255)	The total number of sessions disconnected due to failure monitored through BS monitor keep-alive probe.
sgsn-sai-failure(256)	The total number of sessions disconnected due to error in SGSN attachment in registration state.
sgsn-rnc-removal(257)	The total number of sessions disconnected due to error in SGSN inbound SRNS in registration state.
sgsn-rai-removal(258)	The total number of sessions disconnected due to error in Update PDP Context Response message for direct tunnel functionality. Direct tunnel functionality at GGSN was expecting some fields which were not received in the Update PDP Context Response message. Hence, GGSN was not able to establish tunnel appropriately with SGSN or RNC.
sgsn-init-deact(259)	The total number of sessions disconnected at SGSN due to unknown PDP context.
ggsn-init-deact(260)	The total number of sessions disconnected at SGSN due to PDP authentication failed.
hlr-init-deact(261)	The total number of sessions disconnected at SGSN due to duplicate PDP context
ms-init-deact(262)	The total number of sessions disconnected at SGSN due to no response from GGSN.
sgsn-detach-init-deact(263)	The total number of sessions disconnected at SGSN due to failed response from GGSN.
sgsn-rab-rel-init-deact(264)	The total number of sessions disconnected at SGSN due to unknown APN.
sgsn-iu-rel-init-deact(265)	The total number of sessions disconnected at SGSN due to service request initiated deactivation.
sgsn-gtpu-path-failure(266)	The total number of sessions disconnected at SGSN due to attachment procedure initiated abort.
sgsn-gtpc-path-failure(267)	The total number of sessions disconnected at SGSN due to ISRAU initiated abort procedure.

Field	Description
sgsn-local-handoff-init-deact(268)	The total number of sessions disconnected at SGSN due to unknown APN.
sgsn-remote-handoff-init-deact(269)	The total number of sessions disconnected at SGSN due to MM context cleanup initiated abort procedure.
sgsn-gtp-no-resource(270)	The total number of sessions disconnected at SGSN due to unknown abort procedure.
sgsn-rnc-no-resource(271)	The total number of sessions disconnected at SGSN due to abort procedure started by guard timeout.
sgsn-odb-init-deact(272)	The total number of sessions disconnected at SGSN due to abort procedure initiated on DHCP IP validate request.
sgsn-invalid-ti(273)	The total number of sessions disconnected due to id mismatch in MIPv6 session.
sgsn-actv-rejected-due-to-rnc(274)	The total number of sessions disconnected as AAA session id not-found
sgsn-apn-restrict-vio(275)	The total number of sessions disconnected due to security associate rekeying failure.
sgsn-actv-rejected-by-sgsn(276)	The total number of sessions disconnected due to failure in relocation in ASN-PC service.
sgsn-abnormal-deact(277)	The total number of sessions disconnected due to failure in paging controller relocation in ASN PC service.
sgsn-actv-rejected-by-ggsn(278)	The total number of sessions disconnected due to mismatch in authentication policy.
sgsn-err-ind(279)	The total number of sessions disconnected as DELETE MS ENTRY message received by the ASN Paging Controller.
asngw-non-anchor-prohibited(280)	The total number of sessions disconnected due to non-anchor ASN GW being prohibited.
asngw-im-entry-prohibited(281)	The total number of sessions disconnected due to unknown reason.
Session-idle-mode-entry-timeout(282)	The total number of sessions disconnected Administratively.
session-idle-mode-exit-timeout(283)	The total number of sessions disconnected by remote system
asnpc-ms-power-down-nwexit(284)	The total number of sessions disconnected by local system.
asnpc-r4-nwexit-recd(285)	The total number of sessions disconnected due to non-availability of resources.
sgsn-iu-rel-before-call-est(286)	The total number of sessions disconnected because of Iu Release during call establishment when service limits exceeded.

Field	Description
ikev2-subscriber-ipsecmgr-death(287)	The total number of sessions disconnected due to LCP negotiation failed.
All-dynamic-pool-addr-occupied(288)	The total number of sessions disconnected due to no response in PPP-LCP session.
mipv6ha-ip-addr-not-available(289)	The total number of sessions disconnected due to loop back detected in PPP-LCP.
bs-monitor-keep-alive-failed(290)	The total number of sessions disconnected due to failure monitored through BS monitor keep-alive probe.
sgsn-attach-in-reg-state(291)	The total number of SGSN sessions disconnected due to an error in the SGSN attachment during the registration state.
sgsn-inbound-srns-in-reg-state(292)	The total number of SGSN sessions disconnected due to an error in the SGSN inbound SRNS in a registration state.
dt-ggsn-tun-reestablish-failed(293)	The total number of SGSN sessions disconnected due to error in Update PDP Context Response message for direct tunnel functionality. Direct tunnel functionality at GGSN was expecting some fields which were not received in the Update PDP Context Response message. Hence, the GGSN was not able to establish a tunnel appropriately with the SGSN or the RNC.
sgsn-pdp-unknown(294)	The total number of SGSN sessions disconnected due to an unknown PDP context.
sgsn-pdp-auth-failure(295)	The total number of SGSN sessions disconnected because the PDP authentication failed.
sgsn-duplicate-pdp-context(296)	The total number of SGSN sessions disconnected due to duplicate PDP contexts.
sgsn-no-rsp-from-ggsn(297)	The total number of SGSN sessions disconnected because the SGSN does not receive a response from the GGSN.
sgsn-failure-rsp-from-ggsn(298)	The total number of SGSN sessions disconnected due to failed response from the GGSN.
sgsn-apn-unknown(299)	The total number of SGSN sessions disconnected due to an unknown APN.
sgsn-pdp-status-mismatch(300)	The total number of SGSN sessions disconnected due to deactivation initiated by a service request.
sgsn-attach-on-attach-init-abort(301)	The total number of SGSN sessions disconnected due to an attachment procedure-initiated abort.
sgsn-iu-rel-in-israu-init-abort(302)	The total number of SGSN sessions disconnected due to an ISRAU-initiated abort procedure.

Field	Description
sgsn-smgr-init-abort(303)	The total number of SGSN sessions disconnected because the SessMgr initiates an abort.
sgsn-mm-ctx-cleanup-init-abort(304)	The total number of SGSN sessions disconnected due to the MM context cleanup-initiated abort procedure.
sgsn-unknown-abort(305)	The total number of SGSN sessions disconnected due to an unknown abort procedure.
sgsn-guard-timeout-abort(306)	The total number of SGSN sessions disconnected because the abort procedure was started by the guard timer timeout.
vpn-bounce-dhcpip-validate-req(307)	The total number of SGSN sessions disconnected because the abort procedure was initiated upon receiving a DHCP IP validate request.
mipv6-id-mismatch(308)	The total number of sessions disconnected due to id mismatch in MIPv6 session.
aaa-session-id-not-found(309)	The total number of sessions disconnected as AAA session id not-found
x1/x5-max-retry-reached(310)	The total number of sessions disconnected due to security associate rekeying failure.
x1-nwexit-recd(311)	The total number of sessions disconnected due to failure in relocation in ASN-PC service.
x1-dereg-req-recd(312)	The total number of sessions disconnected due to failure in paging controller relocation in ASN PC service.
x1-remote-failure(313)	The total number of sessions disconnected due to mismatch in authentication policy.
x1x2-protocol-errors(314)	The total number of sessions disconnected as DELETE MS ENTRY message received by the ASN Paging Controller.
x2/x6-max-retry-reached(315)	The total number of sessions disconnected because the ASNGW TID entry was not found.
x2/x6-nwexit-recd(316)	The total number of sessions disconnected due to network exit message received on X2 interface in PHS network.
x2-dereg-req-recd(317)	The total number of sessions disconnected due to deregistration request received on X2 interface in PHS network.
x2-remote-failure(318)	The total number of sessions disconnected by remote system due to failure on X2 interface in PHS network.
x1-pmk-key-change-failure(319)	The total number of sessions disconnected due to primary master key change failure on X1 interface in PHS network.
SA-Rekeying-Failure(320)	The total number of sessions disconnected due to security associate rekeying failure.

Field	Description
Sess-sleep-mode-entry-timeout(321)	The total number of sessions disconnected due to session sleep mode entry timeout on PHS GW.
phsgw-non-anchor-prohibited(322)	The total number of sessions disconnected due to non-anchor PHS GW being prohibited.
asnpc-pc-relocation-failed(323)	The total number of sessions disconnected due to failure in relocation in ASN-PC service.
asnpc-pc-relocation(324)	The total number of sessions disconnected due to failure in paging controller relocation in ASN PC service.
auth_policy_mismatch(325)	The total number of sessions disconnected due to mismatch in authentication policy.
ike/ipsec-sa-lifetime-expired(326)	The total number of sessions disconnected due to IKE/IPsec security associate lifetime timer expiration.
asnpc-del-ms-entry-recd(327)	The total number of sessions disconnected as DELETE MS ENTRY message received by the ASN Paging Controller.
phspc-sleep-mode-timeout(328)	The total number of sessions disconnected due to sleep mode timeout by the PHS Paging Controller.
phspc-sleep-mode-exit(329)	The total number of sessions disconnected due to sleep mode exit by the PHS Paging Controller.
phspc-sleep-mode-entry-auth-failed(330)	The total number of sessions disconnected due to failed sleep mode entry authorization by the PHS Paging Controller.
phspc-ms-power-down-nwexit(331)	The total number of sessions disconnected due to ms power down network exit message received by the PHS Paging Controller.
phspc-x6-nwexit-recd(332)	The total number of PHS Paging Controller sessions disconnected due to network exit message received from X2 interface in PHS network.
invalid-nat-config(333)	The total number of sessions disconnected due to the following reasons: <ol style="list-style-type: none"> <li>1. SessMgr and ACSMgr are running in non-optimized mode.</li> <li>2. An undefined NAT pool is configured for subscriber.</li> </ol> NAT must be disabled if ACS is not running in optimized mode.
asngw-tid-entry-not-found(334)	The total number of sessions disconnected because the ASNGW TID entry was not found.
No-NAT-IP-Addr-for-subscriber(335)	The total number of sessions disconnected due to NAT IP address being unavailable during call setup for allocation to a subscriber.
excessive-phs-pd-flows-configured(336)	The total number of sessions disconnected due to configuration of excessive PHS pd flows.

Field	Description
phsgw-invalid-qos-configuration(337)	The total number of sessions disconnected due to invalid QoS configuration for subscriber in PHS network.
Interim-Update(338)	The total number of sessions disconnected due to Interim Update.
sgsn-inbound-attach-abort-radio-status-bad-lost(339)	The total number of SGSN sessions disconnected because the inbound attach requests aborted due to poor radio status or lost radio connections.
sgsn-inbound-irau-abort-radio-status-bad-lost(340)	The total number of SGSN sessions disconnected due to inbound IRAU requests aborting as the radio status was poor or the radio connection lost.
ike-keep-alive-failed(341)	The total number of sessions disconnected due to IKE keepalive failure.
sgsn-attach-abort-ms-suspend(342)	The total number of SGSN sessions disconnected due to attach requests aborting because MS was in suspend mode.
sgsn-inbound-irau-abort-ms-suspend(343)	The total number of SGSN sessions disconnected due to IRAU requests aborted when MS was in suspend mode.
duplicate-session-detected(344)	The total number of sessions disconnected due to detection of duplicate sessions for the same session id.
sgsn-xid-response-failure(345)	The total number of SGSN sessions disconnected due to XID response failure.
sgsn-nse-cleanup(346)	The total number of SGSN sessions disconnected due to record cleanup or reset on the network service entity (NSE).
sgsn-gtp-req-failure(347)	The total number of SGSN sessions disconnected due to failure of the GTPP request.
sgsn-imsi-mismatch(348)	The total number of SGSN sessions disconnected due to mismatches of the IMSIs.
sgsn-bvc-blocked(349)	The total number of SGSN sessions disconnected because the BSSGP Virtual Connection (BVC) was blocked.
sgsn-attach-on-inbound-irau(350)	The total number of SGSN sessions disconnected as the session was attached on inbound IRAU requests.
sgsn-attach-on-outbound-irau(351)	The total number of SGSN sessions disconnected while the session was attached on outbound IRAU requests.
sgsn-incorrect-state(352)	The total number of SGSN sessions disconnected due to incorrect state of network elements.
sgsn-t3350-expiry(353)	The total number of SGSN sessions disconnected due to expiry of the T-3350 timer.

Field	Description
sgsn-page-timer-expiry(354)	The total number of SGSN sessions disconnected due to expiry of the paging timer.
phsgw-tid-entry-not-found(355)	The total number of SGSN sessions disconnected due to local purging of PDP contexts.
sgsn-pdp-local-purge(357)	The total number of SGSN sessions disconnected due to local purging of PDP contexts.
sgsn-offload-phase2(360)	With Iu/Gb flex enabled, this is the total number of SGSN sessions disconnected when the subscribers has been forcefully cleared via phase2 offloading from one SGSN to another SGSN within the SGSN pool.
Remote-error-notification(362)	The total number of sessions disconnected due to remote error notification.
no-response(363)	The total number of sessions disconnected due to no response from any of the network entity.
PDG-Auth-failed(364)	The total number of sessions disconnected due to re-authorization failure at any stage.
mme-s1AP-send-failed(365)	The total number of sessions disconnected due to message sent on S1AP interface failed.
mme-egtpc-connection-failed(366)	The total number of sessions disconnected as connection between MME and eGTP service/node failed due to any reason.
mme-egtpc-create-session-failed(367)	The total number of sessions disconnected as session creation failed between MME and eGTP service/node.
mme-authentication-failure(368)	The total number of sessions disconnected as authentication procedure failed between MME and HSS.
mme-ue-detach(369)	The total number of sessions disconnected as UE detached explicitly.
mme-mme-detach(370)	The total number of sessions disconnected on serving MME due to detach procedure occurred between anchored MME and service MME.
mme-hss-detach(371)	The total number of sessions disconnected due to DETACH procedure started from HSS.
mme-pgw-detach(372)	The total number of sessions disconnected due to DETACH procedure started from P-GW.
mme-sub-validation-failure(373)	The total number of sessions disconnected as subscriber validation failed at MME or HSS during authentication procedure.
mme-hss-connection-failure(374)	The total number of sessions disconnected due to connection failure between MME and associated HSS during authentication procedure.

Field	Description
mme-hss-user-unknown(375)	The total number of sessions disconnected by MME service due to UNKNOWN USER response from HSS during authentication procedure.
dhcp-lease-mismatch-detected(376)	The total number of sessions disconnected due to mismatch in DHCP lease time mismatch.
nemo-link-layer-down(377)	The total number of disconnected sessions due to the NEMO (Network Mobility) link layer being down.
sgsn-offload-phase3(379)	With Iu/Gb flex enabled, this is the total number of SGSN sessions disconnected when the subscribers has been forcefully cleared via phase3 offloading from one SGSN to another SGSN within the SGSN pool.
mbms-bearer-service-disconnect(380)	The total number of sessions disconnected due to disconnect in MBMS bearer service.
disconnect-on-violation-odb(381)	The total number of sessions disconnected due to violation on Operator Determined Barring (ODB) of services.
disconn-on-violation-focs-odb(382)	The total number of sessions disconnected due to violation on Operator Determined Barring (ODB) of Free-of-Charge Service (FOCS).
CSCF-REG-Admin-disconnect(383)	The total number of CSCF sessions disconnected through CLI registration clearing by administrator.
CSCF-REG-User-disconnect(384)	The total number of CSCF sessions disconnected by UE with an explicit deregister message.
CSCF-REG-Inactivity-timeout(385)	The total number of CSCF sessions disconnected due to registration expiry.
CSCF-REG-Network-disconnect(386)	The total number of CSCF sessions disconnected due to network-initiated deregistration.
CSCF-Call-Admin-disconnect(387)	The total number of CSCF sessions disconnected through CLI call clearing by administrator.
CSCF-Call-User-disconnect(388)	The total number of CSCF sessions disconnected by UE using BYE message.
CSCF-CALL-Local-disconnect(389)	The total number of CSCF sessions disconnected locally due to some processing failure, task death, recovery failure, etc.
CSCF-CALL-No-Resource(390)	The total number of CSCF sessions disconnected because locally due to congestion caused by max calline/flow usage from high cpu/memory utilization in sessmgr.
CSCF-CALL-No-Response(391)	The total number of CSCF sessions disconnected due to response timeout (SIP response code 408).

Field	Description
CSCF-CALL-Inactivity-timeout(392)	The total number of CSCF sessions disconnected due to session timer timeout
CSCF-CALL-Media-Auth-Failure(393)	The total number of CSCF sessions disconnected due to media authorization failure.
CSCF-REG-No-Resource(394)	The total number of CSCF sessions disconnected because register message is rejected due to congestion caused by max calline/flow usage from high cpu/memory utilization in sessmgr.
ms-unexpected-idle-mode-entry(395)	The total number of sessions disconnected while MS unexpectedly started the IDLE mode procedure and enters the Idle mode.
Re-Auth-failed(396)	The total number of sessions disconnected during re-authentication when MS started activation after coming out of idle mode.
sgsn-pdp-nse-cleanup(397)	The total number of SGSN sessions disconnected because the NSE configured in the GPRS service is removed and there are PDP contexts associated with the subscribers attached in this NSE.
sgsn-mm-ctxt-gtp-no-resource(398)	The total number of SGSN sessions disconnected because an SGTP service could not be assigned to an MM context.
unknown-apn(399)	The total number of sessions disconnected due to invalid and/or unknown APN name received from AAA or subscriber template.
gtpc-path-failure(400)	The total number of sessions disconnected due to failure of GTP-C interface path between two nodes.
gtpu-path-failure(401)	The total number of sessions disconnected due to failure of GTP-U interface path between two nodes.
actv-rejected-by-ggsn(402)	The total number of sessions disconnected due as session activation procedure, started by an MS which was in idle mode, was rejected by GGSN.
sgsn-pdp-gprs-camel-release(403)	The total number of PDP activation failures due to release from CAMEL. <i>This counter is visible but not yet fully supported.</i>
sgsn-check-imei-failure(404)	The total number of of Attaches / RAUs rejected due to failure in the IMEI checking (i.e. due either to black listing or to grey listing and an SGSN operator policy is configured with deny-grey-list).
sgsn-sndcp-init-deact(405)	The total number of PDP contexts deactivated upon receiving a cleanup indication from the SNDSCP layer.
sgsn-pdp-inactivity-timeout(406)	The total number of subscribers detached or PDP context(s) deactivated due to subscriber inactivity during a configured (in the SGSN operator policy) time.
No-IPV6-address-for-subscriber(410)	The total number of disconnects due to No-IPV6-address-for-subscriber.

Field	Description
prefix-registration-failure(411)	The total number of disconnects due to prefix-registration-failure.
disconnect-from-policy-server(412)	The total number of sessions disconnected due to disconnect from policy server.
s6b-auth-failed (413)	The total number of subscriber sessions disconnected due to failure of authentication over S6b interface with HSS. This support is added for interoperability of GGSN with P-GW and HA.
gtpc-err-ind(414)	The total number of sessions disconnected due to a GTP control plane error indication message.
gtpu-err-ind(415)	The total number of sessions disconnected due to a GTP user plane error indication message.
invalid-pdn-type(416)	The total number of sessions disconnected due to an invalid PDN-type error.
aaa-auth-req-failed(417)	The total number of sessions disconnected due to a AAA authentication request failure.
apn-denied-no-subscription (418)	The total number of subscriber sessions disconnected due to denial of APN as requested APN was not subscribed to subscriber.
sgw-context-replacement(419)	The total number of sessions disconnected due to an S-GW context replacement.
dup-static-ip-addr-req (420)	The total number of subscriber sessions disconnected due to new session request received with duplicate IP address at GGSN. This support is added for interoperability of GGSN with P-GW and HA.
apn-restrict-violation (421)	The total number of subscriber sessions disconnected due to violation of level of restriction to ensure controlled co-existence of the Primary PDP Contexts in APN.
invalid-wapn(422)	The total number of sessions disconnected due to invalid or no W-APN details received from the UE.
ttg-nsapi-allocation-failed(423)	The total number of TTG sessions disconnected due to an NSAPI (Network Service Access Point Identifier) allocation failure.
mandatory-gtp-ie-missing(424)	The total number of sessions disconnected due to the unavailability of a mandatory GTP Information-Element during PDP context creation.
aaa-unreachable(425)	The total number of sessions disconnected due to unreachable AAA server.

Field	Description
asngw-service-flow-deletion(426)	Sent in the Accounting-Stop message for the particular service flow when that service flow is deleted by the Network- or MS-initiated service flow detection procedure.
CT-PMIP-RRQ-NVSE-Value-Change(427)	he total number of disconnects resulting from a PMIP (Proxy-MIP) registration request (RRQ) returning an NVSE (Normal/Vendor organization Special Extension) value change [WiMAX].
tcp-read-failed (428)	The total number of disconnected IP-CAN sessions due to a TCP read failure.
tcp-write-failed (429)	The total number of disconnected IP-CAN sessions due to a TCP write failure.
ssl-handshake-failed (430)	The total number of disconnected SSL ssessions due to a handshake failure.
ssl-renegotiate-failed (431)	The total number of disconnected SSL ssessions due to a renegotiation failure.
ssl-bad-message (432)	The total number of disconnected SSL ssessions due to corrupted messages.
ssl-alert-received (433)	The total number of disconnected SSL ssessions due to an alert.
ssl-disconnect (434)	The total number of SSL disconnections.
ssl-migration (435)	The total number of SSL migrations.
sgsn-ard-failure(436)	The total number of session disconnects due to ARD (access restriction data) subscription restriction received from the HLR.
sgsn-camel-release(437)	The total number of session disconnects experienced by the SGSN when Detach/Attach Rejects were due to explicit "Release GPRS" received from the CAMEL component GSM-SCF or due to failures during CAMEL handling.
sgsn-egtpc-connection-failed(438)	Replaced by <code>sgsn-egtpc-create-session-failed(439)</code> in Release 14.0.
sgsn-egtpc-create-session-failed(439)	Supported in Release 14.0 The total number of session disconnects occurring when the S4-SGSN is not able to establish a PDP context when the SGW returned a failure cause in "Create Session Response" or the SGW did not respond at all to "Create Session Request". Counter
sgsn-hss-detach(440)	Replaced by <code>sgsn-cancel-location-subs-withdrawn(230)</code> in Release 14.0.
sgsn-hss-connection-failure(441)	Replaced by <code>sgsn-glu-failure(236)</code> in Release 14.0
sgsn-pgw-detach(442)	Not yet supported.

Field	Description
sgsn-s5-s8-no-support-for-apn(443)	<p>Supported in Release 14.0.</p> <p>The total number of session disconnects resulting from the S4-SGSN's inability to establish a PDP context for an APN in the following scenario:</p> <ol style="list-style-type: none"> <li>1. An EPS subscription is used for a subscriber.</li> <li>2. The SGSN tries to find an S5 / S8 address of the PGW for the requested APN.</li> <li>3. The DNS response does not contain an S5/S8 address.</li> <li>4. The PDP activation is rejected.</li> </ol>
sgsn-no-rab-for-gbr-bearer(444)	Not yet supported. In development for future use.
sgsn-sgw-selection-failure(445)	<p>Supported in Release 14.0.</p> <p>The total number of session disconnects resulting from the S4-SGSN's inability to establish a PDP context in the following scenario:</p> <ol style="list-style-type: none"> <li>1. Either EPS or GPRS subscription is used.</li> <li>2. S4-SGSN chooses S4 interface for PDP activation because <ul style="list-style-type: none"> <li>• The UE is EPC-capable.</li> <li>• EGTP service is configured.</li> <li>• Operator Policy does not override the core-nw-interface to Gn.</li> </ul> </li> <li>3. The SGSN successfully resolves P-GW address (S5/S8 address) for the APN requested.</li> <li>4. The SGSN tries S-GW resolution. If the DNS response fails and no local S-GW is configured for the RAI, then the PDP activation is rejected with this disconnect reason.</li> </ol>
sgsn-pgw-selection-failure(446)	<p>Supported in Release 14.0.</p> <p>The total number of sessions disconnected by the S4-enabled SGSN when the P-GW DNS resolution fails due to any cause other than the DNS response does not contain an S5/S8 address.</p>
wimax-hotlining-status-change(447)	The total number of disconnects resulting from a status change in the Hotlining-Capabilities sub-attribute in the WiMAX-Capabilities attribute.
ggsn-no-rsp-from-sgsn(448)	The total number of sessions disconnected on GGSN node due to no response received from SGSN for a request.
diameter-protocol-error(449)	The total number of sessions disconnected on IPCF node due to an error in Diameter protocol (such as, CCR-I parse failure).

Field	Description
diameter-request-timeout(450)	The total number of sessions disconnected on IPCF node due to Diameter (RAR/ASR) request timeout on IPCF node.
operator-policy(451)	The total number of session disconnected on IPCF node due to parameters configured by operator for PCC policy.
spr-connection-error(452)	The total number of sessions disconnected on IPCF node due to an error in connection between SSC and IPCF node or non-availability of SSC.
mipha-dup-wimax-session(453)	The total number of WiMAX session disconnects resulting from duplicate Mobile IP Home Agent (MIPHA) logins.
invalid-version-attr(454)	This disconnect reason is set, if there is mismatch of WiMAX-Release version supported by ASNGW and that supported by AAA. This statistic is incremented when there is a mismatch of WiMAX-Release version supported by ASNGW and that supported by AAA. AAA sends WiMAX release in Radius packet. This statistic is cumulative for all ASNGW services configured on the system.
sgsn-zone-code-failure(455)	The total number of session disconnects experienced by the SGSN due to verification failure during the zone-code checking procedure.
invalid-qci(456)	The total number of session disconnects resulting from the receipt of invalid QoS class identifiers (QCIs). This error is returned if an invalid QCI is used in certain operations such as create bearer, which expects a QCI. A QCI is deemed invalid if it is not a standard QCI (1-9) or the QCI is not defined in the QCI table associated with the service.
no_rules(457)	This session disconnect counter increases for eGCDR when the call is terminated because of the PCRF deleting a rulebase through RAR.
sgsn-rnc-no-dual-pdp-init-pdp-deact(458)	Indicates the number of times the SGSN has deactivated a PDP because the MS/UE has roamed into an area where the RNC does not support dual PDP types. Deactivation would have been done with cause code "reactivation required".
mme-init-ctxt-setup-failure(459)	The total number of session disconnects resulting from context setup failures in the ENodeB during EMM/ECM procedures.
mme-driver-initiated(460)	The total number of session disconnects resulting from the default value for mme-sessions.
mme-s1ap-connection-down(461)	The total number of session disconnects resulting from S1AP connection failures.
mme-s1ap-reset-recd(462)	The total number of session disconnects resulting from partial or full resets received for the S1 connection.
mme-s6a-response-timeout(463)	The total number of session disconnects resulting from requests to the HSS that timed out (AIR or ULR).

Field	Description
mme-s13-response-timeout(464)	The total number of session disconnects resulting from EIR query time outs.
mme-Illegal-equipment(465)	The total number of session disconnects resulting from EIR query failures.
mme-unexpected-attach(466)	The total number of session disconnects resulting from older sessions getting disconnected due to the UE executing an ATTACH procedure.
mme-sgw-selection-failure(467)	The total number of session disconnects resulting from failed selections of S-GWs for the UE's current location.
mme-pgw-selection-failure(468)	The total number of session disconnects resulting from failed selections of P-GWs for default APNs.
mme-reselection-to-sgsn(469)	The total number of session disconnects resulting from a context request from an SGSN relocated call to 3G.
mme-relocation-to-sgsn(470)	The total number of session disconnects resulting from calls transitioned to an SGSN using handover signaling.
mme-reselection-to-mme(471)	The total number of session disconnects resulting from a context request from an MME relocated call to a different MME.
mme-relocation-to-mme(472)	The total number of session disconnects resulting from calls transitioned to an MME using handover signaling.
mme-tau-attach-collision(473)	The total number of session disconnects resulting from processing a TAU request with a foreign GUTI that cleared an existing session on the MME.
mme-old-sgsn-resolution-failure(474)	The total number of session disconnects resulting from calls setup using a PTMSI that failed due to failure in resolution of the old SGSN context.
mme-old-mme-resolution-failure(475)	The total number of session disconnects resulting from calls setup using a foreign GUTI that failed due to a failure in resolution of the old MME context.
mme-reloc-ho-notify-timeout (476)	The total number of session disconnects resulting from a handover based session origination failure due to an ho-notify timeout.
mme-reloc-ho-req-ack-timeout(477)	The total number of session disconnects resulting from a handover based session origination failure due to an ho-request-ack timeout.
mme-create-session-timeout(478)	The total number of session disconnects resulting from a create session request to the S-GW that timed out.
mme-create-session-failure(479)	The total number of session disconnects resulting from a create session request to the S-GW that returned a failure response.
mme-s11-path-failure(480)	The total number of session disconnects resulting from a call cleared due to an S11 path failure.

Field	Description
mme-policy-no-ue-irat(481)	The total number of session disconnects resulting from a call cleared due to policy restrictions on inter-rat handovers.
mme-x2-handover-failed(482)	The total number of session disconnects resulting from a call cleared due to failures in x2 handovers.
mme-attach-restrict(483)	The total number of session disconnects resulting from an operator policy based attach restriction.
mme-regional-zone-code(484)	In StarOS 15.0 and earlier releases:  The total number of session disconnects resulting from the UE being in a zone code where the UE is not allowed to roam.  This information is also available from the following counter: mme-zone-code-validation-failed(492).
mme-reloc-to-non-3GPP(484)	In StarOS 16.0 and later releases:  The total number of session disconnects resulting from outbound EUTRAN to Non-3GPP handovers.
mme-no-response-from-ue(485)	The total number of session disconnects resulting from the maximum retransmission of a NAS message during session setup.
mme-sgw-relocation-failed(486)	The total number of session disconnects resulting from an S-GW relocation procedure failing.
mme-implicit-detach(487)	The total number of session disconnects resulting from the UE being implicitly detached due to inactivity.
sgsn-detach-notify(488)	Replaced by sgsn-isr-mme-init-detach(505) in Release 14.0.
policy-initiated-release(489) in StarOS 12.1 and earlier releases	
emergency-inactivity-timeout (489) in StarOS 12.2 and later releases	The total number of sessions disconnected due to emergency inactivity timeout. The emergency session inactivity timeout is set on an APN configured as an emergency APN for VoLTE-based E911 support.
gy-result-code-system-failure (490) in StarOS 12.1 and earlier releases	The total number of sessions disconnected due to failure result codes received from the Online Charging Server that resulted in system failure on the GTP side.
policy-initiated-release(490) in StarOS 12.2 and later releases	The total number of times that a call disconnect occurs due to a Gx-initiated bearer release. For example, this disconnect reason may be used if there are any errors in the manner of the policy or rule configurations.
emergency-inactivity-timeout (491) in StarOS 12.1 and earlier releases	The total number of sessions disconnected due to emergency inactivity timeout. The emergency session inactivity timeout is set on an APN configured as an emergency APN for VoLTE-based E911 support.

Field	Description
gy-result-code-system-failure (491) in StarOS 12.2 and later releases	The total number of sessions disconnected due to failure result codes received from the Online Charging Server that resulted in system failure on the GTP side.
mme-zone-code-validation-failed(492)	The total number of session disconnects resulting from the UE being in a zone code where the UE is not allowed to roam.
sgsn-pgw-init-deact(493)	Supported in Release 14.0. The total number of session disconnects resulting from an initial deactivation between the SGSN and the P-GW when the P-GW sends "Delete Bearer Request" to deactivate a PDP or a PDP bundle.
s6b-ip-validation-failed(494)	Not supported in releases 12.0 or 12.2 . Supported in release 14.0 and later. The total number of session disconnects resulting from an IP validation failure on the S6b (3GPP AAA) interface.
sgsn-failure-rsp-from-sgw(495)	The total number of session disconnects resulting from the SGSN receiving a failure response from the S-GW. This occurs in any of the following scenarios: <ul style="list-style-type: none"> <li>• The UE has successfully attached and activated the PDP contexts through the S4 interface and then the UE does a RAU to a new RA. During this RAU, the SGSN will do S-GW selection for the new RA. If the SGSN selects a new S-GW for this RA and sends "Create Session Request" to the new S-GW to setup a tunnel. But the new S-GW does not respond or the responds with a failure cause. The SGSN deactivates the PDP with this disconnect cause.</li> <li>• In the case of a new-SGSN RAU without S-GW relocation, the new-SGSN sends "Modify Bearer Req" to inform the S-GW that the UE has moved to the new-SGSN but the SGSN does not receive any response from the S-GW.</li> <li>• During intra-SGSN RAU with a change in the PLMN but without a change in the S-GW. In this case, SGSN will send "Modify Bearer Req" to inform the S-GW of the change in PLMN ID but SGSN does not receive any response from the S-GW.</li> <li>• During intra-SGSN 3G-to-2G or 2G-to-3G inter-RAT RAU without an S-GW change. In this case, the SGSN sends "Modify Bearer Req" to inform the S-GW of the change in RAT type but the SGSN does not receive any response from the S-GW.</li> </ul>
tcp-remote-close (496)	The total number of sessions disconnected due to a TCP FIN (finished sending) message received from the UE.
tcp-reset-received (497)	The total number of sessions disconnected due to a TCP RST (reset) message received from the UE.

Field	Description
tcp-socket-error (498)	The total number of sessions disconnected due to a socket error received from the trek stack at the access-side TCP socket connection between the UE and the TTG.
ptmsi-signature-mismatch(499)	The number of times the SGSN was unable to validate the P-TMSI signature, present in the Attach Request, against the PTMSI-SIGNATURE stored in SGSN. The SGSN sent an Attach Reject to MS if it did not match. This occurs when the GPRS service is configured to reject Attaches with mismatching P-TMSI-signature. This configuration is used to prevent collision of 2 Attach procedures from 2 subscribers with the same P-TMSI and then quickly enforces an IMSI Attach.
camel-invalid-configuration(500)	The number of times the SGSN has encountered an invalid Customized Applications for Mobile network Enhanced Logic (CAMEL) configuration. This condition typically occurs when a subscriber moves from 3G service to 2G service or vice versa and the CAMEL service is associated only in the source service but not in the target service. In such cases, RAU requests are rejected with disconnect reason "camel-invalid-configuration".
4Gto3G-context-replacement(501)	Supported in Release 14.0.  The total number of times a PGW call has been cleared when a new call request came on GGSN and PGW already had a call with the same IMSI. ISR is enabled.
mme-isr-sgsn-init-detach(502)	Supported in Release 14.0.  The total number of times an MME, with IRS enabled, deletes a subscriber to detach the UE after receiving an S3 Detach Notification from the SGSN with cause code "complete detach".

Field	Description
sgsn-isr-addl-ptmsi-rai(503)	<p>The total number times the SGSN has disconnected a session because the SGSN has sent an additional P-TMSI Attach request during ISR. This cause is used to peg the clearing of stale contexts. This can occur in the following scenario:</p> <ol style="list-style-type: none"> <li>1. The UE is registered with both the MME and the SGSN and ISR is active.</li> <li>2. Due to one of the reasons mentioned in Annex J.6 of TS 23.401, ISR is deactivated at the UE but has not deactivated at either the SGSN or the MME which means the UE's last point of attachment at the time of ISR deactivation is the MME.</li> <li>3. Now the UE does a RAU to the SGSN. The UE will send old-RAI mapped from the GUTI (since the ISR is deactivated and the UE's last point of attachment was the MME) and also an additional RAI / P-TMSI which is the P-TMSI/RAI given by the SGSN at the time of ISR activation in step 1. This additional P-TMSI / RAI helps the SGSN to locate the stale UE context and clean it up. (The SGSN received a RAU with an old-RAI mapped from the GUTI so the SGSN needs to build a fresh UE context by fetching information from the MME - "Context Req/Rsp/Ack".)</li> </ol>
sgsn-sgw-dbr-cause-isr-deact(504)	<p>The number of times "Delete Bearer Requests" occurred between the SGSN and the S-GW due to ISR being deactivated. This occurs when the SGSN locally deactivate PDP contexts after receiving "Delete Bearer Requests" with cause "ISR Deactivation" from the S-GW.</p>
sgsn-isr-mme-init-detach(505)	<p>The number of times Init Detach occurred between the SGSN and the MME with ISR activated. This occurs when the SGSN receives "S3 Detach Notification" with cause "Complete Detach" from the MME.</p>
mme-sgw-dbr-cause-isr-deact(506)	<p>Supported in Release 14.0.</p> <p>The number of times Delete Bearer Requests occurred between MME and SGW due to ISR being deactivated.</p>
sgsn-ptmsi-crunch(507)	<p>The total number of sessions disconnected by the SGSN when there is a shortage of P-TMSIs which can occur when the number of possible subscribers per SessMgr has increased (with a PSC3) but the number of local NRI has not been increased in the configuration.</p>
3Gto4G-context-replacement(508)	<p>Supported in Release 14.0.</p> <p>The total number of times a GGSN call has been cleared when a new call request came on PGW and GGSN already had a call with the same IMSI. Idle mode Signaling Reduction (ISR) is enabled.</p>
sgsn-actv-reject-on-dns-failure(509)	<p>Never used. Removed in Release 14.0.</p>

Field	Description
mme-no-eps-bearers-activated(509)	Supported in Release 14.0. The number of times the MME has rejected a TAU Attach Request due to any of the following reasons: <ul style="list-style-type: none"> <li>• EPS Context Status IE value = 0 ( which implies no EPS bearers were active in UE).</li> <li>• The SGSN Context Response received by the MME did not have any PDP Contexts or the Response which included the PDP Contexts encountered basic decoding issues (like incorrectly encoded APN, etc.).</li> </ul>
sgsn-cancel-loc-initial-attach(513)	Supported in Release 14.0. The number of times a subscriber disconnects due to CLR with "initial attach procedure" as the cancellation type.
Local-fallback-timeout(514)	The total number of times the call gets disconnected due to the local policy timeout when Gx is not reachable.
sgsn-nrspca-actv-rej-by-sgsn(515)	The total number of times the network requested secondary PDP context activation (NRSPCA) procedure did not complete successfully for any reason other than the MS rejecting the procedure by sending a Request Secondary PDP Context Activation Reject message to the SGSN.
sgsn-nrspca-actv-rej-by-ms(516)	The total number of times the MS rejects the NRSPCA procedure by sending Request Secondary PDP Context Activation Reject message to the SGSN.
ims-authorization-config-delete(517)	The total number of times the sessions are disconnected due to IMS Authorization configuration being deleted.
sgsn-no-ptmsi-signature(518)	The total number of times the SGSN disconnects a subscriber (from an MME) because no PTMSI-signature was included in the RAU Request.
ePDG-dns-server-not-reachable(519)	The total number of disconnected sessions due to DNS server not reachable.
ePDG-dns-no-resource-records(520)	The total number of disconnected sessions when no valid record is fetched from DNS server.
ePDG-dns-no-service-params(521)	The total number of disconnected sessions when the fetched service parameters from DNS record does not match the configured protocol (GTP/PMIPv6).
pgw-sel-dns-server-nt-reachable(519) Release 15.0+	The number of sessions disconnected by the P-GW when its selected DNS server was not reachable.

Field	Description
pgw-sel-dns-no-resource-records(520) Release 15.0+	The number of sessions disconnected by the P-GW when its selected DNS server had no resource records.
pgw-sel-dns-no-service-params(521) Release 15.0+	The number of sessions disconnected by the P-GW when its selected DNS server had no service parameters.
ePDG-Auth-failed(522)	The total number of times ePDG authentication failed.  <b>Note</b> Invalid-AAA-attr-in-auth-response is incremented and as of now ePDG-Auth-failed is not used.
ePDG-pgw-sel-failure-initial(523)	The total number of disconnected sessions due to PGW selection failure in initial state.
ePDG-pgw-sel-failure-handoff(524)	The total number of disconnected sessions due to PGW selection failure in handoff state.
sgsn-ho-sgw-reloc-collision(525)	The total number of Relocation Collisions encountered during an SGSN handover to S-GW.
ePDG-dbr-from-pgw(526)	The total number of disconnected sessions due to Delete Bearer Request GTP message coming from PGW.
ePDG-gtpc-abort-session(527)	The total number of disconnected sessions due to GTP control plane path failure.
ePDG-gtpu-abort-session(528)	The total number of disconnected sessions due to GTP user plane path failure.
ePDG-gtpu-error-ind(529)	The total number of disconnected sessions due to error indication message on GTP user plane.
ePDG-pgw-not-reachable(530)	The total number of disconnected sessions due to PGW being down.
ePDG-reject-from-pgw(531)	The total number of disconnected sessions due to PGW rejecting the create session request.
IPSG-session-replacement(532)	The total number of times existing IPSG sessions have been replaced by new sessions. IPSG session replacement must be enabled.
ePDG-release-due-to-handoff(533)	The total number of disconnected sessions when ePDG gets a Delete Bearer Request from PGW due to hand-off.
mme-foreign-plmn-guti-rejected(534)	The total number of sessions rejected where the session contained a foreign GUTI and where the MME is configured to reject such foreign GUTIs as defined in the Foreign PLMN GUTI Management Database (foreign-plmn-guti-mgmt-db) configured in the lte-policy mode and which has been associated with the MME service.
sgsn-dsd-allepwithdrawn(535)	

Field	Description
NAT-Pool-BusyOut-Or-Pend-Delete(536)	The number of sessions disconnected because the NAT pool was busied-out or in Pending Delete state.
Invalid-APN(537)	The number of sessions disconnected because an ePDG rejected the incoming new call due to an APN syntax error (invalid length).
srvcc-ps-to-cs-handover(538)	The number of sessions disconnected because bearers were deactivated as a part of an SRVCC PS-to-CS handover.
henbgw-mme-s1ap-reset-recd(539)	The number of sessions disconnected by the HeNBGW when an S1 Application Protocol (S1AP) RESET was received from the MME.
henbgw-henb-s1ap-reset-recd(540)	The number of sessions disconnected by the HeNBGW when an S1AP RESET was received from the HeNB.
henbgw-mme-sctp-conn-down(541)	The number of sessions disconnected by the HeNBGW when an SCTP Connection Down was received from the MME.
henbgw-henb-sctp-conn-down(542)	The number of sessions disconnected by the HeNBGW when an SCTP Connection Down was received from the HeNB.
henbgw-handoff-complete(543)	The number of sessions disconnected by the HeNBGW when a handoff was completed.
henbgw-handover-failed(544)	The number of sessions disconnected by the HeNBGW when a handoff failed.
henbgw-mme-error-indication(545)	The number of sessions disconnected by the HeNBGW when an MME error indication was received.
henbgw-henb-error-indication(546)	The number of sessions disconnected by the HeNBGW when an HeNB error indication was received.
henbgw-henb-initiated-release(547)	The number of sessions disconnected by the HeNBGW due to an HeNB initiated release.
henbgw-mme-initiated-release(548)	The number of sessions disconnected by the HeNBGW due to an MME initiated release.
henbgw-duplicate-session(549)	The number of sessions disconnected by the HeNBGW because of duplicate sessions.
Transport-mismatch-with-PGW(550)	The number of sessions disconnected by the ePDG due to a DNS server IPv4-IPv6 mismatch for the P-GW IP address.
icsr-ipsec-chkpt-failed(551)	The number of sessions disconnected due IPSec checkpoint failure in ICSR setup.
sgsn-dbr-cause-isr-deact-detach(552)	The number of times subscribers are detached from the SGSN as a result of Delete Bearer Request messages being received from the SGW which causes Idle-mode Signaling Reduction (ISR) deactivation for ISR-activated subscribers.

Field	Description
unexpected-scenario(553)	The number of times that an unexpected call processing scenario has been encountered. This scenario may have caused an assertion failure with an associated core dump.
icsr-delete-standby(554)	The number of times that a session was deleted on the standby ICSR chassis when a call clear trigger is received from the active chassis or the call is removed for re-establishment when a full checkpoint was received
ePDG-local-pgw-resolution-failed(555)	The number of times that local resolution of an ePDG session failed due to a configuration error. This scenario occurs if PGW resolution is enabled, the existing DNS/AAA server PGW resolution mechanism failed, and no disconnect reason has been already set from a another mechanism.
sgsn-iovui-negotiation-failure(556)	If 'reject' is the configured option for <b>random-value-in-iov-ui negotiation-failure-action</b> under GPRS service configuration, then the SGSN uses this disconnect-reason to track the number of calls cleared due to the default behavior, which rejects any call when random IOV-UI negotiation fails.
henbgw-gw2henb-inv-mmeues1apid(557)	The number of times an HeNB gateway to HeNB session disconnected due to an invalid UE S1 Application Protocol (S1AP) ID.
henbgw-gw2mme-inv-mmeues1apid(558)	The number of times an HeNB gateway to MME session disconnected due to an invalid UE S1AP ID.
henbgw-henb-sess-henb-conn-down(559)	The number of times an HeNB gateway to HeNB session disconnected because the HeNB connection went down.
henbgw-nw-path-unavailable(560)	The number of HeNB gateway session disconnects because a network path was unavailable.
pgw-transaction-timeout(561)	The number of session disconnects due to a P-GW transaction timeout.
samog-multi-dev-pgw-sel-failure(562)	The number of times a SaMOG multiple device session disconnect has occurred due a P-GW selection failure.
samog-multi-dev-demux-failure(563)	The number of times a SaMOG multiple device session disconnect has occurred due a demux failure.
mme-pgw-restarted(564)	The number of times a session disconnect has occurred due to a P-GW Restart Notification (PRN).
samog-session-replacement(565)	The number of times a SaMOG session was replaced.
authorization-failed(566)	The number of times a SaMOG session was disconnected because authorization failed.
mm-apn-congestion-control(567)	The number of times an SGSN Attach or Inter SGSN RAU call was dropped due to APN congestion control.

Field	Description
samog-pgw-init-detach(568)	The number of times a SaMOG session was disconnected due to PGW initial detach failure.
samog-ggsn-init-detach(569)	The number of times a SaMOG session was disconnected due to GGSN initial detach failure.
samog-pgw-rejected(570)	The number of times a SaMOG session was disconnected due to PGW rejection.
samog-ggsn-rejected(571)	The number of times a SaMOG session was disconnected due to GGSN rejection.
samog-pgw-no-response(572)	The number of times a SaMOG session was disconnected due to no response from the PGW.
samog-ggsn-no-response(573)	The number of times a SaMOG session was disconnected due to no response from the GGSN.
samog-gtpc-path-failure(574)	The number of times a SaMOG session was disconnected due to GTPC path failure.
samog-gtpu-path-failure(575)	The number of times a SaMOG session was disconnected due to GTPU path failure.
samog-gtpu-err-ind(576)	The number of times a SaMOG session was disconnected due to a GTPU error indication.
samog-mandatory-ie-missing(577)	The number of times a SaMOG session was disconnected due to a missing mandatory information element.
samog-mandatory-ie-incorrect(578)	The number of times a SaMOG session was disconnected because of an incorrect mandatory information element.
samog-ip-alloc-failed(579)	The number of times a SaMOG session was disconnected because of an IP address allocation failure.
samog-default-gw-not-found(580)	The number of times a SaMOG session was disconnected because the default gateway was not found.
samog-dns-unreachable(581)	The number of times a SaMOG session was disconnected because the DNS server was unreachable.
samog-dns-no-resource-records(582)	The number of times a SaMOG session was disconnected because there were no DNS resource records.
samog-dns-no-service-params(583)	The number of times a SaMOG session was disconnected because of DNS no-service parameters.
samog-internal-error(584)	The number of times a SaMOG session was disconnected because of an internal error.

Field	Description
handoff-pcf-restriction(585)	This disconnect reason is incremented for the case when handoffs happen from restricted to unrestricted PCF, or conversely from unrestricted PCF to restricted PCF, or handoffs between restricted PCFs.
ue-ctxt-normal-del-ntsr-ddn(587)	The number of UE contexts that were created to handle Network Triggered Service Restoration (NTSR) DDNs and are destroyed when the UE re-attaches.
session-auto-delete(588)	This disconnect reason is used to indicate the percentage of the total number of GGSN, P-GW, S-GW, SAEGW or ePDG sessions that have been auto deleted.
mme-qos-pgw-upgrade-reject(589)	The number of sessions disconnected when a QoS upgrade by P-GW is rejected by the MME during initial attach.
path-failure-s5(590)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S5 GTPC path failure.
path-failure-s11(591)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S11 GTPC path failure.
path-failure-s4(592)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S4 GTPC path failure.
gtpu-path-failure-s5u(593)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S5u GTPU path failure.
gtpu-path-failure-s1u(594)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S1u GTPU path failure.
gtpu-path-failure-s4u(595)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S4u GTPU path failure.
gtpu-path-failure-s12(596)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions disconnected due to an S12 GTPU path failure.
gtpu-err-ind-s5u(597)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions that failed due to an S5u GTPU error indication.

Field	Description
gtpu-err-ind-s1u(598)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions that failed due to an S1u GTPU error indication.
gtpu-err-ind-s4u(599)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions that failed due to an S4u GTPU error indication.
gtpu-err-ind-s12(600)	Supported in release 18.0 and later releases. The number of S-GW/SAEGW sessions that failed due to an S12 GTPU error indication.
diameter-network-too-busy(601)	Supported in release 18 and later releases. The number of ePDG sessions disconnected due to a network too busy indication.
diameter-network-failure(602)	Supported in release 18 and later releases. A temporary network failure has prevented establishing a Diameter session.
diameter-roaming-not-allowed(603)	Supported in release 18 and later releases. Total number of times a session is disconnected when the user is not allowed to roam in the visited network.
diameter-rat-disallowed(604)	Supported in release 18 and later releases. Sent by the HSS to indicate the RAT type the UE is using is not allowed for the IMSI.
diameter-no-subscription(605)	Supported in release 18 and later releases. Sent by the 3GPP AAA Server to indicate that the requested APN is not included in the user's profile, and therefore is not authorized for that user.
pcc-data-mismatch(606)	Supported in release 18 and later releases. The number of times a session has been disconnected due to a Policy and Charging Control (PCC) Packet Control Function (PCF) mismatch.
mme-embms-call-setup-timeout(607)	Supported in release 18 and later releases. Triggered when an eMBMS call setup has timed out.
mme-embms-normal-disconnect(608)	Supported in release 18 and later releases. Triggered by a normal eMBMS call disconnect.
mme-embms-sctp-down(609)	Supported in release 18 and later releases. Triggered when an eMBMS call experiences a Stream Control Transmission Protocol (SCTP) failure.

Field	Description
disconnect-from-charging-server(610)	Supported in release 18 and later releases. The number of times a call is terminated due to a Gy server being down.
disconnect-irat-fail-hi-missing(611)	Supported in release 18 and later releases. The number of times a call is terminated due to HI=1 is not being received (Mandatory id) during a WiFi to LTE handoff.
apn-not-supported-in-plmn-rat(612)	Not yet supported. In development for future use. The requested APN is not supported in current RAT and PLMN combination (cause code 66).
ue-pcscf-reselect-not-supported(613)	Supported in release 18 and later releases. If the UE does not support P-CSCF Reselection (PCO based optional extension as per Rel 12, 3GPP 23.380 section 5.4.3 ), the P-GW initiates a DBReq with cause Reactivation Requested on receiving an MBReq with PCRI (P-CSCF Restoration Indication). The call is then torn down.
newer-session-detected(614)	The total number of times a session is disconnected when Diameter Experimental-Result-Code "DIAMETER_NEWER_SESSION_DETECTED (5199) is received in Assume Positive mode. On receiving this result code, the Diameter application does not retry to a secondary AAA server. This result code is used to maintain session uniqueness and detect stale message requests from ePDG/MME.
mme-guti_realloc_failed-detach(615)	MME will detach the UE after 10 consecutive unsuccessful GUTI Reallocation attempts with this disconnect reason.
mme-pcscf-rest-detach(616)	The MME detaches the subscribers due to HSS-based P-CSCF Restoration. The restoration method for P-CSCF Restoration in this scenario is PDN Deactivate. The MME performs a PDN disconnect procedure to deactivate the PDN with cause "reactivation requested". All subscriber PDNs are restored during P-CSCF Restoration.
Reject-ho-old-tun-path-failure(617)	Supported in release 18 and later releases. A tunnel path failure occurred during an LTE/Wi-Fi handoff.
gx-vapn-selection-failed(618)	The number of times a P-GW/GGSN/SAEGW session was disconnected due to validation failure of virtual APN received from PCRF. This disconnect reason is associated with Gx based Virtual APN Selection feature.  <b>Note</b> This feature is license dependent. For more information, contact your Cisco account representative.

Field	Description
dup-static-ipv6-addr-req(619)	This disconnect reason is incremented when the existing PDN gets gracefully aborted due to a duplicate IPv6 address request received from new PDN. The existing call gets aborted only when the CLI "newcall duplicate-subscriber-requested-v6-address accept" is configured under GGSN/PGW service.
mip-path-failure(620)	This disconnect reason will be incremented when the peer is not reachable or when the peer restarts and sends new restart counter.
apn-congestion(621)	This disconnect reason will be incremented when an incoming call is identified as Low Access Priority Indicator (LAPI), and PGW is in Overload state and Backoff timer is configured and the call is rejected with cause "APN congestion".
ue-redirection(622)	Total number of sessions disconnected due to UE redirection.
ePDG-s2b-access-denied(623)	Total number of sessions disconnected on ePDG due to s2b cause codes mapped to private IKEv2 notify payload type "access denied".
ePDG-s2b-network-failure(624)	Total number of sessions disconnected on ePDG due to s2b cause codes mapped to private IKEv2 notify payload type "network failure".
ePDG-s2b-msg-failure(625)	Total number of sessions disconnected on ePDG due to s2b cause codes mapped to private IKEv2 notify payload type "message failure".
ePDG-s2b-rat-disallowed(626)	Total number of sessions disconnected on ePDG due to s2b cause code "RAT disallowed" which is mapped to private IKEv2 notify payload type "RAT Disallowed".
ePDG-roaming-mandatory(627)	Total the number of sessions disconnected due to DNS failure when roaming is mandatory.
Gtpv2-context-not-found(628)	Total the number of sessions disconnected due to GTP cause code "Context Not Found".
SaMOG-access-switch-timeout(629)	Increments when the access switch from PMIPv6 access-type to EoGRE access-type is not completed.
Decrypt-fail-count-exceeded(630)	Total number of sessions disconnected due to decryption failure count exceeded.
emergency-idle-timeout(631)	Total number of emergency sessions disconnected due to idle session timeout.
gtpu-path-failure-s11u(632)	Supported in release 21.3 and later releases. The number of times a SGW session has been disconnected due to GTPU echo failure on s11u interface.
gtpu-err-ind-s11u(633)	Supported in release 21.3 and later releases. The number of times a SGW session has been disconnected due to Error Indication on s11u interface.

Field	Description
mme-gtpu-path-failure-s11u (634)	The total number of disconnect reasons for the calls aborted due to GTPU path failure.
mme-gtpu-err-ind-s11u (635)	The total number of disconnect reasons for the calls aborted when there is an indication of GTPU error at the s11 interface.
ePDG-pcscf-restoration (636)	The total number of disconnect reasons returned due to the receipt of Delete Bearer request for the PCSCF reactivation.
samog-lbo-user-logout (637)	The total number of disconnect reasons incremented when the session of SaMOG service using S-GW service disconnects due to the duplicate IP address.
sx-req-re (638)	The total number of disconnect reasons incremented at the User Plane due to incorrect URR or PFCP rejection in CUPS.
sx-cntxt-not-found (639)	The total number of disconnect reason returned if the PFCP context is not found.
sx-mand-ie-missing (640)	The total number of disconnect reason set at the UPLANE because of the mandatory IE is missing.
sx-cond-ie-missing (641)	The total number of disconnect reason incremented when conditional IE is missing in PFCP or Uplane QER is missing or UE IP address not present.
sx-msg-invalid-length (642)	The total number of disconnect reason incremented when the message length is insufficient or invalid.
sx-mand-ie-incorrect (643)	The total number of disconnect reason incremented when the mandatory IE is incorrect in the sx interface.
sx-invld-fwd-policy (644)	The total number of disconnect reasons incremented if the forwarding policy is invalid.
sx-invld-fteid-alloc-opt (645)	The total number of disconnect reasons incremented when the fully qualified Tunnel ID allocation option is invalid
sx-no-estabshd-sx-association (646)	The total number of disconnect reasons incremented when peer entry were not in the Associated state.
sx-no-response (647)	The total number of disconnect reasons returned if the Sx proclret fails or there is no response from the sx interface.
sx-no-resource (648)	The total number of disconnect reasons returned when resources were not available on the sx interface.
sx-fteid-ipaddr-type-mismatch (649)	The total number of disconnect reasons returned when a mismatch between FTEID IP Address type is received in Sx session create or modify response and remote GTP peer.
sx-invalid-response (650)	The total number of disconnect reasons returned during an Sx session establish or modify response received with an invalid response.

Field	Description
user-plane-info-not-available (651)	The total number of disconnect reasons when the User plane selection fails for GGSN, P-GW, or SAEGW  In the case of S-GW, the selection fails if there is an internal failure while creating a transient transaction.
user-plane-info-mismatch (652)	The total number of disconnect reasons returned when user plane information mismatches.
IKEv2-request-rate-exceeded (653)	The total number of disconnect reasons returned when IKEv2 (Internet Key Exchange version 2) request rate is exceeded.
mme-decor-call-rerouted (654)	The total number of disconnect reasons incremented when the MME-DCN (dedicated core n/w) does not support UE usage type and a reroute process gets triggered.
mme-decor-call-rejected (655)	The total number of disconnect reasons incremented if the MMEGI of the rerouted message doesn't belong to the new MME and the MME rejects the call.
origin-state-id-change (656)	The total number of disconnect reasons returned when the call is cleared because of the Origin State ID change.
mme-ducon-path-update-failed (657)	The total number of disconnect reasons returned when the MME <i>du</i> connection path update fails
diam-no-non-3gpp-subscription (658)	The total number of disconnect reasons returned when there is no non-3gpp subscription.
diameter-user-unknown (659)	The total number of disconnect reasons returned when the Diameter user is unknown.
diameter-illegal-equipment (660)	The total number of disconnect reasons returned when the Diameter illegal equipment is used.
epdg-invalid-imei (661)	The total number of sessions disconnected due to Invalid IMEI received from the UE.
sx-path-failure (662)	The total number of disconnected reasons returned due to sx interface path failure.
sxfail-opr-revert-info (663)	The total number of disconnected reasons returned due to the Sx Modification Request failure.  <b>Note</b> This reason for the Sx Modification request failure is because of failure in reverting information on User Plane, Control Plane, and User Plane are out of sync or Triggering PDN deletion.
sxfail-opr-get-usagereport (664)	The total number of disconnected reasons returned due to the Sx Modification Request failure.

Field	Description
sfail-opr-create-rulebase-pdr (665)	The total number of disconnect reasons returned if the Sx Modification Request failed because of the failure in creating a Rulebase PDR.
sfail-opr-remove-pdr (666)	The total number of disconnect reasons returned if the Sx Modification Request fails because of the failure in removing PDR on User Plane.
gtp-remote-data-teid-invalid (667)	The total number of disconnect reasons returned if the call is rejected because of the invalid TEID in GTP remote data.
smp-fp-tep-oper-failure (668)	The total number of disconnect reasons is set, if the Failure in Fast Path TEP entry operation is detected.
smp-fp-ambr-oper-failure (669)	The total number of disconnect reasons set if the Fast path Uplink or Downlink Policer configuration or Policer Bucket operations such as add, modify, or delete operation fails.
smp-fp-brr-stream-oper-failure (670)	The total number of disconnect reasons set for the failure of Bearer stream operations . For example, creating and updating in SessMgr Fastpath.
smp-fp-brr-strm-chrgng-op-fail (671)	The total number of disconnect reasons set for the failure of Bearer stream charging operations. For example,creating and updating in SessMgr Fastpath.
smp-fp-itc-bw-oper-failure (672)	The total number of disconnect reason set if the ACS detect session setup failure or Delete indication due to Gx/Gy server being down.
smp-fp-strm-chrg-oper-failure (673)	The total number of errors returned if Session deletion initiated with charging operation failure or sessMgr UP disconnected with Fastpath stream charging operation failure.
vpp-next-hop-failure (674)	The total number of the reasons returned if the next-hop row addition failed in the iCUPS platform.
graceful-cleanup-up-audit-fail (675)	The total number of the reasons returned if Sx Session reported graceful termination for User plane audit failure.
sx-max-trans-threshold-reached (676)	The total number of disconnect reasons returned if the call dropped with the reason transaction pending queue reached its maximum.
sx-db-ub-collision (677)	The total number of disconnect reasons is set if the system detects UBReq collision on deleting the bearer or if the call drops with the reason transaction pending queue reached its maximum.
sx-failure-ntsr (678)	The total number of disconnect reasons is set for the Sx path failure with NTSR (Network Triggered Service Restoration) enabled on the node.
graceful-term-up-self-protectn (679)	The total number of disconnect reasons is set if the Sx Session Reports UP Self Protection Termination is received.
sx-gtpu-sess-repl (680)	The total number of disconnect reasons set if the UPLANE abort session request is received.

Field	Description
mme-reselection-to-amf (681)	The total number of disconnect reasons set if the subscriber reselects AMF as part of the EPS to 5GS Idle Mobility Registration procedure.
mme-relocation-to-amf (682)	The total number of disconnect reasons is set if the subscriber relocates to AMF as part of the EPS to 5GS Handover procedure.
rbase-del-pending (683)	The total number of disconnect reasons if the rulebase is in maintenance mode.
late-overlapping-request (684)	The total number of reason codes returned if IMSA receives an experimental result response as a late overlapping request.
timed-out-request (685)	The total number of reason codes returned if IMSA receives an experimental result response as the time-out request.
Sgi-reachability-reject (686)	The total number of disconnect reasons if the call gets rejected because of the down APN status.
Sgi-reachability-clear (687)	The total number of disconnect reasons if the call gets cleared as the APN status is down.

## show session progress

### Important

In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 527: show session progress Command Output Descriptions**

Field	Description
In-progress calls	The number of calls that are currently in progress (active, dormant, being set up, or being disconnected) and being processed by either the system (if no keywords were used), a specific PDSN service (if the <b>pdsn-service</b> keyword was used), or a specific PCF (if the <b>pcf</b> keyword was used).
In-progress active calls	The total number of active sessions.
In-progress dormant calls	The total number of dormant sessions.  <b>NOTE:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
In-progress always-on calls	The number of calls that have always on enabled.
In-progress calls @ ARRIVED state	The total number of sessions that are at the onset of the registration process.

Field	Description
In-progress calls @ CSCF-CALL-ARRIVED state	The total number of Call Session Control Function (CSCF) sessions that are at the onset of the registration process.
In-progress calls @ CSCF-REGISTERING state	Total number of CSCF sessions which are in registration processing state.
In-progress calls @ CSCF-REGISTERED state	Total number of CSCF sessions which are in registered state.
In-progress calls @ LCP-NEG state	The total number of sessions that are in the Link Control Protocol (LCP) negotiation phase of the registration process.
In-progress calls @ LCP-UP state	The total number of sessions that have just completed the Link Control Protocol (LCP) negotiation phase of the registration process.
In-progress calls @ AUTHENTICATING state	The total number of sessions that are in the process of being authenticated.
In-progress calls @ BCMCS SERVICE AUTHENTICATING state	The total number of BCMCS sessions that are in the process of being authenticated.
In-progress calls @ AUTHENTICATED state	The total number of sessions that have completed the authentication phase with AAA but the session is not yet established.
In-progress calls @ PDG AUTHORIZING state	The total number of Packet Data Gateway (PDG) calls in the process of being authorized.
In-progress calls @ PDG AUTHORIZED state	The total number of PDG calls that have been authorized.
In-progress calls @ IMS AUTHORIZING state	The total number of IP Multimedia Subsystem (IMS) calls in the process of being authorized.
In-progress calls @ IMS AUTHORIZED state	The total number of IMS calls that have been authorized.
In-progress calls @ MBMS UE AUTHORIZING state	The total number of Multimedia Broadcast Multicast Services (MBMS) sessions currently in User Equipment (UE) authorization state.
In-progress calls @ MBMS BEARER AUTHORIZING state	The total number of MBMS sessions currently in bearer authorization state.
In-progress calls @ DHCP PENDING state	The total number of Dynamic Host Configuration Protocol (DHCP) calls that are currently in pending state.
In-progress calls @ L2TP-LAC CONNECTING state	The number of calls that have an L2TP tunnel in the process of being brought up.
In-progress calls @ MBMS BEARER CONNECTING state	The total number of MBMS calls in the bearer connecting state.

Field	Description
In-progress calls @ CSCF-CALL-CONNECTING state	The total number of CSCF calls in the call connecting state.
In-progress calls @ IPCP-UP state	The total number of sessions that have just completed the Internet Protocol Control Protocol (IPCP) phase of the registration process.
In-progress calls @ NON-ANCHOR CONNECTED state	Indicates the total number of WiMAX sessions being processed by this Session Manager instance that are currently connected in non-anchor mode.
In-progress calls @ SIMPLE IPv4 CONNECTED state	The total number of simple IPv4 data sessions that are currently connected.
In-progress calls @ SIMPLE IPv6 CONNECTED state	The total number of simple IPv6 data sessions that are currently connected.
In-progress calls @ SIMPLE-IPv4+IPv6 CONNECTED state	The total number of simple IPv4/IPv6 data sessions that are currently connected.
In-progress calls @ MOBILE-IPv4 CONNECTED state	The total number of Mobile IPv4 (MIP) data sessions that are currently connected.
In-progress calls @ MOBILE-IPv6 CONNECTED state	Total number of Proxy Mobile IPv6 (MIPv6) sessions currently established.
In-progress calls @ GTP CONNECTING state	Total number of GTPv2 sessions in connecting state which are awaiting Create Session Response message in reply to Create Session Request already sent.
In-progress calls @ GTP CONNECTED state	Total number of GTPv2 sessions currently established.
In-progress calls @ PROXY-MOBILE-IP CONNECTING state	Total number of Proxy Mobile IPv6 sessions in connecting state and are waiting for PBA in reply to PBU already sent.
In-progress calls @ PROXY-MOBILE-IP CONNECTED state	The total number of Proxy Mobile IP data sessions that are currently connected.
In-progress calls @ EPDG RE-AUTHORIZING state	the total number of Evolved Packet Data Gateway (ePDG) calls that are re-authorizing.
In-progress calls @ HA-IPSEC CONNECTED state	The number of calls that have negotiated IP Security.
In-progress calls @ L2TP-LAC CONNECTED state	The number of calls that are passing data through an L2TP tunnel.
In-progress calls @ HNBGW CONNECTED state	The number of UMTS-Femto calls connected to HNB-GW.
In-progress calls @ PDP-TYPE-PPP CONNECTED state	The total number of PDP contexts of type PPP (Point to Point Protocol) that are currently connected. This field applies to GGSN only.

Field	Description
In-progress calls @ IPSTG CONNECTED state	The total number of IP Services Gateway (IPSTG) sessions currently connected.
In-progress calls @ BCMCS CONNECTED state	The total number of BCMCS sessions currently connected.
In-progress calls @ PCC CONNECTED state	The total number of IP-Connectivity Access Network (IP-CAN) sessions currently in connected state.
In-progress calls @ MBMS UE CONNECTED state	The total number of MBMS sessions currently in UE connected state.
In-progress calls @ MBMS BEARER CONNECTED state	The total number of MBMS sessions currently in bearer connected state.
In-progress calls @ ASNPC CONNECTED state	Indicates the number of ASN Paging Controller calls that are currently connected.
In-progress calls @ CSCF-CALL-CONNECTING state	Total number of CSCF sessions which are in call connecting state (waiting for ACK).
In-progress calls @ CSCF-CALL-CONNECTED state	Total number of CSCF sessions which are in call connected state.
In-progress calls @ CSCF-CALL-DISCONNECTING state	Total number of CSCF sessions which are in call disconnecting state (such as, processing BYE, waiting for BYE response, etc.).
In-progress calls @ MME ATTACHED state	Indicates the number of MME subscriber session currently attached.
In-progress calls @ HENBGW CONNECTED state	The total number of Home evolved Node B Gateway (HENBGW) calls in the connected state.
In-progress calls @ CSCF-CALL-DISCONNECTING state	Total number of CSCF sessions which are disconnecting.
In-progress calls @ DISCONNECTING state	The total number of sessions that are in the process of disconnecting.

## show session recovery status verbose

**Table 528: show session recovery status verbose Output Descriptions**

Field	Description
Last Status Update	The duration from the last time the Resource Manager did a health check on the session managers. This is informational info only, and does not reflect the last time a subscriber was checkpointed.

Field	Description
cpu	This indicates the card and slot number of the CPU listed.
state	Indicates the state of the specified CPU. This is either Active or Standby.
sessmgr	This lists the number of Session Managers in the active and standby state on the specified CPU.
aaamgr	Indicates the number of AAA managers in the active and standby state on the specified CPU.
demux active	Indicates the number of demux managers on the CPU.
status	This indicates the session recovery state for the specified CPU. This can be one of the following values: <ul style="list-style-type: none"> <li>• Good (Demux)</li> <li>• Demux With Non-Demux</li> <li>• Non-Demux With Demux</li> <li>• Pair on Processing Cards</li> <li>• SESSMGR Not Ready</li> <li>• Missing AAAMGR</li> <li>• No Standby</li> <li>• Good</li> <li>• SESSMGR Not Ready</li> <li>• Too Few Standby</li> <li>• Good</li> <li>• Unknown</li> </ul>

## show session subsystem

This show command is used for monitoring the session related statistics per RAT type.

Field	Description
<b>LTE-M Connection Statistics:</b>	
Total Sessions	Indicates that the total number of active LTE-M sessions.
Total calls arrived	Indicates the total number of sessions received for the selected LTE-M RAT type.
Total calls Connected	Indicates that the total number of calls connected for the LTE-M RAT type.
Total calls disconnected	Indicates the total number of calls disconnected for the LTE-M RAT type.

## show session subsystem full

This show command is used for monitoring the Data packets per RAT type and subscribers count per RAT type.

Field	Description
<b>LTE-M Data Statistics</b>	
Total Sessions	Shows the total number of active data packets.
Total calls arrived	Shows the total number of calls arrived.
Total calls connected	Shows the total number of calls connected.
Total calls disconnected	Shows the total number of calls disconnected.
<b>LTE-M Connection Statistics:</b>	
Total Sessions	Indicates that the total number of active LTE-M sessions
Total calls arrived	Indicates the total number of sessions received for the selected LTE-M RAT type.
Total calls Connected	Indicates that the total number of calls connected for the LTE-M RAT type.
Total calls disconnected	Indicates the total number of calls disconnected for the LTE-M RAT type.

## show session subsystem verbose

The **show session subsystem verbose** command displays the following output for the selected LTE-M RAT type:

Field	Description
<b>LTE-M Data Statistics:</b>	
Packets to User	The number of Data packets received by the user
Octets to User	The number of Data octets received by the user.
Packets from User	The number of Data packets send from the user.
Octets from User	The number of Data octets sent from the user.
<b>LTE-M Connection Statistics :</b>	
Total Sessions	Indicates that the total number of active LTE-M sessions.
Total calls arrived	Indicates the total number of sessions received for the selected LTE-M RAT type.
Total calls Connected	Indicates that the total number of calls connected for the LTE-M RAT type.
Total calls disconnected	Indicates the total number of calls disconnected for the LTE-M RAT type.

## show session subsystem debug-info

Table 529: show session subsystem debug-info Output Descriptions

Field	Description
<b>USF</b>	
No of packet drops on sessmgr	Indicates number of packet drops on Session Manager.
<b>Peer Salvation Stats</b>	
No of peer salvation requests received on sessmgr	Indicates the number of peer salvation requests received on the Session Manager.
No of peer salvaged on sessmgr	Indicates the number of peers salvaged on the Session Manager.
<b>1 AAA Managers</b>	
10 Total aaa requests	Indicates the number of AAA requests. The total number is 10.
2 Total aaa auth requests	Indicates the number of AAA authorization requests. The total number is 2.
0 Total aaa auth probes	Indicates the number of AAA authorization probes. The total number is 0.

## show session subsystem facility a11mgr all

### Important

These statistics are from the perspective of the Session Manager (SessMgr) and A11 Manager (A11Mgr) task itself (not from the perspective of subscribers).

Table 530: show session subsystem facility a11mgr Command Output Descriptions

Field	Description
A11Mgr	The A11 Manager task instance number. Since multiple A11 Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	Indicates the total number of sessions received by this A11 Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this A11 Manager instance.
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this A11 Manager instance.
Total dereg reply sent	Indicates the total number of sessions that were successfully de-registered, or disconnected, by this by this A11 Manager instance.

Field	Description
Current active calls	Indicates the total number of active sessions currently being facilitated by this A11 Manager instance.
Total active services	The total number of PDSN services that are currently facilitating subscriber sessions.

## show session subsystem facility aaamgr all

**Important** These statistics are from the perspective of the Session Manager (SessMgr) and AAA Manager (AAAMgr) task itself (not from the subscriber perspective).

**Table 531: show session subsystem facility aaamgr all Command Output Descriptions**

Field	Description
AAA Manager	The AAA Manager task instance number. Since multiple AAA Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total aaa requests	The total number of AAA requests received by this AAAMgr instance for processing.
Current aaa requests	The number of AAA requests that this AAAMgr instance is currently processing.
Total aaa auth requests	The total number of AAA authentication requests that were received by this AAAMgr instance.
Current aaa auth requests	The number of AAA authentication requests that this AAAMgr instance is currently processing.
Total aaa auth probes	The total number of Authorization Probes that this AAAMgr instance has initiated.
Current aaa auth probes	The number of Authorization Probe requests that this AAAMgr instance is currently processing.
Total aaa auth keepalive	The total number of AAA authentication keepalive requests that were sent by this AAAMgr instance.
Current aaa auth keepalive	The number of AAA authentication keepalive requests that this AAAMgr instance is currently processing.
Total aaa acct requests	The total number of AAA accounting requests that were received by this AAAMgr instance.
Current aaa acct requests	The number of AAA accounting requests that this AAAMgr instance is currently processing.
Total aaa acct keepalive	The total number of AAA accounting keepalive requests that were sent by this AAAMgr instance.

Field	Description
Current aaa acct keepalive	The number of AAA accounting keepalive requests that this AAAMgr instance is currently processing.
Total aaa auth success	The total number of successful AAA authentications facilitated by this AAAMgr instance.
Total aaa no-auth null-username	The total number of AAA authentication requests dropped because of a null user name, or because there is no RADIUS null-username configured.
Total aaa auth failure	The total number of failed AAA authentications facilitated by this AAAMgr instance.
Total aaa auth purged	The total number of AAA authentication requests received by this AAAMgr instance that failed to get a response from the AAA server.
Total aaa auth cancelled	The total number of canceled AAA authentication requests facilitated by this AAAMgr instance.
Total auth keepalive success	The total number of successful authentication keepalives facilitated by this AAAMgr instance.
Total auth keepalive failure	The total number of failed authentication keepalives facilitated by this AAAMgr instance.
Total auth keepalive purged	The total number of authentication keepalive requests received by this AAAMgr instance that failed to get a response from the AAA server.
Total aaa auth DMU challenged	The total number of AAA authentication requests that were challenged for Dynamic Mobile Keying update.
aaa request (used/max)	The total number of AAA requests used and the maximum allowed for this AAAMgr instance.
Total Diameter auth requests	The total number of AAA authentication requests of the type Diameter authentication protocol facilitated by this AAAMgr instance.
Current Diameter auth requests	The number of AAA authentication requests of the type Diameter authentication protocol currently being processed by this AAAMgr instance.
Total Diameter auth requests retried	The total number of AAA authentication requests of the type Diameter authentication protocol that this AAAMgr instance retried. Retries occur when the AAAMgr instance does not receive a response from the AAA server to an initial request. The AAAMgr instance retries a request triggered by a timeout value configured under the AAA group.
Total Diameter auth requests dropped	The total number of AAA authentication requests of the type Diameter authentication protocol dropped by this AAAMgr instance due to the AAA server being unavailable or the system being out of memory.
Total radius auth requests	The total number of RADIUS authentication requests received by this AAAMgr instance.
Current radius auth requests	The number of RADIUS authentication requests currently being processed by this AAAMgr instance.
Total radius auth requests retried	The total number of RADIUS authentication requests processed by this AAAMgr instance that were retried.

Field	Description
Total radius auth responses dropped	The total number of RADIUS authentication responses dropped by the AAAMgr instance.
Total radius malformed auth responses	The total number of RADIUS authentication responses received with multiple rulebase attributes.
Total local auth requests	The total number of authentication requests received by this AAAMgr instance for locally configured subscribes.
Current local auth requests	The number of authentication requests currently being processed by this AAAMgr instance for locally configured subscribes.
Total pseudo auth requests	The total number of AAA requests for user profiles received by this AAAMgr instance.
Current pseudo auth requests	The number of current pending AAA requests for user profiles in this AAAMgr instance.
Total null-username auth requests (rejected)	The total number of AAA requests for un-attempted user profiles received by this AAAMgr instance.
Total aaa acct completed	The total number of AAA accounting requests received by this AAAMgr instance that were delivered successfully to the AAA server.
Total aaa acct purged	The total number of AAA accounting requests received by this AAAMgr instance that had to be purged because the storage limit of pending accounting requests had been exceeded.
Total acct keepalive success	The total number of successful accounting keepalives facilitated by this AAAMgr instance.
Total acct keepalive timeout	The total number of failed accounting keepalives facilitated by this AAAMgr instance.
Total acct keepalive purged	The total number of accounting keepalive requests received by this AAAMgr instance that failed to get a response from the AAA server.
Total aaa acct cancelled	The total number of AAA accounting requests received by this AAAMgr instance that were cancelled.
Total Diameter acct requests	The total number of AAA accounting requests of the type Diameter accounting protocol facilitated by this AAAMgr instance. This includes active and deleted requests.
Current Diameter acct requests	The number of AAA accounting requests of the type Diameter accounting protocol currently being processed by this AAAMgr instance.
Total Diameter acct requests retried	The total number of AAA accounting requests of the type Diameter accounting protocol that this AAAMgr instance retried. Retries occur when the AAAMgr instance does not receive a response from the AAA server to an initial request. The AAAMgr instance retries a request triggered by a timeout value configured under the AAA group.
Total diameter acct requests dropped	The total number of dropped AAA accounting requests of the type Diameter accounting protocol.
Total diameter acct responses dropped	The total number of dropped AAA accounting responses of the type Diameter accounting protocol.

Field	Description
Total diameter acct cancelled	The total number of cancelled AAA accounting requests of the type Diameter accounting protocol.
Total diameter acct purged	The total number of purged AAA accounting requests of the type Diameter accounting protocol.
Total radius acct requests	The total number of AAA accounting requests received by this AAAMgr instance for which the RADIUS protocol was used to deliver the accounting message to the AAA server.
Current radius acct requests	The number of AAA accounting requests currently being processed by this AAAMgr instance for which the RADIUS protocol is being used to deliver the accounting message to the AAA server.
Total radius acct cancelled	The total number of cancelled RADIUS accounting requests received by this AAAMgr instance.
Total radius acct purged	The total number of RADIUS accounting requests received by this AAAMgr instance that had to be purged because the storage limit of pending accounting requests had been exceeded.
Total radius acct requests retried	The total number of AAA accounting requests received by this AAAMgr instance for which the RADIUS protocol was used to deliver the accounting message to the AAA server that were retried.
Total radius acct responses dropped	The total number of RADIUS accounting responses dropped by the AAAMgr instance.
Total radius sec acct requests	The total number of AAA secondary accounting requests received by this AAAMgr instance for which the RADIUS protocol was used to deliver the accounting message to the AAA server.
Current radius sec acct requests	The number of AAA secondary accounting requests currently being processed by this AAAMgr instance for which the RADIUS protocol is being used to deliver the accounting message to the AAA server.
Total radius sec acct cancelled	The total number of cancelled RADIUS secondary accounting requests received by this AAAMgr instance.
Total radius sec acct purged	The total number of RADIUS secondary accounting requests received by this AAAMgr instance that had to be purged because the storage limit of pending accounting requests had been exceeded.
Total radius sec acct requests retried	The total number of AAA secondary accounting requests received by this AAAMgr instance for which the RADIUS protocol was used to deliver the accounting message to the AAA server that were retried.
Total gtpa acct requests	The total number of AAA accounting requests received by this AAAMgr instance for which the GTPA protocol was used to deliver the accounting message to the Charging Gateway Function (CGF).

Field	Description
Current gtp acct requests	The current number of AAA accounting requests being processed by this AAAMgr instance for which the GTPP protocol is being used to deliver the accounting message to the Charging Gateway Function (CGF).
Total gtp acct cancelled	The total number of accounting requests that were cancelled.
Total gtp acct purged	The total number of accounting requests that were purged.
Total gtp sec acct requests	The total number of secondary G-CDR requests being processed by this AAAMgr instance for which the GTPP protocol is being used to deliver the accounting message to the Charging Gateway Function (CGF). It counts total secondary G-CDRs generated by this AAAMgr instance.
Total gtp sec acct purged	The total number of secondary G-CDR requests being processed and purged by this AAAMgr instance for which the GTPP protocol is being used to deliver the accounting message to the Charging Gateway Function (CGF). It counts total secondary G-CDRs purged by this AAAMgr instance.
Total null acct requests	The total number of AAA accounting requests received by this AAAMgr instance that were not required to be delivered to a AAA server.
Current null acct requests	The current number of AAA accounting requests being processed by this AAAMgr instance that are not required to be delivered to a AAA server.
Total aaa acct sessions	The total number of AAA accounting sessions facilitated by this AAAMgr instance.
Current aaa acct sessions	The number of AAA accounting sessions currently being facilitated by this AAAMgr instance.
Total aaa acct archived	The total number of AAA accounting requests received by this AAAMgr instance that initially failed to be delivered to a AAA server, and was subsequently archived for later transmission.
Current aaa acct archived	The current number of AAA accounting requests being processed by this AAAMgr instance that initially failed to be delivered to a AAA server and is currently archived for later transmission.
Current recovery archives	The number of AAA state records being maintained within the AAAMgr. They are used to generate accounting stops when a session manager fails or to recover the call in the Session Manager.
Current valid recovery records	The number of valid call recovery records that exist for current sessions.
Total aaa sockets opened	The total number of communication sockets opened by the AAAMgr instance for the purposes of communication with AAA servers.
Current aaa sockets open	The current number of communication sockets open by the AAAMgr instance for communication with AAA servers.
Total aaa requests pend socket open	The total number of AAA requests received by this AAAMgr instance that had to wait in queue while a socket to the AAA server was being opened.

Field	Description
Current aaa requests pend socket open	The number of AAA requests received by this AAAMgr instance that are currently waiting in queue while a socket to the AAA server is being opened.
Total radius requests pend server max-outstanding	The total number of RADIUS requests received by this AAAMgr instance that had to wait in queue because the limit of the number of outstanding RADIUS messages had been reached.
Current radius requests pend server max-outstanding	The number of RADIUS requests received by this AAAMgr instance that are currently waiting in queue because the limit of the number of outstanding RADIUS messages has been reached.
Total aaa radius coa requests	The total number of RADIUS Change Authorization Requests received from the RADIUS server.
Total aaa radius dm requests	The total number of RADIUS Disconnect Requests Received from the RADIUS server.
Total aaa radius coa acks	The total number of RADIUS Change Authorization Acknowledgement sent to the RADIUS server.
Total aaa radius dm acks	The total number of RADIUS Disconnect Acknowledgments sent to the RADIUS Server.
Total aaa radius coa naks	The total number of RADIUS Change Authorization Negative Acknowledgement sent to the RADIUS server.
Total aaa radius dm naks	The total number of RADIUS Disconnect Negative Acknowledgments sent to the RADIUS Server.
Total radius charg auth	The total number of authentication requests sent to the RADIUS charging server.
Total radius charg auth purg	The total number of RADIUS charging authentication requests purged.
Current radius charg auth	The total number of current authentication requests sent to the RADIUS charging server.
Total radius charg auth succ	The total number of successful authentication requests sent to the RADIUS charging server.
Total radius charg auth fail	The total number of access reject received from the RADIUS charging server.
Total radius charg auth cancel	The total number of accounting authorization request that were cancelled.
Total radius charg acct	The total number of accounting requests sent to the RADIUS charging server.
Current radius charg acct	The total number of current accounting requests sent to the RADIUS charging server
Total radius charg acct succ	The total number of accounting responses from the RADIUS charging server.
Total radius charg acct cancel	The total number of accounting requests that were cancelled.
Total gtpg charg	The total number of GTPG accounting requests sent to the server.
Current gtpg charg	The total number of current GTPG requests sent to the charging server.
Total gtpg charg success	The total number of successful GTPG accounting responses from the charging server.

Field	Description
Total gtpc charg failure	The total number of failed GTPC accounting requests from the charging server.
Total gtpc charg cancelled	The total number of cancelled GTPC accounting requests from the charging server.
Total gtpc charg purged	The total number of purged GTPC accounting requests.
Total radius charg acct purg	The total number of accounting requests purged.
Total gtpc sec charg	The total number of secondary eG-CDR charging requests being processed by this AAAMgr instance for which the GTPC protocol is being used to deliver the charging message to the Charging Gateway Function (CGF). It counts total secondary eG-CDRs generated by this AAAMgr instance.
Total gtpc sec charg purged	The total number of secondary eG-CDRs charging requests being processed and purged by this AAAMgr instance for which the GTPC protocol is being used to deliver the charging message to the Charging Gateway Function (CGF) . It counts total secondary eG-CDRs purged by this AAAMgr instance
Total prepaid online requests	The total number of prepaid online requests.
Current prepaid online requests	The number of prepaid online requests that this AAAMgr instance is currently processing.
Total prepaid online success	The total number of prepaid online requests succeed.
Current prepaid online failure	The number of failed prepaid online requests that this AAAMgr instance is currently processing.
Total prepaid online retried	The total number of prepaid online requests retried.
Total prepaid online cancelled	The total number of prepaid online requests cancelled.
Current prepaid online purged	The total prepaid online cancelled.
Total aaamgr purged requests	The total number of purged AAAMgr requests.
SGSN: Total mm records	Total number of Mobility Management (MM) records in database of this AAAMgr instance for SGSN service.
SGSN: Total pdp records	Total number of PDP context records in database of this AAAMgr instance for SGSN service.
SGSN: Total auth records	Total number of authentication records in database of this AAAMgr instance for SGSN service.
MME: Total extension records	Total number of extension records in database of this AAAMgr instance for MME service.
MME: Total apn records	Total number of APN records in database of this AAAMgr instance for MME service.
MME: Total apn extension records	Total number of extended APN records in database of this AAAMgr instance for MME service.
MME: Total auth records	Total number of authentication records in database of this AAAMgr instance for MME service.

Field	Description
MME: Total auth extension records	Total number of extended authentication records in database of this AAAMgr instance for MME service.
Current active subscriber traces	Total number of subscribers currently enabled with Subscriber Tracing function in database of this AAAMgr instance for MME service.

## show session subsystem facility aaaproxy all

**Important** These statistics are from the perspective of the Session manager (SessMgr) and AAA Proxy Manager (AAAProxyMgr) task itself (not from the perspective of subscribers).

**Table 532: show session subsystem facility aaaproxy all Command Output Descriptions**

Field	Description
Total gtpv requests	The total number of GTPV requests sent.
Current gtpv requests	The total number of outstanding GTPV requests waiting for response from CGF/storage server.
Total GCDRs	The total number of G-CDRs sent.
Current GCDRs	The total number of outstanding G-CDRs waiting for response from CGF/storage server.
Total eGCDRs	The total number of eG-CDRs sent to CGF/storage server.
Current eGCDRs	The total number of outstanding eG-CDRs waiting for response from CGF/storage server.
Total PGW-GCDRs	The total number of PGW-CDRs sent to CGF/storage server.
Current PGW-GCDRs	The total number of outstanding PGW-CDRs waiting for response from CGF/storage server.
Total G-MB-CDRs	The total number of G-MB-CDRs sent.
Current G-MB-CDRs	The total number of outstanding G-MB_CDRs waiting for response from CGF/storage server.
Total SCDRs	The total number of S-CDRs sent.
Current SCDRs	The total number of outstanding S-CDRs waiting for response from CGF/storage server.
Total MCDRs	The total number of M-CDRs sent.
Current MCDRs	The total number of outstanding M-CDRs waiting for response from CGF/storage server.
Total S-SMO-CDRs	The total number of S-SMO-CDRs sent.

Field	Description
Current S-SMO-CDRs	The total number of outstanding S-SMO-CDRs waiting for response from CGF/storage server.
Total S-SMT-CDRs	The total number of S-SMT-CDRs sent.
Current S-SMT-CDRs	The total number of outstanding S-SMT-CDRs waiting for response from CGF/storage server.
Total LCS-MT-CDRs	The total number of LCS-MT-CDRs sent.
Current LCS-MT-CDRs	The total number of outstanding LCS-MT-CDRs waiting for response from CGF/storage server.
Total LCS-MO-CDRs	The total number of LCS-MO-CDRs sent.
Current LCS-MO-CDRs	The total number of outstanding LCS-MO-CDRs waiting for response from CGF/storage server.
Total SMBMSCDRs	The total number of outstanding SMBMS CDRs waiting for response from CGF/storage server.
Total SGW-CDRs	The total number of outstanding S-GW CDRs waiting for response from CGF/storage server.
Current SGW-GCDRs	The total number of SGW-CDRs sent to CGF/storage server.
Total ePDG-CDRs	The total number of outstanding ePDG CDRs waiting for response from CGF/storage server.
Current ePDG-GCDRs	The total number of ePDG-CDRs sent to CGF/storage server.
Total WLAN-CDRs	The total number of outstanding WLANGW CDRs waiting for response from CGF/storage server.
Total sockets opened	The total number of sockets opened.
Current sockets opened	The total number of sockets waiting to open.
Total files closed	The total number of files that have been already closed.
Current Open files	The number of files that are currently open and still in use.

## show session subsystem facility asngwmgr all

**Important** These statistics are from the perspective of the Session manager (SessMgr) and ASNGW Manager (ASNGWMgr) task itself (not from the perspective of subscribers).

Table 533: show session subsystem facility asngwmgr all Command Output Descriptions

Field	Description
ASNGW Managers	Total number of active ASN GW Managers.
Total active services	Total number of active ASN GW services.
Anchor Session	Specifies the subsystem statistics for ASN GW service sessions in anchored mode.
Non-Anchor Session	Specifies the subsystem statistics for ASN GW service sessions in non-anchored mode.
Total calls arrived	Indicates the total number of sessions received by this ASN Gateway Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this ASN Gateway Manager instance.
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this ASN Gateway Manager instance.
Total dereg reply sent	Indicates the total number of sessions that were successfully de-registered, or disconnected, by this ASN Gateway Manager instance.
Total control pkts relayed	Indicates the total number of R6 control packets relayed via demux manager.
Current active calls	Indicates the total number of active sessions currently being facilitated by this ASN Gateway Manager instance.
Total active services	The total number of ASN Gateway services that are currently facilitating subscriber sessions.

## show session subsystem facility asnpcmgr all

### Important

These statistics are from the perspective of the Session Manager (SessMgr) and ASN-PC Manager (ASNPCMgr) task itself (not from the subscriber perspective).

Table 534: show session subsystem facility asngwmgr all Command Output Descriptions 0

Field	Description
ASNPC Managers	Total number of active ASN PC Manager instances.
Total active services	Total number of active ASN PC services.
Total calls arrived	Indicates the total number of sessions received by this ASN PC Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this ASN PC Manager instance.

Field	Description
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this ASN PC Manager instance.
Total calls released	Indicates the total number of sessions that were successfully de-registered, or disconnected, by this ASN PC Manager instance.
Total control pkts relayed	Indicates the total number of R6 control packets relayed via demux manager.
Current active calls	Indicates the total number of active sessions currently being facilitated by this ASN Gateway Manager instance.
context name	Indicates the name of the context where ASN PC service is configured.

## show session subsystem facility egtpegmgr all

**Important** These statistics are from the perspective of the Session Manager (SessMgr) and EGTP Egress Demux Manager (EGTPCegMgr) task itself (not from the subscriber perspective).

*Table 535: show session subsystem facility egtpegmgr Command Output Descriptions*

Field	Description
EGTPEGMgr	The EGTP Egress Demux Manager task instance number. Since multiple EGTP Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total messages arrived	Indicates the total number of messages received by this EGTP Manager instance for processing.
Total messages rejected	Indicates the total number of messages that were rejected by this EGTP Manager instance.
Total messages demultiplexed	Indicates the total number of messages that were successfully set up by this by this EGTP Manager instance.
Total Peer Nodes	Indicates the total number of peer nodes available for facilitating subscriber sessions.
Total Active Peer Nodes	The total number of peer nodes that are currently facilitating subscriber sessions.
Total active services	The total number of EGTP services that are currently facilitating subscriber sessions.
Total Path Failure Detected	The total number of path failure errors detected by both the Session Manager and EGTP Egress Demux Manager.
Informed by sessmgr	The total number of path failure errors detected by the Session Manager
Detected by demuxmgr	The total number of path failure errors detected by the EGTP Egress Demux Manager.
context name	The context to which this EGTP Egress Manager belongs.

## show session subsystem facility egtpinmgr all

**Important** These statistics are from the perspective of the Session Manager (SessMgr) and EGTP Ingress Demux Manager (EGTPCinMgr) task itself (not from the subscriber perspective).

**Table 536: show session subsystem facility egtpinmgr Command Output Descriptions**

Field	Description
EGTPINMgr	The EGTP Ingress Demux Manager task instance number. Since multiple EGTP Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	Indicates the total number of sessions received by this EGTP Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this EGTP Manager instance.
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this EGTP Manager instance.
Total SGSNs	Indicates the total number of SGSNs available for facilitating subscriber sessions.
Total Active SGSNs	The total number of SGSNs that are currently facilitating subscriber sessions.
Total active services	The total number of EGTP services that are currently facilitating subscriber sessions.

## show session subsystem facility famgr all

**Important** These statistics are from the perspective of the Session Manager (SessMgr) and FA Manager (FAMgr) task itself (not from the subscriber perspective).

**Table 537: show session subsystem facility famgr Command Output Descriptions**

Field	Description
FAMgr	The FA Manager task instance number. Since multiple FA Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	Indicates the total number of sessions received by this FA Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this FA Manager instance.

Field	Description
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this FA Manager instance.
Total dereg reply sent	Indicates the total number of sessions that were successfully de-registered, or disconnected, by this by this FA Manager instance.
Current active calls	Indicates the total number of active sessions currently being facilitated by this FA Manager instance.
Total active services	The total number of FA services that are currently facilitating subscriber sessions.

## show session subsystem facility gtpcmgr all

### Important

These statistics are from the perspective of the Session Manager (SessMgr) and GTPC Manager (GTPCMgr) task itself (not from the subscriber perspective).

### Important

This command is not supported release 14.0 onwards. Look for new command **show session subsystem facility egtpinmgr all** instead.

**Table 538: show session subsystem facility gtpcmgr Command Output Descriptions**

Field	Description
GTPCMgr	The GTPC Manager task instance number. Since multiple GTPC Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	Indicates the total number of sessions received by this GTPC Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this GTPC Manager instance.
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this GTPC Manager instance.
Total SGSNs	Indicates the total number of SGSNs available for facilitating subscriber sessions.
Total Active SGSNs	The total number of SGSNs that are currently facilitating subscriber sessions.
Current active calls	Indicates the total number of active sessions currently being facilitated by this GTPC Manager instance.
Total active services	The total number of GTPC services that are currently facilitating subscriber sessions.

## show session subsystem facility hamgr all

**Important** These statistics are from the perspective of the Session Manager (SessMgr) and HA Manager (HAMgr) task itself (not from the subscriber perspective).

**Table 539: show session subsystem facility hamgr all Command Output Descriptions**

Field	Description
HAMgr	The HA Manager task instance number. Since multiple HA Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	Indicates the total number of sessions received by this HA Manager instance for processing.
Total calls rejected	Indicates the total number of sessions that were rejected by this HA Manager instance.
Total calls demultiplexed	Indicates the total number of sessions that were successfully setup by this by this HA Manager instance.
Total dereg reply sent	Indicates the total number of sessions that were successfully de-registered, or disconnected, by this by this HA Manager instance.
Current active calls	Indicates the total number of active sessions currently being facilitated by this HA Manager instance.
Total active services	The total number of HA services that are currently facilitating subscriber sessions.

## show session subsystem facility ipsgmgr

**Important** These statistics are from the perspective of the IPSG Manager (IPSGMgr) task itself (not from the subscriber perspective).

**Table 540: show session subsystem facility ipsgmgr Output Descriptions**

Field	Description
IPSG Managers	The total number of IPSG Managers running on the chassis.
Total calls arrived	The total number of calls received and processed by the IPSG Managers.
Total calls rejected	The total number of calls rejected by the IPSG Managers.
Total calls demultiplexed	The total number of calls demultiplexed by the IPSG Managers.

Field	Description
Total dereg reply sent	The total number of deregistration replies sent by the IPSP Manager.
Current active calls	The total number of active sessions currently being facilitated by the IPSP Manager instances.
Total active services	The total number of IPSP services that are currently facilitating subscriber sessions.

## show session subsystem facility mmedemux

**Important** These statistics are from the perspective of the MME Demux Manager (MMEDemuxr) task itself (not from the subscriber perspective).

**Table 541: show session subsystem facility mmedemux Output Descriptions**

Field	Description
MME Demux Managers	The total number of MME managers running on a chassis.
Total number of packets received	The total number of packets received and processed for EPS session by the MME Demux manager.
Total number of packets received (IPSec)	The total number of encrypted packets received and processed for EPS session by the MME Demux manager.
Total number of packets dropped	The total number of packets received but dropped by the MME Demux manager.
Total number of packets dropped (Total MME Unavail)	The total number incoming packets dropped by the MME Demux subsystem (at S1 interface, coming from eNodeB) while waiting for all MME Managers to be activated (status = UP). The MME waits to start processing traffic only after the expected number of MME Managers are UP after an MME restart.
Total number of packets dropped (Assurance Violation)	The total number of packets received but dropped due to not being encrypted.
Total number of octets received	The total number of packets received and processed for EPS session by the MME Demux manager.
Total number of octets received (IPSec)	The total number of encrypted octets received and processed for EPS session by the MME Demux manager.
Total number of octets dropped	The total number of octets received but dropped by the MME Demux manager.
Total number of octets dropped (Assurance Violation)	The total number of octets received but dropped due to not being encrypted.
Total Services	The total number of MME services managed by the MME Demux Manager.

Field	Description
Total Services (IPSec)	The total number of IPSec-enabled MME services managed by the MME Demux Manager.
Enodeb Associations	The total number of eNodeBs connected/associated with MME services managed by the MME Demux Manager.
Enodeb Associations (IPSec)	The total number of IPSec-enabled eNodeBs connected/associated with MME services managed by the MME Demux Manager.
Total SBC Associations Rejected	The total number of SBC Associations rejected by the MME Demux Manager.
Total number of S1 sctp packets dropped (rate-limit)	This counter displays the number of SCTP packets dropped due to the configured rate limit for incoming S1 SCTP connections in MME per chassis.

## show session subsystem facility mmemgr all

### Important

These statistics are from the perspective of the MME Manager (MMEMgr) task itself (not from the subscriber perspective).

**Table 542: show session subsystem facility mmemgr all Output Descriptions**

Field	Description
MME Managers	Indicates the total number of MME managers running on a chassis.
SCTP Statistics	This group displays the statistics captured over the SCTP interface and processed by this MME manager.
Transmitted SCTP Data	This sub-group displays the statistics of the total data processed and transmitted over SCTP interface by this MME manager.
Init Chunks	Indicates the total SCTP packets with INIT transmitted over SCTP interface by this MME manager.
Init Ack Chunks	Indicates the total SCTP packets with INIT-ACK transmitted over SCTP interface by this MME manager.
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN transmitted over SCTP interface by this MME manager.
Shutdown Ack Chunks	Indicates the total SCTP packets with SHUTDOWN-ACK transmitted over SCTP interface by this MME manager.
Cookie Chunks	Indicates the total SCTP packets with COOKIE transmitted over SCTP interface by this MME manager.

Field	Description
Cookie Ack Chunks	Indicates the total SCTP packets with COOKIE-ACK transmitted over SCTP interface by this MME manager.
Data Chunks	Indicates the total SCTP packets with DATA transmitted over SCTP interface by this MME manager.
Data Ack Chunks	Indicates the total SCTP packets with DATA-ACK transmitted over SCTP interface by this MME manager.
Shutdown Complete Chunks	Indicates the total SCTP packets with SHUTDOWN-COMPLETE transmitted over SCTP interface by this MME manager.
Heartbeat Chunks	Indicates the total SCTP packets with HEARTBEAT transmitted over SCTP interface by this MME manager.
HeartBeat Ack Chunks	Indicates the total SCTP packets with HEARTBEAT-ACK transmitted over SCTP interface by this MME manager.
Abort Chunks	Indicates the total SCTP packets with ABORT transmitted over SCTP interface by this MME manager.
Error Chunks	Indicates the total SCTP packets with ERROR transmitted over SCTP interface by this MME manager.
Received SCTP Data	This sub-group displays the statistics of the total data received over SCTP interface and processed by this MME manager.
Init Chunks	Indicates the total SCTP packets with INIT received over SCTP interface by this MME manager.
Init Ack Chunks	Indicates the total SCTP packets with INIT-ACK received over SCTP interface by this MME manager.
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN received over SCTP interface by this MME manager.
Shutdown Ack Chunks	Indicates the total SCTP packets with SHUTDOWN-ACK received over SCTP interface by this MME manager.
Cookie Chunks	Indicates the total SCTP packets with COOKIE received over SCTP interface by this MME manager.
Cookie Ack Chunks	Indicates the total SCTP packets with COOKIE-ACK received over SCTP interface by this MME manager.
Data Chunks	Indicates the total SCTP packets with DATA received over SCTP interface by this MME manager.
Data Ack Chunks	Indicates the total SCTP packets with DATA-ACK received over SCTP interface by this MME manager.
Shutdown Complete Chunks	Indicates the total SCTP packets with SHUTDOWN-COMPLETE received over SCTP interface by this MME manager.

Field	Description
Heartbeat Chunks	Indicates the total SCTP packets with HEARTBEAT received over SCTP interface by this MME manager.
HeartBeat Ack Chunks	Indicates the total SCTP packets with HEARTBEAT-ACK received over SCTP interface by this MME manager.
Abort Chunks	Indicates the total SCTP packets with ABORT received over SCTP interface by this MME manager.
Error Chunks	Indicates the total SCTP packets with ERROR received over SCTP interface by this MME manager.
Retransmitted SCTP Data	This sub-group displays the statistics of the total data processed and retransmitted over SCTP interface by this MME manager.
Init Chunks	Indicates the total SCTP packets with INIT retransmitted over SCTP interface by this MME manager.
Shutdown Chunks	Indicates the total SCTP packets with SHUTDOWN retransmitted over SCTP interface by this MME manager.
Shutdown Ack Chunks	indicates the total SCTP packets with SHUTDOWN-ACK retransmitted over SCTP interface by this MME manager.
Cookie Chunks	Indicates the total SCTP packets with COOKIE retransmitted over SCTP interface by this MME manager.
Data Chunks	Indicates the total SCTP packets with DATA transmitted over SCTP interface by this MME manager.
Total Bytes Sent To Lower Layer	Indicates the total bytes processed and sent to lower layer over SCTP interface by this MME manager.
Total Bytes Received From Lower Layer	Indicates the total bytes received from lower layer over SCTP interface by this MME manager for processing.
Total Packets Sent To Lower Layer	Indicates the total packets processed and sent to lower layer over SCTP interface by this MME manager.
Total Packets Received From Lower Layer	Indicates the total packets received from lower layer over SCTP interface by this MME manager for processing.
S1AP Statistics	This group displays the statistics captured over S1-AP interface and processed by this MME manager received or transmitted from/to eNodeB.
Transmitted S1AP Data	This sub-group displays the statistics of the total data processed and transmitted over S1-AP interface by this MME manager to eNodeB.
S1 Setup Response	Indicates the total number of S1 SETUP RESPONSE messages for S1 setup procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
S1 Setup Failure	Indicates the total number of S1 SETUP FAILURE messages for S1 setup procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.

Field	Description
Reset	Indicates the total number of S1 RESET messages for S1 reset procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
Reset Acknowledge	Indicates the total number of S1 RESET-ACK messages for S1 reset procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
Overload Start	Indicates the total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
Overload Stop	Indicates the total number of OVERLOAD-START messages for S1 overload start procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
MME Dir Information Transfer	Indicates the total number of MME DIRECT INFORMATION TRANSFER messages for MME Direct Information Transfer procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
Paging	Indicates the total number of PAGING messages for paging procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
EnodeB Configuration Update Acknowledge	Indicates the total number of ENB CONFIGURATION UPDATE ACK messages for eNodeB Configuration Update procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
EnodeB Configuration Update Failure	Indicates the total number of ENB CONFIGURATION UPDATE FAILURE messages for eNodeB Configuration Update procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
MME Configuration Update	Indicates the total number of MME CONFIGURATION UPDATE messages sent by this MME manager to the eNodeB for the purpose of updating the Transport Network Layer (TNL) association. The TNL association is required for the MME and eNodeB to interoperate correctly across the S1 interface.
S1AP Encode Failure	Indicates the total number of failure occurred during S1AP encode procedure and S1AP ENCODE FAILURE messages processed and transmitted over S1-AP interface by this MME manager to eNodeB.
Paging Dropped	Indicates the total number S1 paging requests to all eNodeBs which were dropped because the number of paging requests exceeded the S1 paging rate threshold as configured in the Global Config Mode command: <b>network-overload-protection mme-tx-msg-rate-control enb s1-paging</b> .
Received S1AP Data	This sub-group displays the statistics for the total amount of data received over the S1-AP interface by this MME manager from eNodeB.
S1 Setup Request	Indicates the total number of S1 SETUP REQUEST messages for S1 setup procedure received over S1-AP interface by this MME manager from eNodeB.
Reset	Indicates the total number of S1 RESET messages for S1 reset procedure received over S1-AP interface by this MME manager from eNodeB.

Field	Description
Reset Acknowledge	Indicates the total number of S1 RESET-ACK messages for S1 reset procedure received over S1-AP interface by this MME manager from eNodeB.
EnodeB Dir Information Transfer	Indicates the total number of ENB DIRECT INFORMATION TRANSFER messages for eNB Direct Information Transfer procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
EnodeB Configuration Update	Indicates the total number of ENB CONFIGURATION UPDATE messages for eNB Configuration Update procedure processed and transmitted over S1-AP interface by this MME manager to eNodeB.
S1AP Decode Failure	Indicates the total number of failure occurred during S1AP decoding procedure by eNodeB and S1AP DECODE FAILURE messages received over S1-AP interface by this MME manager from eNodeB.
S1AP Unexpected Event	Indicates the total number of failure occurred due to unexpected events during S1AP procedure at eNodeB and S1AP UNEXPECTED EVENT messages received over S1-AP interface by this MME manager from eNodeB.
Total Services	Indicates the total number of MME services managed by this MME Manager.
Total Services (IPSec)	Indicates the total number of IPSec-enabled MME services managed by this MME Manager.
Enodeb Associations	Indicates the total number of eNodeBs connected/associated with MME services managed by this MME Manager.
Enodeb Associations (IPSec)	Indicates the total number of IPSec-enabled eNodeBs connected/associated with MME services managed by this MME Manager.
S1AP Partial Reset to Sessmgr(Non-Vector)	Indicates the total number of Partial Reset messages received by each Session Manager.
Service Start Request	The total number of service start requests received by MMEMgr.
Service Modify Request	The total number of service modify requests received by MMEMgr.
Service Stop Request	The total number of service stop requests received by MMEMgr.
Paging Messages Sent	The total number of paging messages sent by MMEMgr.
Temporary EnodeB entries(For Trap Generation)	The total number of eNodeB entries cached for generating SNMP traps.
PLMN Validation Failure	The total number of PLMN validations failed at MMEMgr.
EnodeB Id Validation Failure	The total number of eNodeB id validations failed at MMEMgr.
usap(SCTP Endpoints) Allocated	The total number of SCTP user service access points allocated at MMEMgr.
Current Number of SCTP Flows	Current number of SCTP flows at MMEMgr.

Field	Description
Dropped Packets Reason	The following group of counters displays the number of packets dropped at the MME Manager due to various reasons.
Incorrect Length	The total number of dropped packets with reason: Received PDU length at MED layer is less than Length value found after decoding the IP Packet.
Oversized PDU	The total number of dropped packets with reason: Received PDU length at MED layer is more than DBUF size(10K bytes).
No Flow exists	The total number of dropped packets with reason: There is no SCTP flow existing for the flowId received from underlying layer.
Flow Inactive	The total number of dropped packets with reason: Flow entry is not Active when the message is received.
Invalid IP Ver	The total number of dropped packets with reason: Received PDU length at MED layer is less than Length value found after decoding the IP Packet.
Port Mismatch	The total number of dropped packets with reason: Received PDU length at MED layer is less than Length value found after decoding the IP Packet.
Invalid Protocol	The total number of dropped packets with reason: Received PDU length at MED layer is less than Length value found after decoding the IP Packet.
Total Services(SBc)	Total number of SBc services configured on this system.
SBc Statistics	
Transmitted SBc Data	This subgroup includes counters for data transmitted for all SBc services.
Total Transmitted	Total number of messages transmitted from the MME to all CBCs.
Transmit Errors	This subgroup includes counters for errors encountered while transmitting SBc messages towards CBC.
Transport Errors	Total number of failures, due to SCTP, while transmitting SBc messages towards CBC.
Encode Failures	Total number of failures in sending messages to CBC due to message encoding failures.
No buffers	Total number of failures in sending messages to CBC due to memory allocation failures.
Transport Buffer Failure	Total memory allocation failures during sending of SBc message over SCTP.
Encode Buffer Failure	Total memory allocation failures during encoding of IEs for SBc message.
Write Replace Warning Response	The total number of Write-Replace Warning Responses sent for all SBc services (Tracking Area Not Valid + MME Capacity Exceeded + Warn Beast Not Operational + Message Accepted).
Tracking Area Not Valid	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Tracking Area Not Valid.
MME Capacity Exceeded	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause MME Capacity Exceeded.

Field	Description
Warn Bcast NotOperational	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Warning Broadcast Not Operational.
Message Accepted	The total number of Write-Replace Warning Response messages sent from the MME to the CBC with cause Message Accepted.
Stop Warning Response	The total number of Stop Warning Responses sent for all SBc services (Tracking Area Not Valid + MME Capacity Exceeded + Warn Bcast Not Operational + Message Accepted).
Tracking Area Not Valid	The total number of Stop Warning Response messages sent from the MME to the CBC with cause Tracking Area Not Valid.
MME Capacity Exceeded	The total number of Stop Warning Response messages sent from the MME to the CBC with cause MME Capacity Exceeded.
Warn Bcast NotOperational	The total number of Stop Warning Response messages sent from the MME to the CBC with cause Warning Broadcast Not Operational.
Message Accepted	The total number of Stop Warning Response messages sent from the MME to the CBC with cause Message Accepted.
Error Indication	The total number of Error Indication messages sent from the MME to the CBC.
Received SBc Data	This subgroup includes counters for data received for all SBc services.
Total Received PDUs	The total number of messages received from all CBCs.
PDU Decode Success	The total number of successful PDU decodes.
Receive Errors	This subgroup includes counters for PDU receive errors.
No Sbc Association	The total number of received SBc messages dropped due to no matching association.
PDU Decode Failures	The total number of received SBc messages dropped due to PDU decode failure.
Write Replace Warning Request	The total number of Write Replace Warning Request messages received from the CBC.
TAI List Not Present	The total number of Write Replace Warning Request messages received from the CBC without a List-Of-TAIs IE.
Stop Warning Request	The total number of Stop Warning Request messages received from the CBC.
TAI List Not Present	The total number of Stop Warning Request messages received from the CBC without a List-Of-TAIs IE.
Error Indication	The total number of Error Indication messages received from the CBC.
IE Errors	The total number of CBC IE failures.
Protocol Error Statistics	This subgroup includes counters for Protocol Errors for all SBc services.
Unknown Procedures	The total number of messages encountered with Unknown Procedure codes.

Field	Description
Unknown IEs	The total number of messages encountered with Unknown IEs.
Unknown Messages	The total number of unrecognized messages encountered.
Missing Mandatory IEs	The total number of messages encountered with Missing Mandatory IE.
Transfer Syntax Error	The total number of messages encountered with a Transfer Syntax Error.
Semantic Error	The total number of messages encountered with a Semantic Error.
Message Not Compatible	The total number of messages encountered with error: Message Not Compatible.
Others	The total number of parser internal messages.
Abstract Syntax Errors	This subgroup includes counters for Abstract Syntax Errors for all SBc services.
Reject	The total number of messages encountered with Abstract Syntax Error with Criticality: Reject.
Ignore and notify	The total number of messages encountered with Abstract Syntax Error with Criticality: Ignore and Notify.
Ignore	The total number of messages encountered with Abstract Syntax Error with Criticality: Ignore.
Falsely Constr Message	The total number of messages encountered with Abstract Syntax Error: Falsely Constructed message.
SBc Association Statistics	This subgroup includes counters related to SBc Associations for all SBc services.
Total Active	The total number of SBc Associations currently Active.
Total Created	The total number of SBc Associations created.
Total Closed	The total number of SBc Associations closed.
CBC Transactions Created	The total number of CBC transactions created.
CBC Transaction Failed	The total number of CBC transactions failed.
CBC Transaction Timeout	The total number of CBC transactions timed out.
SCTP Flows	The current number of SCTP flows for SBc data at the MMEMgr.
CBC Not Found	The total number of errors due to CBC not found.
IMSIMGR Selection counters	Displays the IMSI Manager Selection Counters
IMSIMGR 1	Displays the number of requests at the IMSI Manager "1".
IMSIMGR 2	Displays the number of requests at the IMSI Manager "2".
IMSIMGR 3	Displays the number of requests at the IMSI Manager "3".
IMSIMGR 4	Displays the number of requests at the IMSI Manager "4".

Field	Description
Paging CS Priority	Displays the configured CS Priority value
Paging PS priority	Displays the configured PS Priority value
Congestion-Configuration:	
CPU Congestion	Indicates whether CPU congestion control is enabled or disabled - Enabled/Disabled.
Thresholds:	
CPU Utilization	Displays the configured CPU utilization value.
CPU Tolerance	Displays the configured CPU tolerance value.
Congestion-State	Indicates the congestion state - Busy/Not Busy.
Congestion History:	
Timestamp	Displays the timestamp.
CPU usage	Displays the CPU usage.

## show session subsystem facility sessmgr all

### Important

These statistics are from the perspective of the Session Manager (SessMgr) task itself (not from the subscriber perspective).

**Table 543: show session subsystem facility sessmgr all Output Descriptions**

Field	Description
SessMgr	Displays the Session Manager task instance number. Since multiple Session Manager tasks can be operating simultaneously in the system, each one is assigned an instance number.
Total calls arrived	The total number of calls for which registration requests were received by this Session Manager instance.
Total calls rejected	The total number of calls that were rejected by this Session Manager instance.
Total calls connected	The total number of calls that are connected (including active, dormant, being set up, and being disconnected) by this Session Manager instance.
Total calls failed	The total number of calls processed by this Session Manager instance which have failed.
Total calls disconnected	The total number of calls that were disconnected by this Session Manager instance.
Total handoffs	The total number of calls that are handed off by this Session Manager instance.

Field	Description
Total renewals	The total number of call that were reprocessed by this Session Manager instance.
Total active-to-idle transitions	The total number of call sessions passed through active mode to idle mode.
Total idle-to-active transitions	The total number of call sessions passed through idle mode to active mode.
Total auth successes	The total number of successful authentications for calls being processed by this Session Manager instance.
Total auth failure	The total number of failed authentications for calls being processed by this Session Manager instance.
Current aaa active sessions	The total number of calls being processed by this Session Manager instance for which there are active AAA authentication and/or accounting sessions.
Current aaa deleting sessions	The total number of calls being processed by this Session Manager instance for which the AAA accounting is being terminated.
Current aaa acct pending	The total number of calls being processed by this Session Manager instance for which there are pending AAA authentication and/or accounting sessions.
aaa acct items (used/max)	The total number of AAA accounting items used and the maximum allowed by this Session Manager instance.
aaa buffer (used in MB/max in MB)	The AAA buffer space used and the maximum allowed in megabytes for this Session Manager instance.
Total aaa cancel auth	The total number of canceled AAA authentication requests for this Session Manager instance.
Total aaa acct purged	The total number of AAA accounting requests received by this Session Manager instance that had to be purged because the storage limit of pending accounting requests had been exceeded.
Total radius acct purged	The total number of RADIUS accounting requests received by this Session Manager instance that had to be purged because the storage limit of pending accounting requests had been exceeded.
Total LCP up	The total number of calls being processed by this Session Manager instance that have completed the Link Control Protocol (LCP) phase of the registration process.
Total IPCP up	The total number of calls being processed by this Session Manager instance that have completed the Internet Protocol Control Protocol (IPCP) phase of the registration process.
Total IPv6CP up	The total number of calls being processed by this Session Manager instance that have completed the Internet Protocol version 6 (IPv6) phase of the registration process.
Total source violation	The total number of source violations experienced for all calls being processed by this Session Manager instance.
Total keepalive failure	The total number of keep-alive failures experienced for all calls being processed by this Session Manager instance.

Field	Description
Empty fwd pkt sessions	The total number of calls that were processed by this session manager instance for which there were no data packets being sent to the subscriber.
Empty rev pkt sessions	The total number of calls that were processed by this session manager instance for which there were no data packets being received from the subscriber.
Total 3gpp2 prepaid sess	The total number of 3gpp2 prepaid sessions on the system.
Current 3gpp2 prepaid sess	The current number of active 3gpp2 prepaid sessions on the system.
Total 3gpp2 online auth requests	The total number of 3gpp2 sessions requesting authentication on the system.
Total 3gpp2 online auth success	The total number of authenticated 3gpp2 active sessions on the system.
Total 3gpp2 online auth failures	The total number of 3gpp2 sessions that had authentication failures.
Total 3gpp2 online prepaid errors	The total number of prepaid 3gpp2 sessions that incurred errors.
Total 3gpp2 prepaid initial auth errors	The total number of prepaid initial 3gpp2 sessions that had authentication errors.
Total Rfc3261 subscribers	Total number of subscribers registered in CSCF Rfc3261 service.
Total Proxy Cscf subscribers	Total number of subscribers registered in Proxy-CSCF service.
Total Serving Cscf subscribers	Total number of subscribers registered in Serving-CSCF service.
Total Proxy-Serving cscf subscribers	Total number of subscribers registered in Collapsed Proxy-Serving-CSCF service.
Total voice-push sessions	The total number of voice-push sessions.
Current voice-push sessions	The current number of active voice-push sessions.
Total voice-push-filt sessions	The total number of voice-push-filt sessions.
Current voice-push-filt sessions	The current number of voice-push-filt sessions.
Total non-voice-push sessions	The total number of non-voice-push session.
Current non-voice-push sessions	The current number of non-voice-push sessions
Total undetermined sessions	The total number of undetermined sessions.
Current undetermined sessions	The current number of undetermined sessions.
Intra-ASNGW HO attempted	The total number of inter-BS (Intra-ASN GW) handovers attempted by system.
Intra-ASNGW HO succeeded	The total number of inter-BS (Intra-ASN GW) handover attempts succeeded.
Inter-ASNGW HO attempted	The total number of inter-ASN GW handovers attempted by system.
Inter-ASNGW HO succeeded	The total number of inter-ASN GW handover attempts succeeded.
ASNPC IM Entry attempted	The total number of idle mode entry attempted by Paging Controller.

Field	Description
ASNPC IM Entry Succeeded	The total number of idle mode entry by Paging Controller succeeded.
ASNPC IM Exit attempted	The total number of idle mode exit attempted by Paging Controller.
ASNPC IM Exit Succeeded	The total number of idle mode exit by Paging Controller succeeded.
ASNPC LU attempted	The total number of location updates attempted by Paging Controller.
ASNPC LU Succeeded	The total number of location updates by Paging Controller succeeded.
ASNPC Paging Triggered	The total number of pagings triggered by Paging Controller.
ASN Ctrl packets received	The total number of control packets received for ASN GW service session.
ASN Ctrl packets runt received	The total number of control packets with run-time error discarded for ASN GW service session.
ASN Ctrl packets csum received	The total number of control packets with checksum error discarded for ASN GW service session.
ASN Ctrl packets no-flow discarded	The total number of control packets (without any flow) discarded for ASN GW service session.
ASNGW data pkts stored (during paging)	The total number of data packets stored during paging.
ASNGW data pkts flushed (during paging)	The total number of data packets flushed during paging.
CRP-RP handoff attempted	The total number of Closed RP to RP handoffs that were attempted.
CRP-RP handoff succeeded	The total number of Closed RP to RP handoffs that succeeded.
RP-CRP handoff attempted	The total number of RP to Closed RP handoffs that were attempted.
RP-CRP handoff succeeded	The total number of RP to Closed RP handoffs that succeeded.
Current active subscriber traces	Total number of subscribers currently enabled with Subscriber Tracing function in database of this SessMgr instance for MME service.
Current MME EGTP path failure queued for ecm-idle sessions	The current number of ECM Idle sessions queued for deactivation due to an EGTP path failure for this Session Manager instance (for MME services).
Current MME EGTP path failure queued for ecm-connected sessions	The current number of ECM Connected sessions queued for deactivation due to an EGTP path failure for this Session Manager instance (for MME services).
Maximum MME EGTP path failure queued for ecm-idle sessions	The maximum number of ECM Idle sessions queued for deactivation due to an EGTP path failure for this Session Manager instance (for MME services). This is the maximum value of the current ecm-idle sessions reached since the Session Manager started.
Maximum MME EGTP path failure queued for ecm-connected sessions	The maximum number of ECM Connected sessions queued for deactivation due to an EGTP path failure for this Session Manager instance (for MME services). This is the maximum value of the current ecm-connected sessions reached since the Session Manager started.

Field	Description
Data statistics	This table categorizes the number of Receive and Transmit packets into packet size ranges. These statistics are totals for all calls being processed by this Session Manager instance.
In-Progress Call Duration Statistics	This table categorizes the total number of calls being processed by this Session Manager according to various time durations ranging from less than (<) 1 minute to greater than (>) 24 hours.
Setup Time Statistics	This table categorizes the amount of time it took to set up calls according to various time durations ranging from less than (<) 100 ms to greater than (>) 18 seconds.
Total SGSN Fast Path statistics update	Total number of updates for statistical information from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path statistics update	Total number of updates for statistical information from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
Total SGSN Fast Path out-of-order statistics updates	Total number of updates for out of order packet statistics from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path out-of-order statistics updates	Total number of updates for out of order packet statistics from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
Total SGSN Fast Path statistics updates lost	Total number of packets lost for statistical updates from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path statistics updates lost	Total number of packets lost for statistical updates from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
Total SGSN Fast Path packets lost	Total number of lost packets of all types from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path packets lost	Total number of lost packets of all types from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
Total SGSN Fast Path bytes lost	Total number of lost bytes from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path bytes lost	Total number of lost bytes from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
Total SGSN Fast Path packets received	Total number of all type of packets received from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path packets received	Total number of all type of packets received from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.

Field	Description
Total SGSN Fast Path bytes received	Total number of all type of bytes received from NPU in fast path support. The title of this counter is valid in release 12.2 and earlier versions.
Total Gtpu Fast Path bytes received	Total number of all type of bytes received from NPU in fast path support. The title of this counter is valid in release 14.0 and later versions.
In-progress calls	The number of calls that are currently in progress (active, dormant, being set up, or being disconnected) and being processed by either the system (if no keywords were used), a specific PDSN service (if the <b>pdsn-service</b> keyword was used), or a specific PCF (if the <b>pcf</b> keyword was used).
In-progress active calls	The total number of active sessions being processed by this Session Manager instance.
In-progress dormant calls	The total number of dormant sessions being processed by this Session Manager instance. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
In-progress always-on calls	The total number of always-on sessions being processed by this Session Manager instance.
In-progress calls @ MBMS UE AUTHORIZING state	The total number of MBMS sessions currently in UE authorization state.
In-progress calls @ MBMS BEARER AUTHORIZING state	The total number of MBMS sessions currently in bearer authorization state.
In-progress calls @ ARRIVED state	The total number of sessions being processed by this Session Manager instance that are at the onset of the registration process.
In-progress calls @ LCP-NEG state	The total number of sessions being processed by this Session Manager instance that are in the Link Control Protocol (LCP) negotiation phase of the registration process.
In-progress calls @ LCP-UP state	The total number of sessions being processed by this Session Manager instance that have just completed the Link Control Protocol (LCP) negotiation phase of the registration process.
In-progress calls @ AUTHENTICATING state	The total number of sessions being processed by this Session Manager instance that are in the process of being authenticated.
In-progress calls @ AUTHENTICATED state	The total number of sessions being processed by this Session Manager instance that have just completed the authentication phase of the registration process.
In-progress calls @ L2TP-LAC CONNECTING state	The number of calls that have an L2TP tunnel in the process of being brought up.
In-progress calls @ IPCP-UP state	The total number of sessions being processed by this Session Manager instance that have just completed the Internet Protocol Control Protocol (IPCP) phase of the registration process.
In-progress calls @ NON-ANCHOR CONNECTED state	The total number of WiMAX sessions being processed by this Session Manager instance that are currently being in connected state in non-anchor mode.

Field	Description
In-progress calls @ MOBILE-IPv6 CONNECTED state	Total number of Proxy Mobile IPv6 sessions currently established.
In-progress calls @ GTP CONNECTING state	Total number of GTPv2 sessions in connecting state which are awaiting Create Session Response message in reply to Create Session Request already sent.
In-progress calls @ GTP CONNECTED state	Total number of GTPv2 sessions currently established.
In-progress calls @ PROXY-MOBILE-IP CONNECTING state	Total number of Proxy Mobile IPv6 sessions in connecting state and are waiting for PBA in reply to PBU already sent.
In-progress calls @ SIMPLE-IP CONNECTED state	The total number of Simple IP data sessions being processed by this Session Manager instance that are currently being supported.
In-progress calls @ MOBILE-IP CONNECTED state	The total number of Mobile IP data sessions being processed by this Session Manager instance that are currently being supported.
In-progress calls @ PROXY-MOBILE-IP CONNECTED state	The total number of Proxy Mobile IP data sessions being processed by this Session Manager instance that are currently being supported.
In-progress calls @ EPDG RE-AUTHORIZING state	Total number of sessions for which RAR is received from AAA and are in phase of reauthorization.
In-progress calls @ L2TP-LAC CONNECTED state	The number of calls that are passing data through an L2TP tunnel.
In-progress calls @ PDP-TYPE-IP CONNECTED state	The total number of PDP contexts of type IP that are currently connected. This field applies to GGSN only.
In-progress calls @ PDP-TYPE-PPP CONNECTED state	The total number of PDP contexts of type PPP that are currently connected. This field applies to GGSN only.
In-progress calls @ BCMCS CONNECTED state	The total number of BCMCS sessions currently in connected state.
In-progress calls @ MBMS UE CONNECTED state	The total number of MBMS sessions currently in UE connected state.
In-progress calls @ MBMS BEARER CONNECTED state	The total number of MBMS sessions currently in bearer connected state.
In-progress calls @ ASNPC CONNECTED state	The number of ASN Paging Controller calls that are currently connected.
In-progress calls @ DISCONNECTING state	The total number of sessions being processed by this Session Manager instance that are in the process of disconnecting.
In-progress calls @ CSCF-REGISTERING state	Total number of CSCF sessions which are in registration processing state.

Field	Description
In-progress calls @ CSCF-REGISTERED state	Total number of cscf sessions which are in registered state.
In-progress calls @ CSCF-CALL-ARRIVED state	Total number of CSCF sessions which are processing the newly arrived CSCF calls (i.e., processing initial Invite, waiting for provisional response, waiting for final response, etc.).
In-progress calls @ CSCF-CALL-CONNECTING state	Total number of CSCF sessions which are in call connecting state (waiting for ACK).
In-progress calls @ CSCF-CALL-CONNECTED state	Total number of CSCF sessions which are in call connected state.
In-progress calls @ CSCF-CALL-DISCONNECTING state	Total number of CSCF sessions which are in call disconnecting state (i.e., processing BYE , waiting for BYE response, etc.).
In-progress calls @ MME ATTACHED state	Indicates the number of MME subscriber session currently attached.
User Data statistics	This section indicates the Data octets and Data packets received and send by a user.
Data octets from User	The number of Data octets send from the user.
Data octets to User	The number of Data octets received by the user.
Data packets from User	The number of Data packets send from the user.
Data packets to User	The number of Data packets received by the user.
<b>Pilot packet statistics</b>	
VPN name	Name of the VPN
Server name	Name of the server
Total NAT Alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port allocation for all NAT enabled calls.
Total NAT De-alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port deallocation for all NAT enabled calls.
Total Non NAT Alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port allocation for all non-NAT calls.
Total Non NAT De-alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port deallocation for all non-NAT calls.
Total Alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port allocation for all call types.
Total De-alloc Pilot-Packets Sent	The total number of Pilot Packets sent per VPN/server for every IP/Port deallocation for all call types.

Field	Description
RAT-Change-User-Info	The total number of Pilot Packets sent for every subscriber IP allocation on RAT type change.
RAT-Change-NAT-Info	The total number of Pilot Packets sent for every NAT port chunk allocation on RAT type change.
Geog Redundancy Compression Info	The Service Redundancy Protocol (SRP) compression algorithm used for payload messaging between Interchassis Session Recovery (ICSR) chassis in support of geographical redundancy.
Chkpoint Compress Supported	Indicates the current compression algorithm supported on this chassis: none (SRP not enabled), lz4 or zlib (default).
Chkpoint Compress Agreed	Indicates the negotiated compression algorithm agreed to by both the Active and Standby chassis: none (SRP not enabled), lz4 or zlib (default).
<lz4 or Zlib> Compression Statistics	Specifies the algorithm for which the following statistics apply.
CompSuccess	The total number of successful compression attempts.
DeCompSuccess	The total number of successful decompression attempts.
CompFailure	The total number of failed compression attempts.
DeCompFailure	The total number of failed decompression attempts.
init	Debug only
deinit	Debug only
CompInbyte	The total number of incoming (received) compressed bytes.
CompOutbytes	The total number of outgoing (sent) compressed bytes.
DeCompInbytes	The total number of incoming (received) decompressed bytes.
DeCompOutbyte	The total number of outgoing (sent) decompressed bytes.
Compr ratio	Debug only

## show session summary

Table 544: show session summary Command Output Descriptions

Field	Description
4G LTE (EUTRAN)	The number of sessions using 4G LTE access technology (P-GW, S-GW). For example, NB-IoT= 2, LTE-M = 0

Field	Description
2G (GERAN)	The number of sessions using 2G GERAN access technology (GGSN, P-GW/S-GW, S4 SGSN).
3G (UTRAN)	The number of sessions using 3G UTRAN access technology (GGSN, P-GW/S-GW, S4 SGSN).
WiFi (WIRELESS LAN)	The number of sessions using WiFi access technology (P-GW, CGW).
eHRPD	The number of eHRPD (evolved High Rate Packet Data) sessions.
Others	The number of sessions using other access technologies.
Total sessions	The total number of sessions encompassing all access technologies.
Active	The total number of active sessions.
Dormant	The total number of dormant sessions.
pdsn-simple-ipv4	The number of PDSN (Packet Data Serving Node) Simple IPv4 sessions.
pdsn-simple-ipv6	The number of PDSN Simple 6 sessions.
pdsn-mobile-ip	The number of PDSN Mobile IPv4 sessions.
ha-mobile-ipv6	The number of PDSN Mobile IPv6 sessions.
hsgw-ipv6	The number of HSGW (HRPD Serving Gateway) IPv6 sessions.
hsgw-ipv4	The number of HSGW IPv4 sessions.
hsgw-ipv4-ipv6	The number of HSGW IPv4-IPv6 sessions.
pgw-pmip-ipv6	The number of P-GW (Packet Data Network-Gateway) PMIPv6 (Proxy Mobile IPv6) sessions
pgw-pmip-ipv4	The number of P-GW PMIP IPv4 sessions
pgw-pmip-ipv4-ipv6	The number of P-GW PMIP IPv4-IPv6 sessions
pgw-gtp-ipv6	The number of P-GW GTP (GPRS Tunneling Protocol) IPv6 sessions.
pgw-gtp-ipv4	The number of P-GW GTP IPv4 sessions.
pgw-gtp-ipv4-ipv6	The number of P-GW GTP IPv4-IPv6 sessions.
sgw-gtp-ipv6	The number of S-GW (Serving Gateway) GTP IPv6 sessions.
sgw-gtp-ipv4	The number of S-GW GTP IPv4 sessions.
sgw-gtp-ipv4-ipv6	The number of S-GW GTP IPv4-IPv6 sessions.
sgw-pmip-ipv6	The number of S-GW PMIPv6 sessions.
sgw-pmip-ipv4	The number of S-GW PMIP (IPv4) sessions.

Field	Description
sgw-pmip-ipv4-ipv6	The number of S-GW PMIP (IPv4-IPv6) sessions.
pgw-gtps2b-ipv4	The number of GTP S2b IPv4 sessions.
pgw-gtps2b-ipv6	The number of GTP S2b IPv6 sessions.
pgw-gtps2b-ipv4-ipv6	The number of GTP S2b IPv4-IPv6 sessions.
mme	The number of MME (Mobility Management Entity) sessions.
ipsg-rad-snoop	The number of IPSG (IP Services Gateway) RADIUS snoop sessions.
ipsg-rad-server	The number of IPSG RADIUS server sessions.
ha-mobile-ip	The number of HA (Home Agent) Mobile IP sessions.
ggsn-pdp-type-ppp	The number of GGSN (Gateway GPRS Serving Node) PDP (Packet Data Protocol) type PPP (Point-to-Point Protocol) sessions.
ggsn-pdp-type-ipv4	The number of GGSN PDP type IPv4 sessions.
lns-l2tp	The number of LNS (L2TP Network Server) L2TP (Layer 2 Tunneling Protocol) sessions.

## show session trace statistics

*Table 545: show session trace statistics Command Output Descriptions*

Field	Description
Network Element Status	Specifies if session traces are enabled for the listed network elements.
Number of current trace sessions	The total number of session traces currently active.
Total trace sessions activated	The total number of session traces activated.
Total number of trace session activation failures	The total number of session activation failures.
Total number of trace recording sessions triggered	The total number of trace recording sessions triggered
Total number of messages traced	The total number of messages traced for the activated session traces.
Number of messages dropped	
No memory	The total number of messages dropped due to a no memory condition.
No trace recording session	The total number of messages dropped due to a failure to receive the start trigger.
Interface not traced	The total number of messages dropped due to the messages being received on interfaces not part of the trace interface list.

Field	Description
Total number of file generated	The total number of session trace files generated.
Number of Cell Traffic Trace files generated	The total number of Cell Traffic trace files generated.
Number of files deleted	
No space	The total number of files deleted due to a lack of space on the storage device.
TCE Timeout	The total number of files deleted due to a Trace Collection Entity timeout.
Number of Cell Traffic Trace files deleted	
No space	The total number of Cell Traffic Trace files deleted due to a lack of space on the storage device.
TCE Timeout	The total number of Cell Traffic Trace files deleted due to a Trace Collection Entity timeout.
Number of current TCE connections	The total number of trace collection entity connections currently configured.
Total number of TCE connections	The total number of trace collection entity connections configured.
Total number of files uploaded to all TCEs	The total number of files uploaded to all trace collection entities.

## show session trace subscriber

The full command is as follows:

```
show session trace subscriber network-element <type> trace-ref <id>
```

**Table 546: show session trace subscriber Command Output Descriptions**

Field	Description
Trace reference	The trace reference ID for the trace displayed. The ID is the MCC (3 digits), followed by the MNC (3 digits), then the trace ID number (3 byte octet string).
Activation time	The date and time when the trace was initiated.
IMEI or IMSI	The subscriber identification. <ul style="list-style-type: none"> <li>• <b>IMEI</b>: The International Mobile Equipment Identification number of the subscriber's UE.</li> <li>• <b>IMSI</b>: The International Mobile Subscriber Identification (IMSI) which is the 3-digit MCC (Mobile Country Code), 2 or 3-digit MNC (Mobile Network Code), and the MSIN (Mobile Subscriber Identification Number).</li> </ul>
Actively Tracing	Specifies if the trace is currently active.

Field	Description
Trace Recording Session Reference	The current active trace recording session reference number.
Recording start time	The date and time when the session trace recording started.
Total number of trace recording sessions triggered	The total number of trace recording sessions initiated.
Total number of messages traced	The total number of messages traced for this trace reference.
Number of messages dropped	
No memory	The total number of messages dropped due to a no memory condition.
No trace recording session	The total number of messages dropped due to a failure to receive the start trigger.
Interface not traced	The total number of messages dropped due to the messages being received on interfaces not part of the trace interface list.
Total number of files created	The total number of trace recording files created.
Number of files deleted	
No space	The total number of files deleted due to a lack of space on the storage device.
Traced Interfaces	List of interfaces configured for the session trace.
Trace Triggers	Identifies the triggers used by this subscriber.

## show session fp-flow-state-change statistics

Field	Description
Onload/Offload event logging	Displays the status of logging to show if it is currently enabled or disabled.
Start time	Displays the start time of the last logging. If the logging was never started, the start time shows "NA".
End time	Displays the time when logging was stopped. If logging was never started, the end time shows NA. If the logging is currently enabled, it shows "In progress".
Total events recorded	Displays the total number of logs generated.
Logging enabled for <i>number of events/ duration</i>	The number of events or duration in seconds.
Sessmgr Instance	The session manager instance for which the logging is enabled.

# CHAPTER 128

## show sgsn-operator-policy

This chapter describes the output of the **show sgsn-operator-policy** command.

- [show sgsn-operator-policy full { all | name }, on page 1907](#)

### show sgsn-operator-policy full { all | name }

This command displays the configuration for a specifically named SGSN operator policy or for all of them.

**Table 547: show sgsn-operator-policy full all Command Output Descriptions**

Field	Description
GPRS Attach All	Indicates whether GRPS attaches are to be allowed.
GPRS Attach All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS Attach All	Indicates whether UMTS attaches are to be allowed.
UMTS Attach All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS RAU Intra All	Indicates whether RAU Intra are to be allowed.
GPRS RAU Intra All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS RAU Intra All	Indicates whether RAU Intra are to be allowed.
UMTS RAU Intra All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS RAU Inter All	Indicates whether RAU Inter are to be allowed.
GPRS RAU Inter All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS RAU Inter All	Indicates whether RAU Inter are to be allowed.
UMTS RAU Inter All Failure Code	Indicates configured failure code to be sent in reject message.
Failure Code For Peer Sgsn Address Resolution Failure	Indicates configured failure code to be sent in reject message.
GPRS SMS MO All	Indicates whether

show sgsn-operator-policy full { all | name }

Field	Description
GPRS SMS MO All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS SMS MO All	
UMTS SMS MO All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS SMS MT All	
GPRS SMS MT All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS SMS MT All	
UMTS SMS MT All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS Primary PDP Context Activation All	
GPRS Secondary PDP Context Activation All	
GPRS PDP Context Activation All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS Primary PDP Context Activation All	
UMTS Secondary PDP Context Activation All	
UMTS PDP Context Activation All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS Nw Init Primary PDP Context Activation All	
GPRS Nw Init Primary PDP Ctxt Activation All Failure Code	Indicates configured failure code to be sent in reject message.
GPRS Nw Init Secondary PDP Ctxt Activation All	
GPRS Nw Init Secondary PDP Ctxt Activation All Failure Code	
UMTS Nw Init Primary PDP Context Activation All	
UMTS Nw Init Primary PDP Ctxt Activation All Failure Code	Indicates configured failure code to be sent in reject message.
UMTS Nw Init Secondary PDP Ctxt Activation All	

Field	Description
UMTS Nw Init Secondary PDP Ctxt Activation All Failure Code	Indicates configured failure code to be sent in reject message.
SRNS Intra All	
SRNS Intra All Failure Code	Indicates configured failure code to be sent in reject message.
SRNS Inter All	
SRNS Inter All Failure Code	Indicates configured failure code to be sent in reject message.
Authentication All-Events	Indicates if feature has been enabled or disabled.
Authentication Attach	Indicates if feature has been enabled or disabled.
Authentication Attach (Gprs only)	Indicates if feature has been enabled or disabled.
Authentication Attach (Combined)	Indicates if feature has been enabled or disabled.
Authentication Activate	Indicates if feature has been enabled or disabled.
Authentication Service Request	Indicates if feature has been enabled or disabled.
Authentication Service Request (Signaling)	Indicates if feature has been enabled or disabled.
Authentication Service Request (Data)	Indicates if feature has been enabled or disabled.
Authentication Service Request (Page Response)	Indicates if feature has been enabled or disabled.
Authentication RAU	Indicates if feature has been enabled or disabled.
Authentication RAU (Periodic)	Indicates if feature has been enabled or disabled.
Authentication RAU (Ra update)	Indicates if feature has been enabled or disabled.
Authentication RAU (Ra update with Local Ptmsi)	Indicates if feature has been enabled or disabled.
Authentication RAU (Ra update with Foreign Ptmsi)	Indicates if feature has been enabled or disabled.
Authentication RAU (Combined Update)	Indicates if feature has been enabled or disabled.
Authentication RAU (Imsi Combined Update)	Indicates if feature has been enabled or disabled.
Authentication Detach	Indicates if feature has been enabled or disabled.
Usage of Auth Vectors From Old Sgsn	Indicates if feature has been enabled or disabled.

show sgsn-operator-policy full { all | name }

Field	Description
Order of Preference for Integrity Algorithm is	
Order of Preference for Encryption Algorithm is	
PTMSI-signature allocation	
PTMSI-Realloc Attach	
PTMSI-Realloc Interval	
PTMSI-Realloc Frequency	
PTMSI-Realloc RAU	
PTMSI-Realloc RAU (Periodic)	
PTMSI-Realloc RAU (Periodic) Frequency value	
PTMSI-Realloc RAU (Ra-Update)	
PTMSI-Realloc RAU (Ra-Update) Frequency	
PTMSI-Realloc RAU (Combined-Update)	
PTMSI-Realloc RAU (Combined-Update) Frequency	
PTMSI-Realloc RAU (Combined-Update with IMSI attach)	
PTMSI-Realloc RAU (Combined-Update with IMSI) Frequency	
PTMSI-Realloc Service Request (Signalling)	
PTMSI-Realloc Service Request (Signalling) Freq	
PTMSI-Realloc Service Request (Data)	
PTMSI-Realloc Service Request (Data) Freq	
PTMSI-Realloc Service Request (Page Response)	Indicates if feature has been enabled or disabled.

Field	Description
PTMSI-Realloc Service Request (Page Response) Freq	Indicates frequency, if configured.
Inactivity detection for establishing pdp contexts	Indicates if feature has been enabled or disabled.
Inactivity detection for establishing pdp contexts - Timer	Indicates timeout value in milliseconds.
Inactivity detection for establishing pdp contexts - Action	Indicates action to be taken.
Monitor Re-attaches after Inactivity Detach	Indicates if feature has been enabled or disabled.
Charging Characteristics Prefer Local	Indicates if feature has been enabled or disabled.
Charging Characteristics Behavior	
Charging Characteristics Profile-Index	Indicates CC profile index.
Charging Characteristics Behavior No Records	Indicates configured CC behavior.
APN restriction	
Wildcard APN for IPv4	
Wildcard APN for IPv6	
Wildcard APN for PPP	
UMTS Gmm-Information	Indicates if feature has been enabled or disabled.
GPRS Gmm-Information	Indicates if feature has been enabled or disabled.
User Equipment Identity Retrieval	Indicates if feature has been enabled or disabled.
Nri bits length	
Nri bits value	
MAP UGL Message. Include Access Type Private Extension	
MAP UGL Message. Include IMEISV	
Reuse of authentication triplets	Indicates if feature has been enabled or disabled.
Re-Authentication	Indicates if feature has been enabled or disabled.
Direct Tunnel

<b>Field</b>	<b>Description</b>
GTPU Fast Path	Indicates if feature has been enabled or disabled.
Sending Radio Access Technology (RAT) IE	Indicates if feature has been enabled or disabled.
Sending User Location Information (ULI) IE	Indicates if feature has been enabled or disabled.
Sending IMEISV IE	Indicates if feature has been enabled or disabled.
Sending MS Time Zone IE	Indicates if feature has been enabled or disabled.

# CHAPTER 129

## show sgsn-service

This chapter describes the output of the **show sgsn-service** command.

- [sgsn-mode](#), on page 1913
- [show sgsn-service all](#), on page 1913

## sgsn-mode

*Table 548: show sgsn-mode Command Output Descriptions*

Field	Description
Extended Coverage Enhanced GPRS (EC-EGPRS/EC-GSM)	Specifies if Extended Coverage Class Support is enabled on the SGSN.

## show sgsn-service all

*Table 549: show sgsn-service all Command Output Descriptions*

Field	Description
Service name	The SGSN service that is running in this session.
Context	The name of the context in which SGSN service is running.
Status	Status of the SGSN service.
Accounting Context Name	The name of the context in which accounting interface is configured for this SGSN service.
SGSN Number	The number of SGSN system in current network.
Network-sharing	Specifies whether network sharing is enabled or disabled.
Nri bits	Specifies whether network resource identifier (NRI) bit is configured or not in this SGSN service.

Field	Description
SGTP Context	The name of the context in which SGTP service is running.
SGTP Service	The SGTP service that is running the SGTP session in this SGSN service.
MAP Context	The name of the context in which mobile application part (MAP) service, configured in this SGSN service, is running.
MAP Service	The service that is running the MAP session in this SGSN service.
HSS Service	The name of the configured home subscriber service (HSS) that is running the HSS session in this SGSN service.
IuPS Context	The name of the context in which UMTS Packet Switch Iu interface (IuPS) service is running.
IuPS Service	The service that is running the IuPS session.
SM-T3385 Timeout	The time-out duration in seconds for GPRS session management timer - T3385 on network side for PDP context activation.
SM-T3386 Timeout	The time-out duration in seconds for GPRS session management timer - T3386 on network side for PDP context modification.
SM-T3395 Timeout	The time-out duration in seconds for GPRS session management timer - T3395 on network side for PDP context deactivation.
SM-Max Activate Retries	Total number of retries for PDP context activation from GPRS session manager.
SM-Max Modify Retries	Total number of retries for PDP context modification from GPRS session manager.
SM-Max Deactivate Retries	Total number of retries for PDP context deactivation from GPRS session manager.
GMM-T3302 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3302 on MS side for GPRS attach procedure or RAU procedure.
GMM-T3322 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3322 on network side for GPRS detach request procedure.
GMM-T3350 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3350 on network side GPRS attach accept/RAU accept/REALLOC request procedure sent with P-TMSI and/or TMSI.
GMM-Mobil-Reachable Timeout	The time-out duration in seconds for GPRS mobility management timer - Mobile Reachable on network side.
GMM-Implicit-Detach Timeout	The time-out duration in seconds for GPRS mobility management timer - Implicit-Detach on network side.
GMM-Purge Timeout	The time-out duration in seconds for GPRS mobility management timer - Purge to hold the detach of MM context on network side.
GMM-T3313 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3313 on network side for paging procedure initiation.

Field	Description
GMM-Max Page Retries	Maximum number of retries for paging procedure from GPRS mobility manager.
GMM-T3312 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3313 on network side for RAU procedure initiation.
GMM-T3370 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3370 on network side for identity request procedure.
GMM-Max Identity Retries	Maximum number of retries for identity request procedure from GPRS mobility manager.
GMM-T3360 Timeout	The time-out duration in seconds for GPRS mobility management timer - T3360 on network side for Authentication and Cipher request procedure.
GMM-Max Auth Retries	Maximum number of retries for authentication request procedure from GPRS mobility manager.
GMM-Max PTMSI RELOC Retries	Maximum number of retries for Packet-Temporary Mobile Subscriber Identity (P-TMSI) relocation procedure from GPRS mobility manager.
GMM-Perform-Identity-After-Auth	Specifies whether "perform identity after authentication" procedure is enabled or not.
Max simultaneous pdp contexts per MS	Maximum number of simultaneous PDP context allowed on one MS.
SUPER CHARGER	Specifies whether "super charger" feature is enabled or not.
Accounting cdr-types	Specifies type of accounting CDRs configured in this SGSN service.
Charging Characteristics (CC) Profiles	This group provides the charging characteristics profiles configured in this SGSN service.
Profile	Specifies the charging characteristic profile configured in this SGSN service.
Bucket	Specifies the charging bucket configured for charging characteristic in this SGSN service.
Network Global MME ID Mgmt DB	Indicates if a network global MME ID management database ID is associated with this SGSN service. This ID is used for GUTI to RAI mapping of networks with LACs for UTRAN and GERAN coverage in the 32768 - 65535 range.
TAI Management Database	Indicates if a Tracking Area Identifier (TAI) Management database is associated with this SGSN service.
Inform RNC before UE during QoS Modification	Specifies if operator has enabled or disabled the SGSN functionality to inform RNC before UE during QoS modification.
Restrict Bitrate to 16 Mbps when UE 3GPP Compliance is Unknown	Indicates whether or not the option to restrict bitrate to "16" Mbps when the UEs 3GPP compliance is not known has been configured.
MCC/MNC Encoding in DNS for RAI FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RAI FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for RAI FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RAI FQDN in SNAPTR Query .

Field	Description
MCC/MNC Encoding in DNS for APN FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for APN FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for APN FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for APN FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for RNC FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RNC FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for RNC FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for RNC FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for MMEC FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for MMEC FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for MMEC FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for MMEC FQDN in SNAPTR Query.
MCC/MNC Encoding in DNS for TAI FQDN in A/AAAA Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for TAI FQDN in A/AAAA Query.
MCC/MNC Encoding in DNS for TAI FQDN in SNAPTR Query	Displays the configured MCC/MNC encoding as either Hexadecimal or Decimal for TAI FQDN in SNAPTR Query.
Check IMEI	Displays configuration indicating SGSN action if EIR routing is down: <ul style="list-style-type: none"> <li>• Gf Timeout Action</li> <li>• Gf Failure Action</li> </ul> Value options are 'Continue' or 'Reject'; Default for both is 'Reject'.
Accounting cdr-types	Indicates CDR types to be used. Options include: mcd, scdr, sms, lcs, smbmscdr
Charging Characteristics(CC) Profiles	Indicates bucket configuration per profile.
Sgsn NRI Length	Indicates configured NRI length for the SGSN service. Default is 6.
NRI(s) that will be used in NON-POOLED area	Displays the list of NRIs used in the Non-Pooled area.
Sgsn NRI value	Displays the NRI value and also indicates the status of offloading for each NRI.
NRI(s) that will be used in POOLED area	Displays the list of NRIs used in the Pooled area.
NRI(s) that will be used in POOLED & NON-POOLED area	Displays the list of NRIs used in the Non-Pooled and Pooled areas.
Ignore ASI bit received from peer SGSN during RAU	Indicates if this function has been enabled or disabled.

# CHAPTER 130

## show sgs-service

This chapter describes the output of the **show sgs-service** command.

- [show sgs-service all](#), on page 1917
- [show sgs-service offload-status service-name](#), on page 1917
- [show sgs-service statistics all](#), on page 1918
- [show sgs-service vlr-status full](#), on page 1920

## show sgs-service all

The output of this command is enhanced to display the following fields.

*Table 550: show sgs-service all Command Output Descriptions*

Field	Description
<b>Non-Broadcast LAI</b>	
MCC	Displays the configured MCC value.
MNC	Displays the configured MNC value.
LAC	Displays the configured LAC value.

## show sgs-service offload-status service-name

Displays statistics for all VLRs flagged for offload for the specified SGs service.

*Table 551: show sgs-service offload-status service-name Command Output Descriptions*

Field	Description
VLR Name	The VLR name as configured in the SGs service.
VLR Offload	Displays if the VLR is configured/marked for offload.
Offload Marked Subscriber Count	The number of subscribers that have yet to be offloaded.

Field	Description
Total Attached Attached Subscribers	The total number of subscribers to be offloaded.

## show sgs-service statistics all

Displays SGs service statistics for all SGs services configured on the system.

*Table 552: show sgs-service statistics all Command Output Descriptions*

Field	Description
<b>SCTP Statistics</b>	
Transmitted SCTP Data	
Init Chunks	The total number of initial chunks transmitted by this service.
Init Ack Chunks	The total number of initial ack chunks transmitted by this service.
Shutdown Chunks	The total number of shutdown chunks transmitted by this service.
Cookie Chunks	The total number of cookie chunks transmitted by this service.
Data Chunks	The total number of chunks transmitted by this service.
Data Ack Chunks	The total number of data ack chunks transmitted by this service.
Shutdown Complete Chunks	The total number of shutdown complete chunks transmitted by this service.
Heartbeat Chunks	The total number of heartbeat chunks transmitted by this service.
HeartBeat Ack Chunks	The total number of heartbeat ack chunks transmitted by this service.
Abort Chunks	The total number of abort chunks transmitted by this service.
Error Chunks	The total number of error chunks transmitted by this service.
Init Chunks	The total number of initial chunks received by this service.
Init Ack Chunks	The total number of initial ack chunks received by this service.
Shutdown Chunks	The total number of shutdown chunks received by this service.
Cookie Chunks	The total number of cookie chunks received by this service.
Data Chunks	The total number of chunks received by this service.
Data Ack Chunks	The total number of data ack chunks received by this service.
Shutdown Complete Chunks	The total number of shutdown complete chunks received by this service.
Heartbeat Chunks	The total number of heartbeat chunks received by this service.
HeartBeat Ack Chunks	The total number of heartbeat ack chunks received by this service.
Abort Chunks	The total number of abort chunks received by this service.
Error Chunks	The total number of error chunks received by this service.
Init Chunks	The total number of initial chunks retransmitted by this service.

Field	Description
Total Bytes Sent	The total number of SCTP bytes sent by this service.
Total Bytes Received	The total number of SCTP bytes received by this service.
Total Packets Sent	The total number of SCTP packets sent by this service.
Total Packets Received	The total number of SCTP packets received by this service.
<b>SGS-AP Statistics</b>	
SGS-AP Data	
<b>Tx</b>	The total number of messages transmitted by this service for the associated message type.
<b>ReTx</b>	The total number of messages retransmitted by this service for the associated message type.
<b>Rx</b>	The total number of messages received by this service for the associated message type.
Paging Request	The total number of paging request messages.
Paging Reject	The total number of paging reject messages.
Service Request	The total number of service request messages.
Downlink Unitdata	The total number of downlink unit data messages.
Uplink Unitdata	The total number of uplink unit data messages.
Location Update Request	The total number of Location Update Request messages.
Location Update Accept	The total number of Location Update Accept messages.
Location Update Reject	The total number of Location Update Reject messages.
Location Update Timeout	The total number of Location Update Request messages not received from HSS/MSC due to ts6-1 timeout.  Note that only the Rx counter will increment. Tx and ReTx counters are not supported.
TMSI Reallocation Complete	The total number of TMSI reallocation complete messages.
Alert Request	The total number of alert request messages.
Alert Ack	The total number of alert ack messages.
Alert Reject	The total number of alert reject messages.
UE Activity Indication	The total number of UE activity indication messages.
EPS Detach Indication	The total number of EPS detach indication messages.
EPS Detach Ack	The total number of EPS detach ack messages.
IMSI Detach Indication	The total number of IMSI detach indication messages.
IMSI Detach Ack	The total number of IMSI detach ack messages.
Reset Indication	The total number of reset indication messages.

Field	Description
Reset Ack	The total number of reset ack messages.
MM Information Request	The total number of MM information request messages.
Release Request	The total number of release request messages.
Status	The total number of status messages.
UE Unreachable	The total number of UE unreachable messages.
Service Abort Request	The total number of SGsAP-SERVICE-ABORT-REQUEST messages.
Unknown MSG	The total number of unknown messages.

## show sgs-service vlr-status full

Table 553: show sgs-service vlr-status Command Output Descriptions

Field	Description
MMEMGR	The MME manager instance where the SGs service is running.
MME Reset	A system-wide parameter which is set to "Yes" when the MME service ( and SGS service) is up or after the MME restarts after a failure. This is a restoration indicator at MME service.
Service ID	The system generated identification number of the SGs service.
Peer ID	The system generated identification number of the VLR's SCTP connection.
VLR Name	The VLR name as configured in the SGs service.
SGS Service Name	The configured SGs service name.
VLR Offload	Displays if the VLR is configured/marked for offload state.
SGS Service Address	The IP address of the interface to which the SGs service is bound.
SGS Service Port	The port number of the interface to which the SGs service is bound.
VLR IP Address (es)	The VLR IP address as configured in the SGs service. If multi-homing is configured, both addresses will be shown. The path status for each is displayed as either UP or DOWN.
VLR Port	The VLR port number as configured in the SGs service.
Assoc State	The current state of the SCTP association, either UP or DOWN.
Assoc Uptime	The total amount of time ( hours   minutes   seconds) the current SCTP association has been active (up).  The format of Assoc UpTime is 0000d00h00m (where d= day, h=hour, m=minutes) when h >=24 hrs, otherwise it will be displayed as 00h00m00s.

Field	Description
Assoc State Up Count	The total number of times the SCTP association has come up.
VLR Failure Detach	<p>Indicates if the <b>sgs vlr-failure</b> Exec Mode command is enabled (Yes) or disabled (No).</p> <p>Detach Count: The total number of subscribers that have already been detached as a result of the sgs vlr-failure command.</p> <p>Total: Indicates the total number of subscribers that have to be detached.</p> <p><b>Note:</b> This field is <b>not</b> displayed when the <b>vlr-recover</b> Config Mode command is enabled.</p>
SGs Service Configured VLR Failure	<p>Indicates if the SGs service <b>vlr-recover</b> Config Mode command is enabled (Yes) or disabled (No).</p> <p>Detach Count: The total number of subscribers that have already been detached as a result of the SGs Service VLR Failure feature.</p> <p>Total: Indicates the total number of subscribers that have to be detached.</p> <p><b>Note:</b> This field is only displayed when the SGs Service VLR Failure feature has been configured.</p>
VLR Recover Detach	<p>Indicates if the <b>sgs vlr-recover</b> Exec Mode command is enabled (Yes) or disabled (No).</p> <p>Detach Count: The total number of subscribers that have already been detached as a result of the sgs vlr-recover command.</p> <p>Total: Indicates the total number of subscribers that have to be detached.</p>
<b>SGS-AP Statistics</b>	
<b>Tx</b>	The total number of messages transmitted by this service for the associated message type.
<b>ReTx</b>	The total number of messages retransmitted by this service for the associated message type.
<b>Rx</b>	The total number of messages received by this service for the associated message type.
Paging Request	The total number of paging request messages.
Paging Reject	The total number of paging reject messages.
Service Request	The total number of service request messages.
Downlink Unitdata	The total number of downlink unit data messages.
Uplink Unitdata	The total number of uplink unit data messages.
Location Update Request	The total number of Location Update Request messages.
Location Update Accept	The total number of Location Update Accept messages.
Location Update Reject	The total number of Location Update Reject messages.

Field	Description
Location Update Timeout	The total number of Location Update Request messages not received from HSS/MSC due to ts6-1 timeout.  Note that only the Rx counter will increment. Tx and ReTx counters are not supported.
TMSI Reallocation Complete	The total number of TMSI reallocation complete messages.
Alert Request	The total number of alert request messages.
Alert Ack	The total number of alert ack messages.
Alert Reject	The total number of alert reject messages.
UE Activity Indication	The total number of UE activity indication messages.
EPS Detach Indication	The total number of EPS detach indication messages.
EPS Detach Ack	The total number of EPS detach ack messages.
IMSI Detach Indication	The total number of IMSI detach indication messages.
IMSI Detach Ack	The total number of IMSI detach ack messages.
Reset Indication	This statistic has been deprecated.
Reset Ack	This statistic has been deprecated.
MM Information Request	The total number of MM information request messages.
Release Request	The total number of release request messages.
Status	The total number of status messages.
UE Unreachable	The total number of UE unreachable messages.
Service Abort Request	The total number of SGsAP-SERVICE-ABORT-REQUEST messages.
Unknown MSG	The total number of unknown messages.
<b>Flow debug stats for VLR address index :</b>	
<i>Each of the following statistics is only displayed if the stat's value is non-zero. These stats are typically used for debugging.</i>	
NPU Flow created for Primary IPA	The total number of NPU Flow created for Primary IPA.
NPU Flow created for Secondary IPA	The total number of NPU Flow created for Secondary IPA.
Primary IPA flow add requests sent	The total number of Primary IPA flow add requests sent.
Secondary IPA flow add requests sent	The total number of Secondary IPA flow add requests sent.
Primary IPA flow add success received	The total number of Primary IPA flow add success received.
Secondary IPA flow add success received	The total number of Secondary IPA flow add success received.
Primary IPA flow add failed	The total number of Primary IPA flow add failed.

Field	Description
Secondary IPA flow add failed	The total number of Secondary IPA flow add failed.
Primary IPA flow alloc failed	The total number of Primary IPA flow alloc failed.
Secondary IPA flow alloc failed	The total number of Secondary IPA flow alloc failed .
Primary IPA flow insert failed	The total number of Primary IPA flow insert failed.
Secondary IPA flow insert failed	The total number of Secondary IPA flow insert failed.
Primary IPA flow delete requests sent	The total number of Primary IPA flow delete requests sent.
Secondary IPA flow delete requests sent	The total number of Secondary IPA flow delete requests sent.
Primary IPA flow delete success	The total number of Primary IPA flow delete success.
Secondary IPA flow delete success	The total number of Secondary IPA flow delete success .
Primary IPA flow delete failed	The total number of Primary IPA flow delete failed .
Secondary IPA flow delete failed	The total number of Secondary IPA flow delete failed.
Primary IPA flow delete no match	The total number of Primary IPA flow delete no match.
Secondary IPA flow delete no match	The total number of Secondary IPA flow delete no match.
Primary IPA invalid flowid	The total number of Primary IPA invalid flowid.
Secondary IPA invalid flowid	The total number of Secondary IPA invalid flowid.
Primary IPA invalid NPU response	The total number of Primary IPA invalid NPU response.
Secondary IPA invalid NPU response	The total number of Secondary IPA invalid NPU response.
Max per VLR associations reached	The total number of Max per VLR associations reached .
Invalid NPU response codes	The total number of Invalid NPU response codes .
Primary IPA flow resp code[%s] count	The total number of Primary IPA flow resp code[%s] count.
Secondary IPA flow resp code[%s] count	The total number of Secondary IPA flow resp code[%s] count.
Total VLRs	The total number of VLRs configured in the SGs service.

## show sgtp

This chapter describes the outputs of the **show sgtp** command.

- [show sgtp-service ggsn-table](#), on page 1925
- [show sgtp-service sgsn-table](#), on page 1926

## show sgtp-service ggsn-table

*Table 554: show sgtp-service ggsn-table Command Output Descriptions*

Field	Description
GTP	Indicates the GTP version. Possible values are: <ul style="list-style-type: none"><li>• 0: GTP-v0</li><li>• 1: GTP-v1</li></ul>
Status	Indicates the status of the GTP session. Possible values are: <ul style="list-style-type: none"><li>• I: Inactive</li><li>• A: Active</li></ul>
GTPC Echo	Indicates the status of the GTPC echo. Possible values are: <ul style="list-style-type: none"><li>• D: Disabled</li><li>• E: Enabled</li></ul>
PLMN Type	Indicates the type of Public Land Mobile Network area. Possible values are: <ul style="list-style-type: none"><li>• H: Home networks</li><li>• F: Foreign networks</li><li>• U: Unknown networks</li></ul>

Field	Description
SGTPC Stats	Indicates the availability of the SGTPC statistics. Possible values are: <ul style="list-style-type: none"> <li>• A: Available</li> <li>• U: Unavailable</li> </ul>
Service ID	Indicates the SGTP service identifier.
GGSN Address	Indicates the IP address of GGSN service.
Restart Counter	Indicates the restart counter of SGTP service.
No. of restart	Indicates the total number of restarts happened for SGTP session.
Curr sessions	Total number of SGTP session currently running.
Max sessions	Indicates the maximum number of SGTP session allowed.

## show sgtp-service sgsn-table

Table 555: show sgtp-service sgsn-table Command Output Descriptions

Field	Description
GTP	Indicates the GTP version. Possible values are: <ul style="list-style-type: none"> <li>• 0: GTP-v0</li> <li>• 1: GTP-v1</li> </ul>
GTPC Echo	Indicates the status of the GTPC echo. Possible values are: <ul style="list-style-type: none"> <li>• D: Disabled</li> <li>• E: Enabled</li> </ul>
PLMN Type	Indicates the type of Public Land Mobile Network area. Possible values are: <ul style="list-style-type: none"> <li>• H: Home networks</li> <li>• F: Foreign networks</li> <li>• U: Unknown networks</li> </ul>
SGTPC Stats	Indicates the availability of the SGTPC statistics. Possible values are: <ul style="list-style-type: none"> <li>• A: Available</li> <li>• U: Unavailable</li> </ul>
Service ID	Indicates the SGTP service identifier.

Field	Description
SGSN Address	Indicates the IP address of SGSN service.

# CHAPTER 132

## show sgtpc

This chapter describes the outputs of the **show sgtpc** command.

- [show sgtpc statistics, on page 1929](#)

## show sgtpc statistics

*Table 556: show sgtpc statistics Command Output Descriptions*

Field	Description
<b>Tunnel Management Messages:</b>	
<b>Create PDP Context Request:</b>	
Total Primary CPC Req	The total number of Create PDP Context requests received for the primary PDP context.
Total Secondary CPC Req	The total number of Create PDP Context requests received for the secondary PDP context.
Initial Primary CPC Req	The total number of initial Create PDP Context requests received for the primary PDP context.
Initial Secondary CPC Req	The total number of initial secondary Create PDP Context requests received for the secondary PDP context.
Retrans Primary CPC Req	The total number of Create PDP Context requests retransmitted for the primary PDP context.
Retrans Secondary CPC Req	The total number of Create PDP Context requests retransmitted for the secondary PDP context.
<b>Create PDP Context Response:</b>	
Total Accepted	The total number of Create PDP Context response messages accepted.
Total Denied	The total number of Create PDP Context response messages denied.

Field	Description
Total Primary CPC	The total number of Create PDP Context response messages transmitted for the primary PDP context.
Total Secondary CPC	The total number of Create PDP Context response messages transmitted for the secondary PDP context.
Decode Failure RX	The total number of Create PDP Context response messages received with decode failure.
<b>Update PDP Context Request</b>	
Total UPC Req TX	The total number of Update PDP Context request messages transmitted.
Total UPC Req RX	The total number of Update PDP Context request messages received.
Initial UPC Req TX	The total number of initial Update PDP Context request messages transmitted.
Initial UPC Req RX	The total number of initial Update PDP Context request messages received.
Retrans UPC Req TX	The total number of tunnel-retransmitted Update PDP Context request messages transmitted.
Retrans UPC Req RX	The total number of tunnel-retransmitted Update PDP Context request messages received.
<b>Update PDP Context Response:</b>	
Total UPC Rsp TX	The total number of Update PDP Context response messages transmitted.
Total UPC Rsp RX	The total number of Update PDP Context response messages received.
Denied TX	The total number of denied Update PDP Context response messages transmitted.
Denied RX	The total number of denied Update PDP Context response messages received.
Accepted TX	The total number of accepted Update PDP Context response messages transmitted.
Accepted RX	The total number of accepted Update PDP Context response messages received.
Initial UPC-Rsp TX	The total number of initial Update PDP Context response messages transmitted.
Initial UPC-Rsp RX	The total number of initial Update PDP Context response messages received.
Retrans UPC-Rsp TX	The total number of tunnel-retransmitted Update PDP Context response messages transmitted.

Field	Description
Decode Failure RX	
<b>Delete PDP Context Request:</b>	
Total DPC Req TX	The total number of Delete PDP Context request messages transmitted.
Total DPC Req RX	The total number of Delete PDP Context request messages received.
Initial DPC Req TX	The total number of initial Delete PDP Context request messages transmitted.
Initial DPC Req RX	The total number of initial Delete PDP Context request messages received.
Retrans DPC Req TX	The total number of tunnel-retransmitted Delete PDP Context request messages transmitted.
<b>Delete PDP Context Response:</b>	
Total DPC Rsp TX	The total number of Delete PDP Context response messages transmitted.
Total DPC Rsp RX	The total number of Delete PDP Context response messages received.
Denied TX	The total number of denied Delete PDP Context response messages transmitted.
Denied RX	The total number of denied Delete PDP Context response messages received.
Accepted TX	The total number of accepted Delete PDP Context response messages transmitted.
Accepted RX	The total number of accepted Delete PDP Context response messages received.
Initial DPC-Rsp TX	The total number of initial Delete PDP Context response messages transmitted.
Initial DPC-Rsp RX	The total number of initial Delete PDP Context response messages received.
Retrans DPC-Rsp TX	The total number of tunnel-retransmitted Delete PDP Context response messages transmitted.
Decode Failure RX	
<b>PDU Notification Request:</b>	
Total Primary PDU Not Req	The total number of PDU notification request messages received but not requested for the primary PDP context.
Total Secondary PDU Not Req	The total number of PDU notification request messages received but not requested for the secondary PDP context.

Field	Description
Initial Primary PDU Not Req	The total number of initial PDU notification request messages received but not requested for the primary PDP context.
Initial Secondary PDU Not Req	The total number of initial PDU notification request messages received but not requested for the secondary PDP context.
Retrans Primary PDU Not Req	The total number of tunnel-retransmitted PDU notification request messages received but not requested for the primary PDP context.
Retrans Secondary PDU Not Req	The total number of tunnel-retransmitted PDU notification request messages received but not requested for the secondary PDP context.
<b>PDU Notification Response:</b>	
Total Accepted	The total number of PDU notification response messages accepted.
Total Denied	The total number of PDU notification response messages denied.
Acc. Primary PDU Not Rsp	
Initial PDU Not Rsp	
Retrans Pri PDU Not Rsp	
Acc. Secondary PDU Not Rsp	
Initial PDU Not Rsp	
Retrans Secondary PDU Not Rsp	
<b>PDU Notification Rej Request:</b>	
Total PDU Not Rej Req	
Initial PDU Not Rej Req	
Retrans PDU Not Rej Req	
<b>PDU Notification Rej Response:</b>	
Total PDU Not Rej Rsp	
Denied	
Accepted	
Initial PDU Not Rej Rsp	
Initiate PDP Context Activation Request	This group of counters indicates the number of IPCA Requests received from GGSN.

Field	Description
Total IPCA Req	Total number of Initiate PDP Context Activation Request messages received from GGSN.
Initial IPCA Req	Total number of initial Initiate PDP Context Activation Request messages received from GGSN.
Retrans IPCA Req	Total number of retransmitted Initiate PDP Context Activation Request messages received from GGSN.
Initiate PDP Context Activation Response	This group of counters indicates the number of IPCA Responses sent to GGSN.
Total Accepted	Total number of Initiate PDP Context Activation Response messages with cause Accepted sent to GGSN.
Initial IPCA Rsp	Total number of initial Initiate PDP Context Activation Response messages with cause Accepted sent to GGSN.
Retrans IPCA Rsp	Total number of retransmitted Initiate PDP Context Activation Response messages with cause Accepted sent to GGSN. When SGSN receives a retransmitted IPCA Req after it has sent IPCA Rsp with cause Accepted, it responds by sending the same IPCA Rsp and increments this counter.
Total Denied	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause other than Accepted
Initial IPCA Rsp	Total number of initial Initiate PDP Context Activation Response messages with cause other than Accepted sent to GGSN.
Retrans IPCA Rsp	Total number of retransmitted Initiate PDP Context Activation Response messages sent to GGSN. When SGSN receives a retransmitted IPCA Req after it has sent IPCA Rsp with cause other than Accepted, it responds by sending the same IPCA Rsp and increments this counter.
Initiate PDP Context Activation Response Not Sent	This group of counters indicates the number of IPCA Responses not sent to GGSN. Normally, IPCA Response is sent for each received IPCA Request from GGSN. For the following two cases, IPCA Response is not sent to GGSN. (verbose mode only)
Retrans IPCA Req bef MS rsp	Total number of IPCA Response messages not sent due to reception of retransmitted IPCA Req during NRSPCA procedure and MS has not responded with Activate Secondary PDP Context Request. Such retransmitted requests are dropped/ignored.
Linked PDP deact coll	Total number of IPCA Response messages not sent due to linked PDP deactivation collision with NRSPCA procedure.

Field	Description
Initiate PDP Context Activation Denied	This group of counters indicates the number of IPCA Response messages with failure causes sent to GGSN. (verbose mode only)
No resources	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "no resources available (199)".
Service Not Supported	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "service not supported (200)".
System Failure	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "system failure (204)".
Mandatory IE incorrect	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "mandatory IE incorrect (201)".
Mandatory IE missing	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "mandatory IE missing (202)".
Optional IE incorrect	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "optional IE incorrect (203)".
Invalid message format	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "invalid message format (193)".
Context not found	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "Context not found (210)".
Semantic Error in TFT	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "semantic error in TFT operation (215)".
Syntactic Error in TFT	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "syntactic error in TFT operation (216)".
Semantic Error in Pkt Filter	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "semantic error in PKT filter (217)".
Syntactic Error in Pkt Filter	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "syntactic error in PKT filter (218)".

Field	Description
MS is not GPRS responding	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "MS is not GPRS responding (196)".
MS refuses	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "MS refuses (197)".
Invalid correlation-Id	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "invalid correlation Id (225)".
PDP Ctxt without TFT already Active	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "PDP Ctx without TFT already activated (221)".
BCM violation	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "Bearer Control Mode violation (227)".
MS GPRS Suspended	Total number of Initiate PDP Context Activation Response messages sent to GGSN with cause "GPRS Connection Suspended (207)".
Unknown cause	Total number of Initiate PDP Context Activation Response messages sent to GGSN with any other cause than mentioned above.
<b>Mobility Management Messages:</b>	
<b>Identification Request:</b>	
Total Ident-Req TX	The total number of identification request messages transmitted.
Total Ident-Req RX	The total number of identification request messages received.
Initial Ident-Req TX	The total number of initial identification request messages transmitted.
Initial Ident-Req RX	The total number of initial identification request messages received.
Retrans Ident-Req TX	
<b>Identification Response:</b>	
Total Ident-Rsp TX	The total number of identification response messages transmitted.
Denied TX	
Accepted TX	
Initial Ident-Rsp TX	

Field	Description
Retrans Ident-Rsp TX	
Total Ident-Rsp RX	The total number of identification response messages received.
Denied RX	
Accepted RX	
Initial Ident-Rsp RX	
Decode Failure RX	
<b>SGSN Context Request:</b>	
Total SGSN-Ctx-Req TX	The total number of SGSN Context Request messages sent on the Gn/Gp interface.
Total SGSN-Ctx-Req RX	The total number of SGSN Context Request messages received on the Gn/Gp interface.
Initial SGSN-Ctx-Req TX	The number of initial SGSN Context Request messages sent on the Gn/Gp interface.
Initial SGSN-Ctx-Req RX	The number of initial SGSN Context Request messages received on the Gn/Gp interface.
Retrans SGSN-Ctx-Req TX	The number of SGSN Context Request messages retransmitted on the Gn/Gp interface.
Retrans SGSN-Ctx-Req RX	The number of SGSN Context Request messages received on the Gn/Gp interface.
<b>SGSN Context Response:</b>	
Total SGSN-Ctx-Rsp TX	The total number of SGSN Context response messages transmitted on the Gn/Gp interface.
Denied TX	
Accepted TX	
Initial SGSN-Ctx-Rsp TX	
Retrans SGSN-Ctx-Rsp TX	
Total SGSN-Ctx-Rsp RX	The total number of SGSN Context response messages received on the Gn/Gp interface.
Denied RX	
Accepted RX	
Initial SGSN-Ctx-Rsp RX	
Retrans SGSN-Ctx-Rsp RX	

Field	Description
Decode Failure RX	
<b>SGSN Context Ack:</b>	
Total SGSN-Ctx-Ack TX	The total number of SGSN Context Acknowledgement response messages transmitted on the Gn/Gp interface.
Denied TX	
Accepted TX	
Initial SGSN-Ctx-Ack TX	
Retrans SGSN-Ctx-Ack TX	
Total SGSN-Ctx-Ack RX	The total number of SGSN Context Acknowledgement response messages received on the Gn/Gp interface.
Denied RX	
Accepted RX	
Initial SGSN-Ctx-Ack RX	
Retrans SGSN-Ctx-Ack RX	
Decode Failure RX	
<b>Forward Relocation Request:</b>	
Total Fwd-Rel-Req TX	The total number of Forward Relocation request messages transmitted.
Total Fwd-Rel-Req RX	The total number of Forward Relocation request messages received.
Initial Fwd-Rel-Req TX	The total number of initial Forward Relocation request messages transmitted.
Initial Fwd-Rel-Req RX	The total number of initial Forward Relocation request messages received.
Retrans Fwd-Rel-Req TX	
Retrans Fwd-Rel-Req RX	
<b>Forward Relocation Response:</b>	
Total Fwd-Rel-Rsp TX	The total number of Forward Relocation response messages transmitted.
Denied TX	
Accepted TX	
Initial Fwd-Rel-Rsp TX	

Field	Description
Retrans Fwd-Rel-Rsp TX	
Total Fwd-Rel-Rsp RX	The total number of Forward Relocation response messages received.
Denied RX	
Accepted RX	
Initial Fwd-Rel-Rsp RX	
Decode Failure RX	
<b>Forward SRNS Context:</b>	
Total Fwd-SRNS-Ctx TX	The total number of Forward Serving Radio Network Subsystem (SRNS) Context request messages transmitted.
Total Fwd-SRNS-Ctx RX	The total number of Forward Serving Radio Network Subsystem (SRNS) Context request messages received.
Initial Fwd-SRNS-Ctx TX	
Initial Fwd-SRNS-Ctx RX	
Retrans Fwd-SRNS-Ctx TX	
Retrans Fwd-SRNS-Ctx RX	
<b>Forward SRNS Context Ack:</b>	
Total SRNS-Ctx-Ack TX	The total number of Forward Serving Radio Network Subsystem (SRNS) Context Acknowledgement messages transmitted.
Denied TX	
Accepted TX	
Initial SRNS-Ctx-Ack TX	
Retrans SRNS-Ctx-Ack TX	
Total SRNS-Ctx-Ack RX	The total number of Forward Serving Radio Network Subsystem (SRNS) Context Acknowledgement messages received.
Denied RX	
Accepted RX	
Initial SRNS-Ctx-Ack RX	
Decode Failure RX	
<b>Forward Relocation Complete:</b>	

Field	Description
Total Fwd-Rel-Cmp TX	The total number of Forward Relocation Complete messages transmitted.
Total Fwd-Rel-Cmp RX	The total number of Forward Relocation Complete messages received.
Initial Fwd-Rel-Cmp TX	
Initial Fwd-Rel-Cmp RX	
Retrans Fwd-Rel-Cmp TX	
Retrans Fwd-Rel-Cmp RX	
<b>Forward Relocation Complete Ack:</b>	
Total Rel-Cmp-Ack TX	The total number of Relocation Complete Acknowledgement messages transmitted.
Denied TX	
Accepted TX	
Initial Rel-Cmp-Ack TX	
Retrans SRNS-Ctx-Ack TX	
Total Rel-Cmp-Ack RX	The total number of Relocation Complete Acknowledgement messages received.
Denied RX	
Accepted RX	
Initial Rel-Cmp-Ack RX	
Decode Failure RX	
<b>Relocation Cancel Request:</b>	
Total Rel-Can-Req TX	The total number of Relocation Cancel request messages transmitted.
Total Rel-Can-Req RX	The total number of Relocation Cancel request messages received.
Initial Rel-Can-Req TX	
Initial Rel-Can-Req RX	
Retrans Rel-Can-Req TX	
Retrans Rel-Can-Req RX	
<b>Relocation Cancel Response:</b>	

Field	Description
Total Rel-Can-Rsp TX	The total number of Relocation Cancel response messages transmitted.
Denied TX	
Accepted TX	
Initial Rel-Can-Rsp TX	
Retrans Rel-Can-Rsp TX	
Total Rel-Can-Rsp RX	The total number of Relocation Cancel response messages received.
Denied RX	
Accepted RX	
Initial Rel-Can-Rsp RX	
Decode Failure RX	
<b>Path Management Messages:</b>	
<b>Echo Request:</b>	
Total Echo-Req TX	The total number of Echo request messages transmitted.
Total Echo-Req RX	The total number of Echo request messages received.
Initial Echo-Req TX	The total number of initial Echo request messages transmitted.
Initial Echo-Req RX	The total number of initial Echo request messages received.
Retrans Echo-Req TX	The total number of Echo request messages retransmitted.
<b>Echo Response:</b>	
Total Echo-Rsp TX	The total number of Echo response messages transmitted.
Total Echo-Rsp RX	The total number of Echo response messages received.
Version Not Supported	The total number of Echo messages received and transmitted with GTP version not supported.
RX	The total number of Echo messages received with GTP version not supported.
TX	The total number of Echo messages transmitted with GTP version not supported.
Supported Ext. Headers Notif	The total number of Echo messages received and transmitted with supported extension headers notification.
RX	The total number of Echo messages received with supported extension headers notification.

Field	Description
TX	The total number of Echo messages transmitted with supported extension headers notification.
<b>Location Management Messages:</b>	
<b>Send Routing Info Request:</b>	
Total SRI-Req	The total number of Send Routing Information (SRI) request messages transmitted to the HLR(s).
Initial SRI-Req	The total number of initial Send Routing Information (SRI) request messages transmitted to the HLR(s).
Retrans SRI-Req	The total number of Send Routing Information (SRI) request messages retransmitted to the HLR(s).
<b>Send Routing Info Response:</b>	
Total SRI-Rsp	The total number of Send Routing Information (SRI) response messages transmitted to the HLR(s).
Denied	The total number of initial Send Routing Information (SRI) response messages transmitted to the HLR(s).
Accepted	The total number of Send Routing Information (SRI) response messages retransmitted to the HLR(s).
Initial SRI-Rsp	
Retrans SRI-Rsp	
<b>Failure Report Request:</b>	
Total Fail-Rpt-Req	The total number of fail report request messages transmitted.
Initial Fail-Rpt-Req	The total number of initial fail report request messages transmitted.
Retrans Fail-Rpt-Req	The total number of fail report request messages retransmitted.
<b>Failure Report Response:</b>	
Total Fail-Rpt-Rsp	The total number of fail report response messages transmitted.
Denied	
Accepted	
Initial Fail-Rpt-Rsp	The total number of initial fail report response messages transmitted.
Retrans Fail-Rpt-Rsp	The total number of fail report response messages retransmitted.
<b>Note Ms Gprs Present Request:</b>	
Total Note-Ms-Gprs-Req	The total number of Note MS GPRS Present request messages received from the HLR(s).

Field	Description
Initial Note-Ms-Gprs-Req	The total number of initial Note MS GPRS Present request messages received from the HLR(s).
Retrans Note-Ms-Gprs-Req	The total number of Note MS GPRS Present request messages retransmitted.
<b>Note Ms Gprs Present Response:</b>	
Total Note-Ms-Gprs-Rsp	The total number of Note MS GPRS Present response messages transmitted to the HLR(s).
Denied	The total number of "deny" Note MS GPRS Present response messages transmitted to the HLR(s).
Accepted	The total number of Note MS GPRS Present response messages transmitted to the HLR(s) containing a cause value of 128 (80H, Request accepted).
Initial Note-Ms-Gprs-Rsp	
Decode Failure	
<b>MS Info Change Notification Request:</b>	
Total MICN-Req	
Initial MICN-Req	
Retrans MICN-Req	
<b>MS Info Change Notification Response:</b>	
Total MICN-Rsp	
Denied	
Dropped	
Accepted	
<b>MBMS Bearer Service specific Messages:</b> This group lists statistics related to Multimedia Broadcast Multicast Service (MBMS) bearer messages.	
<b>MBMS Session Start Request:</b>	
Total Sess-Start-Req	The total number of MBMS Session Start request messages transmitted.
Initial Sess-Start-Req	The total number of initial MBMS Session Start request messages transmitted.
Retrans Sess-Start-Req	The total number of MBMS Session Start request messages retransmitted.
<b>MBMS Session Start Response:</b>	

Field	Description
Total Sess-Start-Rsp	The total number of MBMS Session Start response messages received.
Denied	The total number of MBMS Session Start response messages denied.
Accepted	The total number of MBMS Session Start response messages accepted.
Initial Sess-Start-Rsp	The total number of initial MBMS Session Start response messages received.
Retrans Sess-Start-Rsp	The total number of MBMS Session Start response messages retransmitted.
<b>MBMS Session Stop Request:</b>	
Total Sess-Stop-Req	The total number of MBMS Session Stop request messages transmitted.
Initial Sess-Stop-Req	The total number of MBMS Session Start request messages transmitted.
Retrans Sess-Stop-Req	The total number of MBMS Session Start request messages transmitted.
<b>MBMS Session Stop Response:</b>	
Total Sess-Stop-Rsp	The total number of MBMS Session Stop response messages transmitted.
Denied	The total number of MBMS Session Stop response messages denied.
Accepted	The total number of MBMS Session Stop response messages accepted.
Initial Sess-Stop-Rsp	The total number of initial MBMS Session Stop response messages transmitted.
Retrans Sess-Stop-Rsp	The total number of MBMS Session Stop response messages retransmitted.
<b>MBMS Session Update Request:</b>	
Total Sess-Update-Req	The total number of MBMS Session Update request messages transmitted.
Initial Sess-Update-Req	The total number of initial MBMS Session Update request messages transmitted.
Retrans Sess-Update-Req	The total number of MBMS Session Update request messages retransmitted.
<b>MBMS Session Update Response:</b>	
Total Sess-Update-Rsp	The total number of MBMS Session Update response messages transmitted.

Field	Description
Denied	The total number of MBMS Session Update response messages denied.
Accepted	The total number of MBMS Session Update response messages accepted.
Initial Sess-Update-Rsp	The total number of initial MBMS Session Update response messages transmitted.
Retrans Sess-Update-Rsp	The total number of MBMS Session Update response messages retransmitted.
<b>MBMS Registration Request:</b>	
Total Reg-Req TX	The total number of MBMS Registration request messages transmitted.
Initial Reg-Req TX	The total number of initial MBMS Registration request messages transmitted.
Retrans Reg-Req TX	The total number of MBMS Registration request messages retransmitted.
<b>MBMS Registration Response:</b>	
Total Reg-Rsp RX	The total number of MBMS Registration response messages received.
Denied RX	The total number of MBMS Registration response messages denied.
Accepted RX	The total number of MBMS Registration response messages accepted.
Initial Reg-Rsp RX	The total number of initial MBMS Registration response messages received.
Decode Failure RX	The total number of MBMS Registration response messages received with a decode failure.
<b>MBMS De-Registration Request:</b>	
Total De-Reg-Req TX	The total number of MBMS De-Registration request messages transmitted.
Total De-Reg-Req RX	The total number of MBMS De-Registration request messages received.
Initial De-Reg-Req TX	The total number of initial MBMS De-Registration request messages transmitted.
Initial De-Reg-Req RX	The total number of initial MBMS De-Registration request messages received.
Retrans De-Reg-Req TX	The total number of retransmitted MBMS De-Registration request messages transmitted.

Field	Description
Retrans De-Reg-Req RX	The total number of retransmitted MBMS De-Registration request messages received.
<b>MBMS De-Registration Response:</b>	
Total De-Reg-Rsp TX	
Total De-Reg-Rsp RX	
Denied TX	
Denied RX	
Accepted TX	
Accepted RX	
Initial De-Reg-Rsp TX	
Initial De-Reg-Rsp RX	
Retrans De-Reg-Rsp TX	
Decode Failure RX	
<b>Path Failure Statistics:</b>	
Number of Path Failures due to Echo Request Timeout	
Number of Deactivations due to Echo Request Timeout	
Number of Path Failures due to Non Echo Request Timeout	
Number of Deactivations due to Non Echo Request Time	
Number of Path Failures due to Restart Counter Change in Echo Response	
Number of Restart Counter Changes verified using Echo Response	
Number of Restart Counter Changes in Echo Response	
Number of Path Failures due to Restart Counter Change in Non Echo Response	
Number of Deactivations due to Restart Counter Change	

Field	Description
Number of Incorrect Path Failures detected by Session Manager	
<b>MBMS UE specific Messages:</b> This group lists statistics related to Multimedia Broadcast Multicast Service (MBMS) UE messages.	
<b>MBMS Notification Request:</b>	
Total MBMS-Not-Req RX	The total number of MBMS notification request messages received.
Initial MBMS-Not-Req RX	The total number of initial MBMS notification request messages received.
Retrans MBMS-Not-Req RX	The total number of retransmitted MBMS notification request messages received.
<b>MBMS Notification Response:</b>	
Total MBMS-Not-Rsp TX	The total number of MBMS notification response messages transmitted.
Denied TX	
Accepted TX	
Initial MBMS-Not-Rsp TX	The total number of initial MBMS notification response messages transmitted.
Retrans MBMS-Not-Rsp TX	The total number of retransmitted MBMS notification response messages transmitted.
<b>MBMS Notification Reject Request:</b>	
Total MBMS-Not-Rej-Req TX	
Initial MBMS-Not-Rej-Req TX	
Retrans MBMS-Not-Rej-Req TX	
<b>MBMS Notification Reject Response:</b>	
Total MBMS-Not-Rej-Rsp RX	
Denied RX	
Accepted RX	
Initial MBMS-Not-Rej-Rsp	
Decode Failure RX	
<b>Create MBMS Context Request:</b>	
Total CMC-Req TX	The total number of Create MBMS Context request messages transmitted.

Field	Description
Initial CMC-Req TX	The total number of initial Create MBMS Context request messages transmitted.
Retrans CMC-Req TX	The total number of retransmitted Create MBMS Context request messages transmitted.
<b>Create MBMS Context Response:</b>	
Total CMC-Rsp RX	
Denied RX	
Accepted RX	
Initial CMC-Rsp RX	
Decode Failure RX	
<b>Update MBMS Context Request:</b>	
Total UMC-Req TX	The total number of Update MBMS Context request messages transmitted.
Initial UMC-Req TX	The total number of initial Update MBMS Context request messages transmitted.
Retrans UMC-Req TX	The total number of retransmitted Update MBMS Context request messages transmitted.
<b>Update MBMS Context Response:</b>	
Total UMC-Rsp RX	
Denied RX	
Accepted RX	
Initial UMC-Rsp RX	
Decode Failure RX	
<b>Delete MBMS Context Request:</b>	
Total DMC-Req TX	
Total DMC-Req RX	
Initial DMC-Req TX	
Initial DMC-Req RX	
Retrans DMC-Req TX	
Retrans DMC-Req RX	
<b>Delete MBMS Context Response:</b>	

Field	Description
Total DMC-Rsp TX	
Total DMC-Rsp RX	
Denied TX	
Denied RX	
Accepted TX	
Accepted RX	
Initial DMC-Rsp TX	
Initial DMC-Rsp RX	
Decode Failure RX	
<b>RAN info Relay Msg:</b>	
Total messages received	The total number of RAN Information Relay (RIM) messages received.
Total messages sent	The total number of RAN Information Relay (RIM) messages transmitted.
Total messages dropped	The total number of RAN Information Relay (RIM) messages dropped.
due to DNS failure	The total number of RAN Information Relay (RIM) messages dropped due to a DNS failure.
due to RIM disabled in SGSN	The total number of RAN Information Relay (RIM) messages dropped due to lack of support by the SGSN.
due to Invalid Routing Addr	The total number of RAN Information Relay (RIM) messages dropped due to an invalid routing address.

# CHAPTER 133

## show sgtpu

This chapter describes the outputs of the **show sgtpu** command.

- [show sgtpu statistics, on page 1949](#)

## show sgtpu statistics

*Table 557: show sgtpu statistics Command Output Descriptions*

Field	Description
GTPU Statistics:	
Total Packets Sent	
Packets sent to GGSN	Total number of packets for GTP-U messages sent to GGSN.
Packets sent to RNC	Total number of packets for GTP-U messages sent to RNC.
Packets sent to SGSN	Total number of packets for GTP-U messages sent to SGSN.
Total Bytes Sent	
Bytes sent to GGSN	Total number of bytes for GTP-U messages sent to GGSN at a given instance of time.
Bytes sent to RNC	Total number of bytes for GTP-U messages sent to the RNC at a given instance in time.
Bytes sent to SGSN	Total number of bytes for GTP-U messages sent to the SGSN at a given instance in time.
Total Packets Rcvd	
Total Packets from GGSN	Total number of packets for GTP-U messages received from GGSN.
Pkts queued	Total number of packets queued for GTP-U messages from GGSN.
Pkts forward from queue	<b>Description:</b> This proprietary statistic indicates the total number of packets that are forwarded from the GGSN queue. <b>Triggers:</b> Increments when a packet is forwarded from the GGSN queue. <b>Availability:</b> per SGTP service

Field	Description
Pkts dropped	Total number of packets dropped for GTP-U messages from GGSN.
Queue Full	Total number of packets dropped due to queued buffer limit full for GTP-U messages from GGSN.
Ctxt Preserved	Total number of GTP packets from GGSN dropped in preserved context.
Unknown session	Total number of GTP packets from GGSN dropped in unknown session.
Pkts when dp suspended	<p><b>Description:</b> This proprietary statistic indicates the total number of packets dropped because of DP session in suspended state.</p> <p><b>Triggers:</b> Increments when a DP session has deactivation initiated or path failure is detected for the PDP context.</p> <p><b>Availability:</b> per SGTP service</p>
Sess Dealloc started	Total number of GTP packets from peer GGSN received during session deallocation procedure.
Paging Failure	Total number of GTP packets dropped due to paging failure when there was downlink data from GGSN.
Seq Num Not Pres(V0)	Total number of packets from GGSN dropped as GTP-Uv0 messages received with sequence number flag set to false.
Unknown version	Total number of GTP-U packets received from GGSN with unknown GTP version.
Invalid msg length	Total number of GTP packets from GGSN dropped as GTP-U messages received with invalid message length.
Traffic Policing	Total number of GTP-U packets received from GGSN under subscriber traffic policing support.
Iu Release	<p><b>Description:</b> Total number of downlink packets that were queued but dropped due to IU/RAB release.</p> <p><b>Triggers:</b> Counter at the new SGSN increments when Iu/RAB gets released while inter-SGSN-RAU is in progress and downlink data is queued during RAU.</p> <p><b>Availability:</b> per SGTP service</p>
T3-tunnel Timer expiry	<p><b>Description:</b> Total number of downlink packets that were queued but dropped due to T3-tunnel timer expiry during inter-SGSN RAU procedure.</p> <p><b>Triggers:</b> During inter-SGSN RAU at the old SGSN, neither Cancel Location or SGSN Context Ack are received when t3-tunnel timer is fired causing the RAU procedure to abort. If old RABs are not available, the data queued during the RAU will be dropped.</p> <p><b>Availability:</b> per SGTP service</p>

Field	Description
BVC Reset/Block Rcvd	<p><b>Description:</b> This proprietary statistic indicates the total number of packets that are dropped from the GGSN queue, because of BVC Block or BVC Reset messages received for the MM context.</p> <p><b>Triggers:</b> Increments when a packet is dropped from the GGSN queue because of BVC Reset/BVC Block received for the MM context.</p> <p><b>Availability:</b> per SGTP service</p>
Total Bytes Rcvd	
Total Bytes from SGSN	Total number of bytes for GTP-U messages received from GGSN.
Bytes queued	Total number of bytes queued for GTP-U messages from GGSN.
Bytes forward from queue	<p><b>Description:</b> This proprietary statistic indicates the total number of bytes that are forwarded from the GGSN queue.</p> <p><b>Triggers:</b> Increments when a byte is forwarded from the GGSN queue.</p> <p><b>Availability:</b> per SGTP service</p>
Bytes dropped	Total number of bytes dropped for GTP-U messages from GGSN.
Queue Full	Total number of bytes dropped due to queued buffer limit full for GTP-U messages from GGSN.
Ctxt Preserved	Total number of GTP bytes from GGSN dropped in preserved context.
Unknown session	Total number of GTP bytes from GGSN dropped in unknown session.
Pkts when dp suspended	<p><b>Description:</b> This proprietary statistic indicates the total number of bytes dropped because of DP session in suspended state.</p> <p><b>Triggers:</b> Increments when a DP session has deactivation initiated or path failure is detected for the PDP context.</p> <p><b>Availability:</b> per SGTP service</p>
Sess Dealloc started	Total number of GTP bytes from peer GGSN received during session deallocation procedure.
Paging Failure	Total number of GTP bytes dropped due to paging failure when there was downlink data from GGSN.
Seq Num Not Pres(V0)	Total number of bytes from GGSN dropped as GTP-Uv0 messages received with sequence number flag set to false.
Unknown version	Total number of GTP-U bytes received from GGSN with unknown GTP version.
Invalid msg length	Total number of GTP bytes from GGSN dropped as GTP-U messages received with invalid message length.
Traffic Policing	Total number of GTP-U bytes received from GGSN under subscriber traffic policing support.

Field	Description
Iu Release	<p><b>Description:</b> Total number of downlink bytes that were queued but dropped due to IU/RAB release.</p> <p><b>Triggers:</b> Counter at the new SGSN increments when Iu/RAB gets released while inter-SGSN-RAU is in progress and downlink data is queued during RAU.</p> <p><b>Availability:</b> per SGTP service</p>
T3-tunnel Timer expiry	<p><b>Description:</b> Total number of downlink bytes that were queued but dropped due to T3-tunnel timer expiry during inter-SGSN RAU procedure.</p> <p><b>Triggers:</b> During inter-SGSN RAU at the old SGSN, neither Cancel Location or SGSN Context Ack are received when t3-tunnel timer is fired causing the RAU procedure to abort. If old RABs are not available, the data queued during the RAU will be dropped.</p> <p><b>Availability:</b> per SGTP service</p>
BVC Reset/Block Rcvd	<p><b>Description:</b> This proprietary statistic indicates the total number of bytes that are dropped from the GGSN queue, because of BVC Block or BVC Reset messages received for the MM context.</p> <p><b>Triggers:</b> Increments when a byte is dropped from the GGSN queue because of BVC Reset/BVC Block received for the MM context.</p> <p><b>Availability:</b> per SGTP service</p>
Total Error Ind Sent	Indicates the total number of error indication messages sent to GGSN.
Sent to GGSN	<p><b>Description:</b> This proprietary counter indicates the total number of GTP-U (v1 and v0) messages sent to GGSN with error indication.</p> <p><b>Triggers:</b> Increments when SGSN receives data packet from GGSN and no PDP context exists for this data packet on SGSN. In this case, SGSN sends error indications to GGSN.</p> <p><b>Availability:</b> per GGSN</p>
Sent to RNC	<p><b>Description:</b> This proprietary counter indicates the total number of GTP-U (v1 and v0) messages sent to RNC with error indication.</p> <p><b>Triggers:</b> Increments when SGSN receives data packet from RNC and no PDP context exists for this data packet on SGSN. In this case, SGSN sends error indications to RNC.</p> <p><b>Availability:</b> per RNC</p>
Total Error Ind Rcvd	Indicates the total number of error indication messages received by SGSN.
Rcvd from GGSN	<p><b>Description:</b> This proprietary counter indicates the total number of GTP-U (v1 and v0) messages received by SGSN from GGSN with error indication.</p> <p><b>Triggers:</b> Increments when SGSN receives error indication messages from GGSN.</p> <p><b>Availability:</b> per GGSN</p>

Field	Description
Rcvd from RNC	<p><b>Description:</b> This proprietary counter indicates the total number of GTP-U (v1 and v0) messages received by SGSN from RNC with error indication.</p> <p><b>Triggers:</b> Increments when SGSN receives error indication messages from RNC.</p> <p><b>Availability:</b> per RNC</p>
Rcvd from GGSN through RNC	<p><b>Description:</b> This proprietary counter indicates the total number of error indication messages from GGSN.</p> <p>If direct tunnel is enabled, data flows between RNC and GGSN. When the RNC receives GTPU-PDU from the GGSN for which no RAB context exists, RNC discards GTPU-PDU and returns error indication to GGSN. In order to notify SGSN, GGSN sends UPC request with EI Flag to SGSN.</p> <p><b>Triggers:</b> Increments when SGSN receives error indication messages from GGSN through RNC.</p> <p><b>Availability:</b> per GGSN</p>
Rcvd from RNC through GGSN	<p><b>Description:</b> This proprietary counter indicates the total number of error indication messages from RNC.</p> <p>If direct tunnel is enabled, data flows between RNC and GGSN. GGSN sends Error indication to RNC, and in order to notify SGSN, RNC sends RAB Release Request with the error cause 'GTP Resources Unavailable'.</p> <p><b>Triggers:</b> Increments when SGSN receives error indication messages from GGSN through RNC. This is when SGSN receives (Error indication message) Update PDP Context request with EI (Error Indication) flag from GGSN.</p> <p><b>Availability:</b> per RNC</p>

# CHAPTER 134

## show sgw

This chapter describes the output of the **show sgw** command.

- [show sgw-service all](#), on page 1955
- [show sgw-service name](#), on page 1957
- [show sgw-service statistics all verbose](#), on page 1957
- [show sgw-service statistics all](#), on page 1972

## show sgw-service all

Displays configuration information for all S-GW services configured on the system.

**Table 558: show sgw-service all Command Output Descriptions**

Field	Description
Service name	The name of the S-GW service.
Service-ID	The system generated identification number of the service.
Context	The context name where the service is located.
Accounting context	The context where the accounting configuration and or interfaces are configured.
Accounting mode	The accounting mode to be used for the S-GW service – GTTP (default), RADIUS/Diameter or none.
Status	The status of the service.
Egress Protocol	The egress protocol, such as "gtp-pmip"
Ingress EGTP service	The ingress eGTP service configured for this S-GW service.
Egress context	The egress context configured for this service.
Egress EGTP service	The egress eGTP service configured for this S-GW service.
Egress MAG service	The egress Mobile Access Gateway (MAG) service configured for this service.
IMS auth. service	The IMS authorization (IMSA) service used by this service for IMS subscribers.

Field	Description
Accounting policy	The name of the operator policy associated with accounting for this service.
Newcall policy	The newcall policy configured for this service.
S-GW Interface Excluded	Excludes the specified interface.
QCI-QoS mapping table	The QoS Class Index to QoS mapping table configured for use with this service.
GTPC Path Failure Handling	
S11-Interface	<b>local-purge:</b> The S-GW clears the affected bearer (or PDN if the path failure is received on a default bearer) locally without informing the peers. This is the default action for all interfaces.
S5-Interface	
S1U-Interface	<b>signal-peer:</b> The S-GW initiates control signalling towards the peer MME and P-GW.
S5U-Interface	
S4U-Interface	
S12-Interface	
GTPU Error Indication Handling	
S1U-Interface	<b>local-purge:</b> The S-GW clears the affected bearer (or PDN if the error indication is received on the default bearer) locally without informing the peers.
S5U-Interface	
S12-Interface	<b>page-ue:</b> The S-GW moves the complete UE state to S1-Idle and starts paging for this UE. This is the default action for GTP-U error indication messages received on the S12 and S1-U interfaces.
S4U-Interface	
Idle timeout	Indicates the time, in seconds configured for the SGW Session Idle Timer. Once configured, the Session Idle Timer will tear down those sessions that remain idle for longer than the configured time limit.
Idle timeout micro checkpoint periodicity	If configured, shows the ICSR micro checkpoint periodicity for idlesecs. This way the operators can configure this setting to a large value to suit their need to reduce the number of micro checkpoints on the srp link. If not configured, the default value Idle timeout of 10 seconds is used.
PLMN ID List	List of Public Land Mobile Network (PLMN) identifiers associated with the operator policy for this service.  A PLMN ID consists of the Mobile Country Code (MCC) + Mobile network Code (MCC).
Subscriber Map Name	Name of the subscriber map associated with the operator policy for this service.
GTP-C Load Control Profile	Shows the name of the R12 Load Support profile, if configured.
GTP-C Overload Control Profile	Shows the name of the R12 Overload Support profile, if configured.

## show sgw-service name

Displays configuration information for S-GW services configured on the system.

*Table 559: show sgw-service name Command Output Descriptions*

Field	Description
EGTP Ignore ULI IE with SAI/RAI/CGI in Change Notification Req for EUTRAN	Indicates that <b>egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi</b> CLI is enabled or disabled under S-GW services.

## show sgw-service statistics all verbose

*Table 560: show sgw-service statistics all Command Output Descriptions*

Field	Description
<b>Session Level Statistics</b>	
Current	
UE	
Idle	The total number of UE sessions currently idle.
Idle-ISR	The total number of Idle-mode Signaling Reduction UE sessions currently idle.
Active	The total number of UE sessions currently active.
Active-ISR	The total number of Idle-mode Signaling Reduction UE sessions currently active.
PDN	The total number of current PDN sessions.
Home	The total number of current home PDN sessions.
Roaming	The total number of current roaming PDN sessions.
Visiting	The total number of current visiting PDN sessions.
Bearers	The total number of current Bearers.
Ind-Fwd-Tunnels	Indirect forward tunneling: The total number of current tunnels.
Ind-Fwd-Bearers	Indirect forward tunneling: The total number of current bearers.
<b>Traffic Policing</b>	
uplink pkts red	The total number of uplink packets marked red by the trTCM algorithm.
uplink bytes red	The total number of uplink bytes marked red by the trTCM algorithm.
uplink pkts yellow	The total number of uplink packets marked yellow by the trTCM algorithm.

Field	Description
uplink bytes yellow	The total number of uplink bytes marked yellow by the trTCM algorithm.
uplink pkts green	The total number of uplink packets marked green by the trTCM algorithm.
uplink bytes green	The total number of uplink bytes marked green by the trTCM algorithm.
uplink pkts dropped	The total number of uplink packets dropped due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
uplink bytes dropped	The total number of uplink bytes dropped due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
uplink pkts low ip prec	The total number of uplink packets that were transmitted after the IP precedence was lowered due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
uplink bytes low ip prec	The total number of uplink bytes that were transmitted after the IP precedence was lowered due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
uplink pkts transmitted	The total number of uplink packets that were transmitted even after exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
uplink bytes transmitted	The total number of uplink packets that were transmitted even after exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
downlink pkts red	The total number of downlink packets marked red by the trTCM algorithm.
downlink bytes red	The total number of downlink bytes marked red by the trTCM algorithm.
downlink pkts yellow	The total number of downlink packets marked yellow by the trTCM algorithm.
downlink bytes yellow	The total number of downlink bytes marked yellow by the trTCM algorithm.
downlink pkts green	The total number of downlink packets marked green by the trTCM algorithm.
downlink bytes green	The total number of downlink bytes marked green by the trTCM algorithm.
downlink pkts dropped	The total number of downlink packets dropped due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
downlink bytes dropped	The total number of downlink bytes dropped due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
downlink pkts low ip prec	The total number of downlink packets that were transmitted after the IP precedence was lowered due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
downlink bytes low ip prec	The total number of downlink bytes that were transmitted after the IP precedence was lowered due to exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).

Field	Description
downlink pkts transmitted	The total number of downlink packets that were transmitted even after exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
downlink bytes transmitted	The total number of downlink packets that were transmitted even after exceeding or violating the Peak Information Rate (PIR) or the Committed Information Rate (CIR).
<b>Setup</b>	
UE	The total number of UE session set up.
PDN	The total number of PDN sessions set up.
<b>Bearerers</b>	The total number of bearers set up.
<b>PDNs Setup Per PDN-type</b>	
IPv4	The total number of PDN sessions set up using IPv4.
IPv6	The total number of PDN sessions set up using IPv6.
IPv4v6	The total number of PDN sessions set up using IPv4 in IPv6.
<b>PDNs Setup Per Interface</b>	
S11	The total number of PDN sessions set up on an S11 interface.
S4	The total number of PDN sessions set up on an S4 interface.
<b>PDNs Setup Per S5 Proto</b>	
GTP	The total number of PDN sessions set up using GTP tunneling.
PMIP	The total number of PDN sessions set up using PMIP tunneling.
<b>PDNs Released</b>	
IPv4	The total number of PDN sessions released using IPv4.
IPv6	The total number of PDN sessions released using IPv6.
IPv4v6	The total number of PDN sessions released using IPv4 in IPv6.
<b>PDNs Released Reason</b>	
MME Ini	The total number of PDN sessions released - initiated by the MME.
PGW Ini	The total number of PDN sessions released - initiated by the P-GW.
PCRF Ini	The total number of PDN sessions released - initiated by the PCRF.
S4 SGSN Ini	The total number of PDN sessions released - initiated by a Delete Session Request from an S4-SGSN.
Local	The total number of PDN sessions released - initiated locally.

Field	Description
S1 Error Ind	The total number of PDN sessions released due to an S1 interface error.
S5 Error Ind	The total number of PDN sessions released due to an S5 interface error.
Path Failure S11	The total number of PDN sessions released due to an S11 path failure.
Path Failure S1-U	The total number of PDN sessions released due to an S1-U path failure.
Path Failure S5	The total number of PDN sessions released due to an S5 path failure.
Path Failure S5-U	The total number of PDN sessions released due to an S5-U path failure.
Path Failure S4	The total number of PDN sessions released due to an S4 path failure.
Path Failure S4-U	The total number of PDN sessions released due to an S4-U path failure.
Path Failure S12	The total number of PDN sessions released due to an S12 path failure.
Other	The total number of PDN sessions released due to other reasons.
<b>PDNs Rejected</b>	
IPv4	The total number of PDN sessions rejected using IPv4.
IPv6	The total number of PDN sessions rejected using IPv6.
IPv4v6	The total number of PDN sessions rejected using IPv4 in IPv6.
<b>PDNs Rejected Reason</b>	
PGW Ini	The total number of PDN sessions rejected - initiated by the P-GW.
License	The total number of PDN sessions rejected due to license reasons.
Newcall	The total number of PDN sessions rejected due to newcall reasons.
Overload	The total number of PDN sessions rejected due to overload reasons.
Congestion	The total number of PDN sessions rejected due to congestion reasons.
Other	The total number of PDN sessions rejected due to other reasons.
<b>ISR Statistics</b>	
Total ISR Activations	
MME	The total number of ISR activations by an MME.
S4-SGSN	The total number of ISR activations by an S4-SGSN.
Total ISR Deactivations	
MME	The total number of ISR deactivations by an MME.
S4-SGSN	The total number of ISR deactivations by an S4-SGSN.

Field	Description
Call Clear	The total number of ISR deactivations by a call clear.
<b>Bearer Level Statistics</b>	
<b>Total EPS Bearers Setup</b>	
QCI 1 - 9	The total number of EPS bearers set up, with a QoS Class Index.
Non-Std QCI	The total number of EPS bearers set up, with a non-standard QoS Class Index.
<b>Total EPS Bearers Released</b>	
QCI 1 - 9	The total number of EPS bearers released, with a QoS Class Index.
Non-Std QCI	The total number of EPS bearers released, with a non-standard QoS Class Index.
<b>Total EPS Bearers Modified</b>	
QCI 1 - 9	The total number of EPS bearers modified, with a QoS Class Index.
Non-Std QCI	The total number of EPS bearers modified, with a non-standard QoS Class Index.
<b>Dedicated Bearers Released Reason</b>	
PGW Ini	The total number of dedicated bearers released - initiated by the P-GW.
PCRF Ini	The total number of dedicated bearers released - initiated by the PCRF.
S1 Error Ind	The total number of dedicated bearers released due to an S1 interface error.
S5 Error Ind	The total number of dedicated bearers released due to an S5 interface error.
S4-U Error Ind	The total number of dedicated bearers released due to an S4-U interface error.
S12 Error Ind	The total number of dedicated bearers released due to an S12 interface error.
Local	The total number of dedicated bearers released - initiated locally.
PDN Down	The total number of dedicated bearers released due to an inaccessible PDN.
Path Failure S1-U	The total number of dedicated bearers released due to an S1-U path failure.
Path Failure S5-U	The total number of dedicated bearers released due to an S5-U path failure.
Path Failure S4-U	The total number of dedicated bearers released due to an S4-U path failure.
Path Failure S12	The total number of dedicated bearers released due to an S12U path failure.
Other	The total number of dedicated bearers released due to other reasons.
<b>Bearers by QoS characteristics</b>	
Active: QCI n	The number of active QoS bearers with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.

Field	Description
Setup: QCI n	The number of QoS bearers setup with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Released: QCI n	The number of released QoS bearers with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Modified: QCI n	The number of modified QoS bearers with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
<b>Dedicated Bearers Released by Reason</b>	
PGW Ini: QCI n	The number of bearers with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70 that were released due to a P-GW initiated action.
PCRF Ini:	The number of bearers released due to a PCRF initiated action.
Non-Std QCI	The number of bearers released with a non-standard QCI value.
S1 Error Ind: QCI n	The number of bearers released with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70 due to an S1 error indication.
Non-Std QCI	The number of bearers with a non-standard QCI value released due to an S1 error indication.
S5 Error Ind: QCI n	The number of bearers released due to an S5 error indication that had a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non Std QCI	The number of bearers released due to an S5 error indication that had a non-standard QCI value.
S4 Error Ind: QCI n	The number of bearers released due to an S4 error indication that had a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-Std QCI	The number of bearers released due to an S4 error indication that had a non-standard QCI value.
S12 Error Ind: QCI n	The number of bearers released due to an S12 error indication that had a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-std QCI	The number of bearers with a non-standard QCI value released due to an S12 error indication.
Local: QCI n	The number of bearers released due to a local error indication that had a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-std QCI	The number of bearers with a non-standard QCI value released due to a local error indication.
PDN Down: QCI	The number of bearers released due to a PDN down error indication that had a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Non-std QCI	The number of bearers with a non-standard QCI value released due to a PDN down error indication.

Field	Description
Path Failure S1-U: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S1-U path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value that were released due to an S1-U path failure.
Path Failure S5-U: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S5-U path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value that were released due to an S5-U path failure.
Path Failure S5: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S5 path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value that were released due to an S5 path failure.
Path Failure S11: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S11 path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value released due to an S11 path failure.
Path Failure S4-U: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S4-U path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value released due to an S4-U path failure.
Path Failure S12: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an S12 path failure.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value released due to an S12 path failure.
Inactivity Timeout: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due to an inactivity timeout.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value released due to an inactivity timeout.
Other: QCI n	The total number of PDN sessions with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, 70 released due other reasons not specified above.
Non-std QCI	The total number of PDN sessions with a non-standard QCI value released due to other reasons not specified above.
<b>Data Statistics Per Interface</b>	
<b>S1U Total Data Statistics</b>	
Uplink	

Field	Description
Total Pkts	The total number of uplink packets over the S1-U interface.
Total Bytes	The total number of uplink bytes over the S1-U interface.
Dropped Pkts	The total number of dropped uplink packets over the S1-U interface.
Dropped Bytes	The total number of dropped uplink bytes over the S1-U interface.
Pkts QCI n	The total number of uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of uplink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of uplink bytes with a QCI value of 1 through 9 or a QCI value of 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of uplink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped uplink packets with a QoS Class Index.
Dropped Pkts Non-Std QCI	The total number of dropped uplink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped uplink bytes with a non-standard QoS Class Index.
Non-Std QCI	The total number of uplink bytes dropped with a non-standard QoS Class Index.
Downlink	
Pkts	The total number of downlink packets over the S1-U interface.
Bytes	The total number of downlink bytes over the S1-U interface.
Dropped Pkts	The total number of dropped downlink packets over the S1-U interface.
Dropped Bytes	The total number of dropped downlink bytes over the S1-U interface.
Pkts QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of downlink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of downlink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped downlink packets with a non-standard QoS Class Index.

Field	Description
Dropped Bytes QCI n	The total number of dropped downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped downlink bytes with a non-standard QoS Class Index.
<b>S4-U Total Data Statistics</b>	
Uplink	
Pkts	The total number of uplink packets over the S4-U interface.
Bytes	The total number of uplink bytes over the S4-U interface.
Dropped Pkts	The total number of dropped uplink packets over the S4-U interface.
Dropped Bytes	The total number of dropped uplink bytes over the S4-U interface.
Pkts QCI n	The total number of uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of uplink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of uplink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped uplink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped uplink bytes with a non-standard QoS Class Index.
Non-Std QCI	The total number of uplink bytes dropped with a non-standard QoS Class Index.
Downlink	
Pkts	The total number of downlink packets over the S4-U interface.
Bytes	The total number of downlink bytes over the S4-U interface.
Dropped Pkts	The total number of dropped downlink packets over the S4-U interface.
Dropped Bytes	The total number of dropped downlink bytes over the S4-U interface.
Pkts QCI n	The total number of downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of downlink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.

Field	Description
Bytes Non-Std QCI	The total number of downlink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped downlink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped downlink bytes with a non-standard QoS Class Index.
<b>S12 Total Data Statistics</b>	
Uplink	
Pkts	The total number of uplink packets over the S12 interface.
Bytes	The total number of uplink bytes over the S12 interface.
Dropped Pkts	The total number of dropped uplink packets over the S12 interface.
Dropped Bytes	The total number of dropped uplink bytes over the S12 interface.
Pkts QCI n	The total number of uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of uplink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of uplink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped uplink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped uplink bytes with a non-standard QoS Class Index.
Non-Std QCI	The total number of uplink bytes dropped with a non-standard QoS Class Index.
Downlink	
Pkts	The total number of downlink packets over the S12 interface.
Bytes	The total number of downlink bytes over the S12 interface.
Dropped Pkts	The total number of dropped downlink packets over the S12 interface.
Dropped Bytes	The total number of dropped downlink bytes over the S12 interface.

Field	Description
Pkts QCI n	The total number of downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of downlink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of downlink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped downlink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped downlink bytes with a non-standard QoS Class Index.
<b>S5-U Total Data Statistics</b>	
Uplink	
Pkts	The total number of uplink packets over the S5-U interface.
Bytes	The total number of uplink bytes over the S5-U interface.
Dropped Pkts	The total number of dropped uplink packets over the S5-U interface.
Dropped Bytes	The total number of dropped uplink bytes over the S5-U interface.
Pkts QCI n	The total number of uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of uplink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of uplink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped uplink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped uplink bytes with a non-standard QoS Class Index.
Non-Std QCI	The total number of uplink bytes dropped with a non-standard QoS Class Index.
Downlink	

Field	Description
Pkts	The total number of downlink packets over the S5-U interface.
Bytes	The total number of downlink bytes over the S5-U interface.
Dropped Pkts	The total number of dropped downlink packets over the S5-U interface.
Dropped Bytes	The total number of dropped downlink bytes over the S5-U interface.
Pkts QCI n	The total number of downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of downlink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of downlink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped downlink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped downlink bytes with a non-standard QoS Class Index.
<b>S8-U Total Data Statistics</b>	
Uplink	
Pkts	The total number of uplink packets over the S8-U interface.
Bytes	The total number of uplink bytes over the S8-U interface.
Dropped Pkts	The total number of dropped uplink packets over the S8 interface.
Dropped Bytes	The total number of dropped uplink bytes over the S8-U interface.
Pkts QCI n	The total number of uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of uplink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of uplink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped uplink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped uplink packets with a non-standard QoS Class Index.

Field	Description
Dropped Bytes QCI n	The total number of dropped uplink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped uplink bytes with a non-standard QoS Class Index.
Non-Std QCI	The total number of uplink bytes dropped with a non-standard QoS Class Index.
<b>Downlink</b>	
Pkts	The total number of downlink packets over the S8 interface.
Bytes	The total number of downlink bytes over the S8 interface.
Dropped Pkts	The total number of dropped downlink packets over the S8 interface.
Dropped Bytes	The total number of dropped downlink bytes over the S8 interface.
Pkts QCI n	The total number of downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Pkts Non-Std QCI	The total number of downlink packets with a non-standard QoS Class Index.
Bytes QCI n	The total number of downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Bytes Non-Std QCI	The total number of downlink bytes with a non-standard QoS Class Index.
Dropped Pkts QCI n	The total number of dropped downlink packets with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Pkts Non-Std QCI	The total number of dropped downlink packets with a non-standard QoS Class Index.
Dropped Bytes QCI n	The total number of dropped downlink bytes with a QCI value of 1 through 9 or 65, 66, 69, or 70.
Dropped Bytes Non-Std QCI	The total number of dropped downlink bytes with a non-standard QoS Class Index.
<b>Inter-SGW Handover Statistics</b>	
<b>PDNs Incoming</b>	
X2 Based	The total number of incoming X2-based PDNs.
Idle-mode TAU	The total number of incoming PDNs Incoming - Idle-mode TAU
S1 Based	The total number of incoming S1-based PDNs.
PDNs Outgoing	The total number of outgoing PDNs.
<b>Intra-SGW Handover Statistics</b>	
Intra-MME	Intra-MME
Inter-MME	Inter-MME

Field	Description
Intra-SGSN	Intra-SGSN
Inter-SGSN	Inter-SGSN
MME-to-SGSN	MME-to-SGSN
SGSN-to-MME	SGSN-to-MME
<b>Paging Statistics</b>	
Requests	The total number of paging requests.
Success	The total number of paging successes.
Rejects	The total number of paging rejects.
Failures	The total number of paging failures.
Active-Idle Ue Transitions	The total number of Active-Idle UE transitions
Idle-Active Ue Transitions	The total number of Idle-Active UE transitions
<b>Paging Related Data Statistics</b>	
Packets Buffered	The total number of buffered paging packets.
Bytes Buffered	The total number of buffered paging bytes.
Packets Discarded	The total number of discarded paging packets.
Bytes Discarded	The total number of discarded paging bytes.
<b>Idle Mode ACL Statistics</b>	
Packets Discarded	The total number of discarded paging packets due to ACL idle mode.
Bytes Discarded	The total number of discarded paging bytes due to ACL idle mode.
<b>Indirect Forwarding Statistics</b>	
Tunnels Setup	The total number of indirect forwarding tunnels setup.
Tunnels Failed	The total number of failed indirect forwarding tunnels.
Tunnels Released	The total number of indirect forwarding tunnels released.
Bearers Setup	The total number of indirect forwarding bearers setup.
Bearers Released	The total number of indirect forwarding bearers released.
DL Packets Forwarded	The total number of indirect forwarding download packets forwarded.
DL Bytes Forwarded	The total number of indirect forwarding download bytes forwarded.
<b>Source Violations</b>	

Field	Description
Packets Dropped	The total number of packets dropped due to source violations.
Bytes Dropped	The total number of bytes dropped due to source violations.
<b>PDN PLMN Statistics</b>	
Home PDNs	
PDNs active	The total number of home PDNs active.
PDNs setup	The total number of home PDNs setup.
PDNs released	The total number of home PDNs released.
Roaming PDNs	
PDNs active	The total number of roaming PDNs active.
PDNs setup	The total number of roaming PDNs setup.
PDNs released	The total number of roaming PDNs released.
Visiting PDNs	
PDNs active	The total number of visiting PDNs active.
PDNs setup	The total number of visiting PDNs setup.
PDNs released	The total number of visiting PDNs released.
<b>Miscellaneous</b>	
Uplink Data Before MBReq	Uplink data before MBReq
CBReq Rcvd Before CSRsp	CBReq Rcvd before CSRsp
<b>802.1p priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
<b>Priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with an internal QoS priority.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with an internal QoS priority.
<b>Local Call Cleanup Cause Statistics</b>	
Bearer Not in Same State	Total number of EGTPC Assert removals due to the bearer not being in the same state.

Field	Description
Bearer Not In Correct State	Total number of EGTPC Assert removals due to the bearer not being in the correct state.
Duplicate Data TEID	Total number of EGTPC Assert removals due to duplicate data tunnel endpoint identifiers.
Remote Addr Not Compatible	Total number of EGTPC Assert removals due to an incompatible remote address.
Bad Peer	Total number of EGTPC Assert removals due to bad peers.
Bearer Context Missing	Total number of EGTPC Assert removals due to the bearer being missing.
<b>eMPS PDN</b>	
Current Active	
Cumulative Activated	
Cumulative De-activated	
<b>DCNR PDN Statistics</b>	
Active	The total number of current active SGW DCNR PDNs.
Setup	The total number of SGW PDNs that are setup as DCNR PDN.
Released	The total number of SGW DCNR PDNs released.

## show sgw-service statistics all

Identifies the real usage of 5G Data DCNR sessions for S-GW.

**Table 561: show sgw-service statistics all Command Output Descriptions**

Field	Description
DCNR Secondary RAT Data PDN Statistics	

Field	Description
Active	<p>The total number of currently active S-GW DCNR Secondary RAT-Data PDN Sessions.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p> <p>Counter is decremented when the identified DCNR Secondary RAT Data session gets released.</p> <p><b>Note</b> DCNR Secondary RAT Data statistics will be decremented only when the session gets released. There might be also a scenario where DCNR session receives Secondary RAT Data once or twice only and if it is not reported in the subsequent messages from MME / SGW, as per current proposed solution, DCNR Secondary RAT Data statistics will not be decremented till the session is released.</p>
Setup	<p>The total number of cumulative S-GW DCNR Secondary RAT-Data PDN Sessions setup.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p><b>Note</b> Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p>
Released	<p>The total number of cumulative S-GW DCNR Secondary RAT Data PDNs sessions released.</p> <p>Counter is incremented when the DCNR Secondary RAT Data PDN Session release.</p> <p>It is a cumulative counter, so it will not be decremented</p>

# CHAPTER 135

## show sls-service

This chapter includes the **show sls-service** command output tables.

- [show sls-service all](#), on page 1975
- [show sls-service statistics](#), on page 1977

## show sls-service all

*Table 562: show sls-service all Command Output Descriptions*

Field	Description
Service name	The configured SLs service name.
Service id	The system generated identification number of the SLs service.
Context	The name of the context in which SLs service is configured.
Status	Status of this SLs service.
Bind	Indicates whether the service is bound to an interface.: Done or None.
SLs-MME IP Address	The IP address(es) configured for this SLs service.
SCTP Port	The source port number for SCTP communications.
T-3x01 (Low Delay)	The number of seconds configured for the T-3x01 (Low Delay) timer, which defines the number of seconds the MME waits for a "low delay" response from the E-SMLC.
T-3x01 (Delay Tolerant)	The number of seconds configured for the T-3x01 (Delay Tolerant) timer, which defines the number of seconds the MME waits for a "delay tolerant" response from the E-SMLC.
T-3x02	The number of seconds configured for the T-3x02 timer. The T-3x02 timer is started on the MME when the MME sends a RESET REQUEST to the E-SMLC. Once the T3x02 timer expires, the MME can resend the RESET REQUEST to the E-SMLC.

Field	Description
Max Re-Transmission	The configured maximum number of times the MME will resend a RESET REQUEST to the ESMLC.
SCTP Param Template Associated	Displays the name of the SCTP Parameter Template associated with the service. <b>Note:</b> If no SCTP Parameter Template has been associated with this SLs Service, this output field and all the following SCTP fields are not shown.
SCTP Alpha	Displays the SCTP Retransmission Timeout (RTO) alpha value as configured in the SCTP Parameter Template.
SCTP Beta	Displays the SCTP Retransmission Timeout (RTO) beta value as configured in the SCTP Parameter Template.
SCTP Checksum Type	Displays the SCTP checksum type as configured in the SCTP Parameter Template.
SCTP Valid Cookie Lifetime	Displays the SCTP cookie lifetime value as configured in the SCTP Parameter Template.
SCTP Max Assoc Retrans	Displays the maximum number of retransmissions for SCTP associations value as configured in the SCTP Parameter Template.
SCTP Max Number of In Streams	Displays the maximum number of incoming streams for SCTP value as configured in the SCTP Parameter Template.
SCTP Init Retransmissions	Displays the maximum number of retransmissions for SCTP initiations value as configured in the SCTP Parameter Template.
SCTP Max MTU	Displays the maximum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.
SCTP Max Number of Out Streams	Displays the maximum number of outgoing streams for SCTP value as configured in the SCTP Parameter Template.
SCTP Path Retransmissions	Displays the maximum number of retransmissions for SCTP paths value as configured in the SCTP Parameter Template.
SCTP Min MTU	Displays the minimum Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.
SCTP RTO Initial	Displays the initial time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP RTO Max	Displays the maximum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP RTO Min	Displays the minimum time for SCTP Retransmission Timeout (RTO) value as configured in the SCTP Parameter Template.
SCTP Sack Frequency	Displays the frequency for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template.

Field	Description
SCTP Sack Period	Displays the period of time for SCTP Selective Acknowledgement value as configured in the SCTP Parameter Template.
SCTP Start MTU	Displays the initial Maximum Transmission Unit (MTU) size for SCTP value as configured in the SCTP Parameter Template.
SCTP Heartbeat Status	Displays the SCTP heartbeat status as configured in the SCTP Parameter Template.
SCTP HeartBeat Timer	Displays the SCTP heartbeat timer value as configured in the SCTP Parameter Template.
SCTP Bundle Status	Displays the SCTP data chunk bundle status as configured in the SCTP Parameter Template.
SCTP Bundle Timer	Displays the SCTP data chunk bundle timer value as configured in the SCTP Parameter Template.
SCTP Alternate Accept Flag	Displays the SCTP additional lifetime accept flag status as configured in the SCTP Parameter Template.

## show sls-service statistics

*Table 563: show sls-service statistics Command Output Descriptions*

Field	Description
SLS-AP Statistics	
Sent Messages:	
Location Request	The total number of SLS Application Protocol - Location Request messages transmitted.
Location Abort	The total number of SLS Application Protocol - Location Abort messages transmitted.
Connection Info	The total number of SLS Application Protocol - Connection oriented information messages transmitted.
Connectionless Info	The total number of SLS Application Protocol - Non Connection oriented information messages transmitted.
Reset Req	The total number of SLS Application Protocol - Reset messages transmitted.
Reset Ack	The total number of SLS Application Protocol - Reset acknowledgements transmitted.
Received Messages:	

Field	Description
Location Response	The total number of SLs Application Protocol - Location Responses received.
Connection Info	The total number of SLs Application Protocol - Connection oriented information messages received.
Connectionless Info	The total number of SLs Application Protocol - Non Connection oriented information messages received.
Reset Req	The total number of SLs Application Protocol - Reset messages received.
Reset Ack	The total number of SLs Application Protocol - Reset Acknowledgements received.
SCTP Statistics	
Transmitted SCTP Data	This sub-group displays the statistics of the total data processed and transmitted over Stream Control Transmission Protocol (SCTP) interface by the SLs service.
Init Chunks	The total SCTP packets with INIT transmitted by the SLs service.
Init Ack Chunks	The total SCTP packets with INIT-ACK transmitted by the SLs service.
Shutdown Chunks	The total SCTP packets with SHUTDOWN transmitted by the SLs service.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK transmitted by the SLs service.
Cookie Chunks	The total SCTP packets with COOKIE transmitted by the SLs service.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK transmitted by the SLs service.
Data Chunks	The total SCTP packets with DATA transmitted by the SLs service.
Data Ack Chunks	The total SCTP packets with DATA-ACK transmitted by the SLs service.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE transmitted by the SLs service.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT transmitted by the SLs service.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK transmitted by the SLs service.
Abort Chunks	The total SCTP packets with ABORT transmitted by the SLs service.
Error Chunks	The total SCTP packets with ERROR transmitted by the SLs service.
Received SCTP Data	This sub-group displays the statistics of the total data received and processed by the SLs service.

Field	Description
Init Chunks	The total SCTP packets with INIT received by the SLs service.
Init Ack Chunks	The total SCTP packets with INIT-ACK received by the SLs service.
Shutdown Chunks	The total SCTP packets with SHUTDOWN received by the SLs service.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK received by the SLs service.
Cookie Chunks	The total SCTP packets with COOKIE received by the SLs service.
Cookie Ack Chunks	The total SCTP packets with COOKIE-ACK received by the SLs service.
Data Chunks	The total SCTP packets with DATA received by the SLs service.
Data Ack Chunks	The total SCTP packets with DATA-ACK received by the SLs service.
Shutdown Complete Chunks	The total SCTP packets with SHUTDOWN-COMPLETE received by the SLs service.
Heartbeat Chunks	The total SCTP packets with HEARTBEAT received by the SLs service.
HeartBeat Ack Chunks	The total SCTP packets with HEARTBEAT-ACK received by the SLs service.
Abort Chunks	The total SCTP packets with ABORT received by the SLs service.
Error Chunks	The total SCTP packets with ERROR received by the SLs service.
Retransmitted SCTP Data	This sub-group displays the statistics of the total data processed and retransmitted by the SLs service.
Init Chunks	The total SCTP packets with INIT retransmitted by the SLs service.
Shutdown Chunks	The total SCTP packets with SHUTDOWN retransmitted by the SLs service.
Shutdown Ack Chunks	The total SCTP packets with SHUTDOWN-ACK retransmitted by the SLs service.
Cookie Chunks	The total SCTP packets with COOKIE retransmitted by the SLs service.
Data Chunks	The total SCTP packets with DATA transmitted by the SLs service.
Total Bytes Sent	The total number of SCTP bytes transmitted by the SLs service to the eSMLC.
Total Bytes Received	The total number of SCTP bytes received by the SLs service from the eSMLC.
Total Packets Sent	The total number of SCTP packets transmitted by the SLs service to the eSMLC.

Field	Description
Total Packets Received	The total number of SCTP packets received by the SLs service from the eSMLC.

# CHAPTER 136

## show sms statistics

This chapter includes the **show sms statistics** command output tables.

- [show sms statistics gprs only verbose](#), on page 1981
- [show sms statistics mme-only verbose](#), on page 1992
- [show sms statistics name](#), on page 1998
- [show sms statistics sgsn-only verbose](#), on page 2003
- [show sms statistics verbose](#), on page 2014

## show sms statistics gprs only verbose

*Table 564: show subscribers sms statistics gprs only verbose Command Output Descriptions*

Field	Description
Session Statistics	Session statistics includes parameters related to SMS session between the MS and network. It includes parameters such as: <ul style="list-style-type: none"><li>• MO SMS (in progress)</li><li>• MT SMS (in progress)</li><li>• MT SMS (in queue)</li><li>• SMMA (in progress)</li><li>• MO SMS (Attempted)</li><li>• MT SMS (Attempted)</li><li>• SMMA (Attempted)</li><li>• MO SMS (successful)</li><li>• MT SMS (successful)</li><li>• SMMA (successful)</li></ul>
MO SMS (In Progress)	Total number SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being received by network.

Field	Description
MT SMS (In Progress)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being delivered by network.
MT SMS (In Queue)	Total number of SMS messages that are mobile Terminated i.e. being sent to UE or MS and are in queue for being delivered by the network.
SMMA (In Progress)	Total number of SMMA messages in progress for the reception by the network. An SMMA message is used by the MS to indicate the network about availability of the memory in MS, to receive one or more short messages.
MO SMS (Attempted)	Total number of SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being attempted to be received by the network.
MO SMS (Successful)	Total number of SMS messages that are Mobile Originated (MO) i.e. being sent to the network by UE or MS and are successfully received by the network.
MT SMS (Attempted)	Total number of SMS messages that are Mobile Terminated i.e. being sent to a UE or MS and are being attempted to be delivered by the network.
MT SMS (Successful)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are successfully delivered by the network.
SMMA (Attempted)	Total number of SMMA messages that the network has attempted to receive. An SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
SMMA (Successful)	Total number of SMMA messages that are successfully received by the network. An SMMA message is used by the MS to indicate the network about the availability of the memory in MS to receive one or more short messages.
Message Statistics	<p>Specifies received and transmitted data, acknowledgement and error messages between the MS and network for RP as well as CP layers along with the message drop counters. Message statistics includes, parameters related to:</p> <ul style="list-style-type: none"> <li>• CP layer messages</li> <li>• RP layer messages</li> <li>• Message drop counters</li> </ul>

Field	Description
CP Layer Messages	<p>Short Message Service Control Protocol (SM –CP) is used for communication by the SMC entities from MS and network. Following are components of CP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>CP Data:</b> This message is sent between an MS and MSC in both directions. It contains the user data to be relayed between CM – users and associated parameters such as protocol discriminator, transaction identifier, message type and CP user data.</li> <li>• <b>CP Ack:</b> This message is sent between MS and MSC in both directions and is used to acknowledge the reception of a CP-Data message. It contains protocol discriminator, transaction identifier and message type.</li> <li>• <b>CP Error:</b> This message is sent between an MS and MSC in both directions and is used to convey the error information. It contains protocol discriminator, transaction identifier, message type and CP cause.</li> </ul>
CP Data (Tx)	Total number of transmitted CP data messages.
CP Ack (Tx)	Total number of transmitted CP acknowledgement messages.
CP Error (Tx)	Total number of transmitted CP error messages.
CP Data (Rx)	Total number of received CP data messages.
CP Ack (Rx)	Total number of received CP acknowledgement messages.
CP Error (Rx)	Total number of received CP error messages.
CP Error Cause Stats	<p>The CP error message conveys error information that is sent between MS and network in <b>both</b> directions. The message contains protocol discriminator, transaction identifier, message type and CP cause. CP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Network failure</li> <li>• Congestion</li> <li>• Inlaid sematic</li> <li>• Invalid mandatory information</li> <li>• Invalid message type</li> <li>• Invalid protocol state</li> <li>• Invalid IE</li> <li>• Protocol error</li> <li>• Unidentified cause</li> </ul>
Network Failure (Tx)	Total number of errors caused due to network failure while transmitting the message.
Congestion (Tx)	Total number of errors caused due to congestion while transmitting the message.
Inlaid Sematic (Tx)	Total number of errors caused due to invalid sematic while transmitting the message.

Field	Description
Invalid Mandatory Info (Tx)	Total number of errors caused due to invalid mandatory information while transmitting the message.
Invalid Message Type(Tx)	Total number of errors caused due to invalid schematic while transmitting the message.
Invalid Protocol State(Tx)	Total number of errors caused due to invalid protocol state while transmitting the message.
Invalid IE (Tx)	Total number of errors caused due to invalid Information Element (IE) while transmitting the message.
Protocol Error (Tx)	Total number of errors caused due to protocol error or mismatched protocols while transmitting the message.
Undefined Cause (Tx)	Total number of errors caused due to unknown or undefined causes while transmitting the message.
Network Failure (Rx)	Total number of errors caused due to network media failure while receiving the message.
Congestion (Rx)	Total number of errors caused due to congestion while receiving the message.
Inlaid Sematic (Rx)	Total number of errors caused due to invalid message sematic while receiving the message.
Invalid Mandatory Info (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message.
Invalid Message Type(Rx)	Total number of errors caused due to invalid message type while receiving the message.
Invalid Protocol State(Rx)	Total number of errors caused due to invalid protocol state while receiving the message.
Invalid IE (Rx)	Total number of errors caused due to invalid Information Element (IE) while receiving the message.
Protocol Error (Rx)	Total number of errors caused due to protocol error while receiving the message the message.
Undefined Cause (Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message.
Memory Capacity Exceeded (Rx)	Total number of errors caused due to lack of storage capacity in the MS while receiving the message.
Invalid Reference Number (Tx)	Total number of errors caused due to wrong or non-existent reference number while transmitting the message.
Invalid Semantic (Tx)	Total number of errors caused due to wrong or non-existent semantic information while transmitting the message.
Invalid Mandatory Info (Tx)	Total number of errors caused due to non-semantic mandatory information while transmitting the message.
Invalid Message Type (Tx)	Total number of errors caused due to non-existent or non-implemented message type while transmitting the message.

Field	Description
Invalid Protocol State (Tx)	Total number of errors caused due to wrong or non-implemented protocol state used while transmitting the message.
Invalid IE (Tx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while transmitting the message.
Protocol Error (Tx)	Total number of errors caused due to wrong or non-implemented protocol used while transmitting the message.
Invalid Reference Number (Rx)	total number of errors caused due to wrong or non-existent reference number while receiving the message.
Invalid Semantic (Rx)	Total number of errors caused due to wrong or non-existent semantic information while receiving the message.
Invalid Mandatory Info (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message.
Invalid Message Type (Rx)	Total number of errors caused due to non-existent or non-implemented message type while receiving the message.
Invalid Protocol State (Rx)	Total number of errors caused due to wrong or non-implemented protocol state used while receiving the message.
Invalid IE (Rx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while receiving the message.
Protocol Error (Rx)	Total number of errors caused due to wrong or non-implemented protocol used while receiving the message.
Undefined Error(Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message.
Message Drop Counters	Message drop counter for CP layer comprises number of CP layer messages that were dropped by the MS or network. The message drop counters are categorized as: <ul style="list-style-type: none"> <li>• CP Data</li> <li>• CP Ack</li> <li>• CP Error</li> </ul>
CP Data	Total number of CP data messages that were dropped.
Retransmission Drops	Total number of CP data re-transmission messages that were dropped.

Field	Description
Unknown TID Drops	<p>Tunnel Identifier TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of messages dropped due to unknown TID.</p>
CP Ack	Total number of CP acknowledgement messages that were dropped.
CP Error	Total number of CP error messages that were dropped.
CP Error Drop for Invalid TID Received	<p>Tunnel Identifier TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of CP error messages that were dropped due to reception of wrong or non-existent Transaction Identifier.</p>
RP Layer Messages	<p>Short Message Relay Protocol (SM-RP), that is used for communication between the SMR entities from MS and network. Following are the components of RP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>RP Data:</b> This message is sent between MS and the MSC in both directions. It contains message type, message reference, originator address, destination address along with the user data.</li> <li>• <b>RP Ack:</b> This message sent between the MS and MSC in both directions. This message is used to relay the acknowledgement of received RP- data or RP-SMMA messages. It contains message type, message reference and user data.</li> <li>• <b>RP –Error :</b> This message is sent between the MS and the MSC in both directions and is used to relay the cause of erroneous short message or notification transfer attempt. It contains message type, message reference, and cause and user data.</li> </ul>
RP Data (Tx)	Total number of transmitted RP data messages.
RP AcK (Tx)	Total number of transmitted RP acknowledge messages.
RP Error (Tx)	Total number of transmitted RP error messages.

Field	Description
RP Data (Rx)	Total number of received RP data messages.
RP AcK (Rx)	Total number of received RP acknowledgement messages.
RP Error (Rx)	Total number of received RP error messages.
RP SMMA (Rx)	Total number of received RP SMMA messages.
RP Error Cause Statistics	<p>The RP error message conveys the information that is sent between MS and the MSC in both directions. An RP error message comprises message type, message reference, and cause and user data. RP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Unsigned number</li> <li>• Operator determined barring</li> <li>• Call barred</li> <li>• Reserved</li> <li>• SM transfer rejected</li> <li>• Destination out of order</li> <li>• Unidentified subscriber</li> <li>• Facility rejected</li> <li>• Unknown subscriber</li> <li>• Network out of order</li> <li>• Temporary failure</li> <li>• Congestion</li> <li>• Not subscribed</li> <li>• Not implemented</li> <li>• Interworking error</li> <li>• Resource unavailable</li> </ul>
Unassigned Number (Tx)	Total number of errors caused due to un-signed or un-known number while transmitting the message from MS to network.
Operator Determined Barring (Tx)	Total number of errors caused due to operator determined barring while transmitting the message from MS to network.
Call Barred (Tx)	Total number of errors caused due to calls barred while transmitting the message from MS to network.
Reserved (Tx)	Total number or errors caused due to calls reserved while transmitting the message from MS to network.

Field	Description
SM Transfer Rejected (Tx)	Total number of errors caused to Short Message (SM) transfer rejection while transmitting the message from MS to network.
Destination Out of Order (Tx)	Total number of errors caused due to destination out of order while transmitting the message from MS to network.
Unidentified Subscriber (Tx)	Total number of errors caused due to unidentified subscriber while transmitting the message form MS to network.
Facility Rejected (Tx)	Total number of errors caused due to rejection of the facility while transmitting the message from MS to network.
Unknown Subscriber (Tx)	Total number of errors caused due to un-known subscriber while transmitting the message from MS to network.
Network Out of Order (Tx)	Total number of errors caused due to un-arability of the network while transmitting the message from MS to network.
Temporary Failure (Tx)	Total number of errors caused due to temporary failure of the network while transmitting the message from MS to network.
Congestion (Tx)	Total number of errors caused due to congestion in the network while transmitting the message from MS to network.
Not Subscribed (Tx)	Total number of errors caused due to the status as not subscribed while transmitting the message from MS to network.
Not Implemented (Tx)	Total number of errors caused due to non-implementation while transmitting the message from MS to network.
Interworking Error (Tx)	<p>Network interworking is required when for the service execution, a packet domain PLMN works with any other network.The interworking takes place mostly using Gi and Gp interfaces.</p> <p>Total number of errors caused due to interworking errors while transmitting the message from MS to network.</p>
Resource Un-available (Tx)	Total number of errors caused due to un availability of the resource while transmitting the message from MS to network.
Message Drop Counters	<p>Number of RP layer messages that were dropped by the MS or network. The message drop counters are categorized as:</p> <ul style="list-style-type: none"> <li>• RP Data</li> <li>• RP Ack</li> <li>• RP Error</li> <li>• RP Decode Failure</li> </ul>
RP Data	Total number of RP data messages that were dropped.
RP Ack	Total number of RP acknowledgement messages that were dropped.

Field	Description
RP Error	Total number of RP error messages that were dropped.
RP Decode Failures	Total number of RP decode failure messages that were dropped.
General Statistics	<p>General statistical parameters related to SMS. Along with GMM interaction statistics parameters, It includes:</p> <ul style="list-style-type: none"> <li>• Concatenated MO SMS</li> <li>• CP Timer Expiry</li> <li>• TR1N Timer</li> <li>• TR2N Timer</li> <li>• CP Data Retransmissions</li> <li>• RP Msg Encode Fail</li> <li>• CP Data Tx Fail</li> <li>• CP Data Inv TID</li> <li>• Max Retransmissions Reached</li> <li>• SMSC Addr Restricted</li> <li>• MO SMSC Addr Restricted</li> <li>• MT SMSC Addr Restricted</li> <li>• CP-DATA No Cp Ack Rx</li> </ul>
Concatenated MO SMS	Concatenated MO SMS specifies that the SMC has received the data (CP-Data) as well as associated acknowledgement (CP-Ack) messages. This parameter indicates the number of SMCs in such state.
TR1N timer	<p>Specifies current status of TR1N timer.</p> <p>TR1N is a timer for Point to Point Short SMS Service (POPSMS). The timer is associated with the wait for RP acknowledgement message. Refer 3GPP TS 4.011 and 0.12 for more information.</p>
TR2N Timer	<p>Specifies current status of TR2N timer.</p> <p>TR2N timer is a timer for Point to Point Short Message Service (PPSMS). The timer is associated with wait to send for RP acknowledgment message. Refer 3GPP 4.0.11 and 0.12 for more information.</p>
CP Data Retransmissions	Total number of Control Protocol data (CP-Data) messages that were re-transmitted between MS and network.
RP Message Encode Fail	Total number of messages with failed Short Message Rely Protocol (SM RP) encoding.

Field	Description
CP Data Inv TID	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol (CP) message is composed of</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of errors due to invalid transaction identifier.</p>
Max Retransmissions Reached	Total number of messages that have completed the maximum allowed retransmission attempts.
SMSC Addr Restricted	Total number of restricted Short Message Service Center (SMSC) addresses.
MO SMSC Addr Restricted	Total number of SMSC address restricted for the Mobile Originated (MO) messages, i.e. the messages that are being sent from MS to network.
MT SMSC Addr Restr.	Total number of SMSC address restricted for the Mobile Terminated(MT) messages, i.e. the messages that are being sent from network to MS.
GMM Interaction Stats	<p>GMM interaction statistics comprises GPRS Mobility Management (GMM) entities in the network. IT can be used to track the subscriber location within the current or other PLMN. It includes:</p> <ul style="list-style-type: none"> <li>• Page Request Sent</li> <li>• Page Response Successful</li> <li>• Page Response Fail</li> <li>• Release Indication</li> </ul>
Page Request Sent	The paging function is used by the network to retrieve the current cell information from an MS that is in the power saving mode. This is the total number of page requests sent by the network.
Page Response Successful.	Total number of success full responses, received by the network for the paging requests that were sent to the mobile stations in power saving mode.
Page Response Fail	Total number of response failures, received by the network for the paging requests that were sent to mobile stations in power saving mode.
Release Indication	<p>GMM allows packet service continuity when the MS moves from one GPRS Location Area (LA) to another. MS as well as the network can use the IMSI detach procedure to remove the Mobility Management (MM) context when it is not required.</p> <p>These are the number of release indications transmitted between MS and network.</p>

Field	Description
Release Indication Waiting (MO)	These are number of release indications waiting to be delivered for MO messages such as: <ul style="list-style-type: none"> <li>• MO CP Ack</li> <li>• MO CP Data</li> <li>• MO CP ERR</li> </ul>
MO CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol acknowledgement messages that are being delivered.
MO CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol data messages that are being delivered.
MO CP ERR Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol error messages that are being delivered.
Release Indication Waiting (MT)	These are total number of release indications waiting to be delivered for MT messages such as: <ul style="list-style-type: none"> <li>• MT GMM Connection</li> <li>• MT CP Data</li> <li>• MT CP Ack</li> <li>• MT CP ERR</li> </ul>
MT GMM Connection	Total number of release indications waiting to be transferred between the network and MS for mobile terminated GPRS mobility management connections.
MT CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol data messages that are being delivered.
MT CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol acknowledgement messages that are being delivered.
MT CP Err Delivery	Total number of release indications waiting to be transferred between the network and MS for mobile terminated control protocol error messages that are being delivered.
MT- SMS Failures	Mobile terminated SM S failure statistics specifies total number of SMS messages that failed to reach designated MS. The failure reasons can be: <ul style="list-style-type: none"> <li>• IMSI record not found</li> <li>• Busy subscriber</li> <li>• Detached subscriber</li> <li>• MT queue full</li> </ul>

Field	Description
IMSI Record not Found	Total number of SMS messages that failed to reach the MS due to unavailability of International Mobile Subscriber Identity record.
Busy Subscriber	Total number of SMS messages that failed to reach the MS due to busy status of the subscriber.
Detached Subscriber	Total number of SMS messages that failed to reach MS because the intended subscriber was detached.
MT Queue Full	Total number of SMS messages that failed to reach MS because the MT message queue was full.

## show sms statistics mme-only verbose

Table 565: show sms statistics mme-only verbose Command Output Descriptions

Field	Description
Session Statistics:	
MO SMS (In Progress)	The total number of mobile originated (MO) SMS messages that are waiting in the MME to be delivered.
MT SMS (In Progress)	The total number of mobile terminated (MT) SMS messages that are waiting in the MME to be delivered.
MT SMS (In Queue)	The total number of mobile terminated SMS messages in the queue.
SMMA (In Progress)	The total number of procedures for retrieval of available SMS memory in progress.
MO-SMS Attempted	The total number of mobile originated SMS messages that are attempted to be delivered by the network.
MO-SMS Successful	The total number of mobile originated SMS messages that are successfully delivered by the network.
MT-SMS Attempted	The total number of mobile terminated SMS messages that are attempted to be delivered by the network.
MT-SMS Successful	The total number of mobile terminated SMS messages that are successfully delivered by the network.
SMMA Attempted	The total number of procedures for retrieval of available SMS memory attempted.
SMMA Successful	The total number of procedures for retrieval of available SMS memory successful.
Message Statistics:	
CP Layer Messages:	
CP Data (Tx)	The total number of protocol data units sent during connection setup.

Field	Description
CP Data (Rx)	The total number of protocol data units received during connection setup.
CP Ack (Tx)	The total number of Ack messages sent during connection setup.
CP Ack (Rx)	The total number of Ack messages received during connection setup.
CP Error (Tx)	The total number of protocol errors during connection setup in Tx message.
CP Error (Rx)	The total number of protocol errors during connection setup in Rx message.
CP Error Cause Stats:	
Network Failure (Tx)	The total number of protocol errors during connection setup due to network failure in Tx message.
Congestion (Tx)	The total number of protocol errors during connection setup due to congestion in Tx message.
Invalid TID (Tx)	The total number of protocol errors during connection setup due to invalid transaction ID (TID) in Tx message.
Invalid Semantic (Tx)	The total number of protocol errors during connection setup due to invalid semantics in Tx message.
Invalid Mand Info (Tx)	The total number of protocol errors during connection setup as mandatory information in Tx message is invalid.
Invalid Msg Type (Tx)	The total number of protocol errors during connection setup due to invalid Tx message type.
Invalid Prot State (Tx)	The total number of protocol errors during connection setup as protocol state in Tx message is invalid.
Invalid IE (Tx)	The total number of protocol errors during connection setup as information element in Tx message is invalid.
Protocol Error (Tx)	The total number of protocol errors during connection setup as protocol error in Tx message.
Undefined Cause (Tx)	The total number of protocol errors during connection setup due to unspecified error in Tx message.
Network Failure (Rx)	The total number of protocol errors during connection setup due to network failure in Rx message.
Congestion (Rx)	The total number of protocol errors during connection setup due to congestion in Rx message.
Invalid TID (Rx)	The total number of protocol errors during connection setup due to invalid transaction ID (TID) in Rx message.
Invalid Semantic (Rx)	The total number of protocol errors during connection setup due to invalid semantics in Rx message.

Field	Description
Invalid Mand Info (Rx)	The total number of protocol errors during connection setup as mandatory information in Rx message is invalid.
Invalid Msg Type (Rx)	The total number of protocol errors during connection setup due to invalid Rx message type.
Invalid Prot State (Rx)	The total number of protocol errors during connection setup as protocol state in Rx message is invalid.
Invalid IE (Rx)	The total number of protocol errors during connection setup as information element in Rx message is invalid.
Protocol Error (Rx)	The total number of protocol errors during connection setup as protocol error in Rx message.
Undefined Cause (Rx)	The total number of protocol errors during connection setup due to unspecified error in Rx message.
Message Drop Counters:	
CP Data	The total number of CP data packets dropped during connection setup.
Retransmission Drops	The total number of data packets dropped during retransmission.
Unknown TID Drops	The total number of data packets dropped during connection setup due to unknown transaction ID (TID).
Invalid TID Drops	The total number of data packets dropped during connection setup due to invalid transaction ID (TID) received.
CP Ack	The total number of CP acknowledgement messages dropped during connection setup.
CP-ACK Drop for Invalid TID Rcvd	The total number of CP-Ack messages dropped during connection setup due to invalid transaction ID (TID) received.
CP Error	The total number of CP data packets dropped during connection setup due to error in connection.
CP-ERR Drop for Invalid TID Rcvd	The total number of CP-ERR messages dropped during connection setup due to invalid transaction ID (TID) received.
RP Layer Messages:	
RP Data (Tx)	The total number of protocol data units sent during message relay.
RP Ack (Tx)	The total number of Ack messages sent during message relay.
RP Error (Tx)	The total number of protocol errors during message relay in Tx message.
RP Data (Rx)	The total number of protocol data units received during message relay.
RP Ack (Rx)	The total number of Ack messages received during message relay.
RP Error (Rx)	The total number of protocol errors during message relay in Rx message.

Field	Description
RP SMMA (Rx)	The total number of RP SMMA messages received.
RP Error Cause Stats:	
Unassigned Number (Tx)	The total number of protocol errors sent during message relay due to unassigned protocol number.
Opr. Determined Barring (Tx)	The total number of protocol errors sent during message relay due to operator determined barring.
Call Barred (Tx)	The total number of protocol errors sent during message relay due to call barring.
Reserved (Tx)	The total number of protocol errors sent during message relay due to reserved resources.
SM Transfer Rejected (Tx)	The total number of protocol errors sent during message relay due to session manager transfer rejection.
Destination Out of Order (Tx)	The total number of protocol errors sent during message relay due to out of order on destination.
Unidentified Subscriber (Tx)	The total number of protocol errors sent during message relay due to unidentified subscriber.
Facility Rejected (Tx)	The total number of protocol errors sent during message relay due to facility rejection.
Unknown Subscriber (Tx)	The total number of protocol errors sent during message relay due to unknown subscriber.
Network Out of Order (Tx)	The total number of protocol errors sent during message relay due to out-of-order network.
Temporary Failure (Tx)	The total number of protocol errors sent during message relay due to temporary failure in network.
Congestion (Tx)	The total number of protocol errors sent during message relay due to congestion in network.
Not Subscribed (Tx)	The total number of protocol errors sent during message relay as this service is not subscribed by subscriber.
Not Implemented (Tx)	The total number of protocol errors sent during message relay as this service is not yet implemented.
Interworking Error (Tx)	The total number of protocol errors sent during message relay due to interworking error between two networks or technology.
Resource Un-available (Tx)	The total number of protocol errors sent during message relay as resources are not available.
Memory Capacity Exceeded (Rx)	The total number of protocol errors received during message relay as capacity is exceeded.
Invalid Reference Number (Tx)	The total number of protocol errors during message relay as invalid reference in Tx message.
Invalid Semantic (Tx)	The total number of protocol errors during message relay due to invalid semantics in Tx message.

Field	Description
Invalid Mandatory Info (Tx)	The total number of protocol errors during message relay as mandatory information in Tx message is invalid.
Invalid Message Type (Tx)	The total number of protocol errors during message relay due to invalid Tx message type.
Invalid Protocol State (Tx)	The total number of protocol errors during message relay as protocol state in Tx message is invalid.
Invalid IE (Tx)	The total number of protocol errors during message relay as information element in Tx message is invalid.
Protocol Error (Tx)	The total number of RP ERROR messages sent with the cause Protocol Error in the message header.
Undefined Error (Tx)	The total number of protocol errors during message relay due to unspecified error in Tx message.
Invalid Reference Number (Rx)	The total number of protocol errors during message relay as invalid reference in Rx message.
Invalid Semantic (Rx)	The total number of protocol errors during message relay due to invalid semantics in Rx message.
Invalid Mandatory Info (Rx)	The total number of protocol errors during message relay as mandatory information in Rx message is invalid.
Invalid Message Type (Rx)	The total number of protocol errors during message relay due to invalid Rx message type.
Invalid Protocol State (Rx)	The total number of protocol errors during message relay as protocol state in Rx message is invalid.
Invalid IE (Rx)	The total number of protocol errors during message relay as information element in Rx message is invalid.
Protocol Error (Rx)	The total number of RP ERROR messages received with the cause Protocol Error in the message header.
Undefined Error (Rx)	The total number of protocol errors during message relay due to unspecified error in Rx message.
Message Drop Counters:	
RP Data	The total number of RP data packets dropped during message relay.
RP Ack	The total number of RP acknowledgement messages dropped during message relay.
RP Error	The total number of RP data packets dropped during message relay due to error in connection.
RP Decode Failures	The total number of messages dropped during message relay due to invalid transaction ID (TID) received.

Field	Description
General Statistics:	
Concatenated MO SMS	The total number of concatenated mobile originated SMS messages.
CP Timer Expiry	The total number of events when timer expired during connection setup.
TR1N timer	The total number of events when TR1N timer expired during mobile terminated SMS is in wait state for RP-ACK.
TR2N Timer	The total number of events when TR2N timer expired during mobile terminated SMS is in wait state to send RP-ACK.
CP Data Retrans	The total number of protocol data units retransmitted during connection setup.
RP Msg Encode Fail	The total number of message encoding failures during message relay.
CP Data Tx Fail	The total number of protocol data units with Tx messages failed during connection setup.
CP Data Inv TID	The total number of protocol data units with invalid transaction ID (TID) during connection setup.
Max Returns Reached	The total number of events when retransmission limit is exhausted during connection setup.
SMSC Addr Restricted	The total number of SMSC addresses restricted.
MO SMSC Addr Restr	The total number of mobile originated SMSC addresses restricted.
MT SMSC Addr Restr.	The total number of mobile terminated SMSC addresses restricted.
CP-DATA No Cp Ack Rx	The total number of mobile terminated messages failed as no acknowledgement is received during connection setup.
Release Indication Waiting MO CP-ACK Delivery	The total number of release indications waiting to be transferred between network and MS for mobile originated control protocol acknowledgement messages that are being delivered.
Release Indication Waiting MO CP-DATA Delivery	The total number of release indications waiting to be transferred between network and MS for mobile originated control protocol data messages that are being delivered.
Release Indication Waiting MO CP-ERR Delivery	The total number of release indications waiting to be transferred between network and MS for mobile originated control protocol error messages that are being delivered.
Release Indication Waiting MT CP-DATA Delivery	The total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol data messages that are being delivered.
Release Indication Waiting MT CP-Ack Delivery	The total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol acknowledgement messages that are being delivered.
Release Indication Waiting MT CP-Err Delivery	The total number of release indications waiting to be transferred between the network and MS for mobile terminated control protocol error messages that are being delivered.
MT-SMS Failures:	

Field	Description
IMSI Record not Found	The total number of mobile terminated messages failed as IMSI record is not available.
Busy Subscriber	The total number of mobile terminated messages failed due to busy subscriber.
Detached Subscriber	The total number of mobile terminated messages failed due to detached subscriber.
MT Queue Full	The total number of mobile terminated messages failed as messaged queue was full.

## show sms statistics name

Table 566: show subscribers sms statistics name Command Output Descriptions

Field	Description
Session statistics	<p>Session statistics includes parameters related to SMS session between the MS and network. It includes parameters such as:</p> <ul style="list-style-type: none"> <li>• MO SMS (in progress)</li> <li>• MT SMS (in progress)</li> <li>• SMMA (in progress)</li> <li>• MO SMS (Attempted)</li> <li>• MT SMS (Attempted)</li> <li>• SMMA (Attempted)</li> <li>• MO SMS (successful)</li> <li>• MT SMS (successful)</li> <li>• SMMA (successful)</li> </ul>
MO SMS (In progress)	Total number SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being received by network.
MT SMS (In Progress)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being delivered by network.
SMMA (In Progress)	Total number of SMMA messages in progress for the reception by the network. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
MO SMS (Attempted)	Total number of SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being attempted to be received by the network.
MT SMS (Attempted)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being attempted to be delivered by the network.

Field	Description
SMMA (Attempted)	Total number of SMMA messages that the network has attempted to receive. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
MO SMS (Successful)	Total number of SMS messages that are Mobile Originated (MO) i.e. being sent to the network by UE or MS and are successfully received by the network.
MT SMS (Successful)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are successfully delivered by the network.
SMMA (Successful)	Total of SMMA messages that are successfully received by the network. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
Message Statistics	<p>Message statistics comprises, received and transmitted data, acknowledgement and error messages between the MS and network for RP as well as CP layers along with the message drop counters. Message statistics includes, parameters related to:</p> <ul style="list-style-type: none"> <li>• CP layer messages</li> <li>• RP layer messages</li> <li>• Message drop counters</li> </ul>
CP Layer Messages	<p>Short Message Service Control Protocol (SM –CP) is used for communication by the SMC entities from MS and network. Following are components of CP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>CP Data:</b> This message is sent between an MS and MSC in both directions. It contains the user data to be relayed between CM – users and associated parameters such as protocol discriminator, transaction identifier, message type and CP user data.</li> <li>• <b>CP Ack:</b> This message is sent between MS and MSC in both directions and is used to acknowledge the reception of a CP-Data message. It contains protocol discriminator, transaction identifier and message type.</li> <li>• <b>CP Error:</b> This message is sent between an MS and MSC in both directions and is used to convey the error information. It contains protocol discriminator, transaction identifier, message type and CP cause.</li> </ul>
CP Data (Tx)	Total number of transmitted CP data messages.
CP Ack (Tx)	Total number of transmitted CP acknowledgement messages.
CP Error (Tx)	Total number of transmitted CP error messages.
CP Data (Rx)	Total number of received CP data messages.
CP Ack (Rx)	Total number of received CP acknowledgement messages.
CP Error (Rx)	Total number of received CP error messages.

Field	Description
Message Drop Counters	<p>Message drop counter for CP layer comprises number of CP layer messages that were dropped by the MS or network. The message drop counters are categorized as:</p> <ul style="list-style-type: none"> <li>• CP Data</li> <li>• Retransmission Drops</li> <li>• Unknown TId Drops</li> <li>• CP Ack</li> <li>• CP Error</li> </ul>
CP Data	Total number of CP data messages that were dropped.
Retransmission Drops	Total number of CP data re-transmission messages that were dropped.
Unknown TId Drops	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of:</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of messages dropped due to unknown TID.</p>
CP Ack	Total number of CP acknowledgement messages that were dropped.
CP Error	Total number of CP error messages that were dropped.
RP Layer Messages	<p>Short Message Relay Protocol (SM-RP), that is used for communication between the SMR entities from MS and network. Following are the components of RP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>RP Data:</b> This message is sent between MS and the MSC in both directions. It contains message type, message reference, originator address, destination address along with the user data.</li> <li>• <b>RP Ack:</b> This message sent between the MS and MSC in both directions. This message is used to relay the acknowledgement of received RP- data or RP-SMMA messages. It contains message type, message reference and user data.</li> <li>• <b>RP –Error :</b> This message is sent between the MS and the MSC in both directions and is used to relay the cause of erroneous short message or notification transfer attempt. It contains message type, message reference, and cause and user data.</li> </ul>
RP Data (Tx)	Total number of transmitted RP data messages.
RP Ack (Tx)	Total number of transmitted RP acknowledge messages.
RP Error (Tx)	Total number of transmitted RP error messages.

Field	Description
RP Data (Rx)	Total number of received RP data messages.
RP Ack (Rx)	Total number of received RP acknowledgement messages.
RP Error (Rx)	Total number of received RP error messages.
RP SMMA (Rx)	Total number of received RP SMMA messages.
Message Drop Counters	Number of RP layer messages that were dropped by the MS or network. The message drop counters are categorized as: <ul style="list-style-type: none"> <li>• RP Data</li> <li>• RP Ack</li> <li>• RP Error</li> <li>• RP Decode Failure</li> </ul>
RP Data	Total number of RP data messages that were dropped.
RP Ack	Total number of RP acknowledgement messages that were dropped.
RP Error	Total number of RP error messages that were dropped.
RP Decode Failures	Total number of RP decode failure messages that were dropped.
General Statistics	General statistical parameters related to SMS. Along with GMM interaction statistics parameters, It includes: <ul style="list-style-type: none"> <li>• Concatenated MO SMS</li> <li>• CP Timer Expiry</li> <li>• TR1N Timer</li> <li>• TR2N Timer</li> <li>• CP Data Retransmissions.</li> <li>• RP Msg Encode Fail</li> <li>• CP Data Tx Fail</li> <li>• CP Data Inv TID</li> <li>• Max Retransmissions Reached</li> <li>• SMSC Addr Restricted</li> </ul>
Concatenated MO SMS	Concatenated MO SMS indicates that the SMC has received the data (CP-Data) as well as associated acknowledgement (CP-Ack) messages. This parameter indicates the number of SMCs in such state.

Field	Description
TR1N Timer	Specifies current status of TR1N timer. TR1N is a timer for Point to Point Short SMS Service (POPSMS). It is associated with the wait for RP acknowledgement message. Refer 3GPP TS 4.011 and 0.12 for more information.
TR2N Timer	Specifies current status of TR2N timer. TR2N timer is a timer for Point to Point Short Message Service (PPSMS). The timer is associated with wait to send for RP acknowledgement message. Refer 3GPP 4.0.11 and 0.12 for more information.
CP Data Retransmissions	Total number of Control Protocol data (CP-Data) messages that were re-transmitted between MS and network.
RP Message Encode Fail	Total number of messages with failed Short Message Rely Protocol (SM RP) encoding.
CP Data Tx Fail	Total number of errors due to transmission failure for the CP-data messages.
CP Data Inv TID	Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI. A Control Protocol message is composed of <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> his specifies total number messages with invalid transaction identifier.
Max Retransmissions Reached	Total number of messages that have completed the maximum allowed retransmission attempts.
SMSC Addr Restricted	Total number of restricted Short Message Service Center (SMSC) addresses.
GMM Interaction Stats	GMM interaction statistics comprises GPRS Mobility Management (GMM) entitles in the network. It includes: <ul style="list-style-type: none"> <li>• Page Request Sent</li> <li>• Page Response Successful</li> <li>• Page Response Fail</li> <li>• Release Indication</li> </ul>
Page Request Sent	The paging function is used by the network to retrieve the current cell information from an MS that is in the power saving mode. This is the total number of page requests sent by the network.

Field	Description
Page Response Successful	Total number of success full responses, received by the network for the paging requests that were sent to the mobile stations in power saving mode.
Page Response Fail	Total number of response failures, received by the network for the paging requests that were sent to mobile stations in power saving mode.
Release Indication	GMM allows packet service continuity when the MS moves from one GPRS Location Area (LA) to another. MS as well as the network can use the IMSI detach procedure to remove the Mobility Management (MM) context when it is not required.  This specifies number of release indications transmitted between MS and network.

## show sms statistics sgsn-only verbose

*Table 567: show sms statistics sgsn-only verbose Command Output Descriptions*

Field	Description
Session Statistics:	Session statistics includes parameters related to SMS session between the MS and network. It includes parameters such as: <ul style="list-style-type: none"> <li>• MO SMS (In Progress)</li> <li>• MT SMS (In Progress)</li> <li>• MT SMS (In Queue)</li> <li>• SMMA (In Progress)</li> <li>• MO SMS (Attempted)</li> <li>• MO SMS (Successful)</li> <li>• MT SMS (Attempted)</li> <li>• MT SMS (Successful)</li> <li>• SMMA (Attempted)</li> <li>• SMMA (Successful)</li> </ul>
MO SMS (In Progress)	Total number SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being received by network. It includes parameters related to:
MT SMS (In Progress)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being delivered by network.
MT SMS (In Queue)	Total number of SMS messages that are mobile Terminated i.e. being sent to UE or MS and are in queue for being delivered by the network.

Field	Description
SMMA (In Progress)	Total number of SMMA messages in progress for the reception by the network. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
MO SMS (Attempted)	Total number of SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being attempted to be received by the network.
MO SMS (Successful)	Total number of SMS messages that are Mobile Originated (MO) i.e. being sent to the network by UE or MS and are successfully received by the network.
MT SMS (Attempted)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being attempted to be delivered by the network.
MT SMS (Successful)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are successfully delivered by the network.
SMMA (Attempted)	Total number of SMMA messages that the network has attempted to receive. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
SMMA (Successful)	Total number of SMMA messages that are successfully received by the network. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
Message Statistics	<p>Message statistics comprises, received and transmitted data, acknowledgement and error messages between the MS and network for RP as well as CP layers along with the message drop counters. It includes parameters related to:</p> <ul style="list-style-type: none"> <li>• CP layer messages</li> <li>• RP layer messages</li> <li>• Message drop counters</li> </ul>
CP Layer Messages	<p>Short Message Service Control Protocol (SM –CP) is used for communication by the SMC entities from MS and network. Following are components of CP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>CP Data:</b> This message is sent between an MS and MSC in both directions. It contains the user data to be relayed between CM – users and associated parameters such as protocol discriminator, transaction identifier, message type and CP user data.</li> <li>• <b>CP Ack:</b> This message is sent between MS and MSC in both directions and is used to acknowledge the reception of a CP-Data message. It contains protocol discriminator, transaction identifier and message type.</li> <li>• <b>CP Error:</b> This message is sent between an MS and MSC in both directions and is used to convey the error information. It contains protocol discriminator, transaction identifier, message type and CP cause.</li> </ul>
CP Data (Tx)	Total number of transmitted CP data messages.
CP Ack (Tx)	Total number of transmitted CP acknowledgement messages.

Field	Description
CP Error (Tx)	Total number of transmitted CP error messages.
CP Data (Rx)	Total number of received CP data messages.
CP Ack (Rx)	Total number of received CP acknowledgement messages.
CP Error (Rx)	Total number of received CP error messages.
CP Error Cause Stats	<p>The CP error message that conveys error information that is sent between MS and MSC in both directions. It contains protocol discriminator, transaction identifier, message type and CP cause. CP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Network failure</li> <li>• Congestion</li> <li>• Inlaid sematic</li> <li>• Invalid mandatory information</li> <li>• Invalid message type</li> <li>• Invalid protocol state</li> <li>• Invalid IE</li> <li>• Protocol error</li> <li>• Unidentified cause</li> </ul>
Network Failure (Tx)	Total number of errors caused due to network failure while transmitting the message from network to MS.
Congestion (Tx)	Total number of errors caused due to congestion while transmitting the message from network to MS.
Inlaid Sematic (Tx)	Total number of errors caused due to invalid sematic while transmitting the message from network to MS.
Invalid Mandatory Info (Tx)	Total number of errors caused due to invalid mandatory information while transmitting the message from network to MS.
Invalid Message Type(Tx)	Total number of errors caused due to invalid schematic while transmitting the message from network to MS.
Invalid Protocol State(Tx)	Total number of errors caused due to invalid protocol state while transmitting the message from network to MS.
Invalid IE (Tx)	Total number of errors caused due to invalid Information Element (IE) while transmitting the message from network to MS.
Protocol Error (Tx)	Total number of errors caused due to protocol error while receiving the message the message from network to MS.

Field	Description
Undefined Cause (Tx)	Total number of errors caused due to unknown or un-defined cause while receiving the message from network toMS.
Network Failure (Rx)	Total number of errors caused due to network media failure while receiving the message from MS to network.
Congestion (Rx)	Total number of errors caused due to congestion while receiving the message from MS to network.
Inlaid Sematic(Rx)	Total number of errors caused due to invalid sematic while receiving the message from MS to network.
Invalid Mandatory Information (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message from MS to network.
Invalid Message Type(Rx)	Total number of errors caused due to invalid message type while receiving the message from MS to network.
Invalid Protocol State(Rx)	Total number of errors caused due to invalid protocol state while receiving the message from MS to network.
Invalid IE (Rx)	Total number of errors caused due to invalid Information Element (IE) while receiving the message from MS to network.
Protocol Error (Rx)	Total number of errors caused due to protocol error while receiving the message the message from MS to network.
Undefined Cause (Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message from MS to network.
Message Drop Counters	<p>Message drop counter for CP layer comprises number of CP layer messages that were dropped by the MS or network. The message drop counters are categorized as:</p> <ul style="list-style-type: none"> <li>• CP Data</li> <li>• Retransmission Drops</li> <li>• Unknown TId Drops</li> <li>• CP Ack</li> <li>• CP Error</li> </ul>
CP Data	Total number of CP data messages that were dropped.
Retransmission Drops	Total number of CP data re-transmission messages that were dropped.

Field	Description
Unknown TId Drops	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>Control Protocol (CP) message is composed of:</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of messages dropped due to unknown transaction identifier.</p>
CP Ack	Total number of CP acknowledgement messages that were dropped.
CP Error	Total number of CP error messages that were dropped.
CP Error Drop for Invalid TId Received	Total number of CP error messages dropped due to reception of wrong or non-existent Transaction Identifier (TId).
RP Layer Messages	<p>Short Message Relay Protocol (SM-RP), that is used for communication between the SMR entities from MS and network. Following are the components of RP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>RP Data:</b> This message is sent between MS and the MSC in both directions. It contains message type, message reference, originator address, destination address along with the user data.</li> <li>• <b>RP Ack:</b> This message sent between the MS and MSC in both directions. This message is used to relay the acknowledgement of received RP- data or RP-SMMA messages. It contains message type, message reference and user data.</li> <li>• <b>RP –Error :</b> This message is sent between the MS and the MSC in both directions and is used to relay the cause of erroneous short message or notification transfer attempt. It contains message type, message reference, and cause and user data.</li> </ul>
RP Data (Tx)	Total number of transmitted RP data messages.
RP AcK (Tx)	Total number of transmitted RP acknowledgement messages.
RP Error (Tx)	Total number of transmitted RP error messages.
RP Data (Rx)	Total number of received RP data messages.
RP Ack (Rx)	Total number of received RP acknowledgement messages.
RP Error (Rx)	Total number of received RP error messages.
RP SMMA (Rx)	Total number of received RP SMMA messages.

Field	Description
RP Error Cause Statistics	<p>The RP error message conveys the information that is sent between MS and the MSC in both directions. An RP error message comprises message type, message reference, and cause and user data. RP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Unsigned number</li> <li>• Operator determined barring</li> <li>• Call barred</li> <li>• Reserved</li> <li>• SM transfer rejected</li> <li>• Destination out of order</li> <li>• Unidentified subscriber</li> <li>• Facility rejected</li> <li>• Unknown subscriber</li> <li>• Network out of order</li> <li>• Temporary failure</li> <li>• Congestion</li> <li>• Not subscribed</li> <li>• Not implemented</li> <li>• Interworking error</li> <li>• Resource unavailable</li> </ul>
Unassigned Number (Tx)	Total number of errors caused due to un-signed or un-known number while transmitting the message from MS to network.
Operator Determined Barring (Tx)	Total number of errors caused due to operator determined barring while transmitting the message from MS to network.
Call Barred (Tx)	Total number of errors caused due to calls barred while transmitting the message from MS to network.
Reserved (Tx)	Total number or errors caused due to calls reserved while transmitting the message from MS to network.
SM Transfer Rejected (Tx)	Total number of errors caused to Short Message (SM) transfer rejection while transmitting the message from MS to network.
Destination Out of Order (Tx)	Total number of errors caused due to destination out of order while transmitting the message from MS to network.
Unidentified Subscriber (Tx)	Total number of errors caused due to destination out of order while transmitting the message from MS to network.

Field	Description
Facility Rejected (Tx)	Total number of errors caused due to rejection of the facility while transmitting the message from MS to network.
Unknown Subscriber (Tx)	Total number of errors caused due to un-known subscriber while transmitting the message from MS to network.
Network Out of Order (Tx)	Total number of errors caused due to un-availability of the network while transmitting the message from MS to network.
Temporary Failure (Tx)	Total number of errors caused due to temporary failure of the network while transmitting the message from MS to network.
Congestion (Tx)	Total number of errors caused due to congestion in the network while transmitting the message from MS to network.
Not Subscribed (Tx)	Total number of errors caused due to the status as not subscribed while transmitting the message from MS to network.
Not Implemented (Tx)	Total number of errors caused due to non-implementation while transmitting the message from MS to network.
Interworking Error (Tx)	Network interworking is required when for the service execution, a packet domain PLMN works with any other network. The interworking takes place mostly using Gi and Gp interfaces. Total number of errors caused due to interworking errors while transmitting the message from MS to network.
Resource Un-available (Tx)	Total number of errors caused due to un availability of the resource while transmitting the message from MS to network.
Memory Capacity Exceeded	Total number of errors caused due to lack of storage capacity in the MS while receiving the message.
Invalid Reference Number (Tx)	Total number of errors caused due to wrong or non-existent reference number while transmitting the message.
Invalid Semantic (Tx)	Total number of errors caused due to wrong or non-existent semantic information while transmitting the message.
Invalid Mandatory Info (Tx)	Total number of errors caused due to non-semantic mandatory information while transmitting the message.
Invalid Message Type (Tx)	Total number of errors caused due to non-existent or non-implemented message type while transmitting the message.
Invalid Protocol State (Tx)	Total number of errors caused due to wrong or non-implemented protocol state used while transmitting the message.
Invalid IE (Tx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while transmitting the message.

Field	Description
Protocol Error (Tx)	Total number of errors caused due to wrong or non-implemented protocol used while transmitting the message.
Invalid Reference Number (Rx)	Total number of errors caused due to wrong or non-existent reference number while receiving the message.
Invalid Semantic (Rx)	Total number of errors caused due to wrong or non-existent semantic information while receiving the message.
Invalid Mandatory Info (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message.
Invalid Message Type (Rx)	Total number of errors caused due to non-existent or non-implemented message type while receiving the message.
Invalid Protocol State (Rx)	Total number of errors caused due to wrong or non-implemented protocol state used while receiving the message.
Invalid IE (Rx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while receiving the message.
Protocol Error (Rx)	Total number of errors caused due to wrong or non-implemented protocol used while receiving the message.
Undefined Error (Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message.
Message Drop Counters	<p>Message drop counter comprises RP layer messages that were dropped by the MS or network. The message drop counters are categorized as:</p> <ul style="list-style-type: none"> <li>• RP Data</li> <li>• RP Ack</li> <li>• RP Error</li> <li>• RP Decode Failure</li> </ul>
RP Data	Total number of RP data messages that were dropped.
RP Ack	Total number of RP acknowledgement messages that were dropped.
RP Error	Total number of RP error messages that were dropped.
RP Decode Failures	Total number of RP decode failure messages that were dropped.

Field	Description
General Statistics	<p>General statistics comprises statistical parameters related to SMS, along with GMM interaction statistics parameters, It includes:</p> <ul style="list-style-type: none"> <li>• Concatenated MO SMS</li> <li>• CP Timer Expiry</li> <li>• TR1N Timer</li> <li>• TR2N Timer</li> <li>• CP Data Retransmissions</li> <li>• RP Msg Encode Fail</li> <li>• CP Data Tx Fail</li> <li>• CP Data Inv TID</li> <li>• Max Retransmissions Reached</li> <li>• SMSC Addr Restricted</li> <li>• MO SMSC Addr Restricted</li> <li>• MT SMSC Addr Restricted</li> </ul>
Concatenated MO SMS	Concatenated MO SMS indicates that the SMC has received the data (CP-Data) as well as associated acknowledgement (CP-Ack) messages. This parameter indicates the number of SMCs in such state.
TR1N timer	<p>Specifies current status of TR1N timer.</p> <p>TR1N is a timer for Point to Point Short SMS Service (POPSMS). It is associated with the wait for RP acknowledgement message. Refer 3GPP TS 4.011 and 0.12 for more information.</p>
TR2N Timer	<p>Specifies current status of TR2N timer.</p> <p>TR2N timer is a timer for Point to Point Short Message Service (POPSMS). The timer is associated with wait to send for RP acknowledgement message. Refer 3GPP 4.0.11 and 0.12 for more information.</p>
CP Data Retransmissions	Total number of Control Protocol data (CP-Data) messages that were re-transmitted between MS and network.
RP Message Encode Fail	Total number of messages with failed Short Message Rely Protocol (SM RP) encoding.

Field	Description
CP Data Inv TID	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of:</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul>
Max Returns Reached	Total number of messages that have completed the maximum allowed retransmission attempts.
SMSC Addr Restricted	Total number of restricted Short Message Service Center (SMSC) addresses.
MO SMSC Addr Restr	Total number of SMSC address restricted for the Mobile Originated (MO) messages, i.e. the messages that are being sent from MS to network.
MT SMSC Addr Restr.	Total number of SMSC address restricted for the Mobile Terminated(MT) messages, i.e. the messages that are being sent from network to MS.
GMM Interaction Stats	<p>GMM interaction statistics comprises GPRS Mobility Management (GMM) entitles in the network. It includes:</p> <ul style="list-style-type: none"> <li>• Page Request Sent</li> <li>• Page Response Successful</li> <li>• Page Response Fail</li> <li>• Release Indication</li> </ul>
Page Request Sent	The paging function is used by the network to retrieve the current cell information from an MS that is in the power saving mode. This is the total number of page requests sent by the network.
Page Response Succ	Total number of success full responses, received by the network for the paging requests that were sent to the mobile stations in power saving mode.
Page Response Fail	Total number of response failures, received by the network for the paging requests that were sent to mobile stations in power saving mode.
Release Indication	<p>GMM allows packet service continuity when the MS moves from one GPRS Location Area (LA) to another. MS as well as the network can use the IMSI detach procedure to remove the Mobility Management (MM) context when it is not required.</p> <p>This specifies number of release indications transmitted between MS and network.</p>

Field	Description
Release Indication Waiting (MO)	These are total number of release indications waiting to be delivered for MO messages such as: <ul style="list-style-type: none"> <li>• MO CP Ack</li> <li>• MO CP Data</li> <li>• MO CP ERR</li> </ul>
MO CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol acknowledgement messages that are being delivered.
MO CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol data messages that are being delivered.
MO CP ERR Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol error messages that are being delivered.
Release Indication Waiting (MT)	These are total number of release indications waiting to be delivered for MT messages such as: <ul style="list-style-type: none"> <li>• MT GMM Connection</li> <li>• MT CP Data</li> <li>• MT CP Ack</li> <li>• MT CP ERR</li> </ul>
MT GMM Connection	Total number of release indications waiting to be transferred between the network and MS for mobile terminated GPRS mobility management connections.
MT CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol data messages that are being delivered.
MT CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol acknowledgement messages that are being delivered.
MT CP Err Delivery	Total number of release indications waiting to be transferred between the network and MS for mobile terminated control protocol error messages that are being delivered.
MT- SMS Failures	Mobile terminated SM S failure statistics specifies total number of SMS messages that failed to reach designated MS. The failure reasons can be: <ul style="list-style-type: none"> <li>• IMSI record not found</li> <li>• Busy subscriber</li> <li>• Detached subscriber</li> <li>• MT queue full</li> </ul>

Field	Description
IMSI Record not Found	Total number of SMS messages that failed to reach the MS due to unavailability of International Mobile Subscriber Identity record.
Busy Subscriber	Total number of SMS messages that failed to reach the MS due to busy status of the subscriber.
Detached Subscriber	Total number of SMS messages that failed to reach MS because the intended subscriber was detached.
MT Queue Full	Total number of SMS messages that failed to reach MS because the MT message queue was full.

## show sms statistics verbose

Table 568: show subscribers sms statistics name Command Output Descriptions

Field	Description
Session Statistics	<p>Session statistics includes parameters related to SMS session between the MS and network. It includes parameters such as:</p> <ul style="list-style-type: none"> <li>• MO SMS (in progress)</li> <li>• MT SMS (in progress)</li> <li>• MT SMS (in queue)</li> <li>• SMMA (in progress)</li> <li>• MO SMS (attempted)</li> <li>• MT SMS (attempted)</li> <li>• MT SMS (successful)</li> <li>• SMMA (Successful)</li> </ul>
MO SMS (In Progress)	Total number SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being received by network.
MT SMS (In Progress)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are being delivered by network.
MT SMS (In Queue)	Total number of SMS messages that are mobile Terminated i.e. being sent to UE or MS and are in queue for being delivered by the network.
SMMA (In Progress)	Total number of SMMA messages in progress for the reception by the network. An SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.

Field	Description
MO SMS (Attempted)	Total number of SMS messages that are Mobile Originated (MO) i.e. sent from an UE or MS and are being attempted to be received by the network.
MT SMS (Attempted)	Total number of SMS messages that are Mobile Terminated i.e. being sent to a UE or MS and are being attempted to be delivered by the network.
MT SMS (Successful)	Total number of SMS messages that are Mobile Terminated (MT) i.e. being sent to a UE or MS and are successfully delivered by the network.
SMMA Successful	Total number of SMMA messages that are successfully received by the network. The SMMA message is used by the MS to indicate the network about the availability of the memory in MS, to receive one or more short messages.
Message Statistics	<p>Message statistics comprises received and transmitted data, acknowledgement and error messages between the MS and network for RP as well as CP layers along with the message drop counters. Message statistics includes, parameters related to:</p> <ul style="list-style-type: none"> <li>• CP layer messages</li> <li>• RP layer messages</li> <li>• Message drop counters</li> </ul>
CP Layer Messages	<p>Short Message Service Control Protocol (SM –CP) is used for communication by the SMC entities from MS and network. Following are components of CP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>CP Data:</b> This message is sent between an MS and MSC in both directions. It contains the user data to be relayed between CM – users and associated parameters such as protocol discriminator, transaction identifier, message type and CP user data.</li> <li>• <b>CP Ack:</b> This message is sent between MS and MSC in both directions and is used to acknowledge the reception of a CP-Data message. It contains protocol discriminator, transaction identifier and message type.</li> <li>• <b>CP Error:</b> This message is sent between an MS and MSC in both directions and is used to convey the error information. It contains protocol discriminator, transaction identifier, message type and CP cause.</li> </ul>
CP Data (Tx)	Total number of transmitted CP data messages.
CP Ack (Tx)	Total number of transmitted CP acknowledgement messages.
CP Error (Tx)	Total number of transmitted CP error messages.
CP Data (Rx)	Total number of received CP data messages.
CP Ack (Rx)	Total number of received CP acknowledgement messages.
CP Error (Rx)	Total number of received CP error messages.

Field	Description
CP Error Cause Stats	<p>The CP error message conveys error information that is sent between MS and MSC in both directions. It contains protocol discriminator, transaction identifier, message type and CP cause. CP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Network failure</li> <li>• Congestion</li> <li>• Inlaid sematic</li> <li>• Invalid mandatory information</li> <li>• Invalid message type</li> <li>• Invalid protocol state</li> <li>• Invalid IE</li> <li>• Protocol error</li> <li>• Unidentified cause</li> </ul>
Network Failure (Tx)	Total number of errors caused due to network failure while transmitting the message from network to MS.
Congestion (Tx)	Total number of errors caused due to congestion while transmitting the message from network to MS.
Inlaid Sematic(Tx)	Total number of errors caused due to invalid sematic while transmitting the message from network to MS.
Invalid Mandatory Info (Tx)	Total number of errors caused due to invalid mandatory information while transmitting the message from network to MS.
Invalid Message Type(Tx)	Total number of errors caused due to invalid schematic while transmitting the message from network to MS.
Invalid Protocol State(Tx)	Total number of errors caused due to invalid protocol state while transmitting the message from network to MS.
Invalid IE (Tx)	Total number of errors caused due to invalid Information Element (IE) while transmitting the message from network to MS.
Protocol Error (Tx)	Total number of errors caused due to protocol error while transmitting the message from network to MS.
Undefined Cause (Tx)	Total number of errors caused due to unknown or undefined causes while transmitting the message from network to MS.
Network Failure (Rx)	Total number of errors caused due to network media failure while receiving the message from MS to network.
Congestion (Rx)	Total number of errors caused due to congestion while receiving the message from MS to network.

Field	Description
Inlaid Sematic(Rx)	Total number of errors caused due to invalid sematic while receiving the message from MS to network.
Invalid Mandatory Info (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message from MS to network.
Invalid Message Type (Rx)	Total number of errors caused due to invalid message type while receiving the message from MS to network.
Invalid Protocol State(Rx)	Total number of errors caused due to invalid protocol state while receiving the message from MS to network.
Invalid IE (Rx)	Total number of errors caused due to invalid Information Element (IE) while receiving the message from MS to network.
Protocol Error (Rx)	Total number of errors caused due to protocol error while receiving the message the message from MS to network.
Undefined Cause (Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message from MS to network.
Message Drop Counters	<p>Message drop counter for CP layer comprises number of CP layer messages that were dropped by the MS or network. The message drop counters are categorized as:</p> <ul style="list-style-type: none"> <li>• CP Data</li> <li>• Retransmission Drops</li> <li>• Unknown TId Drops</li> <li>• CP Ack</li> <li>• CP Error</li> </ul>
CP Data	Total number of CP data messages that were dropped.
Retransmission Drops	Total number of CP data re-transmission messages that were dropped.
Unknown TID Drops	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol (CP) message is composed of:</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number of messages that were dropped due to unknown transaction identifier.</p>

Field	Description
CP Ack	Total number of CP acknowledgement messages that were dropped.
CP Error	Total number of CP error messages that were dropped.
CP –Error Drop for Invalid TID Recvd.	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>Specifies total number of CP error messages dropped due to reception of wrong or non-existent Transaction Identifier (TID).</p>
RP Layer Messages	<p>Short Message Relay Protocol (SM-RP), that is used for communication between the SMR entities from MS and network. Following are the components of RP layer messages:</p> <ul style="list-style-type: none"> <li>• <b>RP Data:</b> This message is sent between MS and the MSC in both directions. It contains message type, message reference, originator address, destination address along with the user data.</li> <li>• <b>RP Ack:</b> This message sent between the MS and MSC in both directions. This message is used to relay the acknowledgement of received RP- data or RP-SMMA messages. It contains message type, message reference and user data.</li> <li>• <b>RP –Error :</b> This message is sent between the MS and the MSC in both directions and is used to relay the cause of erroneous short message or notification transfer attempt. It contains message type, message reference, and cause and user data.</li> </ul>
RP Data (Tx)	Total number of transmitted RP data messages.
RP Ack (Tx)	Total number of transmitted RP acknowledge messages.
RP Error (Tx)	Total number of transmitted RP error messages.
RP Data (Rx)	Total number of received RP data messages.
RP Ack (Rx)	Total number of received RP acknowledgement messages.
RP Error (Rx)	Total number of received RP error messages.
RP SMMA (Rx)	Total number of received RP SMMA messages.

Field	Description
RP Error Cause Statistics	<p>The RP error message conveys the information that is sent between MS and the MSC in both directions. An RP error message comprises message type, message reference, and cause and user data. RP error cause statistics includes:</p> <ul style="list-style-type: none"> <li>• Unsigned number</li> <li>• Operator determined barring</li> <li>• Call barred</li> <li>• Reserved</li> <li>• SM transfer rejected</li> <li>• Destination out of order</li> <li>• Unidentified subscriber</li> <li>• Facility rejected</li> <li>• Unknown subscriber</li> <li>• Network out of order</li> <li>• Temporary failure</li> <li>• Congestion</li> <li>• Not subscribed</li> <li>• Not implemented</li> <li>• Interworking error</li> <li>• Resource unavailable</li> </ul>
Unsigned Number (Tx)	Total number of errors caused due to un-signed or un-known number while transmitting the message from MS to network.
Opr. Determined Barring (Tx)	Total number of errors caused due to operator determined barring while transmitting the message from MS to network.
Call Barred (Tx)	Total number of errors caused due to calls barred while transmitting the message from MS to network.
Reserved (Tx)	Total number or errors caused due to calls reserved while transmitting the message from MS to network.
SM Transfer Rejected (Tx)	Total number of errors caused to Short Message (SM) transfer rejection while transmitting the message from MS to network.
Destination Out of Order (Tx)	Total number of errors caused due to destination out of order while transmitting the message from MS to network.
Unidentified Subscriber (Tx)	Total number of errors caused due to unidentified subscriber while transmitting the message form MS to network.

Field	Description
Network Out of Order (Tx)	Total number of errors caused due to un-availability of the network while transmitting the message from MS to network.
Temporary Failure (Tx)	Total number of errors caused due to temporary failure of the network while transmitting the message from MS to network.
Congestion (Tx)	Total number of errors caused due to congestion in the network while transmitting the message from MS to network.
Not Subscribed (Tx)	Total number of errors caused due to the status as not subscribed while transmitting the message from MS to network.
Not Implemented (Tx)	Total number of errors caused due to non-implementation while transmitting the message from MS to network.
Interworking Error (Tx)	Network interworking is required when for the service execution, a packet domain PLMN works with any other network. The interworking takes place mostly using Gi and Gp interfaces. Total number of errors caused due to interworking errors while transmitting the message from MS to network.
Resource Un-available (Tx)	Total number of errors caused due to un availability of the resource while transmitting the message from MS to network.
Memory Capacity Exceed	Total number of errors caused due to lack of storage capacity in the MS while receiving the message.
Invalid Reference Number (Tx)	Total number of errors caused due to wrong or non-existent reference number while transmitting the message.
Invalid Semantic (Tx)	Total number of errors caused due to wrong or non-existent semantic information while transmitting the message.
Invalid Mandatory Info (Tx)	Total number of errors caused due to non-semantic mandatory information while transmitting the message.
Invalid Message Type (Tx)	Total number of errors caused due to non-existent or non-implemented message type while transmitting the message.
Invalid Protocol State (Tx)	Total number of errors caused due to wrong or non-implemented protocol state used while transmitting the message.
Invalid IE (Tx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while transmitting the message.
Protocol Error (Tx)	Total number of errors caused due to wrong or non-implemented protocol used while transmitting the message.
Undefined Error (Tx)	Total number of errors caused due to unknown or un-defined cause while transmitting the message.

Field	Description
Invalid Reference Number (Rx)	Total number of errors caused due to wrong or non-existent reference number while receiving the message.
Invalid Semantic (Rx)	Total number of errors caused due to wrong or non-existent semantic information while receiving the message.
Invalid Mandatory Info (Rx)	Total number of errors caused due to invalid mandatory information while receiving the message.
Invalid Message Type (Rx)	Total number of errors caused due to non-existent or non-implemented message type while receiving the message.
Invalid Protocol State (Rx)	Total number of errors caused due to wrong or non-implemented protocol state used while receiving the message.
Invalid IE (Rx)	Total number of errors caused due to wrong or un-implemented Information Element (IE) used while receiving the message.
Protocol Error (Rx)	Total number of errors caused due to wrong or non-implemented protocol used while receiving the message.
Undefined Error (Rx)	Total number of errors caused due to unknown or un-defined cause while receiving the message.
Message Droop Counters	Message drop counters comprises number of RP layer messages that were dropped by the MS or network. The message drop counters are categorized as: <ul style="list-style-type: none"> <li>• RP Data</li> <li>• RP Ack</li> <li>• RP Error</li> <li>• RP Decode Failure</li> </ul>
RP Data	Total number of RP data messages that were dropped.
RP Ack	Total number of RP acknowledgement messages that were dropped.
RP Error	Total number of RP error messages that were dropped.
RP Decode Failure	total number of RP decode failure messages that were dropped.

Field	Description
General Statistics	<p>General statistics comprises statistical parameters related to SMS, along with GMM interaction statistics parameters, It includes:</p> <ul style="list-style-type: none"> <li>• Concatenated MO SMS</li> <li>• CP Timer Expiry</li> <li>• TR1N Timer</li> <li>• TR2N Timer</li> <li>• CP Data Retransmissions</li> <li>• RP Msg Encode Fail</li> <li>• CP Data Tx Fail</li> <li>• CP Data Inv TID</li> <li>• Max Retransmissions Reached</li> <li>• SMSC Addr Restricted</li> <li>• MO SMSC Addr Restricted</li> <li>• MT SMSC Addr Restricted</li> <li>• CP-DATA No Cp Ack Rx</li> </ul>
Concatenated MO SMS	<p>Connected MO SMS indicates that the SMC has received the data (CP-Data) as well as associated acknowledgement (CP-Ack) messages. This parameter indicates the number of SMCs in such state.</p>
TR1N timer	<p>Specifies current status of TR1N timer.</p> <p>TR1N is a timer for Point to Point Short SMS Service (POPSMS). It is associated with the wait for RP acknowledgement message. Refer 3GPP TS 4.011 and 0.12 for more information.</p>
TR2N Timer	<p>Specifies current status of TR2N timer.</p> <p>TR2N timer is a timer for Point to Point Short Message Service (PPSMS). The timer is associated with wait to send for RP acknowledgement message. Refer 3GPP 4.0.11 and 0.12 for more information.</p>
CP Data Retransmissions	<p>Total number of Control Protocol data (CP-Data) messages that were re-transmitted between MS and network.</p>
RP Message Encode Fail	<p>Total number of messages with failed Short Message Rely Protocol (SM RP) encoding.</p>

Field	Description
CP Data Inv TID	<p>Tunnel Identifier (TID) is an identity provided by the Gprs Tunneling Protocol (GTP) to every packet. The TID identifies the destination and transaction to which the packet belongs. Transactions are identified using logical Identifiers as well as IMSI.</p> <p>A Control Protocol message is composed of</p> <ul style="list-style-type: none"> <li>• Protocol discriminator</li> <li>• Transaction Identifier</li> <li>• Message type</li> <li>• Other required Information Elements (IEs)</li> </ul> <p>This specifies total number messages with invalid transaction identifier.</p>
Max Returns Reached	Total number of messages that have completed the maximum allowed retransmission attempts.
SMSC Addr Restricted	Total number of restricted Short Message Service Center (SMSC) addresses.
MO SMSC Addr Restricted	Total number of SMSC address restricted for the Mobile Originated (MO) messages, i.e. the messages that are being sent from MS to network.
MT SMSC Addr Restricted.	Total number of SMSC address restricted for the Mobile Terminated(MT) messages, i.e. the messages that are being sent from network to MS.
GMM Interaction Stats	<p>GMM interaction statistics comprises GPRS Mobility Management (GMM) entitles in the network. It includes:</p> <ul style="list-style-type: none"> <li>• Page Request Sent</li> <li>• Page Response Successful</li> <li>• Page Response Fail</li> <li>• Release Indication</li> </ul>
Page Request Sent	The paging function is used by the network to retrieve the current cell information from an MS that is in the power saving mode. This is the total number of page requests sent by the network.
Page Response Successful	Total number of success full responses, received by the network for the paging requests that were sent to the mobile stations in power saving mode.
Page Response Fail	Total number of response failures, received by the network for the paging requests that were sent to mobile stations in power saving mode.
Release Indication	<p>GMM allows packet service continuity when the MS moves from one GPRS Location Area (LA) to another. MS as well as the network can use the IMSI detach procedure to remove the Mobility Management (MM) context when it is not required.</p> <p>This specifies number of release indications transmitted between MS and network.</p>

Field	Description
Release Indication Waiting (MO)	These are number of release indications waiting to be delivered for MO messages such as: <ul style="list-style-type: none"> <li>• MO CP Ack</li> <li>• MO CP Data</li> <li>• MO CP ERR</li> </ul>
MO CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol acknowledgement messages that are being delivered.
MO CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol data messages that are being delivered.
MO CP ERR Delivery	Total number of release indications waiting to be transferred between network and MS for mobile originated control protocol error messages that are being delivered.
Release Indication Waiting (MT)	These are total number of release indications waiting to be delivered for MT messages such as: <ul style="list-style-type: none"> <li>• MT GMM Connection</li> <li>• MT CP Data</li> <li>• MT CP Ack</li> <li>• MT CP ERR</li> </ul>
MT GMM Connection	Total number of release indications waiting to be transferred between the network and MS for mobile terminated GPRS mobility management connections.
MT CP Data Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol data messages that are being delivered.
MT CP Ack Delivery	Total number of release indications waiting to be transferred between network and MS for mobile terminated control protocol acknowledgement messages that are being delivered.
MT CP Err Delivery	Total number of release indications waiting to be transferred between the network and MS for mobile terminated control protocol error messages that are being delivered.
MT- SMS Failures	Mobile terminated SM S failure statistics specifies total number of SMS messages that failed to reach designated MS. The failure reasons can be: <ul style="list-style-type: none"> <li>• IMSI record not found</li> <li>• Busy subscriber</li> <li>• Detached subscriber</li> <li>• MT queue full</li> </ul>

<b>Field</b>	<b>Description</b>
IMSI Record not Found	Total number of SMS messages that failed to reach the MS due to unavailability of International Mobile Subscriber Identity record.
Busy Subscriber	Total number of SMS messages that failed to reach the MS due to busy status of the subscriber.
Detached Subscriber	Total number of SMS messages that failed to reach MS because the intended subscriber was detached.
MT Queue Full	Total number of SMS messages that failed to reach MS because the MT message queue was full.

# CHAPTER 137

## show smsc-service

This chapter includes the **show smsc-service** command output tables.

- [show smsc-service name <smc\\_svc\\_name>](#), on page 2027
- [show smsc-service statistics all](#), on page 2027
- [show smsc-service statistics summary](#), on page 2029

## show smsc-service name <smc\_svc\_name>

*Table 569: show smsc-service name <smc\_svc\_name> Command Output Descriptions*

Field	Description
Service name	The name of the configured SMSC service.
Context	The name of the context in which SMSC service is configured.
Status	The status of the SMSC service.
Diameter endpoint	The configured Diameter endpoint name.
Diameter dictionary	The configured Diameter dictionary.
Tmsi	The configured TMSI value.
Non-broadcast-Lai	The configured non-broadcast MCC, MNC, and LAC values.
MME-address	The configured MME address.

## show smsc-service statistics all

*Table 570: show smsc-service statistics all Command Output Descriptions*

Field	Description
Session Stats:	

Field	Description
Total Current Sessions	The total number of current SMSC sessions.
Sessions Failovers	The number of SMSC session failovers.
Total Starts	The total number of SMSC session starts.
Total Session Updates	The total number of SMSC session updates.
Total Terminated	The total number of terminated SMSC sessions.
Message Stats:	
Total Messages Rcvd	The total number of messages received.
Total Messages Sent	The total number of messages sent.
OF Request	The total number of OF requests.
OF Answer	The total number of OF answers.
OFR Retries	The total number of OFR retries.
OFR Timeouts	The total number of OFR timeouts.
OFA Dropped	The total number of OFA dropped.
TF Request	The total number of TF requests.
TF Answer	The total number of TF answers.
TFR Retries	The total number of TFR retries.
TFA Timeouts	The total number of TFA timeouts.
TFA Dropped	The total number of TFA dropped requests.
AL Request	The total number of AL requests.
AL Answer	the total number of AL answers.
ALR Retries	Displays the total number of ALR retries.
ALR Timeouts	The total number of ALR timeouts.
ALA Dropped	Displays the total number of ALA dropped.
Message Error Stats:	
Unable To Comply	The total number of message errors containing the result code "Unable To Comply".
User Unknown	The total number of message errors containing the result code "User Unknown".

Field	Description
User Absent	The total number of message errors containing the result code "User Absent".
User Illegal	The total number of message errors containing the result code "User Illegal".
SM Delivery Failure	The total number of message errors containing the result code "SM Delivery Failure".
User Busy for MT SMS	The total number of message errors containing the result code "User Busy for MT SMS".
Other Errors	the total number of message errors containing the result code "Other Errors".
Bad Answer Stats:	
Auth-Application-Id	The absence or unexpected value in Auth-Application-Id AVP.
Session-Id	The absence or unexpected value in Session-Id AVP.
Origin-Host	The absence of Origin-Host AVP.
Origin Realm	The absence of Origin-Realm AVP.
Parse-Message-Errors	The total number of parse errors in the message.
Parse-Mscs-Errors	The total number of parse errors in MSCS AVP.
Miscellaneous	The total number of other miscellaneous errors.

## show smsc-service statistics summary

*Table 571: show smsc-service statistics summary Command Output Descriptions*

Field	Description
SMSC Session Stats:	
Total Current Sessions	The total number of current SMSC sessions.
Sessions Failovers	The total number of SMSC session failovers.
Total Starts	The total number of SMSC session starts.
Total Session Updates	The total number of SMSC session updates.
Total Terminated	The total number of terminated SMSC sessions.

# CHAPTER 138

## show sndcp-statistics

This chapter describes the output of the **show sndcp-statistics** command variants.

- [show sndcp statistics verbose, on page 2031](#)

## show sndcp statistics verbose

*Table 572: show sndcp statistics verbose Command Output Descriptions*

Field	Description
SND CP Data Statistics:	
Un-Acknowledged mode:	
SN-PDUs received	<b>Description:</b> This proprietary counter indicates the total number of SN-PDUs received by SND CP. <b>Triggers:</b> Increments when an SN-PDU is received by SND CP. <b>Availability:</b> per SGSN service
SN-PDU Bytes received	<b>Description:</b> This proprietary counter indicates the total number of SN-PDU bytes received by SND CP. <b>Triggers:</b> Increments when an SN-PDU is received by SND CP. <b>Availability:</b> per SGSN service
SN-PDUs dropped	<b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SND CP due to various reasons. <b>Triggers:</b> Increments when SN-PDUs are dropped at SND CP for various error cases as explained by the specific Drop reason counters below. <b>Availability:</b> per SGSN service

Field	Description
SN-PDU Bytes dropped	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDU bytes dropped at SNDCP due to various reasons.</p> <p><b>Triggers:</b> Increments when SN-PDUs are dropped at SNDCP for various error cases as explained by the specific Drop reason counters below.</p> <p><b>Availability:</b> per SGSN service</p>
SN-PDU Drop Reason:	
Invalid SAPI State	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to invalid SAPI state.</p> <p><b>Triggers:</b> Increments when SN-PDUs are received in invalid SAPI state.</p> <p><b>Availability:</b> per SGSN service</p>
Invalid PDP Ctx	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to invalid PDP context.</p> <p><b>Triggers:</b> Increments when SN-PDUs are received by a non-existent PDP Context or non-existent subscriber.</p> <p><b>Availability:</b> per SGSN service</p>
Decode Failure	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to decode failure.</p> <p><b>Triggers:</b> Increments when Decode failures occur for SN-PDUs.</p> <p><b>Availability:</b> per SGSN service</p>
Reassembly Drops:	
Discard State	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP in discard state.</p> <p><b>Triggers:</b> Increments when SN-PDUs are dropped and an unexpected segment is received to enter discard state. SNDCP entity expects either a first segment or subsequent segment. Reception of last segment clears this state.</p> <p><b>Availability:</b> per SGSN service</p>
Rx First Seg State	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP in Receive First Segment state.</p> <p><b>Triggers:</b> In receive first segment state, only first segment of N-PDU is expected. If subsequent segmented is received, it is dropped with this reason and enters discard state.</p> <p><b>Availability:</b> per SGSN service</p>
Rx Subsequent Seg State	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to reassembly failure.</p> <p><b>Triggers:</b> In receive subsequent segment state, only subsequent segments of N-PDU are expected. If first segment is received, it is dropped with this reason and enters discard state.</p> <p><b>Availability:</b> per SGSN service</p>

Field	Description
New First Segment	<p><b>Description:</b> This proprietary counter indicates the total number of buffered SN-PDUs dropped at SNDCP due to reception of new N-PDU.</p> <p><b>Triggers:</b> Increments when reception of new N-PDU drops buffered SN-PDUs, if any with this reason.</p> <p><b>Availability:</b> per SGSN service</p>
Reassembly Failure	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to reassembly failure.</p> <p><b>Triggers:</b> Increments when SN-PDUs are dropped at SNDCP due to reassembly failure.</p> <p><b>Availability:</b> per SGSN service</p>
Reassembly Timeout	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to reassembly timeout.</p> <p><b>Triggers:</b> Increments when the buffered segments are dropped and the last segment is not received before reassembly timer expiry.</p> <p><b>Availability:</b> per SGSN service</p>
DCOMP Error	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to DCOMP (Data Compression algorithm ID) error.</p> <p><b>Triggers:</b> Increments when SN-PDUs are received with invalid DCOMP value or DCOMP value different from that negotiated between MS and SGSN.</p> <p><b>Availability:</b> per SGSN service</p>
PCOMP Error	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to PCOMP (Protocol Header Compression algorithm ID).</p> <p><b>Triggers:</b> Increments when SN-PDUs are received with invalid PCOMP value or PCOMP value different from that negotiated between MS and SGSN.</p> <p><b>Availability:</b> per SGSN service</p>
PDP Ctx Modified	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to PDP modification.</p> <p><b>Triggers:</b> Increments when buffered data segments (SN-PDUs) are dropped during PDP context modification.</p> <p><b>Availability:</b> per SGSN service</p>
PDP Ctx Deleted	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDCP due to PDP deletion.</p> <p><b>Triggers:</b> Increments when buffered data segments (SN-PDUs) are dropped at SNDCP due to PDP context deletion.</p> <p><b>Availability:</b> per SGSN service</p>

Field	Description
Other Reasons	<p><b>Description:</b> This proprietary counter indicates the total number of SN-PDUs dropped at SNDTCP due to any other reason than those mentioned above.</p> <p><b>Triggers:</b> Increments when buffered data segments (SN-PDUs) are dropped at SNDTCP due to other reasons than those mentioned above.</p> <p><b>Availability:</b> per SGSN service</p>

# CHAPTER 139

## show snmp

This chapter describes the output of the **show snmp** command.

- [show snmp accesses](#), on page 2035
- [show snmp communities](#), on page 2036
- [show snmp notifies](#), on page 2036
- [show snmp server](#), on page 2037
- [show snmp trap history](#), on page 2038
- [show snmp trap statistics](#), on page 2038

## show snmp accesses

*Table 573: show snmp accesses Command Output Descriptions*

Field	Description
<b>SNMP Usage Statistics:</b>	
Get PDUs Received	The number of SNMP Get request packet data units (PDUs) received by the system from the SNMP alarm server.
GetNext PDUs Received	The number of SNMP GetNext request packet data units (PDUs) received by the system from the SNMP alarm server.
Set PDUs Received	The number of SNMP Set request packet data units (PDUs) received by the system from the SNMP alarm server.
PduTooBig Errors	The number of errors that occurred due to the packet data unit being received is too large.
NoSuchName Errors	The number of errors that occurred due to the packet data unit being requested not existing in the system. For example, this error would be generated if an SNMP "GET" request was received for an OID that doesn't exist in the system.
BadValue Errors	The number of errors that occurred due to the receipt of a bad value. For example, this error would be generated if an SNMP "SET" operation provides an illegal value.

Field	Description
GenError Errors	The number errors that occurred that could not be properly classified. For example, this error would be generated if the system receives a valid SNMP "GET" PDU requesting a piece of data about a card, however, the system experiences an internal error attempting to reach the card.
Agent started	The date and time when the SNMP agent was started.

## show snmp communities

Table 574: show snmp communities Command Output Descriptions

Field	Description
Community Name	Displays the name of the SNMP community.
Access Level	Displays the access level – "read-only" or "read-write".

## show snmp notifies

Table 575: show snmp notifies Command Output Descriptions

Field	Description
<b>SNMP Notification Statistics:</b>	
Total number of notifications	The total number of notifications that have been sent to the SNMP alarm server since notification was enabled.
Last notification sent	The last date and time that a notification was sent to the SNMP alarm server.
Notification sending is	Indicates whether the sending of notifications is enabled or disabled on the system.
Notifications have never been disabled	Indicates whether or not the sending of SNMP notifications has ever been disabled.
Notifications in current period	The number of notifications that have been sent to the SNMP alarm server during the current monitor period.
Notifications in previous period	The number of notifications that have been sent to the SNMP alarm server during the previous monitor period.
Notification monitor period	The duration of the monitor period in seconds.
Trap Name	The trap name.
#Gen	The number of times notifications were generated for the trap.

Field	Description
#Disc	The disc number.
Disable	The number of notifications disabled.
Last Generated	The last date and time that a notification generated.
Total number of notifications Disabled	The total number of notifications disabled.

## show snmp server

*Table 576: show snmp server Command Output Descriptions*

Field	Description
SNMP Server Configuration:	
Server State	Identifies the current server state, for example "enabled".
SNMP Port	Identifies the SNMP port number. Default = 161.
sysLocation	Displays the System Location.
sysContact	Displays the System contact information.
authenticationFail traps	Indicates whether this trap is Enabled or Disabled.
EngineID	Displays the SNMP Engine identifier.
Runtime Debugging	Indicates whether SNMP runtime debugging is enabled (ON) or disabled (OFF). By default the setting is ON.

Field	Description
Runtime Debug Token	Displays the numerical value(s) corresponding to SNMP DEBUGMSG tokens that have been enabled: <ul style="list-style-type: none"> <li>• 1 = mib_init</li> <li>• 2 = parse-file</li> <li>• 3 = parse-mibs</li> <li>• 4 = read_config</li> <li>• 5 = snmp</li> <li>• 6 = snmpd</li> <li>• 7 = snmptrapd</li> <li>• 8 = trap</li> <li>• 9 = transport</li> <li>• 10 = usm</li> <li>• 11 = disman</li> <li>• 12 = agentx</li> <li>• 13 = dumpph</li> <li>• 14 = init_mib</li> </ul>
Alert Threshold	"<number> of alerts in <number> seconds"
Alert Low Threshold	"<number> of alerts in <number> seconds"
SNMP Agent Mib Configuration:	
<mib_name>	Lists available SNMP MIBs and whether they are Enabled or Disabled.

## show snmp trap history

Table 577: show snmp trap history Command Output Descriptions

Field	Description
There are <n> historical trap records (5000 maximum)	
Timestamp	Identifies the date and time the event trap was generated.
Trap Information	Shows the trap notification number and the associated device.

## show snmp trap statistics

Table 578: show snmp trap statistics Command Output Descriptions

Field	Description
SNMP Notification Statistics:	

Field	Description
Total number of notifications	The total number of notifications sent to the SNMP alarm server since notification was enabled.
Last notification sent	The last date and time that a notification was sent to the SNMP alarm server.
Notification sending is	Indicates whether notification sending is enabled/disabled.
Notifications have never been disabled	Indicates whether notification sending was ever disabled.
Notifications have never been cleared	Indicates whether notification sending was ever cleared.
Notifications in current period	The number of notifications that have been sent to the SNMP alarm server during the current monitor period.
Notifications in previous period	The number of notifications that have been sent to the SNMP alarm server during the previous monitor period.
Notification monitor period	The duration of the monitor period in seconds.
Trap Name	The trap name.
#Gen	The number of times notifications were generated for the trap.
#Disc	The disc number.
Disable	The number of notifications disabled.
Last Generated	The last date and time that a notification generated.
Total number of notifications Disabled	The total number of notifications disabled.

# CHAPTER 140

## show software authenticity

This chapter describes the output of the **show software authenticity** command.

- [show software authenticity file](#), on page 2041
- [show software authenticity keys](#), on page 2042
- [show software authenticity running](#), on page 2042

## show software authenticity file

*Table 579: show software authenticity file Command Output Descriptions*

Field	Description
Authenticity Information	
Image Type	States the type of image.
Signer Information	
Common Name	CiscoSystems
Organizational Unit	StarOS
Organizational Name	CiscoSystems
Certificate Serial Number	Number assigned to the certificate.
Hash Algorithm	Type of algorithm used for hashing, such as SHA512.
Signature Algorithm	Type of algorithm used to sign this image, such as 2048-bit RSA.
Key Version	The version of the key used to generate the signature.
Validating digital signature, please wait ... done	This image is <not> authenticate.

## show software authenticity keys

*Table 580: show software authenticity keys Command Output Descriptions*

Field	Description
Primary Public Key	#1 or #2
Backup Public Key	#3 or #4
Key Type	States the type of key, such as Released.
Key Algorithm	The algorithm used to generate the signature key, such as RSA.
Modulus (256 bytes)	Displays the encrypted text corresponding to the public key. Messages encrypted with the public key can only be decrypted using the private key.
Exponent (4 bytes)	The exponent used in modular exponentiation of the public key.
Key Version	The version of the algorithm used by Release Engineering to sign the starfile image.
Product Name	StarOS

## show software authenticity running

*Table 581: show software authenticity running Command Output Descriptions*

Field	Description
SYSTEM IMAGE	
Image Type	States the type of image.
Signer Information	
Common Name	CiscoSystems
Organizational Unit	StarOS
Organizational Name	CiscoSystems
Certificate Serial Number	Number assigned to the certificate.
Hash Algorithm	Type of algorithm used for hashing, such as SHA512.
Signature Algorithm	Type of algorithm used to sign this image, such as 2048-bit RSA.

Field	Description
Key Version	The version of the key used to generate the signature.
Verifier Information	
Verifier Name	Firmware = CFE3 ROM
Verifier Version	Firmware release number
CFE3 ROM	
Image Type	States the type of image.
Signer Information	
Common Name	CiscoSystems
Organizational Unit	StarOS
Organizational Name	CiscoSystems
Certificate Serial Number	Number assigned to the certificate.
Hash Algorithm	Type of algorithm used for hashing, such as SHA512.
Signature Algorithm	Type of algorithm used to sign this image, such as 2048-bit RSA.
Key Version	The version of the key used to generate the signature.
Verifier Information	
Verifier Name	Firmware = BIOS/UEFI
Verifier Version	Firmware release number
BIOS3	
Image Type	States the type of image.
Signer Information	
Common Name	CiscoSystems
Organizational Unit	StarOS
Organizational Name	CiscoSystems
Certificate Serial Number	Number assigned to the certificate.
Hash Algorithm	Type of algorithm used for hashing, such as SHA512.
Signature Algorithm	Type of algorithm used to sign this image, such as 2048-bit RSA.
Key Version	The version of the key used to generate the signature.

Field	Description
Verifier Information	
Verifier Name	Microloader
Verifier Version	Release number

# CHAPTER 141

## show srp

This chapter describes the outputs of the **show srp** command.

- [show srp audit-statistics](#), on page 2045
- [show srp call-loss statistics](#), on page 2046
- [show srp checkpoint info](#), on page 2047
- [show srp checkpoint statistics](#), on page 2048
- [show srp info](#), on page 2055
- [show srp monitor](#), on page 2057
- [show srp statistics](#), on page 2058

## show srp audit-statistics

*Table 582: show srp audit-statistics Command Output Descriptions*

Field	Description
Message statistics	
Audit Request	
sent	Displays the number of audit requests sent.
received	Displays the number of audit requests received.
dropped	
decode error	Displays the number of audit requests dropped due to decode error.
invalid state	Displays the number of audit requests dropped due to invalid state.
Audit Response	
sent	Displays the number of audit responses sent.
received	Displays the number of audit responses received.
dropped	

Field	Description
decode error	Displays the number of audit responses dropped due to decode error.
invalid state	Displays the number of audit responses dropped due to invalid state.
Session statistics	
Audit-2 as standby started at	Displays a time stamp for when the standby chassis audit began and the amount of time it took to finish.
Audit round trip time	Displays audit round trip time.
Audit triggered by switchover	Displays whether audit was triggered by a switchover.
Active sessions	Displays the number of active sessions and their percentage of total calls.
New sessions	Displays the number of new sessions and their percentage of total calls.
Stale sessions	Displays the number of stale sessions and their percentage of total calls.
Inactive sessions	Displays the number of inactive sessions and their percentage of total calls.
Audit-1 as active started at	Displays a time stamp for when the active chassis audit began and the amount of time it took to finish.
Audit round trip time	Displays audit round trip time.
Audit triggered by switchover	Displays whether audit was triggered by a switchover.
Active sessions	Displays the number of active sessions and their percentage of total calls.
New sessions	Displays the number of new sessions and their percentage of total calls.
Stale sessions	Displays the number of stale sessions and their percentage of total calls.
Inactive sessions	Displays the number of inactive sessions and their percentage of total calls.

## show srp call-loss statistics

Table 583: show srp call-loss statistics Command Output Descriptions

Field	Description
Switchover-n	Identifies the switchover by number.
Started at	Displays the timestamp for when the switchover was initiated.
took	Displays how many seconds the switchover took to finish.

Field	Description
Switchover Reason	Indicates the reason for the switchover: <ul style="list-style-type: none"> <li>• Manual Switchover</li> <li>• AAA failure</li> <li>• BFD failure</li> <li>• BGP failure</li> <li>• Chassis-Chassis BFD failure</li> <li>• Dead Timer Expiry</li> <li>• Diameter failure</li> <li>• Dual Active</li> <li>• Dual Standby</li> <li>• HSRP switchover (WSG/SecGW service only)</li> <li>• Not Defined (replaces "Unknown")</li> </ul>
Total number of active calls at switchover time	Displays the total number of active calls on this chassis when the switchover was initiated.
Total number of VoLTE capable subscribers	Displays the total number of subscribers with VoLTE capable phones that were on the system when the switchover was initiated.
Total number of subscribers engaged in voice calls	Displays the total number of subscribers that were on voice calls when the switchover was initiated.
Total number of lost calls at switchover time	Displays the number of calls that were lost on this chassis during the switchover.
Chkpt never sent	Displays the total number of checkpoints that were never sent by the chassis during the switchover.
Chkpt failed	Displays the total number of checkpoints that this chassis failed to receive during the switchover.

## show srp checkpoint info

*Table 584: show srp checkpoint info Command Output Descriptions*

Field	Description
CMD ID	Displays the checkpoint number associated with the micro-checkpoint.
NAME	Displays the name assigned to the micro-checkpoint.
CRITICAL	Indicates whether or not the micro-checkpoint is in a critical state (Yes or No).
STATS	Indicates whether or not audit statistics are available for the micro-checkpoint (Yes or No).
NACK	Indicates whether or not NACK messaging from the standby chassis has been disabled for the micro-checkpoint (Enable or Disable).

# show srp checkpoint statistics

**Table 585: show srp checkpoint statistics Command Output Descriptions**

Field	Description
The following statistics indicates the state of session managers on the chassis. For ideal invocation of SRP procedures, the SessMgr state should *-Connected state.	
Number of Sessmgrs	Displays the total number of session managers
Sessmgrs in Active-Connected state	Displays the number of session managers in the active-connected state.
Sessmgrs in Standby-Connected state	Displays the number of session managers in the standby-connected state.
Sessmgrs in Pending-Active state	Displays the number of sessions managers in the pending-active state.
These statistics indicate the conversion status of checkpoint information on the standby chassis.	
Current Call Recovery Records (CRRs)	Displays the number of current call recovery records.
Current pre-allocated calls	Displays the number of pre-allocated calls.
The following statistics are indicative of the status of various kinds of SRP message exchanges between active and standby chassis.	
Total id-mapping checkpoint rcvd	Displays the total number of id-mapping checkpoints received by the chassis.
Total APN id-mapping chkpnt rcvd	Displays the total number of APN id-mapping checkpoints received by the chassis.
Total SFW id-mapping chkpnt rcvd	Displays the total number of SFW (Stateful Firewall) checkpoints received by the chassis.
Total sync rcvd	Displays the total number of sync messages received by the chassis.
Total sync-ack rcvd	Displays the total number of sync acknowledgement messages received by the chassis.
Total full session checkpoint rcvd	Displays the total number of complete session information checkpoints received by the chassis.
Total nat-ips add rcvd	Displays the total number of NAT IP address additions received by the chassis.
Total nat-ips delete rcvd	Displays the total number of NAT IP address deletions received by the chassis.
Total micro session checkpoint rcvd	Displays the total number of incremental micro session information checkpoints received.
Total inv-crr micro-chkpnt rcvd	Displays the total number of session teardown indication micro-checkpoints received.
total perf provided info micro-chkpnt rcvd	Displays the total number of PCRF provided MCC-MNC related information for P-GW and GGSN micro-checkpoints received.

Field	Description
Total call-stats micro-chkpnt rcvd	Displays the total number of call statistics update micro-checkpoints received.
Total nat-ips micro-chkpnt rcvd	Displays the total number of NAT-IP micro-checkpoints received at standby.
Total nat-ips add rcvd	Displays the total number of NAT IP address additions received at standby.
Total nat-ips delete rcvd	Displays the total number of NAT IP address deletions received at standby.
Total nat-port micro-chkpnt rcvd	Displays the total number of NAT port micro-checkpoints received at standby.
Total nat-bypass micro-chkpnt rcvd	Displays the total number of NAT-Bypass Micro-checkpoints received at standby.
Total acs-sess-info micro-chkpnt rcvd	Displays the total number of Active Charging Service (ACS) session information Micro-checkpoints received.
Total dyn-rule micro-chkpnt rcvd	Displays the total number of dynamic rules received and checkpointed to the standby chassis respectively.
Total gx-li micro-chkpnt rcvd	Displays the total number of LI session information, as enabled from Gx, received at standby counter.
Total Instance checkpoint rcvd	Displays the total number of PCRF-generated policy information as received session independent at standby.
Total dyn-rule-instance micro-chkpnt rcvd	Displays the total number of session specific policy received counter.
Total dyn-rule-instance delete micro-chkpnt rcvd	Displays the total number of session specific policy remove counter.
Total dyn-rule-instance ACK rcvd	Displays the total number of session independent information acknowledged from standby counter.
Total id-mapping checkpoint sent	Displays the total number of configuration specific id mapping for VPN/VRF context ids, service ids, and APN ids as sent to standby.
Total APN id-mapping chkpt sent	Displays the total number of configuration specific id mapping for APN ids as sent to standby.
Total SFW id-mapping chkpt sent	Displays the total number of configuration specific id mapping for SFW ids as sent to standby.
Total sync sent	Displays the total number of SYN message received counter.
Total sync-ack sent	Displays the total number of SYN Ack received counter.
Total full session checkpoint sent	Displays the total number of full session checkpoints sent by the chassis.
Total nat-ip add sent	Displays the total number of NAT-IP add sent counter to standby.
Total full chkpnt encoding failures	Displays the total number of complete session information formation failure counter primarily due to release of the session at active
Total micro session checkpoint sent	Displays the total number of micro session checkpoints sent by the chassis.

Field	Description
Total inv-crr micro-chkpnt sent	Displays the total number of invalid CRR micro checkpoints sent.
total perf provided info micro-chkpnt sent	Displays the total number of PCRF provided MCC-MNC related information for P-GW and GGSN micro-checkpoints sent.
Total call-stats micro-chkpnt sent	Displays the total number of call statistics micro checkpoints sent.
Total nat-ip micro-chkpnt sent	Displays the total number of NAT-IP Micro-checkpoint sent from active.
Total nat-ip add sent	Displays the total number of NAT-IP address addition indications to standby.
Total nat-ip delete sent	Displays the total number of NAT-IP address deletion indications to standby.
Total nat-port micro-chkpnt sent	Displays the total number of NAT-Port Micro-checkpoint sent from active.
Total nat-bypass micro-chkpnt sent	Displays the total number of NAT-Bypass Micro-checkpoint sent from active.
Total acs-sess-info micro-chkpnt sent	Active Charging Service (ACS) specific session information as sent to standby.
Total dyn-rule micro-chkpnt sent	Displays the total number of dynamic rules sent and checkpointed to the standby chassis respectively.
Total gx-li micro-chkpnt sent	LI session information sent from active.
Total instance micro-chkpnt sent	PCRF generated policy information as sent session independent from active.
Total dyn-rule-instance micro-chkpnt sent	Session specific policy add sent counter at active.
Total dyn-rule-instance delete micro-chkpnt sent	Session specific policy remove sent counter from active.
Total dyn-rule-instance ACK sent	Session independent information acknowledgements sent from standby counter.
Total micro chkpnt encoding failures	Incremental session information failed to be sent due to bad encoding at active.
Total instance micro chkpnt encoding failures	PCRF generated policy encoding failed while being sent session independent from active.
Total ipsec non urgent micro-chkpnt rcvd from active chassis serial number mismatch	Non-urgent IPsec micro-checkpoint received from Active Chassis with serial number mismatch.
Total ipsec urgent micro-chkpnt rcvd from active chassis serial number mismatch	Urgent IPsec micro-checkpoint received from Active Chassis with serial number mismatch.

Field	Description
sessmgr --> ipsecmgr checkpoint queue stats	Displays sessmgr to ipsecmgr queue statistics. <ul style="list-style-type: none"> <li>• Imgr</li> <li>• QFull</li> <li>• UQFull (Urgent Queue)</li> <li>• QLen</li> <li>• UQLen</li> <li>• QSent</li> <li>• UQSent</li> <li>• TotalMsgSent</li> </ul>
sessmgr --> aaamgr ipsec checkpoint queue stats	Displays sessmgr to aaamgr queue statistics.gr to ipsecmgr queue statistics. <ul style="list-style-type: none"> <li>• Amgr</li> <li>• QFull</li> <li>• UQFull (Urgent Queue)</li> <li>• QLen</li> <li>• UQLen</li> <li>• QSent</li> <li>• UQSent</li> <li>• TotalMsgSent</li> </ul>
Total micro-chkpnt to send dropped full-chkpnt not sent	Displays number of unsent micro- checkpoints due to dropped full checkpoints.
Total micro-chkpnt to send dropped srp state not active	Displays number of unsent micro- checkpoints that were dropped because SRP state was not Active.
Total micro-chkpnt to send deleted from chkpnt queue	Displays number of unsent micro-checkpoints that were deleted from the checkpoint queue.
Session full checkpoint never sent	Displays the number of calls which failed to send out complete session information.
Total Macro chkpnt Nack Sent	Displays the number of NACKs sent from Standby due to macro-checkpoint failure.
Total Micro chkpnt Nack Sent	Displays the number of NACKs sent from Standby due to micro-checkpoint failure.
Coherency_key mismatch	Displays the number of NACKs sent from Standby due to micro-checkpoint failure with reason coherency_key mismatch.
Micro-Checkpoint failed to apply	Displays the number of NACKs sent from Standby due to micro-checkpoint failure with reason application failure.
Session Not Found	Displays the number of NACKs sent from Standby due to micro-checkpoint failure with reason session failure.
Total Macro chkpnt Nack Rcvd:	Displays the number of NACKs received from Standby due to macro-checkpoint failure.

Field	Description
Total Micro chkpnt Nack Rcvd	Displays the number of NACKs received from Standby due to micro-checkpoint failure.
Coherency_key mismatch	Displays the number of NACKs received from Standby due to micro-checkpoint failure with reason coherency_key mismatch.
Micro-Checkpoint failed to apply	Displays the number of NACKs received from Standby due to micro-checkpoint failure with reason application failure.
Session Not Found	Displays the number of NACKs received from Standby due to micro-checkpoint failure with reason session failure.
Standby call pre-alloc failures	Displays the number of standby call pre allocation failures.
table-id mapping failures	Displays the number of table id mapping failures.
vpn-id mapping failures	Displays the number of decode failures due to not finding matching vpn information on standby.
svc-id mapping failures	Displays the number of decode failures due to not finding matching service information on standby.
ntwk-id mapping failures	Displays the number of decode failures due to not finding matching ggsn network information on standby.
demux-mapping-id failures	Displays the number of decode failures due to not finding matching demux information on standby.
tpo-policy-mapping-id failures	<b>NOTE: The Traffic Performance Optimization (TPO) in-line service is not supported in this release.</b>
aaa session failures	Displays the number of AAA session failures.
recovery record alloc failures	Displays the number of recovery record allocation failures.
pre-allocate vpnmgr failure	Pre-allocation of callines at standby failed due to VPN IP address allocation.
Ipv4 failure	Pre-allocation of callines at standby failed due to VPN IPv4 address allocation.
Ipv4 Prefix failure	Pre-allocation of callines at standby failed due to VPN IPv4 prefix address allocation.
Ipv6 failure	Pre-allocation of callines at standby failed due to VPN IPv6 address allocation.
pre-allocate vpnmgr msg failure	Pre-allocation of callines at standby failed due to VPN messaging issues.
pre-allocate demuxmgr failure	Pre-allocation of callines at standby failed due to demux failure.
pre-allocate demuxmgr msg failure	Pre-allocation of callines at standby failed due to demux messaging issues.
Standby micro-checkpoint failures	Displays the number of standby micro checkpoint failures.
recovery record not found	Displays the number of recovery records not found.

Field	Description
nat-ip uchkpt failed	The number of NAT IP micro-checkpoint failures.
nat-port uchkpt failed	The number of NAT port micro-checkpoint failures.
nat-bypass uchkpt failed	The number of NAT bypass micro-checkpoint failures.
The following are audit statistics done as part of the switchover--conversion of session information failures as reported at standby going active.	
Total CRR recovery failures	Displays the total number of Call Recovery Record (CRR) call recovery failures.
audit-npumgr-failure	Audit of npumgr failures.
audit-npumgr-nat-flow-failure	Audit of npumgr NAT flow failures.
audit-npumgr-nat-bypass-flow-failure	Audit of npumgr NAT bypass flow failures.
audit-vpnmgr-failure	Audit of vpnmgr failures.
audit-vpnmgr-nat-ip-failure	Audit of vpnmgr NAT IP failures.
audit-demuxmgr-failure	Audit of demuxmgr failures for all demux managers.
For the next three audit statistics, if all three audits fail for a single call, only the counter for the first failure will be incremented. Total audit failure count will remain one (not three). There is no double counting.	
audit-egtpinmgr-imsi-failure	Audit of EGTP inbound IMSI failures following an Interchassis Session Recovery (ICSR) switchover.
audit-egtpinmgr-gtpc-failure	Audit of EGTP inbound GTPC failures following an ICSR switchover.
audit-gtpumgr-failure	Audit of gtpumgr failures following an ICSR switchover.
audit-aaamgr-failure	Audit of aaamgr failures.
audit-ipsecmgr-failure	Audit of ipsecmgr failures.
audit-dgmbmgr-failure	Audit of dgmbmgr failures.
audit-mcast-proxy-failure	Audit of mcast proxy failures.
audit-igmp-proxy-failure	Audit of igmp proxy failures.
audit-unsupported-sess-type	Audit of unsupported session type failures.
recovery-undefined-fail	The call recovery failed due to unspecified reason.
recovery-invalid-crr	The call recovery failed due to invalid CRR.
recovery-missing-info	The call recovery failed due to missing information.
recovery-quota-reached	The call recovery failed due to quota reached.
recovery-set-acs-sess-info-failure	The call recovery failed due to set ACS session information.

Field	Description
recovery-acs-sfw-policy-failure	The call recovery failed due to ACS SFW policy.
recovery-uchekpt-failure	The call recovery failed due to Micro-checkpoint.
recovery-service-not-found	The call recovery failed due to service not found.
recovery-restart-counter-mismatch	The call recovery failed due to restart counter mismatch.
recovery-aaa-sub-session-mismatch	The call recovery failed due to aaa sub session mismatch.
recovery-crr-no-aaa-session	The call recovery failed due to CRR no aaa session.
recovery-crr-aaa-session-not_found	The call recovery failed due to CRR aaa session not found.
recovery-flow-buffer-null	The call recovery failed due to flow buffer null.
recovery-invalid-flow-id	The call recovery failed due to invalid flow ID.
recovery-flow-id-in-use	The call recovery failed due to flow ID in use.
recovery-callline-alloc-failure	The call recovery failed due to callline allocation.
recovery-ipv6-session-alloc-failure	The call recovery failed due to IPv6 session allocation.
recovery-no-apn-group-stats-entry	The call recovery failed due to no APN group statistics.
recovery-apply-aaa-config-failure	The call recovery failed due to application of aaa configuration.
recovery-sub-session-alloc-failure	The call recovery failed due to sub session allocation.
recovery-nat-failure	The call recovery failed due to NAT.
recovery-set-dst-vpn-failure	The call recovery failed due to set destination VPN.
recovery-vpn-not-found	The call recovery failed due to VPN not found.
recovery-access-side-failure	The call recovery failed due to access side.
recovery-network-side-failure	The call recovery failed due to network side.
recovery-peer-callline-failure	The call recovery failed due to peer callline.
recovery-li-failure	The call recovery failed due to LI.
recovery-css-failure	The call recovery failed due to CSS.
recovery-uchkpt-alloc-failure	The call recovery failed due to Micro-checkpoint allocation.
recovery-acs-dyn-rule_failure	The call recovery failed due to ACS dynamic rule.
recovery-acs-acct-rule-failure	The call recovery failed due to ACS account rule.
recovery-prepaid-failure	The call recovery failed due to prepaid.
recovery-mipfa-failure	The call recovery failed due to mipfa.

Field	Description
call-recovery-stale-session	The call recovery failed due to stale session.
call-recovery-wrong-flow-type	The call recovery failed due to wrong flow type.
call-recovery-null-acct-session	The call recovery failed due to null account session.
call-recovery-wrong-acct-session-type	The call recovery failed due to wrong account session type.
call-recovery-null-acct-session	The call recovery failed due to null accounting session.
call-recovery-wrong-acct-session-type	The call recovery failed due to wrong type of accounting session.
recovery-acct-dyn-chrg-update-qg-failure	The call recovery failed due to an ACS accounting dynamic charging QG update failure.
recovery-acct-dyn-chrg-update-ca-failure	The call recovery failed due to an ACS dynamic charging CA update failure.
call-recovery-acct-internal-audit-failure	The call recovery failed due to an ACS internal audit failure.
Total CRR replace record	Total number of replaced CRRs (Call Recovery Records).
call-recovery-gtpu-teid-in_use	The call recoveries for in-use GTPU TEIDs (Tunnel Endpoint IDs).
call-recovery-egtpc-teid-in_use	The call recoveries for in-use EGTPC TEIDs.
NAT-NPU flow audit failures	The number of NAT NPU Flow audit failures.
NAT-IP Pool address audit failures	The number of NAT IP Flow audit failures.
NAT-Bypass flow audit failures	The number of NAT Bypass Flow audit failures.
Graceful call drops during audit failure	The number of calls dropped as a result of Audit Failure with <b>require graceful-cleanup-during-audit-failure</b> enabled.

## show srp info

*Table 586: show srp info Command Output Descriptions*

Field	Description
Service Redundancy Protocol	
Context	Displays the srp context configured for service redundancy protocol. Only one context may be configured with this service.
Local Address	Displays the local address of the chassis.
Chassis State	Displays the chassis state (init, standby or active).
Chassis Mode	Displays the chassis mode (primary or backup).

Field	Description
Chassis Priority	Displays the chassis priority. The chassis priority is an integer that determines which chassis is in the active state. The lower number has a higher priority. The priority must be an integer from 1 through 255. Default is 125.
Local Tiebreaker	Displays the MAC address which is used to determine priority when both chassis have the same priority and route modifier. The lower MAC address has the higher priority.
Route-Modifier	Displays the modifier which is used to determine which chassis has priority. The lower the number the higher the priority.
DSCP Markings	Displays current settings for DSCP marking of SRP messages.
Control	Displays DSCP value set for SRP control messages.
Session	Displays DSCP value set for SRP checkpoint messages (session maintenance).
Peer Remote Address	Displays the IP address of the remote peer.
Peer State	Displays whether the peer is in the active or standby state.
Peer Mode	Displays the peer mode (standby or active).
Peer Priority	Displays the peer priority (primary or backup).
Peer Tiebreaker	Displays the peer MAC address.
Peer Route-Modifier	Displays the peer's BGP route modifier.
Last Hello Message received	Displays a time stamp for the most recent hello message that was received.
Peer Configuration Validation	Displays the peer configuration validation.
Last Peer Configuration Error	Displays the most recent error that was received when the chassis was not able to validate its peer configuration.
Last Peer Configuration Event	Displays a time stamp for the last peer configuration event.
Last Validate Switchover Status	Displays whether both active and standby systems are ready for a planned srp switchover.
Connection State	Displays the status of the redundancy link between the two chassis.
Next Peer Audit Scheduled	Displays minutes and seconds until next audit.
Peer Audit State	Displays current state of peer audit configuration.
Last Peer Audit Type	Displays the type of peer audit that was last run.
Last Peer Audit Successful	Indicates whether or not the last peer audit was successfully completed.
Feature	Configured-status Operational-status
allow-volte-data-traffic	Indicates system-level Configuration and Operational status of this feature as Enabled, Disabled or Mismatch.

Field	Description
allow-all-dat-traffic	Indicates system-level Configuration and Operational status of this feature as Enabled, Disabled or Mismatch.

## show srp monitor

*Table 587: show srp monitor Command Output Descriptions*

Field	Description
Type:	(A) = Authentication Probe (B) = BGP (D) = Diameter (F) = Bidirectional Forwarding Detection
State:	(I) = Initializing (U) = Up (D) = Down
GroupId	SRP Peer Group Identifier (displayed as an integer from 0 through 9. Default = 0).
Auth. probe monitor	Displays the following authentication probe information: IP addr = IP address in IPv4 or IPv6 notation Port = Port number Context (VRF Name) Last Update
(AU) Auth. probe monitors up	Displays the number of authentication probe monitors in the active state.
(AD) Auth. probe monitors down	Displays the number of authentication probe monitors in the inactive state.
(AI) Auth. probe monitors init	Displays the number of authentication probe monitors in the initializing state.
BFD monitor	Displays BFD information.
(FU) BFD monitors up	Displays the number of BFD monitors in the active state.
(FD) BFD monitors down	Displays the number of BFD monitors in the inactive state.
(FI) BFD monitors init	Displays the number of BFD monitors in the initializing state.

Field	Description
BGP monitor state	Displays the following BGP information: <ul style="list-style-type: none"> <li>• IP addr = IP address in IPv4 or IPv6 notation</li> <li>• Port = Port number</li> <li>• Context (VRF Name)</li> <li>• Last</li> <li>• Update</li> </ul>
(BU) BGP monitors up	Displays the number of BGP monitors in the active state.
(BD) BGP monitors down	Displays the number of BGP monitors in the inactive state.
(BI) BGP monitors init	Displays the number of BGP monitors in the initializing state.
DIAMETER monitor state	Displays the following Diameter server information: <ul style="list-style-type: none"> <li>• Context</li> <li>• Endpoint Name</li> <li>• IPAddr (port)/FQDN</li> <li>• Last</li> <li>• Update</li> </ul>
(DU) DIAMETER monitors up	Displays the number of Diameter monitors in the active state.
(DD) DIAMETER monitors down	Displays the number of Diameter monitors in the inactive state.
(DI) DIAMETER monitors init	Displays the number of Diameter monitors in the initializing state.

## show srp statistics

Table 588: show srp statistics Command Output Descriptions

Field	Description
Service Redundancy Protocol	
Peer Remote Address	The IP address for the redundant peer chassis.
Hello Messages Sent	The number of hello messages that were sent to the peer chassis.
Hello Message Received	The number of hello messages received from the peer chassis.
Hello Messages Discarded	The number of discarded hello messages.

Field	Description
Configuration Validation Messages Sent	The number of configuration validation messages sent to the peer.
Configuration Validation Message Received	The number of configuration validation messages received from the peer chassis.
Configuration Validation Messages Discarded	The number of discarded configuration validation messages.
Resource Messages Sent	The number of resource messages sent to the peer chassis.
Resource Messages Received	The number of resource messages received from the peer chassis.
Resource Messages Discarded	The number of discarded resource messages.
Switchover Req Messages Sent	The number of switchover request messages sent to the peer chassis.
Switchover Req Messages Received	The number of switchover request messages received from the peer chassis.
Switchover Rsp Messages Sent	The number of switchover response messages sent to the peer chassis.
Switchover Rsp Messages Received	The number of switchover response messages received from the peer chassis.
Switchover Messages Discarded	The number of discarded switchover messages.
Switchover Events	The number of switchover events, where one chassis went from active to inactive and the other chassis went from inactive to active.
CMP Data Messages Sent	The number of Certificate Management Protocol (CMP) data messages sent. (RFC 4210)
CMP Data Messages Received	The number of CMP data messages received.

## CHAPTER 142

# show ss7-routing-domain

This chapter describes the outputs of the **show ss7-routing-domain** command.

- [show ss7-routing-domain, on page 2061](#)

## show ss7-routing-domain

*Table 589: show ss7-routing-domain Command Output Descriptions*

Field	Description
Peer Server Id	Indicates the peer server identifier.
Peer Server Process Id	Indicates the peer server process identifier.
Association State	Indicates the status of associated link.
Source Address	Indicates the IP address of source node/s.
Destination Address	Indicates the IP address of destination node/s.
Path Status	Indicates the status of established paths between source and destination node.

## CHAPTER 143

# show subscribers

---

This chapter includes the **show subscribers** command output tables.

- [show subscribers aaa-configuration](#), on page 2064
- [show subscribers access-flows](#), on page 2065
- [show subscribers access-flows full](#), on page 2066

- [show subscribers wf1 all](#), on page 2211
- [Common Attributes](#), on page 2212

## show subscribers aaa-configuration

**Table 590: show subscribers aaa-configuration Command Output Descriptions**

Field	Description
Username	Specifies the name of the subscriber.
Status	Indicates the status of the subscriber's session. The status can be Online or Offline and Active or Dormant.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Access Type	Indicates the type of access for this subscriber. See
Network Type	Displays the type of network connection for this subscribers session. See
Access Tech	Represents the <b>Access Technology</b> . See
callid	Displays the subscriber's call identification number (callid).
msid	Displays the subscriber's mobile station identification (MSID).
imsi	Displays the subscriber's international mobile subscriber identity (IMSI).

Field	Description
AAA Information and Attributes	A list of AAA information attributes and their configuration for the specified session.  For additional information on these attributes, if you are using StarOS 12.3 or an earlier release, refer to the <i>AAA and GTPP Interface Administration and Reference</i> . If you are using StarOS 14.0 or a later release, refer to the <i>AAA Interface Administration and Reference</i> .

## show subscribers access-flows

**Table 591: show subscribers access-flows Command Output Descriptions**

Field	Description
Access-Tech	Indicates the session type for this subscriber. See
Type	Indicates the access flow type as one of the following: <ul style="list-style-type: none"> <li>- Static</li> <li>- Dynamic</li> <li>- Pre-provisioned</li> <li>- Accounting</li> </ul>
Direction	Indicates the flow direction as Forward/Uplink or Reverse/Downlink.
Link Status	Indicates the status of the flow as one of the following: <ul style="list-style-type: none"> <li>- Online/Active</li> <li>- Dormant/idle</li> <li>- Not Applicable</li> </ul>
Flow State	Indicates the state of the flow as Active or Inactive.
Flow Mapping	Indicates the mapping of the flow as one of the following: <ul style="list-style-type: none"> <li>- Mapped</li> <li>- Unmapped</li> <li>- Not Applicable</li> </ul>
Network Type	Indicates the session Network Type. See
MSID	Displays the subscriber's mobile station identification (MSID).
ID	Indicates the unique identification number for the flow.
SRID	Indicates the service flow identifier for this subscriber.
PDFID	Indicates the packet data flow identifier for this subscriber.

Field	Description
PROFID	Indicates the QoS profile identifier for this subscriber.
PACKETS	Indicates the total number of packets processed for this flow.
BYTES	Indicates the total number of bytes processed for this flow.
POLICY	Indicates the name of the subscriber QoS policy applicable for this subscriber.

## show subscribers access-flows full

Table 592: show subscribers access-flows full Command Output Descriptions

Field	Description
Username	Specifies the name of the subscriber.
callid	Displays the subscriber's call identification number (callid).
msid	Displays the subscriber's mobile station identification (MSID).
flow ID	Indicates the unique identification number for the flow.
Access Tech	Indicates the session type for this subscriber. See
Status	Indicates the status of the session as Active or Dormant/Idle.
Policy Name	Indicates the name of the QoS/subscriber policy.
Direction	Indicates the flow direction as Forward/Uplink or Reverse/Downlink.
State	Indicates the status of the flow as Active or Inactive.
Mapping Status	Indicates the mapping status of the flow as one of the following: <ul style="list-style-type: none"> <li>- Mapped</li> <li>- Unmapped</li> <li>- Not Applicable</li> </ul>
Flow Type	Indicates the access flow type as one of the following: <ul style="list-style-type: none"> <li>- Accounting</li> <li>- Static</li> <li>- Dynamic</li> <li>- Pre-provisioned</li> </ul>
Hdr Comp	Indicates the status of header compression.
QoS Traffic Policing	Indicates the status of the QoS traffic policing as Enabled or Disabled.

Field	Description
Data Statistics	Displays the data statistics.
Packets	Displays the total number of packets.
Bytes	Displays the total number of bytes.
pkts dropped tp	Displays the number of packets dropped by the traffic policy.
pkts dropped access-ctrl	Displays the number of packets dropped by the access control.
Requested QoS	Displays the requested QoS.
Profile Ids	Displays the profile IDs for the requested QoS.
QoS Id	Displays the applicable QoS identifier.
Granted QoS	Displays the granted QoS.
Global-Service-Class-Name	Specifies the global service class name.
Service-Class-Name	Specifies the local service class name.
Schedule Type	Displays the schedule type configured for the requested QoS. This group contains relevant parameters like, minimum reserved traffic rate, maximum latency allowed, polling interval, traffic priority, sustained traffic rate, and maximum traffic burst.
Classifiers	Displays the service classifier parameters like type of traffic, priority, matching protocol, source-destination IP address and ports, DSCP marking etc. It also shows the configured permit criteria for flows.
Data Path(s)	Displays the available information of data path(s).
Peer Address	Indicates the IP address of the trusted peer ASN GWs for inter ASN GW handovers in this service.
BS ID	Indicates the Base station Id.
Tunnel Endpoint	Indicates the IP address of GRE tunnel endpoint.
Gre Key	Indicates the GRE key for this data tunnel.
Type	Type of GRE data tunnel. It may be R4 or R6.
State	Indicates the status of access flow. Possible states are: - <b>I</b> : Initializing - <b>F</b> : Flow Added - <b>A</b> : Active - <b>P</b> : Pending
RecdPkts	Indicates the total number of packets received.
SendPkts	Indicates the total number of packets sent.

Field	Description
Total access-flows matching specified criteria	Displays the total number of matching access-flows.

## show subscribers access-flows wf1

Table 593: show subscribers access-flows wf1 Command Output Descriptions

Field	Description
Access Tech	Indicates the session type for this subscriber. See
Policy Name	Indicates the name of the QoS/subscriber policy.
Type	Indicates the access flow type as one of the following: <ul style="list-style-type: none"> <li>- <b>A</b>: Accounting</li> <li>- <b>S</b>: Static</li> <li>- <b>D</b>: Dynamic</li> <li>- <b>P</b>: Pre-provisioned</li> </ul>
Direction	Indicates the flow direction as Forward/Uplink or Reverse/Downlink.
Link Status	Indicates the status of the link as one of the following: <ul style="list-style-type: none"> <li>- <b>A</b>: Online/Active</li> <li>- <b>D</b>: Dormant</li> <li>- . (period): Not Applicable</li> </ul>
Flow Status	Indicates the status of the flow as Active or Inactive.
Flow Mapping	Indicates the mapping status of the flow as one of the following: <ul style="list-style-type: none"> <li>- <b>M</b>: Mapped</li> <li>- <b>U</b>: Unmapped</li> <li>- . (period): Not Applicable</li> </ul>
Network Type	Indicates the network type. See
MSID	Displays the subscriber's mobile station identification (MSID) number.
ID	Indicates the unique identification number for the flow.
SRID	Indicates the service request identification number for the flow.
PROFID	Indicates the profile identification number used by the flow.
SO	Displays the service option for each flow.

Field	Description
PACKETS	Indicates the total number of packets.
BYTES	Indicates the total number of bytes.
POLICY	Indicates the policy name used for the flow.
HDR-COMP	Indicates the ROHC header compression feedback channel identification number carried by the link.

## show subscribers activity all

The output of the **show subscribers activity all** command displays the following field:

Field	Description
Access Tech	Indicates the accessing technology. See <b>Common Attributes</b> in this chapter. For example, LTE-M.

# show subscribers all

Table 594: show subscribers all Command Output Descriptions

Field	Description
vvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. <ul style="list-style-type: none"> <li>- <b>A</b>: Attached</li> <li>- <b>C</b>: Call (Unknown Type)</li> <li>- <b>N</b>: Not Attached</li> <li>- <b>v</b>: Voice Call</li> <li>- <b>.</b> (period): Not Applicable</li> <li>- <b>V</b>: Video Call</li> </ul>
	The fifth character represents the <b>Link Status</b> of the session. The possible idle states are: <ul style="list-style-type: none"> <li>- <b>A</b>: Online/Active</li> <li>- <b>D</b>: Dormant/Idle</li> </ul> <p><b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.</p>
	The sixth character represents the session <b>Network Type</b> . See
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP(*)	Displays the IP address assigned to the subscriber. (*) indicates the multiple hosts supported behind a primary node with primary IP address. Note that this is applicable to ASN GW session only.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

Field	Description
(N) - NB-IoT	Display the NB-IoT RAT type

## show subscribers apn <apn\_name> rulename <rule\_name>

Table 595: show subscribers apn <apn\_name> rulename <rule\_name> Command Output Descriptions

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types</a> , on page 2212.
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies</a> , on page 2214.
Call State	The call state. See, <a href="#">Call States</a> , on page 2214.
Access CSCF State	The access state of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - <b>.</b> (period): Not Applicable
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types</a> , on page 2215.
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters. From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. The second character represents the <b>Access Technology</b> . The third character represents the <b>Call State</b> . The fourth character represents the <b>Access CSCF Status</b> of the session. The fifth character represents the <b>Link Status</b> of the session. The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.

Field	Description
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers apn <apn\_name> without-dynamic-rule

Table 596: show subscribers apn <apn\_name> without-dynamic-rule Command Output Descriptions

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types, on page 2212</a> .
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies, on page 2214</a> .
Call State	The call state. See, <a href="#">Call States, on page 2214</a> .
Access CSCF State	The access state of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - . (period): Not Applicable
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types, on page 2215</a> .
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using.
	The second character represents the <b>Access Technology</b> .
	The third character represents the <b>Call State</b> .
	The fourth character represents the <b>Access CSCF Status</b> of the session.
	The fifth character represents the <b>Link Status</b> of the session.
	The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.

Field	Description
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers apn <apn\_name> without-override-control

Table 597: show subscribers apn <apn\_name> without-override-control Command Output Descriptions

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types</a> , on page 2212.
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies</a> , on page 2214.
Call State	The call state. See, <a href="#">Call States</a> , on page 2214.
Access CSCF State	The access state of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - . (period): Not Applicable
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types</a> , on page 2215.
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters. From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. The second character represents the <b>Access Technology</b> . The third character represents the <b>Call State</b> . The fourth character represents the <b>Access CSCF Status</b> of the session. The fifth character represents the <b>Link Status</b> of the session. The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.

Field	Description
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers asngw-only all

Table 598: show subscribers asngw-only all Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - <b>.</b> (period): Not Applicable
	The fifth character represents the <b>Link Status</b> of the session. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected) <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
	The sixth character represents the session <b>Network Type</b> . See
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.

Field	Description
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.
Total subscribers matching specified criteria	The total number of subscribers using firewall.

## show subscribers asngw-service

Table 599: show subscribers asngw-service Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - <b>.</b> (period): Not Applicable
	The fifth character represents the <b>Link Status</b> of the session. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected) <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

Field	Description
Total subscribers matching specified criteria	The total number of subscribers using firewall.

## show subscribers callid

Table 600: show subscribers callid <callid>

Field	Description
Access Tech:	
LTE-M	Displays the Access Technology of the call as LTE-M.

## show subscribers callid <callid> adc readdress statistics

Table 601: show subscribers callid <callid> adc readdress statistics Command Output Descriptions

Field	Description
Total Readdressed Flows	Total number of readdressed uplink and downlink flows.
Readdressed Upl Pkts	Total number of readdressed uplinked packets.
Readdressed Dnl Pkts	Total number of readdressed downlinked packets.
Total Readdressing Failures	Total number of packets with readdressing failures.
Non Syn Flow	Total number of readdressing packets with a non SYN flow failure.
Duplicate Key	Total number of readdressing packets with a duplicate key failure.
Dropped Pkts	Total number of packets discarded on readdressing failure.

## show subscribers counters username

Table 602: show subscriber counters username Command Output Descriptions

Field	Description
Username	Specifies the name of the subscriber.

Field	Description
Status	Indicates the status of the subscriber's session. The status can be Online or Offline and Active or Dormant.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Access Type	Indicates the session type for this subscriber. See
Network Type	Indicates the network service used for the subscriber session. See
callid	Displays the subscriber's call identification number (callid).
msid	Displays the subscriber's mobile station identification (MSID).
input pkts	Indicates the number of packets received.
output pkts	Indicates the number of packets transmitted.
input bytes	Indicates the number of bytes received.
output bytes	Indicates the number of bytes transmitted.
input bytes dropped	Indicates the number of bytes that were dropped while receiving data for this subscriber session.
output bytes dropped	Indicates the number of bytes that were dropped while transmitting data for this subscriber session.
input pkts dropped	Indicates the number of packets that were dropped while receiving data for this subscriber session.
output pkts dropped	Indicates the number of packets that were dropped while transmitting data for this subscriber session.  This field includes packets blocked by Access Control Lists (ACLs). Do not use this figure when computing the total number of output packets.
input pkts dropped due to zero mbr	Indicates the number of packets that were dropped while receiving data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
output pkts dropped due to zero mbr	Indicates the number of packets that were dropped while transmitting data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
pk rate from user(bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.

Field	Description
pk rate to user(bps)	The peak data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate, in bits per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
pk rate from user(pps)	The speed that packets are being received from the user in packets per second. The sampling period is 30 seconds.
pk rate to user(pps)	The speed that packets are being sent to the user in packets per second. The sampling period is 30 seconds.
ave rate from user(pps)	The average speed that packets are being received from the user in packets per second. The sampling period is 30 seconds.
ave rate to user(pps)	The average speed that packets are being sent to the user in packets per second. The sampling period is 30 seconds.
sust rate from user(pps)	The sustained speed that packets are being received from the user in packets per second. The sampling period is 30 seconds.
sust rate to user(pps)	The sustained speed that packets are being sent to the user in packets per second. The sampling period is 30 seconds.
link online/active percent	The percentage of time that the data link was online and active during the last sampling period. The sampling period is 30 seconds.
ipv4 bad hdr	Indicates the number of IPv4 packets received with bad headers.
ipv4 ttl exceeded	Indicates the number of IPv4 packets dropped because their time-to-live was exceeded for this subscriber session.
ipv4 fragments sent	Indicates the number of IPv4 packet fragments that were transmitted.
ipv4 could not fragment	Indicates the number of IPv4 packets that could not be fragmented.
ipv4 input acl drop	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation. <b>Note:</b> This counter may increment even if no ACL is configured.
ipv4 output acl drop	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv4 source violations	Indicates the number of IPv4 source validation violations.

Field	Description
ipv4 source violation no accounting	The IPv4 source validation violations that were detected but not included in the statistics.
ipv6 egress filtered	Enable IPv6 egress address filtering feature.
dormancy total	Indicates the total amount of time in seconds that the subscriber session was dormant over the duration of the session.  <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
handoff total	The total number of subscriber sessions handed off.
ipv4 icmp packets dropped	When hide service address is enabled and a service in the system is sent ping packets or a traceroute is executed, the packets pertaining to the service address are dropped. This counter shows the number of those packets that have been dropped.
Total subscribers matching specified criteria	Displays the number of subscribers currently accessing the system that matched the criteria that was specified during the execution of this command.

## show subscribers cscf-only full

Displays per-subscriber information for active sessions.

**Table 603: show subscribers cscf-only full Command Output Descriptions**

Field	Description
AoR	The address of record of the CSCF subscriber.
callid	The call ID of the active subscriber session.
Contact	The subscriber's contact information provided during registration.
Custom Features	If applicable, the custom feature tag set for the CSCF subscriber.
Card/CPU	The slot and CPU number of the Processing Card through which the session is being processed.
Sessmgr Instance	The session manager instance the active subscriber session is using.
Active TCP Connections	(P-CSCF only) The total number of open TCP connections with subscribers.
Transport of Last Received Msg	The transport method used for the last received message. Possible transport methods used are TCP or UDP.
Last Registration Timestamp	Last registration received for the subscriber, displayed in Universal Time Coordinated (UTC).
Registration expires after	The remaining duration of the subscriber registration.

Field	Description
State	The current state of the session.
Subscriber type	The subscriber type (home or visitor).
CSCF Service	The CSCF service the session is using.
CSCF Role	The role of the CSCF service.
Collapsed with access service	The access service with which the CSCF service is collapsed.
Access service callid	The call ID number of the access gateway integrated with the SCM.
AAA context	The AAA service to which the subscriber belongs.
AAA domain	The AAA domain to which the subscriber belongs.
AAA RADIUS group	The AAA RADIUS group to which the subscriber belongs.
RADIUS Auth Server IP	The RADIUS authentication server's IP address.
RADIUS Acct Server IP	The RADIUS accounting server's IP address. <b>Note:</b> When the RADIUS Accounting Mediation Device is configured, this field will NOT display the RADIUS accounting mediation server's IP address.
DIAMETER Policy Server	The IP address of the Diameter policy server.
DIAMETER Policy Session-Id	The ID of Diameter Policy External Control Application (DPECA) session created by P-CSCF for every subscriber to subscribe to registration path signaling with PCRF. If the diameter subscription fails at PCRF, diameter Policy session ID will be displayed as N/A. <b>Note:</b> This field is applicable only for P-CSCF.
DIAMETER Policy Subscription	The status of DPECA subscription. <b>Note:</b> This field is applicable only for P-CSCF.
DIAMETER Acct Server	The IP address of the Diameter accounting server.
Charging Function Address	The IP address of the charging function server.
PCSCF Path	The node path to the registrar. A "Path" field is only used for REGISTER messages and 200OK responses to REGISTER messages. This field contains either IP-address:port or fully-qualified-domain-name:port.
SCSCF Service Route	The path to the service proxy as returned by the registrar upon successful registration. This field contains either IP-address:port or fully-qualified-domain-name:port.
Current CSCF sessions	The number of CSCF sessions the subscriber currently has running.

Field	Description
<b>Registration Set</b>	
All public URIs registered by the subscriber. It includes a public URI that the user explicitly registers as well as associated URIs that get implicitly registered for the user by the S-CSCF node. In addition, call features that a public URI is subscribed to are also shown below each URI.	
AoR	The address of record of the CSCF subscriber.
Display Name	The display name for the CSCF subscriber.
Unsupported VoLTE	Displays TRUE or FALSE, as per information obtained through Unsupported-VoLTE AVP in SAA from HSS.
Loose Route	The loose route information for the CSCF subscriber.
Alias GroupId	Populated if alias indication feature is enabled on S-CSCF. HSS reports alias group ID.
Total PubUids	The total number of implicit registered users for the CSCF subscriber.
Shared IFC	Populated if Shared Initial Filter Criteria (SiFC) functionality is enabled on the CSCF.
<b>Call Features</b>	
Subscriber profile shows whether a subscriber has enabled local call features. Possible values are: <ul style="list-style-type: none"> <li>• Disabled - Subscriber has disabled local call features; no associated local call features are displayed.</li> <li>• Enabled - Subscriber has enabled local call features; associated local call features are displayed.</li> </ul>	
CID VSC OverRide	Indicates whether Caller ID Display Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CID	Indicates whether Caller ID Display has been enabled (1) or disabled (0) by this subscriber.
CIDB VSC OverRide	Indicates whether Caller ID Display Blocked Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CIDB	Indicates whether Caller ID Display Blocked has been enabled (1) or disabled (0) by this subscriber.
CW VSC OverRide	Indicates whether Call Waiting Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CW	Indicates whether Call Waiting has been enabled (1) or disabled (0) by this subscriber.
CT VSC OverRide	Indicates whether Call Transfer Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CT	Indicates whether Call Transfer has been enabled (1) or disabled (0) by this subscriber.
CFU VSC OverRide	Indicates whether Call Forward Unconditional Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.

Field	Description
CFU	Indicates whether or not Call Forward Unconditional is enabled for the subscriber's session. If not, None will be displayed.
CFNA VSC OverRide	Indicates whether Call Forward No Answer Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CFNA	Indicates whether or not Call Forward No Answer is enabled for the subscriber's session. If not, None will be displayed.
CFBL VSC OverRide	Indicates whether Call Forward Busy Line Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CFBL	Indicates whether or not Call Forward Busy Line is enabled for the subscriber's session. If not, None will be displayed.
CFNR VSC OverRide	Indicates whether Call Forward Not Registered Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
CFNR	Indicates whether or not Call Forward Not Registered is enabled for the subscriber's session. If not, None will be displayed.
FollowMe VSC OverRide	Indicates whether Follow Me/Find Me Vertical Service Code Over Ride has been enabled (1) or disabled (0) by this subscriber.
FollowMe	Indicates whether or not Follow Me/Find Me is enabled for the subscriber's session. If not, None will be displayed.
<b>Current CSCF Subscriptions</b>	
Subscription id	The subscription ID.
Call-ID	The call identification number that uniquely identifies the subscriber.
Subscription Type	The subscription type.
Resource	The resource information.
Event Package	The associated event package. Possible event package types are: message-summary, presence, reg, and winfo.
<b>Subscriber counters</b>	
Call Attempts Tx	The total number of call attempts made by the subscriber for this session.
Call Attempts Rx	The total number of call attempts received by the subscriber for this session.
Call Successes Tx	The total number of calls successfully made by the subscriber for this session.
Call Successes Rx	The total number of successful calls received by the subscriber for this session.
Call Failures Tx	The total number of failed calls made by the subscriber for this session.
Call Failures Rx	The total number of call failures received by the subscriber for this session.

Field	Description
Call Release Attempts Tx	The total number of call release attempts made by the subscriber for this session.
Call Release Attempts Rx	The total number of call release attempts received by the subscriber for this session.
Call Release Successes Tx	The total number of call releases successfully made by the subscriber for this session.
Call Release Successes Rx	The total number of successful call releases received by the subscriber for this session.
Call Release Failures Tx	The total number of failed call releases made by the subscriber for this session.
Call Release Failures Rx	The total number of call release failures received by the subscriber for this session.
Subscription Attempts Tx	The total number of subscription attempts made by the subscriber for this session.
Subscription Attempts Rx	The total number of subscription attempts received by the subscriber for this session.
Subscription Successes Tx	The total number of subscriptions successfully made by the subscriber for this session.
Subscription Successes Rx	The total number of successful subscriptions received by the subscriber for this session.
Subscription Failures Tx	The total number of failed subscriptions made by the subscriber for this session.
Subscription Failures Rx	The total number of subscription failures received by the subscriber for this session.
Publish Attempts Tx	The total number of publish attempts made by the subscriber for this session.
Publish Attempts Rx	The total number of publish attempts received by the subscriber for this session.
Publish Successes Tx	The total number of publishes successfully made by the subscriber for this session.
Publish Successes Rx	The total number of successful publishes received by the subscriber for this session.
Publish Failures Tx	The total number of failed publishes made by the subscriber for this session.
Publish Failures Rx	The total number of publish failures received by the subscriber for this session.
Notification Attempts Tx	The total number of notification attempts made by the subscriber for this session.
Notification Attempts Rx	The total number of notification attempts received by the subscriber for this session.
Notification Successes Tx	The total number of notifications successfully made by the subscriber for this session.
Notification Successes Rx	The total number of successful notifications received by the subscriber for this session.
Notification Failures Tx	The total number of failed notifications made by the subscriber for this session.
Notification Failures Rx	The total number of notification failures received by the subscriber for this session.
Message Attempts Tx	The total number of message attempts made by the subscriber for this session.
Message Attempts Rx	The total number of message attempts received by the subscriber for this session.
Message Successes Tx	The total number of messages successfully made by the subscriber for this session.
Message Successes Rx	The total number of successful messages received by the subscriber for this session.

Field	Description
Message Failures Tx	The total number of failed messages made by the subscriber for this session.
Message Failures Rx	The total number of message failures received by the subscriber for this session.
Response 403 Tx	The total number of Response 403 transmitted.
Response 403 Rx	The total number of Response 403 received.
Response 408 Tx	The total number of Response 408 transmitted.
Response 408 Rx	The total number of Response 408 received.
Response 480 Tx	The total number of Response 480 transmitted.
Response 480 Rx	The total number of Response 480 received.
Response 481 Tx	The total number of Response 481 transmitted.
Response 481 Rx	The total number of Response 481 received.
Response 487 Tx	The total number of Response 487 transmitted.
Response 487 Rx	The total number of Response 487 received.
Response 488 Tx	The total number of Response 488 transmitted.
Response 488 Rx	The total number of Response 488 received.
Response 500 Tx	The total number of Response 500 transmitted.
Response 500 Rx	The total number of Response 500 received.
PDF Call Rejects	The total number of times the subscriber initiated a call through the P-CSCF but the policy decision function (PDF) rejected it.
Local Call Rejects	The total number of local call rejects (by the P-CSCF) for this subscriber.
Emergency Calls	The total number of emergency calls made by this subscriber during this session.
Operator-assistance Calls	The total number of operator-assisted calls made by this subscriber during this session.
Tollfree Calls	The total number of toll-free calls made by this subscriber during this session.
Directory-assistance Calls	The total number of directory assisted calls made by this subscriber during this session.
Premium Calls	The total number of premium service calls made by this subscriber during this session.
International Calls	The total number of international calls made by this subscriber during this session.
LongDistance Calls	The total number of long distance calls made by this subscriber during this session.
Session Timer Expires	The total number of session timer expirations occurring during this session.

## show subscribers data-rate

Use this command to view data rates for a subscriber.

**Note** Data rates are transient for some time (2 minutes) after the ICSR SRP switchover

peak rate from user(bps)	The peak data rate in bits per second is obtained for data that are sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
peak rate to user(bps)	The peak data rate in bits per second is obtained for data that are received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate in bits per second that is obtained for data that are sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate in bits per second is obtained for data that are received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate in bits per second is obtained for data that is sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate in bits per second is obtained for data that are received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
peak rate from user(pps)	The speed that packets are received from the user in packets per second. The sampling period is 30 seconds.
peak rate to user(pps)	The speed at which the packets are sent to the user in packets per second. The sampling period is 30 seconds.
ave rate from user(pps)	The average speed at which the packets are received from the user in packets per second. The sampling period is 30 seconds.
ave rate to user(pps)	The average speed that packets are being sent to the user in packets per second. The sampling period is 30 seconds.
sust rate from user(pps)	The sustained speed at which the packets are received from the user in packets per second. The sampling period is 30 seconds.
sust rate to user(pps)	The sustained speed at which the packets are sent to the user in packets per second. The sampling period is 30 seconds.

# show subscribers enodeb-address

Table 604: show subscribers enodeb-address Command Output Descriptions

Field	Description
vvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible network types are: <b>A</b> - Attached <b>N</b> - Not Attached <b>.</b> (period) - Not Applicable
	The fifth character represents the <b>Link Status</b> of the session. The possible idle states are: <b>A</b> - Online/Active <b>D</b> - Dormant/Idle
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP	Displays the IP address assigned to the subscriber.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

# show subscribers firewall required

Table 605: show subscribers firewall required Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible network types are: <ul style="list-style-type: none"> <li>- <b>A</b>: Attached</li> <li>- <b>N</b>: Not Attached</li> <li>- <b>.</b> (period): Not Applicable</li> </ul>
	The fifth character represents the <b>Link Status</b> of the session. The possible idle states are: <ul style="list-style-type: none"> <li>- <b>A</b>: Online/Active</li> <li>- <b>D</b>: Dormant/Idle</li> </ul> <p><b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.</p>
	The sixth character represents the session <b>Network Type</b> . See
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP	Displays the IP address assigned to the subscriber.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.
Total subscribers matching specified criteria	Total number of subscribers with firewall enabled.

# show subscribers full all

Table 606: show subscribers full all Command Output Descriptions

Field	Description
Username	The subscriber name.
Status	Indicates the session status.
Access Type	Indicates the session type for this subscriber. See <b>Common Attributes</b> in this chapter.
Network Type	Indicates the network service used for the subscriber session. See <b>Common Attributes</b> in this chapter.
Access Tech	Indicates the accessing technology. See <b>Common Attributes</b> in this chapter.
callid	The subscriber's call identification number (callid).
msid	The subscriber's mobile station identification (MSID).
WLAN UE Identifier	The UE identifier — MAC address in ASCII format (upper case only), with octet values separated by hyphens.
WLAN AP Identifier	The UE's access point identifier — Location Area Code Cell Identity (LAC_CI) that is, Location Area Code (LAC) and Cell Id (CI) separated by an underscore.
EAP-TYPE	The Extensible Authentication Protocol type.
Card/Cpu	The card and CPU ID.
Sessmgr Instance	The session manager instances.
state	The session state. The possible values are: <ul style="list-style-type: none"> <li>- Connected</li> <li>- Connecting</li> <li>- Disconnecting</li> <li>- Unknown</li> </ul>
PCF address	IP address of the PCF.
Peer address	IP address of peer system in network.
BS/PA address	Indicates the IP address of base station or paging agent.
idle time	The time period that the subscriber session has been idle, either in an active or dormant state.
idle time left	The idle time period left before timeout.
session time left	The session time left for the subscriber.

Field	Description
long duration time left	Indicates how much time is left for the maximum duration of a specified subscriber session.
long duration action	The setting for the action to take when the long duration timer expires. The possible values are: <ul style="list-style-type: none"> <li>• Detection - Detect and send SNMP trap and CORBA notification only.</li> <li>• Disconnection - Disconnect the session and send SNMP trap and CORBA notification.</li> </ul>
context-retention timer running	Indicates whether context-retention timer is running.
context-retention time left	Indicates time remaining.
always on	Session Update message was sent to the PCF to notify the PCF that the subscriber has the Always On feature enabled.
ip address	Indicates the primary IP address of the subscriber interface in the session. In WiMAX session this is the primary IP address of WiMAX CPE, if multiple host support enabled.
ue mac	The UE's MAC.
Default Gateway	The default gateway IP address.
Multiple Hosts	Specifies the multiple IP host support enabled or disabled for a WiMAX session. It also indicates the connected hosts behind a WiMAX CPE and their allocated IP address with secondary IP pool name.
home-agent	The name of the HA for this subscriber.
fa-service-name	The name of the FA service for this subscriber.
ip pool name	The IP address pool or group to use for subscriber IP address allocation.
local ip addr	The local IP address of the interface in the session.
source context	The name of a configured source context from which the subscriber initiates a session.
destination context	The name of a configured destination context through which the subscriber is provided access to the packet data network.
ip header compression	The header compression method being used.
ROHC cid-mode (local/remote)	Robust Header Compression mode for the bidirectional channel: [ small   large   na ].
ROHC max-cid (local/remote)	For Robust Header Compression, indicates the maximum value of a context identifier.
ROHC mrru (local/remote)	For Robust Header Compression, indicates the maximum reconstructed reception unit.

Field	Description
ROHC max-hdr (local/remote)	For Robust Header Compression, the largest header size in octets that may be compressed.
ROHC profile	Robust Header Compression profile ID as per RFC3095 for the bidirectional channel.
AAA context	The context in which the AAA service is configured.
AAA domain	The domain in which the AAA service is configured.
AAA start count	The number of accounting start messages sent to the accounting server for the subscriber session.
AAA stop count	The number of accounting stop messages sent to the accounting server for the subscriber session.
AAA interim count	The number of accounting interim messages sent to the accounting server for the subscriber session.
Acct-session-id	Identifies a subscriber session or PDP context and sends the information to RADIUS server. In Release 14.0 and later, this field will be displayed in both 3GPP and CDMA formats.
Mediation-acct-session-id	Identifies a subscriber session or PDP context and sends the information to mediation server. This field will be displayed in both 3GPP and CDMA formats.
AAA RADIUS group	The AAA RADIUS server group assigned to specific subscriber for AAA functionality.
AAA RADIUS Secondary group	If the secondary Accounting group is configured in the Subscriber configuration, this field displays the corresponding group name. Otherwise, it displays <i>n/a</i> .
RADIUS Auth Server IP	The RADIUS authentication server's IP address.
RADIUS Acct Server IP	The RADIUS accounting server's IP address. When the RADIUS Accounting Mediation Device is configured, this field will <u>not</u> display the RADIUS accounting mediation server's IP address.
NAS IP Address	The Network Access Server's (NAS) IP address.
Nexthop IP Address	The IP address of configured next-hop-forwarding-address in RADIUS attribute, subscriber configuration, or IP pool configuration.
GTPP Group	Displays all the configured GTPP server groups associated with this APN. <b>Note:</b> This field only appears if the Accounting Mode is GTPP.
Acct Context	Specifies the name of all configured GTPP accounting contexts associated with this APN. <b>Note:</b> This field only appears if the Accounting Mode is GTPP.

Field	Description
Authentication Mode	The authentication mode. Possible modes are: <ul style="list-style-type: none"> <li>- None</li> <li>- User (Single EAP)</li> <li>- Device (Single EAP)</li> <li>- Device-User (Double EAP)</li> <li>- Device-User (Single EAP)</li> </ul>
Authentication Type	The authentication type.
EAP-Type	The type of EAP authentication. Possible types are: <ul style="list-style-type: none"> <li>- EAP-Pre-shared Key (EAP-PSK)</li> <li>- EAP-Transport Layer Security (EAP-TLS)</li> <li>- EAP-Tunneled Transport Layer Security (EAP-TTLS)</li> <li>- EAP-Authentication and Key Agreement (EAP-AKA)</li> </ul>
Client Type	The type of client, which can be Regular or Data. Identifies whether the client is a regular client, which includes voice, or a data client, which is data only.
active input acl	The active Access Control List (ACL) for input.
active output acl	The active Access Control List (ACL) for output.
active input ipv6 acl	The active IPv6 Access Control List (ACL) for input.
active output ipv6 acl	The active IPv6 Access Control List (ACL) for output.
ECS Rulebase	The rulebase applicable for this subscriber when Enhanced Charging Service/Active Charging Service is enabled.
CBB-Policy	The CBB policy associated with the subscriber.
Bandwidth-Policy	The bandwidth policy associated with the subscriber.
Firewall-and-NAT Policy	Displays the Firewall-and-NAT policy name.
Firewall Policy IPv4	Indicates whether IPv4 firewall is enabled for the subscriber.
Firewall Policy IPv6	Indicates whether IPv6 firewall is enabled for the subscriber.
NAT Policy NAT44	Indicates whether NAT44 is enabled or disabled for the subscriber.
NAT Policy NAT64	Indicates whether NAT64 is enabled or disabled for the subscriber.
NAT Policy	Indicates whether NAT is enabled for the subscriber.

Field	Description
NAT Realm	The NAT realms associated with the subscriber. <b>Note:</b> In 15.0 and later releases, the <b>NAT Realm</b> field will be displayed only when IP is assigned, and removed again when IP is released.
NAT IP address	The NAT IP address allocated from the NAT realm.
(on-demand/not-on-demand)	If the NAT realm type is "on-demand" (where NAT IP allocation happens when the very first packet is received from the subscriber for that realm) it is indicated.
(<pool_name>)	If a NAT IP pool group is used, it indicates the NAT pool from which the IP is allocated.
Nat port chunks allocated[start - end]	The NAT port range allocated to the subscriber.
CF Policy ID	The Category-based Content Filtering Policy ID associated with the subscriber.
TPO Policy	<b>Note:</b> The Traffic Performance Optimization (TPO) in-line service is not supported in this release.
active input pley grp	The active input policy group for traffic flow.
active output pley grp	The active output policy group for traffic flow.
MIPFA Sessions	The status of Mobile IP FA sessions.
Layer 3 tunneling	Indicates if Layer 3 tunneling is enabled.
dhcp-service name	The DHCP service name.
dhcp-server address	The DHCP server address.
prepaid status	Indicates if prepaid status is on or off.
external inline srvr processing	Indicates if external inline server processing is on or off.
Proxy DNS Intercept List	The proxy DNS intercept list used for the subscriber.
access-link ip-frag	Configures IP fragmentation processing over the Access-link.
ignore DF-bit data-tunnel	Indicates if whether during Mobile IP tunneling, the DF bit is not ignored and packets are not fragmented.
MIP grat-ARP mode	Indicates if gratuitous ARPs are sent out for an HA session upon handoff and renewal requests.
Downlink traffic-policing	Indicates if traffic policing is enabled for the downlink direction.
Uplink traffic-policing	Indicates if traffic policing is enabled for the uplink direction.
Downlink traffic-shaping	Indicates if traffic shaping is enabled for downlink direction.
Uplink traffic-shaping	Indicates if traffic shaping is enabled for uplink direction.

Field	Description
Radius Accounting Mode	Indicates if the RADIUS accounting mode is either session-based or access-flow-based.
cscf-service name	The CSCF service name.
cscf registration AoR	The CSCF registered AoR.
<b>3GPP User Location Info:</b>	
TAI	Displays the total number of Tracking Area Identity (TAI) for Mobile Country Code (MCC), Mobile Network Code (MNC) , and the Tracking Area Code (TAC).
ECGI	Displays the total number of ECGI for Mobile Country Code (MCC), Mobile Network Code (MNC) , and the Tracking Area Code (TAC).
5GS TAI	Displays the total number of 5GS TAI.
NCGI	Displays the New Radio Cell Global Identity (NCGI) for MCC, MNC, and New Radio Cell Identity (NCI).
apn	The Access Point Name associated with the subscriber.
nsapi	The subscriber's Network Service Access Point Identifier (NSAPI).
imsi	The subscriber's International mobile Subscriber Identity.
MSISDN	The Mobile Station International ISDN Number (MSISDN) of the subscriber node.
remote-ip-addr	The assigned remote IP address.
imei(sv)	The UE's MAC address with FFFE appended at the end.
uli	Displays the access point's identity.
mcc	The Mobile Country Code.
mnc	The Mobile Network Code.
lac	The Location Area Code, which identifies a location area.
ci	The Cell ID, which identifies a cell within a location area.
input pkts	Indicates the number of packets received.
output pkts	Indicates the number of packets transmitted.
input bytes	Indicates the number of bytes received.
output bytes	Indicates the number of bytes transmitted.
input bytes dropped	Indicates the number of bytes that were dropped while receiving data for this subscriber session.

Field	Description
output bytes dropped	Indicates the number of bytes that were dropped while transmitting data for this subscriber session.
input pkts dropped	Indicates the number of packets that were dropped while receiving data for this subscriber session.
output pkts dropped	Indicates the number of packets that were dropped while transmitting data for this subscriber session.  This field includes packets blocked by Access Control Lists (ACLs). Do not use this figure when computing the total number of output packets.
input pkts dropped due to zero mbr	Indicates the number of packets that were dropped while receiving data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
output pkts dropped due to zero mbr	Indicates the number of packets that were dropped while transmitting data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
pk rate from user(bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(bps)	The peak data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate, in bits per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
pk rate from user(pps)	The peak data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(pps)	The peak data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(pps)	The average data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.

Field	Description
ave rate to user(pps)	The average data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(pps)	The mean data rate, in packets per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(pps)	The mean data rate, in packets per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
link online/active percent	The percentage of time that the data link was online and active during the last sampling period.
ipv4 bad hdr	Indicates the number of IPv4 packets received with bad headers.
ipv4 ttl exceeded	Indicates the number of IPv4 packets dropped because their time-to-live was exceeded for this subscriber session.
ipv4 fragments sent	Indicates the number of IPv4 packet fragments that were transmitted.
ipv4 could not fragment	Indicates the number of IPv4 packets that could not be fragmented.
ipv4 input acl drop	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation.  This counter may increment even if no ACL is configured.
ipv4 output acl drop	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv4 input css down drop	Indicates the number of input packets dropped because the CSS service is yet not up or the service went down.
ipv4 output css down drop	Indicates the number of output packets dropped because the CSS service is yet not up or the service went down.
ipv4 output xoff pkts drop	Indicates the number of packets dropped because of flow control.
ipv4 output xoff bytes drop	Indicates the number of bytes dropped because of flow control.
input pkts dropped (0 mbr)	The total number of input packets dropped when a 0 MBR is received in a UPC (Update PDP Context Request) indicating that the UE is out of radio coverage.
output pkts dropped (0 mbr)	The total number of output packets dropped when a 0 MBR is received in a UPC (Update PDP Context Request) indicating that the UE is out of radio coverage.
output pkts dropped lore	The total number of packets dropped due to a UE loss of radio coverage condition.  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.

Field	Description
ipv4 source violations	Indicates the number of IPv4 source validation violations.
ipv4 proxy-dns redirect	The number of foreign DNS request packets intercepted and redirected to the home DNS for the subscriber.
ipv4 proxy-dns pass-thru	The number of foreign DNS request packets allowed through the intercept filter for the subscriber.
ipv4 proxy-dns drop	The number of foreign DNS request packets not matching either redirect or pass-thru rules for the subscriber.
ip source violations no acct	The IP source validation violations that were detected but not included in the statistics.
ip source violations ignored	The IP source validation violations that were detected but then ignored.
ipv4 output no-flow drop	The number of IP packets not matching traffic classifier and dropped for the subscriber.
ip source violations active	The total number of IP source validation violations.
ipv6 source violations	The number of IPv6 source validation violations.
ipv6 source violations no acct	The IPv6 source validation violations that were detected but not included in the statistics.
ipv6 source violations ignored	The IPv6 source validation violations that were detected but then ignored.
ipv6 source violations active	The total number of active IPv6 source validation violations.
dormancy total	Indicates the total amount of time in seconds that the subscriber session was dormant over the duration of the session.
handoff total	The total number of subscriber sessions handed off.
ipv4 icmp packets dropped	When hide service address is enabled and a service in the system is sent ping packets or a traceroute is executed, the packets pertaining to the service address are dropped. This counter shows the number of those packets that have been dropped.
Access-flows	The total number of matching access-flows.  For flow-based service subscribers it provides information on access flow id, packet data flow id, service data flow id, type of access flow, QoS policy name, and direction of flow.
CAE Server Address	The IPv4 address of the CAE serving the subscriber.
Total subscribers matching specified criteria	The total number of subscribers matching the specified criteria.

## show subscribers full username

Table 607: show subscribers full username Command Output Descriptions

Field	Description
Username	Specifies the name of the subscriber.
Status	Indicates the status of the subscriber's session. The status can be Online/Active or Offline/Dormant/Idle. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
Access Type	Indicates the session type for this subscriber. See
Network Type	Indicates the network service used for the subscriber session. See
Access Tech	Indicates Accessing Technology. See
BSID	Displays the ASN base station identifier (MAC address).
callid	Displays the subscriber's call identification number (callid).
msid	Displays the subscriber's mobile station identification (MSID).
3GPP2 Carrier ID	Unique identifier for the carrier.
3GPP2 ESN	Electronic Serial Number of the mobile handset.
Card/Cpu	Indicates the ID of Card and CPU.
Sessmgr Instances	Displays the session manager instances.
state	Indicates the status of session. The possible status are: - Connected - Connecting - Disconnecting - Unknown
PCF address	Specifies the IP address of PCF in decimal notation.
connect time	Displays the time of connection starts.
call duration	Specifies total duration of call session in hh:mm:ss format
idle time	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.
idle time left	Shows the amount of idle time left before timeout.

Field	Description
session time left	How much session time is left for the specified subscriber.
long duration time left	Shows how much time is left for the maximum duration of a specified subscriber session.
long duration action	Shows the setting for the action to take when the long duration timer expires. The possible values for this are: <ul style="list-style-type: none"> <li>• Detection - Detect and send SNMP trap and CORBA notification only.</li> <li>• Disconnection - Disconnect the session and send SNMP trap and CORBA notification.</li> </ul>
always on	Session Update message was sent to the PCF to notify the PCF that the subscriber has the Always On feature enabled.
ip address	The IP address of the interface in the session.
Primary DNS Address	The primary DNS address of the interface in the session.
Secondary DNS Address	The secondary DNS address of the interface in the session.
home-agent	The IP address of the mobile IP user's home agent.
pdsn-service name	The PDSN service that is running this session and the context name of the PDSN-service with the service-name.
fa-service name context	The FA service that is running this session and the context name of the FA-service with the service-name for a MIP call.
ggsn-service name	The GGSN service that is running this session and the context name of the GGSN-service with the service-name.
source context	Specifies the name of a configured source context from which the subscriber initiates a session.
destination context	Specifies the name of a configured destination context through which the subscriber is provided access to the packet data network.
ip header compression: (loc to rem) vj, (rem to loc) vj	This specifies what header compression method is being used.
ROHC max-cid (local/remote)	For Robust Header Compression, indicates the maximum value of a context identifier.
ROHC mrru (local/remote)	For Robust Header Compression, indicates the maximum reconstructed reception unit.
ROHC max-hdr (local/remote)	For Robust Header Compression, the largest header size in octets that may be compressed.
AAA context	The context in which the AAA service is configured.
AAA domain	The domain in which the AAA service is configured.
AAA start count	The number of accounting start messages sent to the accounting server for the subscriber session.

Field	Description
AAA stop count	The number of accounting stop messages sent to the accounting server for the subscriber session.
AAA interim count	The number of accounting interim messages sent to the accounting server for the subscriber session.
Acct-session-id	Identifies a subscriber session or PDP context.
AAA RADIUS group	Indicates the group of AAA RADIUS server assigned to specific subscriber for AAA functionality.
RADIUS Auth Server IP	The RADIUS authentication server's IP address.
RADIUS Acct Server IP	The RADIUS accounting server's IP address. When the RADIUS Accounting Mediation Device is configured, this field will NOT display the RADIUS accounting mediation server's IP address.
NAS IP Address	IP address of Network Access Server (NAS).
Nexthop IP Address	IP address of configured next-hop-forwarding-address in RADIUS attribute, subscriber configuration, or IP pool configuration.
Authentication Mode	The authentication mode. Possible modes are: - None - User (Single EAP) - Device (Single EAP) - Device-User (Double EAP) - Device-User (Single EAP)
Authentication Type	The authentication type.
EAP-Type	The type of EAP authentication. Possible types are: - EAP-Pre-shared Key (EAP-PSK) EAP-Transport Layer Security (EAP-TLS) EAP-Tunneled Transport Layer Security (EAP-TTLS) EAP-Authentication and Key Agreement (EAP-AKA)
Client Type	The type of client, which can be Regular or Data. Identifies whether the client is a regular client, which includes voice, or a data client, which is data only.
active input acl	Specifies active Access Control List (ACL) for input.
active output acl	Specifies active Access Control List (ACL) for output.
ECS Rulebase	Specifies applicable Rulebase for this subscriber when ECS is enabled.

Field	Description
active input pley grp	Specifies active input policy group for traffic flow.
active output pley grp	Specifies active output policy group for traffic flow.
<b>MIPHA Session</b>	
Care-of-Address	The IP address of the device terminating the tunnel to the mobile node. The address may belong to either a Foreign Agent that is facilitating the subscriber's Mobile IP session or another device that the mobile node is associated (co-located) with.
Home-Address	The IP address assigned to the subscriber's mobile node for the duration of the session.
HA-Address	The IP address of the Home Agent that is facilitating the subscriber's Mobile IP session.
Lifetime	The accepted lifetime interval for this session.
Remaining Life	The amount of time that remains after which the session expires and is torn down.
Reverse Tunneling On	Displays whether or not reverse tunneling is enabled for the subscriber's session.
Encapsulation Type	The encapsulation method used for the subscriber's session.
GRE Key	The key that uniquely identifies the subscriber session when the Generic Routing Encapsulation (GRE) protocol Encapsulation Type.
IPSec Required	Indicates whether or not IPSec is required for the subscriber Mobile IP session.
IPSec Ctrl Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the control tunnel has been established.
IPSec Data Tunnel Estab.	If IPSec is required for the session, this field indicates whether or not the data tunnel has been established.
Revocation Negotiated	Indicates whether or not MIP Registration Revocation was negotiated between the FA and the HA for this subscriber session. Possible values are: No or yes.
Revocation I bit Negotiated	Indicates whether or not the Revocation I bit was negotiated. Possible values are: No or Yes.
Collocated COA	Indicates whether or not the subscribers that registered a MIP collocated COA directly with the HA. Options are No or Yes.
NAT Detected	Indicates whether or not network address translation (NAT) is detected. Options are No or Yes.
<b>MN-HA-Key-Present</b>	The security parameter index (SPI) key is used to verify a trusted host environment and that communications are to be established between known hosts.  Checks for presence of mobile node (MN) - home agent (HA) key. Options are True or False.
MN-HA-SPI	Mobile node (MN) - home agent (HA) security parameter index (SPI).

Field	Description
FA-HA-Key-Present	The SPI key is used to verify a trusted host environment and that communications are to be established between known hosts. Checks for presence of the FA - HA key. Options are True or False.
FA-HA-SPI	FA - HA security parameter index (SPI).
MN-FA-Key-Present	The SPI key is used to verify a trusted host environment and that communications are to be established between known hosts. Checks for presence of the MN - FA key. Options are True or False.
MN-FA-SPI	MN - FA security parameter index (SPI).
Layer 3 tunneling	Indicates if Layer 3 tunneling is enabled.
prepaid status	Indicates if prepaid status is on or off.
external inline srvr processing	Indicates if external inline server processing is on or off.
IPv6 Egress address filtering	Enable IPv6 egress address filtering feature.
IPv6 DNS Proxy	Enables/Disables the domain name server proxy for the current session.
Proxy DNS Intercept List	Identifies the proxy DNS intercept list used for the subscriber.
access-link ip-frag	Configures IP fragmentation processing over the Access-link.
ignore DF-bit data tunnel	Use this command to configure a user so that during Mobile IP tunneling the DF bit is not ignored and packets are not fragmented.
MIP grat-ARP mode	Indicates if gratuitous ARPs are sent out for an HA session upon handoff and renewal requests.
Downlink traffic-policing	Shows if traffic policing is enabled for the downlink direction.
Uplink traffic-policing	Shows if traffic policing is enabled for the uplink direction.
input pkts	Indicates the number of packets received.
output pkts	Indicates the number of packets transmitted.
input bytes	Indicates the number of bytes received.
output bytes	Indicates the number of bytes transmitted.
input bytes dropped	Indicates the number of bytes that were dropped while receiving data for this subscriber session.
output bytes dropped	Indicates the number of bytes that were dropped while transmitting data for this subscriber session.
input pkts dropped	Indicates the number of packets that were dropped while receiving data for this subscriber session.

Field	Description
output pkts dropped	<p>Indicates the number of packets that were dropped while transmitting data for this subscriber session.</p> <p>This field includes packets blocked by Access Control Lists (ACLs). Do not use this figure when computing the total number of output packets.</p>
input pkts dropped due to zero mbr	<p>Indicates the number of packets that were dropped while receiving data due to configured maximum bit rate (MBR) was set to zero for a subscriber.</p> <p>This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.</p>
output pkts dropped due to zero mbr	<p>Indicates the number of packets that were dropped while transmitting data due to configured maximum bit rate (MBR) was set to zero for a subscriber.</p> <p>This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.</p>
pk rate from user(bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(bps)	The peak data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate, in bits per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
pk rate from user(pps)	The peak data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(pps)	The peak data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(pps)	The average data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(pps)	The average data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(pps)	The mean data rate, in packets per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.

Field	Description
link online/active percent	The percentage of time that the data link was online and active during the last sampling period. The sampling period is 30 seconds.
ipv4 bad hdr	Indicates the number of IPv4 packets received with bad headers.
ipv4 ttl exceeded	Indicates the number of IPv4 packets dropped because their time-to-live was exceeded for this subscriber session.
ipv4 fragments sent	Indicates the number of IPv4 packet fragments that were transmitted.
ipv4 could not fragment	Indicates the number of IPv4 packets that could not be fragmented.
ipv4 input acl drop	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation. <b>Note:</b> This counter may increment even if no ACL is configured.
ipv4 output acl drop	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv4 input css down drop	Indicates the number of input packets dropped because the CSS service is yet not up or the service went down.
ipv4 output css down drop	Indicates the number of output packets dropped because the CSS service is yet not up or the service went down.
ipv4 output xoff pkts drop	Indicates the number of packets dropped because of flow control.
ipv4 output xoff bytes drop	Indicates the number of bytes dropped because of flow control.
ip source violations	Indicates the number of IPv4 source validation violations.
ipv6 egress filtered	Enable IPv6 egress address filtering feature.
ipv4 proxy-dns redirect	The number of foreign DNS request packets intercepted and redirected to the home DNS for the subscriber.
ipv4 proxy-dns pass-thru	The number of foreign DNS request packets allowed through the intercept filter for the subscriber.
ipv4 proxy-dns drop	The number of foreign DNS request packets not matching either redirect or pass-thru rules for the subscriber.
ip source violations no accounting	The IP source validation violations that were detected but not included in the statistics.
ip source violations ignored	The IP source validation violations that were detected but then ignored.
dormancy total	Indicates the total amount of time in seconds that the subscriber session was dormant over the duration of the session. <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.

Field	Description
handoff total	The total number of subscriber sessions handed off.
ipv4 icmp packets dropped	When hide service address is enabled and a service in the system is sent ping packets or a traceroute is executed, the packets pertaining to the service address are dropped. This counter shows the number of those packets that have been dropped.
Access-flows	The total number of matching access-flows.

## show subscribers ggsn-only

Table 608: show subscribers ggsn-only Command Output Descriptions

Field	Description
Total Subscribers	Total number of subscribers registered on system for GGSN service session.
TotalPDP contexts	Total number of PDP contexts registered on the system for GGSN service session.
Total MBMS-UE contexts	Total number of MBMS-UE contexts registered on the system for GGSN service session.
pdp-type-ipv4	Total number of PDP contexts of IPv4 type registered on the system for GGSN service session.
pdp-type-ppp	Total number of PDP contexts of PPP type registered on the system for GGSN service session.
pdp-type-ipv6	Total number of PDP contexts of IPv6 type registered on the system for GGSN service session.
mbms-ue-type-ipv4	Total number of MBMS-UE contexts of IPv4 type registered on the system for GGSN service session.
ip-type-static	Total number of MS, having static IP allocation, registered with GGSN service session on this system.
ip-type-local-pool	Total number of MS, having IP allocation from local IP pool, are registered with GGSN service session on this system.
ip-type-aaa-ip	Total number of MS, having IP allocation from AAA server, are registered with GGSN service session on this system.
ip-type-dhcp-proxy	Total number of MS, having IP allocation through DHCP-proxy, are registered with GGSN service session on this system.
ip-type-dhcp-relay	Total number of MS, having IP allocation through DHCP-relay, are registered with GGSN service session on this system.
ip-type-unknown	Total number of MS, having IP allocation through unknown method, are registered with GGSN service session on this system.

Field	Description
ip-type-no-alloc	Total number of MS, having no IP allocation, are registered with GGSN service session on this system. Generally IP allocation for a Multicast session of this type.
ip-type-static-nrpca	Total number of MS, having static IP allocation through network requested PDP context activation, are registered with GGSN service session on this system.
in bytes dropped	Total number of bytes dropped in downlink (from PDN) direction for GGSN service session on the system.
out bytes dropped	Total number of bytes dropped in uplink (to PDN) direction for GGSN service session on the system.
in packet dropped	Total number of packets dropped in downlink (from PDN) direction for GGSN service session on the system.
out packet dropped	Total number of packets dropped in uplink (to PDN) direction for GGSN service session on the system.
in packet dropped due to zero mbr	Indicates the number of packets that were dropped while receiving data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
out packet dropped due to zero mbr	Indicates the number of packets that were dropped while transmitting data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
out packet dropped due to lorc	Indicates the number of packets that were dropped while UE was out of coverage area or radio coverage was lost for a subscriber.  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.
ipv4 ttl exceeded	Indicates the number of IPv4 packets dropped because their time-to-live was exceeded for this subscriber session.
ipv4 bad hdr	Indicates the number of IPv4 packets received with bad headers.
ipv4 bad length trim	Indicates the number of IPv4 packets received with bad trimming of packet length.
ipv4 frag failure	Indicates the number of IPv4 packet fragments that were transmitted.
ipv4 frag sent	Indicates the number of IPv4 packets that could not be fragmented.
ipv4 in-acl dropped	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation.  This counter may increment even if no ACL is configured.

Field	Description
ipv4 out-acl dropped	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv6 bad hdr	Indicates the number of IPv6 packets received with bad headers.
ipv6 bad length trim	Indicates the number of IPv6 packets received with bad trimming of packet length.
ipv6 in-acl dropped	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation. This counter may increment even if no ACL is configured.
ipv6 out-acl dropped	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv4 in-css-down dropped	Indicates the number of input packets dropped because the CSS service is yet not up or the service went down.
ipv4 out-css-down dropped	Indicates the number of output packets dropped because the CSS service is yet not up or the service went down.
ipv4 early pdu rcvd	The current total number of early IP packet data units (PDUs) received.
ipv4 icmp packets dropped	Indicates the total number of IPv4 ICMP packets dropped for GGSN service on this system. When <b>hide service address</b> is enabled and a service in the system is sent ping packets or a traceroute is executed, the packets pertaining to the service address are dropped. This counter shows the number of those packets that have been dropped.
dormancy count	Indicates the total amount of time in seconds that the subscriber session was dormant over the duration of the GGSN session on this system.
handoff count	The total number of subscriber sessions handed off for GGSN service on this system.
Bearer not ready	Indicates the total number of instances when bearer was not ready and data received for session.
output bytes dropped	Indicates the cumulative number of bytes dropped for all GGSN subscriber session on this system.
output pkts dropped	Indicates the cumulative number of bytes dropped for all GGSN subscriber session on this system.
ggsn preservation mode	Indicates whether "Preservation-Mode" is enabled or not. Note that this is a customer-specific feature and may not be available for other users.
Direct Tunnel Bearers	Indicates total number of bearer contexts active for direct tunnel support for SGSN with this GGSN service on system.

Field	Description
ggsn LORC state	<p data-bbox="566 283 1466 346">Indicates the number of session where overcharging protection is enabled due to loss of radio coverage.</p> <p data-bbox="566 363 1466 457">This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.</p>

# show subscribers ggsn-only all

Table 609: show subscribers ggsn-only all Command Output Descriptions

Field	Description
vvvvvvv	Displays service and session state information. This column provides a code consisting of seven characters.
	From left-to-right, the first character represents the <b>Network Type</b> that the subscriber is using. See
	The second character represents the network <b>Access Tech</b> that the subscriber is using. See
	The third character represents the <b>Call State</b> . See
	The fourth character (ggsn-only output) represents the <b>Traffic Class</b> . The possible traffic classes are: <ul style="list-style-type: none"> <li>- <b>C</b>: Conversational</li> <li>- <b>S</b>: Streaming</li> <li>- <b>B</b>: Background</li> <li>- <b>1</b>: Interactive 1</li> <li>- <b>2</b>: Interactive 2</li> <li>- <b>3</b>: Interactive 3</li> <li>- <b>x</b>: Not Applicable</li> </ul>
	The fifth character represents the <b>Network Type</b> of the session. See
	The sixth character (ggsn-only output) represents the <b>PLMN</b> of the session. The possible network types are: <ul style="list-style-type: none"> <li>- <b>H</b>: Home</li> <li>- <b>V</b>: Visiting</li> <li>- <b>R</b>: Roaming</li> <li>- <b>u</b>: Unknown</li> </ul>
	The seventh character (ggsn-only output) represents the <b>Emergency Bearer Type</b> of the session. The possible emergency bearer types are: <ul style="list-style-type: none"> <li>- <b>A</b>: Authentic IMSI</li> <li>- <b>U</b>: Un-Authentic IMSI</li> <li>- <b>O</b>: Only IMEI</li> <li>- <b>N</b>: Non-Emergency</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number.

Field	Description
IMSI/IMEI	Displays the International Mobile Subscriber Identity (IMSI) number (ggsn-only output) if the Emergency Bearer Type is Authentic IMSI and/or Non-Emergency. If the Emergency Bearer Type is Un-Authentic IMSI and/or Only IMEI, the International Mobile Equipment Identity (IMEI) number is displayed.
NSAPI	Displays the Network Service Access Point Identifier (ggsn-only output).
Address type	Displays the Address type (ggsn-only output) for the subscriber's session. The possible address types are: <ul style="list-style-type: none"> <li>- <b>S</b>: Static (Subscriber Supplied)</li> <li>- <b>L</b>: Local pool</li> <li>- <b>RA</b>: RADIUSAAA - assigned</li> <li>- <b>d</b>: via DHCP proxy</li> <li>- <b>D</b>: via DHCP relay</li> <li>- <b>u</b>: Unknown</li> </ul>
IP	Displays the IP address assigned to the subscriber.
APN	Displays the Access Point Name for the session (ggsn-only output).
Gn-APN	Displays the APN that comes in CPC. If there is no virtual-apn resolution, both Gi & Gn APN are the same.
Gi-APN	Displays the APN finally selected by the GGSN based on the virtual-apn configuration. If there is no virtual-apn resolution, both Gi & Gn APN are the same.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers ggsn-only full

*Table 610: show subscribers ggsn-only full Command Output Descriptions*

Field	Description
Username	The name of the subscribers using GGSN service.
Status	Indicates the session status. Possible status are: <ul style="list-style-type: none"> <li>- Online/Active</li> <li>- Offline/Inactive</li> </ul>
Access Type	Indicates the session type for this subscriber. See <a href="#">Access Types, on page 2212</a> .

Field	Description
Network Type	Indicates the network service used for the subscriber session. See <a href="#">Network Types, on page 2215</a> .
Access Tech	Indicates the accessing technology. See <a href="#">Access Technologies, on page 2214</a> .
Access Network Peer ID	Indicates the identifier of the peer in access network.
callid	The subscriber's call identification number (callid).
imsi	The subscriber's International mobile station identification (IMSI).
state	The session state. The possible values are: <ul style="list-style-type: none"> <li>- Connected</li> <li>- Connecting</li> <li>- Disconnecting</li> <li>- Unknown</li> </ul>
SGSN cntl address	IP address of SGSN system in network for control messages.
SGSN data address	IP address of SGSN system in network for data traffic messages.
Protocol User Name	User name of protocol.
MSISDN	The Mobile Station International ISDN Number of subscriber node.
Emergency Bearer Type	Bearer type set as emergency. Possible values are: <ul style="list-style-type: none"> <li>- Only IMEI</li> <li>- Authentic IMSI</li> <li>- Un-Authentic IMSI</li> </ul> In case of the non-emergency bearer type, the value displayed is N/A.
connect time	The time of connection of this subscriber.
call duration	Duration of call session.
idle time	Duration of idle status of call session, when no activity detected for this session.
IMEI(SV)	International mobile equipment identification- software version of connected subscriber.
SGSN-MCC-MNC	Mobile country code (MCC) and mobile network code (MNC) of SGSN connected for this call.

Field	Description
ULI	Indicates the user location information. The possible values are: - CELL ID <ul style="list-style-type: none"> <li>• MCC: Mobile Country Code</li> <li>• MNC: Mobile Network Code</li> <li>• LAC: Location Area Code</li> <li>• CI: Cell Identity</li> </ul> -Absent
SGSN RAI	Indicates the Routing Area Identity (RAI) of the SGSN connected to this call. The possible values are: - MCC - MNC - Unknown
Gi-APN	Access point name used for this session on Gi interface, towards PDN.
NSAPI	Identifier for Network Service Access Point (NSAP) index.
Gn-APN	Access point name used for this session on Gn interface, in network side between GSNs.
S6b Returned Virtual APN	Displays the S6b returned full virtual APN name, if the Virtual APN Truncation feature is enabled. Otherwise, it displays 'n/a'.  For more information on this feature, see the <i>Rf Interface Support</i> chapter in the administration guide of the product you are deploying.
Restoration priority level	Identifies the restoration priority value associated with the PND connection.
Total subscribers matching specified criteria	Identifies the total number of subscribers matching criteria for restoration priority value associated with the PND connection.
IMS Auth Service	Indicates whether IMS authorization (Gx) interface support is enabled or not.
S6b Auth Status	Indicates whether S6b interface authorization is enabled or not.
GGSN Preservation Mode	Indicates whether preservation-mode support for GGSN is enabled or not. <b>Note:</b> This is a customer-specific counter that requires a customer-specific license.
Vendor Id	Indicates the identification of vendor who uses GGSN preservation mode feature.

Field	Description
GGSN LORC State	Indicates the state of the overcharging protection feature for specific subscriber. Possible status are: - Yes (overcharging protection is enabled) - No (overcharging protection is enabled) - N/A (overcharging protection is not applicable)  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.
GGSN Bearer Control Mode	Indicates whether network controlled QoS negotiation enabled or not and also the mode applicable for bearer control for this. Possible values are: - MS-Only - Mixed (MS and Network)
FOCS	Indicates whether free of charge service is enabled or not. <b>Note:</b> This is a customer-specific service that requires a customer-specific license.
ODB	Indicates whether Operator Determined Barring is enabled or not. <b>Note:</b> This is a customer-specific service that requires a customer-specific license.
ip address	Indicates the primary IP address of the subscriber interface in the session.
ggsn-service-name	The name of the GGSN service for this subscriber.
GTPU Address	GTP-U/data address of the subscriber, which can be either of the IPv4/IPv6 address.
gtpu-service-name	The name of the GTP-U service associated with the 'ggsn-service-name', which can be bound with one or more addresses.
initiated by	Indicates whether QoS initiated by MS or network.
Subscriber Type	Indicates the type of subscriber. Possible values are Visiting or Home.
Accounting mode	Indicates the accounting mode applicable for this subscriber. Possible modes are: - gtp - none - radius-diameter
APN Selection mode	Indicates the APN selection mode applicable for this subscriber. Possible modes are: - Chosen by SGSN - Sent by MS - Subscribed

Field	Description
ip allocation type	Indicates the IP allocation type applicable for this subscriber: Possible types are: <ul style="list-style-type: none"> <li>- DHCP proxy</li> <li>- DHCP relay</li> <li>- local pool</li> <li>- AAA</li> </ul>
gtp version	Indicates the GTPP version used for this subscriber: Possible versions are 0 and 1.
ipv6 allocation type	Indicates the allocation method by which the IPv6 address has been allocated. The possible values are: <ul style="list-style-type: none"> <li>- local pool (allocated from local pool)</li> <li>- dhcpv6-proxy (allocated by DHCP server)</li> <li>- aaa (S6b or AAA returned IP address)</li> <li>- no-dynamic (Static IP address)</li> <li>- unknown</li> <li>- N/A</li> </ul>
ggsn c-teid	Indicates the GGSN Tunnel Endpoint Identifier (TEID) for GTP-C messages.
ggsn u-teid	Indicates the GGSN Tunnel Endpoint Identifier (TEID) for GTP-U messages.
sgsn c-teid	Indicates the SGSN Tunnel Endpoint Identifier (TEID) for GTP-C messages.
sgsn u-teid	Indicates the SGSN Tunnel Endpoint Identifier (TEID) for GTP-U messages.
charging id	Indicates the charging identifier for this subscriber.
charging chars	Specifies the charging characteristics behavior applicable for this subscriber session.
access-link ip-frag	Configures IP fragmentation processing over the Access-link.
ignore DF-bit data-tunnel	Indicates if whether during Mobile IP tunneling, the DF bit is not ignored and packets are not fragmented.
traffic flow template	The name of the traffic flow template (TFT) applicable for this subscriber session.
Source context	The name of a configured source context from which the subscriber initiates a session.
Destination context	The name of a configured destination context through which the subscriber is provided access to the packet data network.
Authentication context	The name of a configured authentication context from which the subscriber gets authentication.
Accounting context	The name of a configured accounting context through which the subscriber is provided accounting of data session.

Field	Description
Mediation context	The name of a configured mediation context to use for communicating with the mediation device. If this context is not specified in APN configuration mode, the destination context will be used.
Mediation no early PDUs	Specifies whether or not the <b>no-early-pdu</b> option is configured for this subscriber.  If <b>no-early-PDUs</b> is enabled, the chassis does not send uplink/downlink data from/to a MS till it receives the Acct-Rsp Start for the same from the mediation device. On receiving the Acct-Rsp, pending PDUs are sent out.
Mediation No Interims	Specifies whether or not the <b>no-interims</b> option configured for this subscriber.  If <b>no-interims</b> is enabled, the chassis does not send any interim message to the mediation device.
Mediation Delay GTP Response	Specifies whether or not the <b>delay-GTP-response</b> option is configured for this subscriber.  When enabled, this option delays the Create PDP Context response until an Accounting Start response is received from the mediation device.
active input acl	The active IPv4 access control list (ACL) for inward traffic.
active output acl	The active IPv4 access control list (ACL) for outward traffic.
active input IPv6 acl	The active IPv6 access control list (ACL) for inward traffic.
active output IPv6 acl	The active IPv6 access control list (ACL) for outward traffic.
ECS Rulebase	The rulebase applicable for this subscriber when ECS is enabled.
CBB-Policy	The CBB policy associated with the subscriber.
Firewall Policy	Indicates whether firewall processing for this subscriber is enabled.
CF Policy ID	The identifier of content filtering policy ID.
active input pley grp	The active input policy group for inward traffic flow.
active output pley grp	The active output policy group for outward traffic flow.
Layer 3 tunneling	Indicates if Layer 3 tunneling is enabled.
alloc/retention priority	Indicates the traffic handling priority for quality of service (QOS) differentiated service code point (DSCP) if the allocation priority is present in the QOS profile. Possible priorities are 1, 2 or 3.

Field	Description
traffic class	Indicates the class of traffic applied for quality of service (QoS) in this subscriber session. Possible classes are: <ul style="list-style-type: none"> <li>- background</li> <li>- conversational</li> <li>- interactive</li> <li>- streaming</li> </ul>
traffic priority	Indicates the priority for interactive class of traffic for this subscriber session. Possible priorities are 1, 2 or 3.
delivery order	Specifies the delivery order included in service data unit (SDU) for packets to this subscriber.
Negotiated MBR for up (bps)	Indicates the maximum bit rate in bits per seconds negotiated for this subscriber in uplink direction.
Negotiated MBR for down (bps)	Indicates the maximum bit rate in bits per seconds negotiated for this subscriber in downlink direction.
Negotiated GBR for up (bps)	Indicates the guaranteed bit rate in bits per seconds negotiated for this subscriber in uplink direction.
Negotiated GBR for down (bps)	Indicates the guaranteed bit rate in bits per seconds negotiated for this subscriber in downlink direction.
Negotiated GBR for down (bps)	Indicates the guaranteed bit rate in bits per seconds negotiated for this subscriber in downlink direction.
Downlink APN AMBR (bps)	Indicates the aggregate maximum bit rate in bits per second set in downlink direction for APN.
Uplink APN AMBR (bps)	Indicates the aggregate maximum bit rate in bits per second set in uplink direction for APN.
PCRF Authorized Bearer	This group displays the PCRF authorized QoS attributes for GGSN service.
QCI	Indicates the QoS Class Identifier (QCI) received through authorized bearer QoS for GGSN service. Possible values are between 1 through 9.
ARP	Indicates the Allocation and Retention Priority (ARP) set in authorized bearer QoS for GGSN service. Possible values are between 1 through 3.
PCI	Indicates the Preemption Capability Indicator (PCI) value in ARP in authorized bearer QoS for GGSN service. <p>Possible values are:</p> <ul style="list-style-type: none"> <li>0 - disabled</li> <li>1 - enabled</li> </ul>

Field	Description
PL	Indicates the Priority level (PL) value in ARP in authorized bearer QoS for GGSN service. Possible values are between 1 through 15.
PVI	Indicates the Preemption Vulnerability Indicator (PVI) value in ARP in authorized bearer QoS for GGSN service.  Possible values are: 0 - disabled 1 - enabled
MBR uplink (bps)	Indicates the maximum bit reate (MBR) value in bit per second for uplink direction in authorized bearer QoS for GGSN service.
MBR downlink (bps)	Indicates the maximum bit rate (MBR) value in bit per second for downlink direction in authorized bearer QoS for GGSN service.
GBR uplink (bps)	Indicates the guaranteed bit rate (GBR) value in bit per second for uplink direction in authorized bearer QoS for GGSN service.
GBR downlink (bps)	Indicates the guaranteed bit rate (GBR) value in bit per second for downlink direction in authorized bearer QoS for GGSN service.
APN AMBR uplink (bps)	Indicates the aggregate maximum bit rate (AMBR) in bits per second set in uplink direction for APN.
APN AMBR downlink (bps)	Indicates the aggregate maximum bit rate (AMBR) in bits per second set in downing direction for APN.
Ran procedure pkts buffered	Indicates the total number of packets buffered in sub-system waiting for RAB setup ready flag. This is enabled for RAN Procedure Ready delay buffering feature for GGSN service used by this subscriber. Buffer limit is 1024 packets.
Ran procedure buffer overflow pkts drop	Indicates the total number of packets dropped after sub-system buffer was full (buffer limit is 1024 packets) and GGSN is still waiting for RAB setup ready flag. This is enabled for RAN Procedure Ready delay buffering feature for GGSN service used by this subscriber.
Downlink traffic-negotiate-limit	Indicates whether traffic flow negotiate limit is configured for this subscriber under traffic policing feature in downlink direction.
Downlink traffic-rate-limit	Indicates whether traffic flow rate limit is configured for this subscriber under traffic shaping feature in downlink direction.
Uplink traffic-negotiate-limit	Indicates whether traffic flow negotiate limit is configured for this subscriber under traffic policing feature in uplink direction.
Uplink traffic-rate-limit	Indicates whether traffic flow rate limit is configured for this subscriber under traffic shaping feature in uplink direction.

Field	Description
Downlink traffic-shaping	Indicates whether traffic shaping is enabled or not for this subscriber under traffic shaping feature in downlink direction. Possible states are Enabled or Disabled.
Uplink traffic-shaping	Indicates whether traffic shaping is enabled or not for this subscriber under traffic shaping feature in uplink direction. Possible states are Enabled or Disabled.
Peak data rate(bps)	Indicates the peak data rate allowed in downlink/uplink direction through traffic rate limiting.
Guaranteed data rate(bps)	Indicates the guaranteed data rate allowed in downlink/uplink direction through traffic rate limiting.
Burst Size	This group indicates the static/dynamic burst size in bytes for peak and guaranteed rate limiting for this class of QoS in this APN.
Auto Readjust	Indicates whether auto readjustment of burst size is enabled or not. Possible states are Enabled or Disabled.
Auto Readjust Duration	Indicates the configured auto readjust duration in a seconds. If auto readjust is enabled and no readjust duration is specified the default value is 1 second.
Peak Burst Size(bytes)	Indicates the peak burst size in bytes calculated dynamically by auto readjust duration and rate limit value.
Guaranteed Burst Size(bytes)	Indicates the guaranteed burst size in bytes calculated dynamically by auto readjust duration (seconds) and rate limit value (bytes). This counter is applicable only when auto readjustment is enabled.
Peak data rate(bps)	Indicates the peak data rate configured for this subscriber in bits per seconds.
Guaranteed data rate(bps)	Indicates the guaranteed data rate configured for this subscriber in bits per seconds.
Downlink CSS Information	This group provides the information regarding content steering service for downlink traffic.
Service Name	Name of the content steering service applicable for downlink traffic.
downlink pkts to svc	Total number of packets from subscriber node (downlink direction) sent to CSS service.
downlink pkts from svc	Total number of packets from CSS service sent to subscriber node (downlink direction).
Uplink CSS Information	This group provides the information regarding content steering service for uplink traffic.
Service Name	Name of the content steering service applicable for uplink traffic.

Field	Description
uplink pkts to svc	Total number of packets from PDN/Internet (uplink direction) sent to CSS service.
uplink pkts from svc	Total number of packets from CSS service sent to PDN/Internet (uplink direction).
Bearer Establishment	Indicates the status of bearer establishment.
Bearer not ready	This group indicates the number of bytes dropped when bearer was ready.
IM-CN Signaling Context	Specifies the name of the signaling context used for IM-CN (IP Multimedia-Core Network) for interoperability with IP multimedia subsystem (IMS) service.
input pkts	Indicates the number of packets received.
output pkts	Indicates the number of packets transmitted.
input bytes	Indicates the number of bytes received.
output bytes	Indicates the number of bytes transmitted.
input bytes dropped	Indicates the number of bytes that were dropped while receiving data for this subscriber session.
output bytes dropped	Indicates the number of bytes that were dropped while transmitting data for this subscriber session.
input pkts dropped	Indicates the number of packets that were dropped while receiving data for this subscriber session.
output pkts dropped	Indicates the number of packets that were dropped while transmitting data for this subscriber session.  This field includes packets blocked by Access Control Lists (ACLs). Do not use this figure when computing the total number of output packets.
input pkts dropped due to zero mbr	Indicates the number of packets that were dropped while receiving data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
output pkts dropped due to zero mbr	Indicates the number of packets that were dropped while transmitting data due to configured maximum bit rate (MBR) was set to zero for a subscriber.  This counter is applicable when system drops uplink/downlink packets when SGSN notifies Update PDP Contexts for QOS change with bandwidth rate as zero for conversation/streaming class of services.
out packet dropped due to lorc	Indicates the number of packets that were dropped while UE was out of coverage area or radio coverage was lost for a subscriber.  This counter is applicable when GGSN is enabled for overcharging protection for subscriber due to loss of radio coverage and SGSN notifies Update PDP Contexts for QOS change with GTP-C extension for LORC.

Field	Description
pk rate from user(bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(bps)	The peak data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate, in bits per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
pk rate from user(pps)	The peak data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(pps)	The peak data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(pps)	The average data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(pps)	The average data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(pps)	The mean data rate, in packets per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(pps)	The mean data rate, in packets per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
link online/active percent	The percentage of time that the data link was online and active during the last sampling period. The sampling period is 30 seconds.
ipv4 bad hdr	Indicates the number of IPv4 packets received with bad headers.
ipv4 ttl exceeded	Indicates the number of IPv4 packets dropped because their time-to-live was exceeded for this subscriber session.
ipv4 fragments sent	Indicates the number of IPv4 packet fragments that were transmitted.
ipv4 could not fragment	Indicates the number of IPv4 packets that could not be fragmented.

Field	Description
ipv4 input acl drop	Indicates the number of IPv4 packets dropped due to an inbound access control list (ACL) violation. This counter may increment even if no ACL is configured.
ipv4 output acl drop	Indicates the number of IPv4 packets dropped due to an outbound access control list (ACL) violation.
ipv4 input css down drop	Indicates the number of input packets dropped because the CSS service is yet not up or the service went down.
ipv4 output css down drop	Indicates the number of output packets dropped because the CSS service is yet not up or the service went down.
ipv4 output xoff pkts drop	Indicates the number of packets dropped because of flow control.
ipv4 output xoff bytes drop	Indicates the number of bytes dropped because of flow control.
ipv4 source violations	Indicates the number of IPv4 source validation violations.
ipv4 proxy-dns redirect	The number of foreign DNS request packets intercepted and redirected to the home DNS for the subscriber.
ipv4 proxy-dns pass-thru	The number of foreign DNS request packets allowed through the intercept filter for the subscriber.
ipv4 proxy-dns drop	The number of foreign DNS request packets not matching either redirect or pass-thru rules for the subscriber.
ip source violations no acct	The IP source validation violations that were detected but not included in the statistics.
ip source violations ignored	The IP source validation violations that were detected but then ignored.
ipv4 output no-flow drop	The number of IP packets not matching traffic classifier and dropped for the subscriber.
dormancy total	Indicates the total amount of time in seconds that the subscriber session was dormant over the duration of the session.
handoff total	The total number of subscriber sessions handed off.
ipv4 icmp packets dropped	When hide service address is enabled and a service in the system is sent ping packets or a traceroute is executed, the packets pertaining to the service address are dropped. This counter shows the number of those packets that have been dropped.
DHCP context	Name of the system context in which DHCP service is configured.
DHCP service	Name of the DHCP service configured for this subscriber.
DHCP server	Name of the DHCP servers configured for this subscriber for DHCP function.
DHCP lease expiry policy	Specifies the DHCP address lease expiry policy. Possible actions are autoconnect or disconnect

Field	Description
DHCP lease obtained	Specifies the whether lease obtained after lease expiry or not.
DHCP lease remaining	Specifies the status of lease obtained for DHCP allocated IP address.
Total subscribers matching specified criteria	The total number of subscribers matching the specified criteria.

## show subscribers gprs-only full

*Table 611: Show subscribers gprs-only full Command Output Descriptions*

Field	Description
Access Type	Number of GPRS access type, for the subscriber. Possible categories are: SGSN or GGSN.
Access Tech	Number of access technologies associated with the PLMN that is being accessed by the Mobile Station (MS). The Access Tech can be: <ul style="list-style-type: none"> <li>- GPRS GERAN</li> <li>- GSM COMPACT</li> <li>- UTRN</li> <li>- E-UTRN</li> </ul>
Network Type	Network type associated with the PLMN or HPLMN on the PLMN selector. The MS uses this information to select the type of radio carrier for searching, while attempting to select a specific PLMN. Network Type can be: <ul style="list-style-type: none"> <li>- IP</li> <li>- IP Sec</li> <li>- Mobile IP</li> </ul>
msid	Displays the Mobile Station Identification (MSID) associated with the subscriber.
Callid	Displays the subscriber's call identification number.
State	Displays the state of GPRS session in the Mobile Station. Data transfer between MS and network depends on this state. The state can be: <ul style="list-style-type: none"> <li>- Idle</li> <li>- Stand by</li> <li>- Active</li> <li>- Ready</li> </ul>
RFSP Id in Use	Displays the value of the RFSD Id. used.

Field	Description
Connect Time	The date and time when the call was connected to the GPRS network in Day MM DD HH:MM:SS YYYY format.
Call Duration	Total time lapsed after call connection, for this subscriber. Displayed in format hhmms.
Idle Time	Time period for which the subscriber session has been idle either in standby or dormant state. Displayed in format hhmms.
User Location (RAI)	This is the Routing Area Indicator (RAI). It indicates user location in GPRS network.
Cell Global Identity	Cell Global Identity (CGI) indicates a category of user location information that can be used to geographically locate the connected MS.
IMEI (SV)	International Mobile Identity (IMEI) Software Version (SV) associated with MS.
Equipment Status	Equipment status of the mobile equipment, queried from Equipment Identity Registry (EIR).
Source Context	Name of configured source context that was used for session initiation.
Destination Context	Name of configured destination context that was used by the subscriber to access the network.
Accounting Context	The context name where accounting information is configured or where an accounting interface is configured. It can be used to provide accounting of the data session to the subscriber.
Charging Characteristics	Displays associated charging characteristics. It can be: <ul style="list-style-type: none"> <li>- Hot Billing</li> <li>- Flat Rate Billing</li> <li>- Prepaid Billing</li> <li>- Normal Billing</li> </ul>
Characteristics Selection Mode	The selection mode of charging characteristics that is applicable to this session. For example selection mode can be Home or Roaming.
Subscriber Plmn Type	Category of subscriber's Public Land Mobile Network (PLMN). Possible values are: <ul style="list-style-type: none"> <li>- <b>H</b>: home Networks</li> <li>- <b>F</b>: Foreign Networks</li> <li>- <b>U</b>: Unknown Networks</li> </ul>
PPF	The Page Proceed Flag (PPF) indicates whether paging for PS and CS services can be initiated. Possible values are True or False.
NGAF	The Non Gprs Alert Flag (NGAF), indicates whether the MS activity is being reported to MCSC or VLR. Possible values for this flag are True or False.

Field	Description
VLR-Reliable	<p>This flag is set to False when SGSN has received a reset indication from the VLR. The SGSN, upon reception of next Routing Area Update (RAU), may request the MS a procedure to re-attach to non-GPRS services provided that the MS is IMISI attached to such non-GPRS request.</p> <p>Alternately, the SGSN, upon reception of a combined RAU and Location Area Update (LAU) request from an MS that is still attached to non-GPRS service, performs location update procedure for such non-GPRS service.</p>
VLR – Association	<p>States associated with the Gs interface in the VLR. Possible states are:</p> <ul style="list-style-type: none"> <li>- GS NULL</li> <li>- LA UPDATE PRESENT</li> <li>- Gs ASSOCIATED</li> </ul>
NRI Assigned	Assigned Network Resource Indicator (NRI). The NRI is utilized when either Iu-flex or Gb-flex or MOCN configuration is used for network sharing.
ISR – Activated	The activation status of Idle mode Signaling Reduction (ISR). This status can either be True or False.
MME Ctrl Teid	<b>S4-SGSN only:</b> If the <b>ISR-Activated</b> field reads <b>True</b> , this field provides the MME Control Tunnel Endpoint Identifier. The Ctrl TEID identifies the specific S3 tunnel on the MME being used for this ISR-activated subscriber.
MME IP Address	<b>S4-SGSN only:</b> If the <b>ISR-Activated</b> field reads <b>True</b> , this field provides the IP address of the MME associated with this ISR-activated subscriber.
Nego Ready Timer	This value is sent from SGSN to MS. It indicates timeout ready timer value. Its range is from 0 to 11160 seconds the default value is 44 seconds.
MS Network Capacity	<p>The MS network capacity elements provide MS information related to GPRS network. These elements indicate general Mobile Station (MS) characteristics, hence are independent of the frequency band of the channel for which this capability is set.</p> <p>The MS network capacity specifies parameters such as:</p> <ul style="list-style-type: none"> <li>- Revision level indicator</li> <li>- SoLSA capacity</li> <li>- SS screening indicator</li> <li>- Whether UCS2 character set is enabled</li> <li>- SMS via GPRS Channel</li> <li>- Whether or not GPRS Encryption Algorithm - GEA1 to GEA 7 are supported</li> <li>- LCS VA</li> </ul>
Revision Level Indicator (MS Network Capability)	The 3GPP released version that is supported by the MS network capability.

Field	Description
SoLSA Capability (MS Network Capability)	Specifies whether the Support of Localized Service Area (SoLSA) is included in the MS network capability.
SS Screening Indicator (MS Network Capability)	Category of Supplemental Services (SS) screening indicator that is being sent by MS to the network to assess the capabilities of the MS. This indicator is sent by the MS at the beginning of the radio connection.
UCS2 (MS Network Capability)	Specifies whether the Universal Character Set 2 (UCS-2) encoding for the character is supported or whether the use of default alphabet is supported.
SMS via GPRS CH (MS Network Capability)	Specifies whether the MS support for mobile terminated point to point SMS via GPRS channel is included in the MS network capability.
SMS via Dedicated CH (MS Network Capability)	Specifies whether the MS support for mobile terminated point to point SMS via a dedicated GPRS channel is included in the MS network capability.
GEA/1 (MS Network Capability)	Specifies whether support for GEA1 is included in the MS network capability.
GEA/2 (MS Network Capability)	Specifies whether support for GEA2 is included in the MS network capability.
GEA/3 (MS Network Capability)	Specifies whether support for GEA3 is included in the MS network capability.
GEA/4 (MS Network Capability)	Specifies whether support for GEA4 is included in the MS network capability.
GEA/5 (MS Network Capability)	Specifies whether support for GEA5 is included in the MS network capability.
GEA/6 (MS Network Capability)	Specifies whether support for GEA6 is included in the MS network capability.
GEA/7 (MS Network Capability)	Specifies whether support for GEA7 is included in the MS network capability.
Negotiated ciphering algorithm	The ciphering algorithm negotiated by the SGSN and MS during Authentication and Ciphering Request.
LCS VA Capability (MS Network Capability)	Specifies whether the LoCation Services Value Add (LCS VA) capability is included or not in the MS network capacity.
DRX Parameter	<p>Discontinuous Reception (DRX) is used when the MS is in the packet idle mode. If MS is using the discontinuous reception, then the DRX parameters indicate whether the MS is in no-sleep mode and is able to receive paging requests and channel assignments. GPRS uses two DRX modes namely, normal DRX and split paging DRX.</p> <p>Following are the DRX parameters:</p> <ul style="list-style-type: none"> <li>- Split PG cycle code</li> <li>- Split on CCCH</li> <li>- Non-DRX timer</li> <li>- CN Specific DRX cycle length coefficient.</li> </ul>
SPLIT PG Cycle Code (DRX Parameter)	displays the cycle code for the split paging mode.
SPLIT on CCCH (DRX Parameter)	Specifies whether split on Common Control Channel (CCCH) is supported or not.

Field	Description
Non-DRX timer (DRX Parameter)	Value of non-DRX timer transfer state, displayed in seconds.
CN Specific DRX cycle length coefficient (DRX Parameter)	Specifies the Core Network (CN) specific DRX cycle length coefficient support by MS. An MS can be attached to either circuit or packet domain of CN. For the circuit domain the MS uses the circuit domain CN- domain specific cycle length coefficient broadcast in system information.
Uplink Coverage Class	Specifies the uplink coverage class value of the subscriber.
Downlink Coverage Class	Specifies the downlink coverage class value of the subscriber.
Current PTMSI	Current value of Packet Temporary Mobile Subscriber Identity (P-TMSI). P-TMSI gets attached to the MS when GPRS attach procedure is performed. P-TMSI is used to avoid transmitting the IMSI over air interface. P-TMSI is only applicable in the geographical area served by the SGSN. When the MS move to another geographical area, a new P_TMSI gets attached to the MS.
Current PTMSI Acked by MS	Acknowledgement status of current P_TMSI by the MS. Possible values are yes and no.
Any Previous PTMSI	Specifies whether any previous P-TMSI value is available for this MS.
MNRG Flag	Current value of Mobile station Not Reachable in GPRS (MNRG) flag. This flag is found in Home Location Register (HLR) and it indicates whether SGSN can reach this MS. Possible values for this flag are true and false.
Subscriber offload status	Indicates the subscriber offload status.
NRI Assigned	Number of assigned Network Resource Indicators (NRIs).An NRI is a part of TMSI in CS domain and P-TMSI in PS domain.
Number of Free Vectors	Number of free authentication vectors available for the Universal Subscriber Identity Module (USIM) that is associated with the MS.
Number of Used Vectors	Number of authentication vectors used by the Universal Subscriber Identity Module (USIM) associated with the MS.
Number of In-Use Vectors	Indicates the number of authentication vectors that are being used by the Universal Subscriber Identity Module (USIM) that is associated with the MS.
MSISDN (Subscription Data)	The Mobile Station Integrated Subscriber Digital Network Number (MSISDN) associated with the MS. It uniquely identifies a subscription in a mobile network.
Charging Characteristics (Subscription Data)	Associated charging characteristic profile. It can be hot or normal or pre-paid or flat billing.

Field	Description
ODB General Data	<p>Operator Determined Barring (ODB) data. The ODB is an unsigned 32-bit Attribute Value Pair (AVP) containing a bit mask that indicates the services barred by the operator.</p> <p>As per the bit mask:</p> <ul style="list-style-type: none"> <li>- Bit 0 bars all packet oriented services.</li> <li>- Bit 1 bars roamer access HPLMN-AP.</li> <li>- Bit 2 bars roamer access VPLMN- AP.</li> <li>- Bit 3 bars all outgoing calls.</li> <li>- Bit 4 bars all outgoing international calls.</li> <li>- Bit 5 bars all outgoing international calls except to the home PLMN country.</li> <li>- Bit 6 bars all outgoing inter-zonal calls.</li> <li>- Bit 7 bars all outgoing inter-zonal calls, except to the home PLMN country.</li> <li>- Bit 8 bars all outgoing international calls, except to the home PLMN country and barring of all inter-zonal calls.</li> </ul> <p>The following parameters constitute the ODB general data:</p> <ul style="list-style-type: none"> <li>- All Out Going Calls.</li> <li>- All International Outgoing Calls.</li> <li>- All International Outgoing Not To HPLMN Country Calls.</li> <li>- All Interzonal Outgoing Calls.</li> <li>- All Interzonal And International Outgoing Calls Not To HPLMN Country.</li> <li>- Roamer Access to VPLMN Access Point Barred.</li> </ul>
All Out Going Calls (ODB-General-Data)	Specifies permission for all categories of outgoing calls associated with this MS. This is a parameter of ODB General Data. These calls can be barred or not-barred.
All International Outgoing Calls (ODB-General-Data)	Specifies the permission for international outgoing calls associated with this MS. This is a parameter of ODB General Data. These calls can be barred or not-barred
All International Outgoing Not To HPLMN Country Calls (ODB-General-Data)	Specifies permission for the international outgoing calls that are not made to Home Public Land Mobile Network (HPLMN). This is a parameter of ODB General Data. These calls can be barred or not-barred.
All Interzonal Outgoing Calls (ODB-General-Data)	Specifies the permission for the Interzonal outgoing calls associated with this MS. This is a parameter of ODB General Data. These calls can be barred or not-barred.
All Interzonal And International Outgoing Calls Not To HPLMN Country (ODB-General-Data)	Specifies the permission for all interzonal and international calls that are not made to HPLMN country. This is a parameter of ODB General Data. These calls can be barred or not barred.
Roamer Access to HPLMN Access Point Barred (ODB-General-Data)	Specifies whether or not the access point for roamer access to Home PLMN is barred. This is a parameter of ODB General Data.

Field	Description
Roamer Access to VPLMN Access Point Barred (ODB-General-Data)	Specifies whether or not the access point for roamer access to Visitor PLMN is barred. This is a parameter of ODB General Data.
ODB-HPLMN-Data	Specifies the availability of HPLMN data for Operator Defined Barring (ODB).
Zone-Code-List	Zone code list that can be associated with the subscription. A zone is combination of origin and destination area codes. Zoning information can be used for rating and charging purpose.
Tele-Service Code List	Code of the barer service (tele service) associated with this subscription.
HLR Number	The Home Location Register (HLR) associated with this subscription.
HLR-Reset Flag	Specifies the whether the HLR associated with this subscription was reset or not. Possible values of this flag are true and false.
HSS Peer	The name of the peer home subscriber server (HSS) service associated with this subscription.
Utran-not-allowed (ARD)	Value of UTRN –not –allowed flag in the Algorithm Requirements Document (ARD) associated with this subscription. Possible values are true or false.
Geran-not-allowed (ARD)	Value of GERAN –not –allowed flag in the Algorithm Requirements Document (ARD) associated with this subscription. Possible values are true or false.
Super-Charger Enabled	Current value of Super-Charger Enabled flag. It can be either true or False.  Subscriber movement across MSC or VLR forces the HLR to provision new serving MSC or VLR with the subscriber data by moving this data. These signaling procedures add significant overhead in the network traffic. Specifically in high population aerates where the MSC or VLR is handling significantly smaller geographical area. In s supercharged network the HLR does not remove subscriber data from old MSC or VLR and this data can be used when subscriber roams back to old MSC or VLR.
SAI Version	Current version of SAI. The Service Area Identifier (SAI) is a combination of PLMN-id, Location Area Code (LAC) and Service Area Code (SAC). The SAI identifies an area consisting of one or more cells belonging to same LA.
EPS Subscription	Enhanced Packet Service (EPS) subscription data includes subscription related data. Refer the 3GPP technical standard 3GPP TS 23.016 and other related standards for more information.
PDP Context Id (PDP Subscription Data)	Identifies the PDP context for PDP subscription data.
APN (PDP Subscription Data)	Identifies the Access Point Name (APN) associated with this PDP subscription.
PDP Type (PDP Subscription Data)	Category of PDP context. For example it can be IPv4, IPv6 or PPP.
PDP Address Type (PDP Subscription Data)	Category or type of address allocation for PDP address. For example it can be static or dynamic.

Field	Description
PDP Address (PDP Subscription Data)	The IP address allocated for PDP packets.
Ext PDP Type (PDP Subscription Data)	Category or type of PDP context. For example, IPv4 or IPv6.
Ext PDP Address Type (PDP Subscription Data)	Category or type of address allocation for external PDP address. For example it can be static or dynamic.
Ext PDP address (PDP Subscription Data)	The IP address allocated for external PDP packets.
Charging Characteristics (PDP Subscription Data)	Category of charging characteristics associated with this PDP subscription. For example charging characteristics can be either normal billing or hot billing.
VPLMN Address Allowed (PDP Subscription Data)	Specifies whether the address of Visited Public Land Mobile Network (VPLMN) is allowed or not allowed.
Reliability Class (PDP Subscription Data)	Reliability class associated with the PDP subscription. It considers reliability attributes such as delivery order, traffic handling priority, as well as allocation and retention priority. For example reliability class for PDP subscription can be unacknowledged GTP, LLC, acknowledged RLC or protected data.
Delay Class (PDP Subscription Data)	Defined category of network transient delay for the PDP subscription data. For example class 4.
Precedence Class (PDP Subscription Data)	Service precedence delay supported by SGSN by discarding or allowing packets based on the precedence class for the PDP subscription. For example the precedence class for PDP subscription can be high priority.
Peak Throughput (PDP Subscription Data)	Configured maximum allowed throughput rate for the PDP subscription. Along with other fields such as reliability, delay or precedence class, it can be used for traffic shaping.
Mean Throughput (PDP Subscription Data)	Configured mean throughput rate for the PDP subscription. Along with other fields such as reliability, delay or precedence class, it can be used for traffic shaping.
Allocation/Retention Priority (PDP Subscription Data)	Allocation, retention priority indicates the reliability of the PDP subscription data. For example for various traffic classes such as conversational, streaming, interactive and background, this priority can be defined as 1, 2 or 3.
Delivery of Erroneous SDUs (PDP Subscription Data)	Status of the delivery of erroneous Service Delivery Units (SDUs) for the PDP subscription. For example, it indicates whether the delivery of erroneous SDUs are detected.
Traffic Class (PDP Subscription Data)	Category of traffic associated with this PDP subscription. Traffic is broadly categorized as Conversational, Streaming, Background and Interactive.
Max Sdu Size (PDP Subscription Data)	Maximum allowable size of Service Data Units (SDUs) in octets, which is associated with this PDP subscription data.
Max Bit Rate Uplink (PDP Subscription Data)	Maximum allowable rate in kbps for sending that data from an MS to network, that is associated with the PDP subscription.

Field	Description
Max Bit Rate Downlink (PDP Subscription Data)	Maximum allowable rate in kbps for sending the data from network to the MS, which is associated with the PDP subscription.
Residual Bit Error rate (PDP Subscription Data)	Reliability based on residual Bit Error Rate (BER) associated with PDP subscription. For specific traffic class such as conversational, streaming, interactive or background, certain range of residual BER is required.
Sdu Error rate (PDP Subscription Data)	Reliability class based on Service Delivery Unit (SDU) error rate associated with the PDP subscription. For specific traffic class such as Conversational, Streaming, Interactive or background, certain range of SDU error rate is required.
Traffic Handling Priority (PDP Subscription Data)	Priority or importance of handling SDUs belonging to a specific context associated with the PDP subscription.
Transfer Delay (PDP Subscription Data)	Delay encountered in milliseconds (ms), while delivering about 95% of SDUs associated with the PDP context, in the life time of the bearer service.
Guaranteed Bit Rate Uplink (PDP Subscription Data)	Guaranteed number of bits delivered by MS to network in kbps for the associated PDP context.
Guaranteed Bit Rate Downlink (PDP Subscription Data)	Guaranteed number of bits delivered by network to MS, in kbps for the associated PDP context.
APN (User Name)	Access Point Name used by the Mobile Station (MS) to communicate with the GPRS network. It determines the IP addresses used by and security methods applicable to the MS.
PDP address (User Name)	IP address associated with the PDP context that is being used by this user name or subscriber.
NSAPI (User Name)	Network (layer) Service Access Point Identifier (NSAPI) that is being used to identify the unique data session or the PDP context associated with the MS and the SGSN.
Context initiated by (User Name)	Context or session initiated by the user name.
LLC SAPI (User Name)	Logical Link Control Service Access Point Identifier LLC SAPI associated with this user name.
Context Plmn Type (User Name)	PLMN context associated with the MS. IT can be home or roaming.
GGSN c-teid (User Name)	GGSN control plane Tunnel Endpoint Identifier (teid), that is associated with this subscription.  The teid is a unique number that is allocated by the GSN (SGSN or GGSN) and it identifies the tunnel data related to a specific PDP context. The teid along with IP address and UDP port number is used to identify the Gprs Tunneling Protocol (GTP) tunnel that is being established between two GPRS nodes to deliver packets.

Field	Description
GGSN u-teid (User Name)	<p>GGSN user plan Tunnel End Point Identifier (teid), that is associated with this subscription.</p> <p>The teid is a unique number that is allocated by the GSN (SGSN or GGSN) and it identifies the tunnel data related to a specific PDP context. The teid along with IP address and UDP port number is used to identify the GTP tunnel that is being established between two GPRS nodes to deliver packets.</p>
SGSN c-teid (User Name)	<p>SGSN control plane Tunnel Endpoint Identifier (teid), that is associated with this subscription.</p> <p>The teid is a unique number that is allocated by the GSN (SGSN or GGSN) and it identifies the tunnel data related to a specific PDP context. The teid along with IP address and UDP port number is used to identify the Gprs Tunneling Protocol (GTP) tunnel that is being established between two GPRS nodes to deliver packets.</p>
SGSN u-teid (User Name)	<p>SGSN user plan Tunnel End Point Identifier (teid), that is associated with this subscription.</p> <p>The teid is a unique number that is allocated by the GSN (SGSN or GGSN) and it identifies the tunnel data related to a specific PDP context. The teid along with IP address and UDP port number is used to identify the GTP tunnel that is being established between two GPRS nodes to deliver packets.</p>
Requested and Negotiated QoS	<p>A Quality of Service Profile (QoS) profile for the GPRS is defined using service parameters such as:</p> <ul style="list-style-type: none"> <li>- Traffic class</li> <li>- Reliability class</li> <li>- Delay class</li> <li>- Maximum bit rate uplink throughput</li> <li>- Maximum bit rate downlink throughput</li> <li>- Guaranteed bit rate downlink throughput</li> <li>- Residual bit error rate</li> <li>- SDU error rate</li> <li>- Traffic handling priority</li> <li>- Transfer delay</li> </ul> <p>Using these parameters an MS <b>requests</b> the network with specific values for the QoS profile parameters and the network provides the <b>negotiated</b> values of the profile parameters. There can be a difference between the values of the QoS parameters requested by the Mobile Station (MS), and those negotiated with the network.</p>
Reliability Class (Requested-QoS)	<p>It is a QoS attribute associated with reliability. It considers reliability attributes such as delivery order, traffic handling as well as allocation or retention priority. Possible values are unchecked GTP, LLC, acked RLC and protected data. This indicates a QoS parameter value requested by the MS to the network.</p>

Field	Description
Delay Class (Requested-QoS)	It is a QoS attribute associated with traffic flow, the delay class indicates network transient delay. This indicates a QoS parameter value requested by the MS to the network.
Precedence Class (Requested-QoS)	It is a QoS attribute that indicates the service precedence supported by the GPRS network by discarding packets, based on requested and negotiated precedence class. For example a precedence class can have Priority values as high, Normal and Low.  This indicates the QoS parameter value requested by the MS to the network.
Peak Throughput (Requested-QoS)	It is a QoS attribute that indicates configured, maximum allowed throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between GPRS network and MS.
Mean Throughput (Requested-QoS)	It is a QoS attribute that indicates configured mean throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between GPRS network and the MS.  This is the QoS parameter value requested by the MS to the network.
Delivery of Erroneous SDUs (Requested-QoS)	It is the QoS status regarding the delivery of erroneous Service Delivery Units (SDUs). For example it indicates whether or not the delivery of the erroneous SDUs is detected or not.  This is the QoS parameter value requested by the MS to the network.
Traffic Class (Requested-QoS)	Category of traffic class as per the QoS requested by the MS. The traffic is broadly categorized as:  - Conversational - Streaming - Background - Interactive  This is the QoS parameter value requested by the MS to the network.
Max Sdu Size (Requested-QoS)	Maximum allowable size of Service Data Units (SDUs) in octets. This is the QoS parameter value requested by the MS to the network.
Max Bit Rate Uplink (Requested-QoS)	Maximum allowable traffic rate in kbps, for sending data from MS to the network. This is the QoS parameter value requested by the MS to the network.
Max Bit Rate Downlink (Requested-QoS)	Maximum allowable traffic rate in kbps for sending the data from network to MS. This is the QoS parameter value requested by the MS to the network.
Residual Bit Error rate (Requested-QoS)	Reliability based on residual Bit Error Rate (BER). Certain BER rate is associated with specific category of the traffic class such as conversational, streaming, and interactive or background. This is the QoS parameter value requested by the MS to the network.
Sdu Error rate (Requested-QoS)	Service Delivery Unit (SDU) error rate. This is the QoS parameter value requested by the MS to the network.
Traffic Handling Priority (Requested-QoS)	Priority or level of handling SDUs belonging to a specific context. This is the QoS parameter value requested by the MS to the network.

Field	Description
Transfer Delay (Requested-QoS)	Delay encountered in ms, while delivering about 95% of SDUs belonging to specific context. This is the QoS parameter value requested by the MS to the network.
Guaranteed Bit Rate Uplink (Requested-QoS)	Guaranteed number of bits transferred in the specified time frame, by the MS to the network. This is the QoS parameter value requested by the MS to the network.
Guaranteed Bit Rate Downlink (Requested-QoS)	Guaranteed number of bits transferred in the specified time frame, by the network to MS. This is the QoS parameter value requested by the MS to the network.
Reliability Class (Negotiated-QoS)	QoS attribute associated with reliability. It considers reliability attributes such as delivery order, traffic handling as well as allocation or retention priority. Possible values are unchecked GTP, LLC, acked RLC and protected data. This is the negotiated value between MS and the network.
Delay Class (Negotiated-QoS)	QoS attribute associated with traffic flow, the delay class indicates network transient delay. This is the negotiated value between MS and the network.
Precedence Class (Negotiated-QoS)	QoS attribute that indicates the service precedence supported by the GPRS network by discarding packets, based on requested and negotiated precedence class. For example a precedence class can have Priority values as high, Normal and Low. This is the negotiated value between MS and the network.
Peak Throughput (Negotiated-QoS)	QoS attribute that indicates configured, maximum allowed throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between GPRS network and MS. This is the negotiated value between MS and the network.
Mean Throughput (Negotiated-QoS)	QoS attribute that indicates configured mean throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between GPRS network and the MS. This is the negotiated value between MS and the network.
Allocation/Retention Priority (Negotiated-QoS)	Allocation, retention priority indicates the reliability of the PDP subscription data. For example for various traffic classes such as conversational, streaming, interactive and background, this priority can be defined as 1, 2 or 3. This is the negotiated value between MS and the network.
Delivery of Erroneous SDUs (Negotiated-QoS)	QoS status regarding the delivery of erroneous Service Deliver Units (SDUs). For example it indicates whether or not the delivery of the erroneous SDUs is detected or not. This is the negotiated value between MS and the network.
Traffic Class (Negotiated-QoS)	Category of traffic class as per the QoS requested by the MS. The traffic is broadly categorized as: <ul style="list-style-type: none"> <li>- Conversational</li> <li>- Streaming</li> <li>- Background</li> <li>- Interactive</li> </ul> This indicates the negotiated value between MS and the network.

Field	Description
Max Sdu Size (Negotiated-QoS)	Maximum allowable size of Service Data Units (SDUs) in octets. This is the negotiated value between MS and the network.
Max Bit Rate Uplink (Negotiated-QoS)	Maximum allowable traffic rate in kbps, for sending data from MS to the network. This is the negotiated value between MS and the network.
Max Bit Rate Downlink (Negotiated-QoS)	Maximum allowable traffic rate in kbps for sending the data from network to MS. This is the negotiated value between MS and the network.
Residual Bit Error rate (Negotiated-QoS)	Reliability based on residual Bit Error Rate (BER). Certain BER rate is associated with specific category of the traffic class such as conversational, streaming, and interactive or background. This is the negotiated value between MS and the network.
Sdu Error rate (Negotiated-QoS)	Service Delivery Unit (SDU) error rate. This is the negotiated value between MS and the network.
Traffic Handling Priority (Negotiated-QoS)	Priority or level of handling SDUs belonging to a specific context. This is the negotiated value between MS and the network.
Transfer Delay (Negotiated-QoS)	Delay encountered in ms, while delivering about 95% of SDUs belonging to specific context. This is the negotiated value between MS and the network.
Guaranteed Bit Rate Uplink (Negotiated-QoS)	Guaranteed number of bits transferred in the specified time frame, by the MS to the network. This is the negotiated value between MS and the network.
Guaranteed Bit Rate Downlink (Negotiated-QoS)	Guaranteed number of bits transferred in the specified time frame, by the network to MS. This is the negotiated value between MS and the network.
Downlink traffic-rate-limit	Specifies whether the traffic rate limit for the data traffic from network to MS is enabled or disabled.
Uplink traffic-rate-limit	Specifies whether the traffic rate limit for the data traffic form MS to network is enabled or disabled.
input pkts	Specifies total number of error free packets received by the MS from the network.
input bytes	Total number of error free bytes received by the MS from the network.
input bytes dropped	Total number of input bytes dropped by the MS while receiving them from the network.
input pkts dropped	Total number of packets dropped by the MS while receiving the packets from the network.
input pkts dropped due to lorc	Number of input packets dropped by the MS while sending them to the network, due to Loss of Radio Coverage (LORC).

Field	Description
input bytes dropped due to lorc	Number of input bytes dropped by the MS while receiving them from the network due to Loss of Radio Coverage (LORC).
in packet dropped suspended state	Total number of packets dropped by the MS, because the packets were in suspended state, while receiving the packets from the network.
in bytes dropped suspended state	Total number of bytes dropped by the MS, because the bytes were in suspended state, while receiving the bytes from the network.
output pkts	Total number of error free packets sent by the MS to the network.
output bytes	Total number of error free bytes sent by the MS to the network.
output bytes dropped	Total number of output bytes dropped by the MS while sending them to network.
output pkts dropped	Total number of packets dropped by the MS while sending the packets to the network.
output pkts dropped due to lorc	Total number of packets dropped by the MS while sending the packets to the network, due to loss of radio service.
pk rate from user(bps)	The peak data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(bps)	The peak data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(bps)	The average data rate, in bits per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(bps)	The average data rate, in bits per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(bps)	The mean data rate, in bits per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.
sust rate to user(bps)	The mean data rate, in bits per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
pk rate from user(pps)	The peak data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
pk rate to user(pps)	The peak data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
ave rate from user(pps)	The average data rate, in packets per second, obtained for data sent from the subscriber to the network during the last sampling period. The sampling period is 30 seconds.
ave rate to user(pps)	The average data rate, in packets per second, obtained for data received from the network by the subscriber during the last sampling period. The sampling period is 30 seconds.
sust rate from user(pps)	The mean data rate, in packets per second, obtained for data sent from the subscriber to the network during the last three sampling periods. The sampling period is 30 seconds.

Field	Description
sust rate to user(pps)	The mean data rate, in packets per second, obtained for data received from the network by the subscriber during the last three sampling periods. The sampling period is 30 seconds.
SSAF	Indicates if the SSAF flag is set during the CSFB procedure.
EMM Combined UE Waiting Flag	Indicates if the EMM combined UE waiting flag is set during the CSFB procedure.
Subscription Type	Displays the configured subscription type as either "EPS" or "GPRS".

## show subscribers hnbgw-only all

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 612: show subscribers hnbgw-only all Command Output Descriptions**

Field	Description
vv	Displays service and session state information. This column provides a code consisting of two characters.
	From left-to-right, the first character represents the <b>Network Type</b> that the subscriber is using. The possible access types are: <ul style="list-style-type: none"> <li>- <b>H</b>: HNB</li> <li>- <b>P</b>: PS Connection</li> <li>- <b>C</b>: CS Connection</li> </ul>
	The second character represents the <b>Call State</b> . The possible call states are: <ul style="list-style-type: none"> <li>- <b>R</b>: Registered</li> <li>- <b>D</b>: Deregistered</li> <li>- <b>C</b>: Connected</li> <li>- <b>N</b>: Disconnected</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number on HNB-GW in HNB access network.
HNB/UE Id	Displays the HNB or UE identifier on HNB-GW in HNB access network.
HNB IP Address	Displays the HNB IP address registered on HNB-GW service in HNB access network.

# show subscribers hnbgw-only full

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 613: show subscribers hnbgw-only full Command Output Descriptions**

Field	Description
Username	The name of the subscribers accessing HNB-GW over IuH or IuCS or IuPS connection on HNB-GW service.
Access Type	Indicates the access type used by subscriber session over HNB access network. Possible access types are: <ul style="list-style-type: none"> <li>- hnbgw-hnb (IuH connection between HNB and HNB-GW)</li> <li>- hnbgw-iu (IuCS or IuPS connection between HNB-GW and CN)</li> </ul>
Network Type	Indicates the type of network used by subscriber session over HNB access network. Possible network types are: <ul style="list-style-type: none"> <li>- IP</li> <li>- IPSec</li> <li>- Unknown</li> </ul>
Access Tech	Indicates the access technology used by subscriber session over HNB access network. Possible access technologies are FEMTO UTRAN or Other/Unknown
callid	Indicates the subscriber's call identification number (callid) used for this session.
msid	Indicates the subscriber's Mobile Station identification (MS id) used for this session.
state	Indicates the state of the subscriber session over HNB access network. The possible session states are: <ul style="list-style-type: none"> <li>- <b>R</b>: Registered</li> <li>- <b>D</b>: Deregistered</li> <li>- <b>C</b>: Connected</li> <li>- <b>N</b>: Disconnected</li> </ul>
Service Name	Indicates the name of the HNB-GW service for which subscriber information is displayed.
HNB Ip Address	Indicates the primary IP address of the HNB in the session. In HNB-GW session this is the primary IP address of Femto CPE.

Field	Description
User Location (RAI)	Indicates the user location in Femto UTRAN network. This is the Routing Area Identifier (RAI) provided to HNBs during registration with this HNB-GW service. The RAC signifies the routing area that this HNBGW service belongs to and is configured under the PLMN-ID
Service Area Code	Identifies the Service Area (SA) code within a LA (Location Area) used during this HNB-GW session.
GlobalRNCId	Indicates the Global identifier used for Radio Network Controller used by this subscriber session in Femto UTRAN network.
IMSI	Indicates the IMSI number which is currently registered with HNB-GW service session instance.
Registration Type	Indicates the type of registration applies for specific subscriber session over HNB access network. Possible registration types are: <ul style="list-style-type: none"> <li>• Normal: Indicates the normal subscriber session. in this type of session registration multiple Iu sessions and multiple Radio Access Bearers (RABs) are allowed.</li> <li>• Emergency: Indicates that current subscriber session is of Emergency type. In this type of session only on Iu session (CS or PS) with only one Radio Access Bearer (RAB) is allowed.</li> </ul>
Context Id	Indicates the identity number of the context used by specific subscriber session over HNB-GW service instance.
SGSN Point Code	Indicates the SGSN address in SS7 point code where specific subscriber's IuPS session is attached and serve the PS session in Femto UTRAN access network.
Domain	Indicates the type of core network (CN) domain where specific subscriber's Iu (CS or PS) session is attached and served. Possible domains are: <ul style="list-style-type: none"> <li>- Packet Switched (PS) Domain</li> <li>- Circuit Switched (CS) Domain</li> </ul>
PS RABs	This group indicates the status and statistics of RABs used by specific subscriber session over IuPS interface while connected to HNB-PS core network.
Rab id	Indicates the identifier number of PS RAB used by specific subscriber session over IuPS interface while connected to HNB-PS core network.
State	Indicates the state of PS RAB used by specific subscriber session over IuPS interface while connected to HNB-PS core network. Possible states are Established or Released.
GTP-U Tunnel towards CN	This group indicates the setup information of GTP-U tunnel established between HNB-GW and HNB-PS core network (SGSN) for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Remote Addr	Indicates the IP address of SGSN used as remote peer node at the end of GTP-U tunnel established between HNB-GW and HNB-PS core network (SGSN) for specific subscriber session over IuPS interface while connected to HNB-PS core network.

Field	Description
Remote TEID	Indicates the remote GTP-U tunnel end (SGSN side) identifier used by GTP-U tunnel established between HNB-GW and HNB-PS core network (SGSN) for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Local Addr	Indicates the IP address of HNB-GW used by GTP-U tunnel established between HNB-GW and HNB-PS core network (SGSN) for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Local TEID	Indicates the local GTP-U tunnel end (HNB-GW side) identifier used by GTP-U tunnel established between HNB-GW and HNB-PS core network (SGSN) for specific subscriber session over IuPS interface while connected to HNB-PS core network.
GTP-U Tunnel towards HNB	This group indicates the setup information of GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
Remote Addr	Indicates the IP address of HNB used as remote peer node at the end of GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
Remote TEID	Indicates the remote GTP-U tunnel end (HNB side) identifier used by GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
Local Addr	Indicates the IP address of HNB-GW used by GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
Local TEID	Indicates the local GTP-U tunnel end (HNB-GW side) identifier used by GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Data Fwd GTP-U Tunnel towards SGSN/T-RNC	This group indicates the setup information of Data Forwarding GTP-U tunnel established between HNB-GW and SGSN or target RNC (T-RNC) for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Remote Addr	Indicates the IP address of SGSN/target RNC used as remote peer node at the end of Data forwarding GTP-U tunnel established between HNB-GW and SGSN or target RNC for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Remote TEID	Indicates the remote Data Forwarding GTP-U tunnel end (SGSN or target RNC side) identifier used by GTP-U tunnel established between HNB-GW and SGSN or target RNC for specific subscriber session over IuPS interface while connected to HNB-PS core network.
Data Fwd GTP-U Tunnel towards HNB	This group indicates the setup information of Data Forwarding GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.

Field	Description
Local Addr	Indicates the IP address of HNB-GW used as local address by Data forwarding GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
Local TEID	Indicates the local Data Forwarding GTP-U tunnel end (HNB-GW side) identifier used by GTP-U tunnel established between HNB and HNB-GW for specific subscriber session over IuH interface while connected to HNB-PS core network.
GTPU	This group indicates the data transmission information for specific subscriber session connected to HNB-PS core network.
GTPU Downlink Bytes Rx	Indicates the total number of bytes received by HNB-GW in downlink direction (from CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Downlink Bytes Tx	Indicates the total number of bytes transmitted by HNB-GW in downlink direction (towards HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Downlink Packets Rx	Indicates the total number of packets received by HNB-GW in downlink direction (from CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Downlink Packets Tx	Indicates the total number of packets transmitted by HNB-GW in downlink direction (towards HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Bytes Rx	Indicates the total number of bytes received by HNB-GW in uplink direction (from HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Bytes Tx	Indicates the total number of bytes transmitted by HNB-GW in uplink direction (towards CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Packets Rx	Indicates the total number of packets received by HNB-GW in uplink direction (from HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Packets Tx	Indicates the total number of packets transmitted by HNB-GW in uplink direction (towards CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Downlink Bytes dropped	Indicates the total number of bytes dropped by HNB-GW in downlink direction (from CN to HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Bytes dropped	Indicates the total number of bytes dropped by HNB-GW in uplink direction (from HNB to CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.

Field	Description
GTPU Downlink Packets dropped	Indicates the total number of packets dropped by HNB-GW in downlink direction (from CN to HNB) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Uplink Packets dropped	Indicates the total number of packets dropped by HNB-GW in uplink direction (from HNB to CN) over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
Drop Cause	This group indicates the reasons for packet/bytes dropped by HNB-GW in downlink/uplink direction over GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
RAB not in CONNECTED state	Indicates the total number of packets/bytes dropped by HNB-GW in downlink/uplink direction over GTP-U tunnel for specific subscriber session connected to HNB-PS core network as RAB was not connected when packets/bytes received by HNB-GW.
Miscellaneous	Indicates the total number of packets/bytes dropped by HNB-GW in downlink/uplink direction over GTP-U tunnel for specific subscriber session connected to HNB-PS core network due to Emergency type of session or other unknown cause.
GTPU Fwd Packets Rx	Indicates the total number GTP-U Forward packets received by HNB-GW over Data Forward GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
GTPU Fwd Packets Tx	Indicates the total number GTP-U Forward packets transmitted by HNB-GW over Data Forward GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
Drop Cause	This group indicates the reasons for Data Forward GTP-U packet dropped by HNB-GW over Data forward GTP-U tunnel for specific subscriber session connected to HNB-PS core network.
RAB not in CONNECTED state	Indicates the total number of GTPU Forward packets dropped by HNB-GW over Data Forward GTP-U tunnel for specific subscriber session connected to HNB-PS core network as RAB was not connected when Data forward packets received by HNB-GW.
Miscellaneous	Indicates the total number of GTPU Forward packets dropped by HNB-GW over Data Forward GTP-U tunnel for specific subscriber session connected to HNB-PS core network due to Emergency type of session or other unknown cause.
MSC Point Code	Indicates the MSC address in SS7 point code where specific subscriber's IuCS session is attached and serve the CS session in Femto UTRAN access network.
CS RABs	This group indicates the status and statistics of RABs used by specific subscriber session over IuCS interface while connected to HNB-CS core network.
Rab id	Indicates the identifier number of CS RAB used by specific subscriber session over IuCS interface while connected to HNB-CS core network.
State	Indicates the state of CS RAB used by specific subscriber session over IuCS interface while connected to HNB-CS core network. Possible states are: Established or Released.

Field	Description
IUH interface	This group displays the session setup information of IuH interface between HNB and HNB-GW used by specific subscriber session while connected to HNB-CS core network.
Local RTP Addr	Indicates the local IP address allocated to HNB-GW by RTP IP pool and used by HNB-GW for establishing IuH session with HNB. This address is used for RTP session in specific subscriber session while connected to HNB-CS core network.
Local RTP port	Indicates the local RTP port number used by HNB-GW for establishing IuH session with HNB. This port is used by RTP session in specific subscriber session while connected to HNB-CS core network.
Remote RTP Addr	Indicates the remote IP address allocated to HNB by RTP IP pool and used by HNB-GW for establishing IuH session with HNB. This address is used for RTP session in specific subscriber session while connected to HNB-CS core network.
Remote RTP port	Indicates the local RTP port number used by HNB for establishing IuH session with HNB-GW. This port is used by RTP session in specific subscriber session while connected to HNB-CS core network.
RTP	This group indicates the RTP data packet transmission information for specific subscriber session connected to HNB-CS core network.
RTP Downlink Packets Rx	Indicates the total number of RTP packets received by HNB-GW in downlink direction (from CN) over IuCS interface for specific subscriber session connected to HNB-CS core network.
RTP Uplink Packets Tx	Indicates the total number of RTP packets transmitted by HNB-GW in uplink direction (to CN) over IuCS interface for specific subscriber session connected to HNB-CS core network.
RTP Downlink Packets dropped	Indicates the total number of RTP data packets dropped by HNB-GW in downlink direction (from CN to HNB) over IuH interface for specific subscriber session connected to HNB-CS core network.
Drop Cause	This group indicates the reasons for RTP data packets dropped by HNB-GW in downlink/uplink direction over RTP tunnel for specific subscriber session connected to HNB-CS core network.
RAB not in CONNECTED state	Indicates the total number of packets dropped by HNB-GW in downlink direction over RTP tunnel for specific subscriber session connected to HNB-CS core network as RAB was not connected when RTP packets received by HNB-GW.
Miscellaneous	Indicates the total number of packets dropped by HNB-GW in downlink direction over RTP tunnel for specific subscriber session connected to HNB-CS core network due to Emergency type of session or other unknown cause.
IU interface	This group indicates the data packet transmission information over IuCS interface for specific subscriber session connected to HNB-CS core network.
Transport	Indicates the type of transport used in HNB-GW service instance over IuCS interface for specific subscriber session connected to HNB-CS core network. Possible type of transport are IP or ATM.

Field	Description
AAL2 Node	This group displays the information related to ATM adaptation layer 2 (AAL2) channel used for specific subscriber session connected to HNB-CS core network.
AAL2 Path	Indicates the identity number of AAL2 path used for ATM transport in AAL2 node which is applicable for specific subscriber session connected to HNB-CS core network.
AESA	Indicates the ATM End System Address (AESA) used for ATM transport in AAL2 node which is applicable for specific subscriber session connected to HNB-CS core network.
AAL2	This group indicates the AAL2 packet transmission information over ATM channel for specific subscriber session connected to HNB-CS core network.
AAL2 Downlink Packets Rx	Indicates the total number of AAL2 packets received by HNB-GW in downlink direction (from CN) over ATM channel for specific subscriber session connected to HNB-CS core network.
AAL2 Uplink Packets Tx	Indicates the total number of AAL2 packets transmitted by HNB-GW in uplink direction (to CN) over ATM channel for specific subscriber session connected to HNB-CS core network.
AAL2 Downlink Packets dropped	Indicates the total number of AAL2 packets dropped by HNB-GW in downlink direction (from CN to HNB) over ATM channel for specific subscriber session connected to HNB-CS core network.
Drop Cause	This group indicates the reasons for AAL2 packets dropped by HNB-GW in downlink direction over ATM channel for specific subscriber session connected to HNB-CS core network.
RAB not in CONNECTED state	Indicates the total number of packets dropped by HNB-GW in downlink direction over ATM channel for specific subscriber session connected to HNB-CS core network as RAB was not connected when ATM packets received by HNB-GW.
Miscellaneous	Indicates the total number of packets dropped by HNB-GW in downlink direction over ATM channel for specific subscriber session connected to HNB-CS core network due to Emergency type of session or other unknown cause.

## show subscribers hnbgw-service

### Important

In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

Table 614: show subscribers hnbgw-service svc\_name Command Output Descriptions

Field	Description
vv	Displays service and session state information. This column provides a code consisting of two characters.
	From left-to-right, the first character represents the <b>Network Type</b> that the subscriber is using. The possible access types are: <ul style="list-style-type: none"> <li>- <b>H</b>: HNB</li> <li>- <b>P</b>: PS Connection</li> <li>- <b>C</b>: CS Connection</li> </ul>
	The second character represents the <b>Call State</b> . The possible call states are: <ul style="list-style-type: none"> <li>- <b>R</b>: Registered</li> <li>- <b>D</b>: Deregistered</li> <li>- <b>C</b>: Connected</li> <li>- <b>N</b>: Disconnected</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number on HNB-GW in HNB access network.
HNB/UE Id	Displays the HNB or UE identifier on HNB-GW in HNB access network.
HNB IP Address	Displays the HNB IP address registered on HNB-GW service in HNB access network.

## show subscribers mme-only full

Table 615: show subscribers mme-only full Command Output Descriptions

Field	Description
Username	The subscriber name connected for EPS session.
Status	Indicates the status of EPS subscriber session. Possible status are Online/Active or Offline/Dormant/Idle.
Access Type	Indicates the type of access applicable for this subscriber. For MME subscribers it should be <b>s1-mme</b> .
Network Type	Indicates the type of network service used for the subscriber session. See
Access Tech	Indicates the accessing technology. For MME session it is <b>eUTRAN</b> .
Access Network Peer ID	Indicates the identifier of the peer in access network.
Peer Id	Indicates the identifier of the peer MME in home network.

Field	Description
callid	The MME subscriber's call identification number (callid).
msid	The MME subscriber's mobile station identification (MSID), and whether the subscriber is unauthenticated (such as during emergency attach).
imei	The MME subscriber's International Mobile Equipment Identity (IMEI).
guti	This group indicates the Globally Unique Temporary Identifier (GUTI) constructed with following identifiers: <ul style="list-style-type: none"> <li>- PLMN (MMC and MNC)</li> <li>- MME Group ID (MMEGI)</li> <li>- MME Code (MMEC)</li> <li>- MME TMSI (M-TMSI)</li> </ul>
plmn-id	Indicates the public mobile land network (PLMN) of which MME belongs. PLMN is constructed from MMC and MNC.
mme-group-id	Indicates the MME group Id of which MME belongs to.
mme-code	Indicates the MME code of which MME belongs to.
m-tmsi	Indicates the MME TMSI which is used to identify this subscriber in MME service.
MSISDN	Indicates the Mobile Subscriber Integrated Services Digital Network Number (MSISDN) of the subscriber connected to an MME service.
Card/Cpu	The card and CPU ID on which this MME subscriber session is running.
Sessmgr Instance	The session manager instances running for this subscriber.
state	The state of MME subscriber session. The possible values are: <ul style="list-style-type: none"> <li>- Connected</li> <li>- Connecting</li> <li>- Disconnecting</li> <li>- Unknown</li> </ul>
Peer address	IP address of peer MME system in network.
connect time	Indicate the time in DAYMMMDD HH:MM:SS YYYY format when call connected to MME service.
call duration	Total time lapsed after call connected for this subscriber with this MME service.
idle time	The time period that the subscriber session has been idle, either in an active or dormant state.
ip address	Indicates the primary IP address of the subscriber interface in the session.
mme-service name	Indicates the name of MME service which is serving this subscriber for MME calls.

Field	Description
mme-service context	Indicates the name of system context in which particular MME service which is serving this subscriber for MME calls is configured.
source context	The name of the source context in which the S1-MME interface is configured for this MME service
destination context	The name of the destination context in which the S5/S8 interface is configured for this MME service.
Imsimgr Instance	The IMSI Manager instance holding the mapping entry for a subscriber session is displayed as part of the subscriber session information.
DCNR Devices	Indicates the number of DCNR devices attached to the MME.

## show subscribers summary pgw only

*Table 616: show subscribers summary pgw only Command Output Descriptions*

Field	Description
EUTRAN	The total number of EUTRAN PDNs by RAT-Type.
UTRAN	The total number of UTRANs PDNs by RAT-Type.
GERAN	The total number of GERANs PDNs by RAT-Type.
WLAN	The total number of WLANs PDNs by RAT-Type.
Other	The total number of Others PDNs by RAT-Type.

## show subscribers pdf-service

Table 617: show subscribers pdf-service Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible network types are: <ul style="list-style-type: none"> <li>- <b>A</b>: Attached</li> <li>- <b>N</b>: Not Attached</li> <li>- <b>.</b> (period): Not Applicable</li> </ul>
	The fifth character represents the <b>Link Status</b> of the session. The possible idle states are: <ul style="list-style-type: none"> <li>- <b>A</b>: Online/Active (airlink connected)</li> <li>- <b>D</b>: Dormant (airlink not connected)</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP	Displays the IP address assigned to the subscriber.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers pgw-only full all

Table 618: show subscribers pgw-only full all Command Output Descriptions

Field	Description
Access Type	Indicates the session type for this subscriber. See <b>Common Attributes</b> in this chapter.

Field	Description
Network Type	Indicates the network service used for the subscriber session. See <b>Common Attributes</b> in this chapter.
Access Tech	Indicates the accessing technology. See <b>Common Attributes</b> in this chapter.
pgw-service-name	The name of the P-GW service configured and running on the system.
Callid	The subscriber's call identification number (callid).
IMSI	The International Mobile Subscriber Identification (IMSI) which is the 3-digit MCC (Mobile Country Code), 2 or 3-digit MNC (Mobile Network Code), and the MSIN (Mobile Subscriber Identification Number).
MSISDN	The Mobile Station International ISDN Number (MSISDN) of the subscriber node.
External ID	The External-Id that is used as an alternative ID for the MSISDNLess device. External-Id is received in the Network Access Identifier (NAI) format with a maximum size of 22 characters. The operator must ensure the correct format and size of the External-Id value.
Interface Type	Indicates the type of interface.
Low Access Priority	Displays whether or not LAPI (Low Access Priority Indicator) PDN sessions are rejected due to overload.
TWAN Mode	Displays TWAN mode value associated with a P-GW subscriber. Possible TWAN modes are: <ul style="list-style-type: none"> <li>• Multi-connection Mode</li> <li>• Single-connection Mode</li> <li>• Transparent Single Connection Mode</li> </ul>
Emergency Bearer Type	The Emergency Bearer Type of the subscriber session.
S6b Returned Virtual APN	Displays the S6b returned full virtual APN name, if the Virtual APN Truncation feature is enabled. Otherwise, it displays "N/A".  For more information on this feature, see the <i>Rf Interface Support</i> chapter in the administration guide of the product you are deploying.
Restoration priority level	Displays the value of restoration priority associated with a P-GW subscriber.
S6b Auth Status	S6b Auth Status shown as By-passed if S6b auth failed and in the assumed positive state.
<b>Bearer State</b>	
in packet dropped sgw restoration state	Uplink packets dropped during S-GW Restoration.
in bytes dropped sgw restoration state	Uplink bytes dropped during S-GW Restoration.
out packet dropped sgw restoration state	Downlink packets dropped during S-GW Restoration.

Field	Description
out bytes dropped sgw restoration state	Downlink bytes dropped during S-GW Restoration.
Paging Policy Differentiation	Displays whether or not the PPD feature is enabled.
multiple-pra	Multiple Presence Reporting Area Information Reporting.
4G MHS Input Bytes	The total number of input bytes used with 4G Tethering.
4G MHS Output Bytes	The total number of output bytes used with 4G Tethering.
5G MHS Input Bytes	The total number of input bytes used with 5G Tethering.
5G MHS Output Bytes	The total number of output bytes used with 5G Tethering.
5G Composite Input Bytes	The total number of input bytes used with 5G Composite (Tethering and non-Tethering).
5G Composite Output Bytes	The total number of output bytes used with 5G Composite (Tethering and non-Tethering).

## show subscribers pgw-only summary

Table 619: show subscribers pgw-only summary Command Output Descriptions

Field	Description
Total S6b Assume Positive	Total number of subscribers in the assumed positive state.

## show subscribers policy

Table 620: show subscribers policy Command Output Descriptions

Field	Description
<b>PCC rule stats</b>	
Install requests	Total number of Policy Control and Charging (PCC) rule install requests.
Remove requests	Total number of PCC rule removal requests.
Installed uplink	Total number of PCC rules installed for uplink direction.
Installed downlink	Total number of PCC rules installed for downlink direction.
Activate requests	Total number of PCC rule activate requests.
Deactivate requests	Total number of PCC rule deactivate requests.
Activate group	Total number of policy groups activated.

Field	Description
Deactivate group	Total number of policy groups deactivated.
Active Rules	Total number of active rules.
Temp Inactive Rules	Total number of temporary inactive rules.
<b>PCC rule failure stats</b>	
Rule install failure	Total number of PCC rule install failures.
Rule remove failure	Total number of PCC rule removal failures.
Activation failure	Total number of PCC rule activation failures.
Deactivation failure	Total number of PCC rule deactivation failures.
Group activation failure	Total number of policy group activation failures.
Group deactivation failure	Total number of policy group deactivation failures.
<b>Event stats</b>	
Session up	Total number of subscriber sessions up.
Session down	Total number of subscriber sessions down.
Handoff	Total number of handoffs occurred.
RAT change	Total number of Radio Access Type (RAT) changes occurred.
User location change	Total number of user location changes occurred.
Default Bearer QoS change	Total number of default bearer QoS changes occurred.
Flow create	Total number of flows created.
Flow delete	Total number of flows deleted.
Bearer loss	Total number of bearer loss.
Bearer recovery	Total number of bearer recoveries after loss of bearer.
Update tft	Total number of Traffic Flow Template (TFT) updates.
Update qos	Total number of QoS updates.
UE Time Zone change	Total number of UE time zone changes occurred.
<b>Event failure stats</b>	
Session up	Total number of session up failures.
Session down	Total number of session down failures.
Handoff	Total number of handoff failures.

show subscribers rulename &lt;rule\_name&gt;

Field	Description
RAT change	Total number of RAT change failures.
User location change	Total number of user location change failures.
Default Bearer QoS change	Total number of default bearer QoS change failures.
Flow create	Total number of flow creation failures.
Flow delete	Total number of flow deletion failures.
Bearer loss	Total number of bearer loss failures.
Bearer recovery	Total number of bearer recovery failures.
Update tft	Total number of TFT update failures.
Update qos	Total number of QoS update failures.
UE Time Zone change	Total number of UE time zone change failures.
<b>Auth stats</b>	
Auth request	Total number of authorization requests sent.
Auth failure	Total number of authorization request failures.
Reauth request	Total number of re-authorization requests sent.
Reauth request failure	Total number of re-authorization request failures.
Terminate request	Total number of terminate requests sent.
Terminate request failure	Total number of terminate request failures.

## show subscribers rulename <rule\_name>

Table 621: show subscribers rulename <rule\_name> Command Output Descriptions

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types</a> , on page 2212.
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies</a> , on page 2214.
Call State	The call state. See, <a href="#">Call States</a> , on page 2214.
Access CSCF State	The access state of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - . (period): Not Applicable

Field	Description
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types, on page 2215</a> .
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters. From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. The second character represents the <b>Access Technology</b> . The third character represents the <b>Call State</b> . The fourth character represents the <b>Access CSCF Status</b> of the session. The fifth character represents the <b>Link Status</b> of the session. The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers saegw-only full all

The output of the **show subscribers saegw-only full all** command displays the following details:

Field	Description
4G MHS Input Bytes	The total number of input bytes used with 4G Tethering.
4G MHS Output Bytes	The total number of output bytes used with 4G Tethering.
5G MHS Input Bytes	The total number of input bytes used with 5G Tethering.
5G MHS Output Bytes	The total number of output bytes used with 5G Tethering.
5G Composite Input Bytes	The total number of input bytes used with 5G Composite (Tethering and non-Tethering).

Field	Description
5G Composite Output Bytes	The total number of output bytes used with 5G Composite (Tethering and non-Tethering).
<b>Access Tech:</b> Indicates the accessing technology. See <b>Common Attributes</b> in this chapter.	
LTE-M	Displays the access technology of the call as LTE-M.

## show subscribers samog-only full

Table 622: show subscribers samog-only full Command Output Descriptions

Field	Description
EAP-Method	<p>Indicates the Extensible Authentication Protocol (EAP) method. The Possible values are:</p> <ul style="list-style-type: none"> <li>- EAP-AKA</li> <li>- EAP-SIM</li> <li>- EAP-AKA-PRIME</li> <li>- EAP-TLS</li> <li>- EAP-TTLS</li> <li>- EAP-PEAP</li> </ul> <p><b>Note</b> The EAP-Method already displays EAP-AKA, EAP-SIM, EAP-AKA-PRIME. Now this show command is extended to display EAP-TLS, EAP-TTLS, EAP-PEAP.</p>

## show subscribers without-dynamic-rule

Table 623: show subscribers without-dynamic-rule Command Output Descriptions

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types</a> , on page 2212.
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies</a> , on page 2214.
Call State	The call state. See, <a href="#">Call States</a> , on page 2214.
Access CSCF State	<p>The access state of the session. The possible states are:</p> <ul style="list-style-type: none"> <li>- <b>A</b>: Attached</li> <li>- <b>N</b>: Not Attached</li> <li>- . (period): Not Applicable</li> </ul>

Field	Description
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types, on page 2215</a> .
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using.
	The second character represents the <b>Access Technology</b> .
	The third character represents the <b>Call State</b> .
	The fourth character represents the <b>Access CSCF Status</b> of the session.
	The fifth character represents the <b>Link Status</b> of the session.
	The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers without-override-control

*Table 624: show subscribers without-override-control Command Output Descriptions*

Field	Description
Access Type	Indicates the type of access for this subscriber. See, <a href="#">Access Types, on page 2212</a> .
Access Tech	Represents the <b>Access Technology</b> . See, <a href="#">Access Technologies, on page 2214</a> .
Call State	The call state. See, <a href="#">Call States, on page 2214</a> .

Field	Description
Access CSCF State	The access state of the session. The possible states are: - <b>A</b> : Attached - <b>N</b> : Not Attached - . (period): Not Applicable
Link Status	Indicates the status of the flow. The possible states are: - <b>A</b> : Online/Active (airlink connected) - <b>D</b> : Dormant (airlink not connected)
Network Type	Indicates the session Network Type. See, <a href="#">Network Types, on page 2215</a> .
vvvvvv	Displays service and session state information. This column displays a code consisting of six characters.  From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using.  The second character represents the <b>Access Technology</b> .  The third character represents the <b>Call State</b> .  The fourth character represents the <b>Access CSCF Status</b> of the session.  The fifth character represents the <b>Link Status</b> of the session.  The sixth character represents the session <b>Network Type</b> .
CALLID	The subscriber's call identification (callid) number.
MSID	The subscriber's mobile station identification (MSID) number.
USERNAME	The subscriber's user name.
IP	The IP address assigned to the subscriber.
TIME-IDLE	The amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers sgsn-only full

Table 625: show subscribers sgsn-only full Command Output Descriptions

Field	Description
Source context	Specifies the name of a configured source context from which the subscriber initiates a session.

Field	Description
Destination context	Specifies the name of a configured destination context through which the subscriber is provided access to the packet data network.
Accounting context	Specifies the name of a configured accounting context through which the subscriber is provided accounting of data session.
Subscriber Plmn Type	Indicates the subscriber type of Public Land Mobile Network area. Possible values are: - <b>H</b> : Home networks - <b>F</b> : Foreign networks - <b>U</b> : Unknown networks
Charging Characteristics	Displays the Charging characteristics. Hot Billing, Flat rate Billing, Prepaid Billing and Normal Billing
Charging Characteristics Selection Mode	Displays the selection mode of the Charging characteristics.
MNRG Flag	The MNRG (Mobile Not Reachable for GPRS) flag indicates whether activity from the MS will be reported to the HLR or not. Possible values are True or False.
PPF	The PPF (Page Proceed Flag) indicates whether paging for PS and CS services can be initiated. Possible values are True or False.
NGAF	The NGAF (Non-GPRS Alert Flag) indicates whether activity from the MS will be reported to the MCSC/VLR. Possible values are True or False.
VLR-Reliable	Set to 'false' when the SGSN has received a reset indication from the VLR. The SGSN may request the MS, upon reception of the next routing area update (either periodic routing area update or combined routing and location area update) procedure, to re-attach to non-GPRS services if the MS is still IMSI attached to non-GPRS services. Alternatively, the SGSN may upon reception of a combined routing and location area update request or a periodic routing area update from a MS that is still attached for non-GPRS service, perform immediately the location update for non-GPRS services procedure.
VLR-Association	States associated to the Gs interface in the VLR. Possible states are: - Gs-NULL - LA-UPDATE PRESENT - Gs-ASSOCIATED
NRI Assigned	The Network Resource Identifier (NRI) is used either when Iu-flex or Gb-flex is used or when MOCN configuration is used for network sharing. NRI is a 1-10 bit length value that is a part of PTMSI. This de-multiplexes which SGSN handles the subscriber at the RNC or BSS. The NRI that was chosen for this subscriber is shown and this is useful to know when this SGSN is configured with more than one NRI.

Field	Description
Network Sharing Capability	Specifies the MS support for network shearing.  When network sharing feature is enabled, it is possible that the MS is a supporting MS or a non-supporting MS. The three possible values the MS Network Sharing Support feature can hold are:  - Not Applicable (Network Sharing is not enabled)  - Not Supported (Network Sharing is enabled; MS does not support this feature.)  - Supported (Network Sharing is enabled; MS supports this feature.)
Access Type	Access type that the subscriber is using. Following are some examples of access type, pdsn- simple-ip, ha-mobile-ip or ggsn-pdp-type-ipv4.
Access Tech	Access technology used by the subscriber. Following are some example s of access technology WCDMA, UTRAN, FEMTO UTRAN.
Callid	Displays subscriber's call identification number.
State	The call state. Possible states are <b>C</b> : connected, <b>c</b> : Connecting, <b>d</b> : Disconnecting.
RFSP Id in Use	Displays the value of the RFSD Id. used.
Connect Time	Time of connection in Day Month d hh:mm:ss yyyy format.
Network Type	Type of network. Following are some of the examples of network type IP, Mobile IP, L2TP.
Idle Time	Time period in hh:mm:ss format, for this duration the subscriber session has been idle, either in active or in dormant state.
User Location (RAI)	Location of the user in the type of network. This is the Routing Area Identifier (RAI) provided during the registration with the GW service. The RAI signifies the routing area belonging to the GW service.
Serving PLMN	Identification of serving Public Land Mobile Network (PLMN).
Global RNC-Id	Displays information related to Global Radio Network Controller (RNC) settings used by CS core network for a GW service on a chassis. It is configured under PLMN Id.
VLR Number	Total number of VLRs associated with this application.
ISR-Activated	<b>S4-SGSN only</b> : Indicates if the Idle-Mode Signaling Reduction (ISR) feature is enabled (True) or disabled (False) on the SGSN.
MME Ctrl Teid	<b>S4-SGSN only</b> : If the <b>ISR-Activated</b> field reads <b>True</b> , this field provides the MME Control Tunnel Endpoint Identifier (Teid). The Ctrl TEID is the specific S3 tunnel on the MME being used for this ISR-activated subscriber.
MME IP Address	<b>S4-SGSN only</b> : If the <b>ISR-Activated</b> field reads <b>True</b> , this field provides the IP address of the MME associated with this ISR-activated subscriber.
GEA/1	Total number of currently attached subscribers that are affecting MS network capability by using GPRS Encryption Algorithm (GEA)/1 encryption.

Field	Description
GEA/2	Total number of currently attached subscribers that are affecting MS network capability by using GEA/2 encryption.
GEA/3	Total number of currently attached subscribers that are affecting MS network capability by using GEA/3 encryption.
GEA/4	Total number of currently attached subscribers that are affecting MS network capability by using GEA/4 encryption.
GEA/5	Total number of currently attached subscribers that are affecting MS network capability by using GEA/5 encryption.
GEA/6	Total number of currently attached subscribers that are affecting MS network capability by using GEA/6 encryption.
GEA/7	Total number of currently attached subscribers that are affecting MS network capability by using GEA/7 encryption.
LCS VA Capability	Specifies availability of Location Service (LCS) Value Added (VA) capability.
Split PG Cycle Code	Value of Split PG Cycle parameter, for the Discontinuous Reception (DRX).
SPLIT on CCCH	Availability of split on CCCH parameter for Discontinuous Reception (DRX).
APN	Access Point Name associated with the user name or subscriber.
NSAPI	subscriber's Network Service Access Point Identifier (NSAPI).
Context Initiated By	Session context initiator for example an MS.
Direct Tunnel	Specifies whether a direct tunnel between RAN and GGSN is established, not established or torn down by the SGSN.
Fast Path	Specifies whether the fast path is established so that SGSN can perform other signaling procedures and higher services or such fast path is not established.
Charging Characteristics	Associated charging characteristics profile for example hot or normal or pre-paid or flat billing.
Charging Characteristics Selection Mode	Selection mode of associated charging characteristics for example APN.
Charging Id	Contains a unique identifier that can be used for correlating charging records and events.
APN Selection Mode	Type of associated APN selection method. For example an APN selection mode can be chosen by SGSN, sent by MS or subscribed.

Field	Description
Bearer Control Mode	BCM mode is applicable to all PDP contexts within the activated PDP Address/APN pair and is stored common to all PDPs of a bundle. All PDPs in the bundle will display the same information. This parameter represents the latest Bearer Control Mode (BCM) information received, by an SGSN in a UMTS network from a GGSN, in Create PDP Context Response or Update PDP Context Request/Response messages. Value for this field is either "MS only" or "MS/NW" (also known as mixed mode) in accordance with section 7.7.83 of 3GPP TS 29.060 R9.
EUTRAN Service Handover	Indicates if the system is configured to include the E-UTRAN Service Handover Information Element (IE) in RAB Assignment Request and Relocation Request RANAP messages.
Requested and Negotiated QoS	<p>A Quality of Service Profile (QoS) profile for the GPRS is defined using service parameters such as:</p> <ul style="list-style-type: none"> <li>- Reliability class</li> <li>- Delay class</li> <li>- Traffic class</li> <li>- Max sdu size</li> <li>- Max bit rate uplink</li> <li>- Max bit rate downlink</li> <li>- Residual bit error rate</li> <li>- Sdu error rate</li> <li>- Traffic handling priority</li> <li>- Transfer delay</li> <li>- Guaranteed bit rate uplink</li> <li>- Guaranteed bit rate downlink</li> <li>- Precedence class</li> <li>- Peak throughput</li> <li>- Mean throughput</li> </ul> <p>Using these parameters an MS requests the network with specific values for the QoS profile parameters and the network provides the negotiated values of the profile parameters. There can be a difference between the values of the QoS parameters requested by the Mobile Station (MS), and those negotiated with the network.</p>
Reliability Class (Requested QoS)	It is a QoS attribute associated with reliability. It considers reliability attributes such as delivery order, traffic handling priority as well as allocation and retention priority.
Delay Class (Requested QoS)	It is a QoS attribute associated with traffic flow, the delay class indicates network transient as well as transfer delay.

Field	Description
Traffic Class (Requested QoS)	It is a QoS attribute indicating various categories of traffic. For example a traffic class can be, Conversational, Streaming, Background, Interactive 1, Interactive 2 or Interactive 3.
Max sdu Size (Requested QoS)	It is a QoS attribute that indicates maximum allowable size of Service Data Units (SDUs).
Max Bit Rate Uplink (Requested QoS)	It is a QoS attribute indicating maximum allowable rate in <b>kbps</b> for sending the data from an MS to network.  This is a requested QoS parameter indicating the upper limits requested by the subscriber or the default values provided as per the QoS profile.
Max Bit Rate Downlink (Requested QoS)	It is a QoS attribute indicating maximum allowable rate in <b>kbps</b> for sending the data from the network to an MS.
Residual Bit Error Rate (Requested QoS)	It is a QoS attribute indicating reliability based on residual Bit Error Rate (BER). For specific traffic class such as conversational, streaming, interactive or background certain range of residual BER is required.
Sdu Error Rate (Requested QoS)	It is a QoS attribute indicating reliability based on Service Delivery Unit (SDU) error rate. For specific traffic class such as conversational, steaming, interactive or background certain range of Sdu Error Rate is required.
Traffic Handling Priority (Requested QoS)	It is a QoS attribute indicating the importance or priority of handling SDUs belonging to a specific PDP context as compared to any other PDP context.
Transfer Delay (Requested QoS)	It is a QoS attribute. It indicates the delay encountered in ms while delivering about 95% SDUs in the life time of a given bearer service.
Guaranteed Bit Rate Uplink (Requested QoS)	It is a QoS attribute. It is a rate that indicates the guaranteed number of bits delivered by the MS to the SGSN in a specific time frame divided by the duration.
Guaranteed Bit Rate Downlink (Requested QoS)	It is a QoS attribute. It is a rate that indicates the guaranteed number of bits delivered by the SGSN to the MS in a specific time frame, divided by the duration.
Precedence Class (Requested QoS)	It is a QoS attribute that indicates the service precedence supported by the SGSN by discarding packets based on the basis of requested and negotiated precedence between MS and UTRN. For example a precedence class can have values such as high, normal and low.
Peak Throughput (Requested QoS)	It is a QoS attribute that indicates configured maximum allowed throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between SGSN and MS.
Mean Throughput (Requested QoS)	It's a QoS attribute that indicates configured mean throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between SGSN and MS.
Reliability Class (Negotiated QoS)	It is a QoS attribute associated with reliability. It considers reliability attributes such as delivery order, traffic handling priority as well as allocation and retention priority.
Delay Class (Negotiated QoS)	It is a QoS attribute associated with traffic flow, the delay class indicates network transient as well as transfer delay.

Field	Description
Traffic Class (Negotiated QoS)	It is a QoS attribute indicating various categories of traffic. For example a traffic class can be, Conversational, Streaming, Background, Interactive 1, Interactive 2 or Interactive 3.
Max sdu Size (Negotiated QoS)	It is a QoS attribute that indicates maximum allowable size of Service Data Units (SDUs).
Max Bit Rate Uplink(Negotiated QoS)	It is a QoS attribute indicating maximum allowable rate in kbps for sending the data from an MS to network.
Max Bit Rate Downlink (Negotiated QoS)	It is a QoS attribute indicating maximum allowable rate in kbps for sending the data from the network to an MS.
Residual Bit Error Rate (Negotiated QoS)	It is a QoS attribute indicating reliability based on residual Bit Error Rate (BER). For specific traffic class such as conversational, streaming, interactive or background certain range of residual BER is required.
Sdu Error Rate (Negotiated QoS)	It is a QoS attribute indicating reliability based on Service Delivery Unit (SDU) error rate. For specific traffic class such as conversational, steaming, interactive or background certain range of Sdu Error Rate is required.
Traffic Handling Priority (Negotiated QoS)	It is a QoS attribute indicating the importance or priority of handling SDUs belonging to a specific PDP context as compared to any other PDP context.
Transfer Delay (Negotiated QoS)	It is a QoS attribute. It indicates the delay encountered in ms while delivering about 95% SDUs in the life time of a given bearer service.
Guaranteed Bit Rate Uplink (Negotiated QoS)	It is a QoS attribute. It is a rate that indicates the guaranteed number of bits delivered by the MS to the SGSN in a specific time frame divided by the duration.
Guaranteed Bit Rate Downlink (Negotiated QoS)	It is a QoS attribute. It is a rate that indicates the guaranteed number of bits delivered by the SGSN to the MS in a specific time frame, divided by the duration.
Precedence Class (Negotiated QoS)	It is a QoS attribute that indicates the service precedence supported by the SGSN by discarding packets based on the basis of requested and negotiated precedence between MS and UTRN. For example a precedence class can have values such as high, normal and low.
Peak Throughput (Negotiated QoS)	It is a QoS attribute that indicates configured maximum allowed throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between SGSN and MS.
Mean Throughput (Negotiated QoS)	It's a QoS attribute that indicates configured mean throughput rate. This attribute along with other attributes such as precedence, delay and reliability classes can be used for shaping traffic between SGSN and MS.
Downlink traffic-rate-limit	The limit or maximum allowable value for rate of traffic from UTRAN to the MS. This limit can be enabled or disabled.
Uplink traffic-rate-limit	The limit or maximum allowable value for the rate of traffic from MS to UTRAN. This limit can be enabled or disabled.
Input Packets	Number of packets received for example management packets or pass packets.

Field	Description
Input Bytes	Number of bytes received.
Input Packets Dropped	Number of packets that were dropped while receiving data for this subscriber session.
Input Bytes Dropped	Number of bytes dropped while receiving data for this subscriber session.
Input Packets Dropped due to LORC	Number of packets that were dropped while receiving that data due to Loss Of Radio Coverage (LORC).
Input Bytes Dropped due to LORC	Number of bytes that were dropped while receiving that data due to Loss Of Radio Coverage (LORC).
Output Packets Dropped	Number of packets that were dropped while transmitting data for this subscriber session. It includes packets blocked by Access Control Lists (ACLs).
Output Bytes Dropped	Number of bytes that were dropped while transmitting data for this subscriber session.
Output Packets Dropped due to LORC	Number of packets that were dropped while UE was out of coverage area or radio coverage was lost for a subscriber. This is applicable when SGSN notifies update PDP contexts for QoS charge. With GTP-C extension for Loss Of Radio Coverage (LORC) and GGSN is enabled for overcharging protection for subscriber due to LORC.
Pk Rate From User (bps)	Peak or maximum data rate, in bits per second for the data that is sent by the subscriber to the network during last sampling period. The sampling period is 30 seconds.
Pk Rate to User (bps)	Peak or maximum data rate, in bits per second for the data that is received by the subscriber from the network during last sampling period. The sampling period is 30 seconds.
Sust Rate From User (bps)	Sustainable rate of packet transmission by the subscriber to the network, in bits per seconds. The sampling period is 30 seconds.
Sust Rate to User (bps)	Sustainable speed or rate of packet reception by the subscriber from the network, in bits per seconds. The sampling period is 30 seconds.
Ave Rate From User (bps)	Mean or average data rate, in bits per second for the data that is sent from the subscriber to the network for last three sampling periods. The sampling period is 30 seconds.
Ave Rate to User (bps)	Mean or average data rate, in bit per second for the data that is received by the subscriber from the network for last three sampling periods. The sampling period is 30 seconds.
Current PTMSI	Current value of Packet Temporary Mobile Subscriber Identifier (P – TMSI), an identifier allocated to UE by SGSN.
Current PTMSI Acked by MS	Specifies whether the current P-TMSI is acknowledged by the mobile station.
Any Previous PTMSI	Specifies presence or absence of any previous P-TMSI.
MNRG Flag	Current status of Mobile Not Reachable for GPRS (MNRG) flag. This flag indicates whether the MS activates are being reported to HLR or not. Possible values for this flag are true or false.
Subscriber offload status	Indicates the subscriber offload status.

Field	Description
PDP Context Id (PDP Subscription)	Identifies the PDP context for PDP subscription data.
APN (PDP Subscription)	Identifies the Access Point Name (APN) associated with this PDP subscription.
PDP Type (PDP Subscription)	Category of PDP context. For example it can be IPv4, IPv6 or PPP.
PDP Address Type (PDP Subscription)	Category or type of PDP address allocation. For example the address type can be static or dynamic.
Ext PDP Address Type (PDP Subscription)	Category or type of address allocation for external PDP address. For example it can be static or dynamic.
Charging Characteristics (PDP Subscription)	Category of charging characteristics associated with this PDP subscription. For example it can be normal billing or hot billing.
VPLMN Address Allowed (PDP Subscription)	Specifies whether the address of Visited Public Land Mobile Network is allowed or not allowed.
Reliability Class (PDP Subscription)	Reliability class associated with the PDP subscription. It considers reliability attributes such as delivery order, traffic handling priority, as well as allocation and retention priority. For example reliability class for PDP subscription can be unacknowledged GTP, LLC, acknowledged RLC or protected data.
Delay Class (PDP Subscription)	Defined category of network transient delay for the PDP subscription data. For example class 4.
Precedence Class (PDP Subscription)	Service precedence delay supported by SGSN by discarding or allowing packets based on the precedence class for the PDP subscription. For example the precedence class for PDP subscription can be high priority.
Peak Throughput (PDP Subscription)	Configured maximum allowed throughput rate for the PDP subscription. Along with other fields such as reliability, delay or precedence class, it can be used for traffic shaping.
Mean Throughput (PDP Subscription)	Configured mean throughput rate for the PDP subscription. Along with other fields such as reliability, delay or precedence class, it can be used for traffic shaping.
Allocation/Retention Priority (PDP Subscription)	Allocation, retention priority indicates the reliability of the PDP subscription data. For example for various traffic classes such as conversational, streaming, interactive and background, this priority can be defined as 1, 2 or 3.
Delivery of Erroneous SDUs (PDP Subscription)	Status of the delivery of erroneous Service Delivery Units (SDUs) for the PDP subscription. For example it indicates whether the delivery of erroneous SDU's is detected or not.
Traffic Class (PDP Subscription)	Category of traffic associated with this PDP subscription. Traffic is broadly categorized as Conversational, streaming, Background and Interactive.
Max SDU Size (PDP Subscription)	Maximum allowable size of Service Data Units (SDUs) in octets, which is associated with this PDP subscription data.
Max Bit Rate Uplink (PDP Subscription)	Maximum allowable rate in kbps for sending that data from an MS to network, that is associated with the PDP subscription. Indicates maximum allowable rate in kbps for sending that data from an MS to network, that is associated with the PDP subscription.

Field	Description
Max Bit Rate Downlink (PDP Subscription)	Maximum allowable rate in kbps for sending the data from network to the MS, which is associated with the PDP subscription.
Residual Bit Error Rate (PDP Subscription)	Reliability based on residual Bit Error Rate (BER) associated with PDP subscription. For specific traffic class such as conversational, streaming, interactive or background, certain range of residual BER is required.
SDU Error Rate (PDP Subscription)	Reliability class based on Service Delivery Unit (SDU) error rate associated with the PDP subscription. For specific traffic class such as Conversational, Streaming, Interactive or background, certain range of SDU error rate is required.
Traffic Handling Priority (PDP Subscription)	Priority or importance of handling SDUs belonging to a specific context associated with the PDP subscription.
Transfer Delay (PDP Subscription)	Delay encountered in ms, while delivering about 95% of SDUs associated with the PDP context, in the life time of the bearer service.
Guaranteed Bit Rate Uplink (PDP Subscription)	Guaranteed number of bits delivered by MS to network in kbps for the associated PDP context.
Guaranteed Bit Rate Downlink (PDP Subscription)	Guaranteed number of bits delivered by network to MS, in kbps for the associated PDP context.
SSAF	Indicates if the SSAF flag is set during the CSFB procedure.
EMM Combined UE Waiting Flag	Indicates if the EMM combined UE waiting flag is set during the CSFB procedure.
Higher Than 16 Mbps	Displays the MM context value of the "higher bit rates than 16 Mbps" flag as either Allowed or Not Allowed or Unknown.
Subscription Type	Displays the configured subscription type as either "EPS" or "GPRS".
Evolved Allocation/Retention Priority	Displays the Evolved Allocation/Retention Priority parameters.
Priority level	Indicates the configured priority level of the E-ARP.
Pre-emption Vulnerability	Displays the configured pre-emption vulnerability value, the value is configured as either "0" or "1".
Pre-emption Capability	Displays the configured pre-emption capability value, the value is configured as either "0" or "1".
AMBR	Displays the Aggregate Maximum Bit Rate (AMBR) in bits per second.
Negotiated APN-AMBR UL	Displays the negotiated APN-AMBR value in uplink direction.
Negotiated APN-AMBR DL	Displays the negotiated APN-AMBR value in downlink direction.
Max-Requested-Bandwidth-UL	Displays the maximum requested bandwidth in uplink direction.
Max-Requested-Bandwidth-DL	Displays the maximum requested bandwidth in downlink direction.
Applied UE-AMBR DL	Displays the AMBR value applicable to the UE in downlink direction.

# show subscribers sgsn-only summary

Table 626: show subscribers sgsn-only summary Command Output Descriptions

Field	Description
Total Subscribers	
Total Connected Subscribers	
Total Idle Subscribers	
Total Detached Subscribers	
Total Active Subscribers	
Total Subscribers using HLR	The total number of SGSN subscribers authorized via the home location register (HLR).
Total Subscribers using HSS	The total number of SGSN subscribers authorized via the home subscriber server (HSS).
Total PDP contexts	
pdp-type-ipv4	
pdp-type-ppp	
pdp-type-ipv6	
PDP contexts with direct tunnel	<p><b>Description:</b> This proprietary statistic indicates the total number of PDP contexts activated with direct tunnel.</p> <p><b>Triggers:</b> Increments when PDP context with direct tunnel feature is activated for a subscriber.</p> <p><b>Availability:</b> per RNC, per RA, per SGSN service</p>
LCS Subscription	
GMLC List	Counter to display GMLC List information.
GMLC Address	Displays GMLC Address.
LCS Privacy Exception List	Displays the LCS privacy exception list.
LCS Privacy Class	Displays the LCS Privacy Class information.
SS Code	Displays the SS Code.
SS Status	Displays the SS Status.
Notification to MS User	Displays the notifications to MS user.
External Client List	Counter to display the external client list.
External Client Id	Counter to display the external client Id.

Field	Description
GMLC Restriction	Displays the GMLC Restriction.
PLMN Client List	Counter to display the PLMN Client List.
PLMN	Displays the PLMN Id.
Service List	Counter to display the Service List.
Service Type Id	Counter to display the Service Type Id.
MOLR List	Displays the MOLR List.
MOLR Class	Displays the MOLR Class.
Ext PDP Type	Displays the PDP type.
Ext PDP Address Type	Displays the Ext. PDP Address Type only if Ext-PDP-Type is 'IPV4-V6'.
Ext PDP address	Displays the Ext. PDP Address only if Ext-PDP-Type is 'IPV4-V6'.
PGW Allocation Type	The PDN Allocation Type field in the EPS Subscription section of the "show subscribers sgsn-only full" and "show subscribers gprs-only full" commands has been renamed to avoid confusing this field with the PDP Address Allocation Type. The field has been renamed PGW Allocation Type.

## show subscribers sgsn-only partial qos negotiated

Table 627: show subscribers sgsn-only partial qos negotiated Command Output Descriptions

Field	Description
QoS	Indicates the type of action for QoS. Possible values are: <ul style="list-style-type: none"> <li>- QoS Requested (Re)</li> <li>- QoS Negotiated (Neg)</li> </ul>
Traffic Class	Specifies the class of traffic. Possible values are: <ul style="list-style-type: none"> <li>- Conversational (Conv)</li> <li>- Streaming (Strm)</li> <li>- Background (Back)</li> <li>- Interactive (Intr)</li> <li>- Unknown (Unkn)</li> </ul>

Field	Description
Value	Specifies the status of QoS and subscriber. Possible values are: <ul style="list-style-type: none"> <li>- Subscribed (Subs)</li> <li>- Reserved (Resv)</li> <li>- Best Effort (Best)</li> <li>- Negotiated (Nego)</li> </ul>
IMSI	Indicates the International Mobile Subscriber identity of subscriber.
NSAPI	Indicates the Network Service Access Point Identifier of the subscriber.
Peak Thruput octet/h	The peak throughput in octets per hour for this subscriber.
Mean Thruput octet/h	The mean throughput in octets per hour for this subscriber.
MAX SDU Size	The maximum size of service data unit (SDU) in KB.
MBR UP kbps	The maximum bit rate in kilobit per second allowed for this subscriber for upload.
MBR Down kbps	The maximum bit rate in kilobit per second allowed for this subscriber for download.
GBR UP kbps	The guaranteed bit rate in kilobit per second allowed for this subscriber for upload.
GBR Down kbps	The guaranteed bit rate in kilobit per second allowed for this subscriber for download.

## show subscribers sgw-address

Table 628: show subscribers sgw-address Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Access CSCF Status</b> of the session. The possible network types are: <b>A</b> - Attached <b>N</b> - Not Attached . (period) - Not Applicable
	The fifth character represents the <b>Link Status</b> of the session. The possible idle states are: <b>A</b> - Online/Active <b>D</b> - Dormant/Idle
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP	Displays the IP address assigned to the subscriber.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

## show subscribers summary without-dynamic-rule without-override-control rulename <rule\_name>

---

**Important**

In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

Field	Description
	- pdsn rev dynamic flows - fwd static access-flows - rev static access-flows - pdsn fwd packet filters - pdsn rev packet filters - traffic flow templates
Active	Displays the total number all type of Active subscribers on the chassis.
Dormant	Displays the total number all type of Dormant subscribers on the chassis.

## show subscribers tft

*Table 630: show subscribers tft Command Output Descriptions*

Field	Description
Username	Specifies the name of the subscriber.
callid	Displays the subscriber's call identification number (callid).
msid	Displays the subscriber's mobile station identification (MSID).
Number of TFTs	Displays the number of Traffic Flow Templates (TFTs).
MS IP Address	Displays the MS IP address.
Number of Packet Filters	Displays the number of Packet Filters.
<b>Filter Evaluation Precedence 1:</b>	
Flow Id	Displays the flow ID for the first precedence.
Flow Direction	Displays the flow direction (FORWARD or REVERSE) for the first precedence.
Flow State	Displays the flow state and A10 mapping for the first precedence.
Packet Filter Type	Displays the type of Packet Filter for the first precedence.
Filter Components Follows	
Ipv4 Source Addr/Mask	Displays the IP address and mask for the Ipv4 source address.
<b>Filter Evaluation Precedence 2:</b>	
Flow Id	Displays the flow ID for the second precedence.
Flow Direction	Displays the flow direction (FORWARD or REVERSE) for the second precedence.

```
show subscribers summary rulename <rule_name>
```

Field	Description
Flow State	Displays the flow state and A10 mapping for the second precedence.
Packet Filter Type	Displays the type of Packet Filter for the second precedence.
Filter Components Follows	
Ipv4 Source Addr/Mask	Displays the IP address and mask for the Ipv4 source address.
Total TFTs matching specified criteria:	Displays the total number of matching TFTs.

## show subscribers summary rulename <rule\_name>

Active	Displays the total number all type of Active subscribers on the chassis.
Dormant	Displays the total number all type of Dormant subscribers on the chassis.

## show subscribers subscription full

*Table 634: show subscribers subscription full Command Output Descriptions*

Field	Description
Username	The subscriber name.
Status	Indicates the session status.
Access Type	Indicates the session type for this subscriber. See <b>Common Attributes</b> in this chapter.
Network Type	Indicates the network service used for the subscriber session. See <b>Common Attributes</b> in this chapter.
Access Tech	Indicates the accessing technology. See <b>Common Attributes</b> in this chapter.
callid	The subscriber's call identification number (callid).
msid	The subscriber's mobile station identification (MSID).
Card/Cpu	The card and CPU ID.
Sessmgr Instance	The session manager instances.
state	<p>The session state. The possible values are:</p> <ul style="list-style-type: none"> <li>- Connected</li> <li>- Connecting</li> <li>- Disconnecting</li> <li>- Unknown</li> </ul>
idle time	The time period that the subscriber session has been idle, either in an active or dormant state.

Field	Description
idle time left	The idle time period left before timeout.
session time left	The session time left for the subscriber.

## show subscribers user-plane-only callid *callid\_value* drop-statistics

The output of the **show subscriber user-plane-only callid *callid\_value* drop-statistics** command displays the following fields:

Field	Description
Callid	The subscriber's call identification number (callid).
Interface Type	Indicates the type of interface.
<b>Packet Drop Data Statistics:</b>	
<b>NAT packets processing failure:</b>	
NAT on demand handling	The total number of NAT packets dropped due to on-demand handling.
ICMP Packet translation	The total number of NAT packets dropped due to ICMP packet translations.
<b>FIREWALL packets processing failure:</b>	
Policy not found	The total number of Firewall packets dropped due to missing policy.
No Matching GX rule found	The total number of Firewall packets dropped due to unmatched Gx rules.
<b>Flow apply action:</b>	
Discard	The total number of packets dropped due to discard action.
Readdress Failure	The total number of packets dropped due to readdress failure.
Packet exceeds the MTU size	The total number of packets dropped due to excess MTU size.
Failure in processing FAR Buffer packets	The total number of packets dropped due to failure in processing the FAR buffer.

Field	Description
FAR Apply Action Drop	The total number of packets dropped due to FAR apply action.
Traffic Steering Failure	The total number of packets dropped due to traffic steering failure.
QER Gate Status Closed	The total number of packets dropped due to QER gate status closure.
Content-filtering Discard Action	The total number of packets dropped due to content-filtering discard action.
IP Header Validation Failed	The total number of packets dropped due to IP header validation failure.
<b>ADF level failure:</b>	
DL TFT mismatch	The total number of packets dropped due to DL TFT mismatch.
URL Blacklisting Discard Action	The total number of packets dropped due to URL blacklisting discard action.
QGR Flow Action SGQ Discard	The total number of packets dropped due to QGR flow action - SGQ discard.
QGR Policer Drops	The total number of packets dropped due to QGR policer drops.
Total subscribers matching specified criteria	The total number of subscribers matching the specified criteria.

## show subscribers user-plane-only callid *callid\_value* flows flow-id *flow\_id*

The output of the **show subscribers user-plane-only callid *callid\_value* flows flow-id *flow\_id*** command displays the following fields:

Field	Description
Callid	The subscriber's call identification number (callid).
Interface Type	Indicates the type of interface.
IP address	Displays the IP address of the server(s).
Flow ID	Flow ID for this output.
Uplink pkts	Total number of packets uplinked.

Field	Description
Uplink bytes	Total number of bytes uplinked.
Downlink pkts	Total number of packets downlinked.
Downlink bytes	Total number of bytes downlinked.
<b>Fast Path Info:</b>	
Uplink pkts	Total number of packets uplinked.
Uplink bytes	Total number of bytes uplinked.
Downlink pkts	Total number of packets downlinked.
Downlink bytes	Total number of bytes downlinked.
Total pkts	Total number of uplink packets forwarded.
Uplink Dropped pkts	Total number of packets dropped in uplink flow.
Uplink Stream ID	Total number of packets in uplink stream ID.
Uplink Stream State	Displays the uplink stream state.
Downlink Dropped pkts	Total number of packets dropped in downlink flow.
Downlink Stream ID	Total number of packets in downlink stream ID.
Client-ID	Displays the client-ID.
UE IP address	Displays the UE IP address.
Server IP address	Displays the server IP address.
UE Port	Displays the UE port.
Server Port	Displays the server port.
Protocol	Displays the protocol used.
Service Chain Name	Displays the service chain name.
Uplink Sfp Id	Displays the uplink SFP ID number.
Downlink Sfp Id	Displays the downlink SFP ID number.
Total Number of Active flows	Displays the total number of active flows.

# show subscribers user-plane-only callid callid\_value flows full

The output of the **show subscribers user-plane-only callid callid\_value flows flow-id flow\_id** command displays the following fields:

Field	Description
Callid	The subscriber's call identification number (callid).
Interface Type	Indicates the type of interface.
IP address	Displays the IP address of the server(s).
Flow ID	Flow ID for this output.
Uplink pkts	Total number of packets uplinked.
Uplink bytes	Total number of bytes uplinked.
Downlink pkts	Total number of packets downlinked.
Downlink bytes	Total number of bytes downlinked.
<b>Fast Path Info:</b>	
Uplink pkts	Total number of packets uplinked.
Uplink bytes	Total number of bytes uplinked.
Downlink pkts	Total number of packets downlinked.
Downlink bytes	Total number of bytes downlinked.
Total pkts	Total number of uplink packets forwarded.
Uplink Dropped pkts	Total number of packets dropped in uplink flow.
Uplink Stream ID	Total number of packets in uplink stream ID.
Uplink Stream State	Displays the uplink stream state.
Downlink Dropped pkts	Total number of packets dropped in downlink flow.
Downlink Stream ID	Total number of packets in downlink stream ID.
Client-ID	Displays the client ID.
UE IP address	Displays the UE IP address.
Server IP address	Displays the server IP address.
UE Port	Displays the UE port.

Field	Description
Server Port	Displays the server port.
Protocol	Displays the protocol used.
Service Chain Name	Displays the service chain name.
Uplink Sfp Id	Displays the uplink SFP ID number.
Downlink Sfp Id	Displays the downlink SFP ID number.
Total Number of Active flows	Displays the total number of active flows.
Matched Bytes	Total number of matched bytes.
Matched Packets	Total number of matched packets.
Precedence	Specifies the precedence applicable.
Source Interface	Displays the source interface name.
Source Interface Type	Displays the type of source interface.

## show subscribers wf1 all

Table 635: show subscribers wf1 all Command Output Descriptions

Field	Description
vvvvvv	Displays service and session state information. This column provides a code consisting of six characters.
	From left-to-right, the first character represents the <b>Access Type</b> that the subscriber is using. See
	The second character represents the <b>Access Technology</b> . See
	The third character represents the <b>Call State</b> . See
	The fourth character represents the <b>Link Status</b> of the session. The possible idle states are: <ul style="list-style-type: none"> <li>- <b>A</b>: Online/Active (airlink connected)</li> <li>- <b>D</b>: Dormant (airlink not connected)</li> </ul> <b>Note:</b> Sessions facilitated through PDSN Closed R-P services are always displayed as "Active" due to the fact that PDSN Closed R-P services do not receive dormancy information from the PCF.
	The fifth character represents the session <b>Network Type</b> . See
	The sixth character represents the <b>Access CSCF Status</b> of the session. The possible network types are: <ul style="list-style-type: none"> <li>- <b>A</b>: Attached</li> <li>- <b>C</b>: Call (Unknown Type)</li> <li>- <b>N</b>: Not Attached</li> <li>- <b>v</b>: Voice Call</li> <li>- <b>.</b> (period): Not Applicable</li> <li>- <b>V</b>: Video Call</li> </ul>
CALLID	Displays the subscriber's call identification (callid) number.
MSID	Displays the subscriber's mobile station identification (MSID) number.
USERNAME	Displays the subscriber's username.
IP	Displays the IP address assigned to the subscriber.
TIME-IDLE	Displays the amount of time that the subscriber session has been idle either in an active or dormant state.

Field	Description
Access Peer Address	<p>The peer that accessed the system to initiate the subscriber session. This is an IP v4 address and a designator to identify the type of peer. The designator may be one of:</p> <ul style="list-style-type: none"> <li>- <b>BS</b>: ASN Base Station</li> <li>- <b>ASNGW</b>: Access Service Network Gateway</li> <li>- <b>PCF</b>: Packet Control Function</li> <li>- <b>FA</b>: Mobile IP Foreign Agent</li> <li>- <b>SGSN</b>: Serving GPRS Support Node</li> <li>- <b>LAC</b>: L2TP Access Concentrator</li> </ul>
Service Address	<p>The service that is processing the subscriber session. This is listed as an IP v4 address and a designator to identify the type of service. The designator may be one of:</p> <ul style="list-style-type: none"> <li>- <b>ASNGW</b>: Access Service Network Gateway</li> <li>- <b>PDSN</b>: Packet Data Serving Node</li> <li>- <b>HA</b>: Mobile IP Home Agent</li> <li>- <b>GGSN</b>: Gateway GPRS Support Node</li> <li>- <b>LNS</b>: L2TP Network Server</li> </ul>
Network Peer Address	<p>The network peer that the subscriber session connect to. This is listed as an IP v4 address and a designator to identify the type of network peer. The designator may be one of:</p> <ul style="list-style-type: none"> <li>- <b>HA</b>: Mobile IP Home Agent</li> <li>- <b>LNS</b>: L2TP Network Server</li> <li>- <b>IPinIP</b>: IP-in-IP Tunnel Peer</li> <li>- <b>GRE</b>: Generic Routing Encapsulation Peer</li> <li>- <b>6in4</b>: IP V6 packets encapsulated in an IP v4 tunnel peer</li> </ul>
Connect Time	The date and time that the subscriber session was connected.

# CHAPTER 144

## show support

This chapter describes the outputs of the **show support** command.

- [show support collection](#), on page 2217
- [show support collection definitions](#), on page 2217
- [show support details](#), on page 2218
- [show support details icrs](#), on page 2218
- [show support record](#), on page 2219

## show support collection

*Table 636: show support collection Command Output Descriptions*

Field	Description
ID	ID number of the collection file (0 to 65536).
Name	File name of the compressed collection file, in the format: sdr.<id>.gz.
Size	Size of the file in bytes.
Date/Time	Timestamp of the file, in the format: <day-of-week> <month> <day> <hh:mm:ss> <timezone> <yyyy>.
Total	Total number of SDRs, total byte count, and time span is last <nnn> days <hh> hour(s).

## show support collection definitions

*Table 637: show support collection definitions Command Output Descriptions*

Field	Description
No.	ID number of the collection definition.
Default	Status of the collection definition. Enabled = Included in the default record section; Disabled = Not included in the default record section.

Field	Description
section name	StarOS name of the record.
command line	Actual text of the StarOS CLI command within double quotation marks.

## show support details

This command displays the output of all of the CLI command strings in the SDR section. The commands are separated by a string of asterisks (\*\*\*\*\*) bracketing the textual CLI command. The output can be very lengthy depending on the system configuration.

You have the option when running this command to print the output to a file.

## show support details icsr

The **icsr** keyword captures only ICSR-specific information needed for debugging. This keyword reduces the **show support details** (SSD) capture time when debugging ICSR timing issues between the Active and Standby chassis, facilitating quicker resolution of the problem.

This command displays the output of the CLI command strings listed below. The commands are separated by a string of asterisks (\*\*\*\*\*) bracketing the textual CLI command.

You have the option when running this command to print the output to a file.

The **icsr** keyword produces a mini SSD that contains the output of the following **show** commands:

- show srp info
- show srp checkpoint statistics
- show srp checkpoint statistics verbose
- show srp checkpoint statistics debug-info
- show srp checkpoint statistics sessmgr all
- show srp checkpoint statistics sessmgr all debug-info
- show srp checkpoint statistics ipsecmgr all
- show srp checkpoint statistics sessmgr all write-list-stats
- show srp checkpoint info
- show srp monitor
- show srp monitor all
- show srp monitor diameter debug
- show srp statistics
- show srp call-loss statistics
- show srp audit-statistics
- show session subsystem facility sessmgr all debug-info

## show support record

This command displays the output of a specified collection record or range of collection records. The commands are separated by a string of asterisks (\*\*\*\*\*) bracketing the textual CLI command. The output can be very lengthy depending on the system configuration.

# CHAPTER 145

## show supplementary-service

This chapter describes the output of the **show supplementary-service** command variants.

- [show supplementary-service statistics, on page 2221](#)

### show supplementary-service statistics

*Table 638: show supplementary-service statistics Command Output Descriptions*

Field	Description
SS Messages	Supplementary Service messages
3G-Register Rx	Number of Register messages received by SGSN from UE in 3G .
Discarded	Number of Register messages discarded.
3G-Register Tx	Number of Register messages transmitted from SGSN to UE in 3G.
Location Notification	Number of Location Notification messages sent to UE.
Current Location	Number of Location Notification messages sent to UE asking for current location of the UE.
Current/Last known Loc Type	Number of Location Notification messages sent to UE asking for current and last known location.
3G-Facility Rx	Number of Facility messages received from UE.
Discarded	Number of Facility messages discarded.
3G-Facility Tx	Number of Facility message transmitted.
3G-RLC-Rx	Number of Release Complete messages received from UE.
Abort	Number of Release Complete messages received from UE to abort the ongoing LCS procedure.
Return Result	Number of Release Complete message received with Return Result Component.

<b>Field</b>	<b>Description</b>
Verification Response	Number of Release complete messages received with component Return Result for Location Notification's response.
Permission Denied	Number of Location Notification response messages received with the result Permission denied.
Permission Granted	Number of Location Notification response messages received with the result Permission granted.
Reject	Number of Release complete messages received with Reject component.
Decode Error	Number of Release complete messages received with decode error.
3G-RLC-Tx	Number of Release complete messages transmitted.
Abort	Number of Release complete messages transmitted to abort the ongoing LCS procedure.
3G-LCS guard timer expiry	Number of times the guard timer for 3G has expired.

# CHAPTER 146

## show tacacs

---

This chapter provides **show tacacs** command output tables.

- [show tacacs](#), on page 2223
- [show tacacs client statistics](#), on page 2224
- [show tacacs priv-lvl](#), on page 2225
- [show tacacs session statistics](#), on page 2226
- [show tacacs summary](#), on page 2228

## show tacacs

**Table 639: show tacacs Command Output Descriptions**

Field	Description
active session # <i>n</i>	Numerical identifier of an active TACACS+ session.
login username	The username of the TACACS+ user.
login tty	The physical or logical port identifier for a user login.
time of login	The date and time of the TACACS+ login.
login server priority	The specified priority of the TACACS+ server used for login.
current login status	The current login status for this user (pass/fail).
current session state	The current operational state of the TACACS+ session.

Field	Description
current privilege level	<p>The CLI privilege level assigned to the user (default assignments are shown below):</p> <ul style="list-style-type: none"> <li>• 0: Inspector (CLI only)</li> <li>• 1: Inspector (CLI and ECSEMS only)</li> <li>• 2: Inspector (FTP only)</li> <li>• 3: Inspector (CLI and FTP only)</li> <li>• 4: Inspector (CLI, FTP, and ECSEMS only)</li> <li>• 5: Operator (CLI only)</li> <li>• 6: Operator (CLI and ECSEMS only)</li> <li>• 7: Operator (FTP only)</li> <li>• 8: Operator (CLI and FTP only)</li> <li>• 9: Operator (CLI, FTP and ECSEMS only)</li> <li>• 10: Administrator (CLI only)</li> <li>• 11: Administrator (CLI and ECSEMS only)</li> <li>• 12: Administrator (FTP only)</li> <li>• 13: Administrator (CLI, FTP and Lawful Intercept only)</li> <li>• 14: Administrator (CLI, FTP and ECSEMS only)</li> <li>• 15: Administrator (CLI, FTP, ECSEMS and Lawful Intercept)</li> </ul>
remote client application	<p>The application type used by the remote client to access StarOS, if known:</p> <ul style="list-style-type: none"> <li>• telnet</li> <li>• ssh</li> <li>• ftp</li> <li>• console</li> <li>• unknown</li> </ul>
remote client ip address	<p>The IP address of the remote client. If the remote client IP address cannot be determined or is unknown, this field will contain all zeros or be blank. For example, logins via the ASR 5x00 console port typically are not assigned an IP address.</p>
last server reply status	<p>The last known server error code returned for this user session.</p>
Total TACACS+ sessions	<p>The total number of TACACS+ sessions that are currently active.</p>

## show tacacs client statistics

*Table 640: show tacacs client statistics Command Output Descriptions*

Field	Description
last login failure time	<p>The timestamp of the most recent failed TACACS+ authentication attempt.</p>

Field	Description
successful connections	The total number of successful TACACS+ connections established with the TACACS+ server.
failed connections	The total number of connection attempts with a TACACS+ server that have failed.
authentication PASS	The total number of connections established with a TACACS+ server that have passed authentication.
authentication FAIL	The total number of authentication connections attempts with a TACACS+ server that have failed.
session starts	The total number of TACACS+ session starts. A session start is defined as the point at which the TACACS+ user has passed authentication.
active sessions	The total number of active TACACS+ sessions.
authorization errors	The total number of TACACS+ authorization errors.
accounting errors	The total number of TACACS+ accounting errors.
non-TACACS+ logins	The total number of non-TACACS+ logins. Note that the system can be configured to allow TACACS+ users to continue on to use non-TACACS+ authentication services if the user fails the TACACS+ login.

## show tacacs priv-lvl

*Table 641: show tacacs priv-lvl Command Output Descriptions*

Field	Description
priv-lvl	TACACS+ priv-level shown as an integer from 1 through 15.
cli	Access to StarOS CLI (yes or no).
ftp	Access to FTP (yes or no).
ecs	Access to Enhanced Charging Service (ECS) commands [yes or no].
li	Access to Lawful Intercept (LI) commands [yes or no].
authorization-level	Specifies the StarOS administrative authorization level for this privilege level: <ul style="list-style-type: none"> <li>• <b>administrator</b> – Allows user to execute Administrator level configuration commands.</li> <li>• <b>inspector</b> – Allows user to execute Inspector commands.</li> <li>• <b>operator</b> – Allows user to execute Operator commands.</li> <li>• <b>security-admin</b> – Allows user to execute Security Administrator commands.</li> </ul>

## show tacacs session statistics

Table 642: show tacacs session statistics Command Output Descriptions

Field	Description
active session #n	A numerical identifier assigned to an active TACACS+ CLI session.
task id	The software task ID assigned by the client to identify TACACS+ accounting statistics.
task instance	The software task instance ID assigned by the ASR 5000 for each active TACACS+ session.
login username	The username assigned to this TACACS+ session.
login tty	The logical or physical port identifier assigned for a TACACS+ login.
tty connect time	The time at which the TACACS+ connection was established.
session start time	The time and date of the TACACS+ session start time, which is defined as the time at which a TACACS+ user passes TACACS+ authentication.
pre-bytes in	The total number of bytes received from the TACACS+ server before the TACACS+ user was authenticated.
pre-bytes out	The total number of bytes sent to the TACACS+ server before the TACACS+ user was authenticated.
pre-packets in	The total number of packets received from the TACACS+ server before the TACACS+ user was authenticated.
pre-packets out	The total number of packets sent to the TACACS+ server before the TACACS+ user was authenticated.
bytes in	The total number of bytes (pre- and post-authentication) received from the TACACS+ server after the TACACS+ user was authenticated.
bytes out	The total number of bytes sent (pre- and post-authentication) to the TACACS+ server after the TACACS+ user was authenticated.
packets in	The total number of packets (pre- and post-authentication) received from the TACACS+ server for this TACACS+ session.
packets out	The total number of packets (pre- and post-authentication) sent to the TACACS+ server after the TACACS+ user was authenticated.
authen start requestssuccess	The total number of authentication start requests sent to the TACACS+ server that were successful.
authen start requesterror	The total number of authentication start requests sent to the TACACS+ server that were unsuccessful, typically due to a protocol error.

Field	Description
authen cont requestssuccess	The total number of authentication continue requests sent to the TACACS+ server that were successful.
authen cont requesterror	The total number of authentication continue (username and/or password) requests sent to the TACACS+ server that were failed, typically due to a protocol error.
authen start/cont repsuccess	The number of authentication start/continue Reply messages received from the TACACS+ server that were successful.
authen start/cont repfailure	The number of authentication start/continue Reply messages received from the TACACS+ server that failed.
authen start/cont reptimeout	The number of authentication start/continue Reply messages received from the TACACS+ server that timed out.
author requests success	The number of TACACS+ authorization requests sent to the TACACS+ server that were successful.
author requests failure	The number of TACACS+ authorization requests sent to the TACACS+ server that failed.
author responsessuccess	The number of authorization responses received from the TACACS+ server that were successful.
author responsesfailure	The number of authorization responses received from the TACACS+ server that failed.
author responsestimeout	The number of authorization responses from the TACACS+ server that timed out.
account requestssuccess	The number of accounting requests sent to the TACACS+ server that were successful.
account requests error	The number of accounting requests sent to the TACACS+ server that were unsuccessful, typically due to a protocol error.
account replies success	The number of accounting replies from the TACACS+ server that were successful.
account replies failure	The number of accounting replies from the TACACS+ server that failed.
account replies timeout	The number of accounting replies from the TACACS+ server that timed out.
total active TACACS+sessions	The total number of currently active TACACS+ sessions.

# show tacacs summary

The output of this command is identical to [show tacacs, on page 2223](#)

# CHAPTER 147

## show task

This chapter describes the outputs of the **show task** command.

- [show task info](#), on page 2229
- [show task memory](#), on page 2230
- [show task resources card](#), on page 2231
- [show task resources facility](#), on page 2232
- [show task resources max](#), on page 2232
- [show task table](#), on page 2233

## show task info

This command displays current information about tasks running on the system.

**Table 643: show task info Command Output Descriptions**

Field	Description
Task <facility> instance <id>	Identifies the task by its facility name and the instance identifier for which statistics are displayed.
Process <process>	Identifies the process for which statistics are displayed.
Location	The card number, CPU number and process identifier (Pid) for which statistics are displayed.
Parent	The parent task and instance identifier, as well the location where the parent task is running.
CPU usage	The percentage of CPU time actually used versus allocated (allc), as well as the maximum used.
File usage	The number of files actually used versus allocated, as well as the maximum used.
Memory usage	The amount of memory actually used versus allocated, as well as the maximum used. (release 12.x)
Heap Memory usage	The amount of memory initialized at runtime that was dynamically allocated (used) versus originally allocated.

Field	Description
Physical Memory usage	The amount of physical memory used versus allocated.
Virtual Memory usage	The amount of memory managed by the kernel that was actually used versus allocated.
Max usage reset info	Information related to the resetting of maximum usage statistics.
Last reset	Timestamp identifying when maximum usage statistics were last reset.
Last reset reason	The reason why maximum usage statistics were reset.
P2P sessions	Displays the number of P2P sessions used and the maximum number of P2P sessions allowed.
Per Subscriber Firewall sessions	Displays the number of subscriber Firewall sessions used and the maximum number of subscriber Firewall sessions allowed.
Total sessions	Displays the total number of used sessions, the maximum number of sessions allowed, and the number of allocated sessions.
Status	Indicates the status of the configured service sessions.

## show task memory

This command displays current statistics for memory.

**Table 644: show task memory Command Output Descriptions**

Field	Description
cpu	The CPU on the specified card where the task is running (identified by slot_number/CPU_number).
facility	The facility for which statistics are displayed.
task inst	The task instance identifier.
heap memory usage	The amount of memory initialized at runtime that was dynamically allocated (used) versus originally allocated.
physical memory usage	The amount of physical memory actually used versus allocated.
virtual memory usage	The amount of memory managed by the kernel that was actually used versus allocated.

Field	Description
status	The general status of the card, for example, "good".  <b>Important</b> The starSGSNRMMemWarn trap will only be generated if the memory usage is above the threshold limit for more than the configured amount of time (60 seconds). Refer to the <b>show task resources</b> and <b>show task memory</b> CLI commands in the <i>Statistics and Counters Reference</i> to list the used and maximum allocated resources for all procllets. A trap is generated if the memory usage reaches the Warn state or over. The trap will clear as soon as the resource usage is below the threshold values without any delay.
Total	Summary for all task instances, CPU time, memory, files and sessions.

## show task resources card

This command displays current statistics per card.

**Table 645: show task resources card Command Output Descriptions**

Field	Description
cpu	The CPU on the specified card where the task is running (identified by slot_number/CPU_number).
facility	The facility for which statistics are displayed.
task inst	The task instance identifier.
cputime	The percentage of CPU time actually used versus the allocated time (allc).
memory	The amount of memory actually used versus allocated.
files	The number of files actually used versus allocated.
sessions	The number of sessions used versus allocated, as well as the status of those sessions.
status	The general status of the card, for example, "good".  <b>Important</b> The starSGSNRMMemWarn trap will only be generated if the memory usage is above the threshold limit for more than the configured amount of time (60 seconds). Refer to the <b>show task resources</b> and <b>show task memory</b> CLI commands in the <i>Statistics and Counters Reference</i> to list the used and maximum allocated resources for all procllets. A trap is generated if the memory usage reaches the Warn state or over. The trap will clear as soon as the resource usage is below the threshold values without any delay.
Total	Summary for all task instances, CPU time, memory, files and sessions.

## show task resources facility

This command displays current statistics for the specified facility.

*Table 646: show task resources facility Command Output Descriptions*

Field	Description
cpu	The CPU on the card where the facility is running (identified by slot_number/CPU_number).
facility	The facility for which statistics are displayed.
task inst	The task instance identifier.
cputime	The percentage of CPU time actually used versus the allocated time (allc).
memory	The amount of memory actually used versus allocated.
files	The number of files actually used versus allocated.
sessions	The number of sessions used versus allocated, as well as the status of those sessions.
Total	Summary for all task instances, CPU time, memory, files and sessions.

## show task resources max

This command displays maximum (instead of current) statistics for all facilities.

*Table 647: show task resources max Command Output Descriptions*

Field	Description
cpu	The CPU on the specified card where the facility is running (identified by slot_number/CPU_number).
facility	The facility for which maximum statistics are displayed.
task inst	The task instance identifier.
cputime	The maximum percentage of CPU time actually used versus the allocated time (allc).
memory	The maximum amount of memory actually used versus allocated.
files	The maximum number of files actually used versus allocated.
sessions	The maximum number of sessions used versus allocated, as well as the status of those sessions.
Total	Summary of maximum statistics for all task instances, CPU time, memory, files and sessions.

# show task table

This command displays current statistics for all child and parent facilities running on all cards in the system.

*Table 648: show task table Command Output Descriptions*

Field	Description
<b>Currently Running Tasks</b>	
cpu	The CPU on the specified card where the facility is running (identified by slot_number/CPU_number).
task facility	The task/facility for which statistics are displayed.
inst	The task instance identifier.
pid	The process identifier.
pri	The priority of the instance.
<b>Parent Tasks</b>	
parent facility	The parent facility of the task for which statistics are displayed.
inst	The instance identifier of the parent facility.
pid	The process identifier of the parent facility.

## CHAPTER 148

# show tcp-acceleration-profile all

This chapter includes the show **tcp-acceleration-profile all** command output tables.

- [show tcp-acceleration-profile all](#), on page 2235

## show tcp-acceleration-profile all

*Table 649: show tcp-acceleration-profile all Command Output Descriptions*

Field	Description
TCP Acceleration Profile Name	Identifies the TCP acceleration profile name.
Initial Congestion Window	Identifies the Initial Congestion Window size in segments.
Max RTT	Identifies the maximum RTT value.
MSS	Identifies the maximum segment size.
Buffer Size (Downlink)	Identifies the TCP proxy buffer downlink data size in Kilobytes.
Buffer Size (Uplink)	Identifies the TCP proxy buffer uplink data size in Kilobytes.

# CHAPTER 149

## show temperature

This chapter describes the output of the **show temperature** command variants.

- [show temperature, on page 2237](#)

## show temperature

The **show temperature** command displays the current temperatures for installed cards, as well as the lower and upper fan trays.

*Table 650: show temperature Command Output Descriptions*

Field	Description
Card	Indicates the slot number location of an installed card.
xx C	<p>Displays the current temperature in Celsius detected by a sensors on the card or fan unit. The maximum temperature limit at which the card is shut down appears in parentheses immediately after the current temperature.</p> <p>Temperature readings will vary by card based on the location of the card within the chassis and the turbulence associated with moving air around, over and through devices on the cards.</p> <p>There are temperature sensors associated with major power consuming devices on each card. When any device on any card exceeds a pre-set temperature limit, the fan speed is increased on both fan trays. When all sensors on all cards are below the threshold, fan speed is proportionally reduced. When the absolute limit is reached for a device on a card, the card is shut down.</p> <p>To display detailed information on device-level temperature sensors, run <b>show temp verbose</b>.</p>
Fan Upper	Indicates the temperature in Celsius of the air being exhausted from the chassis. The maximum operating temperature should not exceed +55 degrees C.
Fan Lower	Indicates the temperature in Celsius of the air being pulled into the chassis. The maximum ambient temperature should not exceed +40 degrees C. A temperature reading above +30 degrees C typically indicates that the environmental control system at the installation site may not be capable of handling the heat load of the chassis.

# CHAPTER 150

## show threshold

This chapter describes the output of the **show threshold** command variants.

- [show threshold, on page 2239](#)

## show threshold

*Table 651: show threshold Command Output Descriptions*

Field	Description
Threshold operation model	The configured thresholding model.
Configured thresholds	Lists thresholds that were configured by the user (i.e. those that are not enabled as part of the system's default configuration). For each threshold listed, the scope, polling interval, and threshold values are displayed.
Active thresholds	Lists thresholds that are currently being monitored. Note that configured thresholds must be enabled using the <b>threshold monitoring</b> command before they're considered active. For each threshold listed, the scope, polling interval, and threshold values are displayed.
Enabled threshold groups: (name, scope)	Displays configured threshold groups and their scope (what the threshold is applied to (i.e. specific ports, IP pool groups, or system wide).
Non-default poll intervals	Displays all polling intervals whose user-configured values differ from the default values. <b>NOTE:</b> All threshold default values can be viewed using the <b>show thresholds default</b> command.
No outstanding alarm / Outstanding Alarms	Displays whether there are any outstanding (alarms for which no clear alarm was received) alarms or not. If outstanding alarms exist, they will be listed in this field.

# CHAPTER 151

## show uidh-server

This chapter describes the output of the **show uidh-server** command variants.

- [show uidh-server name](#) , on page 2241
- [show uidh-server statistics](#), on page 2242

## show uidh-server name

*Table 652: show uidh-server name Command Output Descriptions*

Field	Description
Name	Indicates the UIDH Server name.
Context Name	Indicates the UIDH server context name.
Remote-address	Specifies the UIDH server's remote address.
Remote-port	Specifies the UIDH server's remote port address.
Local-address	Specifies the UIDH server's local address.
Refresh-interval	Specifies the UIDH server's refresh interval.
Response-timeout	Specifies the UIDH server's response timeout value.
ACSMgr Instance	Specifies the ACS manager instance with the UIDH server.
Total connections up	Specifies the total connections active with the UIDH server.
Total ACSManager Instances	Specifies the total ACS manager instance with the UIDH server.
Total Connections UP	Specifies the total number connections active with the UIDH server.

## show uidh-server statistics

*Table 653: show uidh-server statistics Command Output Descriptions*

Field	Description
Active UIDH Client Connections	Indicates currently active client connections with the UIDH server.
Current Opt-In Subscribers	Indicates the current Opt-In subscribers.
Total UIDH Request	Indicates the total number of UIDH requests.
Initial	Specifies the total number of initial UIDH requests transmitted
Refresh	Specifies the total number of UIDH Refresh Requests transmitted.
Total UIDH OptIn Response	Indicates the total number of UIDH Opt-In response.
Initial	Specifies the total of UIDH OPT-In (subscribers that have opted for UIDH service) response for the Initial Requests.
Refresh	Specifies the total of UIDH OPT-In (subscribers that have opted for UIDH service) response for Refresh Requests.
Total UIDH OptOut Response	Indicates the total number of Opt-out response.
Initial	Specifies the total of UIDH OPT-Out (subscribers that have opted out from the UIDH service) response received for Initial Requests.
Refresh	Specifies the total of UIDH OPT-Out (subscribers that have opted out from the UIDH service) response received for Refresh Requests.
UIDH Failure	Indicates the UIDH Failure.
Request Timeout	Specifies the total number of UIDH Requests that have expired on reaching the timeout value.
Initial	Specifies the total number of initial UIDH Requests that have expired on reaching the timeout value.
Refresh	Specifies the total number of refresh UIDH requests that have expired on reaching the timeout value.
Error Response Code	Indicates the UIDH Failure with an error response code.

Field	Description
Initial	Specifies the total of Failure Code UIDH response received for Initial Requests.
Refresh	Specifies the total of Failure Code UIDH response received for Refresh Requests.
Invalid Length	
Initial	
Refresh	
Request Enqueue Failed	
Initial	
Refresh	
Total UIDH Insertions	Indicates the total number of UIDH insertions in a HTTP request.
UIDH Whitelist Statistics	
URL Host Lookups	Specifies the number of URL Host lookups
URL Host Lookup Failed	Specifies the number of URL Host lookups that resulted in failure.
URL Host Matches	Specifies the number of URL Hosts matched.
URL Host Lookup Bypass	Specifies the number of URL Host Lookups bypassed

## CHAPTER 152

# show url-blockedlisting

This chapter includes the **show url-blacklisting** command output tables.

- [show url-blockedlisting database all, on page 2245](#)
- [show url-blockedlisting database facility acsmgr instance, on page 2246](#)
- [show url-blockedlisting url, on page 2246](#)

## show url-blockedlisting database all

*Table 654: show url-blockedlisting database all Command Output Descriptions*

Field	Description
<b>URL Blockedlisting Static Rating Databases:</b>	
Last Upgrade Status	Indicates status of the last database upgrade.
Path	Indicates the database path, and the status—ACTIVE/NOT LOADED.
Database Status	Indicates status of the database.
Number of URLs in DB	The total number of URLs present in the database.
Type	Indicates the database type.
Version	Indicates the database version.
Creation Time	Indicates the database creation time.
Comment	Indicates additional information.
Last Access Time	Indicates the last access timestamp.
Last Modification Time	Indicates the last modification timestamp.
Last Status Change Time	Indicates the last status change timestamp.

## show url-blockedlisting database facility acsmgr instance

Table 655: show url-blockedlisting database facility acsmgr instance Command Output Descriptions

Field	Description
<b>URL-Blockedlisting ACSMgr Instance Based Database Configuration:</b>	
ACSMgr Instance	The ACSMgr instance number.
BL DB Load Status	The Blockedlisting database's load status.
BL DB Version	The Blockedlisting database's version number.
Number of URLs	The total number of URLs present in the Blockedlisting database.
Checksum	Indicates checksum details. The Blockedlisting database has only one page, so the checksum is of the only page present in the database.

## show url-blockedlisting url

Table 656: show url-blockedlisting url Command Output Descriptions

Field	Description
URL	Indicates the URL.
URL Hash	Indicates the URL hash.
URL Category	Indicates the URL category.
Haspath	Indicates the haspath status.

# CHAPTER 153

## show user-plane-service

This chapter includes the **show user-plane-service** command output tables.

- [show user-plane-service statistics drop-counter](#), on page 2247
- [show user-plane-service all](#), on page 2249
- [r\\_show user-plane-service statistics charging-action \[ name | all \]](#), on page 2250
- [show user-plane-service statistics rulebase \[ name | all \]](#), on page 2250

## show user-plane-service statistics drop-counter

The output of the **show user-plane-service statistics drop-counter** command displays the following fields:

Field	Description
<b>Packet Drop Data Statistics:</b>	
<b>NAT packets processing failure:</b>	
NAT on demand handling	The total number of NAT packets failed due to on-demand handling.
IP allocation is in progress	The total number of NAT packets failed due to IP allocation in progress.
ICMP Packet translation	The total number of NAT packets failed due to ICMP packet translations.
<b>FIREWALL packets processing failure:</b>	
Policy not found	The total number of Firewall packets failed due to missing policy.
No Matching GX rule found	The total number of Firewall packets failed due to unmatched Gx rules.
<b>Flow apply action:</b>	
Discard	The total number of packets dropped due to discard action.

Field	Description
Readdress Failure	The total number of packets dropped due to readdress failure.
Packet exceeds the MTU size	The total number of packets dropped due to excess MTU size.
Failure in processing FAR Buffer packets	The total number of packets dropped due to failure in processing the FAR buffer.
FAR Apply Action Drop	The total number of packets dropped due to FAR apply action.
Traffic Steering Failure	The total number of packets dropped due to traffic steering failure.
QER Gate Status Closed	The total number of packets dropped due to QER gate status closure.
Content-filtering Discard Action	The total number of packets dropped due to content-filtering discard action.
IP Header Validation Failed	The total number of packets dropped due to IP header validation failure.
<b>ADF level failure:</b>	
UL TEID/QFI key mismatch	The total number of packets dropped due to UL TEID/QFI key mismatch.
DL TFT mismatch	The total number of packets dropped due to DL TFT mismatch.
DL QFI mismatch	The total number of packets dropped due to DL QFI mismatch.
URL Blacklisting Discard Action	The total number of packets dropped due to URL blacklisting discard action.
DDN buffer overflow drop packets	The total number of packets dropped due to DDN buffer overflow.
APN AMBR Packets Drop	The total number of packets dropped due to APN AMBR.
ITC Packets Drop	The total number of ITC dropped packets.
ACL Drop	The total number of ACL dropped packets.
CC Dropped Packets	The total number of CC dropped packets.
<b>FastPath Misc Drops:</b>	

Field	Description
Overload Protection	The total number of packets dropped due to overload protection.
Invalid Client	The total number of packets dropped due to invalid client.
Stream ID 0	The total number of packets dropped due to 0 stream ID.
Invalid Stream ID	The total number of packets dropped due to invalid stream ID.

## show user-plane-service all

The output of the **show user-plane-service all** command displays the following fields:

Field	Description
Service name	The name of the configured user plane service.
Service ID	The user plane service identifier.
Context	The context in which the service is configured.
Status	The status of the user plane service.
UPF Ingress GTPU Service	Displays the type of UPF Ingress GTPU Service.
UPF Ingress N3 Interface Type GTPU Service	Displays the type of UPF Ingress N3 Interface Type GTPU Service.
UPF Ingress N9 Interface Type GTPU Service	Displays the type of UPF Ingress N9 Interface Type GTPU Service.
UPF Ingress S5U Interface Type GTPU Service	Displays the type of UPF Ingress S5U Interface Type GTPU Service.
UPF Ingress S8U Interface Type GTPU Service	Displays the type of UPF Ingress S8U Interface Type GTPU Service.
UPF Egress GTPU Service	Displays the type of UPF Egress GTPU Service.
SGW Ingress GTPU Service	Displays the type of SGW Ingress GTPU Service.
SGW Egress GTPU Service	Displays the type of SGW Egress GTPU service.
Control Plane Tunnel GTPU Service	Displays the name of control plane tunnel GTPU service.
Sx Service	Displays the type of Sx Service.

Field	Description
Control Plane Group	Displays the type of control plane group.
Fast-Path service	Indicates the status of the fast-path service.

## r\_show user-plane-service statistics charging-action [ name | all ]

The output of the **show user-plane-service statistics charging-action [ name | all ]** command displays the following fields:

Field	Description
X-Header Bytes Injected	Indicates the number of X-Header bytes injected.
X-Header Packets Injected	Indicates the number of X-Header packets injected.
X-Header Bytes Removed	Indicates the number of X-Header bytes removed.
X-Header Packets Removed	Indicates the number of X-Header packets removed.

## show user-plane-service statistics rulebase [ name | all ]

The output of the **show user-plane-service statistics rulebase [ name | all ]** command displays the following header enrichment field:

Field	Description
HTTP header buffering limit reached	Indicates when the HTTP buffering limit is reached.

# CHAPTER 154

## show version

This chapter describes the outputs of the **show version** command.

- [show version verbose, on page 2251](#)

## show version verbose

This command displays information about the StarOS software currently running on the system.

**Table 657: show version verbose Command Output Descriptions**

Field	Description
Image Version:	Identifies the StarOS version running on this platform.
Image Branch Version:	<i>StarOS releases prior to 16.1 only:</i> Identifies the StarOS version using its CDETS branch numbering scheme. Format = NNN.NNN(NNN). For example "015.000(001)".
Image Build Number:	<i>StarOS release 16.1 onwards:</i> Displays build number or build type (text string).
Image Description:	Brief text string that describes this build. For example, "Deployment_Build".
Image Date:	The date the software image was generated. Format = DoW MMM DD hh:mm:ss TZ YYYY. For example, "Tue Apr 23 00:45:12 EDT 2013".
Boot Image:	The pathname for the bootable image that is currently running. For example, "/flash/<image_filename>.bin".
Source Commit ID:	A 40-character string that corresponds to the Git commit identifier (SHA-1 hash) for the build.
Kernel Version:	The StarOS kernel version number. For example, "2.6.38-staros-v3-51074-deb-64".
Kernel Machine Type:	The StarOS machine (CPU) type. For example, "x86_64" (64-bit version of the Intel x86 instruction set).

---

**Important** When you run the **show version** command without the **verbose** keyword, Kernel Version and Kernel Machine Type are not displayed.

---

# CHAPTER 155

## show wsg

This chapter shows the outputs for the **show wsg-lookup** and **show wsg-service** commands.

- [show wsg-lookup](#), on page 2253
- [show wsg-service all/name](#), on page 2254
- [show wsg-service statistics](#), on page 2254

## show wsg-lookup

*Table 658: show wsg-lookup Command Output Descriptions*

Field	Description
priority 1 source-netmask <value> destination-netmask <value>	Priority 1: source and destination netmasks.
priority 2 source-netmask <value> destination-netmask <value>	Priority 2: source and destination netmasks.
priority 3 source-netmask <value> destination-netmask <value>	Priority 3: source and destination netmasks.
priority 4 source-netmask <value> destination-netmask <value>	Priority 4: source and destination netmasks.
priority 5 source-netmask <value> destination-netmask <value>	Priority 5: source and destination netmasks.
priority 6 source-netmask <value> destination-netmask <value>	Priority 6: source and destination netmasks.

## show wsg-service all/name

**Table 659: show wsg-service all/name Command Output Descriptions**

Field	Description
Service name	Name of the WSG service.
Context	Name of context associated with the WSG service.
Bind	Bound to interface: Done or None.
Max Sessions	Maximum number of sessions.
IP address	IP address associated with this service.
UDP Port	UDP port number.
MTY	Maximum Transmission Unit in bytes.
Service State	Current state of this WSG service.
Crypto-template	Name of the crypto template associated with this WSG service.
deployment-mode	1 = Remote Access; 2 = Site-to-Site (S2S)
peer-list	Name of peer list or "N/A." If a name is displayed the SecGW acts as an IKE initiator.
initiator-mode-duration	Interval in seconds that SecGW waits for a response after initiating a call setup request to an IKE peer. Default is 10. Requires peer-list name to be enabled.
responder-mode-duration	Interval in seconds that SecGW waits for a call request from an IKE peer before switching to initiator mode. Default is 10. Requires peer-list name to be enabled.
Duplicate session detection	Status of duplicate session detection feature: Disabled or Enabled.

## show wsg-service statistics

**Table 660: show wsg-service statistics Command Output Descriptions**

Field	Description
Session Stats:	
Current sessions total	Total number of sessions in progress including transient sessions.
Simple-IP IPv4 current	Number of current Simple-IPv4 sessions.

Field	Description
Simple-IP IPv6 current	Number of current Simple-IPv6 sessions.
Data-Clients	Total number of subscriber sessions originating from data clients.
Active current	Total number of currently active sessions.
Dormant current	Total number of currently dormant sessions.
Active IPv4 current	Total number of currently active IPv4 sessions.
Active IPv6 current	Total number of currently active IPv6 sessions.
Dormant IPv4 current	Total number of currently dormant IPv4 sessions.
Dormant IPv6 current	Total number of currently dormant IPv6 sessions.
Total Simple-IP	Total number of Simple-IP sessions.
Simple-IP-fallback attemps	Total number of Simple-IP fallback attempts.
Successes	Number of successful Simple-IP fallback sessions.
Failures	Number of failed Simple-IP fallback sessions.
Simple-IP-Fallback failure reasons:	
No Mobile-IP RRQ Rx	Mobile-IP RRQ request not received.
Not Allowed	Simple-IP fallback not allowed by configuration.
Tagged Pool Address	Address is in a pool and tagged not to allow Simple-IP fallback.
Misc.	Fallback failures due to other reasons.
Simple-IP attempts	Total number of Simple-IP session attempts.
Total setup success	Number of successful Simple-IP attempts.
Total Attempts Failed	Number of failed Simple-IP attempts.
Total disconnected	Total number of disconnected sessions.
Disconnected locally	Number of sessions disconnected locally.
Disconnected remotely	Number of sessions disconnected remotely.
Disconnect remotely before connect	Number of sessions disconnected remotely before the session was fully connected.
Session Disconnect reason:	
Remote disc. ipsec	Number of sessions disconnected because of remote party (mobile) hang-up.

Field	Description
Admin disconnect	Number of sessions disconnected by the Admin.
Idle timeout	Number of sessions disconnected because the Idle timer has timed out.
Absolute timeout	Number of sessions disconnected because the Absolute timer has timed out.
Long duration timeout	Number of sessions disconnected because the Long Duration timer has timed out.
Session setup timeout	Number of sessions disconnected because the Session Setup timer has timed out.
No resource	Number of sessions disconnected because the system has run out of resources (flows, memory, etc.).
Auth failure	Number of sessions disconnected because of an authentication failure.
Flow add failure	Number of sessions disconnected because flow could not be added on NPU.
Invalid dest-context	Number of sessions disconnected because the destination context coming from AAA server is invalid.
Source address violation	Number of sessions disconnected because the source IP address is invalid.
Duplicate Request	Number of sessions disconnected because of a duplicate request when there is already a session with the same NAI.
MAC validation failure	Number of sessions disconnected because the HSS cannot validate MAC address from remote user.
Addr assign failure	Number of sessions disconnected because no address has been assigned.
Miscellaneous reasons	Number of Mobile-IP sessions disconnected for other reasons.
Data Stats:	
Total Bytes Sent	Total number of bytes sent.
Total Packets Sent	Total number of packets sent.
Total Bytes Rcvd	Total number of bytes received.
Total Packets Rcvd	Total number of packets received.
Total Pckts Violations	Total number of packets received from UEs and destined for the Internet that do not match any of the configured traffic selectors.

Field	Description
EAP Server Stats:	
Total Received	Total number of EAP Success+ EAP Challenge + EAP Failures, coming from EAP server.
Success Received	Number of EAP successes received.
Challenge Received	Number of EAP challenges received.
Failures Received	Number of EAP failures received.
Discarded	Number of EAP server messages discarded.
EAP Server Messages Sent:	
Total Sent	Total number of EAP server messages sent.
Initial Requests	Number of initial EAP requests.
Requests Forwarded	Number of EAP requests forwarded.
EAP Mobile Stats:	
Total Received	Total number of EAP Requests coming from mobile subscriber.
Discarded	Number of EAP mobile messages discarded.

# CHAPTER 156

## show x2gw-service

This chapter describes the output of the **show x2gw-service** command variants.

- [show x2gw](#), on page 2259

## show x2gw

*Table 661: show x2gw Command Output Descriptions*

Field	Description
Context Name	The name of the system context in which the CGF is configured.
Primary Accounting server address	The IP address of the CGF.
port	The TCP port over which GTPP messaging is performed.
priority	The configured priority of the CGF.
State	The status of the CGF as Active or Inactive.
Group	The GTPP server group name in which this server is configured.

## INDEX
