Fax: 408 527-0883

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

All printed copies and duplicate soft copies of this document are considered uncontrolled. See the current online version for the latest version.

Cisco has more than 200 offices worldwide. Addresses and phone numbers are listed on the Cisco website at [www.cisco.com/go/offices](http://www.cisco.com/go/offices).

Cisco and the Cisco logo are trademarks or registered trademarks of Cisco and/or its affiliates in the U.S. and other countries. To view a list of Cisco trademarks, go to this URL: <https://www.cisco.com/c/en/us/about/legal/trademarks.html>. Third-party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Cisco and any other company. (1721R)

**CHAPTER 10**

[show apn-profile](#) 489

show apn-profile full name 489

---

CHAPTER 11

**show apn-remap-table** 497

show apn-remap-table full name 497

---

CHAPTER 12

**show asngw-service** 499

show asngw-service all 499

show asngw-service session all 502

show asngw-service session counters 503

show asngw-service session counters verbose 505

show asngw-service session full 511

show asngw-service session counters function-type data-path 513

show asngw-service session peer-address 517

show asngw-service session summary 518

show asngw-service statistics 518

show asngw-service statistics function-type ms-state-change 521

show asngw-service statistics function-type ms-state-change 524

show asngw-service statistics verbose 526

---

CHAPTER 13

**show asnpc-service** 533

show asnpc-service all 533

show asnpc-service session all 534

show asnpc-service session full 535

show asnpc-service session counters verbose 537

show asnpc-service statistics verbose 540

---

CHAPTER 14

**show bcmcs** 545

show bcmcs counters all 545

show bcmcs statistics 547

---

CHAPTER 15

**show bearer-control-profile** 555

show bearer-control-profile full name 555

---

<b>CHAPTER 16</b>	<b>show bssap</b>	<b>557</b>
	show bssap+ statistics	557

---

<b>CHAPTER 17</b>	<b>show build</b>	<b>559</b>
	show build	559

---

<b>CHAPTER 18</b>	<b>show bulkstats data</b>	<b>561</b>
	show bulkstats data	561

---

<b>CHAPTER 19</b>	<b>show cae-group server name</b>	<b>563</b>
	show cae-group server name	563

---

<b>CHAPTER 20</b>	<b>show call-control-profile</b>	<b>565</b>
	show call-control-profile full name	565

---

<b>CHAPTER 21</b>	<b>show card</b>	<b>585</b>
	show card diag	586
	show card hardware (ASR 5000)	587
	show card hardware (ASR 5500)	589
	show card hardware (VPC-DI)	597
	show card info (ASR 5000)	599
	show card info (ASR 5500)	601
	show card info (VPC-SI, VPC-DI)	604
	show card mappings (ASR 5000)	605
	show card table	606

---

<b>CHAPTER 22</b>	<b>show cdr</b>	<b>609</b>
	show cdr statistics	609
	show cdr file-space-usage	612

---

<b>CHAPTER 23</b>	<b>show cell-trace-module</b>	<b>613</b>
	show cell-trace-module file-space-usage	613

show cell-trace-module statistics 613

---

CHAPTER 24

**show certificate 615**

show certificate 615

---

CHAPTER 25

**show cli 617**

show cli configuration-monitor 617

show cli history 618

show cli session 618

---

CHAPTER 26

**show chassis-throughput 619**

show chassis-throughput 619

---

CHAPTER 27

**show cloud 621**

show cloud configuration 621

show cloud hardware 622

show cloud monitor 622

---

CHAPTER 28

**show cmp 625**

show cmp history 625

show cmp outstanding-reg 627

show cmp statistics 627

---

CHAPTER 29

**show confdmgr 631**

show confdmgr 631

show confdmgr subscriptions 633

---

CHAPTER 30

**show configuration 635**

show configuration iftask boot-options 635

show configuration iftask boot-options verbose 636

show config 636

show config apn 637

show configuration access-link 637

`show config context` 637  
`show configuration srp` 638  
`show config context verbose` 638

---

**CHAPTER 31****show congestion-control** 639

`show congestion-control configuration` 639  
`show congestion-control statistics al lmgr instance` 640  
`show congestion-control statistics asngwmgr instance` 640  
`show congestion-control statistics egtpinmgr` 641  
`show congestion-control statistics mme full` 641

---

**CHAPTER 32****show connectedapps** 643

`show connectedapps` 643

---

**CHAPTER 33****show content-filtering** 645

`show content-filtering category database` 645  
`show content-filtering category database all` 646  
`show content-filtering category database facility srdmgrp all` 647  
`show content-filtering category policy-id id` 648  
`show content-filtering category statistics` 649  
`show content-filtering category statistics facility srdmgrp all` 649  
`show content-filtering category url <url> policy-id <id> verbose` 650  
`show content-filtering server-group name` 651  
`show content-filtering server-group statistics` 652

---

**CHAPTER 34****show chassis-throughput** 655

`show chassis-throughput` 655

---

**CHAPTER 35****show context all** 657

`show context all` 657

---

**CHAPTER 36****show cpu** 659

`show cpu info` 659

show cpu info verbose 660

show cpu table 662

---

**CHAPTER 37****show crash 663**

show crash config 663

show crash list 664

show crash all 664

show crash number 664

---

**CHAPTER 38****show crypto 667**

show crypto group summary 667

show crypto ikev2-ikesa security-associations summary 668

show crypto ikev2-ikesa security-associations summary spi 668

show crypto ipsec security-associations 669

show crypto ipsec security-associations statistics 672

show crypto ipsec security-associations summary 675

show crypto isakmp keys 675

show crypto isakmp security-associations 676

show crypto managers 676

show crypto managers instance 677

show crypto managers summary 678

show crypto map summary 678

show crypto statistics 681

show crypto statistics ikev2 687

show crypto template summary 696

---

**CHAPTER 39****show cs-network 701**

show cs-network all status 701

show cs-network statistics ranap-only 703

show cs-network statistics sccp-only 707

---

**CHAPTER 40****show cscf 711**

show cscf nat media mapping all 711

show cscf peer-servers full 712

show cscf service li-packet-cable statistics 713  
show cscf service statistics name <service\_name> all 713  
show cscf sessions counters 732  
show cscf sessions duration 734  
show cscf sip statistics 735  
show cscf tcp connections 740

---

**CHAPTER 41****show decor 743**

show decor-profile full all 743

---

**CHAPTER 42****show demux-mgr 745**

show demux-mgr statistics egtpegmgr all 745

show demux-mgr statistics egtpinmgr all 745

show demux-mgr sessions egtpinmgr all 746

---

**CHAPTER 43****show dhcp 747**

show dhcp call-id 747

show dhcp chaddr 750

show dhcp dhcp-service 750

show dhcp msid 753

show dhcp full msid 753

show dhcp status 756

show dhcp-service 757

show dhcp statistics 759

show dhcp username 764

show dhcp full username 765

---

**CHAPTER 44****show diameter 771**

show diameter aaa-statistics 771

show diameter aaa-statistics misc-data 783

show diameter authentication servers 784

show diameter diactrl proxy-vm-map 784

show diameter dynamic-dictionary all 785

show diameter endpoints all 785

show diameter message-queue counters outbound endpoint 786  
 show diameter osid-info sessmgr 788  
 show diameter osid-info sessmgr all 788  
 show diameter peers full all 789  
 show diameter statistics 790  
 show diameter tps-statistics verbose 798

---

CHAPTER 45

**show diameter-hdd-module 801**  
 show diameter-hdd-module file-space-usage 801  
 show diameter-hdd-module statistics 801

---

CHAPTER 46

**show dns-client 803**  
 show dns-client 803  
 show dns-client statistics dns-query NF P-CSCF apn name apn-name 805  
 show dns-client statistics dns-query NF P-CSCF apn all 805

---

CHAPTER 47

**show dynamic-policy 807**  
 show dynamic-policy statistics 807

---

CHAPTER 48

**show egtp 811**  
 show egtp peers interface 811  
 show egtp peers path-failure-history 812  
 show egtp statistics path-failure-reasons 813  
 show egtp-service all 815  
 show egtp sessions 818  
 show egtp statistics 820  
 show egtp statistics verbose 853  
     3GPP Release 9, 29.274 853  
     SRVCC Messages 859  
     IMSI/IMEI Statistics 867  
     Collision Counter Support in the GTP Layer 868  
 show egtp-service all 869

---

<b>CHAPTER 49</b>	<b>show epdg-service statistics</b>	<b>873</b>
	show epdg-service statistics	873
	show epdg-service statistics suppress-ir-handover	874
	show epdg-service statistics interworking-5g	874
	show epdg-service name	877
	show epdg-service name name	878

---

<b>CHAPTER 50</b>	<b>show event-notif</b>	<b>879</b>
	show event-notif statistics	879

---

<b>CHAPTER 51</b>	<b>show event-record statistics</b>	<b>881</b>
	Show event-record statistics epdg	881
	show event-record statistics pgw	882
	show event-record statistics	883

---

<b>CHAPTER 52</b>	<b>show fans</b>	<b>885</b>
	show fans	885

---

<b>CHAPTER 53</b>	<b>show fa-service</b>	<b>887</b>
	show fa-service	887

---

<b>CHAPTER 54</b>	<b>show fng-service statistics</b>	<b>891</b>
	show fng-service statistics	891

---

<b>CHAPTER 55</b>	<b>show ggsn-service</b>	<b>895</b>
	show ggsn-service ggsn-table	895
	show ggsn-service all	896

---

<b>CHAPTER 56</b>	<b>show gmb</b>	<b>901</b>
	show gmb statistics	901

---

<b>CHAPTER 57</b>	<b>show gmm-sm</b>	<b>905</b>
-------------------	--------------------	------------

show gmm-sm statistics 905  
 show gmm-sm statistics verbose 934

---

CHAPTER 58

**show gprs-service 1127**  
 show gprs-service all 1127

---

CHAPTER 59

**show gs-service 1131**  
 show gs-service all 1131

---

CHAPTER 60

**show gtpc 1135**  
 show gtpc counters ggsn-service 1135  
 show gtpc full 1137  
 show gtpc summary callid 1142  
 show gtpc statistics custom1 1144  
 show gtpc statistics custom2 1145  
 show gtpc statistics verbose 1145

---

`show gtp storage-server streaming file statistics verbose` 1209  
`show gtp storage-server streaming file counters all` 1210

---

**CHAPTER 64****show gtpu-service** 1213

`show gtpu-service all` 1213  
`show gtpu statistics` 1214

---

**CHAPTER 65****show hardware** 1219

`show hardware (VPC-DI)` 1219  
`show hardware (VPC-SI)` 1221  
`show hardware card (ASR 5000)` 1222  
`show hardware card (ASR 5500)` 1225  
`show hardware inventory (ASR 5x00)` 1229  
`show hardware version (ASR 5000)` 1229  
`show hardware version (ASR 5500)` 1230  
`show hardware version (VPC-DI)` 1231

---

**CHAPTER 66****show hd-storage-policy** 1233

`show hd-storage-policy counters all` 1233  
`show hd-storage-policy statistics all` 1233

---

**CHAPTER 67****show hd raid verbose** 1235

`show hd raid verbose` 1235

---

**CHAPTER 68****show henbgw** 1237

`show henbgw-access-service all` 1237  
`show henbgw-access-service henb-association full` 1238  
`show henbgw-access-service statistics verbose` 1239  
`show henbgw-network-service all` 1247

---

**CHAPTER 69****show hnbgw 1249**

- show hnbgw access-control-db 1249
- show hnbgw access-control-db imsi 1250
- show hnbgw counters 1250
- show hnbgw counters 1251
- show hnbgw counters hnbgw-service 1253
- show hnbgw counters hnbid 1254
- show hnbgw disconnect-reasons 1254
- show hnbgw-global 1260
- show hnbgw-service 1261
- show hnbgw sessions all 1268
- show hnbgw sessions full 1269
- show hnbgw statistics paging-only 1272

---

**CHAPTER 70****show hss-peer-service 1275**

- show hss-peer-service service name <name> 1275
- show hss-peer-service session full 1277
- show hss-peer-service statistics all 1279

---

**CHAPTER 71****show ims-authorization 1285**

- show ims-authorization policy-control statistics 1285
- show ims-authorization policy-gate status full 1295
- show ims-authorization policy-gate counters all 1296
- show ims-authorization servers 1297
- show ims-authorization service name 1298

## About this Guide

---

---

**Note** Control and User Plane Separation (CUPS) represents a significant architectural change in the way StarOS-based products are deployed in the 3G, 4G, and 5G networks. Unless otherwise specified, it should not be assumed that any constructs (including, but not limited to, commands, statistics, attributes, MIB objects, alarms, logs, services) referenced in this document imply functional parity between legacy/non-CUPS and CUPS products. Please contact your Cisco Account or Support representative for any questions about parity between these products.

---

---

**Note** The documentation set for this product strives to use bias-free language. For purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on RFP documentation, or language that is used by a referenced third-party product.

---

---

**Note** The ASR 5000 hardware platform has reached end of life and is not supported in this release. Any references to the ASR 5000 (specific or implied) or its components in this document are coincidental. Full details on the ASR 5000 hardware platform end of life are available at:  
<https://www.cisco.com/c/en/us/products/collateral/wireless/asr-5000-series/eos-eol-notice-c51-735573.html>

---

---

**Note** The HA, HSGW, PDSN, and SecGW products have reached end of life and are not supported in this release. Any references to these products (specific or implied) their components or functions including CLI commands and parameters in this document are coincidental and are not supported. Full details on the end of life for these products are available at  
<https://www.cisco.com/c/en/us/products/collateral/wireless/asr-5000-series/eos-eol-notice-c51-740422.html>.

---

This preface describes the *Statistics and Counters Reference* and its document conventions.

- [Conventions Used, on page xxxvi](#)
- [Supported Documents and Resources, on page xxxvii](#)

- [Contacting Customer Support, on page xxxviii](#)

## Conventions Used

The following tables describe the conventions used throughout this documentation.

Notice Type	Description
Information Note	Provides information about important features or instructions.
Caution	Alerts you of potential damage to a program, device, or system.
Warning	Alerts you of potential personal injury or fatality. May also alert you of potential electrical hazards.

Typeface Conventions	Description
Text represented as a <code>screen display</code>	This typeface represents displays that appear on your terminal screen, for example:  <code>Login:</code>
Text represented as <b>commands</b>	This typeface represents commands that you enter, for example:  <b>show ip access-list</b>  This document always gives the full form of a command in lowercase letters. Commands are not case sensitive.
Text represented as a <b>command variable</b>	This typeface represents a variable that is part of a command, for example:  <b>show card <i>slot_number</i></b>  <i>slot_number</i> is a variable representing the desired chassis slot number.
Text represented as menu or sub-menu names	This typeface represents menus and sub-menus that you access within a software application, for example:  Click the <b>File</b> menu, then click <b>New</b>

Command Syntax Conventions	Description
<p>{ <b>keyword</b> or <i>variable</i> }</p>	<p>Required keyword options and variables are those components that are required to be entered as part of the command syntax.</p> <p>Required keyword options and variables are surrounded by grouped braces { }. For example:</p> <pre>sctp-max-data-chunks { limit max_chunks     mtu-limit }</pre> <p>If a keyword or variable is not enclosed in braces or brackets, it is mandatory. For example:</p> <pre>snmp trap link-status</pre>
<p>[ <b>keyword</b> or <i>variable</i> ]</p>	<p>Optional keywords or variables, or those that a user may or may not choose to use, are surrounded by brackets.</p>
<p> </p>	<p>Some commands support multiple options. These are documented within braces or brackets by separating each option with a vertical bar.</p> <p>These options can be used in conjunction with required or optional keywords or variables. For example:</p> <pre>action activate-flow-detection {   intitiation   termination }</pre> <p>or</p> <pre>ip address [ count number_of_packets     size number_of_bytes ]</pre>

## Supported Documents and Resources

### Related Common Documentation

The following common documents are available:

- *AAA Interface Administration Reference*
- *Command Line Interface Reference*
- *GTPP Interface Administration Reference*
- *Installation Guide* (platform dependant)
- *Release Change Reference*
- *SNMP MIB Reference*
- *System Administration Guide* (platform dependant)
- *Thresholding Configuration Guide*

## Related Product Documentation

The most up-to-date information for related products is available in the product Release Notes provided with each product release.

The following related product documents are also available:

- *ADC Administration Guide*
- *CF Administration Guide*
- *ECS Administration Guide*
- *GGSN Administration Guide*
- *IPSec Reference*
- *MME Administration Guide*
- *MURAL Installation and Administration Guide*
- *NAT Administration Guide*
- *PSF Administration Guide*
- *P-GW Administration Guide*
- *SAEGW Administration Guide*
- *SGSN Administration Guide*
- *S-GW Administration Guide*

## Contacting Customer Support

Use the information in this section to contact customer support.

Refer to the support area of <http://www.cisco.com> for up-to-date product documentation or to submit a service request. A valid username and password are required to access this site. Please contact your Cisco sales or service representative for additional information.

# CHAPTER 1

## Statistics and Counters Overview

---

---

**Note** The ASR 5000 hardware platform has reached end of life and is not supported in this release. Any references to the ASR 5000 (specific or implied) or its components in this document are coincidental. Full details on the ASR 5000 hardware platform end of life are available at:  
<https://www.cisco.com/c/en/us/products/collateral/wireless/asr-5000-series/eos-eol-notice-c51-735573.html>

---

- [Introduction, on page 1](#)

## Introduction

This document organizes and describes various ASR5x00 non-SNMP-MIB forms of dynamic statistics that are output by CLI **show** commands.

The statistics output by **show** commands usually provide a greater degree of granularity than the bulk statistics because:

- the dynamic content is captured at the time the CLI command is entered,
- the command output represents a single element, whereas bulk statistics are often a combination of values for multiple elements,
- the command output can be fine-tuned using keywords included in the **show** command when it is entered.

The types of output statistics are governed by the CLI **show** commands that generate their display. For example, **show power all cards** displays the current power status for each card in every slot of the chassis.

Some of the **show** command outputs display configuration information for reference purposes. For example, **show gs-service full name** *<service\_name>* displays the configuration for the named Gs service.

---

**Important** In Release 21.1 and forward, use the **do show** command to run all Exec Mode **show** commands while in Global Configuration Mode. It is not necessary to exit the Config mode to run a **show** command. The pipe character | is only available if the command is valid in the Exec mode.

---

### Counter Definitions and Disconnect Reasons

In this release, the counters and descriptions are delivered with the companion package in the ASR 5x00 software build. The companion package includes files named **BulkstatStatistics\_documentation**.

The companion package includes two formats for the customers to use.

- The .xls file is an easily readable Excel file that can be used to sort and filter the counter information based on schema or other factors.

The .csv file is machine-readable and includes the same data as the .xls file.

## CHAPTER 2

# show aaa group name

This chapter includes the **show aaa group name** command output tables.

- [show aaa group name, on page 3](#)

## show aaa group name

*Table 1: show aaa group name Command Output Descriptions*

Field	Description
Group name	The AAA server group name.
Context	The context name.
Allow accounting MHS Traffic	Enables reporting MHS data usage in RADIUS accounting messages.
<b>Diameter config:</b>	
<b>Authentication:</b>	
Dictionary	The Diameter dictionary used for authentication. <b>Important</b> The prefix "dynamic-load" is appended to the dictionary name if the dictionary is dynamically configured in AAA group.
Endpoint name	The Diameter endpoint used for authentication.
Max-transmissions	The maximum number of transmission attempts for Diameter authentication.
Max-retries	The number of retry attempts for Diameter authentication requests.
Request-timeout	The Diameter authentication request timeout period.
Redirect-host-avp	Indicates whether to use just one returned AVP, or use the first returned AVP as selecting the primary host and the second returned AVP as selecting the secondary host.
Upgrade-dict-avps	Displays the upgrade-dict-avps attribute value if configured in AAA group. If not configured, this field displays the default value.

Field	Description
Strip-leading-digit user-name	Displays whether or not the stripping of leading digit from User-Name AVP is enabled or disabled.
<b>Accounting:</b>	
Dictionary	The Diameter dictionary used for accounting. <b>Important</b> The prefix "dynamic-load" is appended to the dictionary name if the dictionary is dynamically configured in AAA group.
Endpoint name	The Diameter endpoint used for accounting.
Max-transmissions	The maximum number of transmission attempts for Diameter accounting.
Max-retries	The number of retry attempts for Diameter accounting requests.
Request-timeout	The Diameter accounting request timeout period.
HD-mode	Displays the HD-mode value if configured in AAA group. If not configured, this field displays the default value.
HD-policy	Displays the HD-storage-policy value if configured in AAA group. If not configured, this field displays the default value.
Upgrade-dict-avps	The Diameter accounting request timeout period.
SDC-Integrity	Indicates whether or not the SDC Integrity feature is enabled. This feature is used to protect the integrity of SDCs on Rf interface. <b>Important</b> This feature is customer-specific. For more information, contact your Cisco Account representative.
<b>Radius Config:</b>	
Dictionary	The RADIUS dictionary.
Strip-domain	Indicates whether the domain is stripped from the user name prior to authentication or accounting.
Authenticator-validation	Indicates whether the MD5 authentication of RADIUS user is enabled.
Allow authentication-down	Indicates whether the system allows subscriber sessions when RADIUS authentication is unavailable.
Allow accounting-down	Indicates whether the system allows subscriber sessions when RADIUS accounting is unavailable.
<b>Attributes:</b>	
Nas-identifier	The attribute name by which the system is identified in Access-Request messages.
Nas-ip	The AAA interface IP address(es) used to identify the system.
Nas-ip backup	The IP address of the secondary interface to use in the current context.

Field	Description
Nexthop	The next hop IP address for this NAS IP address.
MPLS-label	Indicates the MPLS label used for traffic from the specified RADIUS client NAS IP address.
VRF	The Virtual Routing and Forwarding (VRF) Context instance associated with this AAA group.
Authentication	
called-station-id	Indicates whether RADIUS authentication attribute for called station id is enabled. The attribute must also be supported in the configured RADIUS dictionary.
calling-station-id	Indicates whether RADIUS authentication attribute for calling station id is enabled. The attribute must also be supported in the configured RADIUS dictionary.
imsi	Indicates whether RADIUS authentication attribute for IMSI is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-pdp-type	Indicates whether RADIUS authentication attribute for 3GPP PDP type is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-cg-address	Indicates whether RADIUS authentication attribute for 3GPP CG address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-gprs-qos-negotiated-profile	Indicates whether RADIUS authentication attribute for 3GPP GPRS QoS negotiated profile is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-sgsn-address	Indicates whether RADIUS authentication attribute for 3GPP SGSN address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ggsn-address	Indicates whether RADIUS authentication attribute for 3GPP GGSN address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-imsi-mcc-mnc	Indicates whether RADIUS authentication attribute for 3GPP IMSI MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ggsn-mcc-mnc	Indicates whether RADIUS authentication attribute for 3GPP GGSN MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-nsapi	Indicates whether RADIUS authentication attribute for 3GPP NSAPI is enabled. The attribute must also be supported in the configured RADIUS dictionary.

Field	Description
3gpp-select-mode	Indicates whether RADIUS authentication attribute for 3GPP select mode is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-charging-characteristics	Indicates whether RADIUS authentication attribute for 3GPP charging characteristics is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-sgsn-mcc-mnc	Indicates whether RADIUS authentication attribute for 3GPP SGSN MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-imeisv	Indicates whether RADIUS authentication attribute for 3GPP imeisv is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-rat-type	Indicates whether RADIUS authentication attribute for 3GPP RAT type is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-user-location-info	Indicates whether RADIUS authentication attribute for 3GPP user location information is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ms-timezone	Indicates whether RADIUS authentication attribute for 3GPP ms timezone is enabled. The attribute must also be supported in the configured RADIUS dictionary.
Accounting	
called-station-id	Indicates whether RADIUS accounting attribute for called station id is enabled. The attribute must also be supported in the configured RADIUS dictionary.
calling-station-id	Indicates whether RADIUS accounting attribute for calling station id is enabled. The attribute must also be supported in the configured RADIUS dictionary.
acct-input-octets	Indicates whether RADIUS accounting attribute for accounting input octets is enabled. The attribute must also be supported in the configured RADIUS dictionary.
acct-input-packets	Indicates whether RADIUS accounting attribute for accounting input packets is enabled. The attribute must also be supported in the configured RADIUS dictionary.
acct-session-time	Indicates whether RADIUS accounting attribute for accounting session time is enabled. The attribute must also be supported in the configured RADIUS dictionary.
acct-output-octets	Indicates whether RADIUS accounting attribute for accounting output octets is enabled. The attribute must also be supported in the configured RADIUS dictionary.

Field	Description
acct-output-packets	Indicates whether RADIUS accounting attribute for accounting output packets is enabled. The attribute must also be supported in the configured RADIUS dictionary.
event-timestamp	Indicates whether RADIUS accounting attribute for event timestamp is enabled. The attribute must also be supported in the configured RADIUS dictionary.
imsi	Indicates whether RADIUS accounting attribute for IMSI is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-charging-id	Indicates whether RADIUS accounting attribute for 3GPP charging ID is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-pdp-type	Indicates whether RADIUS accounting attribute for 3GPP PDP type is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-cg-address	Indicates whether RADIUS accounting attribute for 3GPP CG address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-gprs-qos-negotiated-profile	Indicates whether RADIUS accounting attribute for 3GPP GPRS QoS negotiated profile is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-sgsn-address	Indicates whether RADIUS accounting attribute for 3GPP SGSN address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ggsn-address	Indicates whether RADIUS accounting attribute for 3GPP GGSN address is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-imsi-mcc-mnc	Indicates whether RADIUS accounting attribute for 3GPP IMSI MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ggsn-mcc-mnc	Indicates whether RADIUS accounting attribute for 3GPP GGSN MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-nsapi	Indicates whether RADIUS accounting attribute for 3GPP NSAPI is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-select-mode	Indicates whether RADIUS accounting attribute for 3GPP select mode is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-charging-characteristics	Indicates whether RADIUS accounting attribute for 3GPP charging characteristics is enabled. The attribute must also be supported in the configured RADIUS dictionary.

Field	Description
3gpp-sgsn-mcc-mnc	Indicates whether RADIUS accounting attribute for 3GPP SGSN MCC MNC is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-imeisv	Indicates whether RADIUS accounting attribute for 3GPP imeisv is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-rat-type	Indicates whether RADIUS accounting attribute for 3GPP RAT type is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-user-location-info	Indicates whether RADIUS accounting attribute for 3GPP user location information is enabled. The attribute must also be supported in the configured RADIUS dictionary.
3gpp-ms-timezone	Indicates whether RADIUS accounting attribute for 3GPP ms timezone is enabled. The attribute must also be supported in the configured RADIUS dictionary.
<b>Authentication:</b>	
Algorithm	The RADIUS authentication server selection algorithm for the current context.
Deadtime	The time period to wait before changing the state of a RADIUS server from "Down" to "Active", in minutes.
Max-outstanding	The maximum number of messages a AAA manager will queue.
Max-retries	The maximum number of times communication with a AAA server is attempted before it is marked as "Not Responding" and the detect dead server's consecutive failures count is incremented.
Max-transmissions	The maximum number of re-transmissions for RADIUS authentication requests.
Timeout	The time period to wait for a response from the RADIUS server before re-sending the messages, in seconds.
Apn-to-be-included	The APN name included for RADIUS authentication.
Authenticate null-username	Indicates whether authentication of user names that are blank or empty is enabled.
<b>Probe:</b>	
Interval	The time period between two RADIUS authentication probes.
Timeout	The timeout period for HAGR to wait for a response for RADIUS authentication probes.
Max-retries	The maximum number of retries for RADIUS authentication probe response.
<b>Keepalive:</b>	
Interval	The time period between two keepalive access requests.
Timeout	The time period between two keepalive access request retries.

Field	Description
Retries	The number of times the keepalive access request is sent before marking the server as unreachable.
consecutive-response	The number of consecutive authentication responses after which the server is marked as reachable.
Username	The user name used for authentication.
Calling-station-id	The calling station ID used for keepalive authentication.
Password	The password used for authentication.
Allow access-reject	Indicates whether both access-accept and access-reject are considered as success for the keepalive authentication request.
<b>Detect-dead-server:</b>	
Consecutive-failures	The number of consecutive failures, for any AAA manager, before a server's state is changed from "Active" to "Down".
Response-timeout	The time period for any AAA manager to wait for a response to any message before a server's state is changed from "Active" to "Down", in seconds.
Keepalive	Indicates whether the AAA server alive-dead detect mechanism based on sending keepalive authentication messages to all authentication servers is enabled.
<b>Accounting:</b>	
Algorithm	The RADIUS accounting server selection algorithm for the current context.
Deadtime	The time period to wait before changing the state of a RADIUS server from "Down" to "Active", in minutes.
Fire-And-Forget	Displays whether or not the Fire-and-Forget feature is enabled in the AAA Group configuration.
Max-outstanding	The maximum number of messages a AAA manager will queue.
Max-retries	The maximum number of times communication with a AAA server will be attempted before it is marked as "Not Responding" and the detect dead server's consecutive failure count is incremented.
Max-transmissions	The maximum number of re-transmissions for RADIUS accounting requests.
Max-pdu-size	The maximum sized packet data unit which can be accepted/generated, in bytes.
Interim-timeout	The timeout period for sending accounting INTERIM-UPDATE records, in seconds.
Interim-downlink-volume	The downlink volume limit that triggers RADIUS interim accounting, in bytes.
Interim-uplink-volume	The uplink volume limit that triggers RADIUS interim accounting, in bytes.
Interim-total-volume	The total volume limit for RADIUS interim accounting, in bytes.

Field	Description
Timeout	The time period to wait for a response from a RADIUS server before retransmitting a request.
Remote-address	Indicates whether remote IP address lists are configured, and collection of accounting data for the addresses in those lists on a per-subscriber basis is enabled.
Archive	Indicates whether archiving of RADIUS Accounting messages in the system after the accounting message has exhausted retries to all available RADIUS Accounting servers is enabled.
Apn-to-be-included	The APN name included for RADIUS accounting.
<b>R-P originated:</b>	
Trigger active-start	Indicates whether when an Active-Start is received from the PCF and there has been a parameter change, an R-P event occurs.
Trigger active-handoff	Indicates whether when an Active PCF-to-PFC Handoff occurs, a single or two R-P events will occur (one for the Connection Setup, and the second for the Active-Start).
Trigger active-stop	Indicates whether when an Active-Stop is received from the PCF, an R-P event occurs.
Trigger policy	the overall accounting policy for R-P sessions.
Trigger stop-start	Indicates whether a stop/start RADIUS accounting pair is sent to the RADIUS server when an applicable R-P event occurs.
Handoff policy	The overall accounting policy for R-P sessions.
TOD	The time of day a RADIUS event is generated for accounting.
<b>GTP originated:</b>	
Trigger policy	The RADIUS accounting policy for GTP.
<b>MIP HA:</b>	
Policy	The RADIUS accounting policy for Mobile IP HA calls.
<b>Keepalive:</b>	
Interval	The time period between the two keepalive access requests.
Timeout	The time period between each keepalive access request retries.
Retries	The number of times the keepalive access request is sent before marking the server as unreachable.
consecutive-response	The number of consecutive authentication response after which the server is marked as reachable.
Username	The user name used for authentication.
Calling-station-id	The calling station ID used for keepalive authentication.

Field	Description
Framed-ip-address	The framed-ip-address used for keepalive accounting.
<b>Detect-dead-server:</b>	
Consecutive-failures	The number of consecutive failures, for any AAA manager, before a server's state is changed from "Active" to "Down".
Response-timeout	The time period for any AAA manager to wait for a response to any message before a server's state is changed from "Active" to "Down", in seconds.
Keepalive	Indicates whether the AAA server alive-dead detect mechanism based on sending keepalive authentication messages to all authentication servers is enabled.
<b>Charging:</b>	
Auth-algorithm	The RADIUS authentication algorithm.
Acct-algorithm	The RADIUS accounting algorithm.
Deadtime	The time period to wait before changing the state of a RADIUS server from "Down" to "Active", in minutes.
Max-outstanding	The maximum number of messages a AAA manager will queue.
Max-retries	The maximum number of times communication with a AAA server will be attempted before it is marked as "Not Responding" and the detect dead server's consecutive failure count is incremented.
Max-transmissions	The maximum number of re-transmissions for RADIUS requests.
Timeout	The time period to wait for a response from a RADIUS server before retransmitting a request.
<b>Detect-dead-server:</b>	
Consecutive-failures	The number of consecutive failures, for any AAA manager, before a server's state is changed from "Active" to "Down".
Response-timeout	The time period for any AAA manager to wait for a response to any message before a server's state is changed from "Active" to "Down", in seconds.

## CHAPTER 3

# show access-policy

This chapter includes the **show access-policy** command output tables.

- [show access-policy all](#), on page 13
- [show access-policy full all](#), on page 13

## show access-policy all

*Table 2: show access-policy all Command Output Descriptions*

Field	Description
Access Policy Name	Displays the configured access-policy name(s).

## show access-policy full all

*Table 3: show access-policy full all Command Output Descriptions*

Field	Description
Access Policy Name	Displays the configured access-policy name(s).  For every configured access-policy, the precedence, access-profile, device type, and RAT type are displayed based on the configuration.

## CHAPTER 4

# show access-profile

This chapter includes the **show access-profile** command output tables.

- [show access-profile full name <profile\\_name>](#), on page 15

## show access-profile full name <profile\_name>

*Table 4: show access-profile full name <profile\_name> Command Output Descriptions*

Field	Description
Access Profile Name	Displays the configured access-profile name.
T3422 Timeout	Displays the configured time for T3422 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3450 Timeout	Displays the configured time for T3450 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3460 Timeout	Displays the configured time for T3460 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3470 Timeout	Displays the configured time for T3470 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3485 Timeout	Displays the configured time for T3485 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3486 Timeout	Displays the configured time for T3486 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3489 Timeout	Displays the configured time for T3489 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
T3495 Timeout	Displays the configured time for T3495 timeout in seconds. Displays "Not Configured" if the timer value is not configured in access-profile.
Session Setup Timeout	Displays the configured session setup timeout in seconds. Displays "Not Configured" if the session timeout value is not configured in access-profile.

show access-profile full name <profile\_name>

## CHAPTER 5

# show active-charging

This chapter includes the **show active-charging** command output tables.

## show activecharginganalyzer statistics name

The output of this command displays the following fields. The fields are common for http, secure-http, p2p, tcp, udp.

**Table 5: show active-charging analyzer statistics name Command Output Descriptions**

Field	Description
Total VPP FP Packets	Total number of Fast Path packets through VPP.

Field	Description
<b>VPP Fastpath Statistics:</b>	
Total Flows	Total number of flows.
Current Active Flows	Total number of active current flows.
<b>IPv4:</b>	
Uplink Pkts	Total number of IPv4 packets uplinked.
Uplink Bytes	Total number of IPv4 bytes uplinked.
Downlink Pkts	Total number of IPv4 packets downlinked.
Downlink Bytes	Total number of IPv4 bytes downlinked.
<b>IPv6:</b>	
Uplink Pkts	Total number of IPv6 packets uplinked.
Uplink Bytes	Total number of IPv6 bytes uplinked.
Downlink Pkts	Total number of IPv6 packets downlinked.
Downlink Bytes	Total number of IPv6 bytes downlinked.

## show active-charging analyzer statistics name cdp

Table 6: show active-charging analyzer statistics name cdp Command Output Descriptions

Field	Description
<b>CDP Summary:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.

# show active-charging analyzer statistics name dns

Table 7: show active-charging analyzer statistics name dns Command Output Descriptions

Field	Description
<b>ACS DNS Session Stats:</b>	
Total Uplink Bytes	The total number of DNS bytes detected in uplink direction.
Total Downlink Bytes	The total number of DNS bytes detected in downlink direction.
Total Uplink Pkts	The total number of DNS packets detected in uplink direction.
Total Downlink Pkts	The total number of DNS packets detected in downlink direction.
Unknown OPCODE	The total number of DNS packets with an unknown operational code.
Invalid Pkts	The total number of invalid DNS packets detected.
<b>DNS Over TCP:</b>	
Uplink Bytes	The total number of DNS uplink bytes that were detected over TCP.
Downlink Bytes	The total number of DNS downlink bytes that were detected over TCP.
Uplink Pkts	The total number of DNS uplink packets that were detected over TCP.
Downlink Pkts	The total number of DNS downlink packets that were detected over TCP.
<b>Request:</b>	
A Query Type	The total number of DNS requests received for A query types.
CNAME Query Type	The total number of DNS requests received for CNAME query types.
NS Query Type	The total number of DNS requests received for NS query types.
PTR Query Type	The total number of DNS requests received for PTR query types.
SRV Query Type	The total number of DNS requests received for SRV query types.
Unknown Query Type	The total number of DNS requests received for unknown query types.
AAAA Query Type	The total number of DNS requests received for AAAA query types.
NULL Query Type	The total number of DNS requests received for NULL query types.
TXT Query Type	The total number of DNS requests received for TXT query types.
<b>Response:</b>	
A Query Type	The total number of DNS responses received for A query types.
CNAME Query Type	The total number of DNS responses received for CNAME query types.

Field	Description
NS Query Type	The total number of DNS responses received for NS query types.
PTR Query Type	The total number of DNS responses received for PTR query types.
SRV Query Type	The total number of DNS responses received for SRV query types.
Unknown Query Type	The total number of DNS responses received for unknown query types.
AAAA Query Type	The total number of DNS responses received for AAAA query types.
NULL Query Type	The total number of DNS requests received for NULL query types.
TXT Query Type	The total number of DNS requests received for TXT query types.

## show active-charging analyzer statistics name h323

Table 8: show active-charging analyzer statistics name h323 Command Output Descriptions

Field	Description
<b>H323 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Packets	Total number of packets uplinked.
Total Downlink Packets	Total number of packets downlinked.
Total H323 calls	Total number of H323 calls.
Total RAS messages	Total number of RAS messages.
Total Q931 messages	Total number of Q931 messages.
Total H245 messages	Total number of H245 messages.

## show active-charging analyzer statistics name h323 verbose

Table 9: show active-charging analyzer statistics name h323 verbose Command Output Descriptions

Field	Description
<b>H323 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.

Field	Description
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Packets	Total number of packets uplinked.
Total Downlink Packets	Total number of packets downlinked.
Total H323 calls	Total number of H323 calls.
Total RAS messages	Total number of RAS messages.
Total Q931 messages	Total number of Q931 messages.
Total H245 messages	Total number of H245 messages.
<b>RAS messages</b>	
Uplink	Total number of uplink packets sent from the subscriber for RAS messages.
Downlink	Total number of downlink packets sent from the subscriber for RAS messages.
GatekeeperRequest	The message sent from the H323 endpoint to find a Gatekeeper.
GatekeeperConfirm	The message sent from the Gatekeeper to H323 endpoint which requested for service.
GatekeeperReject	The message sent from the Gatekeeper to H323 endpoint indicating that it must try a different Gatekeeper.
RegistrationRequest	The message sent from the H323 endpoint to register to a particular Gatekeeper.
RegistrationConfirm	The message sent from the Gatekeeper to H323 endpoint indicating that it has been registered.
RegistrationReject	The message sent from the Gatekeeper to H323 endpoint indicating that the registration failed.
UnregistrationRequest	The message sent from the H323 endpoint to unregister from a particular Gatekeeper.
UnregistrationConfirm	The message sent from the Gatekeeper to H323 endpoint indicating that it has been unregistered.
UnregistrationReject	The message sent from the Gatekeeper to H323 endpoint indicating that unregistration failed.
AdmissionRequest	The message sent from the H323 endpoint to a Gatekeeper before accepting or initiating a call.
AdmissionConfirm	The message sent from the Gatekeeper to H323 endpoint indicating that the call is allowed.
AdmissionReject	The message sent from the Gatekeeper to H323 endpoint indicating that the call is not allowed.
LocationRequest	The message sent to the Gatekeeper requesting the transport address of an endpoint.

Field	Description
LocationConfirm	The message sent from the Gatekeeper containing the transport address of an endpoint.
LocationReject	The message sent from the Gatekeeper indicating that the location request is rejected.
DisengageRequest	The message sent from an H323 endpoint to Gatekeeper indicating that the call is getting dropped.
DisengageConfirm	The message confirming the DisengageRequest message from the Gatekeeper.
DisengageReject	The message sent from the Gatekeeper if an endpoint is not registered.
InfoRequest	The message sent from the Gatekeeper to endpoint requesting the status information.
InfoRequestResponse	The message sent from the H323 endpoint to Gatekeeper containing the status information.
RequestInProgress	The message sent by the Gatekeeper or endpoint to indicate to RAS that it cannot respond in normal processing time.
Unclassified	The RAS message that is not classified by the H323 ALG.
<b>Q931 messages</b>	
Uplink	Total number of uplink packets sent from the subscriber for Q931 messages.
Downlink	Total number of downlink packets sent from the subscriber for Q931 messages.
Alerting	The message sent by the called user to indicate that alerting has been initiated.
CallProceeding	The message sent by an H323 endpoint indicating that it has initiated to set up the call.
Setup	The message sent by the calling H323 endpoint to the called H323 endpoint.
Connect	The message sent by the called H323 endpoint to the calling H323 endpoint indicating the acceptance of call.
ReleaseComplete	The message sent by the called H323 endpoint indicating the release of the call.
Facility	The message used to redirect a call or start a new H245 channel.
Progress	The message used to indicate the progress of a call.
Information	The message sent by the called H323 endpoint to provide additional information for a call.
Unclassified	The Q931 message that is not classified by the H323 ALG.
<b>H245 messages</b>	
Uplink	Total number of uplink packets sent from the subscriber for H245 messages.
Downlink	Total number of downlink packets sent from the subscriber for H245 messages.

Field	Description
OpenLogicalChannel	The message sent by an H323 endpoint to open a logical connection between two endpoints.
OpenLogicalChannelAck	The message sent by an H323 endpoint to accept the connection request in an open logical channel.
OpenLogicalChannelReject	The message sent by an H323 endpoint to reject the connection request in an open logical channel.
OpenLogicalChannelConfirm	The message sent by an H323 endpoint indicating that the reverse channel is open.
RequestChannelClose	The message sent by an H323 endpoint to close an existing logical channel between two endpoints.
CloseLogicalChannel	The message sent by an H323 endpoint to close an existing logical channel between two endpoints.
CloseLogicalChannelAck	The message sent by an H323 endpoint to confirm the close of a logical channel.
EndSessionCommand	The message sent by an H323 endpoint to indicate end of H245 session.
Unclassified	The H245 message that is not classified by the H323 ALG.

## show active-charging analyzer statistics name http

Table 10: show active-charging analyzer statistics name http Command Output Descriptions

Field	Description
<b>ACS HTTP Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Total Accel Pkts	Total number of accelerated HTTP packets.
Uplink Bytes Retrans	The number of uplink bytes that were retransmitted.
Downlink Bytes Retrans	Total number of downlink bytes that were retransmitted.
Uplink Pkts Retrans	Total number of uplink packets that were retransmitted.
Downlink Pkts Retrans	Total number of downlink packets that were retransmitted.
Total Request Succeed	Total number of HTTP requests succeeded.

Field	Description
Total Request Failed	Total number of HTTP requests failed.
GET Requests	Total number of HTTP GET requests.
POST Requests	Total number of HTTP POST requests.
CONNECT Requests	Total number of HTTP CONNECT requests.
PUT requests	Total number of HTTP PUT requests.
HEAD requests	Total number of HTTP HEAD requests.
Websocket Flows	Total number of websocket flows.
Invalid packets	Total number of invalid packets.
Wrong FSM packets	Total number of incorrect FSM packets.
Unknown request method	Total number of unknown HTTP request methods.
Corrupt request packets	Total number of corrupt HTTP request packets.
Corrupt response packets	Total number of corrupt HTTP response packets.
Pipeline overflow requests	Total number of pipeline overflow requests.
Unhandled request packets	Total number of unhandled request packets.
Unhandled response packets	Total number of unhandled response packets.
New requests on closed connection	Total number of new requests on closed connections.
Memory allocation failures	Total number of memory allocation failures.
Accel Errors	Total number of accelerated errors.
Packets after permanent failure	Total number of packets after permanent failure.
Total Number of http Video Identified	Total number of HTTP videos identified.
Number of Flash Video Identified	Total number of Flash videos identified.
Number of Isom (MP4) Video Identified	Total number of Isom (MP4) videos identified.
Number of WMV Video Identified	Total number of WMV videos identified.
Number of MOOV Video Identified	Total number of MOOV videos identified.
Number of AVI Video Identified	Total number of AVI videos identified.
Number of HLS Video Identified	Total number of HLS videos identified.
Number of MSS Video Identified	Total number of MSS videos identified.
Number of MPEG TS Video Identified	Total number of MPEG TS videos identified.

Field	Description
<b>Response Based TRM</b>	
GET	Total number of HTTP GET methods that had response-based TRM applied.
POST	Total number of HTTP POST methods that had response-based TRM applied.
CONNECT	Total number of HTTP CONNECT methods that had response-based TRM applied.
PUT	Total number of HTTP PUT methods that had response-based TRM applied.
HEAD	Total number of HTTP HEAD methods that had response-based TRM applied.
OPTION	Total number of HTTP OPTION methods that had response-based TRM applied.
DELETE	Total number of HTTP DELETE methods that had response-based TRM applied.
TRACE	Total number of HTTP TRACE methods that had response-based TRM applied.
Websocket	Total number of HTTP Websocket methods that had response-based TRM applied.
<b>Response Based Charging</b>	
GET	Total number of HTTP GET methods that had response-based charging applied.
POST	Total number of HTTP POST methods that had response-based charging applied.
CONNECT	Total number of HTTP CONNECT methods that had response-based charging applied.
PUT	Total number of HTTP PUT methods that had response-based charging applied.
HEAD	Total number of HTTP HEAD methods that had response-based charging applied.
OPTION	Total number of HTTP OPTION methods that had response-based charging applied.
DELETE	Total number of HTTP DELETE methods that had response-based charging applied.
TRACE	Total number of HTTP TRACE methods that had response-based charging applied.
Websocket	Total number of HTTP Websocket methods that had response-based charging applied.

## show active-charging analyzer statistics name icmpv6

Table 11: show active-charging analyzer statistics name icmpv6 Command Output Descriptions

Field	Description
<b>ACS ICMPv6 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.

Field	Description
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Uplink Bytes Fragmented	Total number of uplink bytes that were fragmented.
Downlink Bytes Fragmented	Total number of downlink bytes that were fragmented.
Uplink Pkts Fragmented	Total number of uplink packets that were fragmented.
Downlink Pkts Fragmented	Total number of downlink packets that were fragmented.
Uplink Bytes Invalid	Total number of invalid uplink bytes.
Downlink Bytes Invalid	Total number of invalid downlink bytes.
Uplink Pkts Invalid	Total number of invalid uplink packets.
Downlink Pkts Invalid	Total number of invalid downlink packets.

## show active-charging analyzer statistics name ip verbose

Table 12: show active-charging analyzer statistics name ip verbose Command Output Descriptions

Field	Description
<b>ACS IP Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Uplink Bytes Fragmented	Total number of uplink bytes that were fragmented.
Downlink Bytes Fragmented	Total number of downlink bytes that were fragmented.
Uplink Pkts Fragmented	Total number of uplink packets that were fragmented.
Downlink Pkts Fragmented	Total number of downlink packets that were fragmented.
Uplink Bytes Invalid Length	Total number of uplink bytes of invalid length.
Downlink Bytes Invalid Length	Total number of downlink bytes of invalid length.
Uplink Pkts Invalid Length	Total number of uplink packets of invalid length.
Downlink Pkts Invalid Length	Total number of downlink packets of invalid length.

Field	Description
Uplink Bytes Invalid Length (After Reassembly)	Total number of uplink bytes of invalid length after reassembly.
Downlink Bytes Invalid Length (After Reassembly)	Total number of downlink bytes of invalid length after reassembly.
Uplink Pkts Invalid Length (After Reassembly)	Total number of uplink packets of invalid length after reassembly.
Downlink Pkts Invalid Length (After Reassembly)	Total number of downlink packets of invalid length after reassembly.
Uplink Bytes Invalid Version	Total number of uplink bytes of invalid version.
Downlink Bytes Invalid Version	Total number of downlink bytes of invalid version.
Uplink Pkts Invalid Version	Total number of uplink packets of invalid version.
Downlink Pkts Invalid Version	Total number of downlink packets of invalid version.
Uplink Bytes Invalid Checksum	Total number of bytes received in uplink direction with invalid checksum errors.
Downlink Bytes Invalid Checksum	Total number of bytes received in downlink direction with invalid checksum errors.
Uplink Pkts Invalid Checksum	Total number of packets received in uplink direction with invalid checksum errors.
Downlink Pkts Invalid Checksum	Total number of packets received in downlink direction with invalid checksum errors.
Uplink Bytes IP reassembly Timeout	Total number of bytes in uplink traffic dropped due to IP reassembly timeout.
Uplink Pkts IP reassembly Timeout	Total number of packets in uplink traffic dropped due to IP reassembly timeout.
Downlink Bytes IP reassembly Timeout	Total number of bytes in downlink traffic dropped due to IP reassembly timeout.
Downlink Pkts IP reassembly Timeout	Total number of packets in downlink traffic dropped due to IP reassembly timeout.
Uplink Bytes IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in uplinked bytes reassembly.
Uplink Pkts IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in uplinked packets reassembly.
Downlink Bytes IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in downlinked bytes reassembly.
Downlink Pkts IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in downlinked packets reassembly.
Uplink Bytes received after reassembly	Total number of uplink bytes received after reassembly.
Uplink Pkts received after reassembly	Total number of uplink packets received after reassembly.
Downlink Bytes received after reassembly	Total number of downlink bytes received after reassembly.

Field	Description
Downlink Pkts received after reassembly	Total number of downlink packets received after reassembly.

## show active-charging analyzer statistics name ipv6

Table 13: show active-charging analyzer statistics name ipv6 Command Output Descriptions

Field	Description
<b>ACS IPv6 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Uplink Bytes Fragmented	Total number of uplink bytes that were fragmented.
Downlink Bytes Fragmented	Total number of downlink bytes that were fragmented.
Uplink Pkts Fragmented	Total number of uplink packets that were fragmented.
Downlink Pkts Fragmented	Total number of downlink packets that were fragmented.
Uplink Bytes Invalid	Total number of invalid uplink bytes.
Downlink Bytes Invalid	Total number of invalid downlink bytes.
Uplink Pkts Invalid	Total number of invalid uplink packets.
Downlink Pkts Invalid	Total number of invalid downlink packets.

## show active-charging analyzer statistics name ipv6 verbose

Table 14: show active-charging analyzer statistics name ipv6 verbose Command Output Descriptions

Field	Description
<b>ACS IPv6 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.

Field	Description
Total Downlink Pkts	Total number of packets downlinked.
Uplink Bytes Fragmented	Total number of uplink bytes that were fragmented.
Downlink Bytes Fragmented	Total number of downlink bytes that were fragmented.
Uplink Pkts Fragmented	Total number of uplink packets that were fragmented.
Downlink Pkts Fragmented	Total number of downlink packets that were fragmented.
Uplink Bytes Invalid Length	Total number of uplink bytes of invalid length.
Downlink Bytes Invalid Length	Total number of downlink bytes of invalid length.
Uplink Pkts Invalid Length	Total number of uplink packets of invalid length.
Downlink Pkts Invalid Length	Total number of downlink packets of invalid length.
Uplink Bytes Invalid Length (After Reassembly)	Total number of uplink bytes of invalid length after reassembly.
Downlink Bytes Invalid Length (After Reassembly)	Total number of downlink bytes of invalid length after reassembly.
Uplink Pkts Invalid Length (After Reassembly)	Total number of uplink packets of invalid length after reassembly.
Downlink Pkts Invalid Length (After Reassembly)	Total number of downlink packets of invalid length after reassembly.
Uplink Bytes IP reassembly Timeout	Total number of bytes in uplink traffic dropped due to IP reassembly timeout.
Uplink Pkts IP reassembly Timeout	Total number of packets in uplink traffic dropped due to IP reassembly timeout.
Downlink Bytes IP reassembly Timeout	Total number of bytes in downlink traffic dropped due to IP reassembly timeout.
Downlink Pkts IP reassembly Timeout	Total number of packets in downlink traffic dropped due to IP reassembly timeout.
Uplink Bytes IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in uplinked bytes reassembly.
Uplink Pkts IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in uplinked packets reassembly.
Downlink Bytes IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in downlinked bytes reassembly.
Downlink Pkts IP reassembly Max. Fragments reached	Total number of times Max fragments was reached in downlinked packets reassembly.

## show active-charging analyzer statistics name mipv6

Table 15: show active-charging analyzer statistics name mipv6 Command Output Descriptions

Field	Description
<b>ACS MIPv6 Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Uplink Pkts	Total number of packets uplinked.
Total PBU Intercepted	Total number of Proxy Binding Update (PBU) messages intercepted.
Total PBU Modified	Total number of modified Proxy Binding Update (PBU) messages.
Total PBU Discarded	Total number of discarded Proxy Binding Update (PBU) messages.

## show active-charging analyzer statistics name p2p protocol-group

Table 16: show active-charging analyzer statistics name p2p protocol-group Command Output Descriptions

Field	Description
<b>ACS P2P Stats:</b>	
<b>Generic</b>	
Uplink Bytes	The total number of bytes uplinked.
Downlink Bytes	The total number of bytes downlinked.
Uplink Pkts	The total number of packets uplinked.
Downlink Pkts	The total number of packets downlinked.
<b>Anonymous - access</b>	
Uplink Bytes	The total number of bytes uplinked.
Downlink Bytes	The total number of bytes downlinked.
Uplink Pkts	The total number of packets uplinked.
Downlink Pkts	The total number of packets downlinked.
<b>Business</b>	
Uplink Bytes	The total number of bytes uplinked.

Field	Description
Downlink Bytes	The total number of bytes downlinked.
Uplink Pkts	The total number of packets uplinked.
Downlink Pkts	The total number of packets downlinked.
<b>Communicator</b>	
Uplink Bytes	The total number of bytes uplinked.
Downlink Bytes	The total number of bytes downlinked.
Uplink Pkts	The total number of packets uplinked.
Downlink Pkts	The total number of packets downlinked.
<b>Cloud</b>	
Uplink Bytes	The total number of bytes uplinked.
Downlink Bytes	The total number of bytes downlinked.
Uplink Pkts	The total number of packets uplinked.
Downlink Pkts	The total number of packets downlinked.
<b>E-mail</b>	
Uplink Bytes	The total number of bytes uplinked.
Downlink Bytes	The total number of bytes downlinked.

<b>ACS SIP Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Pkts	Total number of packets uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Uplink Valid Pkts	Total number of valid packets uplinked.
Downlink Valid Pkts	Total number of valid packets downlinked.
Uplink Retry Pkts	Total number of retry packets uplinked.
Downlink Retry Pkts	Total number of retry packets downlinked.
Uplink Error Pkts	Total number of error packets uplinked.
Downlink Error Pkts	Total number of error packets downlinked.
Total SIP Calls	Total number of SIP calls.
Total SIP TCP Flows	Total number of SIP TCP flows.
Current SIP TCP Flows	Current number of SIP TCP flows.
Total SIP UDP Flows	Total number of SIP UDP flows.
Current SIP UDP Flows	Current number of SIP UDP flows.

Field	Description
SIP Request	<p>Displays the following SIP Requests.</p> <ul style="list-style-type: none"> <li>• INVITE Requests</li> <li>• ACK Requests</li> <li>• REGISTER Requests</li> <li>• BYE Requests</li> <li>• CANCEL Requests</li> <li>• PRACK Requests</li> <li>• MESSAGE Requests</li> <li>• OPTIONS Requests</li> <li>• SUBSCRIBE Requests</li> <li>• REFER Requests</li> <li>• UPDATE Requests</li> <li>• INFO Requests</li> <li>• PUBLISH Requests</li> <li>• NOTIFY Requests</li> </ul>
Total	Total number of SIP requests received by ECS SIP analyzer.
Retransmitted	Total number of SIP requests retransmitted by ECS SIP analyzer.
SIP Response	<p>Displays the following SIP Responses.</p> <ul style="list-style-type: none"> <li>• 1xx</li> <li>• 2xx</li> <li>• 3xx</li> <li>• 4xx</li> <li>• 5xx</li> <li>• 6xx</li> </ul>
Total	Total number of SIP responses received by ECS SIP analyzer.
Retransmitted	Total number of SIP responses retransmitted by ECS SIP analyzer.
SIP Advanced Session Stats	
Total Uplink Bytes	Total uplink bytes processed by SIP ALG.
Total Downlink Bytes	Total downlink bytes processed by SIP ALG.

Field	Description
Total Uplink Packets	Total uplink packets processed by SIP ALG.
Total Downlink Packets	Total downlink packets processed by SIP ALG.
Total SIP Calls	Total number of active SIP calls processed by SIP ALG.
Current SIP Calls	Current number of active SIP calls processed by SIP ALG.
Total SIP UDP Calls	Total number of SIP UDP calls processed by SIP ALG.
Current SIP UDP Calls	Current number of SIP UDP calls processed by SIP ALG.
Total SIP TCP Calls	Total number of SIP TCP calls processed by SIP ALG.
Current SIP TCP Calls	Current number of SIP TCP calls processed by SIP ALG.
SIP Request	<p>Displays the following SIP Requests.</p> <ul style="list-style-type: none"> <li>• Register: Total REGISTER requests.</li> <li>• Invite: Total INVITE requests.</li> <li>• Ack: Total ACK requests.</li> <li>• Bye: Total BYE requests.</li> <li>• Info: Total INFO requests.</li> <li>• Prack: Total PRACK requests.</li> <li>• Refer: Total REFER requests.</li> <li>• Cancel: Total CANCEL requests.</li> <li>• Update: Total UPDATE requests.</li> <li>• Message: Total MESSAGE requests.</li> <li>• Options: Total OPTIONS requests.</li> <li>• Publish: Total PUBLISH requests.</li> <li>• Subscribe: Total SUBSCRIBE requests.</li> <li>• Notify: Total NOTIFY requests.</li> </ul>
Total Received	Total number of SIP requests received by SIP ALG.
Total Transmitted	Total number of SIP requests transmitted by SIP ALG.
Retransmitted	Total number of SIP requests retransmitted by SIP ALG.

Field	Description
SIP Response	Displays the following SIP Responses. <ul style="list-style-type: none"> <li>• 1XX: Total 1xx responses.</li> <li>• 2XX: Total 2xx responses.</li> <li>• 3XX: Total 3xx responses.</li> <li>• 4XX: Total 4xx responses.</li> <li>• 5XX: Total 5xx responses.</li> <li>• 6XX: Total 6xx responses.</li> </ul>
Total Received	Total number of SIP responses received by SIP ALG.
Total Transmitted	Total number of SIP responses transmitted by SIP ALG.
Retransmitted	Total number of SIP responses retransmitted by SIP ALG.

## show active-charging analyzer statistics name tcp

Table 24: show active-charging analyzer statistics name tcp Command Output Descriptions

Field	Description
Uplink In Sequence RST Pkts	The total number of uplink in-sequence RST packets received.
Downlink In Sequence RST Pkts	The total number of downlink in-sequence RST packets received.
Uplink Out of Order RST Pkts	The total number of uplink OOS RST packets received.
Downlink Out of Order RST Pkts	The total number of downlink OOS RST packets received.
Uplink Out of Window RST Pkts	The total number of uplinks Out of Window (OOW) RST packets received.
Downlink Out of Window RST Pkts	The total number of downlink OOW RST packets received.
Uplink Challenge-Ack RST Pkts	The total number of uplink challenge-ack packets received
Downlink challenge-ack RST Pkts	The total number of downlink challenge-ack packets received.
Uplink challenge-ack RST Pkts Timeout	The total number of uplink challenge-ack packets not received within 2msl time.
Downlink challenge-ack RST Pkts Timeout	The total number of downlink challenge-ack packets not received within 2msl time.

## show active-charging analyzer statistics name tcp verbose

Table 25: show active-charging analyzer statistics name tcp verbose Command Output Descriptions

Field	Description
<b>ACS TCP Session Stats:</b>	
Total Uplink Bytes	The total number of bytes uplinked.
Total Downlink Bytes	The total number of bytes downlinked.
Total Uplink Pkts	The total number of packets uplinked.
Total Downlink Pkts	The total number of packets downlinked.
Uplink Bytes Retrans	The number of uplink bytes that were retransmitted.
Downlink Bytes Retrans	The number of downlink bytes that were retransmitted.
Uplink Pkts Retrans	The number of uplink packets that were retransmitted.
Downlink Pkts Retrans	The number of downlink packets that were retransmitted.
Uplink Zero len ACKs	The number of TCP zero length ACK packets uplinked.
Downlink Zero len ACKs	The number of TCP zero length ACK packets downlinked.
Total Non-Syn Flows	The number of total TCP flows without SYN.
Current Non-Syn Flows	The number of current TCP flows without SYN.
Uplink Out of Order Pkts Successfully Analyzed	The number of uplink out of order packets that were successfully analyzed.
Downlink Out of Order Pkts Successfully Analyzed	The number of downlink out of order packets that were successfully analyzed.
Uplink Out of Order Pkts Failure	The number of uplink out of order packets that failed.
Downlink Out of Order Pkts Failure	The number of downlink out of order packets that failed.
Uplink Out of Order Pkts Retransmitted	The number of uplink out of order packets that retransmitted.
Downlink Out of Order Pkts Retransmitted	The number of downlink out of order packets that retransmitted.
Downlink Window Size updated Pkts	The number of downlink packets whose packet window size was updated.
Uplink Out of Order Pkts Buffered	The number of uplink out of order packets buffered to validate the override of transmit-immediately configuration until x-header insertion is performed.
Downlink Out of Order Pkts Buffered	The number of downlink out of order packets buffered to validate the override of transmit-immediately configuration until x-header insertion is performed.

Field	Description
Uplink Bytes Invalid Length	The number of uplink bytes of invalid length.
Downlink Bytes Invalid Length	The number of downlink bytes of invalid length.
Uplink Pkts Invalid Length	The number of uplink packets of invalid length.
Downlink Pkts Invalid Length	The number of downlink packets of invalid length.
Uplink Bytes Out of Sequence	The number of uplink bytes out of sequence.
Downlink Bytes Out of Sequence	The number of downlink bytes out of sequence.
Uplink Pkts Out of Sequence	The number of uplink packets that were out of sequence.
Downlink Pkts Out of Sequence	The number of downlink packets that were out of sequence.
Uplink Bytes Invalid Close Wait	The total number of bytes received in uplink direction while system is in invalid wait state to close connection.
Downlink Bytes Invalid Close Wait	The total number of bytes received in downlink direction while system is in invalid wait state to close connection.
Uplink Pkts Invalid Close Wait	The total number of packets received in uplink direction while system is in invalid wait state to close connection.
Downlink Pkts Invalid Close Wait	The total number of bytes received in downlink direction while system is in invalid wait state to close connection.
Uplink Bytes Invalid Close State	The total number of bytes received in uplink direction while connection is in invalid closed state.
Downlink Bytes Invalid Close State	The total number of bytes received in downlink direction while connection is in invalid closed state.
Uplink Pkts Invalid Close State	The total number of packets received in uplink direction while connection is in invalid closed state.
Downlink Pkts Invalid Close State	Total number of packets received in downlink direction while connection is in invalid closed state.
Uplink Bytes Out of Order Timeout Failure	The total number of bytes received in uplink direction while timeout duration to wait for out of order packets is exhausted.
Downlink Bytes Out of Order Timeout Failure	The total number of bytes received in downlink direction while timeout duration to wait for out of order packets is exhausted.
Uplink Pkts Out of Order Timeout Failure	The total number of packets received in uplink direction while timeout duration to wait for out of order packets is exhausted.
Downlink Pkts Out of Order Timeout Failure	The total number of bytes received in downlink direction while timeout duration to wait for out of order packets is exhausted.
Uplink Bytes Out of Order Failure in Allocation	The total number of bytes received in uplink direction while allocation of out of order packet is failed.

Field	Description
Downlink Bytes Out of Order Failure in Allocation	The total number of bytes received in downlink direction while allocation of out of order packet is failed.
Uplink Pkts Out of Order Failure in Allocation	The total number of packets received in uplink direction while allocation of out of order packet is failed.
Downlink Pkts Out of Order Failure in Allocation	The total number of packets received in downlink direction while allocation of out of order packet is failed.
Uplink Pkts Invalid Window Size	The total number of packets received in uplink direction with invalid window size for buffer.
Uplink Bytes Invalid Window Size	The total number of bytes received in uplink direction with invalid window size for buffer.
Downlink Pkts Invalid Window Size	The total number of packets received in downlink direction with invalid window size for buffer.
Downlink Bytes Invalid Window Size	Total number of bytes received in downlink direction with invalid window size for buffer.
Uplink Pkts Invalid Checksum	The total number of packets received in uplink direction with invalid checksum errors.
Uplink Bytes Invalid Checksum	The total number of bytes received in uplink direction with invalid checksum errors.
Downlink Pkts Invalid Checksum	The total number of packets received in downlink direction with invalid checksum errors.
Downlink Bytes Invalid Checksum	The total number of bytes received in downlink direction with invalid checksum errors.

## show active-charging analyzer statistics name tftp

Table 26: show active-charging analyzer statistics name tftp Command Output Descriptions

Field	Description
<b>ACS TFTP Session Stats:</b>	
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total Uplink Packets	Total number of packets uplinked.
Total Downlink Packets	Total number of packets downlinked.
Total Read Sessions	Total number of read sessions.

Field	Description
Total Write Sessions	Total number of write sessions.
Total Invalid Control Packets	Total number of invalid control packets.
Total Invalid Data Packets	Total number of invalid data packets.
Total Packets with Unknown Request Type	Total number of packets with unknown request type.

## show active-charging bandwidth-policy name

Table 27: show active-charging bandwidth-policy name Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Bandwidth Policy Name	Name of the bandwidth policy.
<b>Flow Limit-for-Bandwidth ID and Group-ID Associations:</b>	
Flow Limit-for-Bandwidth ID	The ACS flow limit-for-bandwidth ID.
Group-ID	The ACS Bandwidth Policy Group ID.
Total number of bw-ids configured in Bandwidth-Policy <policy>	The total number of bandwidth IDs configured in the specified bandwidth policy.
Group-Limits for Group-ID	The group limits set for the group ID.
Rates & Actions	Lists the following rates and actions: <ul style="list-style-type: none"> <li>• Peak Data Rate</li> <li>• Peak Burst Size</li> <li>• Violate Action</li> <li>• Committed Data Rate</li> <li>• Committed Burst Size</li> <li>• Exceed Action</li> </ul>

Field	Description
Uplink	For bandwidth control in uplink direction indicates: <ul style="list-style-type: none"> <li>• Peak data rate in bits per second</li> <li>• Peak burst size in bytes</li> <li>• Violate action configured: discard/lower-ip-precedence</li> <li>• Committed data rate in bits per second</li> <li>• Committed burst size in bytes</li> <li>• Exceed action configured: discard/lower-ip-precedence</li> </ul>
Downlink	For bandwidth control in downlink direction indicates: <ul style="list-style-type: none"> <li>• Peak data rate in bits per second</li> <li>• Peak burst size in bytes</li> <li>• Violate action configured: discard/lower-ip-precedence</li> <li>• Committed data rate in bits per second</li> <li>• Committed burst size in bytes</li> <li>• Exceed action configured: discard/lower-ip-precedence</li> </ul>
Total number of group-limits configured in Bandwidth-Policy <policy>	The total number of group limits configured in the specified bandwidth policy.
Total bandwidth-policies found	The total number of bandwidth policies matching the specified criteria.

## show active-charging charging-action all

*Table 28: show active-charging charging-action all Command Output Descriptions*

Field	Description
Service Name	Name of the Active Charging Service.
Charging Action Name	Name of the charging action. There may be several charging actions configured per charging service.
Content ID	The content ID to use in the generated billing records as the Rating-Group Attribute Value Pair (AVP) for this charging action.
Service ID	Service identifier value configured in the Charging Action mode.
PCO	Specifies the PCO value.

Field	Description
EDRs	Indicates whether Event Detail Record (EDR) billing action for packets matching this charging action is enabled, and the EDR format. <b>Important</b> This field is available only in 12.1 and earlier releases.
Charging EDRs	Indicates whether EDR billing action for packets matching this charging action is enabled, and the charging EDR format name. <b>Important</b> This field is available only in 12.2 and later releases.
Reporting EDRs	Indicates whether EDR billing action for packets matching this charging action is enabled, and the reporting EDR format name. <b>Important</b> This field is available only in 12.2 and later releases.
EGCDRs	Indicates whether eG-CDRs for billing of the packets matching with this charging action is enabled.
UDRs	Indicates whether UDR generation is enabled.
Flow Idle Timeout	Displays the idle-timeout for flows inspected by ECS.
Limit For Flow Type	Indicates whether Limit For Flow Type is enabled/disabled.
Limit For Uplink Bandwidth	Indicates whether Limit For Uplink Bandwidth is enabled/disabled.
Limit For Downlink Bandwidth	Indicates whether Limit For Downlink Bandwidth is enabled/disabled.
Throttle-Suppress Timeout	Displays the configured timeout value in seconds or displays "n/a" if not configured.
QoS Renegotiate Traffic-Class	Indicates whether QoS Renegotiate Traffic-Class is enabled/disabled.
QoS Class Identifier	Indicates whether QoS Class Identifier is configured.
IP Type of Service	Indicates whether IP Type of Service is configured.
Flow-Mapping Idle Timeout	Indicates the flow-mapping timeout value, in seconds.
DNS Proxy Bypass	Indicates whether DNS Proxy Bypass is enabled/disabled. If enabled, the DNS packets bypass interception at the session manager when readdressing for flow occurs, and go through ECS-based DNS redirection.
Count Retransmissions	Indicates whether Count Retransmissions is enabled.
Content Filtering	Indicates whether Content Filtering is enabled.
Type of Service	Displays the service type (PDSN, GGSN, etc.)
Count Retries	Indicates if the ECS service is counting retransmitted packets per subscriber.
GCDRs	Indicates if G-CDRs are enabled or disabled.
Discard	Specifies if the packets that match the flow should be discarded.

Field	Description
Credit Control	Specifies if credit control is being used in this charging action
Xheader-Insert	Indicates the x-header format name.
Message Type	Indicates the message type - Request or Response.
DNS Tethering Hostnames Cache	Indicates whether caching from DNS flows for DNS-based tethering detection is enabled or disabled.
<b>Flow Action</b>	
Redirect URL	Indicates whether the redirection of URL for packets that matches a ruledef is enabled/disabled. If enabled, redirects the HTTP packets matched to this Ruledef to the specified URL.
Clear Quota Retry Timer	Indicates whether Clear Quota Retry Timer is enabled/disabled. If enabled, resets the Credit Control Application quota retry timer for specific subscriber upon redirection.
Conditional Redirect	Indicates whether Conditional Redirect end token action is enabled/disabled. If enabled, conditionally redirects the HTTP packets matched to a configured user-agent to a specified URL.
Discard	Indicates whether discard action is enabled/disabled. If enabled, discards the packet associated with the charging action.
Terminate-Flow	Indicates whether terminate flow action is enabled/disabled. If enabled, terminates the TCP connection gracefully between the subscriber and external server and sends a TCP FIN to the subscriber and a TCP RST to the server. If the flow does not use TCP, this option simply discard the packets. This option is used for flows that use TCP only.
PCO-Custom1 Value	Indicates the configured PCO value. Displays n/a if this value is not configured.
PCO-Custom1-10 value	Indicates the action value for multiple operator-specific PCOs. The value can range from 1 to 10.
Rulebase Change	Indicates whether the rulebase change action is enabled/disabled. If enabled, displays the name of the rulebase the call should be changed to when the charging action is applied.
<b>Billing Action</b>	
Event Data Record	Indicates whether EDRs are enabled/disabled.
GGSN charging Data Record	Indicates whether GGSN CDRs are enabled/disabled.
User Data Record	Indicates whether UDRs are enabled/disabled.
Radius Accounting Record	Indicates whether RADIUS accounting records is enabled/disabled.

Field	Description
Charge Volume	Indicates the charge volume for packet-length (payload).
Predefined Rule Deactivation	Indicates whether the predefined rule/Group of ruledefs deactivation is enabled/disabled.
Total charging action(s) found	The number of charging actions that matched the criteria.
Readdressing	Indicates whether CAE re-addressing on the Mobile Video Gateway is enabled or disabled.  <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.
Percentage Rate Reduction	If enabled, indicates the configured bit rate reduction for mobile video as a percentage of the input bit rate.  <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.
TFT updates to UE	Indicates if the selective TFT suppression feature is enabled or disabled for all bearers including default and dedicated bearers.

## show active-charging charging-action name

Table 29: show active-charging charging-action name Command Output Description

Field	Description
Encryption Type	Indicates the encryption algorithm used, which is either rc4md5 or aes-256-gcm-sha
Salt	Indicates if the salt flag is turned on or off.
Key	Indicates the key that is used for encryption of xheader fields.  <b>Note</b> The supported length for rc4md5 is 8 to 15 string size and for aes256g the supported length is 32 string size, which is equal to 256 bits.

## show active-charging charging-action statistics name

Table 30: show active-charging charging-action statistics name Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Charging Action Name	Name of the charging action. There are be several charging actions per charging service.
Uplink Pkts Retrans	Total number of uplink packets that were retransmitted.

Field	Description
Downlink Pkts Retrans	Total number of downlink packets that were retransmitted.
Uplink Bytes Retrans	Total number of uplink bytes that were retransmitted.
Downlink Bytes Retrans	Total number of downlink bytes that were retransmitted.
Upl Pkts Readdressed	Total number of readdressed uplink packets.
Dnl Pkts Readdressed	Total number of readdressed downlink packets.
Upl Bytes Readdressed	Total number of readdressed uplink bytes.
Dnl Bytes Readdressed	Total number of readdressed downlink bytes.
PP Upl Pkts Readdressed	Total number of post-processed uplink packets readdressed.
PP Dnl Pkts Readdressed	Total number of post-processed downlink packets readdressed.
PP Upl Bytes Readdressed	Total number of post-processed uplink bytes readdressed.
PP Dnl Bytes Readdressed	Total number of post-processed downlink bytes readdressed.
Bytes Charged Yet Packet Dropped	Total number of bytes charged although packet is dropped.  For example, a concatenated HTTP GET packet contains one complete GET request and part of another GET request (partial). The partial packet gets completed in the next HTTP packet but is eventually dropped for some reason. In this case, the partial bytes of the GET request are charged in the earlier packet, however, the packet as a whole is dropped.
Predef-Rules Deactivated	Total number of times predefined rules/Group of ruledefs is deactivated via charging action.
<b>Throttle-Suppress Stats:</b>	
Uplink Bytes	Total number of uplink bytes for which bandwidth limiting is suppressed.
Downlink Bytes	Total number of downlink bytes for which bandwidth limiting is suppressed.
<b>Readdressing Failures Statistics (Packets):</b>	
Non SYN Flow	Total number of readdressing packets with a non SYN flow failure.
Duplicate Key	Total number of readdressing packets with a duplicate key failure.
Dropped Pkts	Total number of packets discarded on readdressing failure.  If the <b>discard-on-failure</b> option is not enabled using the <b>flow action readdress</b> command, this value will be zero.
<b>XHeader Information:</b>	
For Request	
XHeader Bytes Injected	Total number of x-header bytes injected for Request messages.

Field	Description
XHeader Pkts Injected	Total number of x-header packets injected for Request messages.
XHeader Bytes Removed	Total number of x-header bytes removed for Request messages as a result of the anti-spoofing feature configuration.
XHeader Pkts Removed	Total number of x-header packets removed for Request messages as a result of the anti-spoofing feature configuration.
IP Frags consumed by XHeader	Total number of IP fragments consumed by x-header enrichment for Request messages.
For Response	
XHeader Bytes Injected	Total number of x-header bytes injected for Response messages.
XHeader Pkts Injected	Total number of x-header packets injected for Response messages.
XHeader Bytes Removed	Total number of x-header bytes removed for Response messages as a result of the anti-spoofing feature configuration.
XHeader Pkts Removed	Total number of x-header packets removed for Response messages as a result of the anti-spoofing feature configuration.
IP Frags consumed by XHeader	Total number of IP fragments consumed by x-header enrichment for Response messages.
For Local Response	
XHeader Bytes Injected	Total number of x-header bytes injected for local Response messages.
XHeader Pkts Injected	Total number of x-header packets injected for local Response messages.
<b>NCQoS Discarded Packets:</b>	
Rule Bound elsewhere	Total number of rules bound elsewhere.
Rule Binding pending	Total number of rule binding pending.
Unbound Rule hit	Total number of unbound rule hits.
Statistic	Statistic type.
flow-action	Total number of matching flows/sessions/packets for the statistic.
pp-flow-action	Total number of matching flows/sessions/packets for the statistic.
flow-limit	Total number of matching flows/sessions/packets for the statistic.
bandwidth-limit	Total number of matching flows/sessions/packets for the statistic.
Total Charging Action(s) matched	Total number of charging actions matching the criteria.
<b>CAE-Readdressing:</b>	
Requests CAE-Readdressed	Total number of request readdressing done.
Responses CAE-Readdressed	Total number of response readdressing done.

Field	Description
Requests having xheader inserted	Total number of HTTP requests with x-headers inserted.
Total CAE-Readdressed Uplink Bytes	Total number of uplink bytes readdressed.
Total CAE-Readdressed Uplink Packets	Total number of uplink packets readdressed.
Total CAE-Readdressed Downlink Bytes	Total number of downlink bytes readdressed.
Total CAE-Readdressed Downlink Packets	Total number of downlink packets readdressed.
Total Charging action hit - Req. Readdr.	Total number of charging action hits based on HTTP request.
Total Charging action hit - Resp. Readdr	Total number of charging action hits based on HTTP response.
Proxy Disable Success	Total number of flows with proxy disabled.
Flows connected to CAE	Total number of flows connected to the CAE.
<b>CAE Readdressing Error Conditions</b>	
Total connect failed to CAE	Total number of connections failed to the CAE.
Req. Readdr. - pipelined case	Total number of pipelined requests skipped from doing readdressing.
Resp. Readdr. - pipelined case	Total number of pipelined response skipped from doing readdressing.
Req. Readdr. - Socket Mig. failed	Total number of TCP socket migration failure during request readdressing.
Skipped Resp. Readdr. - partial resp hdr	Total number of response readdressing skipped due to partial response.
Resp. Readdr. - Socket Mig. failed	Total number of TCP socket migration failure during response readdressing.
Total CAE load balancer failed	Total number of load balancer failures to find the video server (CAE) for readdressing.
Total MVG xheader insertion failed	Total number of MVG x-header insertion failures. <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.
Proxy Disable Failed	Total number of times the proxy disable function failed.
Strip URL:	
Successful Token stripped	Total number of tokens stripped successfully.
Total strip URL failure	Total number of URL token stripping failures.
Failure - Missing config	Total number of failures due to missing configuration.

Field	Description
Failure - Existing flow bid	Total number of failures due to existing flow action bid.
Failure - Token matching failed	Total number of failures due to token match fail.
Failure - Empty packet	Total number of failures due to empty packet.
Failure - Req end not found	Total number of failures due to request end not found.
Failure - Subset of big token	Total number of failures due to subset of big token.
URL-Readdressing:	
Requests URL-Readdressed	Total number of URL re-addressed requests.
Total Charging action hit - Req. Readdr.	Total number of charging action hits based on request re-addressing.
Proxy Disable Success	Total number of flows the proxy disabled successfully.
Flows connected to URL Server	Total number of flows connected to URL server.
URL Readdressing Error Conditions:	
Total connect failed to URL Server	Total number of failed connections to the URL server.
URL Readdress - pipelined case	Total number of pipelined requests skipped during URL re-addressing.
URL Readdress - Socket Mig. failed	Total number of TCP socket migration failure during URL re-addressing.
Proxy Disable Failed	Total number of times the proxy disabled function failed.

## show active-charging content-filtering category policy-id all

Table 31: show active-charging content-filtering category policy-id all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Content Filtering Policy	The Content Filtering Policy ID.
<b>Content Filtering Categories</b>	
Category	Category of the content rated.
Priority	Priority of the CF category in the CF Policy.
Action	Action taken for the indicated result of CF analysis.
Content Insert	The content string inserted in place of message returned from prohibited or restricted site or content server.

Field	Description
Redirect	The URL to redirect subscribers.
Reply Code	The reply code specified for www-reply-code-and-terminate-flow action.
EDR	The EDR file format name to generate separate CF EDRs based on action and content category.
Failure Action	The failure end condition if rating cannot be performed.
Discarded-Flow-Content-ID	The content ID for the discarded flows. If not configured, this field is not displayed.

## show active-charging content-filtering category statistics rulebase name

Table 32: show active-charging content-filtering category statistics rulebase name Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service in which category-based content filtering application is configured.
Rulebase Name	Name of rulebase for category-based content filtering application.
<b>Content Filtering Statistics</b>	
Flows discarded	Total number of flows discarded in content filtering application.
Flows redirected	Total number of flows redirected in content filtering application.
Flows allowed	Total number of flows allowed in content filtering application.
Flows terminated	Total number of flows terminated in content filtering application.
Flows discarded with content insertion	Total number of flows discarded and information content inserted in header of flow in content filtering application.
Total Flows blocked	Total number of flows blocked in content filtering application.
Total Number of dynamic DB lookups	Total number of lookups in dynamic database for Category-based Content Filtering application. This counter is not available in 9.0 and later releases.
Total number of static DB lookups	Total number of lookups in static URL database for category based content filtering application.

Field	Description
Total number of successful Cache lookups	The total number of successful lookups in cache memory for URLs. <b>Note</b> From Release 21.4, this field is excluded from the output in support of the Talos Security Intelligence Database Support for URL Classification feature.
Total number of unknown URLs	Total number of flows/requests with unknown URL.
<b>Actions For Rating Attempts Not Completed</b>	
Flows discarded	Total number of flows discarded in content filtering application.
Flows redirected	Total number of flows redirected in content filtering application.
Flows allowed	Total number of flows allowed in content filtering application.
Flows terminated	Total number of flows terminated in content filtering application.
Flows discarded with content insertion	Total number of flows discarded and information content inserted in header of flow in content filtering application.
Total Flows blocked	Total number of flows blocked in content filtering application.
Time taken for rating	A URL is classified (rated) as belonging to a distinct category (search, portal, etc.). This column displays the time taken to rate the URL in ms, in time slots of 100 ms, up to 1000 ms, and above 1000 ms. <b>Note</b> From Release 21.4, the following changes are made to the statistics of this field in support of the Talos Security Intelligence Database Support for URL Classification feature: <ul style="list-style-type: none"> <li>• The &gt; <b>50ms</b> value is excluded from the output.</li> <li>• The following sub-fields are added to the “Time taken for rating” field: <ul style="list-style-type: none"> <li>• 50-100ms</li> <li>• 100-200ms</li> <li>• 200-300ms</li> <li>• 300ms</li> </ul> </li> </ul>
Number of URLs	Indicates the number of URLs rated in each time slot.
Number of URLs (SRDB)	Indicates the number of URLs rated in a specific time slot from static rating database (SRDB).
Number of URLs (Cache)	Indicates the number of URLs rated in a specific time slot from the cached list of URLs in memory.
Attempts not completed	Indicates the number of URL rating attempts not completed.

Field	Description
Total rulebases matched	Total number of rulebases that matched the criteria.

## show active-charging content-filtering category statistics

Table 33: show active-charging content-filtering category statistics Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service in which category-based content filtering application is configured.
<b>Cumulative Content Filtering Statistics:</b>	
Flows discarded	Total number of flows discarded.
Flows redirected	Total number of flows redirected.
Flows allowed	Total number of flows allowed.
Flows terminated	Total number of flows terminated.
Flows discarded with content insertion	Total number of flows discarded and content inserted in header of flow.
Total Flows blocked	Total number of flows blocked.
Total Number of dynamic DB lookups	Total number of lookups in dynamic database. This counter is not available in 9.0 and later releases.
Total number of static DB lookups	Total number of lookups in static URL database.
Total number of successful Cache lookups	Total number of successful URL lookups in cache memory. <b>Note</b> From Release 21.4, this field is excluded from the output in support of the Talos Security Intelligence Database Support for URL Classification feature.
Total number of unknown URLs	Total number of flows/requests with unknown URL.
<b>Failure Action (Rating Attempts Not Completed):</b>	
Flows discarded	Total number of flows discarded due to failure action.
Flows redirected	Total number of flows redirected due to failure action.
Flows allowed	Total number of flows allowed due to failure action.
Flows terminated	Total number of flows terminated due to failure action.
Flows discarded with content insertion	Total number of flows discarded and information content inserted in header of flow due to failure action.

Field	Description
Total Flows blocked	Total number of flows blocked due to failure action.
Time taken for rating	<p>A URL is classified (rated) as belonging to a distinct category (search, portal, etc.). This column displays the time taken to rate the URL in ms, in time slots of 100 ms, up to 1000 ms, and above 1000 ms.</p> <p><b>Note</b> From Release 21.4, the following changes are made to the statistics of this field in support of the Talos Security Intelligence Database Support for URL Classification feature:</p> <ul style="list-style-type: none"> <li>• The &gt; <b>50ms</b> value is excluded from the output.</li> <li>• The following sub-fields are added to the “Time taken for rating” field: <ul style="list-style-type: none"> <li>• 50-100ms</li> <li>• 100-200ms</li> <li>• 200-300ms</li> <li>• 300ms</li> </ul> </li> </ul>
Number of URLs	Total number of URLs rated in each time slot.
Attempts not completed	Total number of URL rating attempts not completed.
<b>Cumulative Dynamic Content Filtering Statistics</b>	
Dynamic Flows discarded	Total number of dynamic flows discarded.
Dynamic Flows redirected	Total number of dynamic flows redirected.
Dynamic Flows allowed	Total number of dynamic flows allowed.
Dynamic Flows terminated	Total number of dynamic flows terminated.
Dynamic Flows discarded with content insertion	Total number of dynamic flows discarded and content inserted in header of flow.
Total Dynamic Flows blocked	Total number of dynamic flows blocked.
Total Number of dynamic lookups	Total number of dynamic lookups.
Total number of unknown URLs	Total number of flows/requests with unknown URLs.
Response codes not in range 2xx	Number of responses that were not sent for dynamic rating as the response was not in the 2xx range.
<b>Dynamic Failure Action (Rating Attempts Not Completed):</b>	
Flows discarded	Total number of flows discarded due to failure action.
Flows redirected	Total number of flows redirected due to failure action.

Field	Description
Flows allowed	Total number of flows allowed due to failure action.
Flows terminated	Total number of flows terminated due to failure action.
Flows discarded with content insertion	Total number of flows discarded and information content inserted in header of flow due to failure action.
Total Flows blocked	Total number of flows blocked due to failure action.
Time taken for Dynamic rating	A URL is classified (rated) as belonging to a distinct category (search, portal, etc.). This column displays the time taken to rate the URL in ms, in time slots of 100 ms, up to 1000 ms, and above 1000 ms.
Number of URLs	Total number of URLs rated in each time slot.
Attempts not completed	Total number of URL rating attempts not completed.
Number of Packets Hit per Category	Indicates the specific category and the number of packets hit per category. If during runtime, an x-category was added, the x-category is also displayed.
Number of Packets Blocked per Category	Indicates the specific category and the number of packets blocked per category. If during runtime, an x-category was added, the x-category is also displayed.
Total Responses Inspected	Indicates the number of responses eligible for dynamic rating (i.e. rated as UNKNOW / DYNAM by static rating when dynamic rating is enabled)
Responses Buffered	Indicates the number of responses actually buffered.
Total Dynamic Lookups	Indicates the total number of dynamic lookups of URLs.
Lookups Completed	Indicates the total number of lookups completed.
Responses Too Big	Indicates the size of response more than the maximum value allowed (256KB).
Out of Rating Buffer	Indicates the out of rating buffer limit.
Min Response Size	Indicates the size of the smallest response inspected.
Max Response Size	Indicates the size of the largest response inspected.
Session QLimit Exceeded	Indicates the number of times we exceeded queue limit for a session (i.e. limit on number of packets that can be queued).
Max Pkt per Session	Indicates the maximum number of packets buffered for a single session.
Current Active Sessions	Indicates the current number of responses subjected to dynamic CF.
Max Active Sessions	Indicates the maximum number of responses subjected to dynamic CF simultaneously.

## show active-charging content-filtering server-group name

Table 34: show active-charging content-filtering server-group name Command Output Descriptions

Field	Description
Content Filtering Group	Name of the Content Filtering Server Group (CFSG).
Context	The context in which the CFSG is configured.
Origin Address	IP address of the origin endpoint or ICAP client.
Response Timeout	The response-timeout duration configured to wait for response.
Connection Retry Timeout	The connection retry timeout duration configured to check the TCP connection status between ICAP sever and client.
Dictionary	The dictionary used for encoding requests to the server(s).
Timeout Action	The action configured for connection timeout.
Deny Message	The text string message that is returned to the subscriber in a deny response.
URL-extraction	The ICAP URL extraction mode: <ul style="list-style-type: none"> <li>• after-parsing: Percent-encoded hex characters in URLs sent from the ACF client to the ICAP server are converted to corresponding ASCII characters and sent.</li> <li>• raw: The URLs contain percent-encoded hex characters as is.</li> </ul>
Content Filtering Group Connections	The total number of CF server group connections open.
Priority	Displays the priority of the CF server for which statistics has to be displayed.
ICAP Address (Port)	Displays the IP address and port number of ICAP server within CF Server Group.
Max Outstanding	The total number of unanswered outstanding messages to this ICAP server.
ACSMgr Instance	Number of ACS Manager instance.
Connection State	Status of ACS Manager instance for CF server group connection.
Total content filtering groups matching specified criteria	The total number of CFSG matching the criteria.

# show active-charging content-filtering server-group statistics verbose

Table 35: show active-charging content-filtering server-group statistics verbose Command Output Descriptions

Field	Description
Content Filtering Group	Name of the Content Filtering Server Group (CFSG).
<b>Connection Statistics</b>	
Current Open Connections	Total number of open connections.
Connection DHOST requests	Total number of DHOST requests.
Successful Connections	Total number of successful connections.
Connections DHOST remove	Total number of connections removed from DHOST.
Connection SHUTDOWN req	Total number of requests for SHUTDOWN.
ACF Unreachable(read)	Total number of attempts for Active Content Filter server (ICAP server) to read.
ACF Unreachable(write)	Total number of attempts for Active Content Filter server (ICAP server) to write.
Reconnect attempts	Total number of reconnect attempts for ACF server (ICAP server).
Connection Timeout	Total number of connections timeout after reconnect attempts for ACF server (ICAP server).
<b>Connection Failure Statistics</b>	
Connection DHOST errors	Total number of DHOST errors in connection.
Connection CONNECT error	Total number of CONNECT errors in connection.
Socket open errors	Total number of errors due to SOCKET open in connection.
Connection bind errors	Total number of BIND errors in connection.
Connection setvr errors	Total number of SETVER errors in connection.
Connection NONBLOCK errors	Total number of NONBLOCK errors in connection.
Connection SHUTDOWN errors	Total number of SHUTDOWN errors in connection.
Incomplete 3-way handshaking	Total number of errors due to incomplete 3-way handshaking in TCP connection.
<b>ACF Statistics</b>	
ACF Requests Created	Total number of requests created for ACF.
Response Timeout	Total number of response timeout for requests to ACF.

Field	Description
Write request success	Total number of successful WRITE requests.
Write request failed	Total number of failed WRITE requests.
Read response success	Total number of successful READ response.
Read response failed	Total number of failed READ response.
HTTP Permit	Total number of HTTP URLs permitted from ACF.
WAP Permit	Total number of WAP URLs permitted from ACF.
HTTP Deny	Total number of HTTP URLs denied from ACF.
WAP Deny	Total number of WAP URLs denied from ACF.
HTTP Redirect	Total number of HTTP URLs redirected from ACF.
WAP Redirect	Total number of WAP URLs redirected from ACF.
RTSP Permit	Total number of RTSP URLs permitted from ACF.
RTSP Deny	Total number of RTSP URLs denied from ACF.
RTSP Redirect	Total number of RTSP URLs redirected from ACF.
Client Errors(4xx)	Total number of client ICAP response errors.
Server Errors(5xx)	Total number of server ICAP response errors.
Invalid ACTION	Total number of invalid ACTION message from ACF.
Redirect URL not defined	Total number of errors due to undefined redirect URL.
Buffer List Empty	Total number of errors due to empty buffer list.
<b>Failure Action (communication failure with server-group):</b>	
Permit	Total number of connections permitted after connection failure.
Content Insertion	Total number of connections with content inserted after connection failure.
Discard	Total number of connections discarded after connection failure.
Terminate Flow	Total number of connections terminated after connection failure.
Redirect URL	Total number of connections redirected after connection failure.
Total action taken	Total number of actions taken after connection failure.
Num pkts dropped for DENY	Total number of packets dropped after denying the connection due to failure in connection.
Num pkts dropped for REDIRECT	Total number of packets dropped after redirecting the connection due to failure in connection.

Field	Description
Num pkts dropped for DENY Timeout action	Total number of packets dropped after denying the connection due to timeout action.
Num pkts dropped for REDIRECT Timeout action	Total number of packets dropped after redirecting the connection due to timeout action.
<b>Failure Action (communication with server-group not attempted):</b>	ICAP stats indicating failure (like memory allocation failure, server connection error, etc) on ICAP before a request is sent to the ICAP server.
Permit	Total number of connections permitted after connection failure.
Content Insertion	Total number of connections with content inserted after connection failure.
Discard	Total number of connections discarded after connection failure.
Terminate Flow	Total number of connections terminated after connection failure.
Redirect URL	Total number of connections redirected after connection failure.
<b>ACF Req Error Statistics</b>	Statistics related to ACF request errors.
Host field Null	Total number of HTTP GET requests which has the host field NULL.
URL Invalid	Total number of nonblank URLs with strlen != 0 but URL having " ", \t, \n characters only.
Host same as ICAP server:port	Total number of HTTP GET requests with host same as the configured ICAP server port.
<b>ACF Resp Parse Statistics</b>	Statistics related to ACF response parsing.
Parse ACF resp success	Total number of successful ACF parse response.
Parse ACF resp ver err	Total number of successful ACF parse response version error.
<b>Misc Statistics</b>	Miscellaneous statistics.
Total pkts sent	Total number of packets sent through ICAP connection.
Invalid ACF group config	Total number of errors due to invalid CF Server Group (Active Content Filter server groups) configuration.
Invalid bind address	Total number of errors due to invalid binding address configuration.
Invalid ICAP address	Total number of errors due to invalid ICAP server addresses.
<b>ICAP queue length statistics</b>	
SessionMgr ID	Session Manager ID.
ICAP queue length	Queue size of outstanding ICAP requests per Session Manager.
<b>Histogram of ICAP Server's Response time</b>	

Field	Description
Response Time(ms)	Response time slots, in milliseconds.
No Of Responses	Number of responses per time slot.

## show active-charging credit-control misc-info max-backpressure

Table 36: show active-charging credit-control misc-info max-backpressure Command Output Descriptions

Field	Description
Instance	The session manager instance number.
Max-backpressure	The maximum number of sessions that are in backpressured (unable to send message due to message queue being full) state for all active or specific session manager instance(s).
Time	The timestamp at which the maximum backpressure happened.
Current-Backpressured	Number of sessions that are currently in backpressured state.
Monitoring-time	The timestamp from when the backpressure monitoring is happening. This field helps to know when the last time reset is applied.

## show active-charging credit-control session-states

Table 37: show active-charging credit-control session-states Command Output Descriptions

Field	Description
Charging	Number of sessions/categories in charging state.
NoCharge	Number of sessions/categories in free-of-charge (received 4011 at MSCC level) state.
Blacklist Service Denied	Number of sessions/categories in Service-Denied (received 4010 at MSCC level) state.
In releases prior to StarOS 21.26: Blacklist Rating Failed From StarOS 21.26 and later releases: Blockedlist Rating Failed	Number of sessions/categories in Rating-Failed (received 5031 at MSCC level) state.

Field	Description
In releases prior to StarOS 21.26: Blacklist Auth Rejected From StarOS 21.26 and later releases: Blockedlist Auth Rejected	Number of sessions/categories in Auth-Rejected (received 5003 or 5012 at MSCC level) state.
Blacklist Limit Reached From StarOS 21.26 and later releases: Blockedlist Limit Reached	Number of sessions/categories in Limit-Reached (received 4012 at MSCC level) state.
Blacklist Final Unit From StarOS 21.26 and later releases: Blockedlist Final Unit	Number of sessions/categories in FUI-Terminated state at MSCC level.
In releases prior to StarOS 21.26: Blacklist Other From StarOS 21.26 and later releases: Blockedlist Other	Number of sessions/categories in Blockedlisted state after recovery.
Pending Initial Request	Number of sessions pending for Initial Credit-Control Answer from the server.
Pending Update Request	Number of sessions pending for Update Credit-Control Answer from the server.
Pending Terminate Request	Number of sessions pending for Terminate Credit-Control Answer from the server.
Pending Event Request	Number of sessions pending for Credit-Control Answer Event message from the server.
Backpressured	Number of sessions/categories in backpressured (unable to send message due to message queue being full) state.
Assume-Positive	Number of sessions currently in Assume Positive state.  <b>Important</b> This statistic is customer-specific. For more information, please contact your local Cisco account representative.

# show active-charging credit-control statistics

Table 38: show active-charging credit-control statistics Command Output Descriptions

Field	Description
Active Charging Service	Name of the Active Charging Service.
Credit Control Group	Name of the credit control group. This field is displayed only if there are credit control group(s) configured.
<b>CC Session Stats</b>	
Total Current Sessions	Total number of credit control sessions active.
Total ECS Adds	Total number of ECS sessions added to credit control application.
Total CC Starts	Total number of credit control sessions started.
Total Session Updates	Total number of credit control sessions updated.
Total Terminated	Total number of credit control sessions terminated.
CC Session Failovers	Total number of credit control sessions failed.
<b>CC Message Stats</b>	
Total Messages Received	Total number of credit control messages received.
Total Messages Sent	Total number of credit control messages sent.
Total CC Requests	Total number of Credit Control Request (CCR) messages that went out from system to the credit control server. The CCR can be Initial/Update or Terminate.
Total CC Answers	Total number of Credit Control Answer (CCA) messages that came into system from credit control server.
CCR-Initial	Total number of Initial Credit Control Request (CCR-Initial) messages that went out from system to the credit control server.
CCA-Initial	Total number of Initial Credit Control Answer (CCA-Initial) messages that came into system from Diameter Server.
CCA-Initial Accept	Total number of CCA-Initial-Accept (Initial Credit Control Answer sent and accepted) messages that came into system from Credit Control Server.
CCA-Initial Reject	Total number of CCA-Initial-Reject (Initial Credit Control Answer sent and rejected.) messages that came into system from credit control server.
CCA-Initial Timeouts	Total number of CCA-Initial-Timeouts (Initial Credit Control Answer sent and timed out) messages that came into system from credit control server.

Field	Description
CCR-Update	Total number of CCR-Updates (Credit Control Request with Update) messages that went out from system to the credit control server.
CCA-Update	Total number of CCA-Update (Credit Control Answer for update) messages that came into system from credit control server.
CCA-Update Timeouts	Total number of CCA-Update Timeouts (Credit Control Answer for update sent and timed out) messages that came into system from credit control server.
CCR-Final	Total number of CCR-Final (Credit Control Request with Final) messages that went out from system to the credit control server.
CCA-Final	Total number of CCA-Final (Credit Control Answer for final update sent) messages that came into system from credit control server.
CCA-Final Timeouts	Total number of CCA-Final Timeouts (Credit Control Answer for final update sent and time-out) messages that came into system from credit control server.
CCR-Event	Total number of CCR-Event (Credit Control Request with Event) messages that went out from system to the credit control server.
CCA-Event	Total number of CCA-Event (Credit Control Answer for Event update sent) messages that came into system from credit control server.
CCA-Event Timeouts	Total number of times the tx-timer expired waiting for a CCA-Event message from the server.
ASR	Total number of Abort-Session Request messages came into system from credit control server.
ASA	Total number of Abort-Session Accept messages sent from system to credit control server. This message will be followed by a CCR-Terminate to terminate the session.
RAR	Total number of ReAuth Request messages that came into system from Diameter Server.
RAA	Total number of ReAuth Accept messages sent from system to Credit Control server. This message is followed by a CCR-Update to update the Credit Control server about the session.
CCA Dropped	Total number of Credit Control Answer (CCA) messages dropped by system.
<b>CC Message Error Stats</b>	
Diameter Protocol Errs	Total number of message errors due to Diameter protocol errors.

Field	Description
Transient Failures	Total number of errors that fall within the transient failures category are used to inform a peer that the request could not be satisfied at the time it was received, but may be able to satisfy the request in the future. The Result-Code data field contains 4xxx for Transient Failures.
Permanent Failures	Total number of errors that fall within the permanent failures category are used to inform the peer that the request failed, and should not be attempted again. The Result-Code data field contains 5xxx for Permanent Failures.
Bad Answers	Total number of message errors due to invalid responses.
Unknown Session Reqs	Total number of message errors due to invalid session requests.
Unknown Command Code	Total number of message errors due to invalid/unknown command code (ASR, RAR).
Request Timeouts	Total number of message errors due to request timeout.
Parse Errors	Total number of message errors due to parsing errors.
Unknown Rating Group	Total number of message errors due to invalid/unknown rating groups. Rating group is used to identify a particular type of traffic.
Unknown Rulebase	Total number of message errors due to invalid/unknown rulebase applied.
Unk Failure Handling	Total number of message errors due to invalid/unknown reasons.
<b>Backpressure Stats</b>	
CCR-I Messages	This counter gives the number of times backpressure got hit while creating a CCR-I message.
CCR-U Messages	This counter gives the number of times backpressure got hit while creating a CCR-U message.
CCR-T Messages	This counter gives the number of times backpressure got hit while creating a CCR-T message.
CCR-E Messages	This counter gives the number of times backpressure got hit while creating a CCR-E message.
<b>CC Update Reporting Reason Stats</b>	
Threshold	For each of the rating group, the credit control server send a threshold (this is also configurable in a system) after which a update needs to be sent. For example, a subscriber quota of 1000 bytes with 900 as threshold is sent to credit control application. When 900 bytes have consumed by the system, an update message is sent for quota. This counter gives the number of updates sent because of threshold.

Field	Description
QHT	Total number of credit control updates sent due to expiry of Quota Hold Timer (QHT).
Final	Total number of credit control updates sent due to expiry of final unit of quota.
Quota Exhausted	Total number of credit control updates sent due to subscriber quota getting exhausted.
Validity Time	Total number of credit control updates sent because of the session validity time expired.
Other Quota	Total number of credit control updates sent due to request for additional quota for subscriber.
Rating Condition Change	Total number of credit control updates sent due to change in RAT/QOS/SGSN/CELLID/LAC.
Forced Reauthorization	Total number of credit control updates sent due to RAR.
TITSU Time	This counter is incremented when the RADIUS online access-request is triggered because the Time Interval after TariffSwitchUpdate expired.
<b>CC Termination Cause Stats</b>	
Diameter Logout	Total number of Credit Control Application session(s) terminated due to subscriber logout.
Service Not Provided	Total number of Credit Control Application session(s) terminated as service was not available.
Bad Answer	Total number of Credit Control Application session(s) terminated due to invalid/unknown response received.

Field	Description
Administrative	<p>The total number of sessions disconnected due to any of the following reasons:</p> <ul style="list-style-type: none"> <li>• Sessions disconnected when the Administrator issues the <b>clear subscribers all</b> CLI command.</li> <li>• Sessions disconnected by ECS due to any of the following reasons: <ul style="list-style-type: none"> <li>• Bearer does not contain active rules—when the last bearer has no rules left as part of some PCRF trigger.</li> <li>• Charging-action has the <b>flow action</b> parameter configured as <b>terminate-session</b>.</li> </ul> </li> <li>• Sessions disconnected by the Diameter Credit Control Application (DCCA) due to any of the following reasons: <ul style="list-style-type: none"> <li>• Result code 4010 or 4012 is received at the command level, and for CCR-Initial and CCR-Update Credit Control Failure Handling (CCFH) is configured as Terminate or Retry-and-Terminate.</li> <li>• Result code 5003 or 5030 is received at the command level.</li> <li>• Abort-Session-Request message is received.</li> </ul> </li> </ul>
Link Broken	Total number of Credit Control Application session(s) terminated due to broken/down link.
Auth Expired	Total number of Credit Control Application session(s) terminated due to authorization of subscriber expired.
User Moved	Total number of Credit Control Application session(s) terminated as subscriber moved out of service area.
Session Timeout	Total number of Credit Control Application session(s) terminated due to timeout.
<b>CCBad Answer Stats</b>	
Auth-Application-Id	Indicates the absence or unexpected value in Auth-Application-Id AVP.
Session-Id	Indicates the absence or unexpected value in Session-Id AVP.
CC-Request-Number	Indicates the absence or unexpected value in CC-Request-Number AVP.
CC-Request-Type	Indicates the absence or unexpected value in CC-Request-Type AVP.
Origin-Host	Indicates the absence of Origin-Host AVP.
Origin-Realm	Indicates the absence of Origin-Realm AVP.
Parse-Message-Errors	Indicates the total number of parse errors in the message.
Parse-Msc-Errors	Indicates the total number of parse errors in MSC AVP.

Field	Description
Misc	Indicates the total number of other miscellaneous errors.
<b>CC Traffic Category Stats</b>	
Category Creates	The total traffic categories created.
Category Deletes	The total traffic categories deleted.
Category Lookups	The total traffic categories available.
Hits	The total traffic categories triggered.
Misses	The total traffic categories triggered and missed.
Trigger Events	The total traffic categories triggered.
Final Unit Consumed	The total units consumed by subscriber during session.
MSCC GSU Null Grant	The total number of GSUs with zero grant (null quota).
MSCC FUI Redirect	The total number of HTTP redirections (FUIs with redirect and redirect address received).
Category Success	The total number of successful traffic category sessions.
Rating Failed	The total Rating Groups failed during session.
Service Denied	The total number of services denied during session.
Limit Reached	The total number of events when subscriber reached quota limit.
Auth Rejected	The total number of authorization rejected.
Other Errors	The total number of miscellaneous/unknown errors not specified by system.
<b>CCA Initial Message Stats</b>	
Result Code 2001	This counter shows how many CCA-I messages have been received with a Diameter Result-Code=2001 at command level.
Result Code 5003	This counter shows how many CCA-I messages have been received with a Diameter Result-Code=5003 at command level.
Result Code 4011	This counter shows how many CCA-I messages have been received with a Diameter Result-Code=4011 at command level.
Result Code 4012	This counter shows how many CCA-I messages have been received with a Diameter Result-Code=4012 at command level.
Result Code 5031	This counter shows how many CCA-I messages have been received with a Diameter Result-Code=5031 at command level.
<b>CCA Update Message Stats</b>	

Field	Description
Result Code 2001	This counter counts how many CCA-U messages have been received with a Diameter Result-Code=2001 at command level.
Result Code 5003	This counter counts how many CCA-U messages have been received with a Diameter Result-Code=5003 at command level.
Result Code 4011	This counter counts how many CCA-U messages have been received with a Diameter Result-Code=4011 at command level.
Result Code 4012	This counter counts how many CCA-U messages have been received with a Diameter Result-Code=4012 at command level.
Result Code 5031	This counter counts how many CCA-U messages have been received with a Diameter Result-Code=5031 at command level.
<b>CCA Event Message Stats</b>	
Result Code 2001	This counter counts how many CCA-Event messages have been received with a Diameter Result-Code=2001 at command level.
Other Result Codes	This counter counts how many CCA-Event messages have been received with a Diameter Result-Code other than 2001 at command level.
<b>Failure Handling Stats</b>	
Action-Terminated	This counter counts how many times the DCCA failure handling with action terminate has been invoked in each measurement interval.
Action-Continue	This counter counts how many times the DCCA failure handling with action continue has been invoked in each measurement interval.
Offline Active Sessions	This counter counts the current number of active data sessions that are converted from online to offline charging due to DCCA failure handling actions.
<b>CCA Result Code 2xxx Stats</b>	
Result Code 2xxx	This counter counts how many CCA messages have been received with a Diameter Result-Code in the range of 2000 to 2999 at command level.
Result Code 2001	This counter counts how many CCA messages have been received with a Diameter Result-Code=2001 at command level.
Result Code 2002	This counter counts how many CCA messages have been received with a Diameter Result-Code=2002 at command level.
<b>CCA Result Code 4xxx Stats</b>	
Result Code 4001	This counter counts how many CCA messages have been received with a Diameter Result-Code=4001 at command level.
Result Code 4002	This counter counts how many CCA messages have been received with a Diameter Result-Code=4002 at command level.

Field	Description
Result Code-4010	This counter counts how many CCA messages have been received with a Diameter Result-Code=4010 at command level.
Result Code 4011	This counter counts how many CCA messages have been received with a Diameter Result-Code=4011 at command level.
Result Code 4012	This counter counts how many CCA messages have been received with a Diameter Result-Code=4012 at command level.
<b>CCA Result Code 5xxx Stats</b>	
Result Code 5001	This counter counts how many CCA messages have been received with a Diameter Result-Code=5001 at command level.
Result Code 5002	This counter counts how many CCA messages have been received with a Diameter Result-Code=5002 at command level.
Result Code 5003	This counter counts how many CCA messages have been received with a Diameter Result-Code=5003 at command level.
Result Code 5004	This counter counts how many CCA messages have been received with a Diameter Result-Code=5004 at command level.
Result Code 5005	This counter counts how many CCA messages have been received with a Diameter Result-Code=5005 at command level.
Result Code 5006	This counter counts how many CCA messages have been received with a Diameter Result-Code=5006 at command level.
Result Code 5031	This counter counts how many CCA messages have been received with a Diameter Result-Code=5031 at command level.
All Other Result Codes	This counter counts how many CCA messages have been received with all other Diameter Result-Codes.
<b>CCA Initial Experimental Result Code Stats</b>	
Exp Result Code 5199	<p>This counter indicates the number of times the Experimental-Result-Code "DIAMETER_NEWER_SESSION_DETECTED (5199)" is received in the Credit Control response message.</p> <p>This result code is introduced in Release 19 to maintain session uniqueness and avoid stale message processing.</p> <p><b>Important</b> Maintaining Session Uniqueness is a customer-specific feature. For more information, contact your Cisco account representative.</p>
<b>OCS Unreachable Stats</b>	
Tx-Expiry	This counter indicates how many server-unreachable actions are triggered after tx-expiry.

Field	Description
Response-TimeOut	This counter indicates how many server-unreachable actions are triggered after Response-Timeout.
Connection-Failure	This counter indicates how many server-unreachable behaviours are triggered after the server connection failure.
Action-Continue	This counter indicates how many times the DCCA failure handling with action continue has been invoked in each measurement interval after attaining Server-Unreachable State.
Action-Terminated	This counter indicates how many times the DCCA failure handling with action terminate has been invoked in each measurement interval after attaining Server-Unreachable State.
Server Retries	This counter indicates the total number of times the retries to the Diameter server were attempted.
<b>Assumed-Positive Sessions</b>	
<b>Important</b>	This statistic is customer-specific. For more information, please contact your local Cisco account representative.
Current	This counter indicates the current number of sessions in Assume Positive state. <b>Important</b> This is a customer-specific field.
Cumulative	This counter indicates the cumulative sessions in Assume Positive state. <b>Important</b> This is a customer-specific field.
<b>HDD Stats</b>	
CCR-T	This counter indicates the total number of records written to Hard Disk Drive (HDD) per Credit-Control group.

## show active-charging database uidh

Table 39: show active-charging database uidh Command Output Descriptions

Field	Description
UIDH Databases	Specifies the UIDH Database.
URL-Host Database	Specifies the UIDH URL Host Database
Source File	Species the databases source file
Database Status	Specifies the status of the database

Field	Description
Version	Specifies the database version.
Number of entries in DB	Specifies the name of database entries.
Last Upgrade Status	Specifies when the database was last upgraded.

## show active-charging dns-learnt-ip-addresses statistics sessmgr instance <instance> verbose

Table 40: show active-charging dns-learnt-ip-addresses statistics sessmgr instance <instance> verbose Command Output Descriptions

Field	Description
Sessmgr Instance	The Session Manager instance number.
Pattern	The domain name pattern.  <b>Important</b> In releases prior to 14.0, this field displays information about all configured patterns even though the pattern has not learnt any IP address. In 14.0 and later releases, this field displays only the patterns for which at least one IPv4/IPv6 address and CNAMEs are learnt. That is, the DNS Snooping pools are displayed only if there are learnt IP for the pool.
Rulebase	The ACS rulebase name.  <b>Important</b> In releases prior to 14.0, this field displays the name of all configured rulebases even though the pattern has not learnt any IP address. In 14.0 and later releases, this field displays only the rulebase name for the patterns for which at least one IPv4/IPv6 address and CNAMEs are learnt. That is, the DNS Snooping pools are displayed only if there are learnt IP for the pool.
List of CNAMEs	The list of canonical names.
Destination Context	Name of the destination context.
Total-ipv4-entries	Total number of new IPv4 addresses received (learnt).
Ipv4-Entries-flushed	Total number IPv4 entries with TTL expired (flushed).
Ipv4-TTL-replaced	Total number of IPv4 entries with TTL value replaced with new value.
Ipv4-Overflows	Total number of IPv4 overflows.  Ipv4-Overflows will start incrementing when maximum limit of 51200 across system is reached OR limit of 200 per pattern is reached.
Total-ipv6-entries	Total number of new IPv6 addresses received (learnt).

Field	Description
Ipv6-Entries-flushed	Total number IPv6 entries with TTL expired (flushed).
Ipv6-TTL-replaced	Total number of IPv6 entries with TTL value replaced with new value.
Ipv6-Overflows	Total number of IPv6 overflows. Ipv6-Overflows will start incrementing when maximum limit of 25600 across system is reached OR limit of 100 per pattern is reached.
Ipv4 Address TTL (in secs)	The list of learnt IPv4 addresses, and the TTL, in seconds.
Ipv6 Address TTL (in secs)	The list of learnt IPv6 addresses, and the TTL, in seconds.
<b>Summary</b>	
Total learnt ipv4 entries	A summary of the total number of new IPv4 addresses received (learnt). <b>Important</b> This field is available only in StarOS 12.2 and in StarOS 14.0 and later releases.
Total learnt ipv6 entries	A summary of the total number of new IPv6 addresses received (learnt). <b>Important</b> This field is available only in StarOS 12.2 and in StarOS 14.0 and later releases.

## show active-charging edr-format all

Table 41: show active-charging edr-format all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
EDR Format Name	Name of the configured EDR format.
Attribute	Attribute information configured in specific EDR format.
Total edr-format(s) found	The total number of configured existing EDR formats.

## show active-charging edr-format statistics

Table 42: show active-charging edr-format statistics Command Output Descriptions

Field	Description
Total edr-formats	The total number of EDR formats configured.
Total edrs generated	The total number of EDRs generated.
Total edrs truncated	The total number of EDRs truncated.
Total NAT bind records generated	The total number of Network Address Translation (NAT) bind records generated. The field is only displayed, if configured, in 8.3 and later releases.

## show active-charging edr-udr-file flow-control-counters

Table 43: show active-charging edr-udr-file flow-control-counters Command Output Descriptions

Field	Description
Num of Times Flow Control initiated	Total number of times the flow control initiated.
Num of Outstanding Messages	Total number outstanding messages for flow control.
Num of unsent Messages	Total number unsent messages for flow control.
Num of CDR records Discarded due to flow control	Total number of charging detail records (CDRs) discarded due to flow control action.
Last flow control occurrence	Date and time of the last occurrence of flow control action.

## show active-charging edr-udr-file statistics

Table 44: show active-charging edr-udr-file statistics Command Output Descriptions

Field	Description
<b>EDR-UDR file Statistics</b>	
CDRMOD Instance Id	The CDRMOD instance identifier.
<b>Overall Statistics</b>	
Files rotated	Total number of EDR and UDR files rotated.
Files rotated due to volume limit	Total number of EDR and UDR files rotated due to volume limit.

Field	Description
Files rotated due to time limit	Total number of EDR and UDR files rotated due to time limit.
Files rotated due to records limit	Total number of files rotated because of record limits.
File rotation failures	Total number of times rotation failed for EDR and UDR file.
Files deleted	Total number of EDR and UDR files deleted.
Records deleted	Total number of records deleted.
Records received	Total number of records received.
Files received	Total number of EDR and UDR files received by service.
Current open files	Total number of EDR and UDR files open.
Time of last file deletion	Date and time of last EDR/UDR file deleted.
<b>EDR Specific Statistics</b>	
EDR files rotated	Total number of EDR files rotated.
EDR files rotated due to volume limit	Total number of EDR files rotated due to volume limit.
EDR files rotated due to time limit	Total number of EDR files rotated due to time limit.
EDR files rotated due to records limit	Total number of EDR files rotated due to records limit
EDR file rotation failures	Total number of rotation failed for EDR file.
EDR files deleted	Total number of EDR files deleted.
EDR records deleted	Total number of EDR records deleted.
EDR records received	Total number of EDR records received.
Current open EDR files	Total number of EDR files open.
Time of last EDR file deletion	Date and time of last EDR file deleted.
<b>UDR Specific Statistics</b>	
UDR files rotated	Total number of UDR files rotated.
UDR files rotated due to volume limit	Total number of UDR files rotated due to volume limit.
UDR files rotated due to time limit	Total number of UDR files rotated due to time limit.
UDR files rotated due to records limit	Total number of UDR files rotated due to records limit.
UDR files rotation failures	Total number of rotation failed for UDR file.

Field	Description
UDR files deleted	Total number of UDR files deleted.
UDR records deleted	Total number of UDR records deleted.
UDR records received	Total number of UDR records received.
Current open UDR files	Total number of UDR files open.
Time of last UDR file deletion	Date and time of last UDR file deletion.
<b>EDR-UDR PUSH Statistics</b>	
<b>Overall Statistics</b>	
<b>Primary Server Statistics</b>	
<b>Secondary Server Statistics</b>	
Successful File Transfers	Total number of successful file transfers.
Failed File Transfers	Total number of failed file transfers.
Num of times PUSH initiated	Total number of times an EDR/UDR push attempt was initiated.
Num of times PUSH Failed	Total number of times an EDR/UDR push attempt failed.
Num of times PUSH cancelled due to HD failure	Total number of times EDR/UDR push was cancelled due to hard disk failures.
Num of periodic PUSH	Total number of periodic push.
Num of manual PUSH	Total number of manual push.
Current status of PUSH	Current status of push: Running/Not Running
Last completed PUSH time	The date and time the last push completed.

## show active-charging firewall statistics

Table 45: show active-charging firewall statistics Command Output Descriptions

Field	Description
Firewall Statistics for context	Name of the context.
<b>Data Stats:</b>	
Total Packets Received	Total number of packets received by Stateful Firewall.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.

Field	Description
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of uplink packets dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of uplink bytes dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of downlink packets dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of downlink bytes dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.
Total NAT Flows Processed by Firewall	Total number of NAT flows processed by Stateful Firewall.
Total NAT44 Flows Processed by Firewall	Total number of NAT44 flows processed by Stateful Firewall.
Total NAT64 Flows Processed by Firewall	Total number of NAT64 flows processed by Stateful Firewall.
Total Bypass-NAT Flows Processed by Firewall	Total number of Bypass-NAT flows processed by Stateful Firewall.
Total Bypass-NAT44 Flows Processed by Firewall	Total number of Bypass-NAT44 flows processed by Stateful Firewall.
Total Bypass-NAT64 Flows Processed by Firewall	Total number of Bypass-NAT64 flows processed by Stateful Firewall.
Current Flows Processed by Firewall	Current number of flows processed by Stateful Firewall.
Current NAT Flows Processed by Firewall	Current number of NAT flows processed by Stateful Firewall.
Current NAT44 Flows Processed by Firewall	Current number of NAT44 flows processed by Stateful Firewall.
Current NAT64 Flows Processed by Firewall	Current number of NAT64 flows processed by Stateful Firewall.
Current Bypass-NAT Flows Processed by Firewall	Current number of Bypass-NAT flows processed by Stateful Firewall.
Current Bypass-NAT44 Flows Processed by Firewall	Current number of Bypass-NAT44 flows processed by Stateful Firewall.

Field	Description
Current Bypass-NAT64 Flows Processed by Firewall	Current number of Bypass-NAT64 flows processed by Stateful Firewall.

## show active-charging firewall statistics nat-realm

Table 46: show active-charging firewall statistics nat-realm Command Output Descriptions

Field	Description
Firewall Statistics for NAT-realm	The NAT realm name for which the statistics are displayed.
<b>Data Stats:</b>	
Total Packets Received	Total number of packets received by the NAT realm.
Total Bytes Received	Total number of bytes received by the NAT realm.
Total Packets Sent	Total number of packets sent by the NAT realm.
Total Bytes Sent	Total number of bytes sent by the NAT realm.
Total Packets Injected	Total number of packets injected by the NAT realm.
Total Bytes Injected	Total number of bytes injected by the NAT realm.
Uplink Packets Dropped	Total number of uplink packets dropped by the NAT realm.
Uplink Bytes Dropped	Total number of uplink bytes dropped by the NAT realm.
Downlink Packets Dropped	Total number of downlink packets dropped by the NAT realm.
Downlink Bytes Dropped	Total number of downlink bytes dropped by the NAT realm.
Total Malformed Packets	Total number of malformed packets detected by the NAT realm.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by the NAT realm.
Total Flows Processed by NAT-realm	Total number of flows processed by the NAT realm.

## show active-charging firewall statistics verbose

Table 47: show active-charging firewall statistics verbose Command Output Descriptions

Field	Description
Firewall Statistics for Context	Name of the context.
<b>IP Stats:</b>	

Field	Description
Land Attacks	Total number of Land attacks detected by Stateful Firewall.
Jolt Attacks	Total number of Jolt attacks detected by Stateful Firewall.
Teardrop Attacks	Total number of Teardrop attacks detected by Stateful Firewall.
Zero Length IP Option	Total number of Zero-length IP option attacks detected by Stateful Firewall.
IP Source-router Attacks	Total number of IP Source-router attacks detected by Stateful Firewall.
Packets with IP-Unaligned-Timestamp	Total number of packets with IP unaligned timestamps detected by Stateful Firewall.
Packets with Short IP Header Length	Total number of packets with short IP header length detected by Stateful Firewall.
Packets Dropped due to IP Checksum Errors	Total number of packets dropped due to IP Checksum error.
Downlink Dropped Bytes on IP Reassembly Failure	Total number of downlink bytes dropped on IP Reassembly failure.
Uplink Dropped Bytes on IP Reassembly Failure	Total number of uplink bytes dropped on IP Reassembly failure.
<b>TCP Stats:</b>	
Data Packets Received After RST/FIN	Total number of data packets received after receiving RST (reset) request by Stateful Firewall.
Invalid SEQ Number Received with RST	Total number of invalid sequence-number received with RST (reset) request by Stateful Firewall.
Data without Connection Established	Total number of data packets received before the establishment of connection by Stateful Firewall.
Invalid TCP Connection Requests	Total number of invalid TCP connection requests received by Stateful Firewall.
Invalid TCP pre-connection Requests	Total number of invalid TCP pre-connection requests received by Stateful Firewall.
Invalid ACK Value (Cookie Enabled)	Total number of invalid ACK values (to enable cookies) received by Stateful Firewall.
Invalid TCP Packet Length	Total number of TCP packets with invalid length received by Stateful Firewall.
Packets with Short TCP Header Length	Total number of TCP packets with invalid/short header length received by Stateful Firewall.
Packets Dropped due to TCP Checksum Errors	Total number of packets dropped due to TCP Checksum error.
Packets with SEQ/ACK Out-of-range	Total number of packets with out of range SEQ/ACK.
TCP Null Scan Attacks	Total number of TCP Null Scan attacks detected by Stateful Firewall.
Post Connection SYN	Total number of Post Connection SYN attacks detected by Stateful Firewall.

Field	Description
Unable to Send SYN Packet	Total number of attempts detected by Stateful Firewall when node failed to send SYN packets.
Send Final ACK to Target Failed	Total number of attempts detected by Stateful Firewall when node failed to send Final ACK packet to target node.
Invalid TCP Packet: SYN-ACK Expected	Total number of invalid TCP packets received by Stateful Firewall in place of SYN+ACK packets.
No TCP Flags Set	Total number of TCP packets received with no flags set.
All TCP Flags Set	Total number of TCP flags received with all flags set.
Invalid TCP Packets	Total number of invalid TCP packets including all type of errors and attacks received by Stateful Firewall.
Flows Closed by RST before 3-Way Handshake	Total number flows closed by RST (reset) message before the 3-way handshaking.
Flows Timed-out in SYN_RCVD1 State	Total number of flows timed out in SYN_RCVD1 state.
Flows Timed-out in SYN_RCVD2 State	Total number of flows timed out in SYN_RCVD2 state.
Flows Terminated due to WinNuke Attack	Total number of flows terminated due to WinNuke attacks by Stateful Firewall.
TCP-SYN Flood Attacks	Total number of TCP-SYN Flood attacks detected by Stateful Firewall.
Packets Dropped on TCP-SYN Flood Attack	Total number of packets dropped by Stateful Firewall in TCP-SYN Flood attacks.
FTP-Bounce Attacks	Total number of FTP-Bounce attacks detected by Stateful Firewall.
Mime-Flood Attacks	Total number of Mime-Flood attacks detected by Stateful Firewall.
Proxy Handshakes Completed	Total number of times proxy handshake was completed.
Packets Dropped due to source port zero	Total number of packets dropped due to source port zero error.
SYN Packets Dropped due to ECE/CWR Set	Total number of SYN packets dropped due to ECE/CWR Flags Set.
Packets Dropped on TCP-SYN IP-Sweep Attack (DL/UL)	Total number of packets dropped due to TCP-SYN IP sweep attacks in downlink and uplink direction.
<b>UDP Stats:</b>	
Invalid UDP Echo Response	Total number of invalid UDP echo responses.
Invalid UDP Packet Length	Total number of invalid UDP packet length.
Packets Dropped due to UDP Checksum Errors	Total number of packets dropped due to UDP Checksum errors.
Packets with Short UDP Header Length	Total number of packets with short UDP header length.

Field	Description
Packets Dropped on UDP Flood Attack	Total number of packets dropped by Stateful Firewall in UDP flood attacks.
Packets Dropped due to exceeding ICMP dest unreachable threshold	Total number of packets dropped due to exceeding ICMP destination unreachable threshold.
Packets Dropped on UDP IP-Sweep Attack (DL/UL)	Total number of packets dropped due to UDP IP sweep attacks in downlink and uplink direction.
<b>ICMP Stats:</b>	
Invalid ICMP Response	Total number of invalid ICMP responses.
ICMP Reply Error	Total number of ICMP reply errors.
Invalid ICMP Type Packet	Total number of invalid ICMP type packets.
ICMP Error Message Replay Attacks	Total number of ICMP error message replay attacks detected by Stateful Firewall.
ICMP Packets with Duplicate Sequence Number	Total number of ICMP packets with duplicate sequence numbers.
Packets with Short ICMP Header Length	Total number of packets with short ICMP header length.
Invalid ICMP Packet Length	Total number of packets with invalid ICMP packet length.
Packets Dropped on ICMP Flood Attack	Total number of packets dropped by Stateful Firewall in ICMP flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMP Checksum Errors	Total number of packets dropped due to ICMP Checksum error.
ICMP Packets With Destination Unreachable Message	Total number of ICMP packets with destination unreachable message.
ICMP Echo Packets Dropped due to ID Zero	Total number of ICMP echo packets dropped due to zero ID.
Packets Dropped on ICMP IP-Sweep Attack (DL/UL)	Total number of packets dropped due to ICMP IP sweep attacks in downlink and uplink direction.
<b>ICMPv6 Stats:</b>	
Invalid ICMPv6 Response	Total number of invalid ICMPv6 responses.
ICMPv6 Reply Error	Total number of ICMPv6 reply errors.
Invalid ICMPv6 Type Packet	Total number of invalid ICMPv6 type packets.
ICMPv6 Error Message Replay Attacks	Total number of ICMPv6 error message replay attacks detected by Stateful Firewall.
ICMPv6 Packets with Duplicate Sequence Number	Total number of ICMPv6 packets with duplicate sequence numbers.

Field	Description
Packets with Short ICMPv6 Header Length	Total number of packets with short ICMPv6 header length.
Invalid ICMPv6 Packet Length	Total number of packets with invalid ICMPv6 packet length.
Packets Dropped on ICMPv6 Flood Attack	Total number of packets dropped by Stateful Firewall in ICMPv6 flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMPv6 Checksum Errors	Total number of packets dropped due to ICMPv6 Checksum error.
ICMPv6 Packets With Destination Unreachable Message	Total number of ICMPv6 packets with destination unreachable message.
ICMPv6 Echo Packets Dropped due to ID Zero	Total number of ICMPv6 echo packets dropped due to zero ID.
<b>IPv6 Stats:</b>	
Land Attacks	Total number of land attacks detected by Stateful Firewall.
Jolt Attacks	Total number of jolt attacks detected by Stateful Firewall.
Teardrop Attacks	Total number of teardrop attacks detected by Stateful Firewall.
Invalid IP Option Length	Total number of packets with invalid IP option length.
IPv6 Source-router Attacks	Total number of IPv6 source-router attacks detected by Stateful Firewall.
Packets with Short IPv6 Header Length	Total number of packets with short IPv6 header length detected by Stateful Firewall.
Packets with Nested Fragmentation Header	Total number of packets with nested fragmentation header.
Packets with Unspecified IPv6 Address	Total number of packets with unspecified IPv6 address.
Packets with invalid Payload Length	Total number of packets with invalid payload length.
Packets with more than threshold Extension Headers	Total number of packets with more than threshold extension headers.
Packets with invalid Hop By Hop Extension Header	Total number of packets with invalid hop by hop extension header.
Packets with ICMPv4 in IPv6 Header	Total number of packets with ICMPv4 in IPv6 header.
Packets with invalid Destination Extension Header	Total number of packets with invalid destination extension header.
Downlink Dropped Bytes on IPv6 Reassembly Failure	Total number of downlink bytes dropped on IPv6 Reassembly failure.
Uplink Dropped Bytes on IPv6 Reassembly Failure	Total number of uplink bytes dropped on IPv6 Reassembly failure.

Field	Description
<b>General Stats:</b>	
Packets without Any Data Received	Total number of packets received without any data.
No Matching Uplink Ruledef	Total number of uplink packets with no matching ruledef.
No Matching Downlink Ruledef	Total number of downlink packets with no matching ruledef.
Deny Ruledef Matched	Total number of times deny ruledef was matched.
Packets Dropped due to No Ruledef in Rulebase	Total number of packets dropped due to no ruledef in rulebase. <b>Important</b> This field is deprecated in release 15.0 and later releases.
Packets Dropped due to Miscellaneous Errors	Total number of packets dropped due to miscellaneous errors.
Flows Timed-out	Total number of flows that timed out.
Flows Not Established from External Network	Total number of flows from external networks that were not established.
Max Flows Limit Reached	Total number of times the maximum flows limit was reached.
<b>ALG statistics:</b>	
Packets dropped by SIP ALG	Total number of packets dropped by SIP ALG.
Packets injected by SIP ALG	Total number of packets injected by SIP ALG.
<b>NAT Packet Dropped Statistics:</b>	
Packets dropped due to NAT no available IP/port	Total number of packets dropped due to non-availability of NAT IP/port.
Packets dropped due to NAT binding allocation failure	Total number of packets dropped due to NAT binding allocation failure.
Packets dropped due to NAT Translation failed on unsupported ICMP code	Total number of packets dropped due to NAT Translation failed on unsupported ICMP code.
Packets dropped due to NAT Translation failed on invalid Param Problem	Total number of packets dropped due to NAT Translation failed on invalid param problem.
Packets dropped due to IPv6 routing header with non-zero segments left	Total number of packets dropped due to IPv6 routing header with non-zero segments left.
Packets dropped due to Unsupported Embedded IPv4 Address	Total number of packets dropped due to unsupported embedded IPv4 address.
Packets dropped due to Destination IPv6 Prefix Mismatch	Total number of packets due to IPv6 prefix mismatch for a given destination.

Field	Description
Packets dropped due to MAX port chunks reached	Total number of packets dropped due to reaching the maximum number of port chunks usage limit.
Packets dropped due to non-availability of port chunks	Total number of packets dropped due to non-availability of port chunks.
<b>Data Stats:</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets (NAT64 Translation)	Total number of packets reduced by NAT64 translation.
Total Bytes Reduced (NAT64 Translation)	Total number of bytes reduced by NAT64 translation.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.
Total NAT Flows Processed by Firewall	Total number of NAT flows processed by Stateful Firewall.
Total NAT44 Flows Processed by Firewall	Total number of NAT44 flows processed by Stateful Firewall.
Total NAT64 Flows Processed by Firewall	Total number of NAT64 flows processed by Stateful Firewall.
Total Bypass-NAT Flows Processed by Firewall	Total number of Bypass-NAT flows processed by Stateful Firewall.
Total Bypass-NAT44 Flows Processed by Firewall	Total number of Bypass-NAT44 flows processed by Stateful Firewall.
Total Bypass-NAT64 Flows Processed by Firewall	Total number of Bypass-NAT64 flows processed by Stateful Firewall.
Current Flows Processed by Firewall	Current number of flows processed by Stateful Firewall.

Field	Description
Current NAT Flows Processed by Firewall	Current number of NAT flows processed by Stateful Firewall.
Current NAT44 Flows Processed by Firewall	Current number of NAT44 flows processed by Stateful Firewall.
Current NAT64 Flows Processed by Firewall	Current number of NAT64 flows processed by Stateful Firewall.
Current Bypass-NAT Flows Processed by Firewall	Current number of Bypass-NAT flows processed by Stateful Firewall.
Current Bypass-NAT44 Flows Processed by Firewall	Current number of Bypass-NAT44 flows processed by Stateful Firewall.
Current Bypass-NAT64 Flows Processed by Firewall	Current number of Bypass-NAT64 flows processed by Stateful Firewall.

## show active-charging firewall statistics protocol icmp verbose

Table 48: show active-charging firewall statistics protocol icmp verbose Command Output Descriptions

Field	Description
Firewall Statistics for Protocol: ICMP	
<b>ICMP Stats</b>	
Invalid ICMP Response	Total number of invalid ICMP responses.
ICMP Reply Error	Total number of ICMP reply errors.
Invalid ICMP Type Packet	Total number of invalid ICMP type packets.
ICMP Error Message Replay Attacks	Total number of ICMP error message replay attacks detected by Stateful Firewall.
ICMP Packets with Duplicate Sequence Number	Total number of ICMP packets with duplicate sequence numbers.
Packets with Short ICMP Header Length	Total number of packets with short ICMP header length.
Invalid ICMP Packet Length	Total number of packets with invalid ICMP packet length.
Packets Dropped on ICMP Flood Attack	Total number of packets dropped by Stateful Firewall in ICMP flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMP Checksum Errors	Total number of packets dropped due to ICMP Checksum error.

Field	Description
ICMP Packets With Destination Unreachable Message	Total number of ICMP packets with destination unreachable message.
ICMP Echo Packets Dropped due to ID Zero	Total number of ICMP echo packets dropped due to zero ID.
<b>Data Stats</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.
Total NAT Flows Processed by Firewall	Total number of NAT flows processed by Stateful Firewall.

## show active-charging firewall statistics protocol icmpv6 verbose

Table 49: show active-charging firewall statistics protocol icmpv6 verbose Command Output Descriptions

Field	Description
Firewall Statistics for Protocol: ICMPv6	
<b>ICMPv6 Stats</b>	
Invalid ICMPv6 Response	Total number of invalid ICMPv6 responses.

Field	Description
ICMPv6 Reply Error	Total number of ICMPv6 reply errors.
Invalid ICMPv6 Type Packet	Total number of invalid ICMPv6 type packets.
ICMPv6 Error Message Replay Attacks	Total number of ICMPv6 error message replay attacks detected by Stateful Firewall.
ICMPv6 Packets with Duplicate Sequence Number	Total number of ICMPv6 packets with duplicate sequence numbers.
Packets with Short ICMPv6 Header Length	Total number of packets with short ICMPv6 header length.
Invalid ICMPv6 Packet Length	Total number of packets with invalid ICMPv6 packet length.
Packets Dropped on ICMPv6 Flood Attack	Total number of packets dropped by Stateful Firewall in ICMPv6 flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMPv6 Checksum Errors	Total number of packets dropped due to ICMPv6 Checksum error.
ICMPv6 Packets With Destination Unreachable Message	Total number of ICMPv6 packets with destination unreachable message.
ICMPv6 Echo Packets Dropped due to ID Zero	Total number of ICMPv6 echo packets dropped due to zero ID.
<b>Data Stats</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.

Field	Description
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.
Total NAT Flows Processed by Firewall	Total number of NAT flows processed by Stateful Firewall.

## show active-charging firewall statistics protocol ip verbose

Table 50: show active-charging firewall statistics protocol ip verbose Command Output Descriptions

Field	Description
Firewall Statistics for Protocol IP in Context	Name of the context.
<b>IP Stats:</b>	
Land Attacks	Total number of Land attacks detected.
Jolt Attacks	Total number of Jolt attacks detected.
Teardrop Attacks	Total number of Teardrop attacks detected.
Zero Length IP Option	Total number of Zero-length IP Option attacks detected.
IP Source-router Attacks	Total number of IP Source-router attacks detected.
Packets with IP-Unaligned-Timestamp	Total number of packets with IP-Unaligned-Timestamp.
Packets with Short IP Header Length	Total number of packets with short IP header length.
Packets Dropped due to IP Checksum Errors	Total number of packets dropped due to checksum errors.
Downlink Dropped Bytes on IP Reassembly Failure	Total number of bytes dropped in downlink flow on IP Reassembly failure.
Uplink Dropped Bytes on IP Reassembly Failure	Total number of bytes dropped in uplink flow on IP Reassembly failure.
<b>Data Stats:</b>	
Total Packets Received	Total number of packets received by Stateful Firewall.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.

Field	Description
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of uplink packets dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of uplink bytes dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of downlink packets dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of downlink bytes dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.

## show active-charging firewall statistics protocol ipv6 verbose

Table 51: show active-charging firewall statistics protocol ipv6 verbose Command Output Descriptions

Field	Description
Firewall Statistics for Protocol: IPv6	
<b>IPv6 Stats</b>	
Land Attacks	Total number of land attacks detected by Stateful Firewall.
Jolt Attacks	Total number of jolt attacks detected by Stateful Firewall.
Teardrop Attacks	Total number of teardrop attacks detected by Stateful Firewall.
Invalid IP Option Length	Total number of packets with invalid IP option length.
IPv6 Source-router Attacks	Total number of IPv6 source-router attacks detected by Stateful Firewall.
Packets with Short IPv6 Header Length	Total number of packets with short IPv6 header length.
Packets with Nested Fragmentation Header	Total number of packets with nested fragmentation header.
Packets with Unspecified IPv6 Address	Total number of packets with unspecified IPv6 address.
Packets with invalid Payload Length	Total number of packets with invalid payload length.
Packets with more than threshold Extension Headers	Total number of packets with more than threshold extension headers.

Field	Description
Packets with invalid Hop By Hop Extension Header	Total number of packets with invalid hop by hop extension header.
Packets with ICMPv4 in IPv6 Header	Total number of packets with ICMPv4 in IPv6 header.
Packets with invalid Destination Extension Header	Total number of packets with invalid destination extension header.
Downlink Dropped Bytes on IPv6 Reassembly Failure	Total number of downlink bytes dropped due to reassembly failure.
Uplink Dropped Bytes on IPv6 Reassembly Failure	Total number of uplink bytes dropped due to reassembly failure.
<b>Data Stats</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.
Total NAT Flows Processed by Firewall	Total number of NAT flows processed by Stateful Firewall.

# show active-charging firewall statistics protocol udp verbose

Table 52: show active-charging firewall statistics protocol udp verbose Command Output Descriptions

Field	Description
Firewall Statistics for Protocol: UDP	
<b>UDP Stats</b>	
Invalid UDP Echo Response	Total number of invalid UDP echo responses.
Invalid UDP Packet Length	Total number of invalid UDP packet length.
Packets Dropped due to UDP Checksum Errors	Total number of packets dropped due to UDP Checksum errors.
Packets with Short UDP Header Length	Total number of packets with short UDP header length.
Packets Dropped on UDP Flood Attack	Total number of packets dropped by Stateful Firewall in UDP flood attacks.
Packets Dropped due to exceeding ICMP dest unreachable threshold	Total number of packets dropped due to exceeding ICMP destination unreachable threshold.
<b>Data Stats</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.

## show active-charging firewall statistics callid <call\_id> verbose

Table 53: show active-charging firewall statistics callid <call\_id> verbose Command Output Descriptions

Field	Description
Firewall Statistics for Callid: <call_id>	
<b>IP Stats:</b>	
Land Attacks	Total number of Land attacks detected by Stateful Firewall.
Jolt Attacks	Total number of Jolt attacks detected by Stateful Firewall.
Teardrop Attacks	Total number of Teardrop attacks detected by Stateful Firewall.
Invalid IP Option Length	Total number of Invalid IP Option Length attacks detected by Stateful Firewall.
IP Source-router Attacks	Total number of IP Source-router attacks detected by Stateful Firewall.
Packets with IP-Unaligned-Timestamp	Total number of packets with IP unaligned timestamps detected by Stateful Firewall.
Packets with Short IP Header Length	Total number of packets with short IP header length detected by Stateful Firewall.
Packets Dropped due to IP Checksum Errors	Total number of packets dropped due to IP Checksum error.
Downlink Dropped Bytes on IP Reassembly Failure	Total number of downlink bytes dropped on IP Reassembly failure.
Uplink Dropped Bytes on IP Reassembly Failure	Total number of uplink bytes dropped on IP Reassembly failure.
<b>TCP Stats:</b>	
Data Packets Received After RST/FIN	Total number of data packets received after receiving RST (reset) request by Stateful Firewall.
Invalid SEQ Number Received with RST	Total number of invalid sequence-number received with RST (reset) request by Stateful Firewall.
Data without Connection Established	Total number of data packets received before the establishment of connection by Stateful Firewall.
Invalid TCP Connection Requests	Total number of invalid TCP connection requests received by Stateful Firewall.
Invalid TCP pre-connection Requests	Total number of invalid TCP pre-connection requests received by Stateful Firewall.
Invalid ACK Value (Cookie Enabled)	Total number of invalid ACK values (to enable cookies) received by Stateful Firewall.
Invalid TCP Packet Length	Total number of TCP packets with invalid length received by Stateful Firewall.

show active-charging firewall statistics callid &lt;call\_id&gt; verbose

Field	Description
Packets with Short TCP Header Length	Total number of TCP packets with invalid/short header length received by Stateful Firewall.
Packets Dropped due to TCP Checksum Errors	Total number of packets dropped due to TCP Checksum error.
Packets with SEQ/ACK Out-of-range	Total number of packets with out of range SEQ/ACK.
TCP Null Scan Attacks	Total number of TCP Null Scan attacks detected by Stateful Firewall.
Post Connection SYN	Total number of Post Connection SYN attacks detected by Stateful Firewall.
Unable to Send SYN Packet	Total number of attempts detected by Stateful Firewall when node failed to send SYN packets.
Send Final ACK to Target Failed	Total number of attempts detected by Stateful Firewall when node failed to send Final ACK packet to target node.
Invalid TCP Packet: SYN-ACK Expected	Total number of invalid TCP packets received by Stateful Firewall in place of SYN+ACK packets.
No TCP Flags Set	Total number of TCP packets received with no flags set.
All TCP Flags Set	Total number of TCP flags received with all flags set.
Invalid TCP Packets	Total number of invalid TCP packets including all type of errors and attacks received by Stateful Firewall.
Flows Closed by RST before 3-Way Handshake	Total number flows closed by RST (reset) message before the 3-way handshaking.
Flows Timed-out in SYN_RCVD1 State	Total number of flows timed out in SYN_RCVD1 state.
Flows Timed-out in SYN_RCVD2 State	Total number of flows timed out in SYN_RCVD2 state.
Flows Terminated due to WinNuke Attack	Total number of flows terminated due to WinNuke attacks by Stateful Firewall.
TCP-SYN Flood Attacks	Total number of TCP-SYN Flood attacks detected by Stateful Firewall.
Packets Dropped on TCP-SYN Flood Attack	Total number of packets dropped by Stateful Firewall in TCP-SYN Flood attacks.
FTP-Bounce Attacks	Total number of FTP-Bounce attacks detected by Stateful Firewall.
Mime-Flood Attacks	Total number of Mime-Flood attacks detected by Stateful Firewall.
Proxy Handshakes Completed	Total number of times proxy handshake was completed.
Packets Dropped during Proxy Handshake	Total number of packets dropped during proxy handshake.

Field	Description
<b>UDP Stats:</b>	
Invalid UDP Echo Response	Total number of invalid UDP echo responses.
Invalid UDP Packet Length	Total number of invalid UDP packet length.
Packets Dropped due to UDP Checksum Errors	Total number of packets dropped due to UDP Checksum errors.
Packets with Short UDP Header Length	Total number of packets with short UDP header length.
Packets Dropped on UDP Flood Attack	Total number of packets dropped by Stateful Firewall in UDP flood attacks.
Packets Dropped due to exceeding ICMP dest unreachable threshold	Total number of packets dropped due to exceeding ICMP destination unreachable threshold.
<b>ICMP Stats:</b>	
Invalid ICMP Response	Total number of invalid ICMP responses.
ICMP Reply Error	Total number of ICMP reply errors.
Invalid ICMP Type Packet	Total number of invalid ICMP type packets.
ICMP Error Message Replay Attacks	Total number of ICMP error message replay attacks detected by Stateful Firewall.
ICMP Packets with Duplicate Sequence Number	Total number of ICMP packets with duplicate sequence numbers.
Packets with Short ICMP Header Length	Total number of packets with short ICMP header length.
Invalid ICMP Packet Length	Total number of packets with invalid ICMP packet length.
Packets Dropped on ICMP Flood Attack	Total number of packets dropped by Stateful Firewall in ICMP flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMP Checksum Errors	Total number of packets dropped due to ICMP Checksum errors.
ICMP Packets With Destination Unreachable Message	Total number of ICMP packets with Destination Unreachable Message.
ICMP Echo Packets Dropped due to ID Zero	Total number of ICMP echo packets dropped due to zero ID.
<b>ICMPv6 Stats:</b>	
Invalid ICMPv6 Response	Total number of invalid ICMPv6 responses.

show active-charging firewall statistics callid &lt;call\_id&gt; verbose

Field	Description
ICMPv6 Reply Error	Total number of ICMPv6 reply errors.
Invalid ICMPv6 Type Packet	Total number of invalid ICMPv6 type packets.
ICMPv6 Error Message Replay Attacks	Total number of ICMPv6 error message replay attacks detected by Stateful Firewall.
ICMPv6 Packets with Duplicate Sequence Number	Total number of ICMPv6 packets with duplicate sequence numbers.
Packets with Short ICMPv6 Header Length	Total number of packets with short ICMPv6 header length.
Invalid ICMPv6 Packet Length	Total number of packets with invalid ICMPv6 packet length.
Packets Dropped on ICMPv6 Flood Attack	Total number of packets dropped by Stateful Firewall in ICMPv6 flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMPv6 Checksum Errors	Total number of packets dropped due to ICMPv6 Checksum errors.
ICMPv6 Packets With Destination Unreachable Message	Total number of ICMPv6 packets with Destination Unreachable Message.
ICMPv6 Echo Packets Dropped due to ID Zero	Total number of ICMPv6 echo packets dropped due to zero ID.
<b>General Stats:</b>	
Packets without Any Data Received	Total number of packets received without any data.
No Matching Uplink Ruledef	Total number of uplink packets with no matching ruledef.
No Matching Downlink Ruledef	Total number of downlink packets with no matching ruledef.
Deny Ruledef Matched	Total number of times deny ruledef was matched.
Packets Dropped due to No Ruledef in Rulebase	Total number of packets dropped due to no ruledef in rulebase. <b>Important</b> This field is deprecated in release 15.0 and later releases.
Packets Dropped due to Miscellaneous Errors	Total number of packets dropped due to miscellaneous errors.
Flows Timed-out	Total number of flows that timed out.
Flows Not Established from External Network	Total number of flows from external networks that were not established.
Max Flows Limit Reached	Total number of times the maximum flows limit was reached.
IP Retransmitted Packets Dropped	Total number of IP retransmitted packets dropped.

Field	Description
<b>Data Stats:</b>	
Total Packets Received	Total number of packets received in uplink and downlink flows.
Total Bytes Received	Total number of bytes received by Stateful Firewall.
Total Packets Sent	Total number of packets sent by Stateful Firewall.
Total Bytes Sent	Total number of bytes sent by Stateful Firewall.
Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.

## show active-charging firewall statistics domainname <domain\_name> verbose

Table 54: show active-charging firewall statistics domainname <domain\_name> verbose Command Output Descriptions

Field	Description
Firewall Statistics for 2 Sessions with Domain-name: <domain_name>	
<b>IP Stats:</b>	
Land Attacks	Total number of Land attacks detected by Stateful Firewall.
Jolt Attacks	Total number of Jolt attacks detected by Stateful Firewall.
Teardrop Attacks	Total number of Teardrop attacks detected by Stateful Firewall.
Invalid IP Option Length	Total number of Invalid IP Option Length attacks detected by Stateful Firewall.
IP Source-router Attacks	Total number of IP Source-router attacks detected by Stateful Firewall.
Packets with IP-Unaligned-Timestamp	Total number of packets with IP unaligned timestamps detected by Stateful Firewall.

```
show active-charging firewall statistics domainname <domain_name> verbose
```

Field	Description
Packets with Short IP Header Length	Total number of packets with short IP header length detected by Stateful Firewall.
Packets Dropped due to IP Checksum Errors	Total number of packets dropped due to IP Checksum error.
Downlink Dropped Bytes on IP Reassembly Failure	Total number of downlink bytes dropped on IP Reassembly failure.
Uplink Dropped Bytes on IP Reassembly Failure	Total number of uplink bytes dropped on IP Reassembly failure.
<b>TCP Stats:</b>	
Data Packets Received After RST/FIN	Total number of data packets received after receiving RST (reset) request by Stateful Firewall.
Invalid SEQ Number Received with RST	Total number of invalid sequence-number received with RST (reset) request by Stateful Firewall.
Data without Connection Established	Total number of data packets received before the establishment of connection by Stateful Firewall.
Invalid TCP Connection Requests	Total number of invalid TCP connection requests received by Stateful Firewall.
Invalid TCP pre-connection Requests	Total number of invalid TCP pre-connection requests received by Stateful Firewall.
Invalid ACK Value (Cookie Enabled)	Total number of invalid ACK values (to enable cookies) received by Stateful Firewall.
Invalid TCP Packet Length	Total number of TCP packets with invalid length received by Stateful Firewall.
Packets with Short TCP Header Length	Total number of TCP packets with invalid/short header length received by Stateful Firewall.
Packets Dropped due to TCP Checksum Errors	Total number of packets dropped due to TCP Checksum error.
Packets with SEQ/ACK Out-of-range	Total number of packets with out of range SEQ/ACK.
TCP Null Scan Attacks	Total number of TCP Null Scan attacks detected by Stateful Firewall.
Post Connection SYN	Total number of Post Connection SYN attacks detected by Stateful Firewall.
Unable to Send SYN Packet	Total number of attempts detected by Stateful Firewall when node failed to send SYN packets.
Send Final ACK to Target Failed	Total number of attempts detected by Stateful Firewall when node failed to send Final ACK packet to target node.
Invalid TCP Packet: SYN-ACK Expected	Total number of invalid TCP packets received by Stateful Firewall in place of SYN+ACK packets.
No TCP Flags Set	Total number of TCP packets received with no flags set.
All TCP Flags Set	Total number of TCP flags received with all flags set.

Field	Description
Invalid TCP Packets	Total number of invalid TCP packets including all type of errors and attacks received by Stateful Firewall.
Flows Closed by RST before 3-Way Handshake	Total number flows closed by RST (reset) message before the 3-way handshaking.
Flows Timed-out in SYN_RCVD1 State	Total number of flows timed out in SYN_RCVD1 state.
Flows Timed-out in SYN_RCVD2 State	Total number of flows timed out in SYN_RCVD2 state.
Flows Terminated due to WinNuke Attack	Total number of flows terminated due to WinNuke attacks by Stateful Firewall.
TCP-SYN Flood Attacks	Total number of TCP-SYN Flood attacks detected by Stateful Firewall.
Packets Dropped on TCP-SYN Flood Attack	Total number of packets dropped by Stateful Firewall in TCP-SYN Flood attacks.
FTP-Bounce Attacks	Total number of FTP-Bounce attacks detected by Stateful Firewall.
Mime-Flood Attacks	Total number of Mime-Flood attacks detected by Stateful Firewall.
Proxy Handshakes Completed	Total number of times proxy handshake was completed.
Packets Dropped during Proxy Handshake	Total number of packets dropped during proxy handshake.
<b>UDP Stats:</b>	
Invalid UDP Echo Response	Total number of invalid UDP echo responses.
Invalid UDP Packet Length	Total number of invalid UDP packet length.
Packets Dropped due to UDP Checksum Errors	Total number of packets dropped due to UDP Checksum errors.
Packets with Short UDP Header Length	Total number of packets with short UDP header length.
Packets Dropped on UDP Flood Attack	Total number of packets dropped by Stateful Firewall in UDP flood attacks.
Packets Dropped due to exceeding ICMP dest unreachable threshold	Total number of packets dropped due to exceeding ICMP destination unreachable threshold.
<b>ICMP Stats:</b>	
Invalid ICMP Response	Total number of invalid ICMP responses.
ICMP Reply Error	Total number of ICMP reply errors.
Invalid ICMP Type Packet	Total number of invalid ICMP type packets.

show active-charging firewall statistics domainname &lt;domain\_name&gt; verbose

Field	Description
ICMP Error Message Replay Attacks	Total number of ICMP error message replay attacks detected by Stateful Firewall.
ICMP Packets with Duplicate Sequence Number	Total number of ICMP packets with duplicate sequence numbers.
Packets with Short ICMP Header Length	Total number of packets with short ICMP header length.
Invalid ICMP Packet Length	Total number of packets with invalid ICMP packet length.
Packets Dropped on ICMP Flood Attack	Total number of packets dropped by Stateful Firewall in ICMP flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMP Checksum Errors	Total number of packets dropped due to ICMP Checksum errors.
ICMP Packets With Destination Unreachable Message	Total number of ICMP packets with Destination Unreachable Message.
ICMP Echo Packets Dropped due to ID Zero	Total number of ICMP echo packets dropped due to zero ID.
<b>ICMPv6 Stats:</b>	
Invalid ICMPv6 Response	Total number of invalid ICMPv6 responses.
ICMPv6 Reply Error	Total number of ICMPv6 reply errors.
Invalid ICMPv6 Type Packet	Total number of invalid ICMPv6 type packets.
ICMPv6 Error Message Replay Attacks	Total number of ICMPv6 error message replay attacks detected by Stateful Firewall.
ICMPv6 Packets with Duplicate Sequence Number	Total number of ICMPv6 packets with duplicate sequence numbers.
Packets with Short ICMPv6 Header Length	Total number of packets with short ICMPv6 header length.
Invalid ICMPv6 Packet Length	Total number of packets with invalid ICMPv6 packet length.
Packets Dropped on ICMPv6 Flood Attack	Total number of packets dropped by Stateful Firewall in ICMPv6 flood attacks.
Ping Of Death Attacks	Total number of Ping-of-Death attacks detected by Stateful Firewall.
Packets Dropped due to ICMPv6 Checksum Errors	Total number of packets dropped due to ICMPv6 Checksum errors.
ICMPv6 Packets With Destination Unreachable Message	Total number of ICMPv6 packets with Destination Unreachable Message.

Field	Description
ICMPv6 Echo Packets Dropped due to ID Zero	Total number of ICMPv6 echo packets dropped due to zero ID.
<b>General Stats:</b>	
Packets without Any Data Received	Total number of packets received without any data.
No Matching Uplink Ruledef	Total number of uplink packets with no matching ruledef.
No Matching Downlink Ruledef	Total number of downlink packets with no matching ruledef.
Deny Ruledef Matched	Total number of times deny ruledef was matched.
Packets Dropped due to No Ruledef in Rulebase	Total number of packets dropped due to no ruledef in rulebase. <b>Important</b> This field is deprecated in release 15.0 and later releases.
Packets Dropped due to Miscellaneous Errors	Total number of packets dropped due to miscellaneous errors.
Flows Timed-out	Total number of flows that timed out.

Total Packets Injected	Total number of packets injected by Stateful Firewall.
Total Bytes Injected	Total number of bytes injected by Stateful Firewall.
Uplink Packets Dropped	Total number of packets in uplink flow dropped by Stateful Firewall.
Uplink Bytes Dropped	Total number of bytes in uplink flow dropped by Stateful Firewall.
Downlink Packets Dropped	Total number of packets in downlink flow dropped by Stateful Firewall.
Downlink Bytes Dropped	Total number of bytes in downlink flow dropped by Stateful Firewall.
Total Malformed Packets	Total number of malformed packets detected by Stateful Firewall.
Total DOS Attacks	Total number of Denial-of-Service attacks detected by Stateful Firewall.
Total Flows Processed by Firewall	Total number of flows processed by Stateful Firewall.

## show active-charging firewall track-list attacking-servers

Table 56: show active-charging firewall track-list attacking-servers Command Output Descriptions

Field	Description
<b>Attacking Servers:</b>	
Server IP address	IP address of server being tracked for involvement in Denial-of-Service (DOS) attacks.
Time of last attack	Date and time of last attack from the server.
Time of first attack	Date and time of first attack from the server.
Total attacks	Total number of attacks from the server.
Last Attack Type	The last DOS attack type from the server.
Total attacking servers found	Total number of attacking servers found.

# show active-charging fw-and-nat policy name

**Note** This show command and counters are available in the releases: 8.1, UMTS releases supporting policy-based Firewall and NAT; 9.0 and later.

**Table 57: show active-charging fw-and-nat policy name Command Output Descriptions**

Field	Description
Service Name	Name of the Active Charging Service.
Firewall Policy Name	Name of the Firewall-and-NAT Policy.
Firewall Status IPv4	Indicates whether IPv4 Stateful Firewall is enabled or disabled in the Firewall-and-NAT policy.
Firewall Status IPv6	Indicates whether IPv6 Stateful Firewall is enabled or disabled in the Firewall-and-NAT policy.
NAT Status NAT44	Indicates whether NAT44 is enabled or disabled in the Firewall-and-NAT policy.
NAT Status NAT64	Indicates whether NAT64 is enabled or disabled in the Firewall-and-NAT policy.
NAT Status	Indicates whether NAT is enabled or disabled in the Firewall-and-NAT policy.
<b>Flow recovery status:</b>	
Basic NAT flows	Indicates whether flow recovery is enabled or disabled for basic NAT flows in the Firewall-and-NAT policy.
Recoverable basic NAT flows	Displays the total number of recoverable basic NAT flows in the Firewall-and-NAT policy.
SIP-ALG	Indicates whether flow recovery is enabled or disabled for SIP ALG in the Firewall-and-NAT policy.
<b>ICSR Flow-recovery Status:</b>	
Non-ALG	Indicates whether ICSR flow-recovery is enabled or disabled for non-ALGs in the Firewall-and-NAT policy. <b>Important</b> This statistic is deprecated in 14.0 and later releases.
Basic NAT	Indicates whether ICSR flow-recovery is enabled or disabled for basic NAT in the Firewall-and-NAT policy.
SIP-ALG	Indicates whether ICSR flow-recovery is enabled or disabled for SIP ALG in the Firewall-and-NAT policy.
H323-ALG	Indicates whether ICSR flow-recovery is enabled or disabled for H323 ALG in the Firewall-and-NAT policy.

Field	Description
<b>Firewall and NAT Action Priorities</b>	
Ruledef Name	Name of the access ruledef.
Type	Indicates the ruledef type. <ul style="list-style-type: none"> <li>• FD: Firewall Dynamic Ruledef — Predefined and disabled rules that can be enabled/disabled by the policy server.</li> <li>• FS: Firewall Static Ruledef — Predefined and enabled rules that cannot be modified by the policy server.</li> <li>• FSDP: Firewall Static &amp; Dynamic Ruledef —Predefined and enabled rules that can be enabled/disabled by the policy server.</li> </ul>
Priority	Priority of the access ruledef in the Firewall-and-NAT policy.
Charging-action/ Fw-and-nat-action	The charging action (C) or the fw-and-nat action (F) configured with the access ruledef.
Port-trigger aux-ports:direction	The auxiliary ports open for traffic, and the direction from which the auxiliary connection is initiated.
NAT-Realm	Name of the NAT realm.
<b>Firewall Configuration</b>	
<b>Dos-Protection</b>	
Source-Route	Indicates status of protection against IP Source Route IP Option attacks.
Win-Nuke	Indicates status of protection against Win Nuke attacks.
Mime-Flood	Indicates status of protection against MIME Flood attacks.
FTP-Bounce	Indicates status of protection against FTP Bounce attacks.
IP-Unaligned-Timestamp	Indicates status of protection against IP Unaligned Timestamp attacks.
TCP-Window-Containment	Indicates status of protection against TCP Window Containment.
Teardrop	Indicates status of protection against Teardrop attacks.
UDP Flooding	Indicates status of protection against UDP Flooding attacks.
ICMP Flooding	Indicates status of protection against ICMP Flooding attacks.
SYN Flooding	Indicates status of protection against SYN Flooding attacks.
Port Scan	Indicates status of protection against Port Scan attacks.
IPv6 Extension Headers Limit	Indicates status of protection against maximum limit of IPv6 extension headers in an IPv6 packet. An IPv6 packet can contain zero or more extension headers.

Field	Description
IPv6 Hop By Hop Options	Indicates status of protection against IPv6 packets containing hop-by-hop extension header options.
Hop By Hop Router Alert Option	Indicates status of protection against IPv6 packets containing router alert hop-by-hop option.
Hop By Hop Jumbo Payload Option	Indicates status of protection against IPv6 packets containing jumbo payload hop-by-hop option.
Invalid Hop By Hop Options	Indicates status of protection against IPv6 packets containing invalid hop-by-hop options.
Unknown Hop By Hop Options	Indicates status of protection against IPv6 packets containing unknown hop-by-hop options.
IPv6 Destination Options	Indicates status of protection against IPv6 packets containing IPv6 destination options header.
Invalid Destination Options	Indicates status of protection against IPv6 packets containing invalid destination options.
Unknown Destination Options	Indicates status of protection against IPv6 packets containing unknown destination options.
IPv6 Nested Fragmentation	Indicates status of protection against IPv6 packets containing IPv6 nested fragmentation.
UDP IP Sweep	Indicates status of protection against UDP IP sweep attacks.
ICMP IP Sweep	Indicates status of protection against ICMP IP sweep attacks.
TCP-SYN IP Sweep	Indicates status of protection against TCP-SYN IP sweep attacks.
<b>Max-Packet-Size</b>	
ICMP	For ICMP protocol, the maximum IP packet size (after IP reassembly) allowed over Stateful Firewall.
Non-ICMP	For non-ICMP protocol, the maximum IP packet size (after IP reassembly) allowed over Stateful Firewall.
<b>Flooding</b>	
ICMP limit	The maximum number of ICMP packets allowed during a sampling interval.
UDP limit	The maximum number of UDP packets allowed during a sampling interval.
TCP-SYN limit	The maximum number of TCP-SYN packets allowed during a sampling interval.
Sampling Interval	The flooding sampling interval, in seconds.
<b>TCP-SYN Flood Intercept</b>	

Field	Description
Mode	The TCP SYN flood intercept mode. <ul style="list-style-type: none"> <li>• none</li> <li>• intercept</li> <li>• watch</li> </ul>
Watch-timeout	The TCP intercept watch timeout, in seconds.
<b>Mime-Flood Params</b>	
HTTP Header-Limit	The maximum number of headers allowed in an HTTP packet.
HTTP Max-Header-Field-Size	The maximum header field size allowed in an HTTP header, in bytes.
<b>No Firewall Ruledef Match Action</b>	
Uplink Action	Action configured for uplink packets with no access ruledef matches.
Uplink Charging-Action	Charging action configured for uplink packets with no access ruledef matches.
Uplink NAT-Realm	The NAT-realm to be used if none of the firewall ruledefs are matched for the uplink traffic.
Uplink Fw-and-nat-action	The Fw-and-nat action to be used if none of the firewall ruledefs are matched for the uplink traffic.
Downlink Action	Action configured for downlink packets with no access ruledef matches.
Downlink Charging-Action	Charging action configured for downlink packets with no access ruledef matches.
Downlink NAT-Realm	The NAT-realm to be used if none of the firewall ruledefs are matched for the downlink traffic.
Downlink Fw-and-nat-action	The Fw-and-nat action to be used if none of the firewall ruledefs are matched for the downlink traffic.
TCP RST Message Threshold	Indicates whether a threshold limit is set on the number of TCP reset messages sent by the subscriber for a particular data flow.
TCP RST Message Threshold Value	The threshold value set for the number of TCP reset messages sent by the subscriber for a particular data flow. Range: 1 to 100
ICMP Dest-Unreachable Threshold	Indicates whether a threshold limit is set on the number of ICMP error messages sent by the subscriber for a particular data flow.
ICMP Dest-Unreachable Threshold Value	The threshold value set for the number of ICMP error messages sent by the subscriber for a particular data flow.
Action upon receiving TCP SYN packet with ECN/CWR Flag set	Indicates the action to be taken on receiving a TCP SYN packet with ECN/CWR Flag set.

Field	Description
Action upon receiving a malformed packet	Indicates the action to be taken on receiving a malformed packet.
Action upon IP Reassembly Failure	Indicates the action to be taken on IP reassembly failure.
Action upon receiving an IP packet with invalid Options	Indicates the action to be taken on receiving an IP packet with invalid options.
Action upon receiving a TCP packet with invalid Options	Indicates the action to be taken on receiving a TCP packet with invalid options.
Action upon receiving an ICMP packet with invalid Checksum	Indicates the action to be taken on receiving an ICMP packet with invalid checksum.
Action upon receiving a TCP packet with invalid Checksum	Indicates the action to be taken on receiving a TCP packet with invalid checksum.
Action upon receiving a UDP packet with invalid Checksum	Indicates the action to be taken on receiving a UDP packet with invalid checksum.
Action upon receiving an ICMP echo packet with id zero	Indicates the action to be taken on receiving an ICMP echo packet with id zero.
TCP Stateful Checks	Indicates whether stateful checks for TCP is enabled or disabled.
First Packet Non-SYN Action	Indicates the action to be taken on flows with first packet Non-SYN.
ICMP Stateful Checks	Indicates whether Stateful checks for ICMP is enabled or disabled.
TCP Partial Connection Timeout	Displays the time period for TCP partial connection, in seconds.
<b>NAT Configuration</b>	
NBR Format	Displays the NAT Binding Record format.
Private IP NPU Flow Timeout	The time period for private IP NPU Flow, in seconds.
Suppress sending NAT bind update to AAA	Indicates if the NAT bind update sent to AAA is suppressed or not.
Default NAT-Realm	The default NAT-realm to be used if no NAT-realm is found as part of firewall ruledefs.
Default Fw-and-nat-action	The Fw-and-nat action to be used when the default NAT-realm is used.

## show active-charging flow-kpi all

Table 58: show active-charging flow-kpi all Command Output Descriptions

Field	Description
Rule Name	The name of rules eligible for flow checkpointing.

Field	Description
Active Flows	Total number of active flows of the rule.
SR Flow Checkpoint Sent	Total number of SR flow checkpoint sent for the rule.
SR Flow Checkpoint Received	Total number of SR flow checkpoint received for the rule.
GR Flow Checkpoint Sent	Total number of GR flow checkpoint sent for the rule.
GR Flow Checkpoint Received	Total number of GR flow checkpoint received for the rule.
SR Flow Checkpoint Delete Sent	Total number of SR delete flow checkpoint sent for the rule.
SR Flow Checkpoint Delete Received	Total number of SR delete flow checkpoint received for the rule.
GR Flow Checkpoint Delete Sent	Total number of GR delete flow checkpoint sent for the rule.
GR Flow Checkpoint Delete Received	Total number of GR delete flow checkpoint received for the rule.
Flows of lifetime bucket1	Total number of flows of lifetime_bucket1. Lifetime value of bucket1 is configurable.
Flows of lifetime bucket2	Total number of flows of lifetime_bucket2. Lifetime value of bucket2 is configurable.
Flows of lifetime bucket3	Total number of flows of lifetime_bucket3. Lifetime value of bucket3 is configurable.

## show active-charging flows full

Table 59: show active-charging flows full Command Output Descriptions

Field	Description
FP-Stream-ID (Up)	Specifies the fastpath stream ID of uplink packets.
FP-Stream-State (Up)	Specifies the fastpath stream state of uplink packets.
FP-Stream-ID (Down)	Specifies the fastpath stream ID of downlink packets.
FP-Stream-State (Down)	Specifies the fastpath stream state of downlink packets.
FP-Client-ID	Specifies the VPP fastpath client ID.
Offload-Stream-at-packet (up)	Specifies the packet number of a stream offloaded from the session manager to VPP when the uplink traffic starts.
Offload-Stream-at-packet (Down)	Specifies the packet number of a stream offloaded from the session manager to VPP when the downlink traffic starts.
VPP FP UL Packets	Specifies the VPP count for uplink packets.

Field	Description
VPP FP UL Bytes	Specifies the VPP count for uplink bytes.
VPP FP DL Packets	Specifies the VPP count for downlink packets.
VPP FP DL Bytes	Specifies the VPP count for downlink bytes.
VPP FP Packets	Specifies total offloaded fastpath packets.
VPP FP Dropped Packets	Specifies dropped packets by VPP.
VPP Onload Succeeded	Specifies total packet onloaded from VPP (onloaded to session manager).
Flow-ID	Identifier for flows.
Session-ID	Identifier for ACS session.
Uplink Packets	The total number of uplinked packets.
Uplink Bytes	The total number of uplinked bytes.
Downlink Packets	The total number of downlinked packets.
Downlink Bytes	Total number of downlinked bytes.
FP Packets	Number of data packets processed in fastpath for this flow.
MS IP	The MS IP address.
MS NAT IP	The MS NAT IP address.
Server IP	The server IP address.
Transport Protocol	The transport protocol: TCP, UDP, ICMP
Application Protocol	The application protocol.
Video Pacing	Indicates whether video pacing is enabled or disabled.
Video Encoded Bit Rate	The currently enforced bit rate for video pacing.
Video Pacing Initial Burst Size	The initial burst size allowed, in bytes, during video pacing.
Video Pacing Normal Burst Size	The normal burst size allowed, in bytes, during video pacing.
Video Pacing Dropped Bytes	The number of data bytes dropped during video pacing.
Video Payload Bytes Sent towards User	The number of data bytes sent to the UE during video pacing.
Video Pacing Duration	The total number of video pacing in seconds.
TCP MS Port	The TCP MS port number.

Field	Description
TCP MS NAT Port	The TCP MS NAT port number. This field is not displayed for one-to-one NAT.
TCP Server Port	The TCP server port number.
TCP State	Indicates the TCP state.
TCP Prev State	Indicates the previous TCP state.
MS Window Size	The mobile window size.
Server Window Size	The server window size.
MS Retries	The total number of mobile subscriber retries.
Server Retries	The total number of server retries.
ITC Action Applied	Indicates that the ITC action is applied.
Throttle-Suppress Countdown	Displays the configured timeout (elapsed time) when flow is throttle-suppressed.
Throttle-Suppress	Displays "n/a" when throttle-suppress is inactive.
<b>Socket Migration Details:</b>	TCP Proxy Socket Migration related information.
State	Indicates the Socket Migration state of the flow. For example, SOCK_MIG_DONE.
Highest ACK Frm Server	The highest acknowledgment number from the server.
Highest Seq Frm Server	The Highest sequence number from the server.
Highest ACK Frm MS	The highest acknowledgement number from the MS.
Highest Seq Frm MS	The highest sequence number from the MS.
Seq Frm MS at Mig	Sequence number from MS at migration.
ACK Frm MS at Mig	Acknowledgement number from MS at migration.
Seq Frm Server at Mig	The sequence number from the server at migration.
ACK Frm Server at Mig	The acknowledgement number from the server at migration.
Data To Be Delivered To MS	Data to be delivered to the MS.
Data To Be Delivered To Server	Data to be delivered to the server.
Highest Seq Frm MS	Highest sequence number from the MS.
Timestamps Enabled	Indicates if timestamps option is enabled.
SACK Enabled	Indicates if selective acknowledgement is enabled.

Field	Description
Wscale From MS	Window scale value from MS.
Wscale From Server	Window scale value from server.
<b>Buffering Statistics:</b>	
Buffered Uplink Packets	The total number of buffered uplink packets.
Buffered Uplink Bytes	The total number of buffered uplink bytes.
Buffered Downlink Packets	The total number of buffered downlink packets.
Buffered Downlink Bytes	The total number of buffered downlink bytes.
Uplink Packets in Buffer	The total number of uplink packets in the buffer.
Uplink Bytes in Buffer	The total number of uplink bytes in the buffer.
Downlink Packets in Buffer	The total number of downlink packets in the buffer.
Downlink Bytes in Buffer	The total number of downlink bytes in the buffer.
Buff Over-limit Uplink Pkts	The total number of uplink packets that are over the limit in the buffer.
Buff Over-limit Uplink Bytes	The total number of uplink bytes that are over the limit in the buffer.
Buff Over-limit Downlink Pkts	The total number of downlink packets that are over the limit in the buffer.
Buff Over-limit Downlink Bytes	The total number of downlink bytes that are over the limit in the buffer.
<b>CAE-Readdressing:</b>	
Requests CAE-Readdressed	The total number of request readdressing done.
Responses CAE-Readdressed	The total number of response readdressing done.
Requests having xheader inserted	The total number of HTTP requests with x-headers inserted.
Total connect failed to CAE	The total number of connections failed to the CAE.
Total CAE-Readdressed Uplink Bytes	The total number of uplink bytes readdressed.
Total CAE-Readdressed Uplink Packets	The total number of uplink packets readdressed.
Total CAE-Readdressed Downlink Bytes	The total number of downlink bytes readdressed.
Total CAE-Readdressed Downlink Packets	The total number of downlink packets readdressed.
Flows connected to CAE	The total number of flows connected to the CAE.
Proxy Disable Success	The total number of flows with proxy disabled.

Field	Description
Proxy Disable Failed	The total number of times the proxy disable function failed.
<b>Link Monitoring</b>	
Average Throughput	The average TCP throughput of downlink TCP traffic towards the mobile device, in kbps.
Average RTT	The average TCP RTT (Round Trip Time) of downlink TCP traffic towards the mobile device, in milliseconds.
Tethering detection performed	Indicates whether tethering detection was performed.
Tethering detected	Indicates whether tethering was detected.
Total ACS flows matching specified criteria	The total number of ACS flows that match the specified criteria.

## show active-charging flows full

Table 60: show active-charging flows full Command Output Descriptions

Field	Description
FP-Stream-ID (Up)	Specifies the fastpath stream ID of uplink packets.
FP-Stream-State (Up)	Specifies the fastpath stream state of uplink packets.
FP-Stream-ID (Down)	Specifies the fastpath stream ID of downlink packets.
FP-Stream-State (Down)	Specifies the fastpath stream state of downlink packets.
FP-Client-ID	Specifies the VPP fastpath client ID.
Offload-Stream-at-packet (up)	Specifies the packet number of a stream offloaded from the session manager to VPP when the uplink traffic starts.
Offload-Stream-at-packet (Down)	Specifies the packet number of a stream offloaded from the session manager to VPP when the downlink traffic starts.
VPP FP UL Packets	Specifies the VPP count for uplink packets.
VPP FP UL Bytes	Specifies the VPP count for uplink bytes.
VPP FP DL Packets	Specifies the VPP count for downlink packets.
VPP FP DL Bytes	Specifies the VPP count for downlink bytes.
VPP FP Packets	Specifies total offloaded fastpath packets.
VPP FP Dropped Packets	Specifies dropped packets by VPP.

Field	Description
VPP Onload Succeeded	Specifies total packet onloaded from VPP (onloaded to session manager).
Flow-ID	Identifier for flows.
Session-ID	Identifier for ACS session.
Uplink Packets	The total number of uplinked packets.
Uplink Bytes	The total number of uplinked bytes.
Downlink Packets	The total number of downlinked packets.
Downlink Bytes	Total number of downlinked bytes.
FP Packets	Number of data packets processed in fastpath for this flow.
MS IP	The MS IP address.
MS NAT IP	The MS NAT IP address.
Server IP	The server IP address.
Transport Protocol	The transport protocol: TCP, UDP, ICMP
Application Protocol	The application protocol.
Video Pacing	Indicates whether video pacing is enabled or disabled.
Video Encoded Bit Rate	The currently enforced bit rate for video pacing.
Video Pacing Initial Burst Size	The initial burst size allowed, in bytes, during video pacing.
Video Pacing Normal Burst Size	The normal burst size allowed, in bytes, during video pacing.
Video Pacing Dropped Bytes	The number of data bytes dropped during video pacing.
Video Payload Bytes Sent towards User	The number of data bytes sent to the UE during video pacing.
Video Pacing Duration	The total number of video pacing in seconds.
TCP MS Port	The TCP MS port number.
TCP MS NAT Port	The TCP MS NAT port number. This field is not displayed for one-to-one NAT.
TCP Server Port	The TCP server port number.
TCP State	Indicates the TCP state.
TCP Prev State	Indicates the previous TCP state.
MS Window Size	The mobile window size.

Field	Description
Server Window Size	The server window size.
MS Retries	The total number of mobile subscriber retries.
Server Retries	The total number of server retries.
ITC Action Applied	Indicates that the ITC action is applied.
Throttle-Suppress Countdown	Displays the configured timeout (elapsed time) when flow is throttle-suppressed.
Throttle-Suppress	Displays "n/a" when throttle-suppress is inactive.
<b>Socket Migration Details:</b>	TCP Proxy Socket Migration related information.
State	Indicates the Socket Migration state of the flow. For example, SOCK_MIG_DONE.
Highest ACK Frm Server	The highest acknowledgment number from the server.
Highest Seq Frm Server	The Highest sequence number from the server.
Highest ACK Frm MS	The highest acknowledgement number from the MS.
Highest Seq Frm MS	The highest sequence number from the MS.
Seq Frm MS at Mig	Sequence number from MS at migration.
ACK Frm MS at Mig	Acknowledgement number from MS at migration.
Seq Frm Server at Mig	The sequence number from the server at migration.
ACK Frm Server at Mig	The acknowledgement number from the server at migration.
Data To Be Delivered To MS	Data to be delivered to the MS.
Data To Be Delivered To Server	Data to be delivered to the server.
Highest Seq Frm MS	Highest sequence number from the MS.
Timestamps Enabled	Indicates if timestamps option is enabled.
SACK Enabled	Indicates if selective acknowledgement is enabled.
Wscale From MS	Window scale value from MS.
Wscale From Server	Window scale value from server.
<b>Buffering Statistics:</b>	
Buffered Uplink Packets	The total number of buffered uplink packets.
Buffered Uplink Bytes	The total number of buffered uplink bytes.
Buffered Downlink Packets	The total number of buffered downlink packets.

Field	Description
Buffered Downlink Bytes	The total number of buffered downlink bytes.
Uplink Packets in Buffer	The total number of uplink packets in the buffer.
Uplink Bytes in Buffer	The total number of uplink bytes in the buffer.
Downlink Packets in Buffer	The total number of downlink packets in the buffer.
Downlink Bytes in Buffer	The total number of downlink bytes in the buffer.
Buff Over-limit Uplink Pkts	The total number of uplink packets that are over the limit in the buffer.
Buff Over-limit Uplink Bytes	The total number of uplink bytes that are over the limit in the buffer.
Buff Over-limit Downlink Pkts	The total number of downlink packets that are over the limit in the buffer.
Buff Over-limit Downlink Bytes	The total number of downlink bytes that are over the limit in the buffer.
<b>CAE-Readdressing:</b>	
Requests CAE-Readdressed	The total number of request readdressing done.
Responses CAE-Readdressed	The total number of response readdressing done.
Requests having xheader inserted	The total number of HTTP requests with x-headers inserted.
Total connect failed to CAE	The total number of connections failed to the CAE.
Total CAE-Readdressed Uplink Bytes	The total number of uplink bytes readdressed.
Total CAE-Readdressed Uplink Packets	The total number of uplink packets readdressed.
Total CAE-Readdressed Downlink Bytes	The total number of downlink bytes readdressed.
Total CAE-Readdressed Downlink Packets	The total number of downlink packets readdressed.
Flows connected to CAE	The total number of flows connected to the CAE.
Proxy Disable Success	The total number of flows with proxy disabled.
Proxy Disable Failed	The total number of times the proxy disable function failed.
<b>Link Monitoring</b>	
Average Throughput	The average TCP throughput of downlink TCP traffic towards the mobile device, in kbps.
Average RTT	The average TCP RTT (Round Trip Time) of downlink TCP traffic towards the mobile device, in milliseconds.
Tethering detection performed	Indicates whether tethering detection was performed.

Field	Description
Tethering detected	Indicates whether tethering was detected.
Total ACS flows matching specified criteria	The total number of ACS flows that match the specified criteria.

## show active-charging flows summary

Table 61: show active-charging flows summary Command Output Descriptions

Field	Description
Current:	
Active Flows	Specifies the total number of active flows currently on the system.
TCP Active flows	Specifies the total number of active flows for TCP traffic.
DNS Active flows	Specifies the total number of active flows for DNS traffic.
ICMPV6 Active flows	Specifies the total number of active flows for ICMPv6 traffic.
Idle Flows:	
TCP Idle flows	Specifies the total number of idle flows for TCP traffic.
UDP Idle flows	Specifies the total number of idle flows for UDP traffic.
ICMPv6 Idle flows	Specifies the total number of idle flows for ICMPv6 traffic.
DNS Idle flows	Specifies the total number of idle flows for DNS traffic.
Cumulative:	
Uplink Packets	Specifies the total number of uplinked packets.
Uplink Bytes	Specifies the total number of uplinked bytes.
Downlink Packets	Specifies the total number of downlinked packets.
Downlink Bytes	Specifies the total number of downlinked bytes.

## show active-charging flows full debug-info all

Table 62: show active-charging flows full debug-info all Command Output Descriptions

Field	Description
Last Active Tick Time	Specifies the last active tick time for the data packet.

Field	Description
Current Tick Time	Specifies the current system tick time.

## show active-charging flows full type p2p

*Table 63: show active-charging flows full type p2p Command Output Descriptions*

Field	Description
Flow-ID	Identifier for flows.
Session-ID	Identifier for Active Charging session with P2P.
Uplink Packets	Total packets uplinked.
Downlink Packets	Total packets downlinked.
Uplink Bytes	Total bytes uplinked.
Downlink Bytes	Total bytes downlinked.
Transport Protocol	The protocol used for data transport.
Application Protocol	The type of application protocol used for this session.
UDP Client Port	UDP port on client communication.
UDP Server Port	UDP port on server for communication.
ITC Action Applied	Status of Intelligent Traffic Control (ITC) on this session traffic.

## show active-charging flows type cdp

*Table 64: show active-charging flows type cdp Command Output Descriptions*

Field	Description
Session-ID	Identifier for Active Charging session with CDP.
Flow-ID	Identifier for Flows.
Flow-num	Identifies the flow number.

Field	Description
Application Protocol (VV)	<p>The protocol used for application.</p> <p>Supported application protocols are:</p> <ul style="list-style-type: none"> <li>• HT- HTTP</li> <li>• HS - HTTPS</li> <li>• SM - SMTP</li> <li>• P3 - POP3</li> <li>• WT - WTP</li> <li>• WS - WSP</li> <li>• DN - DNS</li> <li>• RT - RTP</li> <li>• EM - EMAIL</li> <li>• MM - MMS</li> <li>• FT - FTP</li> <li>• SI - SIP</li> <li>• WW - WWW</li> <li>• RS - RTSP</li> <li>• IM - IMAP</li> <li>• P2 - P2P</li> <li>• RC - RTCP</li> <li>• TF - TFTP</li> <li>• WC - WSP Connection Oriented</li> <li>• WX - WSP Connection-less</li> <li>• H3 - H323</li> <li>• PP - PPTP</li> <li>• RA - RADIUS</li> <li>• XX - Unknown</li> </ul>

Field	Description
Transport Protocol (v)	The protocol used for data transport. Supported data transport protocols are: <ul style="list-style-type: none"> <li>• T - TCP</li> <li>• U - UDP</li> <li>• I - ICMP and ICMPv6</li> <li>• G - GREv1</li> <li>• X - Unknown</li> </ul>
Bytes-Up	Total bytes uplinked.
Bytes-Down	Total bytes downlinked.
Packets-Up	Total packets uplinked.
Packets-Down	Total packets downlinked.
Total ACS flows matching specified criteria	The total number of ACS flows matching the specified criteria.

## show active-charging flows type p2p

*Table 65: show active-charging flows type p2p Command Output Descriptions*

Field	Description
Flow-ID	Identifier for Flows.
Session-ID	Identifier for Active Charging session with P2P.
Flow-num	Identifies the flow number.

Field	Description
Application Protocol (VV)	<p>The protocol used for application.</p> <p>Supported application protocols are:</p> <ul style="list-style-type: none"> <li>• HT- HTTP</li> <li>• HS - HTTPS</li> <li>• SM - SMTP</li> <li>• P3 - POP3</li> <li>• WT - WTP</li> <li>• WS - WSP</li> <li>• DN - DNS</li> <li>• RT - RTP</li> <li>• EM - EMAIL</li> <li>• MM - MMS</li> <li>• FT - FTP</li> <li>• SI - SIP</li> <li>• WW - WWW</li> <li>• RS - RTSP</li> <li>• IM - IMAP</li> <li>• P2 - P2P</li> <li>• RC - RTCP</li> <li>• TF - TFTP</li> <li>• WC - WSP Connection Oriented</li> <li>• WX - WSP Connection-less</li> <li>• XX - Unknown</li> <li>• H3 - H323</li> <li>• PP - PPTP</li> <li>• M6 - MIPv6</li> <li>• XX - Unknown</li> </ul>

Field	Description
Transport Protocol (v)	The protocol used for data transport. Supported data transport protocols are: <ul style="list-style-type: none"> <li>• T - TCP</li> <li>• U - UDP</li> <li>• I - ICMP and ICMPv6</li> <li>• G - GREv1</li> <li>• X - Unknown</li> </ul>
Bytes-Up	Total bytes uplinked.
Bytes-Down	Total bytes downlinked.
Packets-Up	Total packets uplinked.
Packets-Down	Total packets downlinked.
Uplink Bytes	Total bytes uplinked.
Downlink Bytes	Total bytes downlinked.
Transport Protocol	The protocol used for data transport.
Application Protocol	The type of application protocol used for this session.
UDP Client Port	UDP port on client communication.
UDP Server Port	UDP port on server for communication.
ITC Action Applied	Status of intelligent traffic control (ITC) on this session traffic.

## show active-charging flow-mappings all

Table 66: show active-charging flow-mappings all Command Output Descriptions

Field	Description
Call-ID	The call identification number to which the data flow belongs.
MS IP	The IP address of the mobile subscriber.
MS NAT IP	The NAT IP address allocated to the mobile subscriber.
MS Server IP	The server IP address of the mobile subscriber.
Transport Protocol	The transport protocol of the flow: TCP or UDP

Field	Description
TCP MS Port	The TCP port number of the mobile subscriber.
TCP MS NAT Port	The TCP NAT port number allocated to the mobile subscriber. This field is applicable for many-to-one NAT.
TCP Server Port	The TCP server port number for this flow (destination server port).
UDP MS Port	The UDP port number of the mobile subscriber.
UDP MS NAT Port	The UDP NAT port number allocated to the mobile subscriber. This field is applicable for many-to-one NAT.
UDP Server Port	The UDP server port number for this flow (destination server port).
Flow-Mapping timeout	The timeout after which the flow-mappings will be deleted.
Mapping Expiry	The time in seconds left for the flow-mapping timeout to happen. This value decrements starting from a maximum of "Flow-Mapping timeout". Upon this value reaching zero, the flow mapping will be deleted.

## show active-charging group-of-ruledefs name

Table 67: show active-charging group-of-ruledefs name Command Output Descriptions

Field	Description
Service Name	The service in which the specified group-of-ruledefs is configured.
Group-of-Ruledefs Name	Name of the group-of-ruledefs.
Ruledef Name	Names of the ruledefs added to the group-of-ruledefs.
Priority	The priorities configured for each of the ruledefs in the group-of-ruledefs.
Total group(s)-of-ruledefs found	The total number of group(s)-of-ruledefs matching the specified criteria.

## show active-charging nat statistics

Table 68: show active-charging nat statistics Command Output Descriptions

Field	Description
<b>NAT Realm Utilization:</b>	
Realm Name	Name of the NAT realm.

Field	Description
Context	Context in which the NAT realm is configured.
Current IP Address-In-Use	The number of IP addresses from the NAT realm currently in use.
Total IP Address	The total number of IP addresses for the NAT realm.
Current Calls Using-REALM	The number of current calls using the NAT realm.
Current Port-Chunks Available	The number of port chunks currently available.
Current Port-Chunks-In-Use	The number of port chunks currently in use.
Total Port-Chunks	The total number of port chunks for the NAT realm.
Port-Chunk Size	The size of the port chunks.
Current Port-Chunks-On-hold	The number of port chunks currently on hold.
<b>Statistics:</b>	
Total AAA alloc msgs sent	The total number of AAA allocation messages sent.
Total AAA dealloc msgs sent	The total number of AAA deallocation messages sent.
Total flows denied IP	The total number of subscriber flows that were denied NAT IP address.
Total flows denied port	The total number of subscriber flows that were denied a port.
NAT44 flows denied IP	The total number of NAT44 flows that were denied NAT IP address.
NAT44 flows denied port	The total number of NAT44 flows that were denied a port.
NAT64 flows denied IP	The total number of NAT64 flows that were denied NAT IP address.
NAT64 flows denied port	The total number of NAT64 flows that were denied a port.
Total flows denied memory	The total number of flows that were denied memory.
NAT44 flows denied memory	The total number of NAT44 flows that were denied memory.
NAT64 flows denied memory	The total number of NAT64 flows that were denied memory.
Total bytes Transferred	The total number of bytes transferred.
Total flows processed	The total number of flows processed.
NAT44 bytes Transferred	The total number of NAT44 bytes transferred.
NAT44 flows processed	The total number of NAT44 flows processed.
NAT64 bytes Transferred	The total number of NAT64 bytes transferred.
NAT64 flows processed	The total number of NAT64 flows processed.

Field	Description
Average TCP port usage	The average TCP port usage in the allocated TCP ports, i.e out of allocated TCP ports how many got used.
Average UDP port usage	The average UDP port usage in the allocated UDP ports, i.e out of allocated UDP ports how many got used.
Average Others port usage	The average Others (ICMP or GRE) port usage in the allocated others ports, i.e out of allocated 'Others' ports how many got used.
Total IP Alloc Reqs	The total number of IP allocation requests.
Total IP Dealloc Reqs	The total number of IP deallocation requests.
Total Port-Chunk Alloc Reqs	The total number of port-chunk allocation requests.
Total Port-Chunk Dealloc Reqs	The total number of port-chunk deallocation requests.
Total IP Alloc failure	The total number of IP allocation failures.
Total Port-Chunk Alloc failure	The total number of port-chunk allocation failures.
Total IP Alloc Bounce	The total number of IP allocations that bounced.
Total IP Audit Req	The total number of IP audit requests.
Total IP Audit Failure	The total number of IP audit failures.
Total IP Alloc failure while recovery is in progress	The total number of IP allocation failures while recovery is in progress.
Total Port-Chunk Alloc failure while recovery is in progress	The total number of port-chunk allocation failures while recovery is in progress.
<b>Port-Chunks distribution</b>	
Max no.of chunks used	The maximum number of port chunks used.
Total no.of subscribers	Total number of subscribers using maximum number of port chunks.
Current no.of subscribers	Total number of current subscribers using maximum number of port chunks.
Total Realms	The total number of NAT realms found.
<b>Ports distribution</b>	
Max no. of ports used	The maximum number of ports used.
Total no. of Subscribers	Total number of subscribers using maximum number of ports.
<b>Important</b>	<p>The maximum number of ports used are divided into buckets of size 8, with the following two exceptions:</p> <p>The first bucket [0-8] includes not-on-demand calls, that is, subscribers who are allocated a port chunk without using any ports at all will fall into the first bucket.</p> <p>The last bucket [<math>\geq 65</math>] includes all subscribers using greater than 64 ports.</p>

## show active-charging nat statistics unsolicited-pkts-server-list instance <instance\_num>

Table 69: show active-charging nat statistics unsolicited-pkts-server-list instance <instance\_num> Command Output Descriptions

Field	Description
Server IP address	Displays the IP address of the server(s).
Total Number of Unsolicited Pkts	Displays the number of unsolicited downlink packets received.
Total Number of ICMP-HU Sent	Displays the number of ICMP-HU packets sent.

## show active-charging p2p-dynamic-rules verbose

This command is not supported in this release.

## show active-charging pcp-service all

**Important** This command is customer specific. For more information, contact your Cisco account representative.

Table 70: show active-charging pcp-service all Command Output Descriptions

Field	Description
Active Charging Service Name	Name of the ACS service.
PCP Service Name	Name of the PCP service.
PCP Supported Version	The supported version number of the PCP service.
PCP IPv4 Address/Port	The IPv4 address or port number of the PCP service.
Policy Control Options	
Request Opcodes	
Map Opcode	Indicates whether Request Map opcode is enabled or not.
Map Options	The Request Map opcode options are: <ul style="list-style-type: none"> <li>• filter</li> <li>• prefer-failure</li> </ul>

Field	Description
Peer Opcode	Indicates whether Request Peer opcode is enabled or not.
Announce Opcode	Indicates whether Request Announce opcode is enabled or not.
Response Opcodes	
Map Life-Time	
Success	Indicates the lifetime for successful Map responses.
Long Error	Indicates the life-time for long error cases.
Short Error	Indicates the life-time for short error cases.
Peer Life-Time	
Success	Indicates the lifetime for successful Peer responses.
Long Error	Indicates the life-time for long error cases.
Short Error	Indicates the life-time for short error cases.
Total PCP Service(s) found	Total number of PCP services matching the specified criteria.

## show active-charging pcp-service name

**Important** This command is customer specific. For more information, contact your Cisco account representative.

**Table 71: show active-charging pcp-service name Command Output Descriptions**

Field	Description
Active Charging Service Name	Name of the ACS service.
PCP Service Name	Name of the PCP service.
PCP Supported Version	The supported version number of the PCP service.
PCP IPv4 Address/Port	The IPv4 address or port number of the PCP service.
Policy Control Options	
Request Opcodes	
Map Opcode	Indicates whether Request Map opcode is enabled or not.

Field	Description
Map Options	The Request Map opcode options are: <ul style="list-style-type: none"> <li>• filter</li> <li>• prefer-failure</li> </ul>
Peer Opcode	Indicates whether Request Peer opcode is enabled or not.
Announce Opcode	Indicates whether Request Announce opcode is enabled or not.
Response Opcodes	
Map Life-Time	
Success	Indicates the lifetime for successful Map responses.
Long Error	Indicates the life-time for long error cases.
Short Error	Indicates the life-time for short error cases.
Peer Life-Time	
Success	Indicates the lifetime for successful Peer responses.
Long Error	Indicates the life-time for long error cases.
Short Error	Indicates the life-time for short error cases.
Total PCP Service(s) found	Total number of PCP services matching the specified criteria.

## show active-charging pcp-service statistics

**Important** This command is customer specific. For more information, contact your Cisco account representative.

*Table 72: show active-charging pcp-service statistics Command Output Descriptions*

Field	Description
Active Charging Service Name	Name of the ACS service.
PCP Service Name	Name of the PCP service.
Total PCP Subscribers	Total number of PCP enabled subscribers.
Current PCP Subscribers	Current number of PCP enabled subscribers.
<b>IPv4:</b>	
Total PCP Requests	Total number of request packets received for the PCP service.

Field	Description
Total PCP Responses	Total number of PCP Responses sent by the PCP service.
Total Unknown Requests	Total number of PCP Responses sent by the PCP service for unknown PCP Requests.
Total Invalid Requests	Total number of PCP Responses sent by the PCP service for unknown PCP Requests.
<b>Map:</b>	
Total Requests	Total number of PCP MAP requests received for the PCP service.
Total Responses	Total number of PCP MAP Responses sent by the PCP service.
Valid Requests	Total number of valid PCP MAP requests received for the PCP service.
Invalid Requests	Total number of invalid PCP MAP requests received for the PCP service.
Success Responses	Total number of successful PCP MAP responses sent by the PCP service.
Error Responses	Total number of error PCP MAP responses sent by the PCP service.
<b>Peer:</b>	
Total Requests	Total number of PCP PEER requests received for the PCP service.
Total Responses	Total number of PCP PEER Responses sent by the PCP service.
Valid Requests	Total number of valid PCP PEER requests received for the PCP service.
Invalid Requests	Total number of invalid PCP PEER requests received for the PCP service.
Success Responses	Total number of successful PCP PEER responses sent by the PCP service.
Error Responses	Total number of error PCP PEER responses sent by the PCP service.
<b>Announce:</b>	
Total Requests	Total number of PCP ANNOUNCE requests received for the PCP service.
Total Responses	Total number of PCP ANNOUNCE Responses sent by the PCP service.
Valid Requests	Total number of valid PCP ANNOUNCE requests received for the PCP service.
Invalid Requests	Total number of invalid PCP ANNOUNCE requests received for the PCP service.
Success Responses	Total number of successful PCP ANNOUNCE responses sent by the PCP service.
Error Responses	Total number of error PCP ANNOUNCE responses sent by the PCP service.
Total PCP Service(s) matched	Total number of PCP services matching the specified criteria.

# show active-charging radio-congestion policy all

Table 73: show active-charging radio-congestion policy all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Radio Congestion Policy	Name of the Radio Congestion policy.
Sampling Interval	Indicates the sampling interval, in seconds.
Reporting Interval	
Num Of Samples Required	Indicates the number of samples required.
Min Samples Required Per Flow	Indicates the minimum number of samples required per flow.
Rtt Samples	Indicated the number of RTT (Round Trip Time) samples for base RTT.
<b>Data Loss</b>	
Threshold	Indicates the threshold value for data loss.
Weightage	Indicates the weightage value for data loss.
Rtt Variance	
Threshold	Indicates the threshold value for RTT variance.
Weightage	Indicates the weightage value for RTT variance.
<b>Congestion-level</b>	
Low	Indicates the low congestion level value.
Medium	Indicates the medium congestion level value.
High	Indicates the high congestion level value.
Extreme	Indicates the extreme congestion level value.
correlation-method	Indicates the configured correlation method used to correlate multiple flows of a subscriber.

## show active-charging radio-congestion policy statistics

Table 74: show active-charging radio-congestion policy statistics Command Output Descriptions

Field	Description
Total Bytes Analyzed	Total number of bytes that were successfully analyzed.
Total Bytes Retransmitted	Total number of bytes that were successfully retransmitted.
Total RTT Samples Analyzed	Total number of RTT samples that were analyzed.
Total Reports Generated	Total number of reports generated to CAE.
Total Reports Generated with Congestion Level no	Total number of generated reports with no congestion.
Total Reports Generated with Congestion Level low	Total number of generated reports with low congestion.
Total Reports Generated with Congestion Level medium	Total number of generated reports with medium congestion.
Total Reports Generated with Congestion Level high	Total number of generated reports with high congestion.
Total Reports Generated with Congestion Level extreme	Total number of generated reports with extreme congestion.
Total Reports Send with Congestion Level no	Total number of generated sent with no congestion.
Total Reports Send with Congestion Level low	Total number of generated sent with low congestion.
Total Reports Send with Congestion Level medium	Total number of generated sent with medium congestion.
Total Reports Send with Congestion Level high	Total number of generated sent with high congestion.
Total Reports Send with Congestion Level extreme	Total number of generated sent with extreme congestion.
Total Flows Analyzed	Total number of flows that were successfully analyzed.
Total Flows Eligible for Correlation	Total number of flows eligible for correlation.
Total Flows with Congestion Level no	Total number of flows with no congestion.
Total Flows with Congestion Level low	Total number of flows with low congestion.

Field	Description
Total Flows with Congestion Level medium	Total number of flows with medium congestion.
Total Flows with Congestion Level high	Total number of flows with high congestion.
Total Flows with Congestion Level extreme	Total number of flows with extreme congestion.

## show active-charging readdress-server-list statistics all

**Important** This command is license dependent. For more information please contact your Cisco account representative.

*Table 75: show active-charging readdress-server-list statistics all Command Output Descriptions*

Field	Description
ACSMGR Instance	Total instances of ACS Manager.
Server List	The list name of the server.
Server	The IP address of the DNS server.
Port	The TCP port number used by the DNS server.
Total Requests	Total number of readdress requests to the DNS server.
Failed Requests	Total number of failed readdress requests to the DNS server.
Status	The status of the DNS server (Active/ Inactive)
Average RTT	Average Round Trip Time (RTT) for the response of the readdress requests sent to the server.

## show active-charging rulebase name

*Table 76: show active-charging rulebase name Command Output Descriptions*

Field	Description
Service Name	Name of the Active Charging Service.
Rule Base Name	Name of the rulebase.
Transactional-Rule-Matching	Specifies if transactional rule matching is enabled or disabled.

Field	Description
<b>Charging Action Priorities</b>	
Name	Name of the charging ruledef / group-of-ruledefs.
Type	The ruledef / group-of-ruledefs type. <ul style="list-style-type: none"> <li>• RD: Dynamic ruledef</li> <li>• RS: Static ruledef</li> <li>• RSD: Static and dynamic ruledef</li> <li>• GD: Dynamic group-of-ruledefs</li> <li>• GS: Static group-of-ruledefs</li> <li>• GSD: Static and dynamic group-of-ruledefs</li> </ul>
Priority	Priority of the ruledef / group-of-ruledefs in the rulebase.
Charging-action	The charging action configured with the ruledef / group-of-ruledefs.
Timedef	The time definition configured with the ruledef / group-of-ruledefs.
Description	Description of the charging ruledef / group-of-ruledefs configuration.
<b>Post-processing Action Priorities</b>	
Name	Name of the Post-processing ruledef.
Type	The Post-processing ruledef type.
Priority	Priority of the Post-processing ruledef in the rulebase.
Charging-action	The charging action configured.
Description	Description of the Post-processing ruledef configuration.
<b>Routing Action Priorities</b>	
Ruledef Name	Name of the routing action ruledef.
Priority	Priority of the routing action ruledef in the rulebase.
Analyzer	Name of the applicable analyzer to routing action ruledef.
Description	Description of the routing ruledef configuration.
<b>Firewall Action Priorities</b>	
Ruledef Name	Name of the Stateful Firewall ruledef.

Field	Description
Type	<p>Indicates the Stateful Firewall ruledef type.</p> <ul style="list-style-type: none"> <li>• FD: Firewall Dynamic Ruledef—Predefined and disabled Stateful Firewall rules that can be enabled/disabled by the policy server.</li> <li>• FS: Firewall Static Ruledef—Predefined and enabled Stateful Firewall rules that cannot be modified by the policy server.</li> <li>• FSDP: Firewall Static &amp; Dynamic Ruledef—Predefined and enabled Stateful Firewall rules that can be disabled/enabled by the policy server.</li> </ul>
Priority	Priority of the Stateful Firewall ruledef in the rulebase.
Charging-action	The charging action configured.
Port-trigger aux-ports:direction	The auxiliary ports open for traffic, and the direction from which the auxiliary connection is initiated.
<b>EGCDR Fields</b>	
Tariff Time thresholds (min:hrs)	Threshold for tariff in minutes and hours.
Internal Threshold	Internal threshold to generate eG-CDRs in seconds.
Uplink Octets	Total number of octets uplinked.
Downlink Octets	Total number of octets downlinked.
Total Octets	Total number of octets uplinked and downlinked.
Time Based Metering	Status of time based metering.
Content Filtering Group	Status of Content Filtering Server Group support for offline content filtering server (ICAP) support.
Content Filtering Flow Any Error	<p>Indicates whether Content Filtering packets are allowed/discarded in case of ACS error scenarios.</p> <p>This field is displayed only if either the Content Filtering mode or, ICAP server-group is configured.</p>
Content Filtering Policy	The Content Filtering policy.
Content Filtering Mode	<p>Indicates the Content Filtering mode.</p> <ul style="list-style-type: none"> <li>• Static</li> <li>• Static-and-dynamic</li> </ul>
<p>In releases prior to StarOS 21.26: URL-Blacklisting Action</p> <p>From StarOS 21.26 and later releases: URL-Blockedlisting Action</p>	Indicates action to be taken on URL Blockedlisting match.

Field	Description
Tethering Detection	Indicates whether tethering detection is enabled or disabled.
OS-based Detection	Indicates if detection is enabled or disabled for IPv4 and IPv6 OS databases.
UA-based Detection	Indicates if UA based detection is enabled or disabled.
Tethering Detection (ip-ttl)	Indicates if IP-TTL based tethering detection is enabled or disabled.
DNS Based Detection	Indicates if DNS-based tethering detection is enabled or disabled.
Ip-ttl Values	Displays TTL values (space separated) configured for detecting tethered flows.
Max SYN detection in a flow	Displays the maximum number of SYN packets detected in a flow.
<b>UDR Fields</b>	
Tariff Time thresholds (min:hrs)	Threshold for tariff, in minutes and hours.
Interval Threshold	Interval threshold to generate UDRs, in seconds.
Uplink Octets	Total number of octets uplinked.
Downlink Octets	Total number of octets downlinked.
First Hit Content-Id Trigger	Indicates whether the First Hit Content ID trigger is enabled or disabled. This is a customer-specific field and is only available in 8.3 and later releases.
Tariff time trigger	Indicates whether the Tariff Time trigger is enabled or disabled. If enabled, this field displays the configured tariff time value.
NEMO Prefix Update Trigger	Indicates whether the NEMO Prefix Update trigger is enabled or disabled. <b>Important</b> This field will be available only when the NEMO license is configured.
Total Octets	Total number of octets uplinked and downlinked.
<b>CCA Fields</b>	
RADIUS charging context	Name of the RADIUS charging context.
RADIUS Charging Group	Name of RADIUS charging server group.
RADIUS interim interval	Interim interval for RADIUS charging generation.
DIAMETER Requested Service Unit	Information regarding requested service unit for prepaid charging through Diameter.
Uplink Octets	Total number of octets uplinked in Diameter charging.
Downlink Octets	Total number of octets downlinked in Diameter charging.
Total Octets	Total number of octets uplinked and downlinked in Diameter charging.

Field	Description
Quota Retry Time	Duration set to retry for prepaid credit limit.
Quota Holding Time (QHT)	Status of quota holding time configuration.
Quota Time Duration Algorithms	Applicable algorithm for quota time duration.
Flow End Condition	Status of flow end condition configuration.
Handoff	Indicates whether EDRs are generated for handoffs.
Timeout	Indicates whether EDRs are generated for timeouts.
Normal-end-signaling	Indicates whether EDRs are generated for normal end signaling.
Session-end	Indicates whether EDRs are generated for session ends.
Hagr	Indicates whether EDRs are generated for HAGR.
Content-Filtering	Indicates whether EDRs are generated for Content Filtering.
edr-format	Name of the EDR format.
Flow Any Error Charging Action	Indicates the charging action configured for accounting action on packets dropped by Firewall due to any error. If disabled, no accounting is performed on such packets.
Billing Records	Status of billing record generation.
Limit For Total Flows	Status of flow limit setting across all applications.
Limit For TCP Flows	Status of TCP flow limit setting.
Limit For Non-TCP Flows	Status of non-TCP flow limit setting.
Charging Rule Optimization	Type of optimization rule setting for charging.
<b>Firewall Configuration</b>	
<b>Dos-Protection</b>	
Source-Route	Indicates status of protection against IP Source Route IP Option attacks.
Win-Nuke	Indicates status of protection against Win Nuke attacks.
Mime-Flood	Indicates status of protection against MIME Flood attacks.
FTP-Bounce	Indicates status of protection against FTP Bounce attacks.
IP-Unaligned-Timestamp	Indicates status of protection against IP Unaligned Timestamp attacks.
Seq-Number-Prediction	Indicates status of protection against Sequence Number Prediction attacks.
TCP-Window-Containment	Indicates status of protection against TCP Window Containment.
Teardrop	Indicates status of protection against Teardrop attacks.

Field	Description
UDP Flooding	Indicates status of protection against UDP Flooding attacks.
ICMP Flooding	Indicates status of protection against ICMP Flooding attacks.
SYN Flooding	Indicates status of protection against SYN Flooding attacks.
Port Scan	Indicates status of protection against Port Scan attacks.
<b>Max-Packet-Size</b>	
ICMP	For ICMP protocol, the maximum IP packet size (after IP reassembly) allowed over Stateful Firewall.
Non-ICMP	For non-ICMP protocol, the maximum IP packet size (after IP reassembly) allowed over Stateful Firewall.
<b>Flooding</b>	
ICMP limit	The maximum number of ICMP packets allowed during a sampling interval.
UDP limit	The maximum number of UDP packets allowed during a sampling interval.
TCP-SYN limit	The maximum number of TCP-SYN packets allowed during a sampling interval.
Sampling Interval	The flooding sampling interval, in seconds.
<b>TCP-SYN Flood Intercept</b>	
Mode	The TCP SYN flood intercept mode. <ul style="list-style-type: none"> <li>• none</li> <li>• intercept</li> <li>• watch</li> </ul>
Max-Attempts	The maximum number of attempts for sending proxy SYN to the target.
Retrans-timeout	The SYN-Proxy retransmit timeout, in seconds.
Watch-timeout	The TCP intercept watch timeout, in seconds.
<b>Mime-Flood Params</b>	
HTTP Header-Limit	The maximum number of headers allowed in an HTTP packet.
HTTP Max-Header-Field-Size	The maximum header field size allowed in an HTTP header, in bytes.
<b>No Firewall Ruledef Match Action</b>	
Uplink Action	Action configured for uplink packets with no Stateful Firewall ruledef matches.
Uplink Charging-Action	Charging action configured for uplink packets with no Stateful Firewall ruledef matches.

Field	Description
Downlink Action	Action configured for downlink packets with no Stateful Firewall ruledef matches.
Downlink Charging-Action	Charging action configured for downlink packets with no Stateful Firewall ruledef matches.
ICMP Dest-Unreachable Threshold	Indicates whether a threshold limit is set on the number of ICMP error messages sent by the subscriber for a particular data flow.
ICMP Dest-Unreachable Threshold Value	The threshold value set for the number of ICMP error messages sent by the subscriber for a particular data flow.
QoS Renegotiation Timeout	The timeout setting for the Quality of Service (QoS) Renegotiation feature.
EDR Suppress zero byte records	Indicates whether EDR suppression of zero byte records is enabled.
EDR Timestamp Rounding	Type of timestamp rounding set for Event Detail Records.
EGCDR Timestamp Rounding	Type of timestamp rounding set for eG-CDRs.
RTP Dynamic Routing	Status of RTP dynamic routing configuration.
Ignore port no. in application headers	Status of ignoring port numbers in application headers.
Delayed Charging	Status of charging configuration to exclude initial handshaking TCP packets from charging.
IP Reassembly-Timeout	IP reassembly timeout period in milliseconds.
IP Reset ToS field	Status of IP Reset ToS field.
TCP Out-of-Order-Timeout	TCP out-of-order timeout period in milliseconds.
TCP 2MSL Timeout	TCP 2MSL timeout period in seconds.
Port Reuse	Indicates whether the Port Reuse feature is enabled or disabled.
WTP Out-of-Order-Timeout	WTP out-of-order timeout period in milliseconds.
TCP transmit-out-of-order-packets	Status of transmitting TCP out-of-order packets.
Verify TCP checksum	Status of verifying TCP checksum errors.
Verify UDP checksum	Status of verifying UDP checksum errors.
P2P Dynamic Routing	Status of P2P dynamic routing.
Total rulebase(s) found	Total number of rulebases matching the criteria.
CAE-Readdressing	Indicates whether CAE re-addressing on the Mobile Video Gateway is enabled or disabled.  <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.

Field	Description
Override Control	Indicates whether the Override Control feature is enabled or disabled.
Percentage Rate Reduction	If enabled, indicates the configured bit rate reduction for mobile video as a percentage of the input bit rate.  <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.
HTTP header-parse-limit	For a customer-specific feature, this field indicates the HTTP header parse limit, in bytes. On exceeding this limit the flow is marked as permanent failure and is matched and charged against <b>http error = TRUE</b> ruledef. If the feature is disabled, shows "disabled".
TFT updates to UE for default bearer	Indicate if the selective TFT suppression feature is enabled or disabled for the default bearer.
UIDH Insertion	Specifies if UIDH Insertion is enabled or disabled.
Server-name	Specifies the UIDH server name.
URL Whitelist	

## show active-charging rulebase statistics

Table 77: show active-charging rulebase statistics Command Output Descriptions

Field	Description
Service Name	Name of the ACS service.
Rulebase Name	Name of the rulebase.
Uplink Pkts	Total number of packets uplinked.
Uplink Bytes	Total number of bytes uplinked.
Downlink Pkts	Total number of packets downlinked.
Downlink Bytes	Total number of bytes downlinked.
Readdressed Upl Pkts	Total number of readdressed uplinked packets.
Readdressed Upl Bytes	Total number of readdressed uplinked bytes.
Readdressed Dnl Pkts	Total number of readdressed downlinked packets.
Readdressed Dnl Bytes	Total number of readdressed downlinked bytes.
TCP MSS Inserted Pkts	Total number of TCP Maximum Segment Size (MSS) inserted packets.
TCP MSS Limited Pkts	Total number of TCP MSS limited packets.

Field	Description
TCP 2msl port reuse	Total number of TCP connections reopened within 2msl timeframe.
ITC Terminated Flows	Total number of ITC terminated flows.
Total PP Dropped Packets	Total number of packets dropped.
Total PP Dropped Packet Bytes	Total number of bytes dropped.
<b>R7Gx Rule-Matching Failure Stats:</b>	
Total Dropped Packets	Total number of packets dropped by R7Gx due to rule matching failure, for the rulebase.
Total Dropped Packet Bytes	Total number of bytes dropped by R7Gx due to rule matching failure, for the rulebase.
TCP-proxy reset for non-SYN flows	Total number of resets sent by TCP Proxy for flows with no SYN packet after recovery.
<b>EDRs</b>	
Total EDRs generated	Total number of EDRs generated.
EDRs generated for handoff	Total number of EDRs generated for handoffs.
EDRs generated for timeout	Total number of EDRs generated for timeouts.
EDRs generated for normal-end-signaling	Total number of EDRs generated for normal end signaling.
EDRs generated for session end	Total number of EDRs generated for session ending.
EDRs generated for rule match	Total number of EDRs generated for rule matches.
EDRs generated for hagr	Total number of EDRs generated for HAGR.
EDRs generated for flow-end content-filtering	Total number of EDRs generated for flow-end Category-based Content Filtering.
In releases prior to StarOS 21.26: EDRs generated for flow-end url-blacklisting From StarOS 21.26 and later releases: EDRs generated for flow-end url-blockedlisting	Total number of EDRs generated for flow-end URL Blockedlisting.
EDRs generated for content-filtering	Total number of EDRs generated for Category-based Content Filtering.
EDRs generated for url-blacklisting	Total number of EDRs generated for URL Blacklisting.
EDRs generated for any-error packets	Total number of EDRs generated for any-error packets.

Field	Description
EDRs generated for firewall deny rule match	Total number of EDRs generated for firewall deny rule match.
EDRs generated for transaction completion	Total number of EDRs generated for completion of transactions.
EDRs generated for voip call end	Total number of EDRs generated on completion of voice calls.
EDRs generated for audio-end Sessions	Total number of EDRs generated on completion of audio sessions.
EDRs generated for video-end Sessions	Total number of EDRs generated on completion of video sessions.
Total Flow-Overflow EDRs	Total number of Flow-Overflow EDRs.
<b>UDRs</b>	
Total UDRs generated	Total number of UDRs generated.
UDRs generated for handoff	Total number of UDRs generated for handoffs.
UDRs generated for time limit	Total number of UDRs generated for time limits.
UDRs generated for volume limit	Total number of UDRs generated for volume limits.
UDRs generated for call end	Total number of UDRs generated for call endings.
UDRs generated for hagr	Total number of UDRs generated for HAGR.
UDRs generated for first-hit per content-id	Total number of UDRs generated for first hit content-Id trigger.
UDRs generated for CCRU response	Total number of UDRs generated for CCR-U response.
UDRs generated for offline charging	Total number of UDRs generated when offline charging trigger is received from DCCA.
UDRs generated for tariff time	Total number of UDRs generated when tariff time trigger is received.
UDRs generated for NEMO prefix update	Total number of UDRs generated for NEMO update event. <b>Important</b> This field is customer specific, and is available only with NEMO license.
<b>GCDRs</b>	
Total EGCDRs generated	Total number of eG-CDRs generated.
GCDRs for Normal Release	Total number of G-CDRs generated for normal releases.
GCDRs for Abnormal Release	Total number of G-CDRs generated for abnormal releases.
GCDRs for Volume Limit	Total number of G-CDRs generated for volume limits.
GCDRs for Time Limit	Total number of G-CDRs generated for time limits.
GCDRs for SGSN Change	Total number of G-CDRs generated for SGSN change.

Field	Description
GCDRs for Max Change Cond	Total number of G-CDRs generated for maximum change condition.
GCDRs for Mgmt Intervention	Total number of G-CDRs generated for management interventions.
GCDRs for RAT Change	Total number of G-CDRs generated for RAT changes.
GCDRs for MS Timezone Change	Total number of G-CDRs generated for MS timezone changes.
GCDRs for SGSN PLMN ID Change	Total number of G-CDRs generated for SGSN PLMN ID changes.
PGWCDRs for Normal Release	Total number of PGW-CDRs generated for normal releases.
PGWCDRs for Abnormal Release	Total number of PGW-CDRs generated for abnormal releases.
PGWCDRs for Volume Limit	Total number of PGW-CDRs generated for volume limits.
PGWCDRs for Time Limit	Total number of PGW-CDRs generated for time limits.
PGWCDRs for ServingNode Change	Total number of PGW-CDRs generated for Serving Node change.
PGWCDRs for Max Change Cond	Total number of PGW-CDRs generated for maximum change condition.
PGWCDRs for Mgmt Intervention	Total number of PGW-CDRs generated for management interventions.
PGWCDRs for RAT Change	Total number of PGW-CDRs generated for RAT changes.
PGWCDRs for MS Timezone Change	Total number of PGW-CDRs generated for MS timezone changes.
PGWCDRs for SGSN PLMN ID Change	Total number of PGW-CDRs generated for SGSN PLMN ID changes.
<b>NBRs</b>	NAT Binding Record (NBR) statistics. These fields are displayed, only if configured, in 8.3 and later releases.
Total NBRs generated	Total number of NBRs generated.
NBRs generated for port chunk allocation	Total number of NBRs generated for port chunk allocation.
NBRs generated for port chunk release	Total number of NBRs generated for port chunk release.
<b>CAE-Readdressing:</b>	
Requests CAE-Readdressed	Total number of request readdressing done.
Responses CAE-Readdressed	Total number of response readdressing done.
Requests having xheader inserted	Total number of HTTP requests with x-headers inserted.
Total CAE-Readdressed Uplink Bytes	Total number of uplink bytes readdressed.
Total CAE-Readdressed Uplink Packets	Total number of uplink packets readdressed.
Total CAE-Readdressed Downlink Bytes	Total number of downlink bytes readdressed.
Total CAE-Readdressed Downlink Packets	Total number of downlink packets readdressed.

Field	Description
Total Charging action hit - Req. Readdr.	Total number of charging action hits based on HTTP request.
Total Charging action hit - Resp. Readdr.	Total number of charging action hits based on HTTP response.
Proxy Disable Success	Total number of flows with proxy disabled.
Flows connected to CAE	Total number of flows connected to the CAE.
<b>CAE Readdressing Error Conditions</b>	
Total connect failed to CAE	Total number of connections failed to the CAE.
Req. Readdr. - pipelined case	Total number of pipelined requests skipped from doing readdressing.
Resp. Readdr. - pipelined case	Total number of pipelined response skipped from doing readdressing.
Req. Readdr. - Socket Mig. failed	Total number of TCP socket migration failure during request readdressing.
Skipped Resp. Readdr. - partial resp hdr	Total number of response readdressing skipped due to partial response.
Resp. Readdr. - Socket Mig. failed	Total number of TCP socket migration failure during response readdressing.
Total CAE load balancer failed	Total number of load balancer failures to find the video server (CAE) for readdressing.
Total MVG xheader insertion failed	Total number of MVG x-header insertion failures. <b>Important</b> In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.
Proxy Disable Failed	Total number of times the proxy disable function failed.
<b>Tethering Detection</b>	
TAC ID lookups	Total number of TAC ID lookups.
TAC ID matches	Total number of TAC IDs matched.
OS signatures lookups	Total number of OS signatures lookups.
OS signatures matches	Total number of OS signatures matched.
IPv6 OS signatures lookups	Total number of IPv6 OS signatures lookups.
IPv6 OS signatures matches	Total number of IPv6 OS signatures matched.
UA signatures lookups	Total number of UA signatures lookups.
UA signatures matches	Total number of UA signatures matched.
Total flows scanned	Total number of flows scanned.
Tethered flows detected	Total number of tethered flows detected.
Non-tethered flows detected	Total number of non-tethered flows detected.

Field	Description
<b>TRM Statistics:</b>	
Bypassed rule-matching	Total number of requests that bypassed rule matching, using the cached rule match instead.
Rule-matching bypass triggered	Total number of times a flow or transaction was put into bypass state, bypassing additional rule matching.
Failed to create dynamic flow element	Total number of times a flow or transaction failed to go into bypass state due to a shortage of memory control blocks for a dynamic rule list element.
Flow cleared, rule not found	Total number of times TRM was cleared from a flow or transaction due to the cached rule no longer being available (i.e. deleted from config).
Flow cleared, rule stats not found	Total number of times TRM was cleared from a flow or transaction due to the cached rule's statistics no longer being available (i.e. deleted from config).
Flow cleared, group not found	Total number of times TRM was cleared from a flow or transaction due to the group no longer being available (i.e. deleted from config).
Flow cleared, group rule error	Total number of times TRM was cleared from a flow or transaction due to the group's rule no longer matching the cached rule (i.e. config change).
Flow cleared, rule error	Total number of times TRM was cleared from a flow or transaction due to the rule ID in the rule control block no longer matching the cached rule ID (i.e. config change).
Flow cleared, rule expired	Total number of times TRM was cleared from a flow or transaction due to the expiry of a dynamic rule's time.
Flow cleared, pkts not forwarded	Total number of times TRM was cleared from a flow or transaction due to the packet not being forwarded for some reason (i.e. user QoS or out of quota).
Flow cleared, pkts buffered	Number of times TRM was cleared from a flow or transaction due to the packet being buffered for later transmit (i.e. quota redirect).
Flow cleared, SEF event	Total number of times TRM was cleared from a flow or transaction due to a user modification event (i.e. QoS change, policy change, etc).
Flow cleared, egcdr bucket idle time out	Total number of times TRM was cleared from a flow or transaction due to service idle timeout expiry of eG-CDR bucket.
FastPath Eligible Flows	Number of data flows which were fastpath eligible for this rulebase.
FastPath Packets	Number of data packets processed in fastpath for this rulebase.
FastPath Failures	Number of fastpath packet errors encountered for this rulebase.
<b>Override Control Install Statistics:</b>	
Total number of Overrides Received	Total number of overrides received for the specified rulebase.
Total number of Overrides Succeeded	Total number of overrides succeeded for the specified rulebase.

Field	Description
Total number of Overrides Failed	Total number of overrides failed for the specified rulebase.
Total number of Subscribers	Total number of subscribers with override control in the specified rulebase.
<b>Disable Override Control Statistics:</b>	
Total number of Disables Received	Total number of disable overrides received for the specified rulebase.
Total number of Disables Succeeded	Total number of disable overrides succeeded for the specified rulebase.
Total number of Disables Failed	Total number of disable overrides failed for the specified rulebase.

## show active-charging rulebase statistics name

Table 78: show active-charging rulebase statistics name Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Rulebase Name	Name of the rulebase.
Uplink Pkts	Total number of packets uplinked.
Uplink Bytes	Total number of bytes uplinked.
Downlink Pkts	Total number of packets downlinked.
Downlink Bytes	Total number of bytes downlinked.
Readdressed Upl Pkts	Total number of readdressed uplink packets.
Readdressed Upl Bytes	Total number of readdressed uplink bytes.
Readdressed Dnl Pkts	Total number of readdressed downlink packets.
Readdressed Dnl Bytes	Total number of readdressed downlink bytes.
Total Readdressing Failures	Total number of packets with readdressing failures.
Non Syn Flow	Total number of readdressing packets with a non SYN flow failure.
Duplicate Key	Total number of readdressing packets with a duplicate key failure.
Dropped Pkts	Total number of packets discarded on readdressing failure.
TCP MSS Inserted Pkts	Total number of Maximum Segment Size (MSS) inserted packets.
TCP MSS Limited Pkts	Total number of MSS limited packets.
TCP MSS Limited Pkts	Total number of MSS limited packets.

Field	Description
TCP 2msl port reuse	Total number of TCP connections reopened within 2msl timeframe.
Total PP Dropped Packets	Total number of packets dropped.
Total PP Dropped Packet Bytes	Total number of bytes dropped.
One Time Hit PCC Rule Matched	Total number of matches for one time hit PCC rules.
<b>R7Gx Rule-Matching Failure Stats:</b>	
Total Dropped Packets	Total number of packets dropped by R7Gx due to rule matching failure, for the rulebase.
Total Dropped Packet Bytes	Total number of bytes dropped by R7Gx due to rule matching failure, for the rulebase.
<b>P2P random drop stats:</b>	
Total Dropped Packets	Total number of packets dropped due to random drop to degrade voice quality.
Total Dropped Packet Bytes	Total number of bytes dropped due to random drop to degrade voice quality.
<b>Predefined Rule Retention Statistics:</b>	
Total number of Predefined Retention Succeeded	Total number of predefined retention succeeded.
Total number of Predefined Retention Failed	Total number of predefined retention failed.
<b>Predefined Rule Installation Statistics:</b>	
Total Number of Installation Received	Total number of predefined installation received.
Total Number of Installation Succeeded	Total number of predefined installation succeeded.
Total Number of Installation Failed	Total number of predefined installation failed.
<b>Predefined Rule Removal Statistics:</b>	
Total Number of Removal Received	Total number of predefined removal received.
Total Number of Removal Succeeded	Total number of predefined removal succeeded.
Total Number of Removal Failed	Total number of predefined removal failed.
<b>Charging EDRs:</b>	
Total Charging EDRs generated	Total number of EDRs generated.
EDRs generated for handoff	Total number of EDRs generated for handoffs.
EDRs generated for timeout	Total number of EDRs generated for timeouts.
EDRs generated for normal-end-signaling	Total number of EDRs generated for normal end signaling.

Field	Description
EDRs generated for session end	Total number of EDRs generated for session ends.
EDRs generated for rule match	Total number of EDRs generated for rule matches.
EDRs generated for hagr	Total number of EDRs generated for HAGR.
EDRs generated for flow-end content-filtering	Total number of EDRs generated for flow-end content filtering.
EDRs generated for content-filtering	Total number of EDRs generated for content filtering.
EDRs generated for any-error packets	Total number of EDRs generated for packets dropped by Firewall due to any error.
EDRs generated for firewall deny rule match	Total number of EDRs generated for firewall deny rule matches.
EDRs generated for voip call end	Total number of EDRs generated on completion of voice calls.
EDRs generated for dcca failure handling	Total number of EDRs generated for DCCA failure handling.
EDRs generated for audio-end Sessions	Total number of EDRs generated on completion of audio sessions.
EDRs generated for video-end Sessions	Total number of EDRs generated on completion of video sessions.
EDRs generated for tethering signature change	Total number of EDRs generated for tethering signature change.
<b>Reporting EDRs:</b>	
Total Reporting EDRs generated	Total number of REDRs generated.
REDRs generated for handoff	Total number of REDRs generated for handoffs.
REDRs generated for timeout	Total number of REDRs generated for timeouts.
REDRs generated for normal-end-signaling	Total number of REDRs generated for normal end signaling.
REDRs generated for session end	Total number of REDRs generated for session ends.
REDRs generated for rule match	Total number of REDRs generated for rule matches.
REDRs generated for hagr	Total number of REDRs generated for HAGR.
REDRs generated for flow-end content-filtering	Total number of REDRs generated for flow-end content filtering.
In releases prior to StarOS 21.26: REDRs generated for flow-end url-blacklisting  From StarOS 21.26 and later releases: REDRs generated for flow-end url-blockedlisting	Total number of REDRs generated for flow-end url-blockedlisting .

Field	Description
EDRs generated for content-filtering	Total number of REDRs generated for content filtering.
In releases prior to StarOS 21.26: REDRs generated for url-blacklisting From StarOS 21.26 and later releases: REDRs generated for url-blockedlisting	Total number of REDRs generated for url-blockedlisting.
REDRs generated for any-error packets	Total number of REDRs generated for packets dropped by Firewall due to any error.
REDRs generated for firewall deny rule match	Total number of REDRs generated for firewall deny rule matches.
REDRs generated for transaction completion	Total number of REDRs generated for transaction completion.
REDRs generated for voip call end	Total number of REDRs generated on completion of voice calls.
REDRs generated for tethering signature change	Total number of REDRs generated for tethering signature change.
<b>UDRs:</b>	
Total UDRs generated	Total number of UDRs generated.
UDRs generated for handoff	Total number of UDRs generated for handoffs.
UDRs generated for time limit	Total number of UDRs generated for time limits.
UDRs generated for volume limit	Total number of UDRs generated for volume limits.
UDRs generated for call end	Total number of UDRs generated for call ends.
UDRs generated for hagr	Total number of UDRs generated for HAGR.
<b>GCDRs:</b>	
Total EGCDRs generated	Total number of eG-CDRs generated.
GCDRs for Normal Release	Total number of G-CDRs generated for normal releases.
GCDRs for Abnormal Release	Total number of G-CDRs generated for abnormal releases.
GCDRs for Volume Limit	Total number of G-CDRs generated for volume limits.
GCDRs for Time Limit	Total number of G-CDRs generated for time limits.
GCDRs for SGSN Change	Total number of G-CDRs generated for SGSN changes.
GCDRs for Max Change Cond	Total number of G-CDRs generated for maximum change condition.
GCDRs for Mgmt Intervention	Total number of G-CDRs generated for management interventions.

Field	Description
GCDRs for RAT Change	Total number of G-CDRs generated for RAT changes.
GCDRs for MS Timezone Change	Total number of G-CDRs generated for MS timezone changes.
GCDRs for SGSN PLMN ID Change	Total number of G-CDRs generated for SGSN PLMN ID changes.
Total rulebases matched	Total number of rulebases that matched the specified criteria.
<b>Tethering Detection stats:</b>	
TAC ID lookups	Total number of TAC ID lookups.
TAC ID matches	Total number of TAC ID matches.
OS signature lookups	Total number of OS signature lookups.
OS signature matches	Total number of OS signature matches.
UA signature lookups	Total number of UA signature lookups.
UA signature matches	Total number of UA signature matches.
Total flows scanned	Total number of flows scanned for tethering detection.
Tethered flows detected	Total number of tethered flows detected.
Tethered Uplink Packets	Total number of uplink packets for tethered flows.
Tethered Downlink Packets	Total number of downlink packets for tethered flows.
<b>Tethering Detection Statistics (ip-ttl)</b>	
Total flows scanned	Total number of flows scanned.
Tethered flows detected	Total number of tethered flows detected.
Tethered uplink packets	Total number of uplink packets for tethered flows.
Tethered downlink packets	Total number of downlink packets for tethered flows.
<b>Change Statistics for Multiple SYN in Flow:</b>	
Tethered to Non-Tethered	This counter is updated when previous SYN has tethered signature and new SYN has non-tethered signature.
Non-Tethered to Tethered	This counter is updated when previous SYN has non-tethered signature and new SYN has tethered signature.
Tethered to Tethered	This counter is updated when previous SYN has tethered signature and new SYN also has tethered signature.
Non-Tethered to Non-Tethered	This counter is updated when previous SYN has non-tethered signature and new SYN also has non-tethered signature.
<b>Header Enrichment stats:</b>	

Field	Description
HTTP header buffering limit reached	Total number of times the HTTP header buffering fails due to the maximum buffering limit reached.  On a header buffering failure, the buffered packets are flushed and sent out without modification, and rule matching is performed on the last packet where the header finished.
Enterprise-ID received over Gx	Indicates the Enterprise ID of a user that PCRF sends in a custom-AVP over the Gx interface.
<b>TRM Statistics:</b>	
Bypassed rule-matching	Total number of requests that bypassed rule matching, using the cached rule match instead.
Rule-matching bypass triggered	Total number of times a flow or transaction was put into bypass state, bypassing additional rule matching.
Failed to create dynamic flow element	Total number of times a flow or transaction failed to go into bypass state due to a shortage of memory control blocks for a dynamic rule list element.
Flow cleared, rule not found	Total number of times TRM was cleared from a flow or transaction due to the cached rule no longer being available (i.e. deleted from config).
Flow cleared, rule stats not found	Total number of times TRM was cleared from a flow or transaction due to the cached rule's statistics no longer being available (i.e. deleted from config).
Flow cleared, group not found	Total number of times TRM was cleared from a flow or transaction due to the group no longer being available (i.e. deleted from config).
Flow cleared, group rule error	Total number of times TRM was cleared from a flow or transaction due to the group's rule no longer matching the cached rule (i.e. config change).
Flow cleared, rule error	Total number of times TRM was cleared from a flow or transaction due to the rule ID in the rule control block no longer matching the cached rule ID (i.e. config change).
Flow cleared, rule expired	Total number of times TRM was cleared from a flow or transaction due to the expiry of a dynamic rule's time.
Flow cleared, pkts not forwarded	Total number of times TRM was cleared from a flow or transaction due to the packet not being forwarded for some reason (i.e. user QoS or out of quota).
Flow cleared, pkts buffered	Number of times TRM was cleared from a flow or transaction due to the packet being buffered for later transmit (i.e. quota redirect).
Flow cleared, SEF event	Total number of times TRM was cleared from a flow or transaction due to a user modification event (i.e. QoS change, policy change, etc).
FastPath Eligible Flows	Number of data flows which were fastpath eligible for this rulebase.
FastPath Packets	Number of data packets processed in fastpath for this rulebase.
FastPath Failures	Number of fastpath packet errors encountered for this rulebase.

Field	Description
<b>URL-Readdressing:</b>	
Requests URL-Readdressed	Total number of URL-readdressed requests.
Total Charging action hit - Req. Readdr.	Total number of charging action hits based on request readdressing.
Proxy Disable Success	Total number of flows with proxy disabled.
Flows connected to URL Server	Total number of flows connected to URL server.
<b>URL Readdressing Error Conditions:</b>	
Total connect failed to URL Server	Total number of failed connections to the URL server.
URL Readdress - pipelined case	Total number of pipelined requests skipped during URL readdressing.
URL Readdress - Socket Mig. failed	Total number of TCP socket migration failure during URL readdressing.
Proxy Disable Failed	Total number of times the proxy disable function failed.
<b>Dynamic Rule Statistics</b>	
<b>Rule Installation Statistics</b>	
Total number of Installation Received	The number of dynamic rules received for installation from PCRF
Total number of Installation Succeeded	The number of dynamic rules installed successfully
Total number of Installation Failed	The number of dynamic rule installations failed
<b>Rule Installation Failure Statistics:</b>	
Unknown Rule Name Error	The number of dynamic rule installations failed because the rule name was not specified
Rating Group Error	The number of dynamic rule installations failed because rating group was invalid/missing.
Service ID Error	The number of dynamic rule installations failed because the service ID was invalid/missing.
Trigger Policy Failure	The number of dynamic rule installations failed because of internal policy failure
Resources Limitation	The number of dynamic rule installations failed because of the limitation of resources
Maximum Number Of Bearer Reached	The number of dynamic rule installations failed because the maximum limit of bearer is reached
Flow Information Missing	The number of dynamic rule installations failed because the flow information is missing
Resource Allocation Failure	The number of dynamic rule installations failed because the resource allocation failed.

Field	Description
QoS Validation Error	The number of dynamic rule installations failed because the QoS validation failed.
Incorrect Flow Information	Number of dynamic rule installations failed because the flow information is incorrect.
Adc Rule - Redirect Server Address Missing	Number of dynamic rule installations failed because the redirect address is missing in an ADC rule.
Adc Rule - TDF App ID Error	Number of dynamic rule installations failed because the TDF Application ID is invalid/missing.
<b>Rule Modification Statistics:</b>	
Total number of Modification Received	Number of dynamic rule modifications received.
Total number of Modification Succeeded	Number of dynamic rule modifications succeeded.
Total number of Modification Failed	Number of dynamic rule modifications failed
<b>Rule Modification Failure Statistics:</b>	
Rating Group Error	Number of dynamic rule modifications failed because the rating group is invalid/missing
Service ID Error	Number of dynamic rule modifications failed because the service ID is invalid/missing.
Trigger Policy Failure	Number of dynamic rule modifications failed because of the internal policy failure
Resources Limitation	Number of dynamic rule modifications failed because of the limitation of resources.
Maximum Number Of Bearer Reached	Number of dynamic rule modifications failed because the maximum limit of bearer is reached.
Resource Allocation Failure	Number of dynamic rule modifications failed because of allocation of resources failed.
QoS Validation Error	Number of dynamic rule modifications failed because the QoS validation failed.
Incorrect Flow Information	Number of dynamic rule modifications failed because the flow information is incorrect.
Adc Rule - Redirect Server Address Missing	Number of dynamic rule modifications failed because the redirect address is missing in an ADC rule.
Adc Rule - TDF App ID Error	Number of dynamic rule modifications failed because the TDF application ID is invalid/missing in an ADC rule.
<b>Common Rule Statistics</b>	
Total Number Of Common Rules Received	Number of dynamic rules received in installation/modification.
Total Number Of Common Failures	Number of dynamic rules failed in installation/modification.

Field	Description
Unknown Bearer ID Error	Number of dynamic rules failed during installation/modification because the bearer ID is not known
Resource Allocation Failure	Number of dynamic rules failed during installation/modification because the resource allocation failed
<b>Already Installed Rule removal</b>	
Total Number Of Intended Removals	Number of dynamic rules intentionally failed due to some internal event.
PS to CS Handover	Number of dynamic rules intentionally failed due to PS to CS handover.
Resource Allocation Failure	Number of dynamic rules intentionally failed due to resource allocation failure.
<b>Rule Removal Statistics</b>	
Total Number Of Removal Received	Number of dynamic rule removals received.
Total Number Of Removal Succeeded	Number of dynamic rules removed successfully.
Total Number Of Removal Failed	Number of dynamic rule removals failed.
<b>Rule Removal Failure Statistics:</b>	
BCM Mode Mismatch	Number of dynamic rule removals failed because the BCM mode has changed
<b>Condition Action Statistics:</b>	
Out of Credit allow actions received	Total number of times the "out of credit allow" actions have been received.
Action applied to packets	Total number of packets to which the "out of credit allow" actions are applied.
Action applied to bytes	Total number of bytes to which the "out of credit allow" actions are applied.
Current Opt-In Subscribers	Indicates the current Opt-In subscribers.
Total UIDH Request	Indicates the total number of UIDH requests.
Initial	Specifies the total number of initial UIDH requests transmitted
Refresh	Specifies the total number of UIDH Refresh Requests transmitted.
Total UIDH OptIn Response	Indicates the total number of UIDH Opt-In response.
Initial	Specifies the total of UIDH OPT-In (subscribers that have opted for UIDH service) response for the Initial Requests.
Refresh	Specifies the total of UIDH OPT-In (subscribers that have opted for UIDH service) response for Refresh Requests.
Total UIDH OptOut Response	Indicates the total number of Opt-out response.
Initial	Specifies the total of UIDH OPT-Out (subscribers that have opted out from the UIDH service) response received for Initial Requests.

Field	Description
Refresh	Specifies the total of UIDH OPT-Out (subscribers that have opted out from the UIDH service) response received for Refresh Requests.
UIDH Failure	Indicates the UIDH Failure.
Request Timeout	Specifies the total number of UIDH Requests that have expired on reaching the timeout value.
Initial	Specifies the total number of initial UIDH Requests that have expired on reaching the timeout value.
Refresh	Specifies the total number of refresh UIDH requests that have expired on reaching the timeout value.
Error Response Code	Indicates the UIDH Failure with an error response code.
Initial	Specifies the total of Failure Code UIDH response received for Initial Requests.
Refresh	Specifies the total of Failure Code UIDH response received for Refresh Requests.
Invalid Length	
Initial	
Refresh	
Request Enqueue Failed	
Initial	
Refresh	
Total UIDH Insertions	Indicates the total number of UIDH insertions in a HTTP request.
UIDH Whitelist Statistics	
URL Host Lookups	Specifies the number of URL Host lookups
URL Host Lookup Failed	Specifies the number of URL Host lookups that resulted in failure.
URL Host Matches	Specifies the number of URL Hosts matched.
URL Host Lookup Bypass	Specifies the number of URL Host Lookups bypassed
<b>VPP Offload Statistics:</b>	
Total Flows	Total number of flows.
Current Active Flows	Total number of active current flows.
<b>IPv4:</b>	
Uplink Pkts	Total number of IPv4 packets uplinked.
Uplink Bytes	Total number of IPv4 bytes uplinked.

Field	Description
Downlink Pkts	Total number of IPv4 packets downlinked.
Downlink Bytes	Total number of IPv4 bytes downlinked.
Dropped Uplink Pkts	Total number of IPv4 uplink packets discarded.
Dropped Uplink Bytes	Total number of IPv4 uplink bytes discarded.
Dropped Downlink Pkts	Total number of IPv4 downlink packets discarded.
Dropped Downlink Bytes	Total number of IPv4 downlink bytes discarded.
<b>IPv6:</b>	
Uplink Pkts	Total number of IPv6 packets uplinked.
Uplink Bytes	Total number of IPv6 bytes uplinked.
Downlink Pkts	Total number of IPv6 packets downlinked.
Downlink Bytes	Total number of IPv6 bytes downlinked.
Dropped Uplink Pkts	Total number of IPv6 uplink packets discarded.
Dropped Uplink Bytes	Total number of IPv6 uplink bytes discarded.
Dropped Downlink Pkts	Total number of IPv6 downlink packets discarded.
Dropped Downlink Bytes	Total number of IPv6 downlink bytes discarded.

## show active-charging ruledef firewall

Table 79: show active-charging ruledef firewall Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Ruledef Name	Name of the ruledef.
tcp client-port	The TCP client port number.
tcp dst-port	The TCP destination port number.
tcp src-port	The TCP source port number.
tcp server-port	The TCP server port number.
udp client-port	The UDP client port number.
udp dst-port	The UDP destination port number.

Field	Description
udp src-port	The TCP source port number.
udp server-port	The UDP server port number.
ip any-match	Indicates whether the ruledef analyzes user traffic based on IP analyzed state—true/false.
Rule Application Type	The rule application type—firewall.
Create-log-record	Indicates whether logging is enabled or disabled.
Total ruledef(s) configured	Total number of Stateful Firewall ruledefs configured.

## show active-charging ruledef statistics

*Table 80: show active-charging ruledef statistics Command Output Descriptions*

Field	Description
Total Charging Ruledefs	Total number of charging ruledefs configured.
Uplink Packets	Total number of packets received in uplink flow.
Uplink Bytes	Total number of bytes received in uplink flow.
Downlink Packets	Total number of packets received in downlink flow.
Downlink Bytes	Total number of bytes received in downlink flow.
Hits	Total number of events.
Match-Bypassed	Total number of packets bypassed on all ruledefs.
Total Post-processing Ruledefs	Total number of post-processing ruledefs configured.
Uplink Packets	Total number of packets received in uplink flow.
Uplink Bytes	Total number of bytes received in uplink flow.
Downlink Packets	Total number of packets received in downlink flow.
Downlink Bytes	Total number of bytes received in downlink flow.
Hits	Total number of events.
Total Firewall Ruledefs	Total number of Stateful Firewall ruledefs configured.
Uplink Packets	Total number of packets received in uplink flow.
Uplink Bytes	Total number of bytes received in uplink flow.
Downlink Packets	Total number of packets received in downlink flow.

Field	Description
Downlink Bytes	Total number of bytes received in downlink flow.
Uplink Packets Dropped	Total number of packets dropped in uplink flow.
Uplink Bytes Dropped	Total number of bytes dropped in uplink flow.
Downlink Packets Dropped	Total number of packets dropped in downlink flow.
Downlink Bytes Dropped	Total number of bytes dropped in downlink flow.
Hits	Total number of events.
Total TPO Ruledefs	<b>Important</b> The Traffic Performance Optimization (TPO) in-line service is not supported in this release.
Hits	<b>Important</b> The Traffic Performance Optimization (TPO) in-line service is not supported in this release.
Total Default Firewall Ruledefs	Total number of default Firewall ruledefs.
Uplink Packets	Total number of packets received in uplink flow.
Uplink Bytes	Total number of bytes received in uplink flow.
Downlink Packets	Total number of packets received in downlink flow.
Downlink Bytes	Total number of bytes received in downlink flow.
Uplink Packets Dropped	Total number of packets dropped in uplink flow.
Uplink Bytes Dropped	Total number of bytes dropped in uplink flow.
Downlink Packets Dropped	Total number of packets dropped in downlink flow.
Downlink Bytes Dropped	Total number of bytes dropped in downlink flow.
Hits	Total count of hits by default Firewall ruledefs.

## show active-charging ruledef statistics all firewall wide

Table 81: show active-charging ruledef statistics all firewall wide Command Output Descriptions

Field	Description
Ruledef Name	Name of the Stateful Firewall ruledef.
Packets-Down	Total number of packets downlinked.
Bytes-Down	Total number of bytes downlinked.

Field	Description
Packets-Up	Total number of packets uplinked.
Bytes-Up	Total number of bytes uplinked.
Pkts-Drop-Dn	Total number of downlink packets dropped.
Bytes-Drop-Dn	Total number of downlink bytes dropped.
Pkts-Drop-Up	Total number of uplink packets dropped.
Bytes-Drop-Up	Total number of uplink bytes dropped.
Hits	Total number of events.
Match-Bypassed	Total number of packets bypassed on all ruledefs.
Total Ruledef(s)	Total number of ruledefs.
SFW Default Ruledefs:	
ALG Pinholes	Total number of packets which do not match SFW ruledefs configured in Firewall-and-NAT policy when NAT ALG is enabled in ECS but allowed to reach ISP or vice-versa.
Default Uplink	Total number of packets which do not match any SFW ruledefs configured but allowed to reach ISP from MS (uplink). This is due to the default SFW behavior.
Default Downlink	Total number of packets which do not match any SFW ruledefs configured but allowed to reach MS from ISP (downlink). This is due to the default SFW behavior.
Total Ruledef(s)	Total number of ruledefs per ACS sub-session.
Total Default SFW Ruledef(s)	Total number of default SFW ruledefs.

## show active-charging ruledef statistics all charging

*Table 82: show active-charging ruledef statistics all charging Command Output Descriptions*

Field	Description
Ruledef Name	Name of the charging ruledef.
Packets-Down	Total number of packets downlinked.
Bytes-Down	Total number of bytes downlinked.
Packets-Up	Total number of packets uplinked.
Bytes-Up	Total number of bytes uplinked.
Hits	Total number of events.

Field	Description
Total Ruledef(s)	Total number of charging ruledefs.

## show active-charging ruledef statistics all tpo

The Traffic Performance Optimization (TPO) in-line service is not supported in this release.

## show active-charging ruledef tpo

The Traffic Performance Optimization (TPO) in-line service is not supported in this release.

## show active-charging service all

*Table 83: show active-charging service all Command Output Descriptions*

Field	Description
Service name	Name of the Active Charging Service.
TCP Flow Idle Timeout	TCP flow idle timeout period, in seconds.
UDP Flow Idle Timeout	UDP flow idle timeout period, in seconds.
ICMP Flow Idle Timeout	ICMP flow idle timeout period, in seconds.
ALG Media Idle Timeout	The configured ALG media idle timeout value, in seconds.
TCP Flow-Mapping Idle Timeout	The configured TCP flow-mapping timeout value, in seconds.
UDP Flow-Mapping Idle Timeout	The configured UDP flow-mapping timeout value, in seconds.
Deep Packet Inspection	Indicates whether Deep Packet Inspection is enabled.
Passive Mode	Indicates whether Passive Mode is enabled.
CDR Flow Control	Indicates whether CDR Flow Control is enabled.
Content Filtering	Indicates whether Category-based Content Filtering is enabled.
Dynamic Content Filtering	Indicates whether Dynamic Content Filtering is enabled.
In releases prior to StarOS 21.26: URL-Blacklisting From StarOS 21.26 and later releases: URL-Blockedlisting	Indicates whether URL Blockedlisting is enabled.

Field	Description
In releases prior to StarOS 21.26: URL-Blacklisting Match-method From StarOS 21.26 and later releases: URL-Blockedlisting Match-method	Indicates the URL Blockedlisting method to look up URLs in the URL Blockedlisting database.
Content Filtering Match-method	Indicates the match method to look up URLs in the category-based content filtering database.
Interpretation of Charging-rule-base-name	Indicates how the Charging-Rule-Base-Name AVP from PCRF is interpreted, either as ACS rulebase or ACS group-of-ruledefs.
Selection of Charging-rule-base	If multiple Charging-Rule-Base-Name AVP are received from the PCRF, indicates which rulebase is selected and applied to the call, the first or the last rulebase.
optimize-update	Enables multiple policy optimization.
pra-change	Enables optimization policies for PRA changes.
<b>Credit Control:</b>	
Mode	Indicates the pre-paid charging application mode—Diameter or RADIUS.
APN-name-to-be-included	Indicates the APN name to be sent in CCA messages.
Trigger-Type	Indicates the credit control reauthorization trigger type.
Event-Trigger-Type	Indicates the configured credit control reauthorization event trigger type.
<b>Failure-Handling</b>	
Initial-Request	Indicates whether initial-request calls will be continued/terminated/retired in the event of a communication failure with the pre-paid server.
Update-Request	Indicates whether update-request calls will be continued/terminated/retired in the event of a communication failure with the pre-paid server.
Terminate-Request	Indicates whether terminate-request calls will be continued/terminated/retired in the event of a communication failure with the pre-paid server.
<b>Server Unreachable Failure-Handling</b>	
Initial-Request	Indicates whether initial-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
Update-Request	Indicates whether update-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
<b>Diameter:</b>	
Endpoint	Name of the Diameter endpoint.
Endpoint-Realm	Realm of the Diameter endpoint.

Field	Description
Dictionary	The Diameter dictionary used for Credit Control.
Session-Failover	Indicates whether Session Failover is supported.
Pending-Timeout	Indicates the pending timeout period, in seconds.
HDD	Indicates whether the Credit-Control group has been configured to store the failed CCR-Ts in the HDD.
<b>Peer-Select:</b>	
Peer	Name of the peer.
Realm	Indicates realm for the peer.
Secondary-Peer	Name of the secondary peer.
Realm	Indicates realm for the secondary peer.
IMSI-Based Start-Value	To select the Diameter peer based on the International Mobile Subscriber Identification (IMSI) number, specify the start of range in integer value of IMSI.
IMSI-Based End-Value	The end of range in integer value of IMSI.
MSISDN-Range-Mode	To select the Diameter peer based on Mobile Station International Subscriber Directory (MSISDN) number, specify the prefix or suffix mode.
MSISDN-Based Start-Value	To select the peer based on MSISDN value, specify the start of range in integer value of MSISDN.
MSISDN-Based End-Value	The end of range in integer value of MSISDN.
<b>Quota</b>	
Request-Trigger	Indicates the trigger action on packets on crossing the threshold limit of subscriber quota in the pre-paid credit control service.
Holding-Time	Indicates the Quota Holding Time (QHT).
Validity-Time	Indicates the validity lifetime of the quota in seconds.
Time-Threshold	Indicates the time threshold for pre-paid credit control quota.
Units-Threshold	Indicates the units threshold for DCCA quota in percentage.
Volume-Threshold	Indicates the volume threshold for pre-paid credit control quota.
<b>Pending-Traffic-Treatment</b>	
trigger	Indicates the trigger status.
forced-reauth	Indicates status of the Diameter credit control pending traffic treatment for forced reauthorization.

Field	Description
no-quota	Indicates status of the Diameter credit control pending traffic treatment quota.
quota-exhausted	Indicates status of the Diameter credit control pending traffic treatment for exhausted quota.
validity-expired	Indicates status of the Diameter credit control pending traffic treatment for validity.
Redirection	Indicates whether or not the "user-agent" check in the HTTP header is enabled.
diameter mscc-final-unit-action terminate	Indicates whether a PDP session or a category is terminated based on the user's quota and Final-Unit-Action (FUA) at <b>Multiple-Services-Credit-Control</b> (MSCC) level.

## show active-charging service-scheme statistics

*Table 84: show active-charging service-scheme statistics Command Output Descriptions*

Field	Description
Service-name	The active charging service name.
Service-Scheme	The active charging service-scheme name.
Total Subscribers	Total number of subscribers configured on the system.
Total service scheme(s) found	Total number of configured active charging service-schemes.

## show active-charging sessions all

*Table 85: show active-charging sessions all Command Output Descriptions*

Field	Description
SESSIONID	The active charging session ID.
CALLID	The Call ID.
IMSI/MSID	Indicates the International Mobile Subscriber Identification/Mobile Station ID.
IP	IP address of the client.
USERNAME	Name of the subscriber.
OC	Indicates the Override Control status as ON or OFF based on whether OC is enabled or disabled for the call.

## show active-charging sessions credit-control server-unreachable

Table 86: show active-charging sessions credit-control server-unreachable Command Output Descriptions

Field	Description
SESSIONID	The active charging session ID.
CALLID	The call ID.
IMSI/MSID	The International Mobile Subscriber Identification/Mobile Station ID.
IP	IP address of client.
USERNAME	Name of the subscriber.
Total acs sessions matching specified criteria	Total number of ACS sessions with firewall enabled.

## show active-charging sessions firewall required

Table 87: show active-charging sessions firewall required Command Output Descriptions

Field	Description
SESSIONID	The active charging session ID.
CALLID	The call ID.
IMSI/MSID	The International Mobile Subscriber Identification/Mobile Station ID.
IP	IP address of client.
USERNAME	Name of the subscriber.
Total acs sessions matching specified criteria	Total number of ACS sessions with firewall enabled.

## show active-charging sessions full

Table 88: show active-charging sessions full Command Output Descriptions

Field	Description
Session-ID	The active charging session ID.
Username	Name of the subscriber.

Field	Description
Callid	The Call ID.
IMSI/MSID	Indicates the International Mobile Subscriber Identification/Mobile Station ID.
ACSMgr Instance	Total instances of ACS Manager.
ACSMgr Card/Cpu	Total number of ACS Manager Card/CPU.
Client-IP	In 14.0 and later releases, prefix of IPv6 address or IPv4 address of the client for all call types. In 12.3 and earlier releases, IPv6 address or IPv4 address of the client for all call types.
SessMgr Instance	Total instances of Session Manager.
NAS-IP	IP address of Network Access Server.
NAS-PORT	TCP port of Network Access Server.
Access-NAS-IP(FA)	IP address of accessed Network Access Server Foreign Agent (FA).
NSAPI	Total instances of NS APIs used.
Acct-Session-ID	The accounting session ID.
NAS-ID	The Network Access Server ID.
Access-NAS-ID(FA)	Accessed Network Access Server Foreign Agent (FA) ID.
3GPP2-BSID	3GPP2 base station ID.
Access-Correlation-ID(FA)	Access correlation ID for FA.
3GPP2-Correlation-ID	Mobile IP Correlation ID.
MEID	Mobile equipment's unique Mobile Equipment Identifier (MEID).
Carrier-ID	Carrier or service ID.
ESN	Electronic Serial Number (ESN) of mobile equipment.
Uplink Bytes	Total bytes uploaded.
Downlink Bytes	Total bytes downloaded.
Uplink Packets	Total packets uploaded.
Downlink Packets	Total packets downloaded.
Injected Uplink Bytes	Total bytes injected to upload.
Injected Downlink Bytes	Total bytes injected to download.
Injected Uplink Packets	Total packets injected to upload.

Field	Description
Injected Downlink Packets	Total packets injected to download.
Buffered Uplink Packets	Total buffered packets for uplink.
Buffered Downlink Packets	Total buffered packets for downlink.
Buffered Uplink Bytes	Total buffered bytes for uplink.
Buffered Downlink Bytes	Total buffered bytes for uplink.
Uplink Packets in Buffer	Total number of uplink packets in the buffer.
Uplink Bytes in Buffer	Total number of uplink bytes in the buffer.
Downlink Packets in Buffer	Total number of downlink packets in the buffer.
Downlink Bytes in Buffer	Total number of downlink bytes in the buffer.
Buff Over-limit Uplink Pkts	Total number of uplink packets that were over the buffer limit.
Buff Over-limit Uplink Bytes	Total number of uplink bytes that were over the buffer limit.
Buff Over-limit Downlink Pkts	Total number of downlink packets that were over the buffer limit.
Buff Over-limit Downlink Bytes	Total number of downlink bytes that were over the buffer limit.
Processed Uplink Packets	Total packets processed for upload.
Processed Downlink Packets	Total packets processed for download.
Dropped Uplink Packets	Total packets dropped in uplink direction.
Dropped Downlink Packets	Total packets dropped in downlink direction.
Uplink Out of Order Packets	Total out of order packets in uplink direction.
Downlink Out of Order Packets	Total out of order packets in downlink direction.
ITC Terminated Flows	Total number of flows terminated by Intelligent Traffic Control service.
ITC Redirected Flows	Total number of flows redirected by Intelligent Traffic Control service.
ITC Dropped Packets	Total number of packets dropped by Intelligent Traffic Control service.
ITC ToS Remarketed Packets	Total number of packets marked with Type of Service (ToS) by Intelligent Traffic Control service.
ITC Dropped Upl Pkts	Total number of packets in uplink direction, that were dropped by Intelligent Traffic Control service.
ITC Dropped Dnl Pkts	Total number of packets in downlink direction, that were dropped by Intelligent Traffic Control service.
ITC Dropped Upl Bytes	Total number of uplink bytes dropped by Intelligent Traffic Control service.

Field	Description
ITC Dropped Dnl Bytes	Total number of downlink bytes dropped by Intelligent Traffic Control service.
R7Gx Dropped Upl Packets	Total number of packets dropped by R7Gx in uplink direction.
R7Gx Dropped Dnl Packets	Total number of packets dropped by R7Gx in downlink direction.
R7Gx Dropped Upl Pkts RuleMatch Fail	Total number of packets dropped by R7Gx in uplink direction due to rulematch failure—no matching rule is found.
R7Gx Dropped Upl Bytes RuleMatch Fail	Total number of bytes dropped by R7Gx in uplink direction due to rulematch failure.
R7Gx Dropped Dnl Pkts RuleMatch Fail	Total number of packets dropped by R7Gx in downlink direction due to rulematch failure.
R7Gx Dropped Dnl Bytes RuleMatch Fail	Total number of bytes dropped by R7Gx in downlink direction due to rulematch failure.
CC Dropped Uplink Packets	Total number of packets dropped by credit control in uplink direction.
CC Dropped Uplink Bytes	Total number of bytes dropped by credit control in uplink direction.
CC Dropped Downlink Packets	Total number of packets dropped by credit control in downlink direction.
CC Dropped Downlink Bytes	Total number of bytes dropped by credit control in downlink direction.
NRUPC Req Made	Total number of Network Requested Update PDP Context (NRUPC) requests made.
NRUPC Req Success	Total number of NRUPC requests succeeded.
NRUPC Req Failed	Total number of NRUPC requests failed.
NRUPC Req Time Out	Total number of NRUPC requests timed out.
Current Readdressed Sessions	Number of current re-addressed sessions
Total Readdressed Uplink Pkts	Total number of re-addressed uplink packets.
Total Readdressed Uplink Bytes	Total number of re-addressed uplink bytes.
Total Readdressed Downlink Pkts	Total number of re-addressed downlink packets.
Total Readdressed Downlink Bytes	Total number of re-addressed downlink bytes.
Total Readdressing Failure	Total number re-addressing failures.
Creation Time	Time display in UTC format.
Last Pkt Time	Time of last packet created.
Duration	Duration of session.
Active Charging Service name	Name of the active charging service.

Field	Description
Rule Base name	Name of the rulebase applied.
Bandwidth Policy	The ACS bandwidth policy applicable for subscriber.
FW-and-NAT Policy	The Stateful Firewall-and-NAT policy applicable for subscriber.
Firewall Policy IPv4	Indicates whether Stateful Firewall IPv4 processing is required for subscriber.
Firewall Policy IPv6	Indicates whether Stateful Firewall IPv6 processing is required for subscriber.
NAT Policy	Indicates whether NAT processing is required for subscriber.
NAT Policy NAT44	Indicates whether NAT44 is enabled or disabled for the subscriber.
NAT Policy NAT64	Indicates whether NAT64 is enabled or disabled for the subscriber.
Bypass NAT Flow Present	Indicates whether bypass NAT flow is present or not.
TPO Policy	<b>Important</b> The Traffic Performance Optimization (TPO) in-line service is not supported in this release.
CF Policy ID	The content filtering policy identifier applicable for subscriber.
Dynamic Charging	Status of dynamic charging functionality.
Dynamic Chrg Msg Received	Total number of messages received for dynamic charging.
Rule Definitions Received	Total number of ruledefs received.
Installs Received	Total number of "Charging-Rule-Install" messages received.
Removes Received	Total number of "Charging-Rule-Remove" messages received.
Installs Succeeded	Total number of charging rules installed successfully.
Installs Failed	Total number of charging rules installation failed.
Removes Succeeded	Total number of charging rules removed successfully.
Removes Failed	Total number of charging rules removal failed.
Uplink Dynamic Rule Packets	Total number of packets uplinked with dynamic rules.
Uplink Dynamic Rule Bytes	Total number of bytes uplinked with dynamic rules.
Downlink Dynamic Rule Packets	Total number of packets downlinked with dynamic rules.
Downlink Dynamic Rule Bytes	Total number of bytes downlinked with dynamic rules.

Field	Description
Credit-Control	Displays the status of DCCA (on/off). <b>Important</b> Credit-Control state will be displayed as "Pending CCR-Event" when the session is waiting for a CCA-Event message. If there are no pending CCA-Event messages then Credit-Control state will be displaying the string "Event-Based-Charging".
Event-Triggers	Indicates the configured credit control reauthorization event triggers. <b>Important</b> This field will appear when Event-Based-Gy session is active.
CC Peer	Name of the credit control (CC) peer.
CC Group	Displays the selected credit control group information.
CC Mode	Indicates the credit control mode: RADIUS or DIAMETER
CC Failure Handling	Action configured for credit control failure handling.
CC Session Failover	Credit control session failover status.
CCR-I Server Unreachable Handling	Indicates whether initial-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
CCR-U Server Unreachable Handling	Indicates whether update-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
Total CCR-U	The total number of CCR-Updates (Credit Control Request with Update) messages sent to the credit control server.
Last State Change Time:	
Offline/Online	Indicates the state transition timestamp. The Offline timestamp is updated when the Gy session goes Offline. The Online timestamp is updated when the Gy session goes Online.
Total Server Unreachable States Hit	Indicates the total number of sessions that are in server unreachable state.
Tx-Expiry	Indicates the number of sessions that are in server unreachable state due to Tx expiry.
Response-TimeOut	Indicates the number of sessions that are in server unreachable state due to response timeout.
Connection-Failure	Indicates the number of sessions that are in server unreachable state due to connection failure.
Result-Code Based	Indicates the number of sessions that are in server unreachable state based on the result codes.
Current Server Unreachable State	Indicates that the Diameter server(s)/OCS are unreachable.

Field	Description
Interim Volume in Bytes (used / allotted)	Indicates how much of data volume has been currently consumed and the total allocated value. This value will be reset once the session comes out of Server-Unreachable-State i.e. when the server becomes available again.
Interim Time in Seconds (used / allotted)	Indicates how much of time has been used up and the total allocated time. This value will be reset once the session comes out of Server-Unreachable-State i.e. when the server becomes available again.
Server Retries (attempted / configured)	Indicates the total number of retries that were configured and attempted to the Diameter server during the Server-Unreachable-State.
Server Unreachable Reason	Indicates the reason for which server-unreachable condition was hit lastly.
Current TCP Proxy Flows	Total number of current TCP Proxy flows for the session. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Total TCP Proxy Flows	Total number of TCP Proxy flows for the session. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
TCP-proxy reset for non-SYN flows	Total number of resets sent by TCP Proxy for flows with no SYN packet after recovery. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IP Flows	Total number of current IP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current ICMP Flows	Total number of current ICMP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IPv6 Flows	Total number of current IPv6 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current ICMPv6 Flows	Total number of current ICMPv6 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current TCP Flows	Total number of current TCP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current UDP Flows	Total number of current UDP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current HTTP Flows	Total number of current HTTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current HTTPS Flows	Total number of current HTTPS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current FTP Flows	Total number of current FTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current POP3 Flows	Total number of current POP3 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current SMTP Flows	Total number of current SMTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current SIP Flows	Total number of current SIP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTSP Flows	Total number of current RTSP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTP Flows	Total number of current RTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTCP Flows	Total number of current RTCP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IMAP Flows	Total number of current IMAP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current WSP-CO Flows	Total number of current WSP-CO flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current WSP-CL Flows	Total number of current WSP-CL flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current MMS Flows	Total number of current MMS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current DNS Flows	Total number of current DNS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current PPTP-GRE Flows	Total number of current PPTP-GRE flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current PPTP Flows	Total number of current PPTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current TFTP Flows	Total number of current TFTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current P2P Flows	Total number of current P2P flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current H323 Flows	Total number of current H323 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current UNKNOWN Flows	Total number of current UNKNOWN flows.
Max (L3) Flows	The maximum number of simultaneous L3 flows seen by the session.
Max Flows Timestamp	Lists the date and time at which the L3 flows were seen.
<b>CAE-Readdressing:</b>	
GET Requests redirected	Total number of HTTP GET requests redirected to a CAE.
POST Requests redirected	Total number of HTTP POST requests redirected to a CAE.
Other Requests redirected	Total number of other HTTP requests redirected to a CAE.
HTTP Responses redirected	Total number of HTTP responses redirected to a CAE.

Field	Description
Requests having xheader inserted	Total number of HTTP requests that have x-headers inserted.
Total connection failed to video server	Total number of failed connections to the video server.
Total uplink Bytes	Total number of uplink bytes.
Total uplink Packets	Total number of uplink packets.
Total downlink Bytes	Total number of downlink bytes.
Total downlink Packets	Total number of downlink packets.
Rating-Group	Rating-Group of the MSCC which is used by DCCA.
Service-Identifier	Service-Identifier of the MSCC which is used by DCCA
State	State in which the MSCC (identified by Rating-Group and Service-Identifier) is present. For example, Charging, Limit-Reached, Rating-Failed
Checkpoint State	Checkpoint status of the MSCC. It can be either Current or Outdated. Current implies that the MSCC is checkpointed recently. Outdated means the MSCC is ready to get checkpointed to update its new status.
Pending Update	This indicates whether a response is awaited from the server for this MSCC, after sending a CCR-U.
Accelerated	This indicates whether or not the MSCC supports acceleration.  The Accelerated status of MSCC will only be visible if the chassis has license for the Flow Aware Packet Acceleration (FAPA) feature.
Last Answer	Time duration from the last sent CCR-Update request for this MSCC.
Backpressured	Shows how many times the category (Rating-Group) is subsequently moving into backpressured (unable to send message due to message queue being full) state while sending a CCR-U. The maximum count value that can be supported is 15.  Once the messages are sent successfully, this counter will be reset to 0 and this field will not be displayed in the output.
Ruledef Name	Name of the ACS ruledef.
Pkts-Down	Total number of packets downlinked.
Bytes-Down	Total number of bytes downlinked.
Pkts-Up	Total number of packets uplinked.
Bytes-Up	Total number of bytes uplinked.
Hits	Total number of packets handled in uplink and downlink directions.
Match-Bypassed	Total number of rule-match request bypassed.
Post-processing Rulestats	

Field	Description
Ruledef Name	Name of the ACS ruledef.
Pkts-Down	Total number of packets downlinked.
Bytes-Down	Total number of bytes downlinked.
Pkts-Up	Total number of packets uplinked.
Bytes-Up	Total number of bytes uplinked.
Hits	Total number of packets handled in uplink and downlink directions.
Firewall-Ruledef Name	Name of the Stateful Firewall ruledef.
Pkts-Down	Total number of packets downlinked.
Bytes-Down	Total number of bytes downlinked.
Pkts-Up	Total number of packets uplinked.
Bytes-Up	Total number of bytes uplinked.
Hits	Total number of packets handled in uplink and downlink directions.
Dynamic Charging Rule Name Statistics	Dynamic charging rule name statistics.
Dynamic Charging Rule Name Configured	Dynamic charging rule name configured.
Predefined Rules Enabled List	List of enabled predefined rules.
Predefined Firewall Rules Enabled List	List of enabled predefined Firewall rules.
NCQoS NRUPC Req Made	Total number of network-controlled QoS Network Requested Update PDP Context requests made.
NCQoS NRSPCA Req Made	Total number of network-controlled QoS Network Requested Secondary PDP Context Activation requests made.
NCQoS NRUPC Req Failed	Total number of network-controlled QoS Network Requested Update PDP Context requests failed.
NCQoS NRSPCA Req Failed	Total number of network-controlled QoS Network Requested Secondary PDP Context Activation requests failed.
NCQoS NRUPC Req Success	Total number of network-controlled QoS Network Requested Update PDP Context requests succeeded.
NCQoS NRSPCA Req Success	Total number of network-controlled QoS Network Requested Secondary PDP Context Activation requests succeeded.
Total acs sessions matching specified criteria	Total number of ACS sessions matching the specified criteria.

# show active-charging sessions full all

Table 89: show active-charging sessions full all Command Output Descriptions

Field	Description
Session-ID	The active charging session ID.
Username	The subscriber's name.
Callid	Call identification.
IMSI/MSID	The International Mobile Subscriber Identification/Mobile Station ID.
ACSMgr Instance	Total instance of ACS Manager.
ACSMgr Card/Cpu	Total number of ACS Manager Card/CPU.
SessMgr Instance	Total instance of session manager.
Client-IP	In 14.0 and later releases, prefix of IPv6 address or IPv4 address of the client for all call types. In 12.3 and earlier releases, IPv6 address or IPv4 address of the client for all call types.
NAS-IP	Indicates the IP address of Network Access Server.
Access-NAS-IP(FA)	Indicates the IP address of accessed Network Access Server Foreign Agent (FA).
NAS-PORT	Indicates the TCP port of Network Access Server.
NSAPI	Total instances of NS APIs used.
Acct-Session-ID	Indicates the accounting session ID.
NAS-ID	The Network Access Server identifier.
Access-NAS-ID(FA)	Indicates the identifier of accessed Network Access Server Foreign Agent (FA).
3GPP2-BSID	Indicates the 3GPP2 base station identifier.
Access-Correlation-ID(FA)	Indicates the access correlation ID for FA.
3GPP2-Correlation-ID	Indicates the Mobile IP Correlation ID.
MEID	Indicates the Mobile equipment's unique Mobile Equipment Identifier (MEID).
Carrier-ID	Indicates the carrier or service ID.

Field	Description
PCO: Value/Interface	Specifies the last updated PCO value and the interface it is configured for.
ESN	Indicates the Electronic Serial Number (ESN) of mobile equipment.
Enterprise ID	A 24-bit integer value, PCRF sends Enterprise ID that is associated with the user to the gateway during call setup. This field is required for identifying traffic based on NSH.
Uplink Bytes	Total bytes uploaded.
Downlink Bytes	Total bytes downloaded.
Uplink Packets	Total packets uploaded.
Downlink Packets	Total packets downloaded.
Injected Uplink Bytes	Total bytes injected to upload.
Injected Downlink Bytes	Total bytes injected to download.
Injected Uplink Packets	Total packets injected to upload.
Injected Downlink Packets	Total packets injected to download.
Buffered Uplink Packets	Total buffered packets for uplink.
Buffered Downlink Packets	Total buffered packets for downlink.
Buffered Uplink Bytes	Total buffered bytes for uplink.
Buffered Downlink Bytes	Total buffered bytes for uplink.
Uplink Packets in Buffer	Total number of uplink packets in the buffer.
Uplink Bytes in Buffer	Total number of uplink bytes in the buffer.
Downlink Packets in Buffer	Total number of downlink packets in the buffer.
Downlink Bytes in Buffer	Total number of downlink bytes in the buffer.
Buff Over-limit Uplink Pkts	Total number of uplink packets that were over the buffer limit.
Buff Over-limit Uplink Bytes	Total number of uplink bytes that were over the buffer limit.
Buff Over-limit Downlink Pkts	Total number of downlink packets that were over the buffer limit.
Buff Over-limit Downlink Bytes	Total number of downlink bytes that were over the buffer limit.
Processed Uplink Packets	Total packets processed for upload.
Processed Downlink Packets	Total packets processed for download.

Field	Description
In Releases prior to 20: Dropped Uplink Packets	Total packets dropped in uplink direction. In Release 20 and beyond, this statistic is replaced by DCCA Buffered Packet Drops Uplink.
In Releases prior to 20: Dropped Downlink Packets	Total packets dropped in downlink direction. In Release 20 and beyond, this statistic is replaced by DCCA Buffered Packet Drops Downlink.
Current P-GW-Buffer Queue Length	Displays the currently utilized queue length.
Total P-GW Buffer Merge Count	Displays the merged count of PRA messages.
<b>DCCA Buffered Packet Drops</b>	
Uplink	Total number of packets dropped in uplink direction due to rule failure for DCCA buffered packets.
Downlink	Total number of packets dropped in downlink direction due to rule failure for DCCA buffered packets.
Uplink Out of Order Packets	Total out of order packets in uplink direction.
Downlink Out of Order Packets	Total out of order packets in downlink direction.
ITC Terminated Flows	Total number of flows terminated by Intelligent Traffic Control service.
ITC Redirected Flows	Total number of flows redirected by Intelligent Traffic Control service.
ITC Dropped Packets	Total number of packets dropped by Intelligent Traffic Control service.
ITC ToS Remarketed Packets	Total number of packets marked with Type of Service (ToS) by Intelligent Traffic Control service.
R7Gx Dropped Upl Packets	Total number of packets dropped by R7Gx in uplink direction.
R7Gx Dropped Dnl Packets	Total number of packets dropped by R7Gx in downlink direction.
R7Gx Dropped Upl Pkts RuleMatch Fail	Total number of packets dropped by R7Gx in uplink direction due to rulematch failure—no matching rule is found.
R7Gx Dropped Upl Bytes RuleMatch Fail	Total number of bytes dropped by R7Gx in uplink direction due to rulematch failure.
R7Gx Dropped Dnl Pkts RuleMatch Fail	Total number of packets dropped by R7Gx in downlink direction due to rulematch failure.
R7Gx Dropped Dnl Bytes RuleMatch Fail	Total number of bytes dropped by R7Gx in downlink direction due to rulematch failure.
CC Dropped Uplink Packets	Total number of packets dropped by credit control in uplink direction.
CC Dropped Uplink Bytes	Total number of bytes dropped by credit control in uplink direction.
CC Dropped Downlink Packets	Total number of packets dropped by credit control in downlink direction.
CC Dropped Downlink Bytes	Total number of bytes dropped by credit control in downlink direction.

Field	Description
NRUPC Req Made	Total number of Network Requested Update PDP Context (NRUPC) requests made.
NRUPC Req Success	Total number of NRUPC requests succeeded.
NRUPC Req Failed	Total number of NRUPC requests failed.
NRUPC Req Time Out	Total number of NRUPC requests timed out.
Current Readdressed Sessions	Total number of current readdressed sessions.
Total Readdressed Uplink Pkts	Total number of readdressed uplink packets.
Total Readdressed Uplink Bytes	Total number of readdressed uplink bytes.
Total Readdressed Downlink Pkts	Total number of readdressed downlink packets.
Total Readdressed Downlink Bytes	Total number of readdressed downlink bytes.
Total Readdressing Failure Packets	Total number of packets with readdressing failures.
Non SYN Flow	Total number of readdressing packets with a non SYN flow failure.
Duplicate Key	Total number of readdressing packets with a duplicate key failure.
Dropped Pkts	Total number of packets discarded on readdressing failure. If the <b>discard-on-failure</b> option is not enabled using the <b>flow action readdress</b> command, this value will be zero.
Creation Time	Time display in UTC format.
Last Pkt Time	Time of last packet created.
Duration	Duration of session.
Active Charging Service name	Name of the Active Charging Service.
Rule Base name	Name of the ACS rulebase applied.
URL-Redir First-Request-Only	Specifies whether URL redirection for the first request only is enabled.
Tethering-detection notification	Indicates whether tethering detection notification is enabled or disabled.
Tethering-detected notification sent	Indicates wheter tethering detection notification is sent (Yes, No, or n/a)
Bandwidth Policy	The ACS bandwidth policy applicable for subscriber.
Firewall Policy	Indicates whether Stateful Firewall processing is required for subscriber.
FW-and-NAT Policy	The Stateful Firewall-and-NAT policy applicable for subscriber.
NAT Policy	Indicates whether NAT processing is required for subscriber.

Field	Description
TPO Policy	<b>Important</b> The Traffic Performance Optimization (TPO) in-line service is not supported in this release.
CF Policy ID	The Content Filtering policy ID applicable for subscriber.
Dynamic Charging	Status of dynamic charging functionality.
Dynamic Chrg Msg Received	Total number of messages received for dynamic charging.
Rule Definitions Received	Total number of ruledefs received.
Installs Received	Total number of "Charging-Rule-Install" messages received.
Removes Received	Total number of "Charging-Rule-Remove" messages received.
Installs Succeeded	Total number of charging rules installed successfully.
Installs Failed	Total number of charging rules installation failed.
Removes Succeeded	Total number of charging rules removed successfully.
Removes Failed	Total number of charging rules removal failed.
<b>Override Control</b>	
Installs Received	Total number of overrides received.
Installs Succeeded	Total number of overrides that were succeeded.
Installs Failed	Total number of overrides that were failed.
Disables Received	Total number of disable overrides received for a specific call.
Disables Succeeded	Total number of disable overrides succeeded for a specific call.
Disables Failed	Total number of disable overrides failed for a specific call.
Uplink Dynamic Rule Packets	Total number of packets uplinked with dynamic rules.
Uplink Dynamic Rule Bytes	Total number of bytes uplinked with dynamic rules.
Downlink Dynamic Rule Packets	Total number of packets downlinked with dynamic rules.
Downlink Dynamic Rule Bytes	Total number of bytes downlinked with dynamic rules.
<b>Dynamic Charging Packet Drop Statistics</b>	
Bearer BW Limit Upl Pkts	Total number of uplink packets dropped due to bearer bandwidth limiting.
Bearer BW Limit Dnl Pkts	Total number of downlink packets dropped due to bearer bandwidth limiting.
Bearer BW Limit Upl Bytes	Total number of uplink bytes dropped due to bearer bandwidth limiting.
Bearer BW Limit Dnl Bytes	Total number of downlink bytes dropped due to bearer bandwidth limiting.

Field	Description
PCC Rule BW Limit Upl Pkts	Total number of uplink packets dropped due to PCC rule bandwidth limiting.
PCC Rule BW Limit Dnl Pkts	Total number of downlink packets dropped due to PCC rule bandwidth limiting.
PCC Rule BW Limit Upl Bytes	Total number of uplink bytes dropped due to PCC rule bandwidth limiting.
PCC Rule BW Limit Dnl Bytes	Total number of downlink bytes dropped due to PCC rule bandwidth limiting.
PCC Rule Gating Upl Pkts	Total number of uplink packets dropped due to PCC rule gating.
PCC Rule Gating Dnl Pkts	Total number of downlink packets dropped due to PCC rule gating.
PCC Rule Gating Upl Bytes	Total number of uplink bytes dropped due to PCC rule gating.
PCC Rule Gating Dnl Bytes	Total number of downlink bytes dropped due to PCC rule gating.
RuleMatch Fail Upl Pkts	Total number of uplink packets dropped due to rule match failure.
RuleMatch Fail Dnl Pkts	Total number of downlink packets dropped due to rule match failure.
RuleMatch Fail Upl Bytes	Total number of uplink bytes dropped due to rule match failure.
RuleMatch Fail Dnl Bytes	Total number of downlink bytes dropped due to rule match failure.
Credit-Control	Indicates DCCA status: On/Off
CC Peer	Name of the credit control (CC) peer.
CC Group	Displays the selected credit control group information.
CC Mode	Indicates the credit control mode: RADIUS or DIAMETER
CC Failure Handling	Action configured for credit control failure handling.
CC Session Failover	Credit control session failover status.
CCR-I Server Unreachable Handling	Indicates whether initial-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
CCR-U Server Unreachable Handling	Indicates whether update-request calls will be continued/terminated when Diameter server(s)/OCS are unreachable.
Total CCR-U	The total number of CCR-Updates (Credit Control Request with Update) messages sent to the credit control server.
Current Server Unreachable State	Indicates that the Diameter server(s)/OCS are unreachable.
Interim Volume in Bytes (used / allotted)	Indicates how much of data volume has been currently consumed and the total allocated value. This value will be reset once the session comes out of Server-Unreachable-State i.e. when the server becomes available again.

Field	Description
Interim Time in Seconds (used / allotted)	Indicates how much of time has been used up and the total allocated time. This value will be reset once the session comes out of Server-Unreachable-State i.e. when the server becomes available again.
Server Retries (attempted / configured)	Indicates the total number of retries that were configured and attempted to the Diameter server during the Server-Unreachable-State.
Current TCP Proxy Flows	Total number of current TCP Proxy flows for the session. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Total TCP Proxy Flows	Total number of TCP Proxy flows for the session. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
TCP-proxy reset for non-SYN flows	Total number of resets sent by TCP Proxy for flows with no SYN packet after recovery. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IP Flows	Total number of current IP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current ICMP Flows	Total number of current ICMP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IPv6 Flows	Total number of current IPv6 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current ICMPv6 Flows	Total number of current ICMPv6 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current MIPv6 Flows	Total number of current MIPv6 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current TCP Flows	Total number of current TCP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current UDP Flows	Total number of current UDP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current HTTP Flows	Total number of current HTTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current HTTPS Flows	Total number of current HTTPS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current FTP Flows	Total number of current FTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current POP3 Flows	Total number of current POP3 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current SMTP Flows	Total number of current SMTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current SIP Flows	Total number of current SIP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTSP Flows	Total number of current RTSP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTP Flows	Total number of current RTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current RTCP Flows	Total number of current RTCP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current IMAP Flows	Total number of current IMAP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current WSP-CO Flows	Total number of current WSP-CO flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current WSP-CL Flows	Total number of current WSP-CL flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current MMS Flows	Total number of current MMS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.

Field	Description
Current DNS Flows	Total number of current DNS flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current PPTP-GRE Flows	Total number of current PPTP-GRE flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current PPTP Flows	Total number of current PPTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current P2P Flows	Total number of current P2P flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current H323 Flows	Total number of current H323 flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current TFTP Flows	Total number of current TFTP flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
Current UNKNOWN Flows	Total number of current UNKNOWN flows. <b>Important</b> This statistic is removed from this command in 18.0 and later releases, and available in the <b>show active-charging subscribers full all</b> command.
<b>CAE-Readdressing:</b>	
GET Requests redirected	Total number of HTTP GET requests redirected to a CAE.
POST Requests redirected	Total number of HTTP POST requests redirected to a CAE.
Other Requests redirected	Total number of other HTTP requests redirected to a CAE.
HTTP Responses redirected	Total number of HTTP responses redirected to a CAE.

Field	Description
Requests having xheader inserted	Total number of HTTP requests that have x-headers inserted.
Total connection failed to video server	Total number of failed connections to the video server.
Total uplink Bytes	Total number of uplink bytes.
Total uplink Packets	Total number of uplink packets.
Total downlink Bytes	Total number of downlink bytes.
Total downlink Packets	Total number of downlink packets.
<b>STATIC CF STATISTICS</b>	
CF Packets Allowed	Total number of packets allowed after applying content filtering service. <b>NOTE:</b> This statistic has been renamed to <b>Flows Allowed</b> in 12.0 and later releases.
CF Packets Discarded without Responding	Total number of packets discarded without sending any response after applying content filtering service. <b>NOTE:</b> This statistic has been renamed to <b>Flows Discarded</b> in 12.0 and later releases.
CF Packets Discarded with Flow Redirection	Total number of packets discarded with traffic flow redirection after applying content filtering service. <b>NOTE:</b> This statistic has been renamed to <b>Flows Redirected</b> in 12.0 and later releases.
CF Packets Discarded with Flow Termination	Total number of packets discarded and traffic flow terminated after applying content filtering service. <b>NOTE:</b> This statistic has been renamed to <b>Flows Terminated</b> in 12.0 and later releases.
CF Packets Discarded with Flow Content Insertion	Total number of packets discarded and content inserted in response message after applying content filtering service. <b>NOTE:</b> This statistic has been renamed to <b>Flows Discarded with Content Insertion</b> in 12.0 and later releases.
CF Static DB Look-ups	Total number of lookups in static rating database for content filtering service.
CF Successful Cache Look-ups	Total number of lookups in cache memory for static rating of URLs and returned successful after applying content filtering service.
<b>DYNAMIC CF STATISTICS</b>	
Flows Allowed	Total number of flows allowed by dynamic CF. Typically a flow is allowed if the matched flow category contains the action "allow" in the CF configuration.
Flows Discarded	Total number of flows discarded by dynamic CF.

Field	Description
Flows Redirected	Total number of flows redirected by dynamic CF.
Flows Terminated	Total number of flows terminated by dynamic CF.
Flows Discarded with Content Insertion	Total number of flows discarded with content insertion by dynamic CF.
CF Dynamic Lookups	Total number of lookups in dynamic rating database for content filtering service.
Charging ruledef(s) matching the specified criteria	Charging ruledef(s) matching the specified criteria.
Firewall ruledef(s) match the specified criteria	Stateful Firewall ruledef(s) matching the specified criteria.
Dynamic Charging Rule Name Statistics	Dynamic charging rule name statistics.
Total Dynamic Rules	Total number of dynamic rules.
Total L7 Dynamic Rules	Total number of L7 dynamic rules sent from PCRF.
Total Predefined Rules	Total number of predefined rules.
Total ADC Rules	Total number of ADC rules (ADC Predefined + ADC Dynamic Rules).
Total Firewall Predefined Rules	Total number of Stateful Firewall predefined rules.
Dynamic Charging Rule Definitions Configured	Dynamic charging rules configured.
Rule Parameters	Displays the values for the following parameters: <ul style="list-style-type: none"> <li>• TDF Application Id: ADC Application Identifier. The name of the ruledef given in the PCRF/Gx configuration.</li> <li>• TDF Readdress Status: ADC Readdress status enabled/disabled.</li> <li>• TDF Readdress IP: Displayed only when Readdress status is enabled.</li> <li>• TDF Redirect URL: Displayed only when the redirect to URL is given in the PCRF/Gx configuration. Either readdress or redirect information is displayed.</li> <li>• TDF Custom-mute: Enabled/Disabled</li> </ul>
Total Dynamic Charging Rule Names	Total number of dynamic charging rules.
Total Dynamic Firewall Rule Names	Total number of dynamic Stateful Firewall rules.
Inheritance is disabled for this subscriber - Error!	This field is displayed if rule information has inheritance parameters but the subscriber-level information does not have inheritance enabled.
Predefined Rules Enabled List	List of enabled predefined rules.
Predefined Firewall Rules Enabled List	List of enabled predefined Firewall rules.

Field	Description
Total Override Control	Total number of overrides that are currently active for the subscriber.
Total acs sessions matching specified criteria	Total number of ACS sessions matching the specified criteria.
<b>Radio-Congestion Session Full Stats</b>	
Last Reported Congestion Level	Indicates the last reported congestion level.
Total Flows Analyzed	Total number of flows analyzed.
Total Flows Eligible for Correlation	Total number of flows eligible for correlation.
<b>Radio-Congestion Session Last Reported Stats</b>	
Total Flows Analyzed	Total number of flows analyzed.
Total Flows Eligible for Correlation	Total number of flows eligible for correlation.
Total Flows with Congestion Level	Total number of flows with congestion level.
no Congestion	Total number of flows with no congestion.
low Congestion	Total number of flows with low congestion.
medium Congestion	Total number of flows with medium congestion.
high Congestion	Total number of flows with high congestion.
extreme Congestion	Total number of flows with extreme congestion.
Link Monitoring Average Throughput	The average link monitoring throughput, in kbps.
Link Monitoring Average RTT	The average link monitoring RTT (Round Trip Time), in milliseconds.
Custom	Indicates operator specific custom option.
Value	Indicates the value used for sending in custom PCO container.
Interface	Indicates the interface such as Gx, Gy or n/a based on the following conditions: <ul style="list-style-type: none"> <li>• Gx: The charging rule is applied from the Gx interface that has custom PCO value.</li> <li>• Gy: The charging rule is applied from the Gy interface that has custom pco value.</li> <li>• N/A: The configured PCO value which is applied from APN profile</li> </ul>

## show active-charging sessions summary

Table 90: show active-charging sessions summary Command Output Descriptions

Field	Description
Session-ID	The active charging session ID.
Username	Name of the subscriber.
Callid	Call identification.
IMSI/MSID	Indicates the International Mobile Subscriber Identification / Mobile Station ID.
ACSMgr Instance	Total instance of ACS Manager.
ACSMgr Card/Cpu	Total number of ACS Manager Card/CPU.
Client-IP	Indicates the IP address of Client.
SessMgr Instance	Total instance of session manager.
NAS-IP	Indicates the IP address of Network Access Server.
NAS-PORT	Indicates the TCP port of Network Access Server.
Access-NAS-IP(FA)	Indicates the IP address of accessed Network Access Server Foreign Agent (FA).
Acct-Session-ID	Indicates the accounting session ID.
3GPP2-Correlation-ID	Indicates the Mobile IP Correlation ID.
Access-Correlation-ID(FA)	Indicates the access correlation ID for FA.
MEID	Indicates the Mobile equipment's unique Mobile Equipment Identifier (MEID).
Carrier-ID	Indicates the Carrier or service ID.
ESN	Indicates the Electronic Serial Number (ESN) of mobile equipment.
Uplink Bytes	Total bytes uploaded.
Downlink Bytes	Total bytes downloaded.
Uplink Packets	Total packets uploaded.
Downlink Packets	Total packets downloaded.
Injected Uplink Bytes	Total bytes injected to upload.
Injected Downlink Bytes	Total bytes injected to download.
Injected Uplink Packets	Total packets injected to upload.
Injected Downlink Packets	Total packets injected to download.

Field	Description
Uplink Out of Order Packets	Total out of order packets in uplink direction.
Downlink Out of Order Packets	Total out of order packets in downlink direction.
Creation Time	Time display in UTC format.
Last Pkt Time	Time of last packet created.
Duration	Duration of session.
Active Charging Service name	Name of the ACS service.
Rule Base name	Name of the rulebase applied.
Credit-Control	DCCA status: On/Off
CC peer	Name of the Credit Control (CC) peer.
CC Failure Handling	Action configured to handle CC failure.
CC Session Failover	CC Session Failover status.
Rating-Group	Rating-Group of the MSCC which is used by DCCA
State	State in which the MSCC (identified by Rating-Group and Service-Identifier) is present. For example, Charging, Limit-Reached, Rating-Failed, etc.
Pending Update	This indicates whether a response is awaited from the server for this MSCC, after sending a CCR-U.
Last CCA	Time duration from the last sent CCR-Update request for this MSCC.
Time Threshold	Threshold for CC.
Quota	Quota assigned for pre-paid subscriber.
Usage	Usage by subscriber.
Ruledef Name	Name of the Ruledef.
Pkts-Down	Total packets in downlink direction.
Bytes-Down	Total byte in downlink direction.
Pkts-Up	Total Packets in upward direction.
Bytes-Up	Total bytes in upward direction.
Hits	Total packets in upload and download direction.
Current IP Sessions	Total number of current IP sessions.
Current ICMP Sessions	Total number of current ICMP sessions.
Current IPv6 Sessions	Total number of current IPv6 sessions.

Field	Description
Current ICMPv6 Sessions	Total number of current ICMPv6 sessions.
Current TCP Sessions	Total number of current TCP sessions.
Current UDP Sessions	Total number of current UDP sessions.
Current HTTP Sessions	Total number of current HTTP sessions.
Current HTTPS Sessions	Total number of current HTTPS sessions.
Current FTP Sessions	Total number of current FTP sessions.
Current POP3 Sessions	Total number of current POP3 sessions.
Current SMTP Sessions	Total number of current SMTP sessions.
Current SIP Sessions	Total number of current SIP sessions.
Current RTSP Sessions	Total number of current RTSP sessions.
Current RTP Sessions	Total number of current RTP sessions.
Current RTCP Sessions	Total number of current RTCP sessions.
Current IMAP Sessions	Total number of current IMAP sessions.
Current WSP-CO Sessions	Total number of current WSP-CO sessions.
Current WSP-CL Sessions	Total number of current WSP-CL sessions.
Current MMS Sessions	Total number of current MMS sessions.
Current DNS Sessions	Total number of current DNS sessions.
Current PPTP Sessions	Total number of current PPTP sessions.
Current PPTP-GRE Sessions	Total number of current PPTP-GRE sessions.
Current P2P Sessions	Total number of current P2P sessions.
Current H323 Sessions	Total number of current H323 sessions.
Current TFTP Sessions	Total number of current TFTP sessions.
Current UNKNOWN Sessions	Total number of current UNKNOWN sessions.
Current SKYPE Sessions	Total number of current SKYPE sessions.
Current YAHOO Sessions	Total number of current YAHOO sessions.
<b>Important</b>	The following voice/non-voice counters are available only for 10.0 and earlier releases.
Current SKYPE voice Sessions	Total number of current SKYPE voice sessions.
Current YAHOO voice Sessions	Total number of current YAHOO voice sessions.

Field	Description
Current SKYPE non-voice Sessions	Total number of current SKYPE non-voice sessions.
Current YAHOO non-voice Sessions	Total number of current YAHOO non-voice sessions.
<b>Important</b> The following two audio counters are available only for 11.0 and later releases.	
Current SKYPE Audio Sessions	Total number of current SKYPE audio sessions.
Current YAHOO Audio Sessions	Total number of current YAHOO audio sessions.
Current YAHOO Video Sessions	Total number of current YAHOO video sessions.
Current SKYPE Unclassified Sessions	Total number of current SKYPE Unclassified sessions.
Current SKYPE Voipout Sessions	Total number of current SKYPE Voipout sessions.
Current EDONKEY Sessions	Total number of current EDONKEY sessions.
Current ORB Sessions	Total number of current ORB sessions.
Current MSN Sessions	Total number of current MSN sessions.
Current GNUTELLA Sessions	Total number of current GNUTELLA sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current MSN voice Sessions	Total number of current MSN voice sessions.
Current MSN non-voice Sessions	Total number of current MSN non-voice sessions.
Current BITTORRENT Sessions	Total number of current BITTORRENT sessions.
<b>Important</b> The following audio/video counters are available only for 11.0 and later releases.	
Current MSN Audio Sessions	Total number of current MSN audio sessions.
Current MSN Video Sessions	Total number of current MSN video sessions.
Current SLINGBOX Sessions	Total number of current SLINGBOX sessions.
Current JABBER Sessions	Total number of current JABBER sessions.
Current WINNY Sessions	Total number of current WINNY sessions.
Current MANOLITO Sessions	Total number of current MANOLITO sessions.
Current PANDO Sessions	Total number of current PANDO sessions.
Current FILETOPIA Sessions	Total number of current FILETOPIA sessions.
Current SOULSEEK Sessions	Total number of current SOULSEEK sessions.
Current PPSTREAM Sessions	Total number of current PPSTREAM sessions.

Field	Description
Current QQ Sessions	Total number of current QQ sessions.
Current QQ Audio Sessions	Total number of current QQ audio sessions.
Current QQ Video Sessions	Total number of current QQ video sessions.
Current QQLIVE Sessions	Total number of current QQLIVE sessions.
Current IMESH Sessions	Total number of current IMESH sessions.
Current MUTE Sessions	Total number of current MUTE sessions.
Current PPLIVE Sessions	Total number of current PPLIVE sessions.
Current GADUGADU Sessions	Total number of current GADUGADU sessions.
Current FEIDIAN Sessions	Total number of current FEIDIAN sessions.
Current APPLEJUICE Sessions	Total number of current APPLEJUICE sessions.
Current fasttrack Sessions	Total number of current Fasttrack sessions.
Current ZATTOO Sessions	Total number of current ZATTOO sessions.
Current SKINNY Sessions	Total number of current SKINNY sessions.
Current SOPCAST Sessions	Total number of current SOPCAST sessions.
Current DIRECTCONNECT Sessions	Total number of current DIRECTCONNECT sessions.
Current ARES Sessions	Total number of current ARES sessions.
Current OSCAR Sessions	Total number of current OSCAR sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current OSCAR voice Sessions	Total number of current OSCAR voice sessions.
Current OSCAR non-voice Sessions	Total number of current OSCAR non-voice sessions.
<b>Important</b> The following two counters are available only for 11.0 and later releases.	
Current OSCAR Audio Sessions	Total number of current OSCAR audio sessions.
Current OSCAR Video Sessions	Total number of current OSCAR video sessions.
Current POPO Sessions	Total number of current POPO sessions.
Current IRC Sessions	Total number of current IRC sessions.
Current STEAM Sessions	Total number of current STEAM sessions.
Current DDLINK Sessions	Total number of current DDLINK sessions.

Field	Description
Current HALFLIFE2 Sessions	Total number of current HALFLIFE2 sessions.
Current HAMACHIVPN Sessions	Total number of current HAMACHIVPN sessions.
Current TVANTS Sessions	Total number of current TVANTS sessions.
Current TVUPLAYER Sessions	Total number of current TVUPLAYER sessions.
Current UUSEE Sessions	Total number of current UUSEE sessions.
Current VPNX Sessions	Total number of current VPNX sessions.
Current VTUN Sessions	Total number of current VTUN sessions.
Current WINMX Sessions	Total number of current WINMX sessions.
Current WOFWARCRAFT Sessions	Total number of current WOFWARCRAFT sessions.
Current XBOX Sessions	Total number of current XBOX sessions.
Current ISKOOT Sessions	Total number of current ISKOOT sessions.
Current FRING Sessions	Total number of current FRING sessions.
Current GTALK Sessions	Total number of current GTALK sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current GTALK voice Sessions	Total number of current GTALK voice sessions.
Current GTALK non-voice Sessions	Total number of current GTALK non-voice sessions.
<b>Important</b> The following two counters are available only for 11.0 and later releases.	
Current GTALK Audio Sessions	Total number of current GTALK audio sessions.
Current GTALK Video Sessions	Total number of current GTALK video sessions.
Current OOVOO Sessions	Total number of current OOVOO sessions.
Current FREENET Sessions	Total number of current FREENET sessions.
Current AIMINI Sessions	Total number of current AIMINI sessions.
Current BATTLEFIELD Sessions	Total number of current BATTLEFIELD sessions.
Current OPENFT Sessions	Total number of current OPENFT sessions.
Current QQGAME Sessions	Total number of current QQGAME sessions.
Current QUAKE Sessions	Total number of current QUAKE sessions.
Current SECONDLIFE Sessions	Total number of current SECONDLIFE sessions.

Field	Description
Current ACTIVESYNC Sessions	Total number of current ACTIVESYNC sessions.
Current NIMBUZZ Sessions	Total number of current NIMBUZZ sessions.
Current IAX Sessions	Total number of current IAX sessions.
Current PALTALK Sessions	Total number of current PALTALK sessions.
Current WARCRAFT3 Sessions	Total number of current WARCRAFT3 sessions.
Current IPTV Sessions	Total number of current IPTV sessions.
Current RDP Sessions	Total number of current RDP sessions.
Current PANDORA Sessions	Total number of current PANDORA sessions.
Current PANDORA unclassified Sessions	Total number of current PANDORA unclassified sessions.
Current PANDORA ads Sessions	Total number of current PANDORA ads sessions.
Current ICECAST Sessions	Total number of current ICECAST sessions.
Current KONTIKI Sessions	Total number of current KONTIKI sessions.
Current MEEBO Sessions	Total number of current MEEBO sessions.
Current SHOUTCAST Sessions	Total number of current SHOUTCAST sessions.
Current TRUPHONE Sessions	Total number of current TRUPHONE sessions.
Current THUNDER Sessions	Total number of current THUNDER sessions.
Current ARMAGETTRON Sessions	Total number of current ARMAGETTRON sessions.
Current BLACKBERRY Sessions	Total number of current BLACKBERRY sessions.
Current CITRIX Sessions	Total number of current CITRIX sessions.
Current CLUBPENGUIN Sessions	Total number of current CLUBPENGUIN sessions.
Current CROSSFIRE Sessions	Total number of current CROSSFIRE sessions.
Current DOFUS Sessions	Total number of current DOFUS sessions.
Current FIESTA Sessions	Total number of current FIESTA sessions.
Current FLORENSIA Sessions	Total number of current FLORENSIA sessions.
Current FUNSHION Sessions	Total number of current FUNSHION sessions.
Current GUILDWARS Sessions	Total number of current GUILDWARS sessions.
Current ISAKMP Sessions	Total number of current ISAKMP sessions.
Current MAPLESTORY Sessions	Total number of current MAPLESTORY sessions.

Field	Description
Current MGCP Sessions	Total number of current MGCP sessions.
Current OCTOSHAPE Sessions	Total number of current OCTOSHAPE sessions.
Current OFF Sessions	Total number of current OFF sessions.
Current PS3 Sessions	Total number of current PS3 sessions.
Current RMSTREAM Sessions	Total number of current RMSTREAM sessions.
Current RFACTOR Sessions	Total number of current RFACTOR sessions.
Current SPLASHFIGHTER Sessions	Total number of current SPLASHFIGHTER sessions.
Current SSDP Sessions	Total number of current SSDP sessions.
Current STEALTHNET Sessions	Total number of current STEALTHNET sessions.
Current STUN Sessions	Total number of current STUN sessions.
Current TEAMSPEAK Sessions	Total number of current TEAMSPEAK sessions.
Current TOR Sessions	Total number of current TOR sessions.
Current VEOHTV Sessions	Total number of current VEOHTV sessions.
Current WII Sessions	Total number of current WII sessions.
Current WMSTREAM Sessions	Total number of current WMSTREAM sessions.
Current WOFKUNGFU Sessions	Total number of current WOFKUNGFU sessions.
Current XDCC Sessions	Total number of current XDCC sessions.
Current YOURFREEDOM Sessions	Total number of current YOURFREEDOM sessions.
Current FACEBOOK Sessions	Total number of current FACEBOOK sessions.
Current GAMEKIT Sessions	Total number of current GAMEKIT sessions.
Current FACETIME Sessions	Total number of current FACETIME sessions.
Current FACETIME Unclassified Sessions	Total number of current FACETIME unclassified sessions.
Current FACETIME Audio Sessions	Total number of current FACETIME audio sessions.
Current FACETIME Video Sessions	Total number of current FACETIME video sessions.
Current GMAIL Sessions	Total number of current GMAIL sessions.
Current ITUNES Sessions	Total number of current ITUNES sessions.
Current MYSPACE Sessions	Total number of current MYSPACE sessions.
Current TEAMVIEWER Sessions	Total number of current TEAMVIEWER sessions.

Field	Description
Current TWITTER Sessions	Total number of current TWITTER sessions.
Current TWITTER streaming-video Sessions	Total number of current TWITTER streaming-video sessions.
Current VIBER Sessions	Total number of current VIBER sessions.
Current VIBER Unclassified Sessions	Total number of current VIBER Unclassified sessions.
Current VIBER Audio Sessions	Total number of current VIBER Audio sessions.
Current VIBER im Sessions	Total number of current VIBER IM sessions.
Current VIBER file-transfer Sessions	Total number of current VIBER File-transfer sessions.
Current ANTSP2P Sessions	Total number of current ANTSP2P sessions.
Current IMO Sessions	Total number of current IMO sessions.
Current NETMOTION Sessions	Total number of current NETMOTION sessions.
Current OGG Sessions	Total number of current OGG sessions.
Current OPENVPN Sessions	Total number of current OPENVPN sessions.
Current QUICKTIME Sessions	Total number of current QUICKTIME sessions.
Current SPOTIFY Sessions	Total number of current SPOTIFY sessions.
Current TANGO Sessions	Total number of current TANGO sessions.
Current TANGO Audio Sessions	Total number of current TANGO audio sessions.
Current TANGO Video Sessions	Total number of current TANGO video sessions.
Current ULTRABAC Sessions	Total number of current ULTRABAC sessions.
Current USENET Sessions	Total number of current USENET sessions.
Current VOIPTUNNEL Sessions	Total number of current VOIPTUNNEL sessions.
Current SCYDO Sessions	Total number of current SCYDO sessions.
Current WHATSAPP Sessions	Total number of current WHATSAPP sessions.
Current WHATSAPP unclassified Sessions	Total number of current WHATSAPP unclassified sessions.
Current WHATSAPP audio Sessions	Total number of current WHATSAPP audio sessions.
Current MYPEOPLE Sessions	Total number of current MYPEOPLE sessions.
Current RDT Sessions	Total number of current RDT sessions.
Current FLASH Sessions	Total number of current FLASH sessions.
Current MOJO Sessions	Total number of current MOJO sessions.

Field	Description
Current PCANYWHERE Sessions	Total number of current PCANYWHERE sessions.
Current WEBEX Sessions	Total number of current WEBEX sessions.
Current NETFLIX Sessions	Total number of current NETFLIX sessions.
Current IMPLUS Sessions	Total number of current IMPLUS sessions.
Current EBUDDY Sessions	Total number of current EBUDDY sessions.
Current MSRP Sessions	Total number of current MSRP sessions.
Current FICALL Sessions	Total number of current FICALL sessions.
Current GOTOMEETING Sessions	Total number of current GOTOMEETING sessions.
Current MIG33 Sessions	Total number of current MIG33 sessions.
Current COMODOUNITE Sessions	Total number of current COMODOUNITE sessions.
Current CALLOFDUTY Sessions	Total number of current CALLOFDUTY sessions.
Current GOOBER Sessions	Total number of current GOOBER sessions.
Current IPLAYER Sessions	Total number of current IPLAYER sessions.
Current OPERAMINI Sessions	Total number of current OPERAMINI sessions.
Current KAKAOTALK Sessions	Total number of current KAKAOTALK sessions.
Current KAKAOTALK Audio Sessions	Total number of current KAKAOTALK audio sessions.
Current KAKAOTALK Unclassified Sessions	Total number of current KAKAOTALK unclassified sessions.
Current NATEONTALK Sessions	Total number of current NATEONTALK sessions.
Current NAVERLINE Sessions	Total number of current NAVERLINE sessions.
Current AVI Sessions	Total number of current AVI sessions.
Current GOOGLEPLAY Sessions	Total number of current GOOGLEPLAY sessions.
Current ICLOUD Sessions	Total number of current ICLOUD sessions.
Current SORIBADA Sessions	Total number of current SORIBADA sessions.
Current WECHAT Sessions	Total number of current WECHAT sessions.
Current WUALA Sessions	Total number of current WUALA sessions.
Current ACTIONVOIP Sessions	Total number of current ACTIONVOIP sessions.
Current ACTIONVOIP unclassified Sessions	Total number of current ACTIONVOIP unclassified sessions.

Field	Description
Current ACTIONVOIP audio Sessions	Total number of current ACTIONVOIP audio sessions.
Current AMAZONCLOUD Sessions	Total number of current AMAZONCLOUD sessions.
Current ICALL Sessions	Total number of current ICALL sessions.
Current ICALL unclassified Sessions	Total number of current ICALL unclassified sessions.
Current ICALL audio Sessions	Total number of current ICALL audio sessions.
Current ICALL video Sessions	Total number of current ICALL video sessions.
Current INSTAGRAM Sessions	Total number of current INSTAGRAM sessions.
Current JUMBLO Sessions	Total number of current JUMBLO sessions.
Current JUMBLO unclassified Sessions	Total number of current JUMBLO unclassified sessions.
Current JUMBLO audio Sessions	Total number of current JUMBLO audio sessions.
Current KUGOO Sessions	Total number of current KUGOO sessions.
Current MAGICJACK Sessions	Total number of current MAGICJACK sessions.
Current MAGICJACK unclassified Sessions	Total number of current MAGICJACK unclassified sessions.
Current MAGICJACK audio Sessions	Total number of current MAGICJACK audio sessions.
Current MAPI Sessions	Total number of current MAPI sessions.
Current PINTEREST Sessions	Total number of current PINTEREST sessions.
Current PLINGM Sessions	Total number of current PLINGM sessions.
Current PLINGM unclassified Sessions	Total number of current PLINGM unclassified sessions.
Current PLINGM audio Sessions	Total number of current PLINGM audio sessions.
Current RYNGA Sessions	Total number of current RYNGA sessions.
Current RYNGA unclassified Sessions	Total number of current RYNGA unclassified sessions.
Current RYNGA audio Sessions	Total number of current RYNGA audio sessions.
Current SMARTVOIP Sessions	Total number of current SMARTVOIP sessions.
Current SMARTVOIP unclassified Sessions	Total number of current SMARTVOIP unclassified sessions.
Current SMARTVOIP audio Sessions	Total number of current SMARTVOIP audio sessions.
Current SPDY Sessions	Total number of current SPDY sessions.
Current TALKATONE Sessions	Total number of current TALKATONE sessions.
Current TALKATONE unclassified Sessions	Total number of current TALKATONE unclassified sessions.

Field	Description
Current TALKATONE audio Sessions	Total number of current TALKATONE audio sessions.
Current VOIPDISCOUNT Sessions	Total number of current VOIPDISCOUNT sessions.
Current VOIPDISCOUNT unclassified Sessions	Total number of current VOIPDISCOUNT unclassified sessions.
Current VOIPDISCOUNT audio Sessions	Total number of current VOIPDISCOUNT audio sessions.
Current VOPIUM Sessions	Total number of current VOPIUM sessions.
Current VOPIUM unclassified Sessions	Total number of current VOPIUM unclassified sessions.
Current VOPIUM audio Sessions	Total number of current VOPIUM audio sessions.
Current BEHAVIORAL-P2P Sessions	Total number of current Behavioral-P2P sessions.
Current BEHAVIORAL-VOIP Sessions	Total number of current Behavioral-VoIP sessions.
Current BEHAVIORAL-UPLOAD Sessions	Total number of current Behavioral-upload sessions.
Current BEHAVIORAL-DOWNLOAD Sessions	Total number of current Behavioral-download sessions.
Current IMESSAGE Sessions	Total number of current IMESSAGE sessions.
Current LINKEDIN Sessions	Total number of current LINKEDIN sessions.
Current GOOGLE Sessions	Total number of current GOOGLE sessions.
Current POCO Sessions	Total number of current POCO sessions.
Current ULTRASURF Sessions	Total number of current ULTRASURF sessions.
Current SNAPCHAT Sessions	Total number of current SNAPCHAT sessions.
Current TRUECALLER Sessions	Total number of current TRUECALLER sessions.
Current CYBERGHOST Sessions	Total number of current CYBERGHOST sessions.
Current GOOGLEPLUS Sessions	Total number of current GOOGLEPLUS sessions.
Current ADOBECONNECT Sessions	Total number of current ADOBECONNECT sessions.
Current USTREAM Sessions	Total number of current USTREAM sessions.
Current SIRI Sessions	Total number of current SIRI sessions.
Current SOFTETHER Sessions	Total number of current SOFTETHER sessions.
Current SUDAPHONE Sessions	Total number of current SUDAPHONE sessions.
Current SVTPLAY Sessions	Total number of current SVTPLAY sessions.
Current HYVES Sessions	Total number of current HYVES sessions.

Field	Description
Current SILVERLIGHT Sessions	Total number of current SILVERLIGHT sessions.
Current BLACKDIALER Sessions	Total number of current BLACKDIALER sessions.
Current BLACKDIALER Unclassified Sessions	Total number of current BLACKDIALER unclassified sessions.
Current BLACKDIALER Audio Sessions	Total number of current BLACKDIALER audio sessions.
<b>Important</b>	The following statistics are supported from ADC plugin 1.5 and later releases.
Current RODI Sessions	Total number of current RODI sessions.
Current SKYDRIVE Sessions	Total number of current SKYDRIVE sessions.
Current VTOK Sessions	Total number of current VTOK sessions.
Current VTOK Unclassified Sessions	Total number of current VTOK unclassified sessions.
Current VTOK Audio Sessions	Total number of current VTOK audio sessions.
Current VTOK Video Sessions	Total number of current VTOK video sessions.
Current FLICKR Sessions	Total number of current FLICKR sessions.
Current KURO Sessions	Total number of current KURO sessions.
Current DROPBOX Sessions	Total number of current DROPBOX sessions.
Current HEYTELL Sessions	Total number of current HEYTELL sessions.
Current BITCASA Sessions	Total number of current BITCASA sessions.
Current CLUBBOX Sessions	Total number of current CLUBBOX sessions.
Current TUMBLR Sessions	Total number of current TUMBLR sessions.
Current YOUTUBE Sessions	Total number of current YOUTUBE sessions.
Current VOXER Sessions	Total number of current VOXER sessions.
Current HOTSPOTVPN Sessions	Total number of current HOTSPOT VPN sessions.
Current BAIDUMOVIE Sessions	Total number of current BAIDU MOVIE sessions.
Current APPLEMAPS Sessions	Total number of current APPLEMAPS sessions.
Current BADOO Sessions	Total number of current BADOO sessions.
Current FACEBOOK UNCLASSIFIED Sessions	Total number of current FACEBOOK UNCLASSIFIED sessions.
Current FACEBOOK AUDIO Sessions	Total number of current FACEBOOK AUDIO sessions.

Field	Description
Current FACEBOOK streaming-video Sessions	Total number of current FACEBOOK streaming-video sessions.
Current FOURSQUARE Sessions	Total number of current FOURSQUARE sessions.
Current JAP Sessions	Total number of current JAP sessions.
Current MONKEY3 Sessions	Total number of current MONKEY3 sessions.
Current OUTLOOK Sessions	Total number of current OUTLOOK sessions.
Current VINE Sessions	Total number of current VINE sessions.
Current YAHOOEMAIL Sessions	Total number of current YAHOOEMAIL sessions.
Current BBM Sessions	Total number of current BBM sessions.
Current BBM UNCLASSIFIED Sessions	Total number of current BBM UNCLASSIFIED sessions.
Current BBM AUDIO Sessions	Total number of current BBM AUDIO sessions.
Current BOX Sessions	Total number of current BOX sessions.
Current CHIKKA Sessions	Total number of current CHIKKA sessions.
Current IMGUR Sessions	Total number of current IMGUR sessions.
Current OIST Sessions	Total number of current OIST sessions.
Current REGRAM Sessions	Total number of current REGRAM sessions.
Current VCHAT Sessions	Total number of current VCHAT sessions.
Current bittorrent-sync Sessions	Total number of current Bittorrent Sync sessions.
Current cisco-jabber unclassified Sessions	Total number of current Cisco Jabber Unclassified sessions.
Current cisco-jabber audio Sessions	Total number of current Cisco Jabber Audio sessions.
Current cisco-jabber video Sessions	Total number of current Cisco Jabber Video sessions.
Current hls Sessions	Total number of current HLS sessions.
Current lync Sessions	Total number of current Lync sessions.
Current lync unclassified Sessions	Total number of current Lync Unclassified sessions.
Current lync audio Sessions	Total number of current Lync Audio sessions.
Current lync auvideo Sessions	Total number of current Lync Video sessions.
Current lync file-transfer Sessions	Total number of current Lync File-transfer sessions.
Current path Sessions	Total number of current Path sessions.

Field	Description
Current waze Sessions	Total number of current Waze sessions.
Current youku Sessions	Total number of current Youku sessions.
Current behavioral-video Sessions	Total number of current Behavioral video sessions.
Current apple-store Sessions	Total number of current apple-store sessions.
Current blackberry-store Sessions	Total number of current blackberry-store sessions.
Current hulu Sessions	Total number of current hulu sessions.
Current igo Sessions	Total number of current igo sessions.
Current mapfactor Sessions	Total number of current mapfactor sessions.
Current mozy Sessions	Total number of current mozy sessions.
Current navigon Sessions	Total number of current navigon sessions.
Current nokia-store Sessions	Total number of current nokia-store sessions.
Current opendrive Sessions	Total number of current opendrive sessions.
Current samsung-store Sessions	Total number of current samsung-store sessions.
Current weibo Sessions	Total number of current weibo sessions.
Current windows-azure Sessions	Total number of current windows-azure sessions.
Current windows-store Sessions	Total number of current windows-store sessions.
Current windows-store Sessions	Total number of current windows-store sessions.
Current apple-push Sessions	Total number of current apple-push sessions.
Current didi Sessions	Total number of current didi sessions.
Current friendster Sessions	Total number of current friendster sessions.
Current google-music Sessions	Total number of current google-music sessions.
Current google-push Sessions	Total number of current google-push sessions.
Current hike-messenger Sessions	Total number of current hike-messenger sessions.
Current idrive Sessions	Total number of current idrive sessions.
Current kik-messenger Sessions	Total number of current kik-messenger sessions.
Current tagged Sessions	Total number of current tagged sessions.
Current telegram Sessions	Total number of current telegram sessions.
Current xing Sessions	Total number of current xing sessions.

Field	Description
Current rhapsody Sessions	Total number of current rhapsody sessions.
Current speedtest Sessions	Total number of current speedtest sessions.
Current twitch Sessions	Total number of current twitch sessions.
Current hbogo Sessions	Total number of current hbogo sessions.
Current iheartradio Sessions	Total number of current iheartradio sessions.
Current iheartradio unclassified Sessions	Total number of current iheartradio unclassified sessions.
Current iheartradio ads Sessions	Total number of current iheartradio ads sessions.
Current slacker-radio Sessions	Total number of current slacker-radio sessions.
Current slacker-radio unclassified Sessions	Total number of current slacker-radio unclassified sessions.
Current slacker-radio ads Sessions	Total number of current slacker-radio ads sessions.
Current upc-phone Sessions	Total number of current upc-phone sessions.
Current upc-phone unclassified Sessions	Total number of current upc-phone unclassified sessions.
Current upc-phone audio Sessions	Total number of current upc-phone audio sessions.
Current radio-paradise audio Sessions	Total number of current radio-paradise audio sessions.
Current beatport Sessions	Total number of current beatport sessions.
Current soundcloud Sessions	Total number of current soundcloud sessions.
Current amazonmusic Sessions	Total number of current amazonmusic sessions.
Current ssl Sessions	Total number of current ssl sessions.
Current slingtv Sessions	Total number of current slingtv sessions.
Current vessel Sessions	Total number of current vessel sessions.
Current vudu Sessions	Total number of current vudu sessions.
Current go90 Sessions	Total number of current go90 sessions.
Current Espn Sessions	Total number of current espn sessions.
Current Hbonow Sessions	Total number of current hbonow sessions.
Current Crackle Sessions	Total number of current crackle sessions.

## show active-charging sessions summary type p2p

Table 91: show active-charging sessions summary type p2p Command Output Descriptions

Field	Description
Total Active Charging Sessions	The total number of active charging sessions.
Uplink Bytes	Total bytes uploaded.
Downlink Bytes	Total bytes downloaded.
Uplink Packets	Total packets uploaded.
Downlink Packets	Total packets downloaded.
Current IP Sessions	Total number of current IP sessions.
Current ICMP Sessions	Total number of current ICMP sessions.
Current IPv6 Sessions	Total number of current IPv6 sessions.
Current ICMPv6 Sessions	Total number of current ICMPv6 sessions.
Current TCP Sessions	Total number of current TCP sessions.
Current UDP Sessions	Total number of current UDP sessions.
Current HTTP Sessions	Total number of current HTTP sessions.
Current HTTPS Sessions	Total number of current HTTPS sessions.
Current FTP Sessions	Total number of current FTP sessions.
Current POP3 Sessions	Total number of current POP3 sessions.
Current SMTP Sessions	Total number of current SMTP sessions.
Current SIP Sessions	Total number of current SIP sessions.
Current RTSP Sessions	Total number of current RTSP sessions.
Current RTP Sessions	Total number of current RTP sessions.
Current RTCP Sessions	Total number of current RTCP sessions.
Current IMAP Sessions	Total number of current IMAP sessions.
Current WSP-CO Sessions	Total number of current WSP-CO sessions.
Current WSP-CL Sessions	Total number of current WSP-CL sessions.
Current MMS Sessions	Total number of current MMS sessions.
Current DNS Sessions	Total number of current DNS sessions.

Field	Description
Current PPTP Sessions	Total number of current PPTP sessions.
Current PPTP-GRE Sessions	Total number of current PPTP-GRE sessions.
Current P2P Sessions	Total number of current P2P sessions.
Current H323 Sessions	Total number of current H323 sessions.
Current TFTP Sessions	Total number of current TFTP sessions.
Current UNKNOWN Sessions	Total number of current UNKNOWN sessions.
Current SKYPE Sessions	Total number of current SKYPE sessions.
Current YAHOO Sessions	Total number of current YAHOO sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current SKYPE voice Sessions	Total number of current SKYPE voice sessions.
Current YAHOO voice Sessions	Total number of current YAHOO voice sessions.
Current SKYPE non-voice Sessions	Total number of current SKYPE non-voice sessions.
Current YAHOO non-voice Sessions	Total number of current YAHOO non-voice sessions.
<b>Important</b> The following audio/non-audio counters are available only for 11.0 and later releases.	
Current SKYPE Audio Sessions	Total number of current SKYPE audio sessions.
Current YAHOO Audio Sessions	Total number of current YAHOO audio sessions.
<b>Important</b> The following audio/non-audio counters are available only for release 11.0.	
Current SKYPE non-audio Sessions	Total number of current SKYPE non-audio sessions.
Current YAHOO non-audio Sessions	Total number of current YAHOO non-audio sessions.
<b>Important</b> The following counters are available only for 12.0 and later releases.	
Current SKYPE Video Sessions	Total number of current SKYPE Video sessions.
Current YAHOO Video Sessions	Total number of current YAHOO Video sessions.
Current SKYPE Unclassified Sessions	Total number of current SKYPE Unclassified sessions.
Current SKYPE Voipout Sessions	Total number of current SKYPE Voipout sessions.
Current EDONKEY Sessions	Total number of current EDONKEY sessions.
Current ORB Sessions	Total number of current ORB sessions.
Current MSN Sessions	Total number of current MSN sessions.

Field	Description
Current GNUTELLA Sessions	Total number of current GNUTELLA sessions.
<b>Important</b> The following counter is available only for 10.0 and earlier releases.	
Current MSN voice Sessions	Total number of current MSN voice sessions.
<b>Important</b> The following counter is available only for 11.0 and later releases.	
Current MSN audio Sessions	Total number of current MSN audio sessions.
Current BITTORRENT Sessions	Total number of current BITTORRENT sessions.
<b>Important</b> The following counter is available only for 10.0 and earlier releases.	
Current MSN non-voice Sessions	Total number of current MSN non-voice sessions.
<b>Important</b> The following counter is available only for release 11.0.	
Current MSN non-audio Sessions	Total number of current MSN non-audio sessions.
Current MSN Video Sessions	Total number of current MSN video sessions.
Current MSN Unclassified Sessions	Total number of current MSN unclassified sessions.
Current SLINGBOX Sessions	Total number of current SLINGBOX sessions.
Current JABBER Sessions	Total number of current JABBER sessions.
Current WINNY Sessions	Total number of current WINNY sessions.
Current MANOLITO Sessions	Total number of current MANOLITO sessions.
Current PANDO Sessions	Total number of current PANDO sessions.
Current FILETOPIA Sessions	Total number of current FILETOPIA sessions.
Current SOULSEEK Sessions	Total number of current SOULSEEK sessions.
Current PPSTREAM Sessions	Total number of current PPSTREAM sessions.
Current QQ Sessions	Total number of current QQ sessions.
Current QQ Audio Sessions	Total number of current QQ audio sessions.
Current QQ Video Sessions	Total number of current QQ video sessions.
Current QQLIVE Sessions	Total number of current QQLIVE sessions.
Current IMESH Sessions	Total number of current IMESH sessions.
Current MUTE Sessions	Total number of current MUTE sessions.
Current PPLIVE Sessions	Total number of current PPLIVE sessions.

Field	Description
Current GADUGADU Sessions	Total number of current GADUGADU sessions.
Current FEIDIAN Sessions	Total number of current FEIDIAN sessions.
Current APPLEJUICE Sessions	Total number of current APPLEJUICE sessions.
Current FASTTRACK Sessions	Total number of current FASTTRACK sessions.
Current ZATTOO Sessions	Total number of current ZATTOO sessions.
Current SKINNY Sessions	Total number of current SKINNY sessions.
Current SOPCAST Sessions	Total number of current SOPCAST sessions.
Current DIRECTCONNECT Sessions	Total number of current DIRECTCONNECT sessions.
Current ARES Sessions	Total number of current ARES sessions.
Current OSCAR Sessions	Total number of current OSCAR sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current OSCAR voice Sessions	Total number of current OSCAR voice sessions.
Current OSCAR non-voice Sessions	Total number of current OSCAR non-voice sessions.
<b>Important</b> The following audio/non-audio counters are available only for release 11.0 and later releases.	
Current OSCAR Audio Sessions	Total number of current OSCAR audio sessions.
Current OSCAR Video Sessions	Total number of current OSCAR video sessions.
Current POPO Sessions	Total number of current POPO sessions.
Current IRC Sessions	Total number of current IRC sessions.
Current STEAM Sessions	Total number of current STEAM sessions.
Current DDLINK Sessions	Total number of current DDLINK sessions.
Current HALFLIFE2 Sessions	Total number of current HALFLIFE2 sessions.
Current HAMACHIVPN Sessions	Total number of current HAMACHIVPN sessions.
Current TVANTS Sessions	Total number of current TVANTS sessions.
Current TVUPLAYER Sessions	Total number of current TVUPLAYER sessions.
Current UUSEE Sessions	Total number of current UUSEE sessions.
Current VPNX Sessions	Total number of current VPNX sessions.
Current VTUN Sessions	Total number of current VTUN sessions.

Field	Description
Current WINMX Sessions	Total number of current WINMX sessions.
Current WOFWARCRAFT Sessions	Total number of current WOFWARCRAFT sessions.
Current XBOX Sessions	Total number of current XBOX sessions.
Current ISKOOT Sessions	Total number of current ISKOOT sessions.
Current FRING Sessions	Total number of current FRING sessions.
Current GTALK Sessions	Total number of current GTALK sessions.
<b>Important</b> The following voice/non-voice counters are available only for 10.0 and earlier releases.	
Current GTALK voice Sessions	Total number of current GTALK voice sessions.
Current GTALK non-voice Sessions	Total number of current GTALK non-voice sessions.
<b>Important</b> The following audio/non-audio counters are available only for 11.0 and later releases.	
Current GTALK Audio Sessions	Total number of current GTALK Audio sessions.
Current GTALK Video Sessions	Total number of current GTALK video sessions.
Current OOVOO Sessions	Total number of current OOVOO sessions.
Current FREENET Sessions	Total number of current FREENET sessions.
Current AIMINI Sessions	Total number of current AIMINI sessions.
Current BATTLEFIELD Sessions	Total number of current BATTLEFIELD sessions.
Current OPENFT Sessions	Total number of current OPENFT sessions.
Current QQGAME Sessions	Total number of current QQGAME sessions.
Current QUAKE Sessions	Total number of current QUAKE sessions.
Current SECONDLIFE Sessions	Total number of current SECONDLIFE sessions.
Current ACTIVESYNC Sessions	Total number of current ACTIVESYNC sessions.
Current NIMBUZZ Sessions	Total number of current NIMBUZZ sessions.
Current IAX Sessions	Total number of current IAX sessions.
Current PALTALK Sessions	Total number of current PALTALK sessions.
Current WARCRAFT3 Sessions	Total number of current WARCRAFT3 sessions.
Current IPTV Sessions	Total number of current IPTV sessions.
Current RDP Sessions	Total number of current RDP sessions.

Field	Description
Current PANDORA Sessions	Total number of current PANDORA sessions.
Current PANDORA unclassified Sessions	Total number of current PANDORA unclassified sessions.
Current PANDORA ads Sessions	Total number of current PANDORA ads sessions.
Current ICECAST Sessions	Total number of current ICECAST sessions.
Current KONTIKI Sessions	Total number of current KONTIKI sessions.
Current MEEBO Sessions	Total number of current MEEBO sessions.
Current SHOUTCAST Sessions	Total number of current SHOUTCAST sessions.
Current TRUPHONE Sessions	Total number of current TRUPHONE sessions.
Current THUNDER Sessions	Total number of current THUNDER sessions.
Current ARMAGETTRON Sessions	Total number of current ARMAGETTRON sessions.
Current BLACKBERRY Sessions	Total number of current BLACKBERRY sessions.
Current CITRIX Sessions	Total number of current CITRIX sessions.
Current CLUBPENGUIN Sessions	Total number of current CLUBPENGUIN sessions.
Current CROSSFIRE Sessions	Total number of current CROSSFIRE sessions.
Current DOFUS Sessions	Total number of current DOFUS sessions.
Current FIESTA Sessions	Total number of current FIESTA sessions.
Current FLORENSIA Sessions	Total number of current FLORENSIA sessions.
Current FUNSHION Sessions	Total number of current FUNSHION sessions.
Current GUILDWARS Sessions	Total number of current GUILDWARS sessions.
Current ISAKMP Sessions	Total number of current ISAKMP sessions.
Current MAPLESTORY Sessions	Total number of current MAPLESTORY sessions.
Current MGCP Sessions	Total number of current MGCP sessions.
Current OCTOSHAPE Sessions	Total number of current OCTOSHAPE sessions.
Current OFF Sessions	Total number of current OFF sessions.
Current PS3 Sessions	Total number of current PS3 sessions.
Current RMSTREAM Sessions	Total number of current RMSTREAM sessions.
Current RFACTOR Sessions	Total number of current RFACTOR sessions.
Current SPLASHFIGHTER Sessions	Total number of current SPLASHFIGHTER sessions.

Field	Description
Current SSDP Sessions	Total number of current SSDP sessions.
Current STEALTHNET Sessions	Total number of current STEALTHNET sessions.
Current STUN Sessions	Total number of current STUN sessions.
Current TEAMSPEAK Sessions	Total number of current TEAMSPEAK sessions.
Current TOR Sessions	Total number of current TOR sessions.
Current VEOHTV Sessions	Total number of current VEOHTV sessions.
Current WII Sessions	Total number of current WII sessions.
Current WMSTREAM Sessions	Total number of current WMSTREAM sessions.
Current WOFKUNGFU Sessions	Total number of current WOFKUNGFU sessions.
Current XDCC Sessions	Total number of current XDCC sessions.
Current YOURFREEDOM Sessions	Total number of current YOURFREEDOM sessions.
Current FACEBOOK Sessions	Total number of current FACEBOOK sessions.
Current GAMEKIT Sessions	Total number of current GAMEKIT sessions.
Current FACETIME Sessions	Total number of current FACETIME sessions.
Current FACETIME Unclassified Sessions	Total number of current FACETIME unclassified sessions.
Current FACETIME Audio Sessions	Total number of current FACETIME audio sessions.
Current FACETIME Video Sessions	Total number of current FACETIME video sessions.
Current GMAIL Sessions	Total number of current GMAIL sessions.
Current ITUNES Sessions	Total number of current ITUNES sessions.
Current MYSPACE Sessions	Total number of current MYSPACE sessions.
Current TEAMVIEWER Sessions	Total number of current TEAMVIEWER sessions.
Current TWITTER Sessions	Total number of current TWITTER sessions.
Current TWITTER streaming-video Sessions	Total number of current TWITTER streaming-video sessions.
Current VIBER Sessions	Total number of current VIBER sessions.
Current VIBER Unclassified Sessions	Total number of current VIBER Unclassified sessions.
Current VIBER Audio Sessions	Total number of current VIBER Audio sessions.
Current VIBER im Sessions	Total number of current VIBER IM sessions.
Current VIBER file-transfer Sessions	Total number of current VIBER File-transfer sessions.

Field	Description
Current ANTSP2P Sessions	Total number of current ANTSP2P sessions.
Current IMO Sessions	Total number of current IMO sessions.
Current NETMOTION Sessions	Total number of current NETMOTION sessions.
Current OGG Sessions	Total number of current OGG sessions.
Current OPENVPN Sessions	Total number of current OPENVPN sessions.
Current QUICKTIME Sessions	Total number of current QUICKTIME sessions.
Current SPOTIFY Sessions	Total number of current SPOTIFY sessions.
Current TANGO Sessions	Total number of current TANGO sessions.
Current ULTRABAC Sessions	Total number of current ULTRABAC sessions.
Current USENET Sessions	Total number of current USENET sessions.
Current VOIPTUNNEL Sessions	Total number of current VOIPTUNNEL sessions.
Current SCYDO Sessions	Total number of current SCYDO sessions.
Current WHATSAPP Sessions	Total number of current WHATSAPP sessions.
Current WHATSAPP unclassified Sessions	Total number of current WHATSAPP unclassified sessions.
Current WHATSAPP audio Sessions	Total number of current WHATSAPP audio sessions.
Current MYPEOPLE Sessions	Total number of current MYPEOPLE sessions.
Current RDT Sessions	Total number of current RDT sessions.
Current FLASH Sessions	Total number of current FLASH sessions.
Current MOJO Sessions	Total number of current MOJO sessions.
Current PCANYWHERE Sessions	Total number of current PCANYWHERE sessions.
Current WEBEX Sessions	Total number of current WEBEX sessions.
Current NETFLIX Sessions	Total number of current NETFLIX sessions.
Current IMPLUS Sessions	Total number of current IMPLUS sessions.
Current EBUDDY Sessions	Total number of current EBUDDY sessions.
Current MSRP Sessions	Total number of current MSRP sessions.
Current FICALL Sessions	Total number of current FICALL sessions.
Current GOTOMEETING Sessions	Total number of current GOTOMEETING sessions.
Current MIG33 Sessions	Total number of current MIG33 sessions.

Field	Description
Current COMODOUNITE Sessions	Total number of current COMODOUNITE sessions.
Current GOOBER Sessions	Total number of current GOOBER sessions.
Current IPLAYER Sessions	Total number of current IPLAYER sessions.
Current OPERAMINI Sessions	Total number of current OPERAMINI sessions.
Current KAKAOTALK Sessions	Total number of current KAKAOTALK sessions.
Current KAKAOTALK Audio Sessions	Total number of current KAKAOTALK audio sessions.
Current KAKAOTALK Unclassified Sessions	Total number of current KAKAOTALK unclassified sessions.
Current NATEONTALK Sessions	Total number of current NATEONTALK sessions.
Current NAVERLINE Sessions	Total number of current NAVERLINE sessions.
Current AVI Sessions	Total number of current AVI sessions.
Current GOOGLEPLAY Sessions	Total number of current GOOGLEPLAY sessions.
Current ICLOUD Sessions	Total number of current ICLOUD sessions.
Current SORIBADA Sessions	Total number of current SORIBADA sessions.
Current WECHAT Sessions	Total number of current WECHAT sessions.
Current WUALA Sessions	Total number of current WUALA sessions.
Current ACTIONVOIP Sessions	Total number of current ACTIONVOIP sessions.
Current ACTIONVOIP unclassified Sessions	Total number of current ACTIONVOIP unclassified sessions.
Current ACTIONVOIP audio Sessions	Total number of current ACTIONVOIP audio sessions.
Current AMAZONCLOUD Sessions	Total number of current AMAZONCLOUD sessions.
Current ICALL Sessions	Total number of current ICALL sessions.
Current ICALL unclassified Sessions	Total number of current ICALL unclassified sessions.
Current ICALL audio Sessions	Total number of current ICALL audio sessions.
Current ICALL video Sessions	Total number of current ICALL video sessions.
Current INSTAGRAM Sessions	Total number of current INSTAGRAM sessions.
Current JUMBLO Sessions	Total number of current JUMBLO sessions.
Current JUMBLO unclassified Sessions	Total number of current JUMBLO unclassified sessions.
Current JUMBLO audio Sessions	Total number of current JUMBLO audio sessions.

Field	Description
Current KUGOO Sessions	Total number of current KUGOO sessions.
Current MAGICJACK Sessions	Total number of current MAGICJACK sessions.
Current MAGICJACK unclassified Sessions	Total number of current MAGICJACK unclassified sessions.
Current MAGICJACK audio Sessions	Total number of current MAGICJACK audio sessions.
Current MAPI Sessions	Total number of current MAPI sessions.
Current PINTEREST Sessions	Total number of current PINTEREST sessions.
Current PLINGM Sessions	Total number of current PLINGM sessions.
Current PLINGM unclassified Sessions	Total number of current PLINGM unclassified sessions.
Current PLINGM audio Sessions	Total number of current PLINGM audio sessions.
Current RYNGA Sessions	Total number of current RYNGA sessions.
Current RYNGA unclassified Sessions	Total number of current RYNGA unclassified sessions.
Current RYNGA audio Sessions	Total number of current RYNGA audio sessions.
Current SMARTVOIP Sessions	Total number of current SMARTVOIP sessions.
Current SMARTVOIP unclassified Sessions	Total number of current SMARTVOIP unclassified sessions.
Current SMARTVOIP audio Sessions	Total number of current SMARTVOIP audio sessions.
Current SPDY Sessions	Total number of current SPDY sessions.
Current TALKATONE Sessions	Total number of current TALKATONE sessions.
Current TALKATONE unclassified Sessions	Total number of current TALKATONE unclassified sessions.
Current TALKATONE audio Sessions	Total number of current TALKATONE audio sessions.
Current VOIPDISCOUNT Sessions	Total number of current VOIPDISCOUNT sessions.
Current VOIPDISCOUNT unclassified Sessions	Total number of current VOIPDISCOUNT unclassified sessions.
Current VOIPDISCOUNT audio Sessions	Total number of current VOIPDISCOUNT audio sessions.
Current VOPIUM Sessions	Total number of current VOPIUM sessions.
Current VOPIUM unclassified Sessions	Total number of current VOPIUM unclassified sessions.
Current VOPIUM audio Sessions	Total number of current VOPIUM audio sessions.
Current BEHAVIORAL-P2P Sessions	Total number of current Behavioral-P2P sessions.
Current BEHAVIORAL-VOIP Sessions	Total number of current Behavioral-VoIP sessions.

Field	Description
Current BEHAVIORAL-UPLOAD Sessions	Total number of current Behavioral-upload sessions.
Current BEHAVIORAL-DOWNLOAD Sessions	Total number of current Behavioral-download sessions.
Current IMESSAGE Sessions	Total number of current IMESSAGE sessions.
Current LINKEDIN Sessions	Total number of current LINKEDIN sessions.
Current GOOGLE Sessions	Total number of current GOOGLE sessions.
Current POCO Sessions	Total number of current POCO sessions.
Current ULTRASURF Sessions	Total number of current ULTRASURF sessions.
Current SNAPCHAT Sessions	Total number of current SNAPCHAT sessions.
Current TRUECALLER Sessions	Total number of current TRUECALLER sessions.
Current CYBERGHOST Sessions	Total number of current CYBERGHOST sessions.
Current GOOGLEPLUS Sessions	Total number of current GOOGLEPLUS sessions.
Current ADOBECONNECT Sessions	Total number of current ADOBECONNECT sessions.
Current USTREAM Sessions	Total number of current USTREAM sessions.
Current SIRI Sessions	Total number of current SIRI sessions.
Current SOFTETHER Sessions	Total number of current SOFTETHER sessions.
Current SUDAPHONE Sessions	Total number of current SUDAPHONE sessions.
Current SVTPLAY Sessions	Total number of current SVTPLAY sessions.
Current HYVES Sessions	Total number of current HYVES sessions.
Current SILVERLIGHT Sessions	Total number of current SILVERLIGHT sessions.
Current BLACKDIALER Sessions	Total number of current BLACKDIALER sessions.
Current APPLEMAPS Sessions	Total number of current APPLEMAPS sessions.
Current BADOO Sessions	Total number of current BADOO sessions.
Current FACEBOOK UNCLASSIFIED Sessions	Total number of current FACEBOOK UNCLASSIFIED sessions.
Current FACEBOOK AUDIO Sessions	Total number of current FACEBOOK AUDIO sessions.
Current FACEBOOK streaming-video Sessions	Total number of current FACEBOOK streaming-video sessions.
Current FOURSQUARE Sessions	Total number of current FOURSQUARE sessions.

Field	Description
Current JAP Sessions	Total number of current JAP sessions.
Current MONKEY3 Sessions	Total number of current MONKEY3 sessions.
Current OUTLOOK Sessions	Total number of current OUTLOOK sessions.
Current VINE Sessions	Total number of current VINE sessions.
Current YAHOOEMAIL Sessions	Total number of current YAHOOEMAIL sessions.
Current BBM Sessions	Total number of current BBM sessions.
Current BBM UNCLASSIFIED Sessions	Total number of current BBM UNCLASSIFIED sessions.
Current BBM AUDIO Sessions	Total number of current BBM AUDIO sessions.
Current BOX Sessions	Total number of current BOX sessions.
Current CHIKKA Sessions	Total number of current CHIKKA sessions.
Current IMGUR Sessions	Total number of current IMGUR sessions.
Current OIST Sessions	Total number of current OIST sessions.
Current REGRAM Sessions	Total number of current REGRAM sessions.
Current VCHAT Sessions	Total number of current VCHAT sessions.
Current bittorent-sync Sessions	Total number of current Bittorrent Sync sessions.
Current cisco-jabber unclassified Sessions	Total number of current Cisco Jabber Unclassified sessions.
Current cisco-jabber audio Sessions	Total number of current Cisco Jabber Audio sessions.
Current cisco-jabber video Sessions	Total number of current Cisco Jabber Video sessions.
Current hls Sessions	Total number of current HLS sessions.
Current lync Sessions	Total number of current Lync sessions.
Current lync unclassified Sessions	Total number of current Lync Unclassified sessions.
Current lync audio Sessions	Total number of current Lync Audio sessions.
Current lync auvideo Sessions	Total number of current Lync Video sessions.
Current lync file-transfer Sessions	Total number of current Lync File-transfer sessions.
Current path Sessions	Total number of current Path sessions.
Current waze Sessions	Total number of current Waze sessions.
Current youku Sessions	Total number of current Youku sessions.
Current behavioral-video Sessions	Total number of current Behavioral video sessions.

Field	Description
Current apple-store Sessions	Total number of current apple-store sessions.
Current blackberry-store Sessions	Total number of current blackberry-store sessions.
Current hulu Sessions	Total number of current hulu sessions.
Current igo Sessions	Total number of current igo sessions.
Current mapfactor Sessions	Total number of current mapfactor sessions.
Current mozy Sessions	Total number of current mozy sessions.
Current navigon Sessions	Total number of current navigon sessions.
Current nokia-store Sessions	Total number of current nokia-store sessions.
Current opendrive Sessions	Total number of current opendrive sessions.
Current samsung-store Sessions	Total number of current samsung-store sessions.
Current weibo Sessions	Total number of current weibo sessions.
Current windows-azure Sessions	Total number of current windows-azure sessions.
Current windows-store Sessions	Total number of current windows-store sessions.
Current apple-push Sessions	Total number of current apple-push sessions.
Current didi Sessions	Total number of current didi sessions.
Current friendster Sessions	Total number of current friendster sessions.
Current google-music Sessions	Total number of current google-music sessions.
Current google-push Sessions	Total number of current google-push sessions.
Current hike-messenger Sessions	Total number of current hike-messenger sessions.
Current idrive Sessions	Total number of current idrive sessions.
Current kik-messenger Sessions	Total number of current kik-messenger sessions.
Current tagged Sessions	Total number of current tagged sessions.
Current telegram Sessions	Total number of current telegram sessions.
Current xing Sessions	Total number of current xing sessions.
Current rhapsody Sessions	Total number of current rhapsody sessions.
Current speedtest Sessions	Total number of current speedtest sessions.
Current twitch Sessions	Total number of current twitch sessions.
Current hbogo Sessions	Total number of current hbogo sessions.

Field	Description
Current iheartradio Sessions	Total number of current iheartradio sessions.
Current iheartradio unclassified Sessions	Total number of current iheartradio unclassified sessions.
Current iheartradio ads Sessions	Total number of current iheartradio ads sessions.
Current slacker-radio Sessions	Total number of current slacker-radio sessions.
Current slacker-radio unclassified Sessions	Total number of current slacker-radio unclassified sessions.
Current slacker-radio ads Sessions	Total number of current slacker-radio ads sessions.
Current upc-phone Sessions	Total number of current upc-phone sessions.
Current upc-phone unclassified Sessions	Total number of current upc-phone unclassified sessions.
Current upc-phone audio Sessions	Total number of current upc-phone audio sessions.
Current radio-paradise Sessions	Total number of current radio-paradise sessions.
Current beatport Sessions	Total number of current beatport sessions.
Current soundcloud Sessions	Total number of current soundcloud sessions.
Current amazonmusic Sessions	Total number of current amazonmusic sessions.
Current ssl Sessions	Total number of current ssl sessions.
Current slingtv Sessions	Total number of current slingtv sessions.
Current vessel Sessions	Total number of current vessel sessions.
Current Vudu Sessions	Total number of current vudu sessions.
Current go90 Sessions	Total number of current go90 sessions.
Current Espn Sessions	Total number of current espn sessions.
Current Hbonow Sessions	Total number of current hbonow sessions.
Current Crackle Sessions	Total number of current crackle sessions.

## show active-charging subscribers full all

Table 92: show active-charging subscribers full all Command Output Descriptions

Field	Description
Callid	The unique call identifier value.
ACSMgr Card/Cpu	Total number of ACS Manager Card/CPU.

Field	Description
Active Charging Service name	Name of the Active Charging Service.
Active Charging Service Scheme name	Name of the Active Charging service-scheme selected for the particular subscriber.
ACSMgr Instance	Total instances of ACS Manager.
Number of Sub sessions	Total number of sub-sessions.
Data Sessions Active	Total number of active data sessions.
Dynamic Routes created	Total number of dynamic routes created.
Uplink Bytes	Total number of uplink bytes.
Downlink Bytes	Total number of downlink bytes.
Uplink Packets	Total number of uplink packets.
Downlink Packets	Total number of downlink packets.
Accel Packets	Total number of accelerated packets.
FastPath Packets	Total number of data packets processed in fastpath.
Total NRSPCA Requests	Total number of Network Requested Secondary PDP Context Activation (NRSPCA) Requests.
NRSPCA Req. Succeeded	Total number of NRSPCA requests succeeded.
NRSPCA Req. Failed	Total number of NRSPCA requests failed.
Total NRUPC Requests	Total number of Network Requested Update PDP Context (NRUPC) requests.
NRUPC Req. Succeeded	Total number of NRUPC requests succeeded.
NRUPC Req. Failed	Total number of NRUPC requests failed.
Pending NRSPCA Requests	Total number of pending NRSPCA requests.
Pending NRUPC Requests	Total number of pending NRUPC requests.
Total Bound Dynamic Rules	Total number of bound dynamic rules.
Total Bound Predef. Rules	Total number of bound predefined rules.
Data Sessions moved	Total number of data sessions moved.
Bearers Terminated for no rules	Total number of bearers terminated for no rules.
Failed Rulebase Install (unknown bearer-id)	Total number of failed Rulebase installation with failure code —Unknown Bearer ID.
Failed Rule Install (unknown bearer-id)	Total number of failed Rule installation with failure code —Unknown Bearer ID.

Field	Description
<b>TCP Proxy:</b>	
TCP Proxy Flows Requests	Total number of TCP Proxy flow requests.
TCP Proxy Flows Request Success	Total number of successful TCP Proxy flow requests.
Disable TCP Proxy Flows Requests	Total number of TCP Proxy flow requests disabled.
Disable TCP Proxy Flows Success	Total number of successful TCP Proxy flow requests disabled.
Current TCP Proxy Flows	Total number of current TCP Proxy flows for the session.
Total TCP Proxy Flows	Total number of TCP Proxy flows for the session.
TCP-proxy reset for non-SYN flows	Total number of resets sent by TCP Proxy for flows with no SYN packet after recovery.
<b>Current Flows:</b>	
Current IP Flows	Total number of current IP flows.
Current ICMP Flows	Total number of current ICMP flows.
Current IPv6 Flows	Total number of current IPv6 flows.
Current ICMPv6 Flows	Total number of current ICMPv6 flows.
Current TCP Flows	Total number of current TCP flows.
Current UDP Flows	Total number of current UDP flows.
Current HTTP Flows	Total number of current HTTP flows.
Current HTTPS Flows	Total number of current HTTPS flows.
Current FTP Flows	Total number of current FTP flows.
Current POP3 Flows	Total number of current POP3 flows.
Current SMTP Flows	Total number of current SMTP flows.
Current SIP Flows	Total number of current SIP flows.
Current RTSP Flows	Total number of current RTSP flows.
Current RTP Flows	Total number of current RTP flows.
Current RTCP Flows	Total number of current RTCP flows.
Current IMAP Flows	Total number of current IMAP flows.
Current WSP-CO Flows	Total number of current WSP-CO flows.
Current WSP-CL Flows	Total number of current WSP-CL flows.

Field	Description
Current MMS Flows	Total number of current MMS flows.
Current DNS Flows	Total number of current DNS flows.
Current PPTP-GRE Flows	Total number of current PPTP-GRE flows.
Current PPTP Flows	Total number of current PPTP flows.
Current P2P Flows	Total number of current P2P flows.
Current H323 Flows	Total number of current H323 flows.
Current TFTP Flows	Total number of current TFTP flows.
Current UNKNOWN Flows	Total number of current UNKNOWN flows.
IPNE	Name of the associated IPNE service.
<b>Flow Information</b>	
Subscriptions	Total number of subscriptions.
Disabled Notifications	Total number of disabled notifications.
<b>NBR Information</b>	
Subscriptions	Total number of NBR subscriptions.
Disabled Notifications	Total number of disabled notifications for NBR.
<b>Usage Information</b>	
Notifications	Total number of notifications.
UL Bytes Last Reported	Total number of Last Reported uplink bytes.
DL Bytes Last Reported	Total number of Last Reported uplink bytes.
Packets dropped due to no NAT Port/IP	Total number of packets dropped due to no NAT Port/IP.
Packets dropped since Last EDR trigger	Total number of packets dropped since the last EDR trigger.
Total packets dropped	Total number of packets dropped.
<b>Radio-Congestion Subscriber Full Stats</b>	
Last Reported Congestion Level	Indicates the last reported congestion level.
Total Flows Analyzed	Total number of flows analyzed.
Total Flows Eligible for Correlation	Total number of flows eligible for correlation.
<b>Radio-Congestion Session Last Reported Stats</b>	

Field	Description
Total Flows Analyzed	Total number of flows analyzed.
Total Flows Eligible for Correlation	Total number of flows eligible for correlation.
Total Flows with Congestion Level	Total number of flows with congestion level.
no Congestion	Total number of flows with no congestion.
low Congestion	Total number of flows with low congestion.
medium Congestion	Total number of flows with medium congestion.
high Congestion	Total number of flows with high congestion.
extreme Congestion	Total number of flows with extreme congestion.
P2P Plugin Version	Displays the P2P Plugin version.
FW-and-NAT Policy	The Stateful Firewall-and-NAT policy name.
FW-and-NAT Policy ID	The Stateful Firewall-and-NAT policy identifier.
Firewall Policy IPv4	Indicates whether Stateful Firewall IPv4 processing is required for subscriber.
Firewall Policy IPv6	Indicates whether Stateful Firewall IPv6 processing is required for subscriber.
NAT Policy NAT44	Indicates whether NAT44 is enabled or disabled for the subscriber.
NAT Policy NAT64	Indicates whether NAT64 is enabled or disabled for the subscriber.
Bypass NAT Flow Present	Indicates whether bypass NAT flow is present or not.
No Firewall ruledef(s) match the specified criteria	Stateful Firewall ruledef(s) matching the specified criteria.
No Default Firewall ruledef(s) match the specified criteria	Default Stateful Firewall ruledef(s) matching the specified criteria.
Predefined Firewall Rules Enabled List	List of enabled predefined Firewall rules.
Local-policy RAI/TAI Rules Active List	Displays the list of local-policy rules for RAI/TAI that are currently activated for the subscriber.
Total acs subscribers matching specified criteria	Total number of ACS subscribers matching the specified criteria.
UIDH received from Server	Specifies the total number of UIDH requests received from the server.
Total UIDH Insertions	Specifies the total number of UIDH insertions.
<b>Override Control</b>	
<b>Charging Parameters</b>	

Field	Description
Online Response Required	Speciies that Online Response Required AVP is activated in the Gx Interface at charging level or Override level with an option to WAIT to DONT_WAIT.
<b>VPP Offload Statistics:</b>	
Total Flows	Total number of flows.
Current Active Flows	Total number of active current flows.
<b>IPv4:</b>	
Uplink Pkts	Total number of IPv4 packets uplinked.
Uplink Bytes	Total number of IPv4 bytes uplinked.
Downlink Pkts	Total number of IPv4 packets downlinked.
Downlink Bytes	Total number of IPv4 bytes downlinked.
Dropped Uplink Pkts	Total number of IPv4 uplink packets discarded.
Dropped Uplink Bytes	Total number of IPv4 uplink bytes discarded.
Dropped Downlink Pkts	Total number of IPv4 downlink packets discarded.
Dropped Downlink Bytes	Total number of IPv4 downlink bytes discarded.
<b>IPv6:</b>	
Uplink Pkts	Total number of IPv6 packets uplinked.
Uplink Bytes	Total number of IPv6 bytes uplinked.
Downlink Pkts	Total number of IPv6 packets downlinked.
Downlink Bytes	Total number of IPv6 bytes downlinked.
Dropped Uplink Pkts	Total number of IPv6 uplink packets discarded.
Dropped Uplink Bytes	Total number of IPv6 uplink bytes discarded.
Dropped Downlink Pkts	Total number of IPv6 downlink packets discarded.
Dropped Downlink Bytes	Total number of IPv6 downlink bytes discarded.

## show active-charging subsystem all

Table 93: show active-charging subsystem all Command Output Descriptions

Field	Description
Total ACS Managers	Total number of Active Charging Service managers running on the system.

Field	Description
Session Creation Succ	Total number of sessions created successfully.
Session Creation Fail	Total number of session creation failures.
Total subscribers	Total number of subscribers configured on system.
Current subscribers	Total number of subscriber active on system.
Total CF subscribers	Total number of Content Filtering subscribers configured on the system.
Current CF subscribers	Total number of Content Filtering subscribers active on the system.
Total Flows Connected	Total number of IPv4 and IPv6 flows connected.
Total IPv4 Flows Connected	Total number of IPv4 flows connected.
Total IPv6 Flows Connected	Total number of IPv6 flows connected.
Total Flows Disconnected	Total number of IPv4 and IPv6 flows disconnected.
Total IPv4 Flows Disconnected	Total number of IPv4 flows disconnected.
Total IPv6 Flows Disconnected	Total number of IPv6 flows disconnected.
Total Uplink Pkts	Total number of IPv4 and IPv6 packets uplinked.
Total IPv4 Uplink Pkts	Total number of IPv4 packets uplinked.
Total IPv6 Uplink Pkts	Total number of IPv6 packets uplinked.
Total Uplink Bytes	Total number of IPv4 and IPv6 bytes uplinked.
Total IPv4 Uplink Bytes	Total number of IPv4 bytes uplinked.
Total IPv6 Uplink Bytes	Total number of IPv6 bytes uplinked.
Total Downlink Pkts	Total number of IPv4 and IPv6 packets downlinked.
Total IPv4 Downlink Pkts	Total number of IPv4 packets downlinked.
Total IPv6 Downlink Pkts	Total number of IPv6 packets downlinked.
Total Downlink Bytes	Total number of IPv4 and IPv6 bytes downlinked.
Total IPv4 Downlink Bytes	Total number of IPv4 bytes downlinked.
Total IPv6 Downlink Bytes	Total number of IPv6 bytes downlinked.
Total ICMP flows	Total number of ICMP flows.
Total ICMPv4 flows	Total number of ICMPv4 flows.
Total ICMPv6 flows	Total number of ICMPv6 flows.
Current ICMP flows	Total number of current ICMP flows.

Field	Description
Current ICMPv4 flows	Total number of current ICMPv4 flows.
Current ICMPv6 flows	Total number of current ICMPv6 flows.
Total TCP flows	Total number of TCP flows.
Total TCP over IPv4 flows	Total number of TCP IPv4 flows.
Total TCP over IPv6 flows	Total number of TCP IPv6 flows.
Current TCP flows	Total number of current TCP flows.
Current TCP over IPv4 flows	Total number of current TCP IPv4 flows.
Current TCP over IPv6 flows	Total number of current TCP IPv6 flows.
Total UDP flows	Total number of UDP flows.
Total UDP over IPv4 flows	Total number of UDP IPv4 flows.
Total UDP over IPv6 flows	Total number of UDP IPv6 flows.
Current UDP flows	Total number of current UDP flows.
Current UDP over IPv4 flows	Total number of current UDP IPv4 flows.
Current UDP over IPv6 flows	Total number of current UDP IPv6 flows.
Total DNS flows	Total number of DNS flows.
Current DNS flows	Total number of current DNS flows.
Total FTP flows	Total number of FTP flows.
Current FTP flows	Total number of current FTP flows.
Total HTTP flows	Total number of HTTP flows.
Current HTTP flows	Total number of current HTTP flows.
Total HTTPS flows	Total number of HTTPS flows.
Current HTTPS flows	Total number of current HTTPS flows.
Total POP3 flows	Total number of POP3 flows.
Current POP3 flows	Total number of current POP3 flows.
Total SMTP flows	Total number of SMTP flows.
Current SMTP flows	Total number of current SMTP flows.
Total SIP flows	Total number of SIP flows.
Current SIP flows	Total number of current SIP flows.

Field	Description
Total RTSP flows	Total number of RTSP flows.
Current RTSP flows	Total number of current RTSP flows.
Total RTP flows	Total number of RTP flows.
Current RTP flows	Total number of current RTP flows.
Total RTCP flows	Total number of RTCP flows.
Current RTCP flows	Total number of current RTCP flows.
Total IMAF flows	Total number of IMAF flows.
Current IMAF flows	Total number of current IMAF flows.
Total WSP-CO flows	Total number of WSP-CO flows.
Current WSP-CO flows	Total number of current WSP-CO flows.
Total WSP-CL flows	Total number of WSP-CL flows.
Current WSP-CL flows	Total number of current WSP-CL flows.
Total MMS flows	Total number of MMS flows.
Current MMS flows	Total number of current MMS flows.
Total TFTP flows	Total number of TFTP flows.
Current TFTP flows	Total number of current TFTP flows.
Total PPTP flows	Total number of PPTP flows.
Current PPTP flows	Total number of current PPTP flows.
Total PPTP-GRE flows	Total number of PPTP-GRE flows.
Current PPTP-GRE flows	Total number of current PPTP-GRE flows.
Total H323 flows	Total number of H323 flows.
Current H323 flows	Total number of current H323 flows.
Total MIPv6 flows	Total number of MIPv6 flows.
Current MIPv6 flows	Total number of current MIPv6 flows.
Total video flows paced	Total number of TCP video flows paced.
Current video flows paced	Total number of current TCP video flows paced.
Total Rule-Hits	Total number of rule hits.
Total Readdr flows	Total number of re-addressed flows.

Field	Description
Current Readdr flows	Total number of current re-addressed flows.
Total Fastpath flows	Total number of data flows that support fastpath.
Total Fastpath pkts	Total number of data packets that have been processed in fastpath.
Total Fastpath NAT pkts	Total number of fastpath packets in which NAT was applied.
Total Fastpath Firewall pkts	Total number of packets processed by Firewall in fast path.
Total Fastpath Bypass NAT pkts	Total number of NAT bypass packets processed in fast path.
Total Fastpath failures	Total number of packet errors detected during fastpath processing.
Last Fastpath Failure	ASCII output indicating the reason the last data flow failed to meet fastpath eligibility requirements.
<b>Readdressing Failure Statistics (Packets):</b>	
Non SYS Flow	The number of packets failed due to non SYS flow.
Duplicate Key	The number of packets failed due to duplicate keys.
Dropped Pkts	The number of packets failed due to dropped packets.
Total Throttle-Suppressed flows	Total number of flows for which bandwidth limiting is suppressed.
Current Throttle-Suppressed flows	Current number of flows for which bandwidth limiting is suppressed.
Total P2P Subscribers	Total number of P2P subscribers.
Total Firewall Subscribers	Total number of Firewall subscribers. <b>NOTE:</b> This statistic is obsolete in 11.0 and later releases.
Total NAT Subscribers	Total number of Network Address Translation subscribers. <b>NOTE:</b> This statistic is obsolete in 11.0 and later releases.
In releases prior to StarOS 21.26: Total Blacklisted URL hits From StarOS 21.26 and later releases: Total Blockedlisted URL hits	Total number of Blockedlisted URL hits.
In releases prior to StarOS 21.26: Total Blacklisted URL misses From StarOS 21.26 and later releases: Total Blockedlisted URL misses	Total number of Blockedlisted URL misses.
Total URLs Outstanding for Rating (SRDB)	Total number of URLs outstanding for Static Rating Database rating.
<b>Firewall/NAT Subscribers:</b>	

Field	Description
Firewall IPv4 Enabled	The total and the active number of subscribers with IPv4 Firewall enabled.
Firewall IPv6 Enabled	The total and the active number of subscribers with IPv6 Firewall enabled.
NAT44 Enabled	The total and the active number of subscribers with NAT44 enabled.
NAT64 Enabled	The total and the active number of subscribers with NAT64 enabled.
NAT Enabled	The total and the active number of subscribers with NAT enabled. <b>NOTE:</b> This statistic is available only from releases 11.0 to 12.1.
IPv4-PDN-NAT Enabled	The total and the active number of IPv4 PDN subscribers with NAT44 enabled.
IPv6-PDN-NAT Enabled	The total and the active number of IPv6 PDN subscribers with NAT64 enabled.
IPv4v6-PDN-NAT Enabled	The total and the active number of IPv4v6 PDN subscribers with either NAT44 or NAT64 enabled, or both NAT44 and NAT64 enabled.
IPv4-PDN with NAT IP	The total and the active number of IPv4 PDN subscribers with NAT44 enabled and using at least one NAT IP.
IPv6-PDN with NAT IP	The total and the active number of IPv6 PDN subscribers with NAT64 enabled and using at least one NAT IP.
IPv4v6-PDN with NAT IP	The total and the active number of IPv4v6 PDN subscribers with either NAT44 or NAT64 enabled, or both, and using at least one NAT IP.
Firewall and NAT Enabled	The total and the active number of subscribers with IPv4 or IPv6 Firewall and NAT enabled.
NAT flows processed	The total and active number of NAT44 and NAT64 flows processed.
NAT44 flows processed	The total and active number of NAT44 flows processed.
NAT44 N-1 flows processed	The total and active number of NAT44 N-1 flows processed.
NAT44 1-1 flows processed	The total and active number of NAT44 1-1 flows processed.
NAT64 flows processed	The total and active number of NAT64 flows processed.
NAT64 N-1 flows processed	The total and active number of NAT64 N-1 flows processed.
NAT64 1-1 flows processed	The total and active number of NAT64 1-1 flows processed.
NAT44 bypass flows	The total and active number of NAT44 bypass flows.
NAT64 bypass flows	The total and active number of NAT64 bypass flows.
NAT flow-mappings	The total and active number of NAT flow mappings.
<b>NAT Packet Statistics:</b>	
Total NAT Bypass packets	The total and active number of NAT bypass packets.

Field	Description
Total NAT44 Bypass packets	The total and active number of NAT44 bypass packets.
Total NAT64 Bypass packets	The total and active number of NAT64 bypass packets.
Total NAT packets	The total and active number of NAT packets.
Total NAT44 packets	The total and active number of NAT44 packets.
Total NAT64 packets	The total and active number of NAT64 packets.
<b>SIP ALG Calls:</b>	
Total SIP ALG calls	Total number of active SIP calls processed by SIP ALG.
Current SIP ALG calls	Current number of active SIP calls processed by SIP ALG.
Total UDP SIP ALG calls	Total number of SIP UDP calls processed by SIP ALG.
Current UDP SIP ALG calls	Current number of SIP UDP calls processed by SIP ALG.
Total TCP SIP ALG calls	Total number of SIP TCP calls processed by SIP ALG.
Current TCP SIP ALG calls	Current number of SIP TCP calls processed by SIP ALG.
Total Number of Unsolicited Downlink packets received	The total number of unsolicited downlink packets received.
Total Number of ICMP-HU packets sent	The total number of ICMP-HU packets sent.
<b>Fair Usage Statistics:</b>	
CPU Credits (used/max)	Number of CPU credits used and maximum number of CPU credits.
<b>Dynamic Transrating Statistics:</b>	
Flows being Transrated	The number of flows being transrated.
Transrating Rejected Due to Lack of Session Mgr Resources:	The number of transrating rejects due to lack of session mgr resources.
Total Accepted Flows:	The total number of accepted flows.
Total Supported Flows:	The total number of supported flows.
Total Sh263 flv:	The total number of Sh263 flv flows.
Total H264 flv:	The total number of H264 flv flows.
Total H264 mp4:	The total number of H264 mp4 flows.
Total Not Supported Flows:	The total number of non supported flows.
Total Active Flows:	The total number of active flows.
Total Active sh263:	The total number of active sh263 flows.

Field	Description
Total Active h264	The total number of active h264 flows.
Total Inactive Flows:	The total number of inactive flows.
Total Inactive sh263:	The total number of inactive sh263 flows.
Total Inactive h264	The total number of inactive h264 flows.
Total Transrated Flows:	The total number of transrated flows
Total Transrated sh263 flv:	The total number of transrated sh263 .flv flows
Total Transrated h264 flv:	The total number of transrated h264 .flv flows
Total Transrated h264 mp4:	The total number of transrated h264 .mp4 flows
Total Never Transrated flows:	The total number of never transrated flows
Total Never Transrated Due To No Resource:	The total number of never transrated flows due to no resource
Total Never Transrated Due To No Congestion:	The total number of never transrated flows due to no congestion
RADIUS Prepaid Statistics	Indicates the group of statistics for RADIUS prepaid session.
Total prepaid sess	Total number of active/dormant/inactive prepaid sessions.
Current prepaid sess	Total number of prepaid sessions currently active.
Total prepaid auth req	Total number of AAA authorization requests for prepaid sessions.
Total prepaid auth success	Total number of successful AAA authorization for prepaid sessions.
Total prepaid auth fail	Total number of failed AAA authorization for prepaid sessions.
Total prepaid errors	Total number of errors occurred in prepaid sessions.
Content Filtering URL Cache Statistics	Indicates URL caching statistics for Content Filtering.
Total cached entries	Total number of cached entries in memory.
Total hits	Total number of attempts to access URLs which are cached in memory with rating.
Total misses	Total number of attempts failed to access URLs which are cached in memory with rating.
Total has-path hits	Total number of attempts to access URLs which are cached in memory with rating with specified path.
Total flushes	Total number of flushing of URL cache to clear memory with stale URL list and rating.

Field	Description
Total Cache size	Total cache size adding maximum cache size for all volume provided for URLs caching.
Percentage Full	Indicates the percentage of memory used out of allocated space for URL caching.
<b>Charging-Update Statistics</b>	
Total Charging Updates Received	Total number of charging updates received
Total Charging Updates Active	Total number of charging updates that are active
Total Sessions with Charging-Updates Received	Total number of sessions with charging updates received
Total Sessions with Charging-Updates Active	Total number of sessions with charging updates active
Total Sessions with Charging-Updates Enforced	Total number of sessions with charging updates enforced
BW Limit Drop Upl Pkts	Total number of uplink packets dropped due to bearer bandwidth limiting.
BW Limit Drop Dnl Pkts	Total number of downlink packets dropped due to bearer bandwidth limiting.
BW Limit Drop Upl Bytes	Total number of uplink bytes dropped due to bearer bandwidth limiting.
BW Limit Drop Dnl Bytes	Total number of downlink bytes dropped due to bearer bandwidth limiting.
BW Limit Mark Upl Pkts	Total number of uplink packets marked due to bearer bandwidth limiting.
BW Limit Mark Dnl Pkts	Total number of downlink packets marked due to bearer bandwidth limiting.
CC Dropped Uplink Packets	Total number of packets dropped by credit control in uplink direction at a system level.
CC Dropped Uplink Bytes	Total number of bytes dropped by credit control in uplink direction at a system level
CC Dropped Downlink Packets	Total number of packets dropped by credit control in downlink direction at a system level.
CC Dropped Downlink Bytes	Total number of bytes dropped by credit control in downlink direction at a system level.
FlowStatus Readdress Upl Bytes	
FlowStatus Readdress Dnl Bytes	
FlowStatus Term Sess Upl Pkts	
FlowStatus Term Sess Dnl Pkts	
FlowStatus Term Flow Upl Pkts	

Field	Description
FlowStatus Term Flow Dnl Pkts	
FlowStatus Term Flow Upl Bytes	
FlowStatus Term Flow Dnl Bytes	
FlowStatus Readdress Upl	
FlowStatus Readdress Dnl Pkts	
FlowStatus Readdress Upl Bytes	
FlowStatus Readdress Dnl Bytes	
Total Control Pkts	Total number of control packets received.
Total Control Pkts Tx	Total number of control packets transmitted..
<b>PCP Service Statistics:</b>	
<b>Important</b> The PCP Service statistics are customer specific. For more information, contact your Cisco account representative.	
Total PCP Subscribers	Total number of PCP enabled subscribers.
Current PCP Subscribers	Current number of PCP enabled subscribers.
IPv4	
Total PCP Requests	Total number of request packets received for the PCP service.
Total PCP Responses	Total number of PCP Responses sent by the PCP service.
Total Unknown Requests	Total number of PCP Responses sent by the PCP service for unknown PCP Requests.
Total Invalid Requests	Total number of PCP Responses sent by the PCP service for invalid PCP Requests.
Opcode Statistics	
Total Requests	Total number of PCP MAP/PEER/ANNOUNCE requests received for the PCP service.
Valid Requests	Total number of valid PCP MAP/PEER/ANNOUNCE requests received for the PCP service.
Invalid Requests	Total number of invalid PCP MAP/PEER/ANNOUNCE requests received for the PCP service.
Total Responses	Total number of PCP MAP/PEER/ANNOUNCE responses sent by the PCP service.
Success Responses	Total number of successful PCP MAP/PEER/ANNOUNCE responses sent for the PCP service.

Field	Description
Error Responses	Total number of error PCP MAP/PEER/ANNOUNCE responses sent by the PCP service.
Data statistics	Statistics of data flow.
Receive Pkts	Total number of packets received in different size based frequency
Transmit pkts	Total number of packets transmitted in different size based frequency
User Data statistics	Indicates the group of statistics of user data traffic.
Data octets from User	Total number of bytes originated from user.
Data packets from User	Total number of data packets originated from user.
Data octets to User	Total number of bytes sent to user.
Data packets to User	Total number of data packets sent to user.

## show active-charging subscribers callid override-control

The output of this command includes the following fields:

Override Control:

- Extended MBR UL—This AVP defines the maximum bit rate in kbps that is allowed for the uplink direction.
- Extended MBR DL—This AVP defines the maximum bit rate in kbps that is allowed for the downlink direction .
- Extended GBR UL—This AVP defines the guaranteed bit rate in kbps that is allowed for Uplink direction. This AVP is included only for rules on dedicated bearers.
- Extended GBR DL—This AVP defines the guaranteed bit rate in kbps that is allowed for downlink direction. This AVP is included only for rules on dedicated bearers.

## show active-charging subsystem facility acsmgr instance

*Table 94: show active-charging subsystem facility acsmgr instance Command Output Descriptions*

Field	Description
ACSMgr Instance	The ACS Manager instance.
Card/CPU	The card and CPU ID.
Session Creation Succ	Total number of sessions created successfully.
Session Creation Fail	Total number of session creation failures.

Field	Description
Total subscribers	Total number of subscribers configured on system.
Current subscribers	Total number of subscriber active on system.
Total CF subscribers	Total number of Content Filtering subscribers configured on the system.
Current CF subscribers	Total number of Content Filtering subscribers active on the system.
Total Flows Connected	Total number of flows connected.
Total Flows Disconnected	Total number of flows disconnected.
Total Uplink Pkts	Total number of packets uplinked.
Total Uplink Bytes	Total number of bytes uplinked.
Total Downlink Pkts	Total number of packets downlinked.
Total Downlink Bytes	Total number of bytes downlinked.
Total ICMP flows	Total number of ICMP flows.
Current ICMP flows	Total number of current ICMP flows.
Total ICMPv6 flows	Total number of ICMPv6 flows.
Current ICMPv6 flows	Total number of current ICMPv6 flows.
Total TCP flows	Total number of TCP flows.
Current TCP flows	Total number of current TCP flows.
Total UDP flows	Total number of UDP flows.
Current UDP flows	Total number of current UDP flows.
Total DNS flows	Total number of DNS flows.
Current DNS flows	Total number of current DNS flows.
Total FTP flows	Total number of FTP flows.
Current FTP flows	Total number of current FTP flows.
Total HTTP flows	Total number of HTTP flows.
Current HTTP flows	Total number of current HTTP flows.
Total HTTPS flows	Total number of HTTPS flows.
Current HTTPS flows	Total number of current HTTPS flows.
Total POP3 flows	Total number of POP3 flows.
Current POP3 flows	Total number of current POP3 flows.

Field	Description
Total SMTP flows	Total number of SMTP flows.
Current SMTP flows	Total number of current SMTP flows.
Total SIP flows	Total number of SIP flows.
Current SIP flows	Total number of current SIP flows.
Total RTSP flows	Total number of RTSP flows.
Current RTSP flows	Total number of current RTSP flows.
Total RTP flows	Total number of RTP flows.
Current RTP flows	Total number of current RTP flows.
Total RTCP flows	Total number of RTCP flows.
Current RTCP flows	Total number of current RTCP flows.
Total IMAP flows	Total number of IMAP flows.
Current IMAP flows	Total number of current IMAP flows.
Total WSP-CO flows	Total number of WSP-CO flows.
Current WSP-CO flows	Total number of current WSP-CO flows.
Total WSP-CL flows	Total number of WSP-CL flows.
Current WSP-CL flows	Total number of current WSP-CL flows.
Total MMS flows	Total number of MMS flows.
Current MMS flows	Total number of current MMS flows.
Total TFTP flows	Total number of TFTP flows.
Current TFTP flows	Total number of current TFTP flows.
Total PPTP flows	Total number of PPTP flows.
Current PPTP flows	Total number of current PPTP flows.
Total PPTP-GRE flows	Total number of PPTP-GRE flows.
Current PPTP-GRE flows	Total number of current PPTP-GRE flows.
Total H323 flows	Total number of H323 flows.
Current H323 flows	Total number of current H323 flows.
Total P2P flows	Total number of P2P flows.
Current P2P flows	Total number of current P2P flows.

Field	Description
Total Rule-Hits	Total number of rule hits.
In releases prior to StarOS 21.26: Blacklisted URL hits From StarOS 21.26 and later releases: Blockedlisted URL hits	The number of Blockedlisted URL hits.
In releases prior to StarOS 21.26: Blacklisted URL misses From StarOS 21.26 and later releases: Blockedlisted URL misses	The number of Blockedlisted URL misses.
Total URLs Outstanding for Rating (SRDB)	Total number of URLs outstanding for Static Rating Database rating.
Total Fastpath Firewall pkts	Total number of packets processed by Firewall in fast path.
Total Fastpath Bypass NAT pkts	Total number of NAT bypass packets processed in fast path.
<b>Firewall/NAT Subscribers:</b>	
Firewall IPv4 Enabled	Displays the total and the active number of subscribers with IPv4 Firewall enabled.
Firewall IPv6 Enabled	Displays the total and the active number of subscribers with IPv6 Firewall enabled.
NAT44 Enabled	Displays the total and the active number of subscribers with NAT44 enabled.
NAT64 Enabled	Displays the total and the active number of subscribers with NAT64 enabled.
IPv4-PDN-NAT Enabled	Displays the total and the active number of IPv4 PDN subscribers with NAT44 enabled.
IPv6-PDN-NAT Enabled	Displays the total and the active number of IPv6 PDN subscribers with NAT64 enabled.
IPv4v6-PDN-NAT Enabled	Displays the total and the active number of IPv4v6 PDN subscribers with either NAT44 or NAT64 enabled, or both NAT44 and NAT64 enabled.
IPv4-PDN with NAT IP	Displays the total and the active number of IPv4 PDN subscribers with NAT44 enabled and using at least one NAT IP.
IPv6-PDN with NAT IP	Displays the total and the active number of IPv6 PDN subscribers with NAT64 enabled and using at least one NAT IP.
IPv4v6-PDN with NAT IP	Displays the total and the active number of IPv4v6 PDN subscribers with either NAT44 or NAT64 enabled, or both, and using at least one NAT IP.
Firewall and NAT Enabled	Displays the total and the active number of subscribers with IPv4 or IPv6 Firewall and NAT enabled.

Field	Description
NAT flows processed	Displays the total and active number of NAT44 and NAT64 flows processed.
NAT44 flows processed	Displays the total and active number of NAT44 flows processed.
NAT44 N-1 flows processed	Displays the total and active number of NAT44 N-1 flows processed.
NAT44 1-1 flows processed	Displays the total and active number of NAT44 1-1 flows processed.
NAT64 flows processed	Displays the total and active number of NAT64 flows processed.
NAT64 N-1 flows processed	Displays the total and active number of NAT64 N-1 flows processed.
NAT64 1-1 flows processed	Displays the total and active number of NAT64 1-1 flows processed.
NAT44 bypass flows	Displays the total and active number of NAT44 bypass flows.
NAT64 bypass flows	Displays the total and active number of NAT64 bypass flows.
<b>RADIUS Prepaid Statistics:</b>	
Indicates the group of statistics for RADIUS prepaid session.	
Total prepaid sess	Total number of active/dormant/inactive prepaid sessions.
Current prepaid sess	Total number of prepaid sessions currently active.
Total prepaid auth req	Total number of AAA authorization requests for prepaid sessions.
Total prepaid auth success	Total number of successful AAA authorization for prepaid sessions.
Total prepaid auth fail	Total number of failed AAA authorization for prepaid sessions.
Total prepaid errors	Total number of errors occurred in prepaid sessions.
<b>Max flows per-session Statistics:</b>	
Indicates the group of statistics for the maximum number of simultaneous flows seen per session.	
Max Flows seen	The maximum number of simultaneous flows seen by the instance on a session.
IMSI	Indicates the International Mobile Subscriber Identity (IMSI).
Max Flows seen at	Lists the date and time at which the flows were seen.
<b>Content Filtering Policy &lt;policy&gt; for Service &lt;service&gt; Matched</b>	
Content Filtering URL Cache Statistics	
Indicates the group of statistics of URL caching for content filtering service.	
Total cached entries	Total number of cached entries in memory.
Total hits	Total number of attempts to access URLs which are cached in memory with rating.
Total misses	Total number of attempts failed to access URLs which are cached in memory with rating.

Field	Description
Total has-path hits	Total number of attempts to access URLs which are cached in memory with rating with specified path.
Total flushes	Total number of flushing of URL cache to clear memory with stale URL list and rating.
Total Cache size (all volumes)	Total cache size adding maximum cache size for all volume provided for URLs caching.
Percentage Full	Indicates the percentage of memory used out of allocated space for URL caching.
Last Flush request received time	Indicates the time of last flush request received for cache flushing.
<b>Volume</b> - <volume>	The volume.
Cached entries	For the volume, indicates the total number of cached entries in memory.
Hits	For the volume, indicates the total number of attempts failed to access URLs which are cached in memory with rating.
Misses	For the volume, indicates the total number of attempts failed to access URLs which are cached in memory with rating.
has-path hits	For the volume, indicates the total number of attempts to access URLs which are cached in memory with rating with specified path.
Flushes	For the volume, indicates the total number of times the URL cache has been flushed to clear memory with stale URL list and rating.
Percentage Full	For the volume, indicates the percentage of memory used out of allocated space for URL caching.
Last Access Time	For the volume, indicates the last access time.
Last Flush Time	For the volume, indicates the last flush time.
<b>Data statistics</b>	
Receive Pkts	Total number of packets received.
Transmit Pkts	Total number of packets transmitted.

## show tcp-acceleration statistics sessmgr all

Table 95: show tcp-acceleration statistics sessmgr all Command Output Descriptions

Field	Description
TCP acceleration Statistics	Specifies the TCP Acceleration Statistics

Field	Description
Total Accelerated Flows	Specifies the total number of accelerated flows.
Current Accelerated Flows	Specifies the current number of accelerated flows.
Released Accelerated Flows	Specifies the total number of released accelerated flows.
Rejected Accelerated Flows	Specifies the total number of accelerated flows rejected.
Feature Not Supported	Specifies the flow rejected with the "Feature Not Supported" reason
RAT Type Not Supported	Specifies the flow rejected with the "RAT Type Not Supported" reason
Bearer Not Supported	Specifies the flow rejected with the "Bearer Not Supported" reason
Resource Not Available (Memory)	Specifies the flow rejected with the "Resource Not Available (Memory)" reason
Resource Not Available (CPU)	Specifies the flow rejected with the "Resource Not Available (CPU)" reason
Others	Specifies the flow rejected for other reasons.
<b>Data Statistics</b>	
IPv4 (User-Side and Inet Side)	
Total Pkts Rx	Indicates the total number of IPv4 TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv4 TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv4 TCP accelerated packets sent towards the UE and internet.
Total Bytes Tx	Indicates the total number of IPv4 TCP accelerated bytes sent towards the UE and internet.
IPv6 (User-Side and Inet Side)	
Total Pkts Rx	Indicates the total number of IPv6 TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv6 TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv6 TCP accelerated packets sent towards the UE and internet.

Field	Description
Total Bytes Tx	Indicates the total number of IPv6 TCP accelerated bytes sent towards the UE and internet.
<b>Data Statistics &gt; IPv4 HTTP (User Side and Inet Side)</b>	
Total Pkts Rx	Indicates the total number of IPv4 HTTP TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv4 HTTP TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv4 TCP accelerated HTTP packets sent towards the UE and internet.
Total Bytes Tx	Indicates the total number of IPv4 HTTP TCP accelerated bytes sent towards the UE and internet.
Retrans Pkts Rx	Indicates the total number of retransmitted packets received from the UE and internet for TCP accelerated IPV4 HTTP flows.
Retrans Bytes Rx	Indicates the total number of retransmitted bytes received from the UE and internet for TCP accelerated IPV4 HTTP flows.
Retrans Pkts Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV4 HTTP flows.
Retrans Bytes Tx	Indicates the total number of bytes retransmitted towards the UE and internet for TCP accelerated IPV4 HTTP flows.
<b>Data Statistics &gt; IPv4 HTTPS (User Side and Inet Side)</b>	
Total Pkts Rx	Indicates the total number of IPv4 HTTPS TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv4 HTTPS TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv4 TCP accelerated HTTPS packets sent towards the UE and internet.
Total Bytes Tx	Indicates the total number of IPv4 HTTPS TCP accelerated bytes sent towards the UE and internet.
Retrans Pkts Rx	Indicates the total number of retransmitted packets received from the UE and internet for TCP accelerated IPV4 HTTPS flows.

Field	Description
Retrans Bytes Rx	Indicates the total number of retransmitted bytes received from the UE and internet for TCP accelerated IPV4 HTTPS flows.
Retrans Pkts Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV4 HTTPS flows.
Retrans Bytes Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV4 HTTPS flows.
<b>Data Statistics &gt; IPv6 HTTP (User Side and Inet Side)</b>	
Total Pkts Rx	Indicates the total number of IPv6 HTTP TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv6 HTTP TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv6 TCP accelerated HTTP packets sent towards the UE and internet.
Total Bytes Tx	Indicates the total number of IPv6 HTTP TCP accelerated bytes sent towards the UE and internet.
Retrans Pkts Rx	Indicates the total number of retransmitted packets received from the UE and internet for TCP accelerated IPV6 HTTP flows.
Retrans Bytes Rx	Indicates the total number of retransmitted bytes received from the UE and internet for TCP accelerated IPV6 HTTP flows.
Retrans Pkts Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV6 HTTP flows.
Retrans Bytes Tx	Indicates the total number of bytes retransmitted towards the UE and internet for TCP accelerated IPV6 HTTP flows.
<b>Data Statistics &gt; IPv6 HTTPS (User Side and Inet Side)</b>	
Total Pkts Rx	Indicates the total number of IPv6 HTTPS TCP accelerated packets received from the UE and internet.
Total Bytes Rx	Indicates the total number of IPv6 HTTPS TCP accelerated bytes received from the UE and internet.
Total Pkts Tx	Indicates the total number of IPv6 TCP accelerated HTTPS packets sent towards the UE and internet.

Field	Description
Total Bytes Tx	Indicates the total number of IPv6 HTTPS TCP accelerated bytes sent towards the UE and internet.
Retrans Pkts Rx	Indicates the total number of retransmitted packets received from the UE and internet for TCP accelerated IPV6 HTTPS flows.
Retrans Bytes Rx	Indicates the total number of retransmitted bytes received from the UE and internet for TCP accelerated IPV6 HTTPS flows.
Retrans Pkts Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV6 HTTPS flows.
Retrans Bytes Tx	Indicates the total number of packets retransmitted towards the UE and internet for TCP accelerated IPV6 HTTPS flows.

## show active-charging tcp-proxy statistics all verbose

Table 96: show active-charging tcp-proxy statistics all verbose Command Output Descriptions

Field	Description
<b>TCP Proxy Stack Statistics</b>	
<b>Statistics</b>	
<b>Cumulative Statistics</b>	
Total Pkts to Stack	Total number of packets received by stack.
Total Bytes to Stack	Total number of bytes received by stack.
Total Pkts from Stack	Total number of packets sent from stack.
Total Bytes from Stack	Total number of bytes sent from stack.
<b>API Statistics</b>	
Total Sockets Opened	Total number of sockets opened.
Socket Open Failed	Total number of sockets open failures.
Total Connect Attempts	Total number of connection attempts.
Total Listening Sockets	Total number of sockets listening.
Socket Listening Failed	Total number of sockets listening failures.

Field	Description
Socket Bind Success	Total number of socket binds successful.
Socket Accept Success	Total number of socket accepts successful.
Socket Accept Failed	Total number of socket accept failures.
Total Send Success	Total number of sends successful.
Total Send Failed	Total number of send failures.
Total Send Partial Succ	Total number of sends partially successful.
Total SendTo Success	Total number of send to successful.
Total SendTo Failed	Total number of send to failures.
Total SendTo Partil Succ	Total number of send to partially successful.
Total Recv Attempted	Total number of Recv attempted.
Total Recv Fail	Total number of Recv failures.
Total RecvFrom Attempted	Total number of RecvFrom attempted.
Total RecvFrom Fail	Total number of RecvFrom failures.
Current Open Sockets	Total number of sockets currently open.
<b>IP Layer Statistics</b>	
Total Pkts Recvd at IP	Total number of packets received at IP layer.
Header Errors	Total number of IP header errors.
Unknown Protocol	Total number of unknown IP protocol errors.
Incoming Discarded Pkts	Total number of incoming packets discarded.
Outgoing Requests	Total number of outgoing requests.
Outgoing Discarded Pkts	Total number of outgoing discarded packets.
Reassembly Timeouts	Total number of reassembly timeouts.
Reassembly Success	Total number of IP datagrams that were reassembled successfully.
Fragmentation Success	Total number of IP datagrams that were fragmented successfully.
Fragmentation Fails	Total number of IP datagrams that were discarded due to fragmentation failures.
Fragments Created	Total number of fragments created.
<b>TCP Layer Statistics</b>	

Field	Description
Incoming TCP Segments	Total number of incoming segments received at TCP layer.
Incoming TCP Bytes	Total number of incoming bytes received at TCP layer.
Incoming TCP Error Seg	Total number of incoming segments containing some error.
In TCP Retrans Seg	Total number of incoming TCP retransmitted segments.
In TCP Retrans Byte	Total number of incoming TCP retransmitted bytes.
Outgoing TCP Data Seg	Total number of outgoing TCP segments having some data.
Outgoing TCP Reset Seg	Total number of outgoing TCP resets.
Outgoing TCP Retrans Seg	Total number of packets retransmitted by the stack.
In TCP Partial Retr Seg	Total number of incoming TCP partial retransmitted segments.
In TCP Partial Retr Byte	Total number of incoming TCP partial retransmitted bytes.
In TCP OOO Segments	Total number of incoming TCP Out-of-Order segments.
In TCP OOO Bytes	Total number of incoming TCP Out-of-Order bytes.
In TCP OOO+Retrans Seg	Total number of incoming TCP Out-of-Order+retransmitted segments.
In TCP OOO+Retrans Bytes	Total number of incoming TCP Out-of-Order+retransmitted bytes.
In TCP OOO Succ Seg	Total number of incoming TCP Out-of-Order Succ segments.
In TCP OOO Succ Bytes	Total number of incoming TCP Out-of-Order Succ bytes.
In TCP Csum Err Seg	Total number of incoming TCP checksum error segments.
In TCP Csum Err Bytes	Total number of incoming TCP checksum error bytes.
Active Open	Total number of active connections initiated by the stack.
Passive Open	Total number of connections accepted by the stack.
Connection Failure	Total number failed connections.
Reset in Est State	Total number of resets received in Established state.
Current Est Connections	Total number of active established connections.
<b>TCP Proxy Statistics for Rulebase</b>	
<b>Cumulative TCP proxy Statistics for Rulebase:</b>	
Total Proxy Flows	Total number of TCP Proxy flows in this rulebase.
Current Proxy Flows	Total no of current TCP Proxy flows in this rulebase.
<b>Uplink TCP Proxy:</b>	

Field	Description
Pkts received from uplink	Total number of uplink packets on Gn interface.
Pkts forwarded to application	Total number uplink packets forwarded by stack to TCP Proxy application.
Pkts received from application	Total number uplink packets received from TCP Proxy application to stack.
Pkts for transmission to uplink	Total number uplink packets sent by stack on Gi interface.
Pkts received after connection with server	Total number uplink packets received after connection with server.
Pkts received before connection with server	Total number uplink packets received before connection with server.
Number of connect tried	Total number times the connect was called.
<b>Downlink TCP Proxy:</b>	
Pkts received from downlink	Total number of downlink packets on Gi interface.
Pkts forwarded to application	Total number downlink packets forwarded by stack to TCP Proxy application.
Pkts received from application	Total number downlink packets received from TCP Proxy application to stack.
Pkts for transmission to downlink	Total number downlink packets from application on Gn interface.
Pkts received after connection with client	Total number of downlink packets received after connection with client.
Pkts received before connection with client	Total number downlink packets received before connection with client.
Number of connect tried	Total number times the connect was called.
<b>Downlink and uplink TCP proxy events:</b>	
Total received failed	Total number of Recv calls failed.
Total error received	Total number of socket errors.
Total reset received	Total number of RESETs received (both from Gn and Gi side).
Total remote closed received	Total number of Remote Close events occurred (both from Gn and Gi side).
Total close complete received	Total number of Remote Close Complete events occurred (both from Gn and Gi side).
Total accept received	Total number of accept events received (both from Gn and Gi side).
Total accept failed	Total number of accept requests failed.
Total registerCB failed	Total number of calls to registerCB function failed.

Field	Description
Total recv occurred	Total number of Recv events occurred.
Total connect complete received	Total number of connect complete events occurred.
Total send failed	Total number of calls to send function failed.
<b>Proxy Session counters:</b>	
Current Connecting Conn (AO on GN)	Total number of current connecting connections active open on GN.
Current Connecting Conn (AO on GI)	Total number of current connecting connections active open on GI.
Current Connected Conn (AO on GN)	Total number of current connected connections active open on GN.
Current Connected Conn (AO on GI)	Total number of current connected connections active open on GI.
Current Un-Accepted Conn (PO on GN)	Total number of current unaccepted connections passive open on GN.
Current Un-Accepted Conn (PO on GI)	Total number of current unaccepted connections passive open on GI.
Current Accepted Conn (PO on GN)	Total number of current accepted connections passive open on GN.
Current Accepted Conn (PO on GI)	Total number of current accepted connections passive open on GI.
Current EST conn on both side	Total number of current EST connections on both side.
Total PO Succ on GN	Total number of passive open successful on GN.
Total AO Succ on GI	Total number of active open successful on GI.
Total PO Succ on GI	Total number of passive open successful on GI.
Total AO Succ on GN	Total number of active open successful on GN.
Flows not proxied - Proxy flow limit	Total number of flows not proxied due to proxy flow limit.
Flows not proxied - Backlog limit	Total number of flows not proxied due to backlog limit.
Flows not proxied - Gn sock limit	Total number of flows not proxied due to Gn sock limit.
Flows not proxied - Gi sock limit	Total number of flows not proxied due to Gi sock limit.
Flows cleared - incomplete active open	Total number of flows cleared due to incomplete active open.
Flows cleared - incomplete passive open	Total number of flows cleared due to incomplete passive open.
<b>Proxy Error counters:</b>	
Socket Open Failed	Socket open failed statistics on Gn and Gi.
Socket Error Events	Socket error event statistics on Gn and Gi.

# show active-charging tcp-proxy statistics socket-migration

Table 97: show active-charging tcp-proxy statistics socket-migration Command Output Descriptions

Field	Description
<b>Socket Migration Statistics</b>	
<b>Cumulative Statistics</b>	
Total Flows Initialized	Total number of flows for which Socket Migration was initialized.
Total Flows Migration Attempt	Total number of flows for which socket migration was started.
Total Flows Success	Total number of flows for which socket migration was successful.
Total Flows Failed	Total number of flows for which socket migration failed with reason.
Memory Alloc Failed	Total number of flows for which socket migration failed due to memory allocation failure.
Permission Denied	Total number of flows for which socket migration failed due to permission denials.
Possible TCP State Change	Total number of flows for which socket migration failed due to possible TCP state change.
Pkt Trimming Failed	Total number of flows for which socket migration failed due to packet trimming failures.
Others	Total number of flows for which socket migration failed due to other reasons.
Total Pkts Trimmed	Total number of packets trimmed during stabilization phase.
<b>Current Statistics</b>	
Current Socket Migrated Flows	Number of current flows for which socket migration is activated.
Flows in Init State	Number of current flows that are in Init state.
Flows in Pre-mig State	Number of current flows that are in Pre-migration state.
Flows in Mig Started State	Number of current flows that are in Migration Started state.
Flows in Post-Mig State	Number of current flows that are in Post Migration state.
Flows in Mig-Done State	Number of current flows that are in Migration Completed state.
Flows in Cant-Do State	Number of current flows that are in Migration Can't be Done state.

# show active-charging tethering-detection database sessmgr all

Table 98: show active-charging tethering-detection database sessmgr all Command Output Descriptions

Field	Description
SMgr Instance	Instance number of the session manager.
<b>TAC Database</b>	
Source File	Location of the TAC database file.
Database Status	Status of the database.
Version	Version of the database used.
Number of entries in DB	Total number of entried in the TAC database.
Last Upgrade Status	Last upgrade status of the TAC database.
<b>OS Database</b>	
Source File	Location of the IPv4 OS Signature database file.
Database Status	Status of the database.
Version	Version of the database used.
Number of signatures in DB	Total number of IPv4 OS signatures in the database.
Last Upgrade Status	Last upgrade status of the IPv4 OS signature database.
<b>OS Database-IPv6</b>	
Source File	Location of the IPv6 OS Signature database file.
Database Status	Status of the database.
Version	Version of the database used.
Number of signatures in DB	Total number of IPv6 OS signatures in the database.
Last Upgrade Status	Last upgrade status of the IPv6 OS signature database.
<b>UA Database</b>	
Source File	Location of the UA signature database file.
Database Status	Status of the database.
Version	Version of the database used.
Number of signatures in DB	Total number of UA signatures in the database.

Field	Description
Last Upgrade Status	Last upgrade status of the UA signature database.

## show active-charging tethering-detection statistics

Table 99: show active-charging tethering-detection statistics Command Output Descriptions

Field	Description
Current Tethered Subscribers	Total number of tethered subscribers at a particular time.
Total flows scanned	Total number of flows scanned.
Total Tethered flows detected	Total number of tethered flows detected.
Total Tethered flows recovered	Total number of tethered flows recovered.
Total flows bypassed for scanning	Total number of flows that were bypassed for tethering with the configured interface ID.
<b>Tethering Detection Statistics (os-ua)</b>	
TAC ID lookups	Total number of TAC ID lookups.
TAC ID matches	Total number of TAC ID matches.
OS signature lookups	Total number of OS signature lookups.
OS signature matches	Total number of OS signature matches.
IPv6 OS signatures lookups	Total number of IPv6 OS signature lookups.
IPv6 OS signatures matches	Total number of IPv6 OS signature matches.
UA signature lookups	Total number of UA signature lookups.
UA signature matches	Total number of UA signature matches.
Total flows scanned	Total number of flows scanned.
Tethered flows detected	Total number of tethered flows detected.
Non-tethered flows detected	Total number of non-tethered flows detected.
Tethered Uplink Packets	Total number of uplink packets for tethered flows.
Tethered Downlink Packets	Total number of downlink packets for tethered flows.
Current tethering-detected indications sent	Current number of tethering-detected indications sent.

Field	Description
Total tethering-detected indications sent	Total number of tethering-detected indications sent.
<b>Tethering Detection Statistics (ip-ttl)</b>	
Total flows scanned	Total number of flows scanned.
Tethered flows detected	Total number of tethered flows detected.
Tethered uplink packets	Total number of uplink packets for tethered flows.
Tethered downlink packets	Total number of downlink packets for tethered flows.
<b>Change Statistics for Multiple SYN in Flow:</b>	
Tethered to Non-Tethered	This counter is updated when previous SYN has tethered signature and new SYN has non-tethered signature.
Non-Tethered to Tethered	This counter is updated when previous SYN has non-tethered signature and new SYN has tethered signature.
Tethered to Tethered	This counter is updated when previous SYN has tethered signature and new SYN also has tethered signature.
Non-Tethered to Non-Tethered	This counter is updated when previous SYN has non-tethered signature and new SYN also has non-tethered signature.

## show active-charging timedef all

Table 100: show active-charging timedef all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Timedef Name	Name of the time definition.
Start Day	Start day configured for each timeslot in the timedef. If the day is not configured, shows "Daily".
Start Time	Start time configured for each timeslot in the timedef.
End Day	End day configured for each timeslot in the timedef. If the day is not configured, shows "Daily".
End Time	End time configured for each timeslot in the timedef.
Total timedef(s) found	The total number of timedefs found.

## show active-charging tpo profile statistics name

The Traffic Performance Optimization (TPO) in-line service is not supported in this release.

## show active-charging traffic-optimization policy

Table 101:

Field	Description
Policy Name	Identifies the configured policy name
Policy-Id	Identifies the policy ID value pertaining to a policy
Bandwidth-Mgmt	Displays the bandwidth management parameters.
Backoff-Profile	Displays the overall aggressiveness of the back off rates.
Min-Effective-Rate	Displays the effective shaping rate in Kbps.
Min-Flow-Control-Rate	Displays the minimum rate allowed in Kbps, to control the flow of heavy session flows during congestion.
Curbing-Control	Displays the curbing control related parameters.
Time	Displays the duration of the flow control phase.
Rate	Displays the curbing flow control at a fixed rate in Kbps.
Max-phases	Displays the maximum phases where the target shaping rate is below threshold-rate to trigger curbing flow control.
Threshold-Rate	Displays the minimum target shaping rate in Kbps
Heavy-Session	Displays heavy-session detection parameters.
Threshold	Displays heavy-session detection threshold in bytes. On reaching the threshold, flows will be monitored and potentially managed.
Standard-Flow-Timeout	Displays the idle-timeout in milliseconds.
Link-Profile	Displays the link profile parameters.
Initial-Rate	Displays the initial seed value of the acquired peak rate in Kbps for a traffic session.

Field	Description
Max-Rate	Displays the maximum peak rate in Kbps for a traffic session.
Peak-Lock	Displays the link peak rate.
Session-Params	Displays session parameters.
Tcp-Ramp-Up	Displays the ramp up phase duration for TCP traffic.
Udp-Ramp-Up	Displays the ramp up phase duration for UDP traffic.

## show active-charging trigger-action all

Table 102: show active-charging trigger-action all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Trigger-Action	Name of the configured trigger action.
HTTP Response Based TRM	Display the specified HTTP method(s) that has response-based TRM applied. Else displays "all" if all HTTP methods are configured and "none" if no HTTP method is configured.
HTTP Response Based Charging	Displays the specified HTTP method(s) that has response-based charging applied. Else displays "all" if all HTTP methods are configured and "none" if no HTTP method is configured.
Throttle Suppress	Indicates whether suppress throttling is enabled or disabled.
Flow recovery	Indicates whether flow recovery is enabled or disabled.
Traffic Optimization	Indicates whether traffic optimization is enabled or disabled.
Step Up GBR	Indicates the step-up value of GBR.
Step Down GBR	Indicates the step-down value of GBR.
TCP Acceleration	Indicates whether the TCP acceleration is enabled or disabled.
TCP Acceleration Threshold	Indicates if the TCP acceleration threshold is enabled or disabled.
Service-Chain	Indicates the name of the assigned service chain.
Total trigger action(s) found	Total number of configured trigger actions.

## show active-charging trigger-condition all

Table 103: show active-charging trigger-condition all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
Trigger-Condition	Name of the configured trigger condition.
Trigger Action Delay	Displays the delay (in seconds )for application of action
Any-Match	Displays the condition specified for any-match.
Local-policy Rule Name	Displays the name of the configured local-policy (LP) rule.
Rule-name/GOR	Displays the condition specified for a particular rule/GoR for flow checkpoint.
Multi-line-OR All lines	Indicates whether the OR operator applied to all lines in a trigger-condition is enabled or disabled.
Total trigger condition(s) found	Total number of configured trigger conditions.
Post-Processing Rule-name/GOR	Specifies the post processing rule name.
Flow-Length Threshold exceed	Indicates when the flow-length of a TCP flow has exceeded the configured threshold value.

## show active-charging udr-format all

Table 104: show active-charging udr-format all Command Output Descriptions

Field	Description
Service Name	Name of the Active Charging Service.
UDR Format Name	Name of the configured UDR format.
Attribute	Attribute information configured in specific UDR format.
Total udr-format(s) found	The total number of the configured UDR formats.

## show active-charging url-blockedlisting statistics

Table 105: show active-charging url-blacklisting statistics Command Output Descriptions

Field	Description
Service name	Name of the Active Charging Service.
<b>Cumulative URL-Blacklisting Statistics</b>	
In releases prior to StarOS 21.26: Total Blacklisted URL hits	The total number of Blockedlisted URL hits.
From StarOS 21.26 and later releases: Total Blockedlisted URL hits	
In releases prior to StarOS 21.26: Total Blacklisted URL misses	The total number of Blockedlisted URL misses.
From StarOS 21.26 and later releases: Total Blockedlisted URL misses	

## show active-charging url-blockedlisting statistics rulebase name

Table 106: show active-charging url-blockedlisting statistics rulebase name Command Output Descriptions

Field	Description
Service name	Name of the Active Charging Service.
Rulebase name	Name of the rulebase.
In releases prior to StarOS 21.26: Blacklisted URL hits	The total number of Blockedlisted URL hits.
From StarOS 21.26 and later releases: Blockedlisted URL hits	
In releases prior to StarOS 21.26: Blacklisted URL misses	The total number of Blockedlisted URL misses.
From StarOS 21.26 and later releases: Blockedlisted URL misses	
Total rulebases matched	The total number of rulebases matching the specified criteria.

# show active-charging video detailed-statistics

Table 107: show active-charging video detailed-statistics Command Output Descriptions

Field	Description
<b>RAT (Radio Access Type)</b>	
GPRS Del. Rate	The average video delivery rate for GPRS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
GPRS Enc. Rate	The average video encoding rate for GPRS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
GPRS Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for GPRS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
GPRS %download	The average percentage (in terms of bytes) of video files downloaded for GPRS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
GPRS Tot. Video	The total number of video clips for GPRS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
UMTS Del. Rate	The average video delivery rate for UMTS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
UMTS Enc. Rate	The average video encoding rate for UMTS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
UMTS Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for UMTS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
UMTS %download	The average percentage (in terms of bytes) of video files downloaded for UMTS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
UMTS Tot. Video	The total number of video clips for UMTS Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
LTE Del. Rate	The average video delivery rate for LTE Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
LTE Enc. Rate	The average video encoding rate for LTE Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
LTE Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for LTE Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.

Field	Description
LTE %download	The average percentage (in terms of bytes) of video files downloaded for LTE Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
LTE Tot. Video	The total number of video clips for LTE Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
HSPA Del. Rate	The average video delivery rate for HSPA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
HSPA Enc. Rate	The average video encoding rate for HSPA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
HSPA Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for HSPA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
HSPA %download	The average percentage (in terms of bytes) of video files downloaded for HSPA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
HSPA Tot. Video	The total number of video clips for HSPA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
CDMA Del. Rate	The average video delivery rate for CDMA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
CDMA Enc. Rate	The average video encoding rate for CDMA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
CDMA Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for CDMA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
CDMA %download	The average percentage (in terms of bytes) of video files downloaded for CDMA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
CDMA Tot. Video	The total number of video clips for CDMA Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
WLAN Del. Rate	The average video delivery rate for WLAN Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
WLAN Enc. Rate	The average video encoding rate for WLAN Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
WLAN Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for WLAN Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.

Field	Description
WLAN %download	The average percentage (in terms of bytes) of video files downloaded for WLAN Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
WLAN Tot. Video	The total number of video clips for WLAN Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Del. Rate	The average video delivery rate for other Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Enc. Rate	The average video encoding rate for other Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Tot. Bytes	The total payload bytes (excluding IP and TCP headers) transferred to the RAN side for other Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other %download	The average percentage (in terms of bytes) of video files downloaded for other Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Tot. Video	The total number of video clips for other Radio Access Type for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
<b>Container (File Format)</b>	
MP4 Enc. Rate	The average video encoding rate for MP4 container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
MP4 Tot. Bytes	The total bytes transferred to RAN side for MP4 container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
MP4 Tot. Video	The total number of video clips for MP4 container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
FLV Enc. Rate	The average video encoding rate for FLV (Flash Video) container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
FLV Tot. Bytes	The total bytes transferred to RAN side for FLV (Flash Video) container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
FLV Tot. Video	The total number of video clips for FLV (Flash Video) container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Enc. Rate	The average video encoding rate for other container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Tot. Bytes	The total bytes transferred to RAN side for other container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.
Other Tot. Video	The total number of video clips for other container file format for iPhone/iPad/iPod (iOS) devices, Android devices, laptops, and other devices.

## show active-charging video detailed-statistics container mp4

Note that there are additional **container** options for this command, as follows: **container flv** and **container others**.

*Table 108: show active-charging video detailed-statistics container mp4 Command Output Descriptions*

Field	Description
<b>Device Type iOS</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for iOS User Device Type for MP4 Container Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for iOS User Device Type for MP4 Container Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for iOS User Device Type for MP4 Container Type.
Total Video Object Count	The total number of video objects for iOS User Device Type for MP4 Container Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for iOS User Device Type for MP4 Container Type.
<b>Device Type Android</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for Android User Device Type for MP4 Container Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for Android User Device Type for MP4 Container Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for Android User Device Type for MP4 Container Type.
Total Video Object Count	The total number of video objects for Android User Device Type for MP4 Container Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for Android User Device Type for MP4 Container Type.
<b>Device Type Laptop</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for Laptop User Device Type for MP4 Container Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for Laptop User Device Type for MP4 Container Type.

Field	Description
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for Laptop User Device Type for MP4 Container Type.
Total Video Object Count	The total number of video objects for Laptop User Device Type for MP4 Container Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for Laptop User Device Type for MP4 Container Type.
<b>Device Type Others</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for other User Device Type for MP4 Container Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for other User Device Type for MP4 Container Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for other User Device Type for MP4 Container Type.
Total Video Object Count	The total number of video objects for other User Device Type for MP4 Container Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for other User Device Type for MP4 Container Type.

## show active-charging video detailed-statistics rat cdma

Note that there are additional **rat** options for this command, as follows: **rat gprs**, **rat hspa**, **rat lte**, **rat others**, **rat umts**, and **rat wlan**.

*Table 109: show active-charging video detailed-statistics rat cdma Command Output Descriptions*

Field	Description
<b>User Device Type iOS</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for iOS User Device Type for CDMA Radio Access Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for iOS User Device Type for CDMA Radio Access Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for iOS User Device Type for CDMA Radio Access Type.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for iOS User Device Type for CDMA Radio Access Type.

Field	Description
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download a video for iOS User Device Type for CDMA Radio Access Type.
Total Video Object Count	The total number of video objects for iOS User Device Type for CDMA Radio Access Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for iOS User Device Type for CDMA Radio Access Type.
Average Delivery Bit Rate	The average delivery bit rate for iOS User Device Type for CDMA Radio Access Type.
Percentage of Video Downloaded	The percentage of bytes downloaded for video for iOS User Device Type for CDMA Radio Access Type.
<b>User Device Type Android</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for Android User Device Type for CDMA Radio Access Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for Android User Device Type for CDMA Radio Access Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for Android User Device Type for CDMA Radio Access Type.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for Android User Device Type for CDMA Radio Access Type.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download a video for Android User Device Type for CDMA Radio Access Type.
Total Video Object Count	The total number of video objects for Android User Device Type for CDMA Radio Access Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for Android User Device Type for CDMA Radio Access Type.
Average Delivery Bit Rate	The average delivery bit rate for Android User Device Type for CDMA Radio Access Type.
Percentage of Video Downloaded	The percentage of bytes downloaded for video for Android User Device Type for CDMA Radio Access Type.
<b>User Device Type Laptop</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for Laptop User Device Type for CDMA Radio Access Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for Laptop User Device Type for CDMA Radio Access Type.

Field	Description
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for Laptop User Device Type for CDMA Radio Access Type.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for Laptop User Device Type for CDMA Radio Access Type.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download a video for Laptop User Device Type for CDMA Radio Access Type.
Total Video Object Count	The total number of video objects for Laptop User Device Type for CDMA Radio Access Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for Laptop User Device Type for CDMA Radio Access Type.
Average Delivery Bit Rate	The average delivery bit rate for Laptop User Device Type for CDMA Radio Access Type.
Percentage of Video Downloaded	The percentage of bytes downloaded for video for Laptop User Device Type for CDMA Radio Access Type.
<b>User Device Type Others</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for other User Device Type for CDMA Radio Access Type.
Total Duration of the Videos	The total duration of the video clips, in seconds, for other User Device Type for CDMA Radio Access Type.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for other User Device Type for CDMA Radio Access Type.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for other User Device Type for CDMA Radio Access Type.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download a video for other User Device Type for CDMA Radio Access Type.
Total Video Object Count	The total number of video objects for other User Device Type for CDMA Radio Access Type. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for other User Device Type for CDMA Radio Access Type.
Average Delivery Bit Rate	The average delivery bit rate for other User Device Type for CDMA Radio Access Type.
Percentage of Video Downloaded	The percentage of bytes downloaded for video for other User Device Type for CDMA Radio Access Type.

## show active-charging video detailed-statistics ue laptop

Note that there are additional **ue** options for this command, as follows: **ue android**, **ue ios**, and **ue others**.

*Table 110: show active-charging video detailed-statistics ue laptop Command Output Descriptions*

Field	Description
<b>Radio Type GPRS</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for GPRS Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for GPRS Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for GPRS Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for GPRS Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for GPRS Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for GPRS Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for GPRS Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for GPRS Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for GPRS Radio Access Type for laptops.
<b>Radio Type UMTS</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for UMTS Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for UMTS Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for UMTS Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for UMTS Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for UMTS Radio Access Type for laptops.

Field	Description
Total Video Object Count	The total number of video objects for UMTS Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for UMTS Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for UMTS Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for UMTS Radio Access Type for laptops.
<b>Radio Type LTE</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for LTE Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for LTE Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for LTE Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for LTE Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for LTE Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for LTE Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for LTE Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for LTE Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for LTE Radio Access Type for laptops.
<b>Radio Type HSPA</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for HSPA Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for HSPA Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for HSPA Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for HSPA Radio Access Type for laptops.

Field	Description
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for HSPA Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for HSPA Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for HSPA Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for HSPA Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for HSPA Radio Access Type for laptops.
<b>Radio Type CDMA</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for CDMA Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for CDMA Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for CDMA Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for CDMA Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for CDMA Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for CDMA Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for CDMA Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for CDMA Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for video for CDMA Radio Access Type for laptops.
<b>Radio Type WLAN</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for WLAN Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for WLAN Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for WLAN Radio Access Type for laptops.

Field	Description
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for WLAN Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for WLAN Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for WLAN Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for WLAN Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for WLAN Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for video for WLAN Radio Access Type for laptops.
<b>Radio Type Others</b>	
Total Content Size of the Videos	The total size in payload bytes (HTTP content length) of the video clips for other Radio Access Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for other Radio Access Type for laptops.
Total Bytes Sent to the User	The total payload bytes (excluding IP and TCP headers) of video data sent to the subscriber UE for other Radio Access Type for laptops.
Total Duration of Video Sessions	The total duration, in seconds, of the video sessions for other Radio Access Type for laptops.
Total Number of TCP Flows for Video Sessions	The total number of TCP flows used to download all videos for other Radio Access Type for laptops.
Total Video Object Count	The total number of video objects for other Radio Access Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for other Radio Access Type for laptops.
Average Delivery Bit Rate	The average delivery bit rate for other Radio Access Type for laptops.
Percentage of Video Downloaded	The average percentage (in terms of bytes) of video files downloaded for other Radio Access Type for laptops.
<b>Container Type MP4</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for MP4 Container Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for MP4 Container Type for laptops.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for MP4 Container Type for laptops.

Field	Description
Total Video Object Count	The total number of video objects for MP4 Container Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for MP4 Container Type for laptops.
<b>Container Type FLV</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for FLV Container Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for FLV Container Type for laptops.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for FLV Container Type for laptops.
Total Video Object Count	The total number of video objects for FLV Container Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for FLV Container Type for laptops.
<b>Container Type Others</b>	
Total Content Size of the Videos	The total size of the video clips in bytes for other Container Type for laptops.
Total Duration of the Videos	The total duration of the video clips, in seconds, for other Container Type for laptops.
Total Bytes Sent to the User	The total bytes of video data sent to the subscriber UE for other Container Type for laptops.
Total Video Object Count	The total number of video objects for other Container Type for laptops. A video object exists from the creation of the first flow to the deletion of the last flow comprising each video.
Average Video Encoding Bit Rate	The average video encoding bit rate for other Container Type for laptops.

## show active-charging xheader-format name

Table 111: show active-charging xheader-format name Command Output Descriptions

Field	Description
Xheader Format Name	Specifies the Xheader Format Name
Total xheader-format(s) found	Specifies the total number of xheader formats found.

## CHAPTER 6

# show administrators

This chapter includes the **show administrators** command output tables.

- [show administrators](#), on page 439
- [show administrators session id](#), on page 440

## show administrators

*Table 112: show administrators Command Output Descriptions*

Field	Description
Administrator/Operator Name	Displays the name of the administrative user currently accessing the system.
M	The M (Lock Mode) characters are defined as follows: <ul style="list-style-type: none"><li>• [blank] – Administrator is in Exec mode</li><li>• <b>c</b> – Administrator session is currently in Config Mode (shared-lock)</li><li>• <b>s</b> – Administrator session is currently saving the config</li><li>• <b>f</b> – Administrator session is currently loading the config file</li><li>• <b>L</b> – Administrator session is currently in Config Mode with the exclusive-lock</li></ul>
Type	Displays the administrative user's type: <ul style="list-style-type: none"><li>• admin = Security Administrator</li><li>• cfgadm = Administrator</li><li>• inspect = Inspector</li><li>• oper = Operator</li></ul>
TTY	Displays a reference for the virtual console device for the CLI instance.
Start Time	Displays the time and date that the administrative user's session started.

# show administrators session id

Table 113: show administrators session id Command Output Descriptions

Field	Description
Administrator/Operator Name	Displays the name of the administrative user currently accessing the system.
M	The M (Lock Mode) characters are defined as follows: <ul style="list-style-type: none"> <li>• [blank] – Administrator is in Exec mode</li> <li>• <b>c</b> – Administrator session is currently in Config Mode (shared-lock)</li> <li>• <b>s</b> – Administrator session is currently saving the config</li> <li>• <b>f</b> – Administrator session is currently loading the config file</li> <li>• <b>L</b> – Administrator session is currently in Config Mode with the exclusive-lock</li> </ul>
Login Context	Displays the context in which the CLI user is working.
Remote Addr	Displays the IP address from which the CLI user is accessing the system.
Session ID	Displays the assigned session ID.
Mode	Displays the user's value: <ul style="list-style-type: none"> <li>• TACACS+ User</li> <li>• Local User</li> <li>• Context User</li> </ul>
Idle	The total number of sessions currently idle in seconds.

## CHAPTER 7

# show alarm

---

This chapter includes the **show alarm** command output tables.

- [show alarm all](#), on page 441
- [show alarm audible](#), on page 442
- [show alarm central-office](#), on page 442
- [show alarm facility](#), on page 443
- [show alarm outstanding all verbose](#), on page 443
- [show alarm statistics](#), on page 444

## show alarm all

*Table 114: show alarm all Command Output Descriptions*

Field	Description
Audible Alarm	Indicates status of Audible Central Office (CO) Alarm on the SMC (ASR 5000) or SSC (ASR 5500): OFF = audible alarm disabled; ON = audible alarm enabled.
<b>Alarm Statistics:</b>	

Field	Description
Cumulative Totals	<p>Indicates the number of alarms that have occurred since the system was last booted:</p> <ul style="list-style-type: none"> <li>• <b>Total:</b> The total number of currently outstanding alarms.</li> <li>• <b>Critical (CR):</b> This alarm is triggered when events cause a degradation in service.</li> <li>• <b>Major (MJ):</b> This alarm is triggered on the following conditions: <ul style="list-style-type: none"> <li>• A hardware failure was detected on a card that will cause it to be taken off-line.</li> <li>• One of the Power Filter Units has failed or was removed.</li> <li>• One or more of the fans on either the upper or lower fan tray have failed.</li> <li>• The upper or lower fan tray has been removed.</li> </ul> </li> <li>• <b>Minor (MN):</b> This alarm is triggered when a high temperature is detected on a card causing the fan tray to switch to high speed.</li> </ul>
<b>Outstanding Alarms:</b>	
Sev	Indicates the severity of the alarm indicated as <b>CR</b> (critical), <b>MJ</b> (major) or <b>MI</b> (minor).
Object	Indicates the source of the alarm.
Event	Displays information about the type of alarm.

## show alarm audible

Indicates the current state of the Audible CO Alarm on the SMC (ASR 5000) or SSC (ASR 5500) as:

- "Audible Alarm OFF" (Disabled)
- "Audible Alarm ON" (Enabled)

## show alarm central-office

Indicates the current state of the Central Office Alarm contacts on the SPIO card (ASR 5000) or SSC (ASR 5500) as:

- "All Central Office (CO) alarms are off" (Disabled)
- "All Central Office (CO) alarms are on" (Enabled)

## show alarm facility

Indicates the current state of the Audible CO Alarm and CO alarm contacts on the SMC/SPIO (ASR 5000) or SSC (ASR 5500) as:

- "Audible Alarm OFF"
  - "All Central Office (CO) alarms are off" (Disabled)
- "Audible Alarm ON"
  - "All Central Office (CO) alarms are on" (Enabled)

## show alarm outstanding all verbose

Table 115: show alarm outstanding all verbose Command Output Descriptions

Field	Description
Severity (Sev)	<p>If an alarm is present, the system indicates that one of the following alarm levels has been triggered:</p> <ul style="list-style-type: none"> <li>• <b>Critical (CR):</b> This alarm is triggered when events cause a degradation in service (i.e. the system is supporting a large number of subscribers and Processing Cards are removed thus reducing the amount of available CPU and memory resources).</li> <li>• <b>Major (MJ):</b> This alarm is triggered on the following conditions:               <ul style="list-style-type: none"> <li>• A hardware failure was detected on a card that will cause it to be taken off-line.</li> <li>• One of the Power Filter Units has failed or was removed.</li> <li>• One or more of the fans on either the upper or lower fan tray have failed.</li> <li>• Either the upper or lower fan trays have been removed.</li> </ul> </li> <li>• <b>Minor (MN):</b> This alarm is triggered when a high temperature is detected on a card causing the fan tray to switch to high speed.</li> </ul>
Object	Describes the source and type of the alarm event.
Timestamp	Lists the date and time that the alarm condition was triggered, in the format: <day-of-week> <month> <day> <hh:mm:ss> <timezone>.
Alarm ID	The internal system ID of the alarm.

# show alarm statistics

Table 116: show alarm statistics Command Output Descriptions

Field	Description
Current Outstanding Alarms	<p>Indicates the alarm conditions that are currently active:</p> <ul style="list-style-type: none"> <li>• <b>Total:</b> The total number of currently outstanding alarms.</li> <li>• <b>Critical (CR):</b> This alarm is triggered when events cause a degradation in service.</li> <li>• <b>Major (MJ):</b> This alarm is triggered on the following conditions: <ul style="list-style-type: none"> <li>• A hardware failure was detected on a card that will cause it to be taken off-line.</li> <li>• One of the Power Filter Units has failed or was removed.</li> <li>• One or more of the fans on either the upper or lower fan tray have failed.</li> <li>• The upper or lower fan tray has been removed.</li> </ul> </li> <li>• <b>Minor (MN):</b> This alarm is triggered when a high temperature is detected on a card causing the fan tray to switch to high speed.</li> </ul>
Cumulative Totals	<p>Indicates the number of alarms that have occurred since the system was last booted:</p> <ul style="list-style-type: none"> <li>• <b>Total:</b> The total number of currently outstanding alarms.</li> <li>• <b>Critical (CR):</b> This alarm is triggered when events cause a degradation in service.</li> <li>• <b>Major (MJ):</b> This alarm is triggered on the following conditions: <ul style="list-style-type: none"> <li>• A hardware failure was detected on a card that will cause it to be taken off-line.</li> <li>• One of the Power Filter Units has failed or was removed.</li> <li>• One or more of the fans on either the upper or lower fan tray have failed.</li> <li>• The upper or lower fan tray has been removed.</li> </ul> </li> <li>• <b>Minor (MN):</b> This alarm is triggered when a high temperature is detected on a card causing the fan tray to switch to high speed.</li> </ul>

## CHAPTER 8

# show alcap

This chapter includes the **show alcap** command output tables.

- [show alcap counters](#), on page 445
- [show alcap-service all](#), on page 446
- [show alcap-service full](#), on page 447

## show alcap counters

*Table 117: show alcap counters Command Output Descriptions*

Field	Description
AAL2 Channels Counters	This group displays the counter statistics of AAL2 channels in ALCAP service.
Number of AAL2 channels in IDLE state	Indicates the total number of AAL2 channels in IDLE state in ALCAP service instance.
Number of AAL2 channels in CONNECTED state	Indicates the total number of AAL2 channels in CONNECTED state in ALCAP service instance.
Number of AAL2 channels in CONNECTING state	Indicates the total number of AAL2 channels in CONNECTING state.
Number of AAL2 channels in RELEASE PENDING state	Indicates the total number of AAL2 channels in RELEASE PENDING state.
Number of AAL2 channels in RESET PENDING state	Indicates the total number of AAL2 channels in RESET PENDING state.
AAL2 Paths Counters	This group displays the counter statistics of AAL2 paths in particular AAL2 channel in ALCAP service.
Number of AAL2 Paths in LOCALLY BLOCKED state	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked locally.
Number of AAL2 Paths in REMOTE BLOCKED state	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked by remote peer node.

Field	Description
Number of AAL2 Paths in BLOCKED state	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked. This includes both, local and remote blocks.
Number of AAL2 Paths in RESET PENDING state	Indicates the total number of AAL2 Paths in RESET PENDING state.

## show alcap-service all

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 118: show alcap-service all Command Output Descriptions**

Field	Description
Aal2 node	The name of the ALCAP service node in which the ALCAP service is configured.
Aal2 node id	The identity number of the ALCAP node in which ALCAP service is configured.
Point code	Point code of adjacent AAL2 node in SS7 format address.
AESA	Specifies the ATM Endpoint Service Address (AESA) in an ATM (or AAL2) network to map with adjacent AAL2 node. The AESA is based on the generic network service access point (NSAP) format. The ATM connection from HNB-GW terminates at this point.
Total Aal2 Path	Indicates the total number of AAL2 paths configured for this ALCAP service on an AAL2 node.
Total Aal2 Path Blocked	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked. This includes both, local and remote blocks.
Total Aal2 Path Locally Blocked	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked locally.
Total Aal2 Path Remote Blocked	Indicates the total number of AAL2 paths in the AAL2 node that are currently blocked by remote peer node.
Aal2 Path info	This group displays the AAL2 path related information.
Aal2 Path id	Indicates the identity number of AAL2 path configured on this AAL2 node under ALCAP service.
ATM Port Bound	Indicates the status if the Aal2 path is bound to a physical ATM port or not.

Field	Description
LPort Id	Indicates the logical port Id identifying an Aal2 path binding to an ATM port.
Path FSM State	Indicates the current state of this AAL2 path FSM. Possible states are: <ul style="list-style-type: none"> <li>• <b>Idle</b>: The Path FSM is in Idle state</li> <li>• <b>Pending Reset Confirm</b>: A path reset procedure is in process and waiting for a conformation from the peer node.</li> <li>• <b>Pending Block Confirm</b>: A path block procedure is in process and waiting for a conformation from the peer node.</li> <li>• <b>Pending Un-Block Confirm</b>: A path Un-block procedure is in process and waiting for a conformation from the peer node.</li> <li>• <b>Pending Reset and Block Confirm</b>: Path reset and path block procedure is in process and waiting for a conformation from the peer node.</li> <li>• <b>Pending Reset and Un-Block Confirm</b>: Path reset and path un-block procedure is in process and waiting for a conformation from the peer node.</li> </ul>
Locally Blocked	Indicates whether an AAL2 path on AAL2 node under ALCAP service is locally blocked or not.
Remote Blocked	Indicates whether an AAL2 path on AAL2 node under ALCAP service is remotely blocked by peer node or not.

## show alcap-service full

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 119: show alcap-service full Command Output Descriptions**

Field	Description
alcap service	The name of the ALCAP service of which statistics are displayed.
service id	The identity number of the ALCAP service of which statistics are displayed.
Context	Indicates the system context name in which ALCAP service is configured.
state	Indicates the state of the ALCAP service.
self point code	Indicates the address of this ALCAP service in SS7 point code notation.

Field	Description
ss7 routing domain id	Indicates the routing domain id in which ALCAP service is associated.
AAL2 Nodes	This group displays the information related to AAL2 node configured in ALCAP service.
Node name	Indicates the name of the AAL2 node configured in ALCAP service.
Point Code	Indicates the address of AAL2 node in SS7 point code notation.
Path id	Indicates the identity number of AAL2 path configured on this AAL2 node under ALCAP service.
Routes	This group displays the information related to AAL2 routes configured for AAL2 path.
AESA	Specifies the ATM Endpoint Service Address (AESA) in an ATM (or AAL2) network to map with adjacent AAL2 node. The AESA is based on the generic network service access point (NSAP) format. The ATM connection from HNB-GW terminates at this point.
Node id	Indicates the AAL2 node identity number used for routes in AAL2 path FSM.
ERQ timer	Indicates the maximum time, in seconds, configured for Timer_ERQ on the system to wait for response from adjacent AAL2 node before reporting the failure of AAL2 Establish Request procedure. Configurable range is from 5 through 30 seconds and default is 5 seconds.
REL timer	Indicates the maximum time, in seconds, configured for Timer_REL on the system to waits for response from adjacent AAL2 node before reporting the failure of AAL2 Release Request procedure. Configurable range is from 2 through 60 seconds and default is 2 seconds.
RES timer	Indicates the maximum time, in seconds, configured for Timer_RES on the system to waits for response from adjacent AAL2 node before reporting the failure of AAL2 Reset Request procedure. Configurable range is from 2 through 60 seconds and default is 2 seconds.
BLO timer	Indicates the maximum time, in seconds, configured for Timer_BLO on the system to waits for response from adjacent AAL2 node before reporting the failure of AAL2 Path Block procedure. Configurable range is from 2 through 60 seconds and default is 2 seconds.
UBL timer	Indicates the maximum time, in seconds, configured for Timer_UBL on the system to waits for response from adjacent AAL2 node before reporting the failure of AAL2 Path Un-Block procedure. Configurable range is from 2 through 60 seconds and default is 2 seconds.

Field	Description
MOD timer	Indicates the maximum time, in seconds, configured for Timer_MOD on the system to wait for response from adjacent AAL2 node before reporting the failure of AAL2 Path ModifyRequest procedure. Configurable range is from 5 through 30 seconds and default is 5 seconds.
STC long timer	Indicates the configured duration value in milliseconds for STC long timer. This timer is used by the congestion indication procedure. Receipt of a repeated congestion indication from MTP3B before the expiry of this timer is interpreted as the congestion situation. On the other hand, if no congestion indication is received from MTP3B before expiry of this timer, the congestion situation is considered to have improved. Configurable range is from 5000 ms through 10000 ms and default value is 5000 ms.
STC short timer	Indicates the configured duration value in milliseconds for STC long timer. This timer is used by the congestion indication procedure. The role of this timer is to avoid overreacting if multiple congestion indications are received from MTP3B in quick succession. Configurable range is from 300 ms through 600 ms and default value is 300 ms.
Max-reset-retransmission	Indicates maximum number of retries allowed for transmission of RESET message to reset the AAL2 path by ALCAP service. Configurable range is 0 to 4 and default is 1. A "0" value indicates that retransmission of RESET message is disabled.

## CHAPTER 9

# show apn

This chapter includes the **show apn** command output tables.

- [show apn all, on page 451](#)
- [show apn counter ip-allocation all, on page 465](#)
- [show apn name, on page 465](#)
- [show apn statistics all hsgw-only, on page 467](#)
- [show apn statistics, on page 468](#)
- [show apn statistics name, on page 468](#)
- [show apn statistics name qci, on page 478](#)

## show apn all

*Table 120: show apn all Command Output Descriptions*

Field	Description
access point name (APN)	Indicates the name of the access point name (APN) for which counters are displayed.
authentication context	Name of the system context used for authentication for this APN.
pdp type	Indicates the type of PDP context. Possible types are: <ul style="list-style-type: none"><li>• IPv4</li><li>• IPv6</li><li>• PPP</li></ul>
ehrpd access	Specifies whether <b>ehrpd-access</b> option is configured in this APN or not. If enabled, the P-GW excludes IPv6 traffic from being delivered to UEs on the eHRPD network that do not have IPv6 capabilities.
emergency	Specifies whether <b>emergency-apn</b> option is configured in this APN or not. If enabled, this APN is an emergency APN for VoLTE based E911 support.

Field	Description
Selection Mode	Indicates the APN selection mode applicable for this APN. Possible selection modes are: <ul style="list-style-type: none"> <li>• Chosen by SGSN</li> <li>• Sent by MS</li> <li>• Subscribed</li> </ul>
ip source violation	Indicates whether check for IPv4 source validation violations enabled or not. Possible status are: <ul style="list-style-type: none"> <li>• Checked</li> <li>• Ignored</li> </ul>
drop limit	Indicates the IP source-violation drop limit configured for the subscriber. The drop-limit is the number of invalid packets that can be received from a subscriber prior to their session being deleted. Refer to the <b>ip source-violation</b> command in the APN configuration mode.
ip source violation no accounting	The IP source validation violations that were detected but not included in the statistics.
accounting mode	Indicates the accounting mode configured for this APN. Possible modes are: <ul style="list-style-type: none"> <li>• gtp - GTP CDR accounting</li> <li>• none - No accounting</li> <li>• radius-diameter - RADIUS or Diameter accounting</li> </ul>
No early PDUs	Specifies whether " <b>no-early-pdu</b> " option configured in this APN or not. If "no-early-PDUs" is enabled, the chassis shall not send uplink/downlink data from/to a MS till it receives the Acct-Rsp Start for the same from the AAA device. On receiving the Acct-Rsp, pending PDUs are sent out.
no-interims	Specifies whether " <b>no-interims</b> " option configured in this APN or not. If "no-interims" is enabled, the chassis shall not send any interim message to the AAA device.
Bearer Control Mode	Specifies whether Bearer Control Mode is enabled in this APN or not.
max-primary-pdp-contexts	Specifies the maximum primary PDP contexts allowed in this APN.
total-pdp-contexts	Specifies the total primary and secondary PDP contexts allowed in this APN.
primary contexts	Specifies the total primary contexts allowed in this APN.
total contexts	Specifies the total primary and secondary contexts allowed in this APN.
max secondary contexts per-subscriber	Specifies the maximum secondary contexts allowed in this APN for a subscriber.
IMS Authorization	Specifies whether IMS authorization support is enabled in this APN or not.

Field	Description
Credit Control	Specifies whether Diameter pre-paid credit control support is enabled in this APN or not.
Credit Control Service Name	Specifies the name of credit control service configured on the chassis.
Accounting Policy Name	Specifies the name of accounting policy associated with the configured APN. If no accounting policy is associated, this field will display as N/A.
PCO Options	Specifies which customized PCO (Protocol Configuration Options) options are sent in the network to MS GTP messages.
Mode	Indicates whether customized PCO options are sent in the network to MS GTP messages for all UEs regardless of support, only UEs that request customized PCO options, or no UEs.
mbms bearer absolute timeout	Indicates the absolute timeout duration in seconds for Multimedia Broadcast-Multicast Service (MBMS) bearer context.
mbms bearer idle timeout	Indicates the idle timeout duration in seconds for Multimedia Broadcast-Multicast Service (MBMS) bearer context.
mbms ue absolute timeout	Indicates the absolute timeout duration in seconds for Multimedia Broadcast-Multicast Service (MBMS) UE context.
local ip	Specifies the local IP address of the interface assigned to this APN.
nexthop gateway addr	Specifies the IP address of the next hop gateway configured in this APN.
ignore-alt-config (no-dns)	Specifies if preference is given to dns server address configured in APN. If name server addresses is not found in APN configuration, it is not provisioned from SGi context even if it is configured there.
ignore-alt-config (no-s6b)	Specifies if alternate service level configuration for s6b authorization is ignored when S6b authorization is disabled at APN.
Authorization with S6b	Specifies if the S6b authorization has been enabled.
primary dns	Indicates the IP address of primary Domain Name Server (DNS).
secondary dns	Indicates the IP address of secondary Domain Name Server (DNS).
primary nbns	Indicates the IP address of primary NetBIOS Name Server (NBNS).
secondary nbns	Indicates the IP address of secondary NetBIOS Name Server (NBNS).
ppp keep alive period	Indicates the duration in seconds to transmit LCP keep-alive packet.
ppp mtu	Indicates the maximum size of transmission units in bytes configured for this APN.
absolute timeout	Indicates the absolute timeout duration in seconds for session configured in this APN.
emergency inactivity timeout	Indicates the emergency inactive timeout duration in seconds for session configured in this APN.

Field	Description
idle timeout	Indicates the idle timeout duration in seconds for session configured in this APN.
bearer inactivity timeout (GBR Bearers)	Indicates the bearer inactivity timeout configuration for gbr bearers in seconds.
bearer inactivity timeout (Non GBR Bearers)	Indicates the bearer inactivity timeout configuration for non-gbr bearers in seconds.
emergency inactivity timeout	Indicates the emergency inactivity timeout duration in seconds for session configured in this emergency APN for VoLTE based E911 support.
idle-timeout-activity ignore-downlink	Indicates whether idle timeout activity configured in this APN to consider downlink traffic as activity for idle-timeout or not.
long duration timeout	Indicates the timeout duration in seconds for long duration timeout support configured in this APN.
long dur inactivity time	Indicates the inactivity duration in seconds for long duration timeout support configured in this APN.
long duration action	Indicates the action configured in this APN for long duration timeout support. Possible actions are: <ul style="list-style-type: none"> <li>• Detection</li> <li>• Disconnection</li> </ul>
ip header compression	Indicates the IP header compression method configured in this APN for ROust Header Compression (ROHC) support. Supported method is Van Jacobsen (VJ).
ip hide service address	Indicates whether APN is configured to hide service IP address from the subscriber (for security reasons) or not.
ip output access-group	The IPv4 access control list (ACL) configured in this APN for outward traffic.
ip input access-group	The IPv4 access control list (ACL) configured in this APN for inward traffic.
ipv6 output access-group	The IPv6 access control list (ACL) configured in this APN for outward traffic.
ipv6 input access-group	The IPv6 access control list (ACL) configured in this APN for inward traffic.
policy-group in	The traffic policy group configured in this APN for inward traffic.
policy-group out	The traffic policy group configured in this APN for outward traffic.
permit ip multicast	Indicates whether APN is configured to discard or permit the IP multicast.
ppp authentication	Indicates the type of PPP authentication configured for this APN.
eap authentication initial-access-request	Indicates the type of initial access request to be used in Diameter EAP request.
allow noauthentication	Indicates whether PPP session is allowed without authentication in this APN or not.

Field	Description
imsi authentication	Indicates whether PPP session authentication in this APN is configured for IMSI authentication or not.
msisdn authentication	Indicates whether PPP session authentication in this APN is configured for MSISDN authentication or not.
radius returned-username	Indicates which Username to use in the RADIUS accounting messages. When "override-constructed-username" is configured, the Username sent by RADIUS in Access-Accept is used. When "prefer-constructed-username" is configured, the Username sent by RADIUS is ignored and the constructed Username is used.
ip destination context	Indicates the name of the configured destination context for this APN.
Rule Base	Indicates the name of the configured rulebase for this APN.
Credit-Control Session	Displays one of the following values based on the credit-control-client override CLI command used in APN mode configuration. <ul style="list-style-type: none"> <li>• per-subscriber</li> <li>• per-sub-session</li> <li>• Default (fallback to config mode 'require ecs credit-control' CLI)</li> </ul>
Gy Rule Base List	Indicates the name of the configured Gy rulebase list for this APN.
Content-Filtering Policy-Id	Indicates whether inline content filtering policy is configured for this APN or not.
mediation accounting	Indicates whether mediation device is configured for accounting in this APN or not.
mediation-device context	Indicates the name of the system context to use for mediation device for accounting in this APN.
mediation no early PDUs	Specifies whether " <b>no-early-pdu</b> " option configured for this subscriber or not. If "no-early-PDUs" is enabled, the chassis shall not send uplink/downlink data from/to a MS till it receives the Acct-Rsp Start for the same from the mediation device. On receiving the Acct-Rsp, pending PDUs are sent out.
mediation no-interims	Specifies whether " <b>no-interims</b> " option configured for this subscriber or not. If "no-interims" is enabled, the chassis shall not send any interim message to the mediation device.
mediation delay-GTP-response	Specifies whether " <b>delay-GTP-response</b> " option configured for this subscriber or not. When enabled, this option delays the Create PDP Context response until an Accounting Start response is received from the mediation device.
outbound username	Name of the user for outbound traffic.
ip address pools	Indicates the IP address pool used for this APN.
access-link ip-frag	Indicates the IP packet fragmentation setting for access link.

Field	Description
ignore DF-bit data-tunnel	Indicates whether "ignore df-bit" is set for data tunnel or not.
ip allocation type	Specifies the type of IP allocation method used for IP address allocation. Possible types are: <ul style="list-style-type: none"> <li>• DHCP-Proxy</li> <li>• DHCP-Relay</li> <li>• Local</li> <li>• Dynamic</li> <li>• Static</li> </ul>
allow user specified ip addr	Indicates whether user specified IP address is allowed or not for IP allocation.
prefer dhcp options	Indicates whether support for DHCP supplied parameters, like DNS/NBNS addresses, in subscriber session is configured for this APN.  This support can be enabled with <b>ip address alloc-method dhcp-proxy prefer-dhcp-options</b> command in APN Configuration mode.
Custom1-10 value	Indicates the action value for multiple operator-specific PCOs. The value can range from 1 to 10.
UE-Requested	Specifies PCO to the UE, which requested for new PCO option.
<b>3gpp qos to dscp mapping</b>	This group indicates the 3GPP QoS to DSCP mapping information.
qci 1: ef	Indicates the DSCP configured for QCI1 type of traffic.
qci 2: ef	Indicates the DSCP configured for QCI2 type of traffic.
qci 3: af11	Indicates the DSCP configured for QCI3 type of traffic.
qci 4: af11	Indicates the DSCP configured for QCI4 type of traffic.
qci 5: ef	Indicates the DSCP configured for QCI5 type of traffic.
qci 6: ef	Indicates the DSCP configured for QCI6 type of traffic.
qci 7: af21	Indicates the DSCP configured for QCI7 type of traffic.
qci 8: af21	Indicates the DSCP configured for QCI8 type of traffic.
qci 9: be	Indicates the DSCP configured for QCI9 type of traffic.
<b>3GPP Qos to DSCP Mapping based on Alloc. Prio</b>	This group indicates the 3GPP QoS to DSCP mapping information based on allocation priority.
qci 5 ( Alloc.P 1): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 1.
qci 5 ( Alloc.P 2): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 2.

Field	Description
qci 5 ( Alloc.P 3): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 3.
qci 6 ( Alloc.P 1): ef	Indicates the DSCP configured for QCI6 type of traffic with allocation priority 1.
qci 6 ( Alloc.P 2): ef	Indicates the DSCP configured for QCI6 type of traffic with allocation priority 2.
qci 6 ( Alloc.P 3): ef	Indicates the DSCP configured for QCI6 type of traffic with and allocation priority 3.
qci 7 ( Alloc.P 1): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 1.
qci 7 ( Alloc.P 2): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 2.
qci 7 ( Alloc.P 3): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 3.
qci 8 ( Alloc.P 1): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 1.
qci 8 ( Alloc.P 2): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 2.
qci 8 ( Alloc.P 3): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 3.
Copy user-datagram IP TOS	Indicates whether copying of IP TOS octet value from user IPv4 datagrams to IP header of tunnel encapsulation is enabled or not.
APN defined Charging Characteristics	This group displays the APN defined charging characteristics for various types of subscribers.
Home Subscribers	This sub-group displays the APN defined charging characteristics for home subscribers.
Behavior Bits	Indicates the behavior bits configured for home subscribers in APN defined charging characteristics.
Profile Value	Indicates the profile value configured for home subscribers in APN defined charging characteristics.
Visiting Subscribers	This sub-group displays the APN defined charging characteristics for visiting subscribers.
Behavior Bits	Indicates the behavior bits configured for visiting subscribers in APN defined charging characteristics.
Profile Value	Indicates the profile value configured for visiting subscribers in APN defined charging characteristics.
Roaming Subscribers	This sub-group displays the APN defined charging characteristics for roaming subscribers.
Behavior Bits	Indicates the behavior bits configured for roaming subscribers in APN defined charging characteristics.
Profile Value	Indicates the profile value configured for roaming subscribers in APN defined charging characteristics.
All (Home/Visiting/Roaming) Subscribers	This sub-group displays the APN defined charging characteristics for all subscribers (including home, visiting, and roaming).

Field	Description
Behavior Bits	Indicates the behavior bits configured for all subscribers (including home, visiting, and roaming) in APN defined charging characteristics.
Profile Value	Indicates the profile value configured for all subscribers (including home, visiting, and roaming) in APN defined charging characteristics.
Subscribers to use APN defined charging characteristics	Indicates the number of subscriber to use APN defined charging characteristics.
Subscribers to use RADIUS returned charging characteristics	Indicates whether subscribers in this APN are configured to use charging characteristics returned from RADIUS server.
Subscribers to use GX returned charging characteristics	Indicates whether subscribers in this APN are configured to use Gx-returned charging characteristics.
dhcp service name	Specifies the name of the DHCP service configured for IP address allocation.
dhcp context name	Specifies the name of the DHCP context where DHCP service is configured for IP address allocation.
dhcp lease expiry policy	Specifies the DHCP address lease expiry policy. Possible actions are: <ul style="list-style-type: none"> <li>• autoconnect</li> <li>• disconnect</li> </ul>
mobile-ip	Specifies the whether Mobile IP is configured in this APN or not.
mobile-ip home-agent	Specifies the IP address of home agent (HA) to use for Mobile IP session in this APN.
mobile-ip alternate-home-agent(s)	Specifies the IP address of alternate home agent (HA) to use for Mobile IP session in this APN.
mobile-ip reverse-tunnel	Specifies the whether Mobile IP reverse tunnel is enabled for Mobile IP session in this APN or not.
mobile-ip mn-aaa-removal-indication	Specifies the whether "mn-aaa-removal-indication" parameter is configured for Mobile IP session in this APN or not.
mobile-ip mn-ha-spi	Specifies the security parameter index (SPI) configured between MN and HA for Mobile IP session in this APN.
mobile-ip mn-ha-hash-algorithm	Specifies the hash algorithm configured for Mobile IP session in this APN. Possible hash algorithms are: <ul style="list-style-type: none"> <li>• hmac-md5</li> <li>• md5</li> <li>• rfc2002-md5</li> </ul>
proxy-mip	Specifies the whether Proxy-Mobile IP is configured in this APN or not.

Field	Description
proxy-mip null-username static home address	Specifies the whether handling of RRQ to enable the acceptance without NAI extension in this APN is enabled or not.
Tunnel peer load-balancing	Specifies the tunnel peer selection method in this APN for load balancing between tunnel-peers. Possible selection methods are: <ul style="list-style-type: none"> <li>• balanced</li> <li>• prioritized</li> <li>• random</li> </ul>
L3-to-L2 tunnel address-policy no-alloc-validate	Specifies whether this APN is configured, to not to allocate or validate subscriber addresses locally for such sessions, it passes the address between remote tunnel terminator to the Mobile Node, or not.
tunnel address-policy alloc-validate	Specifies whether this APN is configured, to allocate addresses for cases in which IP addresses are dynamically assigned, or not.
NPU QoS Traffic Priority	Indicates the configured NPU QoS priority queue for packets facilitated by the APN. Possible priorities are: <ul style="list-style-type: none"> <li>• best-effort</li> <li>• bronze</li> <li>• derive-from-packet-dscp</li> <li>• gold</li> <li>• silver.</li> </ul>
APN QoS Attributes	Specifies the QoS attribute configured in this APN.
Newcall Policy	Indicates the policy for action on new calls coming on this APN. Possible actions are: <ul style="list-style-type: none"> <li>• Accept</li> <li>• Reject</li> </ul>
SDU Error Ratio	Indicates the QoS attribute reliability class based on Service Data Unit (SDU) Error Ratio attributes configured in this APN.
Residual BER	Indicates the QoS attribute reliability class based on Residual Bit Error Ratio (BER) attributes configured in this APN.
QCI n	Specifies the statistics for use traffic of QoS QCI class along with traffic status. Here n (qci-val) is the QCI for which the negotiate limit is being set, it ranges from 1 to 9.
Downlink Negotiate Limit	Specifies whether traffic data QoS negotiation limit in downlink direction is enabled or not for this class of QoS in this APN. By default it's disabled.
Uplink Negotiate Limit	Specifies whether traffic data QoS negotiation limit in uplink direction is enabled or not for this class of QoS in this APN. By default it's disabled.

Field	Description
Peak Data Rate (in bps)	The peak data rate in bit per seconds for this class of QoS in this APN.
Committed Data Rate(in bps)	The committed data rate in bit per seconds for this class of QoS in this APN.
Downlink Rate Limit	Specifies whether traffic data rate limit in downlink direction is enabled or not for this class of QoS in this APN.
Uplink Rate Limit	Specifies whether traffic data rate limit in uplink direction is enabled or not for this class of QoS in this APN.
Burst Size	This group indicates the static/dynamic burst size in bytes for peak and guaranteed rate limiting for this class of QoS in this APN.
Auto Readjust	Indicates whether auto readjustment of burst size is enabled or not. Possible states are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Auto Readjust Duration	Indicates the configured auto readjust duration in a seconds. If auto readjust is enabled and no readjust duration is specified the default value is 1 second.
Peak Burst Size(bytes)	Indicates the peak burst size in bytes calculated dynamically by auto readjust duration and rate limit value.
Guaranteed Burst Size(bytes)	Indicates the guaranteed burst size in bytes calculated dynamically by auto readjust duration (seconds) and rate limit value (bytes). This counter is applicable only when auto readjustment is enabled.
Exceed Action	Specifies the action on downlink/uplink data rate when exceeds the allowed rate limit for this class of QoS. Possible actions are: <ul style="list-style-type: none"> <li>• <b>drop</b>: drop the packets.</li> <li>• <b>lower-ip-precedence</b>: transmit the packet after lowering the ip-precedence.</li> <li>• <b>transmit</b>: transmit the packet.</li> </ul>

Field	Description
Violate Action	<p>Specifies the action on downlink/uplink data rate violation of allowed rate limit for this class of QoS. Possible actions are:</p> <ul style="list-style-type: none"> <li>• <b>drop</b>: drop the packets.</li> <li>• <b>lower-ip-precedence</b>: transmit the packet after lowering the ip-precedence.</li> <li>• <b>shape</b>: enables the traffic shaping and provides the buffering of user packets when subscriber traffic violates the allowed peak/committed data rate.</li> <li>• <b>shape-transmit-when-buffer-full</b>: enables the traffic shaping and allows the packet to be transmitted when buffer memory is full.</li> <li>• <b>transmit</b>: transmit the packet.</li> </ul>
APN-AMBR	Specifies the traffic statistics for APN Maximum Bit Rate.
Downlink Apn Ambr	<p>Specifies whether traffic data QoS negotiation limit in downlink direction is enabled or not for this class of QoS in this APN. By default it's disabled.</p> <p>Possible states are:</p> <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Uplink Apn Ambr	<p>Specifies whether traffic data QoS negotiation limit in uplink direction is enabled or not for this class of QoS in this APN. By default it's disabled.</p> <p>Possible states are:</p> <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Burst Size	This group indicates the static/dynamic burst size in bytes for peak and guaranteed rate limiting for this class of QoS in this APN.
Auto Readjust	<p>Indicates whether auto readjustment of burst size is enabled or not.</p> <p>Possible states are:</p> <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Auto Readjust Duration	<p>Indicates the configured auto readjust duration in a seconds.</p> <p>If auto readjust is enabled and no readjust duration is specified the default value is 1 second.</p>

Field	Description
Violate Action	Specifies the action on downlink/uplink data rate violation of allowed rate limit for this class of QoS. Possible actions are: <ul style="list-style-type: none"> <li>• <b>drop</b>: drop the packets.</li> <li>• <b>lower-ip-precedence</b>: transmit the packet after lowering the ip-precedence.</li> <li>• <b>shape</b>: enables the traffic shaping and provides the buffering of user packets when subscriber traffic violates the allowed peak/committed data rate.</li> <li>• <b>shape-transmit-when-buffer-full</b>: enables the traffic shaping and allows the packet to be transmitted when buffer memory is full.</li> <li>• <b>transmit</b>: transmit the packet.</li> </ul>
ppp accept peer ipv6 ifid	Indicates the IPv6 interface id of peer to accept PPP session.
ipv6 init router advt interval	Indicates the initial IPv6 router advertisement interval in seconds for this APN.
ipv6 init router number of advts	Indicates the total number of initial IPv6 router advertisement for this APN.
ipv6 address prefix	Indicates the IPv6 address prefix configured for sessions facilitated by this APN.
ipv6 address prefix pool	Indicates the IPv6 address prefix pool name configured for sessions facilitated by this APN.
ipv6 interface id	Indicates the IPv6 interface id configured for sessions facilitated by this APN.
ipv6 dns primary server	Indicates the IPv6 address of primary DNS server configured for sessions facilitated by this APN.
ipv6 dns secondary server	Indicates the IPv6 address of secondary DNS server configured for sessions facilitated by this APN.
ipv6 egress address filtering	Indicates whether egress address filtering configured in this APN or not to filter out packets not meant for the mobile interface ID.
p-cscf fqdn	Indicates the FQDN server name of P-CSCF configured for sessions facilitated by this APN.
p-cscf primary ip	Indicates the IPv4 address of primary P-CSCF configured for sessions facilitated by this APN.
p-cscf secondary ip	Indicates the IPv4 address of secondary P-CSCF configured for sessions facilitated by this APN.
p-cscf primary ipv6	Indicates the IPv6 address of primary P-CSCF configured for sessions facilitated by this APN.
p-cscf secondary ipv6	Indicates the IPv6 address of secondary P-CSCF configured for sessions facilitated by this APN.
ipv6 dns proxy	Indicates whether IPv6 DNS proxy server configured for sessions facilitated by this APN or not.

Field	Description
ipv6 minimum link MTU	Indicates the size of packet in bytes configured for access-link MTU for fragment.
Radius Group	Indicates the AAA server group associated with this APN.
Radius Secondary Group	If the secondary Accounting group is configured in the APN configuration, this field displays the corresponding group name. Otherwise, it displays <i>none</i> .
Radius Returned Framed IP Address	This group specifies the action and policy to handle the framed IP address returned from RADIUS server.
Policy	Specifies the policy to handle the framed IP address returned from RADIUS server. Possible actions are: <ul style="list-style-type: none"> <li>• accept-call-when-ms-ip-not-supplied</li> <li>• reject-call-when-ms-ip-not-supplied</li> </ul>
Access-flow traffic-validation	Specifies whether traffic validation for access flow is enabled for this APN or not.
Virtual APN Configuration	Indicates whether virtual APN is configured with APN or not.
Preference	Specifies the configured preference value of the rule for the virtual apn. It is an integer value which ranges from 1 to 1000.
Rule-Definition	Specifies the configured rule definition(s) for the virtual apn. Rule definitions include: <ul style="list-style-type: none"> <li>• access-gw-address</li> <li>• bearer-access-service</li> <li>• cc-profile: charging characteristics profile index ranging from 0 to 15</li> <li>• domain</li> <li>• mcc: mobile country code ranging from 100 to 999</li> <li>• msisdn-range</li> <li>• rat-type: eutran, gan, geran, hspa, utran, and wlan</li> <li>• roaming-mode: home, roaming, and visiting</li> </ul>
Selected-APN	Specifies the access point name (APN) in the VPN context to allow configuration of virtual APN related parameters.
IPv6 Configuration	This group displays the configuration related to IPv6 parameters.
IPv6 initial number of router advertisements	Indicates the total number of initial IPv6 router advertisement for this APN.
IPv6 initial router advertisements interval	Indicates the initial IPv6 router advertisement interval in seconds for this APN.

Field	Description
IPv6 initial router advertisements option MTU	Indicates if the <b>option mtu</b> setting is enabled/disabled for IPv6 initial router advertisements. When this feature is enabled and configured in <i>APN Configuration Mode</i> , the RA messages will contain the IPv6 MTU option for IPv6/Ipv4v6 PGW/SAEGW/GGSN calls. As a result, the UE will send uplink data packets based on the configured MTU and perform data fragmentation at the source, if required. This feature also reduces the number of ICMPv6 <i>Packet Too Big Error</i> messages in the operator's network.
IPv6 Prefix Pool	Indicates the IPv6 address prefix pool name configured for sessions facilitated by this APN.
IPv6 Egress address filtering	Indicates whether egress address filtering configured in this APN or not to filter out packets not meant for the mobile interface ID.
IPv6 Primary DNS server address	Indicates the IPv6 address of primary DNS server configured for sessions facilitated by this APN.
IPv6 Secondary DNS server address	Indicates the IPv6 address of secondary DNS server configured for sessions facilitated by this APN.
GTPP Group	Displays all the configured GTPP server groups associated with this APN.
GTPP Accounting Context	Specifies the name of all configured GTPP accounting contexts associated with this APN.
Firewall Policy	Indicates whether stateful firewall policy is applicable with this APN or not.
Mobile IPv6 Tunnel MTU	Indicates the configured maximum transmission unit of packet in bytes for Mobile IPv6 tunnel traffic.
Mobile IPv6 Tunnel MTU Exceed Action	Indicates the action to take on packets which exceeds the maximum transmission unit of packet in bytes for Mobile IPv6 tunnel traffic. Possible actions are: <ul style="list-style-type: none"> <li>• Normal processing</li> <li>• Ignore defragment bit</li> <li>• Fragment and forward the packet and notify the sender</li> </ul>
Mobile IPv6 Home Agent	Specifies the IPv6 address of home agent (HA) to use for Mobile IP session in this APN.
Mobile IPv6 Home Link Prefix	Specifies the home link prefix for to use for Mobile IP session in this APN.
Mobile IPv6 Home Address	Specifies the home IPv6 address of subscriber to use for Mobile IP session in this APN.
APN QCI Stats	Displays bulk statistics per APN QCI.
Event Reporting	Specifies whether event reporting to a log has been Enabled or Disabled.

Field	Description
Qci-qos-mapping Name for RAT-type	<p>Displays the QCI QoS mapping table name associated with a specific APN profile configuration.</p> <p>The mapping table displays DSCP marking for the following RAT-types:</p> <ul style="list-style-type: none"> <li>• EUTRAN</li> <li>• GERAN</li> <li>• UTRAN</li> <li>• LTE-M</li> </ul>

## show apn counter ip-allocation all

Table 121: show apn counter ip-allocation all Command Output Descriptions

Field	Description
APN	Indicates the name of the access point name (APN) for which counters are displayed.
UE PROVID.	Indicates the total number of cumulative sessions which used UE provided IP allocation method through this APN.
LOCAL POOL	Indicates the total number of cumulative sessions which used Local Pool method for IP allocation through this APN.
AAA	Indicates the total number of cumulative sessions which used AAA provided IP allocation method through this APN.
DHCP	<p>This group indicates the total number of cumulative sessions which used DHCP method for IP allocation through this APN. Possible groups are:</p> <p>CLIENT: Indicates the number of cumulative sessions which used DHCP client method for IP allocation through this APN.</p> <p>RELAY: Indicates the number of cumulative sessions which used DHCP relay method for IP allocation through this APN.</p>
PASSTHRU	Indicates the total number of cumulative sessions which used PASSTHRU IP allocation method through this APN.

## show apn name

Table 122: show apn name Command Output Descriptions

Field	Description
APN-AMBR	Specifies the traffic statistics for APN Maximum Bit Rate.

Field	Description
Downlink Apn Ambr	Specifies whether traffic data QoS negotiation limit in downlink direction is enabled or not for this class of QoS in this APN. By default it's disabled.  Possible states are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Uplink Apn Ambr	Specifies whether traffic data QoS negotiation limit in uplink direction is enabled or not for this class of QoS in this APN. By default it's disabled.  Possible states are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Burst Size	This group indicates the static/dynamic burst size in bytes for peak and guaranteed limiting for this class of QoS in this APN.
Auto Readjust	Indicates whether auto readjustment of burst size is enabled or not.  Possible states are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Auto Readjust Duration	Indicates the configured auto readjust duration in a seconds.  If auto readjust is enabled and no readjust duration is specified the default value is 1 second.
Violate Action	Specifies the action on downlink/uplink data rate violation of allowed rate limit for this class of QoS. Possible actions are: <ul style="list-style-type: none"> <li>• <b>drop</b>: drop the packets.</li> <li>• <b>lower-ip-precedence</b>: transmit the packet after lowering the ip-precedence.</li> <li>• <b>shape</b>: enables the traffic shaping and provides the buffering of user packets when subscriber traffic violates the allowed peak/committed data rate.</li> <li>• <b>shape-transmit-when-buffer-full</b>: enables the traffic shaping and allows the packet to be transmitted when buffer memory is full.</li> <li>• <b>transmit</b>: transmit the packet.</li> </ul>
Token Replenishment Interval	Indicates the token-replenishment-interval.
Access Point Name (APN)	Indicates the name of the access point name (APN) for which counters are displayed.
Authentication Context	Name of the system context used for authentication for this APN.

Field	Description
Pdp Type	Indicates the type of PDP context. Pdp type are as follows: <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> </ul>
Emergency	Specifies whether <b>emergency-apn</b> option is configured in this APN or not.
Delay Tolerant	Specifies whether Delay Tolerant behavior for PDN connection is available for Power Saving Mode or not.
PCO Options	Specifies which customized PCO (Protocol Configuration Options) options are sent to the network to MS GTP messages. PCO Options are as follows: <ul style="list-style-type: none"> <li>• Custom1</li> <li>• Mode</li> <li>• Link MTU</li> <li>• Non-link MTU</li> <li>• ePDG Selection FQDN</li> </ul>
Online Charging without Wait	Shows that the Online charging without Wait is defined at the APN level is defined.
pra-profile Name	Specifies the PRA name to be associated in APN for differentiating 5G traffic.
<b>Virtual APN Configuration:</b>	
RAT Type	Shows that the Virtual-APN is selected based on the LTE-M RAT type during Session setup.

## show apn statistics all hsgw-only

Table 123: show apn statistics all hsgw-only Command Output Descriptions

Field	Description
<b>HSGW Static FQDN Statistics:</b>	
Attempts:	Total primary FQDN Selection attempts.
Success:	Total primary FQDN Selection attempts that were successful.
Timeout:	Total number of PBU sent to primary FQDN that timed out.
Total Failures:	Total primary FQDN Selection attempts that failed.
Attempts:	Total secondary FQDN Selection attempts.
Success:	Total secondary FQDN Selection attempts that were successful.

Field	Description
Timeout:	Total number of PBU sent to the secondary FQDN that timed out.
Total Failures:	Total secondary FQDN Selection attempts that failed.

## show apn statistics

Table 124: show apn statistics Command Output Descriptions

Field	Description
<b>HSGW Static FQDN Statistics:</b>	
Attempts:	Total primary FQDN Selection attempts.
Success:	Total primary FQDN Selection attempts that were successful.
Timeout:	Total number of PBU sent to primary FQDN that timed out.
Total Failures:	Total primary FQDN Selection attempts that failed.
Attempts:	Total secondary FQDN Selection attempts.
Success:	Total secondary FQDN Selection attempts that were successful.
Timeout:	Total number of PBU sent to the secondary FQDN that timed out.
Total Failures:	Total secondary FQDN Selection attempts that failed.

## show apn statistics name

Table 125: show apn statistics name Command Output Descriptions

Field	Description
<b>Data Statistics ('uplink'=to PDN, 'downlink'=from PDN):</b>	
uplink bytes	The current total number of bytes sent on the Gi interface for the APN.
downlink bytes	The current total number of bytes received on the Gi interface for the APN.
uplink pkts	The current total number of IP packets sent from the Gi interface for the APN.
downlink pkts	The current total number of IP packets received from the Gi interface for the APN.
uplink pkts dropped	The current total number of IP packets for the APN that were dropped prior to sending over the Gi interface.

Field	Description
downlink pkts dropped	The current total number of IP packets received from the Gi interface for the APN and dropped.
uplink bytes dropped	The current total number of IP bytes for the APN that were dropped prior to sending over the Gi interface.
downlink bytes dropped	The current total number of IP bytes received from the Gi interface for the APN and dropped.
uplink Flow MBR excd byte drop	Number of exceeded uplink bytes dropped due to maximum bit rate.
downlink Flow MBR excd byte drop	Number of exceeded downlink bytes dropped due to maximum bit rate.
uplink Flow MBR excd packet drop	Number of exceeded uplink packets dropped due to maximum bit rate.
downlink Flow MBR excd packet drop	Number of exceeded uplink packets dropped due to maximum bit rate.
uplink Flow GBR excd byte drop	Number of exceeded uplink bytes dropped due to guaranteed bit rate.
downlink Flow GBR excd byte drop	Number of exceeded downlink bytes dropped due to guaranteed bit rate.
uplink Flow GBR excd packet drop	Number of exceeded uplink packets dropped due to guaranteed bit rate.
downlink Flow GBR excd packet drop	Number of exceeded downlink packets dropped due to guaranteed bit rate.
uplink AMBR excd byte drop	Number of exceeded uplink bytes dropped due to APN Maximum bit rate.
downlink AMBR excd byte drop	Number of exceeded downlink bytes dropped due to APN Maximum bit rate.
uplink AMBR excd packet drop	Number of exceeded uplink packets dropped due to APN Maximum bit rate.
downlink AMBR excd packet drop	Number of exceeded downlink packets dropped due to APN Maximum bit rate.
uplink misc byte drop	Number of uplink bytes dropped due to miscellaneous reasons.
downlink misc byte drop	Number of downlink bytes dropped due to miscellaneous reasons.
uplink misc packet drop	Number of uplink packets dropped due to miscellaneous reasons.
downlink misc packet drop	Number of downlink packets dropped due to miscellaneous reasons.
ip bad hdr	The current total number IP packets received and dropped due to bad headers.
ip ttl exceeded	The current total number of IP packets dropped because they were received with TTL values of 0.
ip fragments sent	The current total number of number of times IP packets were fragmented before being sent over the Gi interface.
ip could not fragment	The current total number of IP packets which failed in fragmentation.
ip input acl drop	The current total number IP packets that were received and then dropped due to ACL filtering. <b>NOTE:</b> This counter may increment even if no ACL is configured.

Field	Description
ip output acl drop	The current total number of IP packets that were dropped prior to sending due to ACL filtering.
ip input css down drop	The current total number of IP packets the CSS received and then dropped.
ip output css down drop	The current total number of IP packets that were dropped prior to sending due to CSS filtering.
ip early pdu rcvd	The current total number of early IP packet data units (PDUs) received.
IP bad length trim	
ip source violations	The current total number of IP packets received for which source violations were detected and then dropped.
ip source violations no accounting	The IP packets received for source violations that were detected but not included in the statistics.
ip source violation ignored	The IP source validation violations that were detected and then ignored.
<b>802.1p priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with a specific (0-7) 802.1p priority.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with a specific (0-7) 802.1p priority.
<b>Subscriber Session Statistics</b>	
Default bearers active	The total number of active default bearers.
Dedicated bearers active	The total number of active dedicated bearers.
Default bearers setup	The total number of setup default bearers.
Dedicated bearers setup	The total number of setup dedicated bearers.
Default bearers released	The total number of default bearers released.
Dedicated bearers released	The total number of dedicated bearers released.
Default bearers rel fail	The total number of default bearer release failed.
Dedicated bearers rel fail	The total number of dedicated bearer release failed.
Default bearers rejected	The total number of default bearers rejected.
Dedicated bearers rejected	The total number of dedicated bearers rejected.
UE-init mod	The total number of UE initiated bearer modifications.
Network-init mod	The total number of network initiated bearer modifications.

Field	Description
UE-init mod fail	The total number of ue initiated modifications failed.
Network-init mod fail	The total number of network initiated modifications failed.
<b>Total PDN-Type stats</b>	
PDN-Type IPv4 sessions active	The total number of pdn ipv4 active sessions.
PDN-Type IPv4 sessions setup	The total number pdn ipv4 setup sessions.
PDN-Type IPv4 sessions released	The total number of pdn ipv4 sessions released.
PDN-Type IPv6 sessions active	The total number of pdn ipv6 active sessions.
PDN-Type IPv6 sessions setup	The total number pdn ipv6 setup sessions.
PDN-Type IPv6 sessions released	The total number pdn ipv6 sessions released.
PDN-Type IPv4v6 sessions active	The total number of pdn ipv4v6 active sessions.
PDN-Type IPv4v6 sessions setup	The total number pdn ipv4v6 setup sessions.
PDN-Type IPv4v6 sessions released	The total number pdn ipv4v6 sessions released.
<b>Initiated Sessions per RAT Type</b>	
EUTRAN	The total number of sessions initiated by EUTRAN.
UTRAN	The total number of sessions initiated by UTRAN.
GERAN	The total number of sessions initiated by GERAN.
EHRPD	The total number of sessions initiated by EHRPD.
S2A GTP	The total number of sessions initiated by S2A GTP.
S2B GTP	The total number of sessions initiated by S2B GTP.
S2B PMIP	The total number of sessions initiated by S2B PMIP.
<b>Inter Technology Handovers</b>	The Inter-Technology key performance indicators (KPIs) monitor RAT Initiated Sessions and inter-technology handovers so that operators can gauge 2G/3G/4G/WiFi/eHRPD coverage and determine how WiFi is penetrating as the first attach choice. The KPIs identify how a session is initiated and how many handoffs occur.
GNGP-to-LTE handover Attempted	The total number of GNGP-to-LTE handovers that have been attempted.
GNGP-to-LTE handover Succeeded	The total number of GNGP-to-LTE handovers that have succeeded.
GNGP-to-LTE handover Failed	The total number of GNGP-to-LTE handovers that have failed
LTE-to-GNGP handover Attempted	The total number of LTE-to-GNGP handovers that have been attempted.
LTE-to-GNGP handover Succeeded	The total number of LTE-to-GNGP handovers that have succeeded.

Field	Description
LTE-to-GNGP handover Failed	The total number of LTE-to-GNGP handovers that have failed.
GNGP-to-S4SGSN handover Attempted	The total number of GNGP-to-S4SGSN handovers that have been attempted.
GNGP-to-S4SGSN handover Succeeded	The total number of GNGP-to-S4SGSN handovers that have succeeded.
GNGP-to-S4SGSN handover Failed	The total number of GNGP-to-S4SGSN handovers that have failed.
S4SGSN-to-GNGP handover Attempted	The total number of S4-SGSN-to-GNGP handovers that have been attempted.
S4SGSN-to-GNGP handover Succeeded	The total number of S4SGSN-to-GNGP handovers that have succeeded.
S4SGSN-to-GNGP handover Failed	The total number of S4SGSN-to-GNGP handovers that have failed.
S4SGSN-to-LTE handover Attempted	The total number of S4SGSN-to-LTE handovers that have been attempted.
S4SGSN-to-LTE handover Succeeded	The total number of S4SGSN-to-LTE handovers that have succeeded.
S4SGSN-to-LTE handover Failed	The total number of S4SGSN-to-LTE handovers that have failed.
LTE-to-S4SGSN handover Attempted	The total number of LTE-to-S4SGSN handovers that have been attempted.
LTE-to-S4SGSN handover Succeeded	The total number of LTE-to-S4SGSN handovers that have succeeded.
LTE-to-S4SGSN handover Failed	The total number of LTE-to-S4SGSN handovers that have failed.
LTE-to-eHRPD handover Attempted	The total number of LTE-to-eHRPD handovers that have been attempted.
LTE-to-eHRPD handover Succeeded	The total number of LTE-to-eHRPD handovers that have succeeded.
LTE-to-eHRPD handover Failed	The total number of LTE-to-eHRPD handovers that have failed.
eHRPD-to-LTE handover Attempted	The total number of eHRPD-to-LTE handovers that have been attempted.
eHRPD-to-LTE handover Succeeded	The total number of eHRPD-to-LTE handovers that have succeeded.
eHRPD-to-LTE handover Failed	The total number of eHRPD-to-LTE handovers that have failed.
LTE-to-S2bPMIP handover Attempted	The total number of LTE-to-S2bPMIP handovers that have been attempted.
LTE-to-S2bPMIP handover Succeeded	The total number of LTE-to-S2bPMIP handovers that have succeeded.
LTE-to-S2bPMIP handover Failed	The total number of LTE-to-S2bPMIP handovers that have failed.
S2bPMIP-to-LTE handover Attempted	The total number of S2bPMIP-to-LTE handovers that have been attempted.
S2bPMIP-to-LTE handover Succeeded	The total number of S2bPMIP-to-LTE handovers that have succeeded.
S2bPMIP-to-LTE handover Failed	The total number of S2bPMIP-to-LTE handovers that have failed.
eHRPD-to-S2bPMIP handover Attempted	The total number of eHRPD-to-S2bPMIP handovers that have been attempted.
eHRPD-to-S2bPMIP handover Succeeded	The total number of eHRPD-to-S2bPMIP handovers that have succeeded.
eHRPD-to-S2bPMIP handover Failed	The total number of eHRPD-to-S2bPMIP handovers that have failed.

Field	Description
S2bPMIP-to-eHRPD handover Attempted	The total number of S2bPMIP-to-eHRPD handovers that have been attempted.
S2bPMIP-to-eHRPD handover Succeeded	The total number of S2bPMIP-to-eHRPD handovers that have succeeded.
S2bPMIP-to-eHRPD handover Failed	The total number of S2bPMIP-to-eHRPD handovers that have failed.
S2bGTP-to-LTE handover Attempted	The total number of S2bGTP-to-LTE handovers that have been attempted.
S2bGTP-to-LTE handover Succeeded	The total number of S2bGTP-to-LTE handovers that have succeeded.
S2bGTP-to-LTE handover Failed	The total number of S2bGTP-to-LTE handovers that have failed.
LTE-to-S2bGTP handover Attempted	The total number of LTE-to-S2bGTP handovers that have been attempted.
LTE-to-S2bGTP handover Succeeded	The total number of LTE-to-S2bGTP handovers that succeeded.
LTE-to-S2bGTP handover Failed	The total number of LTE-to-S2bGTP handovers that failed.
S2bGTP-to-eHRPD handover Attempted	The total number of S2bGTP-to-eHRPD handovers that have been attempted.
S2bGTP-to-eHRPD handover Succeeded	The total number of S2bGTP-to-eHRPD handovers that have succeeded.
S2bGTP-to-eHRPD handover Failed	The total number of S2bGTP-to-eHRPD handovers that have failed.
eHRPD-to-S2bGTP handover Attempted	The total number of eHRPD-to-S2bGTP handovers that have been attempted.
eHRPD-to-S2bGTP handover Successful	The total number of eHRPD-to-S2bGTP handovers that have succeeded.
eHRPD-to-S2bGTP handover Failed	The total number of eHRPD-to-S2bGTP handovers that have failed.
S2aGTP-to-LTE handover Attempted	The total number of S2aGTP-to-LTE handovers that have been attempted.
S2aGTP-to-LTE handover Succeeded	The total number of S2aGTP-to-LTE handovers that have succeeded.
S2aGTP-to-LTE handover Failed	The total number of S2aGTP-to-LTE handovers that have failed.
LTE-to-S2aGTP handover Attempted	The total number of LTE-to-S2aGTP handovers that have been attempted.
LTE-to-S2aGTP handover Succeeded	The total number of LTE-to-S2aGTP handovers that have succeeded.
LTE-to-S2aGTP handover Failed	The total number of LTE-to-S2aGTP handovers that have failed.
LTE-to-S2bGTP handover Succeeded on First Uplink Data on S2b tunnel	Specifies the number of handover due to Uplink packets.
LTE-to-S2bGTP handover Succeeded on Timer Expiry	Specifies the number of handover due to Timer Expiry.
<b>IP Address Allocation Statistics</b>	
Total IPv4 addrs allocated: Local pool add assign	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IP addresses from pools configured locally on the system.
Total IPv4 addrs allocated: Static addr assign	The current total number of PDP contexts facilitated by the APN that used static IP address.

Field	Description
Total IPv4 addrs allocated: aaa provided addr	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IP addresses from a AAA server.
Total IPv4 addrs allocated: skipped ip validation for L3 tunnels	The current total number of PDP contexts facilitated by the APN that were skipped validation for L3 tunnels.
Total IPv4 addrs allocated: DHCP proxy assign	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IP addresses by the system using the DHCP client mode.
Total IPv4 addrs allocated: DHCP relay assign	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IP addresses by the system using the DHCP relay mode.
Total IPv4 addrs allocated: No allocation	The current total number of PDP contexts facilitated by the APN that were not dynamically allocated IP addresses.  This counters is relevant for a multicast sessions (MBMS) where IP allocation is not applicable.
Total IPv6 addrs allocated: Stateless auto config	The current total number ipv6 address allocation by stateless auto configuration.
Total IPv6 addrs allocated: Local pool add assign	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IPv6 addresses from pools configured locally on the system.
Total IPv6 addrs allocated: Static addr assign	The current total number of PDP contexts facilitated by the APN that used static IPv6 address.
Total IPv6 addrs allocated: No allocation	The current total number of PDP contexts facilitated by the APN that were not dynamically allocated IPv6 addresses.  This counters is relevant for a multicast sessions (MBMS) where IPv6 allocation is not applicable.
Total IPv6 addrs allocated: skipped ip validation for L3 tunnels	The current total number of PDP contexts facilitated by the APN that were skipped validation for L3 tunnels.
Total IPv6 addrs allocated: DHCPv6 proxy assign	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IPv6 addresses by the system using the DHCP client mode.
Total IPv6 addrs allocated: aaa provided addr	The current total number of PDP contexts facilitated by the APN that were dynamically assigned IPv6 addresses from a AAA server.
No allocation	The current total number of PDP contexts facilitated by the APN that were not allocated IPv6 addresses.
skipped ip validation for L3 tunnels	The current total number of PDP contexts facilitated by the APN IP validation was skipped for L3 tunnels.
4G Bearers Released by Reason	
Admin disconnect: QCI n	The number of administrative disconnects of sessions for QCI n. Where n is a QCI value from 1 to 9, or 65, 66, 68, or 69.
<b>Subscriber QoS Statistics</b>	

Field	Description
QCI n: Bearer Active	The current total number of bearers with qci n active. Here n (qci-val) is the QCI for which the negotiate limit is being set, it ranges from 1 to 9 , or is a new standard QCI value of 65, 66, 69 or 70).
QCI n: Bearer Setup	The current total number of bearers with qci n setup.
QCI n: Bearer Released	The current total number of bearers with qci n released.
QCI n: Bearer Rejected	The current total number of bearers with qci n rejected.
QCI n: Uplink Bytes Forwarded	The current total number of uplink bytes forwarded for qci n.
QCI n: Downlink Bytes Forwarded	The current total number of downlink bytes forwarded for qci n.
QCI n: Uplink Packets Forwarded	The current total number of uplink packets forwarded for qci n.
QCI n: Downlink Packets Forwarded	The current total number of downlink packets forwarded for qci n.
QCI n: Uplink Bytes Dropped	The current total number of uplink bytes dropped for qci n.
QCI n: Downlink Bytes Dropped	The current total number of downlink bytes dropped for qci n.
QCI n: Uplink Packets Dropped	The current total number of uplink packets dropped for qci n.
QCI n: Downlink Packets Dropped	The current total number of downlink packets dropped for qci n.
QCI n: Uplink Bytes dropped(MBR Excd)	The current total number of uplink bytes dropped for qci n due to exceeded MBR.
QCI n: Downlink Bytes dropped(MBR Excd)	The current total number of downlink bytes dropped for qci n due to exceeded MBR.
QCI n: Uplink pkts dropped(MBR Excd)	The current total number of uplink packets dropped for qci n due to exceeded MBR.
QCI n: Downlink pkts dropped(MBR Excd)	The current total number of downlink packets dropped for qci n due to exceeded MBR.
Non-Std QCI(Non-GBR): Bearer Active	The current total number of active bearers with non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Bearer setup	The current total number of setup bearers with non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Bearer Released	The current total number of released bearers with non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Uplink Bytes forwarded	The current total number of uplink bytes forwarded for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Downlink Bytes forwarded	The current total number of downlink bytes forwarded for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Uplink pkts forwarded	The current total number of uplink packets forwarded for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Downlink pkts forwarded	The current total number of downlink packets forwarded for non-standard (non-GBR) qci.

Field	Description
Non-Std QCI(Non-GBR): Uplink Bytes dropped	The current total number of uplink bytes dropped for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Downlink Bytes dropped	The current total number of downlink bytes dropped for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Uplink pkts dropped	The current total number of uplink packets dropped for non-standard (non-GBR) qci.
Non-Std QCI(Non-GBR): Downlink pkts dropped	The current total number of downlink packets dropped for non-standard (non-GBR) qci.
Non-Std QCI(GBR): Bearer Active	The current total number of active bearers with non-standard (non-GBR) qci.
Non-Std QCI(GBR): Bearer setup	The current total number of setup bearers with non-standard (non-GBR) qci.
Non-Std QCI(GBR): Bearer Released	The current total number of released bearers with non-standard (non-GBR) qci.
Non-Std QCI(GBR): Uplink Bytes forwarded	The current total number of uplink bytes forwarded for non-standard (GBR) qci.
Non-Std QCI(GBR): Downlink Bytes forwarded	The current total number of downlink bytes forwarded for non-standard (GBR) qci.
Non-Std QCI(GBR): Uplink pkts forwarded	The current total number of uplink packets forwarded for non-standard (GBR) qci.
Non-Std QCI(GBR): Downlink pkts forwarded	The current total number of downlink packets forwarded for non-standard (GBR) qci.
Non-Std QCI(GBR): Uplink Bytes dropped	The current total number of uplink bytes dropped for non-standard (GBR) qci.
Non-Std QCI(GBR): Downlink Bytes dropped	The current total number of downlink bytes dropped for non-standard (GBR) qci.
Non-Std QCI(GBR): Uplink pkts dropped	The current total number of uplink packets dropped for non-standard (GBR) qci.
Non-Std QCI(GBR): Downlink pkts dropped	The current total number of downlink packets dropped for non-standard (GBR) qci.
Invalid/ Not-Configured QCI: Bearer Rejected	The current total number of bearers rejected with invalid or non-configures qci.
<b>Session statistics</b>	
current contexts (selected APN(s))	The current total number of PDP contexts facilitated by the APN.
current contexts (system wide)	The current total number of PDP contexts facilitated by the entire system.
cumulative contexts (selected APN(s))	The cumulative number of PDP contexts facilitated by the APN.
cumulative contexts (system wide)	The cumulative number of PDP contexts facilitated by the entire system.
Current APN context load	Current APN context load = ( current contexts (selected APN(s)) / current contexts (system wide) ) * 100.

Field	Description
Cumulative APN context load	The cumulative percent utilization of the APN as function of the APN's configured maximum number of supported PDP contexts and the cumulative number of PDP contexts facilitated by the APN.
<b>Pilot packet statistics</b>	
NAT-Alloc	The total number of Pilot Packets sent per APN for every IP/Port allocation for all NAT enabled calls.
NAT-De-Alloc	The total number of Pilot Packets sent per APN for every IP/Port deallocation for all NAT enabled calls.
Non-NAT-Alloc	The total number of Pilot Packets sent per APN for every IP/Port allocation for all non-NAT calls.
Non-NAT-De-Alloc	The total number of Pilot Packets sent per APN for every IP/Port deallocation for all non-NAT calls.
Total-Alloc	The total number of Pilot Packets sent per APN for every IP/Port allocation for all call types.
Total-De-Alloc	The total number of Pilot Packets sent per APN for every IP/Port deallocation for all call types.
RAT-Change-User-Info	The total number of Pilot Packets sent for every subscriber IP allocation on RAT type change.
RAT-Change-NAT-Info	The total number of Pilot Packets sent for every NAT port chunk allocation on RAT type change.
<b>AAA-Counters</b>	
Authentication Counters	
Access-Request Sent	The total number of access requests that were sent.
Access-Request Timeouts	The total number of access request timeouts.
<b>Accounting Counters</b>	
Accounting-Request Sent	The total number of accounting requests that were sent.
Accounting-Response Received	The total number of accounting responses that were received.
Accounting-Request Timeouts	The total number of accounting request timeouts.
RADIUS Acct-Req purged	The total number of RADIUS accounting requests purged.
GTPP Acct-req purged	The total number of GTPP accounting requests purged.

Field	Description
GTPP sec Acct-req purged	The total number of secondary G-CDR accounting requests being processed and purged by this AAAMgr instance for which the GTPP protocol is being used to deliver the accounting message to the Charging Gateway Function (CGF) . It counts total secondary G-CDR accounting requests purged by this AAAMgr instance
GTPP Chrg-req purged	The total number of GTPP charging requests purged.
GTPP sec Chrg-req purged	The total number of secondary eG-CDR charging requests being processed and purged by this AAAMgr instance for which the GTPP protocol is being used to deliver the charging message to the Charging Gateway Function (CGF). It counts total secondary eG-CDR charging requests purged by this AAAMgr instance

Table 126: show apn statistics all name Command Output Descriptions

Field	Description
<b>Active Sessions per RAT Type:</b>	
LTE-M	Dsplays number of initiated sessions and active sessions with LTE-M RAT Type per APN.

## show apn statistics name qci

Table 127: show apn statistics name qci Command Output Descriptions

Field	Description
<b>Data Statistics</b>	
Uplink Bytes	The total number of uplink bytes received.
Uplink Packets	The total number of uplink packets received.
Uplink Bytes dropped	The total number of uplink bytes dropped for any reason.
Uplink Pkts dropped	The total number of uplink packets dropped for any reason.
Downlink Bytes	The total number of downlink bytes.
Downlink Pkts	The total number of downlink packets.
Downlink Bytes dropped	The total number of downlink bytes dropped for any reason.
Downlink Pkts dropped	The total number of downlink packets dropped for any reason.

Field	Description
<b>Uplink Dropped:</b> This section provides detailed reasons for uplink byte and packet drops.	
MBR Exceeded (Bytes)	The total number of uplink IP bytes dropped due to exceeding the maximum bit rate (MBR).
MBR Exceeded (Pkts)	The total number of uplink IP packets dropped due to exceeding the maximum bit rate (MBR).
AMBR Exceeded (Bytes)	The total number of uplink IP bytes dropped due to exceeding the aggregate maximum bit rate (AMBR).
AMBR Exceeded (Pkts)	The total number of uplink IP packets dropped due to exceeding the maximum bit rate (MBR).
Miscellaneous (Bytes)	The total number of uplink IP bytes dropped for miscellaneous reasons.
Miscellaneous (Pkts)	The total number of uplink IP packets dropped for miscellaneous reasons.
Overcharge Prtctn (Bytes)	The total number of IP input bytes dropped due to Overcharging protection.
Overcharge Prtctn (Pkts)	The total number of IP input packets dropped due to overcharging protection.
SGW Restoration (Bytes)	The total number of IP input bytes dropped due to S-GW Restoration.
SGW Restoration (Pkts)	The total number of IP input packets dropped due to S-GW Restoration.
SDF Gate (Bytes)	The total number of IP input bytes dropped due to Dynamic Rule level throttling.
SDF Gate (Pkts)	The total number of IP input packets dropped due to Dynamic Rule level throttling.
ITC Gate (Bytes)	The total number of IP input bytes dropped due to flow limits exceeded.
ITC Gate (Pkts)	The total number of IP input packets dropped due to flow limits being exceeded.
Flow Terminated (Bytes)	The total number of IP input bytes dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Flow Terminated (Pkts)	The total number of IP input packets dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.

Field	Description
Subsession Terminated (Bytes)	The total number of IP input bytes dropped due to Bearer termination.
Subsession Terminated (Pkts)	The total number of IP input packets dropped due to Bearer termination.
Call Terminated (Bytes)	The total number of IP input bytes dropped due to session termination.
Call Terminated (Pkts)	The total number of IP input packets dropped due to session termination.
DCCA Discard (Bytes)	The total number of IP input bytes dropped due to DCCA not enabled but charging action has credit-control configured.
DCCA Discard (Pkts)	The total number of IP input packets dropped due to DCCA not enabled but charging action has credit-control configured.
No Rule Match (Bytes)	The total number of IP input bytes dropped due to no rule match.
No Rule Match (Pkts)	The total number of IP input packets dropped due to no rule match.
ICAP (Bytes)	The total number of IP input bytes dropped due to ICAP (Internet Content Adaption Protocol) action: discard or terminate flow.
ICAP (Pkts)	The total number of IP input packets dropped due to ICAP (Internet Content Adaption Protocol) action: discard or terminate flow.
SFW (Bytes)	The total number of IP input bytes dropped due to SFW (Software Firewall) action.
SFW (Pkts)	The total number of IP input packets dropped due to Software Firewall (SFW) action.
Hierarchical ENF (Bytes)	The total number of IP input bytes dropped due to Hierarchical enforcement flow status.
Hierarchical ENF (Pkts)	The total number of IP input packets dropped due to Hierarchical enforcement flow status.
Dynamic CA Gate (Bytes)	The total number of IP input bytes dropped due to dynamic CA gate.
Dynamic CA Gate (Pkts)	The total number of IP input packets dropped due to dynamic CA gate.

Field	Description
NAT64 Cancel (Bytes)	The total number of IP input bytes dropped because IPv6 packets received are translated to IPv4 by NAT.
NAT64 Cancel (Pkts)	The total number of IP input packets dropped because IPv6 packets received are translated to IPv4 by NAT.
Bearer Not Found (Bytes)	The total number of IP input bytes dropped because an associated bearer was not found.
Bearer Not Found (Pkts)	The total number of IP input packets dropped because no associated bearer was found.
<b>Downlink Dropped:</b> This section provides detailed reasons for downlink byte and packet drops.	
MBR Exceeded (Bytes)	The total number of downlink IP bytes dropped due to exceeding the maximum bit rate (MBR).
MBR Exceeded (Pkts)	The total number of downlink IP packets dropped due to exceeding the maximum bit rate (MBR).
AMBR Exceeded (Bytes)	The total number of downlink IP bytes dropped due to exceeding the aggregate maximum bit rate (AMBR).
AMBR Exceeded (Pkts)	The total number of downlink IP packets dropped due to exceeding the aggregate maximum bit rate (AMBR).
Miscellaneous (Bytes)	The total number of downlink IP bytes dropped for miscellaneous reasons.
Miscellaneous (Pkts)	The total number of downlink IP packets dropped for miscellaneous reasons.
Overcharge Prtctn (Bytes)	The total number of IP output bytes dropped due to Overcharging protection.
Overcharge Prtctn (Pkts)	The total number of IP output packets dropped due to Overcharging protection.
SGW Restoration (Bytes)	The total number of IP output bytes dropped due to SGW Restoration.
SGW Restoration (Pkts)	The total number of IP output packets dropped due to SGW Restoration.
SDF Gate (Bytes)	The total number of IP output bytes dropped due to Dynamic Rule level throttling.
SDF Gate (Pkts)	The total number of IP output packets dropped due to Dynamic Rule level throttling.

Field	Description
ITC Gate (Bytes)	The total number of IP output bytes dropped due to flow limits being exceeded.
ITC Gate (Pkts)	The total number of IP output packets dropped due to flow limits being exceeded.
Flow Terminated (Bytes)	The total number of IP output packets dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Flow Terminated (Pkts)	The total number of IP output packets dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Subsession Terminated (Bytes)	The total number of IP output bytes dropped due to bearer termination.
Subsession Terminated (Pkts)	The total number of IP output packets dropped due to bearer termination.
Call Terminated (Bytes)	The total number of IP output bytes dropped due to session termination.
Call Terminated (Pkts)	The total number of IP output packets dropped due to session termination.
DCCA Discard (Bytes)	The total number of IP output bytes dropped due to DCCA not enabled but charging action has credit-control configured.
DCCA Discard (Pkts)	The total number of IP output packets dropped due to DCCA not enabled but charging action has credit-control configured.
No Rule Match (Bytes)	The total number of IP output bytes dropped due to no rule match.
No Rule Match (Pkts)	The total number of IP output packets dropped due to no rule match.
ICAP (Bytes)	N/A
ICAP (Pkts)	N/A
SFW (Bytes)	The total number of IP output bytes dropped due to SFW (Software Firewall) action.
SFW (Pkts)	The total number of IP output packets dropped due to SFW (Software Firewall) action.

Field	Description
Hierarchical ENF (Bytes)	The total number of IP output bytes dropped due to Hierarchical enforcement flow status.
Hierarchical ENF (Pkts)	The total number of IP output packets dropped due to Hierarchical enforcement flow status.
Dynamic CA Gate (Bytes)	The total number of IP output bytes dropped due to dynamic CA gate.
Dynamic CA Gate (Pkts)	The total number of IP output packets dropped due to dynamic CA gate.
NAT64 Cancel (Bytes)	The total number of IP output bytes dropped because IPv6 packets received are translated to IPv4 by NAT.
NAT64 Cancel (Pkts)	The total number of IP output packets dropped because IPv6 packets received are translated to IPv4 by NAT.
Bearer Not Found (Bytes)	The total number of IP output bytes dropped because an associated bearer was not found.
Bearer Not Found (Pkts)	The total number of IP output packets dropped because an associated bearer was not found.
<b>4G Bearers Released by Reasons</b>	
Admin Disconnect	The total number of 4G bearers released for each QCI 1 through 9 due to an Administrative disconnect.
<b>ARP level distribution of 4G Bearer Released by Reasons</b>	
Admin Disconnect	The total number of administrative disconnects by QCI n/ARP n value. Where QCI n is a value from 1 through 9 and its associated ARP n values are from 1 to 15.
<b>Subscriber QoS Statistics:</b> Provides detailed packet/byte drop statistics for QCI n/ARP n. Where QCI is a value from 1 through 9 and its associated ARP n values are from 1 through 15;	
Bearer Active	
Bearer Released	
Bearer Setup	
Bearer Rejected	
Uplink Bytes forwarded	
Uplink Bytes forwarded	
Uplink Bytes dropped	

Field	Description
Uplink Pkts dropped	
Downlink Bytes forwarded	
Downlink Pkts forwarded	
Downlink Bytes dropped	
Downlink Pkts dropped	
<b>Uplink Dropped:</b> This section provides detailed uplink packet/byte drop information for all QCI n/ARP n values.	
MBR Exceeded (Bytes)	The total number of uplink IP bytes dropped due to exceeding the maximum bit rate (MBR).
MBR Exceeded (Pkts)	The total number of uplink IP packets dropped due to exceeding the maximum bit rate (MBR).
AMBR Exceeded (Bytes)	The total number of uplink IP bytes dropped due to exceeding the aggregate maximum bit rate (AMBR).
AMBR Exceeded (Pkts)	The total number of uplink IP packets dropped due to exceeding the aggregate maximum bit rate (AMBR).
Miscellaneous (Bytes)	The total number of uplink IP bytes dropped for miscellaneous reasons.
Miscellaneous (Pkts)	The total number of uplink IP packets dropped for miscellaneous reasons.
Overcharge Prtctn (Bytes)	The total number of IP input bytes dropped due to Overcharging protection.
Overcharge Prtctn (Pkts)	The total number of IP input packets dropped due to overcharging protection.
SGW Restoration (Bytes)	The total number of IP input bytes dropped due to S-GW Restoration.
SGW Restoration (Pkts)	SGW Restoration (Pkts): The total number of IP input packets dropped due to S-GW Restoration.
SDF Gate (Bytes)	The total number of IP input bytes dropped due to Dynamic Rule level throttling.
SDF Gate (Pkts)	The total number of IP input packets dropped due to Dynamic Rule level throttling.
ITC Gate (Bytes)	The total number of IP input bytes dropped due to flow limits exceeded.

Field	Description
ITC Gate (Pkts)	The total number of IP input packets dropped due to flow limits being exceeded.
Flow Terminated (Bytes)	The total number of IP input bytes dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Flow Terminated (Pkts)	The total number of IP input packets dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Subsession Terminated (Bytes)	The total number of IP input bytes dropped due to Bearer termination.
Subsession Terminated (Pkts)	The total number of IP input packets dropped due to Bearer termination.
Call Terminated (Bytes)	The total number of IP input bytes dropped due to session termination.
Call Terminated (Pkts)	The total number of IP input packets dropped due to session termination.
DCCA Discard (Bytes)	The total number of IP input bytes dropped due to DCCA not enabled but charging action has credit-control configured.
DCCA Discard (Pkts)	The total number of IP input packets dropped due to DCCA not enabled but charging action has credit-control configured.
No Rule Match (Bytes)	The total number of IP input bytes dropped due to no rule match.
No Rule Match (Pkts)	The total number of IP input packets dropped due to no rule match.
ICAP (Bytes)	The total number of IP input bytes dropped due to ICAP (Internet Content Adaption Protocol) action: discard or terminate flow.
ICAP (Pkts)	The total number of IP input packets dropped due to ICAP (Internet Content Adaption Protocol) action: discard or terminate flow.
SFW (Bytes)	The total number of IP input bytes dropped due to SFW (Software Firewall) action.
SFW (Pkts)	The total number of IP input packets dropped due to Software Firewall (SFW) action.

Field	Description
Hierarchical ENF (Bytes)	The total number of IP input bytes dropped due to Hierarchical enforcement flow status.
Hierarchical ENF (Pkts)	The total number of IP input packets dropped due to Hierarchical enforcement flow status.
Dynamic CA Gate (Bytes)	The total number of IP input bytes dropped due to dynamic CA gate.
Dynamic CA Gate (Pkts)	The total number of IP input packets dropped due to dynamic CA gate.
NAT64 Cancel (Bytes)	The total number of IP input bytes dropped because IPv6 packets received are translated to IPv4 by NAT.
NAT64 Cancel (Pkts)	The total number of IP input packets dropped because IPv6 packets received are translated to IPv4 by NAT.
Bearer Not Found (Bytes)	The total number of IP input bytes dropped because an associated bearer was not found.
Bearer Not Found (Pkts)	The total number of IP input packets dropped because an associated bearer was not found.
<b>Downlink Dropped:</b> This section provides detailed downlink packet/byte drop information for all QCI n/ARP n values.	
MBR Exceeded (Bytes)	The total number of downlink IP bytes dropped due to exceeding the maximum bit rate (MBR).
MBR Exceeded (Pkts)	The total number of downlink IP packets dropped due to exceeding the maximum bit rate (MBR).
AMBR Exceeded (Bytes)	The total number of downlink IP bytes dropped due to exceeding the aggregate maximum bit rate (AMBR).
AMBR Exceeded (Pkts)	The total number of downlink IP packets dropped due to exceeding the aggregate maximum bit rate (AMBR).
Miscellaneous (Bytes)	The total number of downlink IP bytes dropped for miscellaneous reasons.
Miscellaneous (Pkts)	The total number of downlink IP packets dropped for miscellaneous reasons.
Overcharge Prctn (Bytes)	The total number of IP output bytes dropped due to Overcharging protection.
Overcharge Prctn (Pkts)	The total number of IP output packets dropped due to Overcharging protection.

Field	Description
SGW Restoration (Bytes)	The total number of IP output bytes dropped due to S-GW Restoration.
SGW Restoration (Pkts)	The total number of IP output packets dropped due to S-GW Restoration.
SDF Gate (Bytes)	The total number of IP output bytes dropped due to Dynamic Rule level throttling.
SDF Gate (Pkts)	The total number of IP output packets dropped due to Dynamic Rule level throttling.
ITC Gate (Bytes)	The total number of IP output bytes dropped due to flow limits exceeded.
ITC Gate (Pkts)	The total number of IP output packets dropped due to flow limits being exceeded.
Flow Terminated (Bytes)	The total number of IP output bytes dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Flow Terminated (Pkts)	The total number of IP output packets dropped due to Flow status redirect, Flow status remove, Flow status terminate, Flow action discard, Flow action redirect in charging action, and Redirection from OCS.
Subsession Terminated (Bytes)	The total number of IP output bytes dropped due to Bearer termination.
Subsession Terminated (Pkts)	The total number of IP output packets dropped due to Bearer termination.
Call Terminated (Bytes)	The total number of IP output bytes dropped due to session termination.
Call Terminated (Pkts)	The total number of IP output packets dropped due to session termination.
DCCA Discard (Bytes)	The total number of IP output bytes dropped due to DCCA not enabled but charging action has credit-control configured.
DCCA Discard (Pkts)	The total number of IP output packets dropped due to DCCA not enabled but charging action has credit-control configured.
No Rule Match (Bytes)	The total number of IP output bytes dropped due to no rule match.

Field	Description
No Rule Match (Pkts)	The total number of IP output packets dropped due to no rule match.
ICAP (Bytes)	N/A
ICAP (Pkts)	N/A
SFW (Bytes)	The total number of IP output bytes dropped due to SFW (Software Firewall) action.
SFW (Pkts)	The total number of IP output packets dropped due to SFW (Software Firewall) action.
Hierarchical ENF (Bytes)	The total number of IP output bytes dropped due to Hierarchical enforcement flow status.
Hierarchical ENF (Pkts)	The total number of IP output packets dropped due to Hierarchical enforcement flow status.
Dynamic CA Gate (Bytes)	The total number of IP output bytes dropped due to dynamic CA gate.
Dynamic CA Gate (Pkts)	The total number of IP output packets dropped due to dynamic CA gate.
NAT64 Cancel (Bytes)	The total number of IP output bytes dropped because IPv6 packets received are translated to IPv4 by NAT.
NAT64 Cancel (Pkts)	The total number of IP output packets dropped because IPv6 packets received are translated to IPv4 by NAT.
Bearer Not Found (Bytes)	The total number of IP output bytes dropped because an associated bearer was not found.
Bearer Not Found (Pkts)	The total number of IP output packets dropped because an associated bearer was not found.

# CHAPTER 10

## show apn-profile

This chapter describes the output of the **show apn-profile** command.

- [show apn-profile full name](#), on page 489

### show apn-profile full name

*Table 128: show apn-profile full name Command Output Descriptions*

Field	Description
APN Profile Name	Indicates the name of the Access Point Name (APN) profile.
Resolution Priority	Indicates the address-resolution-mode configured for this APN Profile. Possible values are dns-fallback and local.
Charging Characteristics Prefer Local	Indicates whether the APN profile prefers the charging characteristics settings from the APN profile instead of the charging characteristics received from the HLR.
Charging Characteristics Behavior	Indicates the behavior bit in charging characteristics provided by the APN profile when the HLR does not provide a value.
Charging Characteristics Profile-Index	Indicates the charging characteristics profile index specified by the APN profile, such as 4 for prepaid billing or 8 for normal billing.
<b>3gpp qos to dscp Uplink mapping</b>	
This group displays 3GPP QoS to Differentiated Services Code Point (DSCP) uplink mapping information.	
conversational	Indicates the DSCP configured for conversational type of traffic.
streaming	Indicates the DSCP configured for streaming type of traffic.
interactive (TP 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1.
interactive (TP 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2.
interactive (TP 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3.

Field	Description
<b>3gpp qos to dscp Uplink mapping based on Allocation Priority</b>	
This group displays 3GPP QoS to Differentiated Services Code Point (DSCP) uplink mapping information based on allocation priority.	
interactive (TP 1, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 1.
interactive (TP 1, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 2.
interactive (TP 1, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 3.
interactive (TP 2, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 1.
interactive (TP 2, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 2.
interactive (TP 2, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 3.
interactive (TP 3, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 1.
interactive (TP 3, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 2.
interactive (TP 3, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 3.
<b>3gpp qos to Downlink mapping</b>	
This group displays 3GPP QoS to Differentiated Services Code Point (DSCP) downlink mapping information.	
conversational	Indicates the DSCP configured for conversational type of traffic.
streaming	Indicates the DSCP configured for streaming type of traffic.
interactive (TP 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1.
interactive (TP 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2.
interactive (TP 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3.
<b>3gpp qos to dscp Downlink mapping based on Allocation Priority</b>	
This group displays 3GPP QoS to Differentiated Services Code Point (DSCP) downlink mapping information based on allocation priority.	
interactive (TP 1, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 1.

Field	Description
interactive (TP 1, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 2.
interactive (TP 1, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 1 and allocation priority 3.
interactive (TP 2, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 1.
interactive (TP 2, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 2.
interactive (TP 2, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 2 and allocation priority 3.
interactive (TP 3, Alloc.P 1)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 1.
interactive (TP 3, Alloc.P 2)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 2.
interactive (TP 3, Alloc.P 3)	Indicates the DSCP configured for interactive type of traffic with traffic priority 3 and allocation priority 3.
IP Source Validation	Indicates whether check for IP source validation violations is enabled.
Direct Tunnel	Indicates if the SGSN allows direct tunneling if the direct tunneling is supported by destination node.
Service Restriction for Access Type > UMTS	Indicates if the SGSN is configured to restrict the PDP context activation from Universal Mobile Telecommunications Systems (3G) network access.
Inactivity Idle timeout in seconds	Indicates the PDP inactivity timeout value in seconds.
Inactivity Idle timeout action	Indicates the action to be taken when the PDP inactivity timeout value is reached.
Inactivity Idle timeout action condition	Indicates the condition that warrants a PDP detach when PDP inactivity timeout value is reached.
Allocation OR Retention Priority	Indicates the QoS Allocation/Retention Priority.
<b>Traffic Policing</b>	
Traffic Policing Uplink	Indicates if traffic policing is configured for uplink traffic.
Traffic Policing Downlink	Indicates if traffic policing is configured for downlink traffic.
[SaMOG] IP ACL IN	
[SaMOG] IP ACL OUT	
[SaMOG] IP CONTEXT NAME	
[SaMOG] IP POOL NAME	

Field	Description
[SaMOG] IPv6 Prefix Pool Name	Indicates the IPv6 pool name to be used by SaMOG if the 'Framed-IPv6-Pool' AVP is unavailable in the Diameter AA-Answermessage.
[SaMOG] IPv6 Unsolicited Router Advertisement options:	
Number of router advts to deprecate prefix	Indicates the number of times unsolicited router advertisement must be sent to deprecate an IPv6 prefix.
Interval between router advts to deprecate prefix	Indicates the interval between each unsolicited router advertisement to deprecate an IPv6 prefix.
Number of router advts to advertise prefix	Indicates the number of times unsolicited router advertisement must be sent to advertise an IPv6 prefix.
Interval between router advts to advertise prefix	Indicates the interval between each unsolicited router advertisement to advertise an IPv6 prefix.
[SaMOG] IP RULEBASE	
[SaMOG] DNS PRIMARY	
[SaMOG] DNS SECONDARY	
[SaMOG] IPv6 DNS PRIMARY	
[SaMOG] IPv6 DNS Secondary	
[SaMOG] DHCP SHORT LEASE	Indicates the DHCP short lease time for web authorization sessions to force the UE to initiate DHCP request after the pre-authentication phase completes
[SaMOG] DHCP LEASE TIME	Indicates the lease time for the UE's IP address during the web authorization TAL phase.
[SaMOG] DF-SET FRAGMENTATION OPTION	
[SaMOG] FRAGMENTATION TYPE	
<b>Idle Mode ACL (SGW)</b>	
IPv4 ACL	Indicates the configuration of access control lists (ACLs) that define rules to apply to downlink data destined for UEs in an idle mode - IPv4.
IPv6 ACL	Indicates the configuration of access control lists (ACLs) that define rules to apply to downlink data destined for UEs in an idle mode - IPv6.
DNS Extension with MSISDN	Indicates whether the SGSN is configured to append an offset group of digits from the MSISDN to the APN string that is being sent in the DNS query.
DNS Extension with LAC-RAC	Indicates whether the SGSN is configured to append geographical information to the APN string that is being sent in the DNS query.
Fallback on DNS Failure	Indicates whether fallback on DNS failure is enabled or disabled.

Field	Description
DNS Extension with RNC-ID	Indicates whether the SGSN is configured to include the ID of the calling RNC in the APN string that is being sent in the DNS query.
DNS Extension with Charging Characteristics	Indicates whether the SGSN is configured to include the profile index value of the charging characteristics in the APN string that is being sent in the DNS query.
SNAPTR DNS Query for APN Resolution	Indicates whether the SGSN is configured to send Straightforward Name Authority Pointer (SNAPTR) type DNS query for APN resolution.
<b>P-GW</b>	
IP-Address	Indicates the IP address of the P-GW supporting APNs associated with this APN profile.
S5-S8-Protocol	Indicates the S5-S8 protocol configured for the this P-GW.
Weight	Indicates the weight assigned to this P-GW for load balancing purposes.
<b>QOS APN-AMBR</b>	
MAX uplink	Indicates the aggregate maximum bit rate (AMBR) for uplink (subscriber to network) traffic.
MAX downlink	Indicates the aggregate maximum bit rate (AMBR) for downlink (network to subscriber) traffic.
<b>QOS Default BRR</b>	
QCI	Indicates the QoS Class Identifier (QCI) for the default bearer.
ARP	Indicates the QoS address retention priority (ARP) value for the default bearer.
Preemption-Capability	Indicates the configuration of the QoS preemption capability flag for the default bearer.
Preemption-Vulnerability	Indicates the configuration of the QoS vulnerability capability flag for the default bearer.
QCI-QOS mapping table	If configured, the name of the QCI-QOS mapping table associated with this APN Profile.
<b>Location Reporting</b>	
Location Reporting UMTS	Indicates the configuration of the <b>location-reporting</b> command for UMTS access type.
Location Reporting GPRS	Indicates the configuration of the <b>location-reporting</b> command for GPRS access type.
APN Type	Indicates the configuration of the <b>apn-type</b> command, which identifies the APN is an IMS APN, allowing the SGSN to delay sending MBR to the S-GW until after receiving the Forward Relocation Complete Ack from the peer during SRNS procedure. By default this identification is disabled.
<b>QOS upgrade from PGW for non-gbr</b>	

Field	Description
Action	Indicates the configuration of the <b>qos pgw-upgrade non-gbr</b> command, which configures the action to be taken when the MME receives a QoS upgrade from P-GW for Non-GBR bearers  Possible values: accept/reject/locally-cap/Not Configured.
<b>Dedicated bearers</b>	
GBR	Indicates the configuration of the <b>dedicated-bearers</b> command, which configures the MME to either accept or reject GBR dedicated bearers.  Possible values: accept/reject/Not Configured.
Non-GBR	Indicates the configuration of the <b>dedicated-bearers</b> command, which configures the MME to either accept or reject Non-GBR dedicated bearers.  Possible values: accept/reject/Not Configured.
<b>Allow QoS Upgrade from GGSN</b>	
QoS Upgrade From GGSN (UMTS)	Indicates if QoS upgrade from GGSN is enabled or disabled.
Capped with Subscribed QoS	Indicates if capping of QoS with Subscribed QoS (local/HLR) is enabled or disabled.
QoS Upgrade From GGSN (GPRS)	Indicates if QoS upgrade from GGSN is enabled or disabled.
Capped with Subscribed QoS	Indicates if capping of QoS with Subscribed QoS (local/HLR) is enabled or disabled.
<b>Bearer Inactivity Timeout</b>	
Exclude Default Bearer	Indicates if the application will ignore bearer inactivity handling for default/primary bearer.
GBR or non-GBR	Indicates that the system will check for low activity on a GBR or non-GBR bearer.
Timeout (Seconds)	The configured dedicated bearer timeout, in seconds.
Threshold (bytes)	The configured volume threshold for the dedicated bearer timeout (in bytes).
Direction	The traffic direction on which to execute the dedicated bearer timeout action (uplink, downlink, or bi-directional).
Associated Quality of Service Profile Name (UMTS)	Displays the name of the Quality of Service profile associated with the APN profile in a 3G network (access type "UMTS").
Associated Quality of Service Profile Name (GPRS)	Displays the name of the Quality of Service profile associated with the APN profile in a 2G network (access type "GPRS").
Validity	Displays the validity of the QoS profile associated with the APN profile as either "Valid" or "Invalid" based on whether or not such a QoS profile is created or exists in the system.
<b>802.1p priority marking statistics</b>	

Field	Description
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with a specific (0-7) 802.1p priority. Deprecated in releases 16.0 and later.
<b>Priority marking statistics</b>	
Uplink: Priority 0-7	The total number of packets sent in the uplink direction marked with an internal QoS priority.
Downlink: Priority 0-7	The total number of packets sent in the downlink direction marked with an internal QoS priority.
APN Restoration Priority	Displays the locally configured priority for reactivating impacted PDNs following a P-GW Restart Notification (PRN). If enabled, the configured restoration priority of 1 through 16 is displayed (1 is highest priority, 16 is lowest).
Service Restriction for Access Type UMTS	The restrict access-type command under the APN profile configuration mode is used to configure PDP activation restriction on the basis of access type. This field displays if service restriction is enabled for an UMTS service.
Service Restriction for Access Type GPRS	The restrict access-type command under the APN profile configuration mode is used to configure PDP activation restriction on the basis of access type. This field displays if service restriction is enabled for an GPRS service.
Service Restriction for Access Type EPS	The restrict access-type command under the APN profile configuration mode is used to configure PDP activation restriction on the basis of access type. This field displays if service restriction is enabled for an EPS service.
Complete APN restricted	This field indicates if complete APN restriction is enabled.
ESM-T3396 Timer	This field displays "Not Configured" if the ESM T3396 timeout is not configured for any cause code.  If the ESM T3396 timeout is configured for a cause code, the following two fields display the configured values.
Value for Cause Code UNKNOWN OR MISSING APN(27)	This field displays the configured T3396 timeout value in seconds for cause code value 27.
Value for Cause Code INSUFFICIENT RESOURCES(26)	This field displays the configured T3396 timeout value in seconds for cause code value 26.
CIoT:	
SCEF:	
Wait-Time	Displays the configured SCEF wait time, in seconds.
<b>S-GW Restoration</b>	
Session Hold (T-PDN Release) time	Specifies the maximum time to hold or release sessions at S-GW
UE Usage Type	Configures UE usage type for disconnecting PDN for up service area.

Field	Description
Collocated Node	<p>Configures the Collocation name to select the collocated S/PGW node IP addresses and/or PGW Node name for 5GS Interworking.</p> <p><b>Note</b> PGW Node name should be configured under <b>Collocated-node</b> for 5GS interworking with N26 interface. This configuration allows the <b>P-GW Node Name</b> to include the configured name in <b>Context Response</b> and <b>Forward relocation Request Response</b> messages from MME to AMF over N26 interface.</p>
<b>PGW-Address with SMF Combined Configuration</b>	
SMF-combined	Configures a combined P-GW and SMF.

# CHAPTER 11

## show apn-remap-table

This chapter describes the output of the **show apn-remap-table** command.

- [show apn-remap-table full name](#), on page 497

### show apn-remap-table full name

This command provides detailed configuration and functional information for a specified apn-remap-table. Only those settings which are configured will be displayed in the output of this command.

*Table 129: show apn-remap-table full name Command Output Descriptions*

Field	Description
Default APN	Displays the network identifier to be used when the normal APN selection process fails. This setting is configured using the <b>apn-selection-default</b> command. Up to four individual default APN configurations will be displayed if configured.
Require Subscription APN	Indicates if this APN name must be included in the subscription data for the default APN feature to function.
Use Default APN when no APN is requested	Indicates that the default APN should be used if no APN is requested in the subscription record.
Use Default APN when DNS Query fails	Indicates that the default APN should be used if the DNS query fails.
Fallback APN to use when Default APN not present in subscription	Indicates the dummy APN to be used when the default APN is not present in the subscription.
Fallback APN in First subscription record when Default APN not present	Indicates whether to use the APN from the first subscription record when the configured default APN is not available.
Use APN from Single Subscription record	Indicates whether to use the APN from the subscription record if it is the only record available and normal APN selection fails.
APN selection mode when APN requested not present	Indicates the default APN selection mode, either first-in-subscription or lowest-context-id. This setting is configured using the <b>apn-selection-default</b> command.

Field	Description
APN to use when no APN is requested	Indicates the APN that will be used when no APN is requested. This setting is configured using the <b>blank-apn</b> command.
<b>Charging Characteristic APN Override Entry <i>n</i></b>	Displays a charging characteristics-based APN override group entry and associated settings. This group of settings is configured using the <b>cc</b> command.
Match Charging Characteristics Behavior	Indicates the charging characteristic behavior bit value.
Match Charging Characteristics Profile-Index	Indicates the index value for this charging characteristic profile.
Match Requested APN	Identifies the "old" APN network identifier of that is configured to be overridden/remapped.
APN to use for overriding	Identifies the "new" APN network identifier to which the APN will be remapped.
Wildcard APN for IPv4	Identifies the configuration of the wildcard APN feature for IPv4 PDP contexts.
Wildcard APN for IPv6	Identifies the configuration of the wildcard APN feature for IPv6 PDP contexts.
Wildcard APN for IPv4v6	Identifies the configuration of the wildcard APN feature for dual IPv4v6 PDP contexts.
Wildcard APN for PPP	Identifies the configuration of the wildcard APN feature for PPP contexts.
<b>APN remap Entry <i>n</i></b>	Displays an APN remap group entry and associated settings.
Match Input NI wildcard	Identifies the "old" APN network identifier that is being mapped for replacement.
Remap Input NI to	Identifies the new (target) network identifier to use.
Match Input OI wildcard	Identifies the "old" APN operator identifier that is being mapped for replacement.
Remap Input OI to	Identifies the new (target) operator identifier to use.
Replace wildcard MCC in Input OI with	Identifies the new (target) MCC value to use. This is specified using the <b>value-for-oi-mcc</b> keyword.
Replace wildcard MNC in Input OI with	Identifies the new (target) MNC value to use. This is specified using the <b>value-for-oi-mnc</b> keyword.

## CHAPTER 12

# show asngw-service

This chapter includes the **show asngw-service** command output tables.

- [show asngw-service all](#), on page 499
- [show asngw-service session all](#), on page 502
- [show asngw-service session counters](#), on page 503
- [show asngw-service session counters verbose](#), on page 505
- [show asngw-service session full](#), on page 511
- [show asngw-service session counters function-type data-path](#), on page 513
- [show asngw-service session peer-address](#), on page 517
- [show asngw-service session summary](#), on page 518
- [show asngw-service statistics](#), on page 518
- [show asngw-service statistics function-type ms-state-change](#), on page 521
- [show asngw-service statistics function-type ms-state-change](#), on page 524
- [show asngw-service statistics verbose](#), on page 526

## show asngw-service all

*Table 130: show asngw-service all Command Output Descriptions*

Field	Description
Service name	The ASN GW service name.
Context	The context in which the service is configured.
Bind	The bind status.
Max Subscribers	The maximum number of subscribers.
IP address	IP address of ASN GW server where this service is located.
UDP Port	The UDP port number.
Service Status	Status of this service.

Field	Description
Authentication	The authentication mode. Possible modes are: <ul style="list-style-type: none"> <li>• None</li> <li>• User (Single EAP)</li> <li>• Device (Single EAP)</li> <li>• Device-User (Double EAP)</li> <li>• Device-User (Single EAP)</li> </ul>
Policy msid-dhcp-chaddr-mismatch	The status of the policy to handle the calls with mismatched DHCP Client Hardware (MAC) Address (CHADDR) and MSID of the ASN-GW session.
Policy ms-unexpected-network-reentry	The status of the policy to handle the unexpected network re-entry of an MS.
Policy asngw-initiated-reauth	The status of the policy to handle the ASN GW initiated reauthorization trigger.
Policy non-anchor-mode	The status of the policy to handle the ASN GW to accept the session in non-anchor mode.
Newcall Policy	Specify that the new call policy enabled or disabled to handle new calls. Possible values are: <ul style="list-style-type: none"> <li>• NONE</li> <li>• REJECT</li> </ul>
Policy Overload	Specify that the session overload policy enabled or disabled to handle new calls. Possible values are: <ul style="list-style-type: none"> <li>• DROP</li> <li>• REJECT</li> </ul>
Mobile IP FA context	The name of the context where MIP FA service is configured.
Maximum number of retransmissions	The maximum number of retransmissions.
Retransmission timeout	The retransmission timeout duration.
Setup timeout	The session setup timeout duration.
Active-relay timeout	The timeout duration for active relay of R4 or R6 messages.
Handover anchor data-path termination timeout	The timeout duration in seconds to keep the data path registration with previous anchored BS after completion of handover.
Handover anchor data-path pre-registration termination timeout	The timeout duration in seconds to keep the data path pre-registration termination information with anchored BS after completion of handover.
Handover non-anchor data-path termination timeout	The timeout duration in seconds to keep the data path registration with non-anchored BS after completion of handover.

Field	Description
Handover non-anchor data-path pre-registration termination timeout	The timeout duration in seconds to keep the data path pre-registration termination information with non-anchored BS after completion of handover.
Handover max number of data-path pre-registrations	The maximum number of data paths created during pre-registration for a handover.
Idle-mode entry timeout	The timeout duration in seconds for a session to enter the idle mode from active mode.
Idle-mode exit timeout	The timeout duration in seconds for a session to reenter the active mode from idle mode.
Idle-mode timeout	The total timeout duration in seconds.
Policy transaction-id-validation	The status of the policy to validate the transaction id.
Policy zero-function-type	The status of the policy to allow the zero function type of call.
Transaction Id. Seed	The transaction identifier seed.
Peer ASNGW addresses	The IP addresses of trusted ASN GW peers for handover.
BS Monitor Config	The status of BS monitoring support. Possible values are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Interval	The configured amount of time in seconds between two ICMP ping message to an ASN BS.
Timeout	The number of seconds to wait for response from the ASN BS before re-sending the ICMP ping message.
Number of retries	The number of retries to sent ICMP ping messages to an ASN BS before the ASN BS is declared as dead/unreachable.
MTU size	The maximum transmission unit size configured in bytes.
Total BSs	The total number of BSs monitored.
Active BSs	The number of active BSs.
Alive BSs	The number of active and alive BSs.
ICMP Monitored BSs	The number of BSs which are monitored through ICMP ping messages.
Inactive BSs	The number of inactive BSs.
No Calls BSs	The total number of BSs which have no active calls or in idle mode.
Going Down BSs	The total number of BSs which are going down or terminating sessions.
BS	The IP address of BSs.

Field	Description
Status	The status of listed BSs.
Maximum Number of Secondary IP Hosts	The maximum number of secondary hosts connected behind a primary WiMAX CPE under multiple IP host support.
Ran Peer Map Name	The name of the RAN Peer Map this service is using to reconcile base station MAC address received in R6 protocol messages to the actual IPv4 address of the base station.

## show asngw-service session all

Table 131: show asngw-service session all Command Output Descriptions

Field	Description
vv	<p>Displays service and session state information. This column provides a code consisting of two characters.</p> <p>From left-to-right, the first character represents the <b>Call Type</b> that the subscriber is using. The possible call types are:</p> <ul style="list-style-type: none"> <li>• <b>A</b>: Anchor</li> <li>• <b>N</b>: Non-Anchor</li> </ul> <p>From left-to-right, the second character represents the <b>DP Status</b>. The possible data path status are:</p> <ul style="list-style-type: none"> <li>• <b>A</b>: Active</li> <li>• <b>I</b>: Idle</li> </ul>
CALLID	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
NAI	The subscriber's Network Access Identifier.
Home Address	The IP address assigned to the subscriber's mobile node for the duration of the session.
Total Non-Anchor ASNGW Sessions	The total number of ASN GW sessions in non-anchor mode.
Total Anchor ASNGW Sessions	The total number of ASN GW sessions in anchor mode.
Total Active ASNGW Sessions	The total number of active ASN GW sessions including anchor and non-anchor mode.
Total Idle ASNGW Sessions	The total number of idle ASN GW sessions including anchor and non-anchor mode.
Total ASNGW Sessions	The total number of ASN GW sessions on chassis including all modes.

## show asngw-service session counters

Table 132: show asngw-service session counters Command Output Descriptions

Field	Description
Username	The subscriber's user name.
Callid	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
Session Type	The type of session. Possible type of sessions are: <ul style="list-style-type: none"> <li>• Anchor</li> <li>• Non-Anchor</li> </ul>
<b>Initial Network Entry Events</b>	
MS Pre-Attach	Displays the MS pre-attach event statistics.
Attempted	The total number of attempts made for an event.
Success	The total number of successful attempts made for an event.
Failures	The total number of failed attempts made for an event.
Authentications	Displays the authentication event statistics.
EAP	The total number of authentication/re-authentication attempts failed due to EAP.
Misc. Reason	The total number of authentication/re-authentication attempts failed due to miscellaneous reasons.
MS Attach	Displays the MS attach event statistics.
DP Registrations	Displays the data path registration event statistics.
Re-Authentications	Displays the re-authentication event statistics.
<b>Handover Events</b>	
Intra ASN-GW Handovers	Displays the intra-ASN GW (inter BS) handover event statistics.
Inter ASN-GW Handovers	Displays the inter-ASN GW handover event statistics.
DP De-Registrations	Displays the data path de-registration event statistics.
Idle Mode entry events	Displays the idle mode entry event statistics.
Idle Mode exit events	Displays the idle mode exit event statistics.
Paging initiation events	Displays the paging initiation event statistics.

Field	Description
<b>Total R6/R4 Control Messages</b>	Displays the statistics of total R4 and R6 control messages.
Sent	Total number of R4/R6 control messages sent.
Retransmissions Sent	Total number of R4/R6 control messages retransmitted.
Received	The total number of R4/R6 control messages received.
Accepted	The total number of R4/R6 control messages received and accepted.
Relayed	The total number of R4/R6 control messages received and relayed.
Denied	The total number of R4/R6 control messages received and denied.
Discarded	The total number of R4/R6 control messages received and discarded.
Badly Formed	The total number of badly formed R4/R6 control messages messages.
Decode Error	The total number of decode errors found in the R4/R6 control messages.
Unspecified Error	The total number of unspecified errors found in the R4/R6 control messages.
Missing Mandatory TLV	The total number of R4/R6 control messages received with missing mandatory TLVs.
TLV Value Invalid	The total number of R4/R6 control messages received with invalid TLV value.
Unknown TLV	The total number of R4/R6 control messages received with unknown TLV value.
Duplicate TLV Found	The total number of R4/R6 control messages received with duplicate TLV value.
No Session Found	The total number of R4/R6 control messages received without session information.
Transaction Id. Error	The total number of R4/R6 control messages received with error in transaction id.
Key Change Success	The total number of R4/R6 control messages received with successful Key Change request.
Key Change Failure	The total number of R4/R6 control messages with failed Key Change request.
MS Initiated Re-Auth	The total number of R4/R6 control messages received with for MS initiated re-authentication.
BS Initiated Re-Auth	The total number of R4/R6 control messages received with for BS initiated re-authentication.
<b>Total R4/R6 Data messages:</b>	Displays the statistics of total R4 and R6 data messages.
<b>GRE Receive:</b>	
Packets Received	The total number of packets received by the system through GRE tunnel.
Bytes Received	The total number of bytes received by the system through GRE tunnel.
Protocol Type Error	The total number of encapsulated packets received through GRE tunnel with protocol type errors.

Field	Description
GRE Key Absent	Total number of GRE tunneled key absent errors received through GRE tunnel.
GRE Checksum Error	Total number of checksum errors that occurred in GRE tunnels received by this system.
Invalid Packet Length	Total number of encapsulated packets received with invalid packet lengths through GRE tunnel.
No Session found	Total number of errors that occurred due to no session being present in received tunnels.
Unspecified Error	Total number of data messages received with errors which are not specified in this table.
<b>GRE Send:</b>	
Packets Sent	The total number of packets sent by the system through GRE tunnel.
Bytes Sent	The total number of bytes sent by the system through GRE tunnel.
Send Error	The total number of errors that occurred while sending replies through GRE tunnel.
Unspecified Error	Total number of data messages sent with errors which are not specified in this table through GRE tunnel.
Total Non-Anchor ASNGW Sessions	The total number of ASN GW sessions in non-anchor mode.
Total Anchor ASNGW Sessions	The total number of ASN GW sessions in anchor mode.
Total ASNGW Sessions	The total number of ASN GW sessions including anchor and non-anchor mode.

## show asngw-service session counters verbose

Table 133: show asngw-service session counters verbose Command Output Descriptions

Field	Description
Username	The subscriber's user name.
Callid	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
Session Type	The type of session. Possible type of sessions are: <ul style="list-style-type: none"> <li>• Anchor</li> <li>• Non-Anchor</li> </ul>
<b>Message Groups</b>	

Field	Description
R6 MS Pre-Attachment Request messages	Groups the statistics of the MS pre-attachment request messages on R6 interface.
R6 MS Pre-Attachment Response messages	Groups the statistics of the MS pre-attachment response messages on R6 interface.
R6 MS Pre-Attachment Ack messages	Groups the statistics of the MS pre-attachment ACK messages on R6 interface.
R6 Network Exit MS State Change Request messages	Groups the statistics of the MS state change request messages on network exit R6 interface.
R4 Network Exit MS State Change Request messages	Groups the statistics of the MS state change request messages on network exit R4 interface.
R6 Network Exit MS State Change Response messages	Groups the statistics of the MS state change response messages on network exit R6 interface.
R4 Network Exit MS State Change Response messages	Groups the statistics of the MS state change response messages on network exit R4 interface.
R6 Context Request messages	Groups the statistics of the context request messages on R6 interface.
R4 Context Request messages	Groups the statistics of the context request messages on R4 interface.
R6 Context Report messages	Groups the statistics of the context report messages on R6 interface.
R4 Context Report messages	Groups the statistics of the context report messages on R4 interface.
R6 Context Ack messages	Groups the statistics of the context ACK messages on R6 interface.
R4 Context Ack messages	Groups the statistics of the context ACK messages on R4 interface.
R6 Authentication Relay EAP Transfer messages	Groups the statistics of the EAP authentication relay transfer messages on R6 interface.
R4 Authentication Relay EAP Transfer messages	Groups the statistics of the EAP authentication relay transfer messages on R4 interface.
R6 Authentication Relay EAP Start messages	Groups the statistics of the EAP authentication relay start messages on R6 interface.
R4 Authentication Relay EAP Start messages	Groups the statistics of the EAP authentication relay start messages on R4 interface.
R6 MS Attachment Request messages	Groups the statistics of the MS attachment request messages on R6 interface.
R6 MS Attachment Response messages	Groups the statistics of the MS attachment response messages on R6 interface.
R6 MS Attachment Ack messages	Groups the statistics of the MS attachment ACK messages on R6 interface.
R6 Data-Path Pre-Registration Request messages	Groups the statistics of the data path pre-registration request messages on R6 interface.
R4 Data-Path Pre-Registration Request messages	Groups the statistics of the data path pre-registration request messages on R4 interface.

Field	Description
R6 Data-Path Pre-Registration Response messages	Groups the statistics of the data path pre-registration response messages on R6 interface.
R4 Data-Path Pre-Registration Response messages	Groups the statistics of the data path pre-registration response messages on R4 interface.
R6 Data-Path Pre-Registration Ack messages	Groups the statistics of the data path pre-registration ACK messages on R6 interface.
R4 Data-Path Pre-Registration Ack messages	Groups the statistics of the data path pre-registration ACK messages on R4 interface.
R6 Data-Path Registration Request messages	Groups the statistics of the data path registration request messages on R6 interface.
R4 Data-Path Registration Request messages	Groups the statistics of the data path registration request messages on R4 interface.
R6 Data-Path Registration Response messages	Groups the statistics of the data path registration response messages on R6 interface.
R4 Data-Path Registration Response messages	Groups the statistics of the data path registration response messages on R4 interface.
R6 Data-Path Registration Ack messages	Groups the statistics of the data path registration ACK messages on R6 interface.
R4 Data-Path Registration Ack messages	Groups the statistics of the data path registration ACK messages on R4 interface.
R6 Data-Path De-Registration Request messages	Groups the statistics of the data path de-registration request messages on R6 interface.
R4 Data-Path De-Registration Request messages	Groups the statistics of the data path de-registration request messages on R4 interface.
R6 Data-Path De-Registration Response messages	Groups the statistics of the data path de-registration response messages on R6 interface.
R4 Data-Path De-Registration Response messages	Groups the statistics of the data path de-registration response messages on R4 interface.
R6 Data-Path De-Registration Ack messages	Groups the statistics of the data path de-registration ACK messages on R6 interface.
R4 Data-Path De-Registration Ack messages	Groups the statistics of the data path de-registration ACK messages on R4 interface.
R6 Key Change Directive messages	Groups the statistics of the key change directive messages on R6 interface.
R4 Key Change Directive messages	Groups the statistics of the key change directive messages on R4 interface.
R6 Key Change Ack messages	Groups the statistics of the key change ACK messages on R6 interface.
R4 Key Change Ack messages	Groups the statistics of the key change ACK messages on R4 interface.

Field	Description
R6 Key Change Confirm messages	Groups the statistics of the key change confirm messages on R6 interface.
R4 Key Change Confirm messages	Groups the statistics of the key change confirm messages on R4 interface.
R6 Cmac Key Count Update Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count update messages on R6 interface.
R4 Cmac Key Count Update Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count update messages on R4 interface.
R6 Cmac Key Count Ack Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count ACK messages on R6 interface.
R4 Cmac Key Count Ack Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count ACK messages on R46 interface.
R6 Handoff Request Msg	Groups the statistics of the hand-off request messages on R6 interface.
R4 Handoff Request Msg	Groups the statistics of the hand-off request messages on R4 interface.
R6 Handoff Response Msg	Groups the statistics of the hand-off response messages on R6 interface.
R4 Handoff Response Msg	Groups the statistics of the hand-off response messages on R4 interface.
R6 Handoff Ack Msg	Groups the statistics of the hand-off ACK messages on R6 interface.
R4 Handoff Ack Msg	Groups the statistics of the hand-off ACK messages on R4 interface.
R6 Handoff Confirm Msg	Groups the statistics of the hand-off confirm messages on R6 interface.
R4 Handoff Confirm Msg	Groups the statistics of the hand-off confirm messages on R4 interface.
R6 Handoff Complete Msg	Groups the statistics of the hand-off complete messages on R6 interface.
R4 Handoff Complete Msg	Groups the statistics of the hand-off complete messages on R4 interface.
R4 IM Entry State Change Req Msg	Groups the statistics of the idle mode entry state change request messages on R4 interface.
R4 IM Entry State Change Rsp Msg	Groups the statistics of the idle mode entry state change response messages on R4 interface.
R4 IM Entry State Change Ack Msg	Groups the statistics of the idle mode entry state change ACK messages on R4 interface.
R4 Anchor PC Indication Msg	Groups the statistics of anchor paging controller (PC) indication messages on R4 interface.
R4 Anchor PC Ack Msg	Groups the statistics of anchor paging controller (PC) ACK messages on R4 interface.
R4 IM Exit State Change Req Msg	Groups the statistics of the idle mode exit state change request messages on R4 interface.

Field	Description
R4 IM Exit State Change Rsp Msg	Groups the statistics of the idle mode exit state change response messages on R4 interface.
R4 Initiate Paging Req Msg	Groups the statistics of the initiated paging request messages on R4 interface.
R4 Initiate Paging Rsp Msg	Groups the statistics of the initiated paging response messages on R4 interface.
R4 Delete MS Entry Req Msg	Groups the statistics of the request messages to delete the MS entry request on R4 interface.
R4 Delete MS Entry Rsp Msg	Groups the statistics of the messages sent in response of delete message for the MS entry request on R4 interface.
R6 Unknown messages	Groups the statistics of the unknown type of request messages on R6 interface.
R4 Unknown messages	Groups the statistics of the unknown type of request messages on R4 interface.
<b>Message Statistics</b>	
Total Sent	The total number of this type of message sent on specific interface.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Retransmissions Sent	The total number of this type of message re-transmitted on specific interface.
Total Received	The total number of this type of message received on specific interface.
Total Accepted	The total number of this type of message accepted on specific interface.
Total Relayed	The total number of this type of message relayed on specific interface.
Total Denied	The total number of this type of message denied on specific interface.
Total Discarded	The total number of this type of message discarded on specific interface.
Badly Formed	The total number of badly formed this type of message on specific interface.
Decode Error	The total number of this type of message on specific interface with decode error.
Unspecified Error	The total number of this type of message on specific interface with unspecified error.
Missing Mandatory TLV	The total number of this type of message on specific interface with missing mandatory TLVs.
TLV Value Invalid	The total number of this type of message on specific interface with invalid TLV value.
Unknown TLV	The total number of this type of message on specific interface with unknown TLVs.
Duplicate TLV Found	The total number of this type of message on specific interface with duplicate TLVs.

Field	Description
No session Found	The total number of this type of message on specific interface without any session information.
Transaction Id. Error	The total number of this type of message on specific interface. with transaction id error.
Key Change Success	The total number of successful Key Change Confirmation messages.
Key Change Failure	The total number of Key Change Confirmation messages failed.
Out Of Order Packet	The total number of authentication relay EAP transfer/start messages on R6 interface with out-of-order packets.
MS Initiated Re-Auth	The total number of authentication relay EAP start messages on specific interface with MS initiated reauthorization.
BS Initiated Re-Auth	The total number of authentication relay EAP start messages on specific interface with BS initiated reauthorization.
ASNGW Initiated Re-Auth	Total number of the re-authentications initiated from the ASN GW.
<b>Data messages</b>	
GRE R6 Receive	The total number of data message received with through GRE tunnel on R6 interface.
GRE R4 Receive	The total number of data message received through GRE tunnel on R4 interface.
Packets Received	The total number of data packets received/sent through GRE tunnel on R4/R6 interface.
Bytes Received	The total number of data bytes received/sent through GRE tunnel on R4/R6 interface.
Protocol Type Error	The total number of data message received/sent with protocol type error through GRE tunnel on R4/R6 interface.
GRE Key Absent	The total number of data message received/sent without GRE key through GRE tunnel on R4/R6 interface.
GRE Checksum Error	The total number of data message received/sent with checksum error through GRE tunnel on R4/R6 interface.
Invalid Packet Length	The total number of data message received/sent with invalid packet length through GRE tunnel on R4/R6 interface.
No Session found	The total number of data message received/sent without any session information through GRE tunnel on R4/R6 interface.
Unspecified Error	The total number of data message received/sent with unknown error through GRE tunnel on R4/R6 interface.
GRE R6 Send	The total number of data message sent through GRE tunnel on R6 interface.

Field	Description
GRE R4 Send	The total number of data message sent through GRE tunnel on R4 interface.
Packets Sent	The total number of data packets sent through GRE tunnel on R4/R6 interface.
Send Error	The total number of data message sent with error through GRE tunnel on R4/R6 interface.
Bytes Sent	The total number of data bytes sent through GRE tunnel on R4/R6 interface.

## show asngw-service session full

Table 134: show asngw-service session full Command Output Descriptions

Field	Description
Username	The subscriber's user name.
Callid	The subscriber's call identification number.
Pseudoname	The subscriber's pseudo name. It provides the pseudo user name for a WIMAX session if TTLS authentication is used for the call.
MSID	The subscriber's Mobile Station Identification number.
Home Address	The IP address assigned to the subscriber's mobile node for the duration of the session.
ASNGW Service Address	IP address of system where ASN GW service is running.
Session Type	The type of session. Possible type of sessions are: <ul style="list-style-type: none"> <li>• Anchor</li> <li>• Non-Anchor</li> </ul>
DP Status	The status of data path. Possible data path status are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Idle</li> </ul>
Authenticator Address	IP address of the authenticator ASN GW.
Anchor Address	IP address of the anchor ASN GW where subscriber is attached.
Data Path Status	Identifies if the call can carry data over the R6/R4 interface.  Idle: the ASN GW is attached to PCLR and is not capable of sending traffic to BS over R6/R4.  Active: the IP-GRE tunnels between the ASN GW and the BS are setup and ready to transfer data from the IP network side.

Field	Description
PCLR Address	IP address of PC-LR currently attached to this ASN GW.
CMAC Key Count	Total number of Cipher-based Message Authentication Code (CMAC) key count.
EAP MSK Lifetime	Total lifetime configured for EAP Master Session Key in seconds.
Remaining MSK Lifetime	Remaining lifetime available for EAP Master Session Key in seconds.
Number of Re-authentication	Total number of re-authentications happened for a WiMAX subscriber.
Authentication Mode	The authentication mode. Possible modes are: <ul style="list-style-type: none"> <li>• None</li> <li>• User (Single EAP)</li> <li>• Device (Single EAP)</li> <li>• Device-User (Double EAP)</li> <li>• Device-User (Single EAP)</li> </ul>
EAP-Methods	Specifies the EAP authentication method. Possible methods are: <ul style="list-style-type: none"> <li>• EAP-Pre-shared Key (EAP-PSK)</li> <li>• EAP-Transport Layer Security (EAP-TLS)</li> <li>• EAP-Tunneled Transport Layer Security (EAP-TTLS)</li> <li>• EAP-Authentication and Key Agreement (EAP-AKA)</li> </ul>
DHCP ChAddr of MS	Client Hardware (MAC) Address (CHADDR) of MS.
<b>Service Flow Information</b>	
SFID	The service flow identifier.
Direction	Direction of the service flow.
SDFID	The service data flow identifier.
PDFID	The packet data flow identifier.
Profile ID	The profile id applicable for service flow.
Peer (*) Address	Specifies the IP address of the trusted peer for handover.
Peer Type	Specifies the type of peer for handover. Possible types are: <ul style="list-style-type: none"> <li>• BS</li> <li>• ASN GW</li> </ul>
BSID	Specifies the ASN base station Id.

Field	Description
GRE Key	The Generic Routing Encapsulation (GRE) key.
Tunnel Endpoint	The IP address of GRE tunnel endpoint.
Total Service flows(unidirectional)	Total number of service flows in both direction.
Total Non-Anchor ASNGW Sessions	The total number of ASN GW sessions in non-anchor mode.
Total Anchor ASNGW Sessions	The total number of ASN GW sessions in anchor mode.
Total Active ASNGW Sessions	The total number of active ASN GW sessions.
Total Idle ASNGW Sessions	The total number of ASN GW sessions in idle mode.
Total ASNGW Sessions	The total number of ASN GW sessions including anchor and non-anchor mode.

## show asngw-service session counters function-type data-path

Table 135: show asngw-service session counters function-type data-path Command Output Descriptions

Field	Description
Username	The subscriber's user name.
CALLID	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
<b>Data-Path Registration Request Messages:</b>	
Total Sent	The total number of Data-Path Registration Request messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Data-Path Registration Request messages received.
Total Denied	The total number of Data-Path Registration Request messages denied.
Total Discarded	The total number of Data-Path Registration Request messages discarded.
Badly Formed	The total number of badly formed Data-Path Registration Request messages.
Decode Error	The total number of decode errors in the Data-Path Registration Request messages sent.
Unspecified Error	The total number of unspecified errors in the Data-Path Registration Request messages sent.

Field	Description
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Data-Path Registration Request messages sent.
TLV Value Invalid	The total number of Data-Path Registration Request messages sent with invalid TLV value.
Unknown TLV	The total number of Data-Path Registration Request messages sent with unknown TLV.
Duplicate TLV Found	The total number of Data-Path Registration Request messages sent with duplicate TLV.
No Session Found	The total number of Data-Path Registration Request messages sent without session information.
<b>Data-Path Registration Response Messages:</b>	
Total Sent	The total number of Data-Path Registration Response messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Data-Path Registration Response messages received.
Total Denied	The total number of Data-Path Registration Response messages denied.
Total Discarded	The total number of Data-Path Registration Response messages discarded.
Badly Formed	The total number of badly formed Data-Path Registration Response messages.
Decode Error	The total number of decode errors in the Data-Path Registration Response messages sent.
Unspecified Error	The total number of unspecified errors in the Data-Path Registration Response messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Data-Path Registration Response messages sent.
TLV Value Invalid	The total number of Data-Path Registration Response messages sent with invalid TLV value.
Unknown TLV	The total number of Data-Path Registration Response messages sent with unknown TLV.
Duplicate TLV Found	The total number of Data-Path Registration Response messages sent with duplicate TLV.
No Session Found	The total number of Data-Path Registration Response messages sent without session information.
<b>Data-Path Registration Ack Messages:</b>	

Field	Description
Total Sent	The total number of Data-Path Registration Request Ack messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Data-Path Registration Request Ack messages received.
Total Denied	The total number of Data-Path Registration Request Ack messages denied.
Total Discarded	The total number of Data-Path Registration Request Ack messages discarded.
Badly Formed	The total number of badly formed Data-Path Registration Request Ack messages.
Decode Error	The total number of decode errors in the Data-Path Registration Request Ack messages sent.
Unspecified Error	The total number of unspecified errors in the Data-Path Registration Request Ack messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Data-Path Registration Request Ack messages sent.
TLV Value Invalid	The total number of Data-Path Registration Request Ack messages sent with invalid TLV value.
Unknown TLV	The total number of Data-Path Registration Request Ack messages sent with unknown TLV.
Duplicate TLV Found	The total number of Data-Path Registration Request Ack messages sent with duplicate TLV.
No Session Found	The total number of Data-Path Registration Request Ack messages sent without session found.
<b>Data-Path De-Registration Request Messages:</b>	
Total Sent	The total number of Data-Path De-Registration Request messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Data-Path De-Registration Request messages received.
Total Denied	The total number of Data-Path De-Registration Request messages denied.
Total Discarded	The total number of Data-Path De-Registration Request messages discarded.
Badly Formed	The total number of badly formed Data-Path De-Registration Request messages.
Decode Error	The total number of decode errors in the Data-Path De-Registration Request messages sent.

Field	Description
Unspecified Error	The total number of unspecified errors in the Data-Path De-Registration Request messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Data-Path De-Registration Request messages sent.
TLV Value Invalid	The total number of Data-Path De-Registration Request messages sent with invalid TLV value.
Unknown TLV	The total number of Data-Path De-Registration Request messages sent with unknown TLV.
Duplicate TLV Found	The total number of Data-Path De-Registration Request messages sent with duplicate TLV.
No Session Found	The total number of Data-Path De-Registration Request messages sent without session information.
<b>Data-Path De-Registration Response Messages:</b>	
Total Sent	The total number of Data-Path De-Registration Response messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Data-Path De-Registration Response messages received.
Total Denied	The total number of Data-Path De-Registration Response messages denied.
Total Discarded	The total number of Data-Path De-Registration Response messages discarded.
Badly Formed	The total number of badly formed Data-Path De-Registration Response messages.
Decode Error	The total number of decode errors in the Data-Path De-Registration Response messages sent.
Unspecified Error	The total number of unspecified errors in the Data-Path De-Registration Response messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Data-Path De-Registration Response messages sent.
TLV Value Invalid	The total number of Data-Path De-Registration Response messages sent with invalid TLV value.
Unknown TLV	The total number of Data-Path De-Registration Response messages sent with unknown TLV.
Duplicate TLV Found	The total number of Data-Path De-Registration Response messages sent with duplicate TLV.

Field	Description
No Session Found	The total number of Data-Path De-Registration Response messages sent without session information.
Total ASNGW Sessions	The total number of ASNGW messages.

## show asngw-service session peer-address

Table 136: show asngw-service session peer-address Command Output Descriptions

Field	Description
vv	<p>Displays service and session state information. This column provides a code consisting of two characters.</p> <p>From left-to-right, the first character represents the <b>Call Type</b> that the subscriber is using. The possible call types are:</p> <ul style="list-style-type: none"> <li>• <b>A</b>: Anchor</li> <li>• <b>N</b>: Non-Anchor</li> </ul> <p>From left-to-right, the second character represents the <b>DP Status</b>. The possible data path status are:</p> <ul style="list-style-type: none"> <li>• <b>A</b>: Active</li> <li>• <b>I</b>: Idle</li> </ul>
CALLID	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
NAI	The subscriber's Network Access Identifier.
Home Address	The IP address assigned to the subscriber's mobile node for the duration of the session.
Total Non-Anchor ASNGW Sessions	The total number of ASN GW sessions in non-anchor mode.
Total Anchor ASNGW Sessions	The total number of ASN GW sessions in anchor mode.
Total Active ASNGW Sessions	The total number of active ASN GW sessions including anchor and non-anchor mode.
Total Idle ASNGW Sessions	The total number of idle ASN GW sessions including anchor and non-anchor mode.
Total ASNGW Sessions	The total number of ASN GW sessions on chassis including all modes.

# show asngw-service session summary

Table 137: show asngw-service session summary Command Output Descriptions

Field	Description
Total Non-Anchor ASNGW Sessions	The total number of ASN GW sessions in non-anchor mode.
Total Anchor ASNGW Sessions	The total number of ASN GW sessions in anchor mode.
Total Active ASNGW Sessions	The total number of active ASN GW sessions including anchor and non-anchor mode.
Total Idle ASNGW Sessions	The total number of idle ASN GW sessions including anchor and non-anchor mode.
Total ASNGW Sessions	The total number of ASN GW sessions on chassis including all modes.

# show asngw-service statistics

Table 138: show asngw-service statistics Command Output Descriptions

Field	Description
<b>Initial Network Entry Events</b>	
MS Pre-Attach	Displays the MS pre-attach event statistics.
Attempted	The number of attempts made for an event.
Success	The number of successful attempts made for an event.
Failures	The number of failed attempts made for an event.
Authentications	Displays the authentication event statistics.
EAP	The total number of authentication/re-authentication attempts failed due to EAP.
Misc. Reason	The total number of authentication/re-authentication attempts failed due to miscellaneous reasons.
MS Attach	Displays the MS attach event statistics.
Re-Authentications	Displays the re-authentication event statistics.
<b>Handover Events</b>	
Intra ASN-GW Handovers	Displays the intra-ASN GW (inter BS) handover event statistics.
Inter ASN-GW Handovers	Displays the inter-ASN GW handover event statistics.
DP Pre-registration	Displays the data path pre-registration event statistics.

Field	Description
DP Registration	Displays the data path registration event statistics.
DP De-Registration	Displays the data path de-registration event statistics.
Path Modifications	Displays the data path modification statistics.
Idle Mode entry events	Displays the idle mode entry event statistics.
Idle Mode exit events	Displays the idle mode exit event statistics.
Paging initiation events	Displays the paging initiation event statistics.
Total Disconnects	Displays the reason statistics for the disconnection of session.
MSK Lifetime Expiry	The total number of disconnects due to Master Session Key lifetime expiry.
Auth Failures	The total number of disconnects due to authentication failure.
Admin Drops	The total number of disconnects due to administrator intervention.
De-registrations	The total number of disconnects due to de-registration request initiation.
Other Reasons	The total number of disconnects due to unspecified reasons.
<b>Total R6/R4 Control Messages</b>	Displays the statistics of total R4 and R6 control messages.
Sent	Total number of R4/R6 control messages sent.
Retransmissions Sent	Total number of R4/R6 control messages retransmitted.
Send Failures	Total number of R4/R6 control messages sent and failed.
Received	Total number of R4/R6 control messages received.
Accepted	Total number of R4/R6 control messages received and accepted.
Relayed	Total number of R4/R6 control messages received and relayed.
Denied	Total number of R4/R6 control messages received and denied.
Discarded	Total number of R4/R6 control messages received and discarded.
Badly Formed	Total number of badly formed R4/R6 control messages.
Decode Error	Total number of decode errors found in the R4/R6 control messages.
Unspecified Error	Total number of unspecified errors found in the R4/R6 control messages.
Missing Mandatory TLV	Total number of R4/R6 control messages received with missing mandatory TLVs.
TLV Value Invalid	Total number of R4/R6 control messages received with invalid TLV value.
Unknown TLV	Total number of R4/R6 control messages received with unknown TLV value.
Duplicate TLV Found	Total number of R4/R6 control messages received with duplicate TLV value.

Field	Description
No Session Found	Total number of R4/R6 control messages received without session information.
No Resource Drops	Total number of R4/R6 control messages received without resource drops.
Admin Prohibited	Total number of R4/R6 control messages received with admin prohibited.
Transaction Id. Error	Total number of R4/R6 control messages received with error in transaction id.
Key Change Success	Total number of R4/R6 control messages received with successful Key Change request.
Key Change Failures	Total number of R4/R6 control messages with failed Key Change request.
MS Initiated Re-Auth	Total number of R4/R6 control messages received with for MS initiated re-authentication.
BS Initiated Re-Auth	Total number of R4/R6 control messages received with for BS initiated re-authentication.
ASNGW Initiated Re-Auth	Total number of the re-authentications initiated from the ASN GW.
<b>Total R4/R6 Data messages:</b>	Displays the statistics of total R4 and R6 data messages.
<b>GRE Receive:</b>	
Total Packets Received	Total number of packets received by the system through GRE tunnel.
Total Bytes Received	Total number of bytes received by the system through GRE tunnel.
Protocol Type Error	Total number of encapsulated packets received through GRE tunnel with protocol type errors.
GRE Key Absent	Total number of GRE tunneled key absent errors received through GRE tunnel.
GRE Checksum Error	Total number of checksum errors that occurred in GRE tunnels received by this system.
Invalid Packet Length	Total number of encapsulated packets received with invalid packet lengths through GRE tunnel.
No Session found	Total number of errors that occurred due to no session being present in received tunnels.
Unspecified Error	Total number of data messages received with errors which are not specified in this table.
<b>GRE Send:</b>	
Total Packets Sent	Total number of packets sent by the system through GRE tunnel.
Total Bytes Sent	Total number of bytes sent by the system through GRE tunnel.
Send Error	Total number of errors that occurred while sending replies through GRE tunnel.

Field	Description
Unspecified Error	Total number of data messages sent with errors which are not specified in this table through GRE tunnel.
Total Sessions Connected	Historical count of the total number of ASNGW sessions setup on a per-service and a per-chassis basis.

## show asngw-service statistics function-type ms-state-change

Table 139: show asngw-service statistics function-type ms-state-change Command Output Descriptions

Field	Description
<b>Network Entry MS State Change Request Messages:</b>	
Total Sent	The total number of Network Entry MS State Change Request messages sent.
Retransmissions Sent	The number of Network Entry MS State Change Request messages retransmitted.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Network Entry MS State Change Request messages received.
Total Accepted	The total number of Network Entry MS State Change Request messages accepted.
Total Relayed	The total number of Network Entry MS State Change Request messages relayed.
Total Denied	The total number of Network Entry MS State Change Request messages denied.
Total Discarded	The total number of Network Entry MS State Change Request messages discarded.
Badly Formed	The total number of badly formed Network Entry MS State Change Request messages.
Decode Error	The total number of decode errors in the Network Entry MS State Change Request messages sent.
Unspecified Error	The total number of unspecified errors in the Network Entry MS State Change Request messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Network Entry MS State Change Request messages sent.
TLV Value Invalid	The total number of Network Entry MS State Change Request messages sent with invalid TLV value.
Unknown TLV	The total number of Network Entry MS State Change Request messages sent with unknown TLV.

Field	Description
Duplicate TLV Found	The total number of Network Entry MS State Change Request messages sent with duplicate TLV.
No Session Found	The total number of Network Entry MS State Change Request messages sent without session information.
No Resource Drops	Total number of R4/R6 control messages received without resource drops.
Admin Prohibited	Total number of R4/R6 control messages received with admin prohibited
Transaction Id. Error	Total number of R4/R6 control messages received with error in transaction id.
Congestion/Overloaded	Total number of R4/R6 control messages received with a congestion/overload error.
<b>Messages:</b>	
Sent	The total number of messages sent.
Total Received	The total number of messages received.
Total Denied	The total number of messages denied.
Total Discarded	The total number of messages discarded.
Badly Formed	The total number of badly formed messages.
Decode Error	The total number of decode errors in the messages sent.
Unspecified Error	The total number of unspecified errors in the messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the messages sent.
TLV Value Invalid	The total number of messages sent with invalid TLV value.
Unknown TLV	The total number of messages sent with unknown TLV.
Duplicate TLV Found	The total number of messages sent with duplicate TLV.
No Session Found	The total number of messages sent without session information.
<b>Network Entry MS State Change Directive Messages:</b>	
Total Sent	The total number of Network Entry MS State Change Directive messages sent.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of Network Entry MS State Change Directive messages received.
Total Denied	The total number of Network Entry MS State Change Directive messages denied.
Total Discarded	The total number of Network Entry MS State Change Directive messages discarded.

Field	Description
Badly Formed	The total number of badly formed Network Entry MS State Change Directive messages.
Decode Error	The total number of decode errors in the Network Entry MS State Change Directive messages sent.
Unspecified Error	The total number of unspecified errors in the Network Entry MS State Change Directive messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Network Entry MS State Change Directive messages sent.
TLV Value Invalid	The total number of Network Entry MS State Change Directive messages sent with invalid TLV value.
Unknown TLV	The total number of Network Entry MS State Change Directive messages sent with unknown TLV.
Duplicate TLV Found	The total number of Network Entry MS State Change Directive messages sent with duplicate TLV.
No Session Found	The total number of Network Entry MS State Change Directive Request messages sent without session information.
<b>Network Entry MS State Change Ack Messages:</b>	
Total Sent	The total number of Network Entry MS State Change Ack messages sent.
Total Received	The total number of Network Entry MS State Change Ack messages received.
Total Denied	The total number of Network Entry MS State Change Ack messages denied.
Total Discarded	The total number of Network Entry MS State Change Ack messages discarded.
Badly Formed	The total number of badly formed Network Entry MS State Change Ack messages.
Decode Error	The total number of decode errors in the Network Entry MS State Change Ack messages sent.
Unspecified Error	The total number of unspecified errors in the Network Entry MS State Change Ack messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the Network Entry MS State Change Ack messages sent.
TLV Value Invalid	The total number of Network Entry MS State Change Ack messages sent with invalid TLV value.
Unknown TLV	The total number of Network Entry MS State Change Ack messages sent with unknown TLV.
Duplicate TLV Found	The total number of Network Entry MS State Change Ack messages sent with duplicate TLV.

Field	Description
No Session Found	The total number of Network Entry MS State Change Ack messages sent without session information.

## show asngw-service statistics function-type ms-state-change

Table 140: show asngw-service statistics function-type ms-state-change Command Output Descriptions 1

Field	Description
<b>R6 MS Pre-Attachment Request messages</b>	
Total Sent	The total number of R6 MS Pre-Attachment Request messages sent.
Retransmissions Sent	The number of R6 MS Pre-Attachment Request messages retransmitted.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of R6 MS Pre-Attachment Request messages received.
Total Accepted	The total number of R6 MS Pre-Attachment Request messages accepted.
Total Relayed	The total number of R6 MS Pre-Attachment Request messages relayed.
Total Denied	The total number of R6 MS Pre-Attachment Request messages denied.
Total Discarded	The total number of R6 MS Pre-Attachment Request messages discarded.
Badly Formed	The total number of badly formed R6 MS Pre-Attachment Request messages.
Decode Error	The total number of decode errors in the R6 MS Pre-Attachment Request messages sent.
Unspecified Error	The total number of unspecified errors in the R6 MS Pre-Attachment Request messages sent.
Missing Mandatory TLV	The total number of missing mandatory TLVs in the R6 MS Pre-Attachment Request messages sent.
TLV Value Invalid	The total number of R6 MS Pre-Attachment Request messages sent with invalid TLV value.
Unknown TLV	The total number of R6 MS Pre-Attachment Request messages sent with unknown TLV.
Duplicate TLV Found	The total number of R6 MS Pre-Attachment Request messages sent with duplicate TLV.

Field	Description
No Session Found	The total number of R6 MS Pre-Attachment Request messages sent without session information.
No Resource Drops	Total number of R4/R6 control messages received without resource drops.
Admin Prohibited	Total number of R4/R6 control messages received with admin prohibited
Transaction Id. Error	Total number of R4/R6 control messages received with error in transaction id.
Congestion/Overloaded	Total number of R4/R6 control messages received congestion/overload error.
	<ul style="list-style-type: none"> <li>• R6 MS Pre-attachment Request Messages</li> <li>• R6 MS Pre-attachment Response Messages</li> <li>• R6 MS Pre-attachment Ack Messages</li> <li>• R6 MS Attachment Request Messages</li> <li>• R6 MS Attachment Response Messages</li> <li>• R6 MS Attachment Ack Messages</li> <li>• R6 Key Change Directive Messages</li> <li>• R4 Key Change Directive Messages</li> <li>• R6 Key Change Ack Messages</li> <li>• R4 Key Change Ack Messages</li> <li>• R6 Network Exit MS State Change Request Messages</li> <li>• R4 Network Exit MS State Change Request Messages</li> <li>• R6 Network Exit MS State Change Response Messages</li> <li>• R4 Network Exit MS State Change Response Messages</li> </ul>
Total Sent	The total number of messages sent.
Retransmissions Sent	The number of messages retransmitted.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Total Received	The total number of messages received.
Total Accepted	The total number of messages accepted.
Total Relayed	The total number of messages relayed.
Total Denied	The total number of messages denied.
Total Discarded	The total number of messages discarded.
Badly Formed	The number of badly formed messages.
Decode Error	The number of decode errors in the messages sent.
Unspecified Error	The number of unspecified errors in the messages sent.
Missing Mandatory TLV	The number of missing mandatory TLVs in the messages sent.

Field	Description
TLV Value Invalid	The number of messages sent with invalid TLV value.
Unknown TLV	The number of messages sent with unknown TLV.
Duplicate TLV Found	The number of messages sent with duplicate TLV.
No Session Found	The number of messages sent without session information.
No Resource Drops	The number of R4/R6 control messages received without resource drops.
Admin Prohibited	The number of R4/R6 control messages received with admin prohibited
Transaction Id. Error	The number of R4/R6 control messages received with error in transaction id.

## show asngw-service statistics verbose

Table 141: show asngw-service statistics verbose Command Output Descriptions

Field	Description
<b>Message Groups</b>	
R6 MS Pre-Attachment Request messages	Groups the statistics of the MS pre-attachment request messages on R6 interface.
R6 MS Pre-Attachment Response messages	Groups the statistics of the MS pre-attachment response messages on R6 interface.
R6 MS Pre-Attachment Ack messages	Groups the statistics of the MS pre-attachment ACK messages on R6 interface.
R6 Network Exit MS State Change Request messages	Groups the statistics of the MS state change request messages on network exit R6 interface.
R4 Network Exit MS State Change Request messages	Groups the statistics of the MS state change request messages on network exit R4 interface.
R6 Network Exit MS State Change Response messages	Groups the statistics of the MS state change response messages on network exit R6 interface.
R4 Network Exit MS State Change Response messages	Groups the statistics of the MS state change response messages on network exit R4 interface.
R6 Context Request messages	Groups the statistics of the context request messages on R6 interface.
R4 Context Request messages	Groups the statistics of the context request messages on R4 interface.
R6 Context Report messages	Groups the statistics of the context report messages on R6 interface.
R4 Context Report messages	Groups the statistics of the context report messages on R4 interface.
R6 Context Ack messages	Groups the statistics of the context ACK messages on R6 interface.
R4 Context Ack messages	Groups the statistics of the context ACK messages on R4 interface.

Field	Description
R6 Authentication Relay EAP Transfer messages	Groups the statistics of the EAP authentication relay transfer messages on R6 interface.
R4 Authentication Relay EAP Transfer messages	Groups the statistics of the EAP authentication relay transfer messages on R4 interface.
R6 Authentication Relay EAP Start messages	Groups the statistics of the EAP authentication relay start messages on R6 interface.
R4 Authentication Relay EAP Start messages	Groups the statistics of the EAP authentication relay start messages on R4 interface.
R6 MS Attachment Request messages	Groups the statistics of the MS attachment request messages on R6 interface.
R6 MS Attachment Response messages	Groups the statistics of the MS attachment response messages on R6 interface.
R6 MS Attachment Ack messages	Groups the statistics of the MS attachment ACK messages on R6 interface.
R6 Data-Path Pre-Registration Request messages	Groups the statistics of the data path pre-registration request messages on R6 interface.
R4 Data-Path Pre-Registration Request messages	Groups the statistics of the data path pre-registration request messages on R4 interface.
R6 Data-Path Pre-Registration Response messages	Groups the statistics of the data path pre-registration response messages on R6 interface.
R4 Data-Path Pre-Registration Response messages	Groups the statistics of the data path pre-registration response messages on R4 interface.
R6 Data-Path Pre-Registration Ack messages	Groups the statistics of the data path pre-registration ACK messages on R6 interface.
R4 Data-Path Pre-Registration Ack messages	Groups the statistics of the data path pre-registration ACK messages on R4 interface.
R6 Data-Path Registration Request messages	Groups the statistics of the data path registration request messages on R6 interface.
R4 Data-Path Registration Request messages	Groups the statistics of the data path registration request messages on R4 interface.
R6 Data-Path Registration Response messages	Groups the statistics of the data path registration response messages on R6 interface.
R4 Data-Path Registration Response messages	Groups the statistics of the data path registration response messages on R4 interface.
R6 Data-Path Registration Ack messages	Groups the statistics of the data path registration ACK messages on R6 interface.
R4 Data-Path Registration Ack messages	Groups the statistics of the data path registration ACK messages on R4 interface.

Field	Description
R6 Data-Path De-Registration Request messages	Groups the statistics of the data path de-registration request messages on R6 interface.
R4 Data-Path De-Registration Request messages	Groups the statistics of the data path de-registration request messages on R4 interface.
R6 Data-Path De-Registration Response messages	Groups the statistics of the data path de-registration response messages on R6 interface.
R4 Data-Path De-Registration Response messages	Groups the statistics of the data path de-registration response messages on R4 interface.
R6 Data-Path De-Registration Ack messages	Groups the statistics of the data path de-registration ACK messages on R6 interface.
R4 Data-Path De-Registration Ack messages	Groups the statistics of the data path de-registration ACK messages on R4 interface.
R6 Key Change Directive messages	Groups the statistics of the key change directive messages on R6 interface.
R4 Key Change Directive messages	Groups the statistics of the key change directive messages on R4 interface.
R6 Key Change Ack messages	Groups the statistics of the key change ACK messages on R6 interface.
R4 Key Change Ack messages	Groups the statistics of the key change ACK messages on R4 interface.
R6 Key Change Confirm messages	Groups the statistics of the key change confirm messages on R6 interface.
R4 Key Change Confirm messages	Groups the statistics of the key change confirm messages on R4 interface.
R6 Cmac Key Count Update Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count update messages on R6 interface.
R4 Cmac Key Count Update Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count update messages on R4 interface.
R6 Cmac Key Count Ack Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count ACK messages on R6 interface.
R4 Cmac Key Count Ack Msg	Groups the statistics of the Cipher-based Message Authentication Code (CMAC) key count ACK messages on R46 interface.
R6 Handoff Request Msg	Groups the statistics of the hand-off request messages on R6 interface.
R4 Handoff Request Msg	Groups the statistics of the hand-off request messages on R4 interface.
R6 Handoff Response Msg	Groups the statistics of the hand-off response messages on R6 interface.
R4 Handoff Response Msg	Groups the statistics of the hand-off response messages on R4 interface.
R6 Handoff Ack Msg	Groups the statistics of the hand-off ACK messages on R6 interface.
R4 Handoff Ack Msg	Groups the statistics of the hand-off ACK messages on R4 interface.

Field	Description
R6 Handoff Confirm Msg	Groups the statistics of the hand-off confirm messages on R6 interface.
R4 Handoff Confirm Msg	Groups the statistics of the hand-off confirm messages on R4 interface.
R6 Handoff Complete Msg	Groups the statistics of the hand-off complete messages on R6 interface.
R4 Handoff Complete Msg	Groups the statistics of the hand-off complete messages on R4 interface.
R4 IM Entry State Change Req Msg	Groups the statistics of the idle mode entry state change request messages on R4 interface.
R4 IM Entry State Change Rsp Msg	Groups the statistics of the idle mode entry state change response messages on R4 interface.
R4 IM Entry State Change Ack Msg	Groups the statistics of the idle mode entry state change ACK messages on R4 interface.
R4 Anchor PC Indication Msg	Groups the statistics of anchor paging controller (PC) indication messages on R4 interface.
R4 Anchor PC Ack Msg	Groups the statistics of anchor paging controller (PC) ACK messages on R4 interface.
R4 IM Exit State Change Req Msg	Groups the statistics of the idle mode exit state change request messages on R4 interface.
R4 IM Exit State Change Rsp Msg	Groups the statistics of the idle mode exit state change response messages on R4 interface.
R4 Initiate Paging Req Msg	Groups the statistics of the initiated paging request messages on R4 interface.
R4 Initiate Paging Rsp Msg	Groups the statistics of the initiated paging response messages on R4 interface.
R4 Delete MS Entry Req Msg	Groups the statistics of the request messages to delete the MS entry request on R4 interface.
R4 Delete MS Entry Rsp Msg	Groups the statistics of the messages sent in response of delete message for the MS entry request on R4 interface.
R6 Unknown messages	Groups the statistics of the unknown type of request messages on R6 interface.
R4 Unknown messages	Groups the statistics of the unknown type of request messages on R4 interface.
<b>Message Statistics</b>	
Total Sent	The total number of this type of message sent on specific interface.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Retransmissions Sent	The number of this type of message re-transmitted on specific interface.
Total Received	The total number of this type of message received on specific interface.

Field	Description
Total Accepted	The total number of this type of message accepted on specific interface.
Total Relayed	The total number of this type of message relayed on specific interface.
Total Denied	The total number of this type of message denied on specific interface.
Total Discarded	The total number of this type of message discarded on specific interface.
Badly Formed	The number of badly formed this type of message on specific interface.
Decode Error	The number of this type of message on specific interface with decode error.
Unspecified Error	The number of this type of message on specific interface with unspecified error.
Missing Mandatory TLV	The number of this type of message on specific interface with missing mandatory TLVs.
TLV Value Invalid	The number of this type of message unspecific interface with invalid TLV value.
Unknown TLV	The number of this type of message on specific interface with unknown TLVs.
Duplicate TLV Found	The number of this type of message on specific interface with duplicate TLVs.
No session Found	The number of this type of message on specific interface without any session information.
No Resource Drops	The number of this type of message received without resource drops.
Admin Prohibited	The number of this type of message received with admin prohibited
Transaction Id. Error	The number of this type of message on specific interface. with transaction id error.
<b>Data messages</b>	
GRE R6 Receive	The number of data message received with through GRE tunnel on R6 interface.
GRE R4 Receive	The number of data message received through GRE tunnel on R4 interface.
Packets Received	The number of data packets received/sent through GRE tunnel on R4/R6 interface.
Bytes Received	The number of data bytes received/sent through GRE tunnel on R4/R6 interface.
Protocol Type Error	The number of data message received/sent with protocol type error through GRE tunnel on R4/R6 interface.
GRE Key Absent	The number of data message received/sent without GRE key through GRE tunnel on R4/R6 interface.
GRE Checksum Error	The number of data message received/sent with checksum error through GRE tunnel on R4/R6 interface.
Invalid Packet Length	The number of data message received/sent with invalid packet length through GRE tunnel on R4/R6 interface.

Field	Description
No Session found	The number of data message received/sent without any session information through GRE tunnel on R4/R6 interface.
Unspecified Error	The number of data message received/sent with unknown error through GRE tunnel on R4/R6 interface.
GRE R6 Send	The number of data message sent through GRE tunnel on R6 interface.
GRE R4 Send	The number of data message sent through GRE tunnel on R4 interface.
Packets Sent	The number of data packets sent through GRE tunnel on R4/R6 interface.
Send Error	The number of data message sent with error through GRE tunnel on R4/R6 interface.
Bytes Sent	The number of data bytes sent through GRE tunnel on R4/R6 interface.
Unspecified Error	The number of data bytes sent with unspecified error on R4/R6 interface.
Total Sessions Connected	The total number of sessions connected on R4/R6 interface.

# CHAPTER 13

## show asnpc-service

This chapter includes the **show asnpc-service** command output tables.

- [show asnpc-service all](#), on page 533
- [show asnpc-service session all](#), on page 534
- [show asnpc-service session full](#), on page 535
- [show asnpc-service session counters verbose](#), on page 537
- [show asnpc-service statistics verbose](#), on page 540

## show asnpc-service all

*Table 142: show asnpc-service all Command Output Descriptions*

Field	Description
Service name	The ASN GW service name.
Context	The context in which the service is configured.
Anchor PC ID	The anchor paging controller identifier.
Bind	The bind status.
Max Subscribers	The maximum number of subscribers.
IP address	IP address of ASN GW server where this service is located.
UDP Port	The UDP port number.
Service Status	Status of this service.
Maximum number of retransmissions	The maximum number of retransmissions.
Maximum number of paging-announce retransmissions	The maximum number of paging-announce retransmissions.
Retransmission timeout	The retransmission timeout duration.
Setup timeout	The session setup timeout duration.

Field	Description
Active-relay timeout	Indicates the timeout duration for active relay of R4 or R6 messages.
Paging-announce timeout	Indicates the paging announce timeout duration in seconds.
Paging-announce retransmission timeout	Indicates the paging announce retransmission timeout duration in seconds.
Policy transaction-id-validation	Possible values are: <ul style="list-style-type: none"> <li>• ALLOW: Enforce tid validation procedure as per NWG specification, section 3.1.</li> <li>• DISALLOW: Do not enforce tid validation procedure as per NWG specification, section 3.1.</li> </ul>
Policy zero-function-type	Possible values are: <ul style="list-style-type: none"> <li>• ALLOW: If configured, function type is not considered for transaction id generation/validation.</li> <li>• DISALLOW: If configured, function type is considered for transaction id generation/validation.</li> </ul>
Transaction Id. Seed	If configured, initial value of tid is set to this configured value, otherwise, initial value of tid is set to a random number.
Peer ASNGW address	The list of ASN GW IP addresses with which the PCLR is permitted to interact.
Number of Paging Groups configured	The total number of paging groups configured for this service.
Paging Group	The paging group ID associated with this service.
Paging Offset	The offsets configured for the Paging Group.
Number of MSIDs	The current total number of MNs assigned/using the offset.

## show asnpc-service session all

Table 143: show asnpc-service session all Command Output Descriptions

Field	Description
CALLID	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
BS/PA Address	IP address of the base-station or paging agent.

Field	Description
Session Type	Indicates the type of ASN PC session. Possible type of sessions are: <ul style="list-style-type: none"> <li>• Anchor</li> <li>• Non-anchor</li> </ul>
Total ASNPC Sessions	The total number of ASN PC sessions on chassis including all modes.

## show asnpc-service session full

Table 144: show asnpc-service session full Command Output Descriptions

Field	Description
Username	The subscriber's user name.
Callid	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
ASNPC Service Address	IP address of system where ASN PC service is running.
BS/PA Address	IP address of the base-station or paging agent.
BS ID	The identifier of base station. Generally it is MAC address of the BS.
Authenticator Address	IP address of the authenticator ASN GW.
DPF/ASNGW Address	IP address of the system where data path function/ASN GW service is running.
Idle-mode timeout	Indicates the total configured timeout duration in seconds for an MS to enter the idle mode from active mode.
Remaining Idle Mode Timeout	Indicates the remaining timeout duration in seconds for an MS to enter the idle mode from active mode.
<b>Paging Information</b>	
Paging Cycle	Indicates the number of paging cycles happened in this ASN PC service session.
Paging Offset	Indicates the paging offset for paging announce.
Paging Group ID	Indicates the paging group identifier which contains the group of paging agents bounded with this paging controller session.
Paging Interval	Interval time in seconds between two paging announces.
<b>MS Information</b>	
Idle Mode Authorization Indication	Indicates the idle mode authorization status.

Field	Description
SA Descriptor Information	Indicates the Security Association description information.  SA descriptor is a compound attribute whose sub-attributes describe the properties of a Security Association (SA). These properties include the SA ID, the SA type, the SA service type, and the cryptographic suite employed within the SA.
SA ID	Indicates the identifier for the security association.
SA Type	Indicates the types of security association. Possible values are:
Cryptographic Suite	Indicates the cryptographic suite employed within the security association. Possible values are: <ul style="list-style-type: none"> <li>• 0: Primary SA</li> <li>• 1: Static SA</li> <li>• 3: Dynamic SA</li> <li>• 4. Group SA</li> <li>• 5: MBS SA</li> </ul>
SA Service Type	Indicates the service types of the corresponding SA type. Possible values are: <ul style="list-style-type: none"> <li>• 0: Unicast service</li> <li>• 1: Group multicast service</li> <li>• 2: MBS service</li> </ul> <p>Note that this shall be defined only when SA type is Static SA or Dynamic SA.</p>
SA Index	Indicates the index of security association.
Older/Newer TEK Parameters	Indicates the older or newer Traffic Encryption Key (TEK) parameters involved.
TEK TLV (in hex)	Indicates the TEK total length value in hexadecimal.
TEK Sequence Number	Indicates the TEK sequence number.
TEK Lifetime	Indicates the TEK lifetime in seconds.
PN Counter	Indicates the packet number counter in downlink direction that are used for encryption and decryption by the Base Station.
RxPN Counter	Indicates the packet number counter in uplink direction that are used for encryption and decryption by the Base Station.
Total ASNPC Sessions	The total number of ASN PC sessions on chassis including all modes.

## show asnpc-service session counters verbose

Table 145: show asnpc-service session counters verbose Command Output Descriptions

Field	Description
Username	The subscriber's user name.
Callid	The subscriber's call identification number.
MSID	The subscriber's Mobile Station Identification number.
<b>Message Groups</b>	
R6 Idle Mode Entry MS State Change Request Msg	Groups the statistics of the Idle Mode Entry MS State Change Request messages on R6 interface.
R6 Idle Mode Entry MS State Change Response Msg	Groups the statistics of the Idle Mode Entry MS State Change Response messages on R6 interface.
R6 Idle Mode Entry MS State Change Ack Msg	Groups the statistics of the Idle Mode Entry MS State Change Ack messages on R6 interface.
R6 Idle Mode Exit MS State Change Request Msg	Groups the statistics of the Idle Mode Exit MS State Change Request messages on R6 interface.
R6 Idle Mode Exit MS State Change Response Msg	Groups the statistics of the Idle Mode Exit MS State Change Response messages on R6 interface.
R6 Location Update Request Msg	Groups the statistics of the Location Update Request messages on R6 interface.
R6 Location Update Response Msg	Groups the statistics of the Location Update Response messages on R6 interface.
R6 Location Update Confirm Msg	Groups the statistics of the Location Update Confirm messages on R6 interface.
R6 Paging Announce Msg	Groups the statistics of the Paging Announce messages on R6 interface.
R4 Idle Mode Entry MS State Change Request Msg	Groups the statistics of the Idle Mode Entry MS State Change Request messages on R4 interface.
R4 Idle Mode Entry MS State Change Response Msg	Groups the statistics of the Idle Mode Entry MS State Change Response messages on R4 interface.
R4 Idle Mode Entry MS State Change Ack Msg	Groups the statistics of the Idle Mode Entry MS State Change Ack messages on R4 interface.
R4 Idle Mode Exit MS State Change Request Msg	Groups the statistics of the Idle Mode Exit MS State Change Request messages on R4 interface.
R4 Idle Mode Exit MS State Change Response Msg	Groups the statistics of the Idle Mode Exit MS State Change Response messages on R4 interface.
R4 Network Exit MS State Change Request Msg	Groups the statistics of the Network Exit MS State Change Request messages on R4 interface.

Field	Description
R4 Network Exit MS State Change Response Msg	Groups the statistics of the Network Exit MS State Change Response messages on R4 interface.
R4 Delete MS Entry Request Msg	Groups the statistics of the Delete MS Entry Request messages on R4 interface.
R4 Delete MS Entry Response Msg	Groups the statistics of the Delete MS Entry Response messages on R4 interface.
R4 Initiate Paging Request Msg	Groups the statistics of the Initiate Paging Request messages on R4 interface.
R4 Initiate Paging Response Msg	Groups the statistics of the Initiate Paging Response messages on R4 interface.
R4 Anchor PC Ind Msg	Groups the statistics of the Anchor Paging Controller Indicator messages on R4 interface.
R4 Anchor PC Ack Msg	Groups the statistics of the Anchor Paging Controller Ack messages on R4 interface.
R4 Context Request Msg	Groups the statistics of the Context Request messages on R4 interface.
R4 Context Report Msg	Groups the statistics of the Context Report messages on R4 interface.
R6/R4 Unknown Messages	Groups the statistics of the Unknown type of messages on R6 and/or R4 interface.
<b>Message Statistics</b>	
Total Sent	The total number of this type of message sent on specific interface.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Retransmissions Sent	The total number of this type of message re-transmitted on specific interface.
Total Received	The total number of this type of message received on specific interface.
Total Accepted	The total number of this type of message accepted on specific interface.
Total Relayed	The total number of this type of message relayed on specific interface.
Total Denied	The total number of this type of message denied on specific interface.
Total Discarded	The total number of this type of message discarded on specific interface.
Badly Formed	The total number of badly formed this type of message on specific interface.
Decode Error	The total number of this type of message on specific interface with decode error.
Unspecified Error	The total number of this type of message on specific interface with unspecified error.
Paging Config Error	The total number of this type of errors messages on specified interface occurred. This error occurs when paging node id (BS id) is not configured in configured paging groups.

Field	Description
Missing Mandatory TLV	The total number of this type of message on specific interface with missing mandatory TLVs.
TLV Value Invalid	The total number of this type of message on specific interface with invalid TLV value.
Unknown TLV	The total number of this type of message on specific interface with unknown TLVs.
Duplicate TLV Found	The total number of this type of message on specific interface with duplicate TLVs.
No session Found	The total number of this type of message on specific interface without any session information.
Transaction Id. Error	The total number of this type of message on specific interface. with transaction id error.
<b>Data messages</b>	
GRE R6 Receive	The total number of data message received with through GRE tunnel on R6 interface.
GRE R4 Receive	The total number of data message received through GRE tunnel on R4 interface.
Packets Received	The total number of data packets received/sent through GRE tunnel on R4/R6 interface.
Bytes Received	The total number of data bytes received/sent through GRE tunnel on R4/R6 interface.
Protocol Type Error	The total number of data message received/sent with protocol type error through GRE tunnel on R4/R6 interface.
GRE Key Absent	The total number of data message received/sent without GRE key through GRE tunnel on R4/R6 interface.
GRE Checksum Error	The total number of data message received/sent with checksum error through GRE tunnel on R4/R6 interface.
Invalid Packet Length	The total number of data message received/sent with invalid packet length through GRE tunnel on R4/R6 interface.
No Session found	The total number of data message received/sent without any session information through GRE tunnel on R4/R6 interface.
Unspecified Error	The total number of data message received/sent with unknown error through GRE tunnel on R4/R6 interface.
GRE R6 Send	The total number of data message sent through GRE tunnel on R6 interface.
GRE R4 Send	The total number of data message sent through GRE tunnel on R4 interface.
Packets Sent	The total number of data packets sent through GRE tunnel on R4/R6 interface.

Field	Description
Send Error	The total number of data message sent with error through GRE tunnel on R4/R6 interface.
Bytes Sent	The total number of data bytes sent through GRE tunnel on R4/R6 interface.

## show asnpc-service statistics verbose

Table 146: show asnpc-service statistics verbose Command Output Descriptions

Field	Description
<b>Message Groups</b>	
R6 Idle Mode Entry MS State Change Request Msg	Groups the statistics of the Idle Mode Entry MS State Change Request messages on R6 interface.
<b>Message Statistics</b>	
Total Sent	The total number of this type of message sent on specific interface.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Retransmissions Sent	The total number of this type of message re-transmitted on specific interface.
Total Received	The total number of this type of message received on specific interface.
Total Accepted	The total number of this type of message accepted on specific interface.
Total Relayed	The total number of this type of message relayed on specific interface.
Total Denied	The total number of this type of message denied on specific interface.
Total Discarded	The total number of this type of message discarded on specific interface.
Badly Formed	The number of badly formed this type of message on specific interface.
Decode Error	The number of this type of message on specific interface with decode error.
Unspecified Error	The number of this type of message on specific interface with unspecified error.
Missing Mandatory TLV	The number of this type of message on specific interface with missing mandatory TLVs.
TLV Value Invalid	The number of this type of message on specific interface with invalid TLV value.
Unknown TLV	The number of this type of message on specific interface with unknown TLVs.
Duplicate TLV Found	The number of this type of message on specific interface with duplicate TLVs.

Field	Description
No session Found	The number of this type of message on specific interface without any session information.
No Resource Drops	The number of this type of message on specific interface without resource drops.
Admin Prohibited	The number of this type of message on specific interface with admin prohibited.
Transaction Id. Error	The number of this type of message on specific interface. with transaction id error.
Congestion/Overloaded	Number of R4/R6 control messages received with a congestion/overload error.
<b>Message Groups</b>	
R6 Idle Mode Entry MS State Change Response Msg	Groups the statistics of the Idle Mode Entry MS State Change Response messages on R6 interface.
R6 Idle Mode Entry MS State Change Ack Msg	Groups the statistics of the Idle Mode Entry MS State Change Ack messages on R6 interface.
R6 Idle Mode Exit MS State Change Request Msg	Groups the statistics of the Idle Mode Exit MS State Change Request messages on R6 interface.
R6 Idle Mode Exit MS State Change Response Msg	Groups the statistics of the Idle Mode Exit MS State Change Response messages on R6 interface.
R6 Location Update Request Msg	Groups the statistics of the Location Update Request messages on R6 interface.
R6 Location Update Response Msg	Groups the statistics of the Location Update Response messages on R6 interface.
R6 Location Update Confirm Msg	Groups the statistics of the Location Update Confirm messages on R6 interface.
R6 Paging Announce Msg	Groups the statistics of the Paging Announce messages on R6 interface.
R4 Idle Mode Entry MS State Change Request Msg	Groups the statistics of the Idle Mode Entry MS State Change Request messages on R4 interface.
R4 Idle Mode Entry MS State Change Response Msg	Groups the statistics of the Idle Mode Entry MS State Change Response messages on R4 interface.
R4 Idle Mode Entry MS State Change Ack Msg	Groups the statistics of the Idle Mode Entry MS State Change Ack messages on R4 interface.
R4 Idle Mode Exit MS State Change Request Msg	Groups the statistics of the Idle Mode Exit MS State Change Request messages on R4 interface.
R4 Idle Mode Exit MS State Change Response Msg	Groups the statistics of the Idle Mode Exit MS State Change Response messages on R4 interface.
R4 Initiate Paging Request Msg	Groups the statistics of the Initiate Paging Request messages on R4 interface.
R4 Initiate Paging Response Msg	Groups the statistics of the Initiate Paging Response messages on R4 interface.
R4 Location Update Request Msg	Groups the statistics of the Location Update Request messages on R4 interface.

Field	Description
R4 Location Update Response Msg	Groups the statistics of the Location Update Response messages on R4 interface.
R4 Location Update Confirm Msg	Groups the statistics of the Location Update Confirm messages on R4 interface.
R4 Network Exit MS State Change Request Msg	Groups the statistics of the Network Exit MS State Change Request messages on R4 interface.
R4 Network Exit MS State Change Response Msg	Groups the statistics of the Network Exit MS State Change Response messages on R4 interface.
R4 Delete MS Entry Request Msg	Groups the statistics of the Delete MS Entry Request messages on R4 interface.
R4 Delete MS Entry Response Msg	Groups the statistics of the Delete MS Entry Response messages on R4 interface.
R4 Anchor PC Ind Msg	Groups the statistics of the Anchor Paging Controller Indicator messages on R4 interface.
R4 Anchor PC Ack Msg	Groups the statistics of the Anchor Paging Controller Ack messages on R4 interface.
R4 PC Relocation Ind Msg	Groups the statistics of the PC Relocation Ind messages on the R4 interface.
R4 PC Relocation Ack Msg	Groups the statistics of the PC Relocation Ack messages on the R4 interface.
R4 Context Request Msg	Groups the statistics of the Context Request messages on R4 interface.
R4 Context Report Msg	Groups the statistics of the Context Report messages on R4 interface.
R4 CMAC Key Count Update Msg	Groups the statistics of the CMAC Key Count Update messages on the R4 interface.
R4 CMAC Key Count Ack Msg	Groups the statistics of the CMAC Key Count Ack messages on the R4 interface.
R6 Keep Alive Request Msg	Groups the statistics of the R6 Keep Alive Request messages on the R4 interface.
R6 Keep Alive Response Msg	Groups the statistics of the R6 Keep Alive Response messages on the R4 interface.
Total Sessions Connected	Groups the statistics of the CMAC Key Count Ack messages on the R4 interface.
R6/R4 Unknown Messages	Groups the statistics of the Unknown type of messages on R6 and/or R4 interface.
<b>Message Statistics</b>	
Total Sent	The total number of this type of message sent on specific interface.
Total Send Failures	The total number of failures occurred during transaction id generation and message not sent for specific interface. This counter is used to count the error while sending the R6/R4 packets.
Retransmissions Sent	The number of this type of message re-transmitted on specific interface.
Total Received	The total number of this type of message received on specific interface.
Total Accepted	The total number of this type of message accepted on specific interface.

Field	Description
Total Relayed	The total number of this type of message relayed on specific interface.
Total Denied	The total number of this type of message denied on specific interface.
Total Discarded	The total number of this type of message discarded on specific interface.
Badly Formed	The number of badly formed this type of message on specific interface.
Decode Error	The number of this type of message on specific interface with decode error.
Unspecified Error	The number of this type of message on specific interface with unspecified error.
Missing Mandatory TLV	The number of this type of message on specific interface with missing mandatory TLVs.
TLV Value Invalid	The number of this type of message on specific interface with invalid TLV value.
Unknown TLV	The number of this type of message on specific interface with unknown TLVs.
Duplicate TLV Found	The number of this type of message on specific interface with duplicate TLVs.
No session Found	The number of this type of message on specific interface without any session information.
No Resource Drops	The number of this type of message on specific interface without resource drops.
Admin Prohibited	The number of this type of message on specific interface with admin prohibited.
Transaction Id. Error	The number of this type of message on specific interface. with transaction id error.

# CHAPTER 14

## show bcmcs

This chapter includes the **show bcmcs** command output tables.

- [show bcmcs counters all, on page 545](#)
- [show bcmcs statistics, on page 547](#)

## show bcmcs counters all

*Table 147: show bcmcs counters all Command Output Descriptions*

Field	Description
Username	BCMCS group username for this output.
Callid	Call ID for this output.
Flow-id	Flow ID for this output.
<b>BCMCS Service Request/Reply</b>	
Renew SRQ Accepted	The total number of service request renewals accepted.
Discarded	The total number of service request renewals discarded.
Response Send Error	The total number of service replies for which errors were experienced during transmission.
<b>BCMCS Registration Request/Reply</b>	
Renew RRQ Accepted	The total number of registration request renewals accepted.
Discarded	The total number of registration request renewals discarded.
Response Send Error	The total number of registration replies for which errors were experienced during transmission.
<b>BCMCS Registration Update/Ack</b>	
Initial Update Transmitted	The total number of registration updates that have been transmitted.
Update Retransmitted	The total number of registration updates that have been re-transmitted.

Field	Description
Denied	The total number of registration updates that have been denied by the PCF.
Not Acknowledged	The total number of registration updates and/or acknowledgements that have not been acknowledged by the PCF.
Reg Ack Received	The total number of registration acknowledgements that have been received.
Reg Ack Discarded	The total number of registration acknowledgements that have been discarded.
Update Send Error	The total number of registration updates for which errors were experienced during transmission.
<b>BCMCS Registration Update Send Reason</b>	
Lifetime Expiry	The total number of registration updates that were sent due to the expiration of a lifetime timer during a subscriber session.
Upper Layer Initiated	The total number of registration updates that were initiated by upper processing layers.
Other Reasons	The total number of registration updates that were sent due to reasons other than those listed here.
Session Manager Exited	The total number of registration updates that were sent due to the termination of Session Manager tasks.  <b>NOTE:</b> If any data is reported for this field, there may be an issue with either the software or hardware. If you continue to experience problems, refer to the System Administration and Administration Reference for information on troubleshooting the problem.
<b>BCMCS Registration Update Denied</b>	
Reason Unspecified	The total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).
Admin Prohibited	The total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
BSN Failed Authentication	The total number of denied registration updates due to authentication failure by the mobile node.
Identification Mismatch	The total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Update	The total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).
<b>GRE Send</b>	
Total Packets Sent	Indicates the total number of Generic Routing Encapsulation (GRE) packets transmitted.
Total Bytes Sent	Indicates the total number of Generic Routing Encapsulation (GRE) bytes transmitted.
Total BCMCS Sessions matching specified criteria	Total number of sessions matching specified criteria.

# show bcmcs statistics

Table 148: show bcmcs statistics Command Output Descriptions

Field	Description
<b>Session Stats</b>	
Total Sessions Current	Indicates the total number of sessions that are in progress. These could be either active, dormant, being set up, or being disconnected.
Current Flow-id session	Indicates the number of flow-id sessions in progress. These could be active, dormant, being set up or being disconnected.
Current Pgm-Id Session	Indicates the number of program-id sessions in progress. These could be active, dormant, being set up or being disconnected.
Total Setup	Indicates the total number of sessions that have been successfully set up since system started.
Total Released	Indicates the total number of sessions that have successfully been disconnected.
Total Setup Flow-Id	Indicates the total number of flow-id sessions that have been successfully set up since the system was started.
Total Setup Program-Id	Indicates the total number of program-id sessions that have been successfully set up since the system was started.
<b>Session Releases</b>	
De-registered	Indicates the total number of sessions that were disconnected through a normal de-registration process.
Lifetime Expiry	Indicates the total number of sessions that were disconnected due to the expiration of their lifetime timer.
PPP Layer Command	Indicates the number of sessions disconnected due to PPP initiating a tear-down.
PCF-Monitor Fail	The total number of sessions disconnected because the PCF monitor function detected that the PCF was down.
GRE Key Mismatch	The total number of sessions disconnected because the GRE key changed for a session.
Other Reasons	Indicates the number of sessions disconnected due to reasons other than those listed here.
<b>BCMCS Service Request/Response</b>	

Field	Description
Total SRQ/Renew/Dereg RX	The total number of service requests, renewals, and de-registrations received.
Total Accept	The total number of service requests that have been received and accepted.
Total Denied	Total number of service requests that have been received and denied.
Total Discard	Total number of service requests that have been received and discarded.
Init SRQ RX	The total number of initial setup or start service requests that have been received.
Init SRQ Accept	The total number of initial setup or start service requests that have been received and accepted.
Init SRQ Denied	The total number of initial setup or start service requests that have been received and denied.
Init SRQ Discard	The total number of initial setup or start service requests that have been received and discarded.
Renew SRQ RX	The total number of service request renewals received.
Renew SRQ Accept	The total number of service request renewals received and accepted.
Renew SRQ Denied	The total number of service request renewals received and denied.
Renew SRQ Discard	The total number of service request renewals received discarded.
Dereg SRQ RX	The total number of de-registration requests that have been received.
Dereg SRQ Accept	The total number of de-registration requests that have been received and accepted.
Dereg SRQ Denied	The total number of de-registration requests that have been received and denied.
Dereg SRQ Discard	The total number of de-registration requests that have been received and discarded.
Response Send Error	Indicates the total number of registration replies for which errors were experienced during transmission.
<b>BCMCS Service Request Denied</b>	
Requests Accepted	Indicates the total number of service requests that were denied based on the number of requests accepted.

Field	Description
Unspecified Reason	Indicates the total number of service requests that were denied for unspecified reasons.
PCF Failed Auth	Indicates the total number of service requests that were denied due to mobile node authentication failure.
Identification Mismatch	Indicates the total number of service requests that were denied due to an identification mismatch.
Unknown BSN	Indicates the total number of service requests that were denied due to an unknown BSN address.
<b>BCMCS SRQ Denied - Insufficient Resource Reasons</b>	
No Session Manager	Indicates the total number of service requests that were denied due to the lack of available Session Manager tasks. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
No Memory	Indicates the total number of service requests that were denied due to insufficient memory.
Session Managers Retried	Indicates that the system unsuccessfully attempted to try multiple Session Manager tasks to establish a session.
Input-Q Exceeded	Indicates that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
<b>BCMCS SRQ Denied - Poorly Formed Request Reasons</b>	
Session Already Dormant	The number of SRQs that had Active Stop for a session that was already dormant.
Already Active	The number of SRQs that had Active Start for a session that was already active.
Other Reasons	The number of SRQs denied due to other reasons for a badly formed SRQ.
<b>BCMCS SRQ Denied - Overload/Congestion Control</b>	
Admin Prohibited (reject)	SRQs denied due to congestion control mechanism.
Unknown BSN (redirect)	SRQs denied due to congestion control mechanism.
<b>BCMCS Registration Request/Reply</b>	
Total RRQ/Renew/Dereg RX	The total number of registration requests, renewals, and de-registrations received.
Total Accept	The total number of registration requests that have been accepted.
Total Denied	The total number of registration requests that have been rejected.

Field	Description
Total Discard	The total number of registration requests that have been discarded.
Init RRQ RX	The total number of initial registration requests that have been received.
Init RRQ Accept	The total number of initial registration requests received and accepted.
Init RRQ Denied	The total number of initial registration requests received and rejected.
Init RRQ Discard	The total number of initial registration requests that have been received and discarded.
Renew RRQ RX	The total number of registration request renewals received.
Renew RRX Accept	The total number of registration request renewals received and accepted.
Renew Actv Start Accept	The total number of RRQ renewals with an Active Start record received and accepted.
Renew Actv Stop Accept	The total number of RRQ renewals with an Active Stop record received and accepted.
Renew RRQ Denied	The total number of registration request renewals received and rejected.
Renew RRQ Discard	The total number of registration request renewals received and discarded.
Dereg RRQ RX	The total number of de-registration requests that have been received.
Dereg RRQ Accept	The total number of de-registration requests received and accepted.
Dereg Active Stop Accept	The total number of de-registration requests with an active stop that were accepted.
Dereg RRQ Denied	The total number of de-registration requests received and rejected.
Dereg RRQ Discard	The total number of de-registration requests received and discarded.
Reply Send Error	Indicates the total number of registration replies for which errors were experienced during transmission.
<b>BCMCS Registration Request Denied</b>	
Unspecified Reason	Indicates the total number of registration requests that were denied using reply code of 80H (Registration Denied - reason unspecified)

Field	Description
Admin Prohibited	Indicates the total number of registration requests that were denied using reply code of 81H (Registration Denied - administratively prohibited).
Insufficient Resources	Indicates the total number of registration requests that were denied using reply code of 82H (Registration Denied - insufficient resources).
PCF Failed Auth	Indicates the total number of registration requests that were denied using reply code of 83H (Registration Denied - mobile node failed authentication).
Identification Mismatch	Indicates the total number of registration requests that were denied using reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Request	Indicates the total number of registration requests that were denied using reply code of 86H (Registration Denied - poorly formed request).
Unknown BSN Address	Indicates the total number of registration requests that were denied due to an unknown BSN address.
Reverse Tunnel Unavail	Indicates the total number of registration requests that were denied using reply code of 89H (Registration Denied - requested reverse tunnel unavailable).
Reverse Tunnel Required	Indicates the total number of registration requests that were denied using reply code of 8AH (Registration Denied - reverse tunnel is mandatory and "T"-bit not set).
Unrecognized Vendor Id	Indicates the total number of registration requests that were denied using reply code of 8DH (Registration Denied - unsupported vendor ID or unable to interpret data in the CVSE).
Session Already Closed	Renew and RRQ denied due to the session not present in the PDSN Dereq. Error code 0x8e.
<b>BCMCS RRQ Denied - Insufficient Resource Reasons</b>	
No Session Manager	Indicates the total number of registration requests that were denied due to the lack of available Session Manager tasks. This may occur when the system is booting up in the event that a Session Manager task terminated unexpectedly.
No Memory	Indicates the total number of registration requests that were denied due to insufficient memory.
Session Managers Retried	Indicates that the system unsuccessfully attempted to try multiple Session Manager tasks to establish a session.

Field	Description
Input-Q Exceeded	Indicates that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
<b>BCMCS RRQ Denied - Poorly Formed Request Reasons</b>	
Session Already Dormant	The number of RRQs that had Active Stop for a session that was already dormant.
Already Active	The number of RRQs that had Active Start for a session that was already active.
Other Reasons	The number of RRQs denied due to other reasons for a badly formed RRQ.
<b>BCMCS RRQ Denied - Overload/Congestion Control</b>	
Admin Prohibited (reject)	RRQs denied with error code 0x81h due to congestion control mechanism.
Unknown BSN (redirect)	RRQs denied with error code 0x88 due to congestion control mechanism.
<b>BCMCS Registration Update/Ack</b>	
Reg Update Transmitted	Indicates the total number of registration updates that were transmitted.
Accepted	Indicates the total number of registration updates that were accepted by the PCF.
Denied	Indicates the total number of registration updates that were denied.
Not Acknowledged	Indicates the total number of registration updates that were not acknowledged.
Initial Update TX	Indicates the total number of initial registration updates that were transmitted.
Update Retransmitted	Indicates the total number of registration updates that were re-transmitted.
Reg Ack Received	Indicates the total number of registration acknowledgements that were received.
Reg Ack Discarded	Indicates the total number of registration acknowledgements that were discarded.
Update Send Error	Indicates the total number of registration updates for which errors were experienced during transmission.
<b>BCMCS Registration Update Send Reason</b>	

Field	Description
Lifetime Expiry	Indicates the total number of registration updates that were sent due to the expiration of a lifetime timer during a subscriber session.
Other Reasons	Indicates the total number of registration updates that were sent due to reasons other than those listed here.
Upper Layer Initiated	Indicates the total number of registration updates that were initiated by upper processing layers.
Session Manager Exited	Indicates the number of registration updates that were sent due to the termination of a Session Manager task.
<b>BCMCS Registration Update Denied</b>	
Reason Unspecified	Indicates the total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).
Admin Prohibited	Indicates the total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).
BSN Failed Auth	Indicates the total number of denied registration updates that were sent due to failed authentication by the mobile node.
Identification Mismatch	Indicates the total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).
Poorly Formed Updated	Indicates the total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).
<b>BCMCS Registration Ack Discard Reasons</b>	
Session Absent	Indicates the total number of registration acknowledgements that were discarded due to the session having been already ended because the acknowledgement was late.
No Memory	Indicates the total number of registration acknowledgements that were discarded due to insufficient memory.
Malformed	Indicates the total number of registration acknowledgements that were discarded due to being poorly formed.
Auth Failure	Indicates the total number of registration acknowledgements that were discarded due to the mobile node failing authentication.
Internal Bounce Error	Indicates that an internal communication message between an A11 Manager task and a Session Manager task bounced (was not successfully sent).

Field	Description
Input-Q Exceeded	Indicates the number of times that the queue in which incoming calls are kept prior to being processed exceeded its capacity.
Mismatched Id	Indicates the total number of discarded registration acknowledgements due to reply code 85H (Registration Denied - identification mismatch).
Invalid Packet Length	Indicates the total number of registration acknowledgements that were discarded due to having an invalid packet length.
Misc Reasons	Indicates the number of registration acknowledgements that were discarded due to reasons other than those listed here.
<b>GRE Send</b>	
Total Packets Sent	Indicates the total number of Generic Routing Encapsulation (GRE) packets transmitted.
Total Bytes Sent	Indicates the total number of Generic Routing Encapsulation (GRE) bytes transmitted.

# CHAPTER 15

## show bearer-control-profile

This chapter describes the output of the **show bearer-control-profile** command.

- [show bearer-control-profile full name](#), on page 555

### show bearer-control-profile full name

*Table 149: show bearer-control-profile full name Command Output Descriptions*

Field	Description
Bearer Control Profile Name	Indicates the Bearer Control Profile
pre-rel8-qos-mapping	Defines (MME) mapping of EPC QOS (non-standard QCIs) to 3GPP PreRelease8 QoS parameters.
Class	Indicates the UMTS traffic classified into the following: <ul style="list-style-type: none"><li>• Background</li><li>• Conversational</li><li>• Interactive</li><li>• Streaming</li></ul>
traffic handing priority	Traffic handling priority specifies the relative importance of handling all SDUs that belong to the UMTS bearer compared to the SDUs of other bearers. The priority value ranges from 1 to 3, where the value 1 holds the highest priority. The predefined thp value is 3.
sdu error ratio	Service Data Unit (SDU) Error ratio indicates the fraction of SDUs lost or detected as error packets. SDU error ratio is defined only for conforming traffic. The range is an integer ranging from 1 to 7. The ratio ranges from $10^{-1}$ to $10^{-6}$ . Allowed values are $1(10^{-2})$ , $2(7*10^{-3})$ , $3(10^{-3})$ , $4(10^{-4})$ , $5(10^{-5})$ , $6(10^{-6})$ and $7(10^{-1})$ . The predefined minimum value is 1.

Field	Description
minimum transfer delay	<p>Defines the maximum delay for 95 percentile of the delay distributed for all delivered SDUs during the lifetime of a bearer service. The delay value ranges from 10 to 40,000 milliseconds. The predefined minimum value is 100.</p> <p>The delay for an SDU is defined as the time from request to transfer and SDU at one SAP to its delivery at the other SAP.</p>
source stats descriptor	Toggles the source statistics descriptor. The values are either 0 or 1.
signaling indication	Indicates the state of the signal.

# CHAPTER 16

## show bssap

This chapter includes the **show bssap** command output tables.

- [show bssap+ statistics, on page 557](#)

## show bssap+ statistics

*Table 150: show bssap+ statistics Command Output Descriptions*

Field	Description
Bssap+ Statistics	Base station system application part plus related statistics.
Number of Subscribers in Gs-Associated State	Total number of subscriber in Gs associated state or using Gs interface for connectivity between SGSN and VLR.
Number of Associated Vlrs	Total number of VLRs associated with this BSSAP+ application.
Alert Req Rcvd	Total number of alert request messages received by BSSAP+ application from VLR.
Alert Ack Sent	Total number of acknowledge messages sent by BSSAP+ application in response to alert requests messages.
Alert Rej Sent	Total number of messages sent by BSSAP+ application to reject the alert requests.
Location Upd Req Sent	Total number of location update request messages sent by BSSAP+ application.
Location Upd Acc Rcvd	Total number of location update accept messages sent by BSSAP+ application from VLR.
Location Upd Rej Rcvd	Total number of messages sent by BSSAP+ application to reject the location update requests from VLR.
GPRS Detach Ind Sent	Total number of GPRS detach indication messages sent by BSSAP+ application.
GPRS Detach Ack Rcvd	Total number of acknowledge messages received by BSSAP+ application in response to GPRS detach indication messages sent to VLR.
IMSI Detach Ind Sent	Total number of IMSI detach indication messages sent by BSSAP+ application to VLR.

Field	Description
IMSI Detach Ack Rcvd	Total number of acknowledge messages received by BSSAP+ application in response to IMSI detach indication messages sent to VLR.
Mobile Status Rcvd	Total number of mobile status messages received by BSSAP+ application from VLR.
Mobile Status Sent	Total number of mobile status messages sent by BSSAP+ application to VLR.
Paging Req Rcvd	Total number of paging request messages received by BSSAP+ application from VLR.
Paging Rej Sent	Total number of messages sent by BSSAP+ application to reject the received paging request messages from VLR.
MS Unreachable Sent	Total number of messages sent by BSSAP+ application to indicate that mobile is unreachable to VLR.
TMSI Reloc Comp Sent	Total number of messages sent by BSSAP+ application with TMSI relocation components to VLR.
MS Info Req Rcvd	Total number of MS information request messages received by BSSAP+ application from VLR.
MS Info Rsp Sent	Total number of response messages sent by BSSAP+ application in response to MS information request messages from VLR.
MM Info Req Rcvd	Total number of mobility management (MM) information request messages received by BSSAP+ application from VLR.
MS Activity Ind Sent	Total number of MS activity indication messages sent by BSSAP+ application to VLR.
Reset Ind Rcvd	Total number of reset indicator messages received by BSSAP+ application from VLR.
Reset Ack Sent	Total number of acknowledge messages sent by BSSAP+ application in response to reset indicator message received from VLR.
Reset Ind Sent	Total number of reset indicator messages sent by BSSAP+ application to VLR.
Reset Ack Rcvd	Total number of acknowledge messages received by BSSAP+ application in response to reset indicator message sent to VLR.
Downlink Tnnl Req Rcvd	Total number of downlink tunnel request messages received by BSSAP+ application from VLR.
Uplink Tnnl Req Sent	Total number of uplink tunnel request messages sent by BSSAP+ application to VLR.

# CHAPTER 17

## show build

This chapter includes the **show build** command output table.

- [show build, on page 559](#)

## show build

This command displays detailed information about the currently active StarOS release build.

**Table 151: show build Command Output Descriptions**

Field	Description
Active Software:	
Image Version	Identifies the StarOS version running on this platform.
Image Build Number:	Displays build number or build type (text string).
Image Description:	Brief text string that describes this build. For example, "Deployment".
Image Date:	The date the software image was generated. Format = DoW MMM YYYY. For example, "Tue May 4 00:45:12 EDT 2016".
Boot Image:	The pathname for the bootable image that is currently running. For example, "/flash/<image_filename>.bin".
Kernel Version:	The StarOS kernel version number. For example, "2.6.38-stars-v3".
Kernel Machine Type:	The StarOS machine (CPU) type. For example, "x86_64" (64-bit v3 x86 instruction set).
Build Information:	
Kernel Build:	Text string identifying the kernel build script with timestamp.
Image Build Type:	Text string identifying the type of build.
Image Build User:	Text string identifying the build user.
Image Build Machine:	Text string identifying the machine on which the build was created.

Field	Description
Image Build Changeset Version:	Text string identifying the set of code changes incorporated into this build.
Image Build Changeset Author:	Text string identifying the author of the Changeset.
Image Build Changeset Location:	Text string identifying the location of the Changeset, for example "cisco".
Image Build Changeset Number	The 40-character string that corresponds to the Git commit identifier (SHA-1) of the build.
Image Build Changeset PID	Text string identifying the Cisco Part Identifier (PID) assigned to this build.

# CHAPTER 18

## show bulkstats data

This chapter includes the **show bulkstats data** command output tables.

- [show bulkstats data, on page 561](#)

## show bulkstats data

*Table 152: show bulkstats data Command Output Descriptions*

Field	Description
<b>Bulk Statistics Server Configuration:</b>	
Server State	Indicates the server state—enabled or disabled.
File Limit	Indicates the file size limit in KB.
Sample Interval	Indicates the sampling interval.
Transfer Interval	Indicates the transfer interval.
Receiver Mode	Indicates the receiver mode.
Local File Storage	Indicates the local file storage.
Historical Data Collection	Indicates the Historical Data Collection state—enabled or disabled.
<b>Bulk Statistics Server Statistics:</b>	
Records awaiting transmission	Indicates the number of records awaiting transmission.
Bytes awaiting transmission	Indicates the number of bytes awaiting transmission.
Total records collected	Indicates the total number of records collected.
Total bytes collected	Indicates the total number of bytes collected.
Total records transmitted	Indicates the total number of records transmitted.
Total bytes transmitted	Indicates the total number of bytes transmitted.

Field	Description
Total records discarded	Indicates the total number of records discarded.
Total bytes discarded	Indicates the total number of bytes discarded.
Last collection time required	Indicates the last collection time required.
Last transfer time required	Indicates the last transfer time required.
No successful data transfers	Indicates the total number of successful data transfers.
No attempted data transfers	Indicates the total number of attempted data transfers.
<b>File n</b>	
Remote File Format	The remote file format—for example, %date%-%time%
File Header	The file's header.
File Footer	The file's footer.
No bulkstats receivers	Indicates the total number of bulk statistics collection servers configured.
<b>File Statistics:</b>	
Records awaiting transmission	Indicates the number of records awaiting transmission.
Bytes awaiting transmission	Indicates the number of bytes awaiting transmission.
Total records collected	Indicates the total number of records collected.
Total bytes collected	Indicates the total number of bytes collected.
Total records transmitted	Indicates the total number of records transmitted.
Total bytes transmitted	Indicates the total number of bytes transmitted.
Total records discarded	Indicates the total number of records discarded.
Total bytes discarded	Indicates the total number of bytes discarded.
Last transfer time required	Indicates the last transfer time required.
No successful data transfers	Indicates the total number of successful data transfers.
No attempted data transfers	Indicates the total number of attempted data transfers.
<b>Handoff Statistics</b>	
epdg-handoff-disc	Configures LTE to Wi-Fi HO disconnect reason statistics.
show epdg-service statistics handoff-disc-reasons	Displays the statistics corresponding to LTE to Wi-Fi HO disconnect reasons for all services.
clear epdg-service statistics handoff-disc-reasons	Removes the statistics corresponding to LTE to Wi-Fi HO disconnect reasons for all services.

# CHAPTER 19

## show cae-group server name

This chapter includes the **show cae-group server name** command output tables.

- [show cae-group server name, on page 563](#)

## show cae-group server name

**Important** In release 20.0, MVG is not supported. For more information, contact your Cisco account representative.

**Table 153: show cae-group server name Command Output Descriptions**

Field	Description
Server	The name of the CAE.
IP	The IPv4 address of the CAE.
State	The current state of the CAE, which can be Init (Initializing), Up, Down, or Tmout (Timed Out).
Hit Count	The number of HTTP GET requests sent to this CAE. A single video may contain multiple HTTP GET requests from the UE.
Timeout Consecutive (Cumulative)	The number of current consecutive timeouts that have occurred on the keep-alive heartbeat. This counter is reset to 0 if the Mobile Video Gateway is receiving no responses from the CAE. (Cumulative) is the total number of timeouts that have occurred since the last reset (clear) of the statistics for this CAE.
Last Failure	The duration of time since the CAE state was last transitioned to Down.

## CHAPTER 20

# show call-control-profile

This chapter describes the output of the **show call-control-profile** command.

- [show call-control-profile full name](#), on page 565

## show call-control-profile full name

This command displays the detailed configuration for a specifically named call control profile.

**Table 154: show call-control-profile full name Command Output Descriptions**

Field	Description
Call Control Profile Name	The name of the call control profile you chose to view.
Accounting Context Name	The name of the accounting context associated with this call control profile.
Accounting GTPP Group Name	The name of the GTPP accounting group associated with this call control profile.
Secondary GTPP Group Name	The name of the secondary GTPP accounting group associated with this S-GW call control profile.
Secondary GTPP Accounting Context Name	The accounting context used for secondary GTPP accounting.
Accounting Mode (SGW)	The method selected for S-GW accounting (GTPP [default], none, or RADIUS/Diameter).
GPRS Attach All	Indicates whether the call control profile allows or restricts attaches of all subscribers using the GPRS access type.
GPRS Attach All Failure Code	The configured GMM failure code to be sent in reject messages to GPRS mobile subscribers attempting to attach.
UMTS Attach All	Indicates whether the call control profile allows or restricts attaches of all subscribers using the UMTS access type.
UMTS Attach All Failure Code	The configured GMM failure code to be sent in reject messages to UMTS mobile subscribers attempting to attach.

Field	Description
GPRS RAU Intra All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with GPRS access-type extensions from the intra-SGSN RAU procedure.
GPRS RAU Intra All Failure Code	The configured GMM failure cause code that identifies the reason an intra-SGSN RAU does not occur. This GMM cause code will be sent in the reject message to the GPRS mobile subscriber.
UMTS RAU Intra All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with UMTS access-type extensions from the intra-RAU procedure.
UMTS RAU Intra All Failure Code	The configured GMM failure cause code that identifies the reason an intra-SGSN RAU does not occur. This GMM cause code will be sent in the reject message to the UMTS mobile subscriber.
GPRS RAU Inter-PLMN All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with GPRS access-type extensions from triggering RAUs between different PLMNs.
GPRS RAU Inter-PLMN All Failure Code	The configured GMM failure cause code that identifies the reason an RAU does not occur between different PLMNs. This GMM cause code will be sent in the reject message to the GPRS mobile subscriber.
UMTS RAU Inter-PLMN All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with UMTS access-type extensions from triggering RAUs between different PLMNs.
UMTS RAU Inter-PLMN All Failure Code	The configured GMM failure cause code that identifies the reason an RAU does not occur between different PLMNs. This GMM cause code will be sent in the reject message to the UMTS mobile subscriber.
GPRS RAU Inter All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with GPRS access-type extensions from the inter-SGSN RAU procedure.
GPRS RAU Inter All Failure Code	The configured GMM failure cause code that identifies the reason an inter-SGSN RAU does not occur. This GMM cause code will be sent in the reject message to the GPRS mobile subscriber.
UMTS RAU Inter All	Indicates whether the call control profile is configure to allow or restrict mobile subscribers with UMTS access-type extensions from the inter-RAU procedure.
UMTS RAU Inter All Failure Code	The configured GMM failure cause code that identifies the reason an inter-SGSN RAU does not occur. This GMM cause code will be sent in the reject message to the UMTS mobile subscriber.
Failure Code For Peer Sgsn Address Resolution Failure	The configured GMM failure cause code that indicates that the SGSN cannot resolve the IP address for a peer SGSN. This GMM cause code will be sent in the reject message to the mobile subscriber.
GPRS SMS MO All	Indicates whether the call control profile allows or restricts mobile-originated SMS messages from subscribers using the GPRS access type.

Field	Description
GPRS SMS MO All Failure Code	The configured GMM failure cause code that indicates that mobile-originated SMS messages from GPRS subscribers are not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
UMTS SMS MO All	Indicates whether the call control profile allows or restricts mobile-originated SMS messages from subscribers using the UMTS access type.
UMTS SMS MO All Failure Code	The configured GMM failure cause code that indicates that mobile-originated SMS messages from UMTS subscribers are not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
GPRS SMS MT All	Indicates whether the call control profile allows or restricts mobile-terminated SMS messages to subscribers using the GPRS access type.
GPRS SMS MT All Failure Code	The configured GMM failure cause code that indicates that mobile-terminated SMS messages to GPRS subscribers are not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
UMTS SMS MT All	Indicates whether the call control profile allows or restricts mobile-terminated SMS messages to subscribers using the UMTS access type.
UMTS SMS MT All Failure Code	The configured GMM failure cause code that indicates that mobile-terminated SMS messages to UMTS subscribers are not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
GPRS Primary PDP Context Activation All	Indicates whether primary PDP context activation is allowed for GPRS mobile subscribers.
GPRS Secondary PDP Context Activation All	Indicates whether secondary PDP context activation is allowed for GPRS mobile subscribers.
GPRS PDP Context Activation All Failure Code	The configured GMM failure cause code that indicates that PDP context activation by GPRS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
UMTS Primary PDP Context Activation All	Indicates whether primary PDP context activation is allowed for UMTS mobile subscribers.
UMTS Secondary PDP Context Activation All	Indicates whether secondary PDP context activation is allowed for UMTS mobile subscribers.
UMTS PDP Context Activation All Failure Code	The configured GMM failure cause code that indicates that PDP context activation by UMTS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
GPRS Nw Init Primary PDP Context Activation All	Indicates whether network-initiated primary PDP context activation is allowed for GPRS mobile subscribers.
GPRS Nw Init Primary PDP Ctxt Activation All Failure Code	The configured GMM failure cause code that indicates that network-initiated primary PDP context activation by GPRS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.

Field	Description
GPRS Nw Init Secondary PDP Ctxt Activation All	Indicates whether network-initiated secondary PDP context activation is allowed for GPRS mobile subscribers.
GPRS Nw Init Secondary PDP Ctxt Activation All Failure Code	The configured GMM failure cause code that indicates that network-initiated secondary PDP context activation by GPRS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
UMTS Nw Init Primary PDP Context Activation All	Indicates whether network-initiated primary PDP context activation is allowed for UMTS mobile subscribers.
UMTS Nw Init Primary PDP Ctxt Activation All Failure Code	The configured GMM failure cause code that indicates that network-initiated primary PDP context activation by UMTS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
UMTS Nw Init Secondary PDP Ctxt Activation All	Indicates whether network-initiated secondary PDP context activation is allowed for UMTS mobile subscribers.
UMTS Nw Init Secondary PDP Ctxt Activation All Failure Code	The configured GMM failure cause code that indicates that network-initiated secondary PDP context activation by UMTS subscribers is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
SRNS Intra All	Indicates whether intra-SRNS (Serving Radio Network Subsystem) relocation is allowed for mobile subscribers.
SRNS Intra All Failure Code	The configured GMM failure cause code that indicates that intra-SRNS relocation is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
SRNS Inter All	Indicates whether inter-SRNS relocation is allowed for mobile subscribers.
SRNS Inter All Failure Code	The configured GMM failure cause code that indicates that inter-SRNS relocation is not permitted. This GMM cause code will be sent in the reject message to the mobile subscriber.
S6a Hss Service	Indicates the name of the home subscriber server, if configured, that the SGSN will access via the S6a interface.
S13 Hss Service	If configured, indicates the name of the home subscriber server that the SGSN will access via the S13 interface.
S6d Hss Service	S4-SGSN only. Indicates the name of the home subscriber server, if configured, that the SGSN will access via the S6d interface to obtain subscriber-related information.
Send EMM Info for Periodic TAU	Indicates whether the EMM information for periodic TAU is enabled or disabled.
Access Type	Indicates the access type—WB-EUTRAN, NB-IOT, or WB-EUTRAN and NB-IOT.
S13 prime Hss Service	S4-SGSN only. Indicates the name of the home subscriber server (HSS), if configured, that the SGSN will access via the S13' interface to perform Mobile Equipment Identity checks.

Field	Description
Preferred Subscription Interface	<p>If configured, indicates the preferred subscription interface (HLR or HSS). HLR indicates that the MAP protocol will be used to exchange messages with the HLR. HSS indicates that the Diameter protocol will be used to exchange messages with the HSS.</p> <p>The preferred subscription interface is displayed as <b>hss for epc-ue</b> if <b>prefer subscription-interface hss epc-ue</b> is configured under the Call Control Profile. This keyword is configured to select the HSS interface for EPC capable subscribers.</p>
DNS GGSN Context	On an S4-SGSN, indicates the context associated for DNS lookup for a GGSN.
DNS SGSN Context	On an S4-SGSN, indicates the context associated for DNS lookup for an SGSN.
DNS PGW Context	Indicates the context associated for DNS lookup for a P-GW.
DNS SGW Context	Indicates the context associated for DNS lookup for an S-GW.
DNS MSC Context	On an MME, indicates the context associated for DNS lookup for an Mobile Switching Center (MSC).
Sgtp-service Context	The name of the context that has the applicable SGTP service for this call control profile associated with it.
Service	The name of the SGTP service associated with the context.
Authentication All-Events	Indicates whether authentication for all events (attaches, activates, and so forth) has been enabled or disabled.
Authentication Attach	Indicates whether authentication for an Attach with a local P-TMSI or Attaches with an IMSI has been enabled or disabled.
Authentication Attach (Inter RAT)	Indicates whether Attach message authentication has been enabled or disabled for re-authorizing subscribers on a change in Radio Access Type (RAT) of the subscriber's node.
Authentication Attach (Gprs only)	Indicates whether Attach message authentication has been enabled or disabled for calls from GPRS mobile subscribers.
Authentication Attach (Combined)	Indicates whether authentication for combined GPRS/IMSI Attaches has been enabled or disabled.
Authentication Activate	Indicates whether authentication for activate requests has been enabled or disabled.
Authentication Service Request	Indicates whether authentication for all service requests has been enabled or disabled.
Authentication Service Request (Signaling)	Indicates whether authentication for signaling service requests has been enabled or disabled.
Authentication Service Request (Data)	Indicates whether authentication for data service requests has been enabled or disabled.
Authentication Service Request (Page Response)	Indicates whether authentication for page response service requests has been enabled or disabled.
Authentication RAU	Indicates whether authentication for routing area updates has been enabled or disabled.

Field	Description
Authentication RAU (Periodic)	Indicates whether authentication for periodic RAU Requests has been enabled or disabled.
Authentication RAU (Ra update)	Indicates whether authentication for RA update RAU Requests has been enabled or disabled.
Authentication RAU (Ra update with Local Ptmsi)	Indicates whether authentication for RA update using the local P-TMSI type of RAU Requests has been enabled or disabled.
Authentication RAU (Ra update with Foreign Ptmsi)	Indicates whether authentication for RA update using foreign P-TMSI type of RAU Requests has been enabled or disabled.
Authentication RAU (Imsi Combined Update)	Indicates whether authentication for RA update RAU Requests using the inter-RAT P-TMSI has been enabled or disabled.
Authentication RAU (Combined Update)	Indicates whether authentication for RAU Requests using the local P-TMSI has been enabled or disabled.
Authentication RAU (Combined Update IRAT PTMSI)	Indicates whether authentication for RAU Requests using inter-RAT and the local P-TMSI has been enabled or disabled.
Authentication RAU (Imsi Combined Update)	Indicates whether authentication for RAU Requests using IMSI and local P-TMSI values has been enabled or disabled.
Authentication RAU (Imsi Combined Update IRAT PTMSI)	Indicates whether authentication for RAU Requests using IMSI values, inter-RAT, and the local P-TMSI has been enabled or disabled.
Authentication Detach	Indicates whether authentication for Detach Requests has been enabled or disabled.
Authentication SMS	Indicates whether authentication for all SMS messages has been enabled or disabled.
Authentication SMS (MO-SMS)	Indicates whether authentication for mobile-originated SMS messages has been enabled or disabled.
Authentication SMS (MT-SMS)	Indicates whether authentication for mobile-terminated SMS messages has been enabled or disabled.
Regional Subscription Restriction Failure Code Value	The configured GMM failure cause code that indicates that mobile subscriber lacks the required subscription to place calls to the region. This GMM cause code will be sent in the reject message to the mobile subscriber.
ARD-Checking	Indicates whether access restriction data (ARD) checking in incoming subscriber data (ISD) messages has been enabled or disabled.
ARD Failure Code	The configured GMM failure cause code that indicates the incoming subscriber data has failed ARD checking. This GMM cause code will be sent in the reject message to the mobile subscriber.
Access Restriction Data	Indicates if the eutran-not-allowed parameter is enabled to override the "eutran-not-allowed" flag received from the HLR/HSS in the ISD/ULA request for the Access Restriction Data (ARD) parameter. The helps ensure that an SRNS relocation handover to E-UTRAN is not allowed for E-UTRAN capable UEs that have only a UTRAN/GERAN roaming agreement.

Field	Description
Zone-Code Check	Indicates whether zone code checking has been enabled or disabled.
Usage of Auth Vectors From Old Sgsn	Indicates whether the ability of an SGSN to receive authorization vectors from other SGSNs has been enabled or disabled.
SGSN Address	Provides information on how the peer SGSN is configured, including the peer IP address, RAC and LAC values or RNC_ID, and interface type.
PEER-MME	Provides information on how the peer MME is configured, including the peer IP address, MME Group ID or TAC, and interface type.
Order of Preference for Integrity Algorithm is	The integrity algorithm that receives the first priority.
Order of Preference for Encryption Algorithm is	The encryption algorithm that receives the first priority.
Order of Preference for Gprs Cipherring Algorithm is	The GPRS cipherring algorithm that receives the first priority.
PTMSI-signature allocation	Indicates whether P-TMSI signature allocation has been enabled or disabled.
PTMSI-Signature-Realloc Interval value UMTS	The time interval (in minutes) for skipping the P-TMSI signature service/RAU/attach request message procedure for UMTS mobile subscribers.
PTMSI-Signature-Realloc Interval value GPRS	The time interval (in minutes) for skipping the P-TMSI signature service/RAU/attach request message procedure for GPRS mobile subscribers.
PTMSI-Signature-Realloc Frequency value UMTS	How many times P-TMSI signature reallocation for service requests can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc Frequency value GPRS	How many times P-TMSI signature reallocation for service requests can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc Attach Frequency value UMTS	How many times P-TMSI signature reallocation for Attach requests can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc Attach Frequency value GPRS	How many times P-TMSI signature reallocation for Attach requests can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc RAU (Generic) Frequency value UMTS	How many times P-TMSI signature reallocation for routing area updates can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc RAU (Generic) Frequency value GPRS	How many times P-TMSI signature reallocation for routing area updates can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc RAU Periodic Frequency value UMTS	How many times P-TMSI signature reallocation for periodic routing area updates can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc RAU Periodic Frequency value GPRS	How many times P-TMSI signature reallocation for periodic routing area updates can be skipped for GPRS mobile subscribers.

Field	Description
PTMSI-Signature-Realloc RAU RA Update Frequency value UMTS	How many times P-TMSI signature reallocation for routing area update RA updates can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc RAU RA Update Frequency value GPRS	How many times P-TMSI signature reallocation for routing area update RA updates can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc RAU Combined Update Frequency value UMTS	How many times P-TMSI signature reallocation for combined requests can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc RAU Combined Update Frequency value GPRS	How many times P-TMSI signature reallocation for combined requests can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc RAU Imsi Combined Update Frequency value UMTS	How many times P-TMSI signature reallocation for combined RAU updates with IMSI values can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc RAU Imsi Combined Update Frequency value GPRS	How many times P-TMSI signature reallocation for combined RAU updates with IMSI values can be skipped for GPRS mobile subscribers.
PTMSI-Signature-Realloc Ptsi-Reallocation-Cmd Update Frequency value UMTS	How many times P-TMSI signature reallocation during PTMSI reallocation can be skipped for UMTS mobile subscribers.
PTMSI-Signature-Realloc Ptsi-Reallocation-Cmd Update Frequency value GPRS	How many times P-TMSI signature reallocation during PTMSI reallocation can be skipped for GPRS mobile subscribers.
PTMSI-Realloc Attach	Indicates whether P-TMSI reallocation has been enabled or disabled.
PTMSI-Realloc Interval	The time interval (in minutes) for skipping the P-TMSI reallocation during the service/RAU/attach request message procedure.
PTMSI-Realloc Frequency	How many times P-TMSI reallocation can be skipped during service/RAU/attach request message procedure.
PTMSI-Realloc RAU	Indicates whether P-TMSI reallocation during routing area updates has been enabled or disabled.
PTMSI-Realloc RAU (Periodic)	Indicates whether P-TMSI reallocation during periodic routing area updates has been enabled or disabled.
PTMSI-Realloc RAU (Periodic) Frequency value	How many times P-TMSI reallocation can be skipped during the periodic RAU message procedure.
PTMSI-Realloc RAU (Ra-Update)	Indicates whether P-TMSI reallocation during the RA update RAU request procedure has been enabled or disabled.
PTMSI-Realloc RAU (Ra-Update) Frequency	How many times P-TMSI reallocation can be skipped during the RA update RAU message procedure.

Field	Description
PTMSI-Realloc RAU (Combined-Update)	Indicates whether P-TMSI reallocation during the RAU combined update procedure has been enabled or disabled.
PTMSI-Realloc RAU (Combined-Update) Frequency	How many times P-TMSI reallocation can be skipped during the RAU combined update message procedure.
PTMSI-Realloc RAU (Combined-Update with IMSI attach)	Indicates whether P-TMSI reallocation during the RAU combined update with IMSI procedure has been enabled or disabled.
PTMSI-Realloc RAU (Combined-Update with IMSI) Frequency	How many times P-TMSI reallocation can be skipped during the RAU combined update with IMSI message procedure.
PTMSI-Realloc Service Request (Signalling)	Indicates whether P-TMSI reallocation during signaling service requests has been enabled or disabled.
PTMSI-Realloc Service Request (Signalling) Freq	How many times P-TMSI reallocation can be skipped during the signaling service request message procedure.
PTMSI-Realloc Service Request (Data)	Indicates whether P-TMSI reallocation during data service requests has been enabled or disabled.
PTMSI-Realloc Service Request (Data) Freq	How many times P-TMSI reallocation can be skipped during the data service request message procedure.
PTMSI-Realloc Service Request (Page Response)	Indicates whether P-TMSI reallocation during page response service requests has been enabled or disabled.
PTMSI-Realloc Service Request (Page Response) Freq	How many times P-TMSI reallocation can be skipped during the page response service request message procedure.
Inactivity detection for establishing pdp contexts	Indicates whether an SGSN will be periodic polled to verify that it can accept requests to establish a PDP context.
Inactivity detection for establishing pdp contexts - Timer	The timeout value in milliseconds for determining that a SGSN is unresponsive.
Inactivity detection for establishing pdp contexts - Action	The action to be taken if a SGSN is declared unresponsive.
Monitor Re-attaches after Inactivity Detach	Indicates whether the SGSN will be monitored to determine if it has become responsive again after an inactivity timeout and detach.
Charging Characteristics Prefer Local	When enabled, indicates whether the call-control profile prefers the charging characteristics settings from the call control profile instead of the charging characteristics received from the HLR.
Charging Characteristics Behavior	The behavior bit in charging characteristics provided by the call control profile when the HLR does not provide a value.
Charging Characteristics Profile-Index	The charging characteristics profile index specified by the call control profile, such as 4 for prepaid billing or 8 for normal billing.

Field	Description
Charging Characteristics Behavior No Records	The behavior bit in charging characteristics that is used to determine that no accounting records will be generated.
APN restriction	If this feature is enable, the SGSN sends the maximum APN restriction value in every CPC Request message sent to the GGSN
UMTS Gmm-Information	When this feature is enabled, indicates that GPRS mobility management (GMM) parameters will be included in message to UMTS mobile subscribers.
GPRS Gmm-Information	When this feature is enabled, indicates that GMM parameters will be included in message to GPRS mobile subscribers.
User Equipment Identity Retrieval	Indicates whether International Mobile Equipment Identity (IMEI) or software version (SV) retrieval and validation has been enabled or disabled.
MAP UGL Message. Include Access Type Private Extension	The specific access-type private extension included in GPRS Location Update (GLU) request MAP messages.
MAP UGL Message. Include IMEISV	The specific International Mobile equipment Identity-Software Version (IMEI-SV) information included in GLU request MAP messages.
MAP MO-FWD-SM Message. Include IMSI	Indicates if the inclusion of the IMSI of the originating subscriber in the mobile-originated SM transfer is enabled or disabled. This parameter is included when the sending entity (MSC or SGSN) supports mobile number portability (MNP). This IMSI IE is required in the in MAP-MO-FORWARD-SHORT-MESSAGE in countries where MNP is deployed.
Reuse of authentication triplets	Indicates whether the reuse of authentication triplets in the event of a failure has been enabled or disabled.
Re-Authentication	Indicates whether the re-authentication feature, which instructs the SGSN to retry authentication with another RAND in situations where failure of the first authentication has occurred, has been enabled or disabled.
Direct Tunnel	Indicates if the SGSN allows direct tunneling if the direct tunneling is supported by destination node.
GTPU Fast Path	Indicates whether Fast Path support for network processing unit (NPU) processing of GTP-U packets of user sessions has been enabled or disabled.
Super Charger	Indicates whether the SGSN's ability to work with a super-charged network is enabled or disabled. By enabling the super charger functionality for 2G or 3G connections controlled by an operator policy, the SGSN changes the hand-off and location update procedures to reduce signaling traffic management.
Sending Radio Access Technology (RAT) IE	When this feature is enabled, the SGSN sends RAT information elements (IEs) within GTP messages.
Sending User Location Information (ULI) IE	When this feature is enabled, the SGSN sends ULI IEs within GTP messages.
Sending IMEISV IE	When this feature is enabled, the SGSN includes the IMEISV values of the mobile subscriber when sending GTP messages of the type "Create PDP Context Request".

Field	Description
Derive IMEISV from IMEI	When this feature is enabled, the SGSN sends the IMEI to the GGSN as an IMEI-SV.
Sending MS Time Zone IE	When this feature is enabled, the SGSN sends the mobile subscribers timezone IE in GTP messages of the type "Create PDP Request" and "Update PDPContext Request".
Treat as HPLMN	When this feature is enabled, the MME or SGSN treats an IMSI series as coming from the home PLMN.
Idle-mode-Signaling-Reduction (ISR) for UMTS	Indicates if the Idle-Mode-Signaling-Reduction (ISR) feature is enabled for UMTS (3G) subscribers. When ISR is enabled, the MME and SGSN allow the UE to be registered simultaneously in both the UMTS network on the SGSN and on the E-UTRAN on the MME. A separate feature license is required to enable ISR.
Idle-mode-Signaling-Reduction (ISR) for GPRS	Indicates if the Idle-Mode-Signaling-Reduction (ISR) feature is enabled for GPRS (2G) subscribers. When this feature is enabled, the MME and SGSN allow the UE to be registered simultaneously in both the GPRS network on the SGSN and on the E-UTRAN on the MME. A separate feature license is required to enable ISR.
Location Reporting for UMTS	When this feature is enabled, the MME can query and receive UE location reports from an eNodeB.
Location Reporting for GPRS	When this feature is enabled, the MME can query and receive UE location reports from an eNodeB.
SMS in MME	Displays the configured value (preferred / not-preferred) for SMS in MME.
SMSC Address	Displays the configured SMSC address.
Send SMS Subscription Request to HSS	Indicates whether the SMS Subscription Request to HSS is enabled or disabled.
Send SMS Subscription Notification to UE	Indicates whether the SMS Subscription Notification to UE is enabled or disabled.
<b>MME S6a Message Options</b>	
Notify Req (Trigger : MNRF flag)	Indicates whether the MNRF flag trigger for Notify Request is enabled or disabled
<b>MME SGd Message Options</b>	
Alert SC Request (Trigger : MNRF flag)	Indicates whether the MNRF flag trigger for Alert SC Request is enabled or disabled.
<b>EPS Attach Restrict</b>	
Voice Unsupported	When this feature is enabled, the MME can restrict UE attaches when the network does not support voice, for example when Voice over IMS is not supported in the network and the UE does not support CSFB.
IMSI Attach Fail	When this feature is enabled, the MME can restrict UE attaches when the IMSI Attach fails.
<b>EPS Network</b>	

Field	Description
<b>N1 mode</b>	This sub-group displays interworking with 5GS for UEs supporting N1 mode.
5GS to EPS handover using N26 interface	When this setting is enabled under N1 mode, the MME allows 5GS-EPS interworking with N26 interface.
<b>CSFB Restrictions</b>	
SMS Only	When this setting is enabled, the MME allows SMS-only attaches for Circuit Switched Fall Back (CSFB) services.
Not Allowed	When this setting is enabled, the MME disallows CSFB services (both SMS-only and voice services).
Not Preferred	When this setting is enabled, the MME returns "not-preferred" for CSFB services for combined EPS/IMSI attach requests.
<b>Network Feature Support</b>	
IMS Voice Over PS	Indicates whether IMS Voice over Packet-Switched information element (IE) is supported as part of the MME (Network) Feature
Qos	Indicates the transmission of quality of service (QoS) parameters has been enabled or disabled.
AMBR	Indicates whether an aggregate maximum bit rate (AMBR) will be enforced for user equipment.
Gn/Gp ARP	Indicates whether Gn-Gp pre-release 8 ARP and pre-emption parameters will be enforced or not.
High Priority (H) (Default)	The high-priority (address retention protocol) ARP value used for QoS.
Medium Priority (M) (Default)	The medium-priority ARP value used for QoS.
Gn/Gp Pre-Emption Capabilities (Default)	The pre-emption capability criteria for PDP contexts imported from an SGSN on Gn/Gp interfaces.
Gn/Gp Pre-Emption Vulnerabilities (Default)	The pre-emption vulnerability criteria for PDP contexts imported from an SGSN on Gn/Gp interfaces.
GPRS PDP Type IPV4V6 Override	Indicates whether the MME is configured to override the requested Packet Data Network (PDN) type (IPv4 or IPv6) based on the inbound roamer PLMN.
UMTS PDP Type IPV4V6 Override	Indicates whether the MME is configured to override the requested Packet Data Network (PDN) type (IPv4 or IPv6) based on the inbound roamer PLMN.
EPS PDN Type IPV4V6 Override	Indicates whether the MME is configured to override the requested Packet Data Network (PDN) type (IPv4 or IPv6) based on the inbound roamer PLMN.
RFSP	Displays the configuration of the <b>rfsp-override</b> command which the MME uses to control the override of RAT Frequency Selection Priority (RFSP).

Field	Description
Rfsp-override eutran-ho-restricted	Displays the configured value for RAT frequency selection priority when Handover to EUTRAN is restricted. This value overrides the RFSP ID value sent by the HLR/HSS in an EPS subscription.
PDN Type IPv6 Denied	Indicates whether the MME is enabled to allow only IPv4 addresses to a PDN connection.
<b>Cause Code Mapping</b>	
Restricted zone code	Displays the emm-cause-code to be returned to the UE when the UE requests access to a restricted zone during an EMM procedure.
Congestion	Displays the emm-cause-code to be returned to the UE when the system has detected a congestion condition during an EMM procedure.
Newcall policy restrict	Displays the emm-cause-code to be returned to the UE when the policy restricts new calls.
APN mismatch	Displays the emm-cause-code to be returned to the UE when the system has detected an APN mismatch condition during an EMM procedure.
VLR down	Displays the emm-cause-code to be returned to the UE when the system has detected a VLR down condition during an EMM procedure.
VLR unreachable	Displays the emm-cause-code to be returned to the UE when the system has detected a VLR unreachable condition during an EMM procedure.
Auth failure	Displays the emm-cause-code to be returned to the UE when an authentication failure occurs.
PEER NODE unknown	Displays the emm-cause-code to be returned to the UE when peer node resolution is not successful.
CTXT transfer fail SGSN	Displays the emm-cause-code to be returned to the UE when a UE context transfer failure from a peer SGSN occurs.
CTXT transfer fail MME	Displays the emm-cause-code to be returned to the UE when a UE context transfer failure from a peer MME occurs.
HSS unavailable	Displays the emm-cause-code to be returned to the UE when HSS resolution fails in the MME or the HSS does not respond in time.
SGW selection failure	Displays the emm-cause-code to be returned to the UE when a failure occurs during S-GW selection.
PGW selection failure	Displays the emm-cause-code to be returned to the UE when a failure occurs during P-GW selection.
GW unreachable Attach	Displays the emm-cause-code to be returned to the UE when a gateway (S-GW or P-GW) does not respond during an EMM Attach procedure.
GW unreachable TAU	Displays the emm-cause-code to be returned to the UE when a gateway (S-GW or P-GW) does not respond during an EMM TAU procedure.

Field	Description
NO bearers active	Displays the emm-cause-code to be returned to the UE when the context received from a peer SGSN (during a TAU procedure) does not contain any active PDP contexts
SGSN Core Network Interface Selection	Displays the SGSN Core Network Interface selection.
SGSN Core Network Interface Type	Displays the interface type selected as either Gn or S4.
S4 for EPC Capable Devices	Displays the configuration as either <b>Always</b> or <b>When EPS Subscription Available</b> , based on the CLI configured in the command <b>sgsn-core-nw-interface</b> in the Call-Control Profile.
S4 for Non-EPC Capable Devices	Displays the configuration as <b>Never</b> or <b>Always</b> or <b>When EPS Subscription Available</b> , based on the CLI configured in the command <b>sgsn-core-nw-interface</b> in the Call-Control Profile.
Uplink data status IE in service request	This field displays whether the Uplink Data Status IE is Processed or Ignored.
GUTI Reallocation	This parameter indicates if GUTI Reallocation is configured. The configured status is displayed as "Enabled" or "Disabled".
GUTI Reallocation Frequency	Displays the value of GUTI Reallocation Frequency in number of NAS requests.
GUTI Reallocation Periodicity	Displays the value of GUTI Reallocation Periodicity in minutes.
Authentication All-Events ANY (UMTS/GPRS/EUTRAN) Frequency	This parameter indicates if Selective Authentication frequency for all events is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication All-Events ANY (UMTS/GPRS/EUTRAN) Frequency Value	Displays the value of the configured Selective Authentication Frequency for all events.
Authentication All-Events ANY (UMTS/GPRS/EUTRAN) Periodicity	This parameter indicates if Selective Authentication periodicity for all events is configured. If the Periodicity is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication All-Events ANY (UMTS/GPRS/EUTRAN) Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for all events.
Authentication Attach ANY Frequency	This parameter indicates if Selective Authentication frequency for Attach procedure is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Attach ANY (UMTS/GPRS/EUTRAN) Frequency Value	Displays the value of the configured Selective Authentication Frequency for Attach procedures.
Authentication Attach ANY Periodicity	This parameter indicates if Selective Authentication periodicity for Attach procedure is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".

Field	Description
Authentication Attach ANY Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Attach procedures.
Authentication Attach Inter-rat ANY (UMTS/GPRS/EUTRAN) Frequency	This parameter indicates if Selective Authentication frequency for Attach during Inter-RAT procedure is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Attach Inter-rat ANY (UMTS/GPRS/EUTRAN) Frequency Value	Displays the value of the configured Selective Authentication Frequency for Attach during Inter-RAT procedures.
Authentication Attach Inter-rat ANY Periodicity	This parameter indicates if Selective Authentication periodicity for Attach during Inter-RAT procedure is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Attach Inter-rat ANY Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Attach during Inter-RAT procedures.
Authentication Service Req Frequency	This parameter indicates if Selective Authentication frequency for Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Frequency Value	Displays the value of the configured Selective Authentication Frequency for Service Requests.
Authentication Service Req Periodicity	This parameter indicates if Selective Authentication periodicity for Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Service Requests.
Authentication Service Req Data Frequency	This parameter indicates if Selective Authentication frequency for Data Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Data Frequency Value	Displays the value of the configured Selective Authentication Frequency for Data Service Requests.
Authentication Service Req Data Periodicity	This parameter indicates if Selective Authentication periodicity for Data Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Data Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Data Service Requests.
Authentication Service Req Signaling Frequency	This parameter indicates if Selective Authentication frequency for Signaling Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Signaling Frequency Value	Displays the value of the configured Selective Authentication Frequency for Signaling Service Requests.

Field	Description
Authentication Service Req Signaling Periodicity	This parameter indicates if Selective Authentication periodicity for Signaling Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Signaling Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Signaling Service Requests.
Authentication Service Req Page Response Frequency	This parameter indicates if Selective Authentication frequency for Page Response Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Page Response Frequency Value	Displays the value of the configured Selective Authentication Frequency for Page Response Service Requests.
Authentication Service Req Page Response Periodicity	This parameter indicates if Selective Authentication periodicity for Page Response Service Requests is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Service Req Page Response Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Page Response Service Requests.
Authentication TAU Frequency	This parameter indicates if Selective Authentication frequency for TAU Procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Frequency Value	Displays the value of the configured Selective Authentication Frequency for TAU Procedures.
Authentication TAU Periodicity	This parameter indicates if Selective Authentication periodicity for TAU Procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for TAU Procedures.
Authentication Inter-RAT TAU Frequency	This parameter indicates if Selective Authentication frequency for TAU during Inter-RAT procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Frequency Value	Displays the value of the configured Selective Authentication Frequency for TAU during Inter-RAT procedures.
Authentication TAU Inter-rat Periodicity	This parameter indicates if Selective Authentication periodicity for TAU during Inter-RAT procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Inter-rat Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for TAU during Inter-RAT procedures.
Authentication Intra-RAT TAU Frequency	This parameter indicates if Selective Authentication frequency for TAU during Intra-RAT procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".

Field	Description
Authentication Intra-RAT TAU Frequency Value	Displays the value of the configured Selective Authentication Frequency for TAU during Intra-RAT procedures.
Authentication TAU Intra-rat Periodicity	This parameter indicates if Selective Authentication periodicity for TAU during Intra-RAT procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Intra-rat Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for TAU during Intra-RAT procedures.
Authentication Normal TAU Frequency	This parameter indicates if Selective Authentication frequency for Normal TAU procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Normal TAU Frequency Value	Displays the value of the configured Selective Authentication Frequency for Normal TAU procedures.
Authentication TAU Normal Periodicity	This parameter indicates if Selective Authentication periodicity for Normal TAU procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Normal Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Normal TAU procedures.
Authentication Periodic TAU Frequency	This parameter indicates if Selective Authentication frequency for Periodic TAU procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication Periodic TAU Frequency Value	Displays the value of the configured Selective Authentication Frequency for Periodic TAU procedures.
Authentication TAU Periodic Periodicity	This parameter indicates if Selective Authentication periodicity for Periodic TAU procedures is configured. If the frequency is configured the status is displayed as "Enabled" or it is displayed as "Disabled".
Authentication TAU Periodic Periodicity Value	Displays the value of the configured Selective Authentication Periodicity for Periodic TAU procedures.
Mapped SM Cause For Req APN not sup in current RAT and PLMN combination	Displays the mapped SM caused code for APN request not supported in current RAT and PLMN combination.
Cause Code Mapping	Displays the cause code mapping information.
APN not supported PLMN-RAT esm-proc	Displays the cause code configured for APN not supported PLMN-RAT esm-proc.
APN not supported PLMN-RAT Attach	Displays the cause code configured for APN not supported PLMN-RAT in attach requests.
APN not supported PLMN-RAT TAU	Displays the cause code configured for APN not supported PLMN-RAT in TAU requests.

Field	Description
Paging priority to be sent to eNodeB	If paging priority support is enabled this field displays the configured value of paging priority sent to eNodeB for CS paging. For example, if the paging priority value is set to "1", this field is displayed as "Enabled with value: 1". If paging priority support is disabled this field is displayed as "Disabled".
MPS CS priority	The MPS CS priority is displayed as either "Subscribed" or "None" based on the configuration.
MPS EPS priority	The MPS EPS priority is displayed as either "Subscribed" or "None" based on the configuration.
Paging priority to be sent to eNodeB for CS	Displayed as "Enabled" with value if paging-priority cs value is configured.
Paging priority mapping for CS	Displayed as "Enabled" with emlpp-priority to paging-priority mapping information if mapping is configured, otherwise it is displayed as "Disabled".
Paging priority mapping for EPS	Displayed as "Enabled" with ARP to paging-priority mapping information if mapping is configured, otherwise it is displayed as "Disabled".
Handover Restriction	Displayed as "Enabled" if HO restriction is configured, else it is displayed as "Disabled".
SCEF Service	Displays the name of the configured SCEF service.
Attach without PDN Support for WB-EUTRAN	Indicates whether Attach without PDN for WB-EUTRAN is enabled or disabled.
Attach without PDN Support for NB-IoT	Indicates whether Attach without PDN for NB-IoT is enabled or disabled.
IE Override:	
S6A Interface	Indicates whether the S6a interface is enabled or disabled.
Supported RAT Type AVP	Displays the configured RAT type AVP IE.
Extended DRX	Specifies the following eDRX parameters: <ul style="list-style-type: none"> <li>• Paging Time Window</li> <li>• eDRX Cycle Length</li> <li>• Downlink Buffer Duration in DDN Ack</li> <li>• DL Buffering Suggested Packet Count in DDN Ack</li> </ul>
<b>CIoT Optimisation:</b>	
CP-Optimisation	Indicates whether CP CIoT optimization is enabled or disabled.
Access-Type	If CP CIoT optimization is enabled, displays the access type based on the configuration as: NB-IoT, or both WB-EUTRAN and NB-IoT. If CP CIoT optimization is disabled, this field displays N/A.

Field	Description
Serving PLMN Rate Control	Indicates whether serving PLMN rate control for CP CIoT optimization is enabled or disabled.
UL Rate	Displays the maximum number of data NAS PDUs that the UE sends in uplink path per deci-hour (6 minutes).
DL Rate	Displays the maximum number of data NAS PDUs that the P-GW or SCEF sends in the downlink path to the UE per deci-hour (6 minutes).
Gtp Tunnel ECN Ingress Mode	Displays the mode of ECN configured for the GTP tunnel.
ESM-T3396 Timer	This fields displays "Not Configured" if the ESM T3396 timeout is not configured for any cause code.
If the ESM T3396 timeout is configured for a cause code, the following two fields display the configured values.	
Value for Cause Code UNKNOWN OR MISSING APN(27)	This fields displays the configured T3396 timeout value in seconds for cause code value 27.
Value for Cause Code INSUFFICIENT RESOURCES(26)	This fields displays the configured T3396 timeout value in seconds for cause code value 26.
<b>SRVCC</b>	
SRVCC Service	This fields displays the status of the SRVCC service, that is, if SRVCC handovers are authorized or unauthorized, in a roaming network.
IMS APN	Displays IMS APN is "Configured" or "Not Configured".
Access Policy	Displays the configured access-policy name. If access-policy is not associated with call-control profile, this field displays "Not Defined".
Sending Ue-Usage-Type in CSR	Enables the sending of mapped Ue-Usage to Dedicated Core Network Configuration.

show call-control-profile full name

## CHAPTER 21

# show card

---

This chapter includes the **show card** command output tables.

---

**Important** The outputs of **show card** commands vary based on platform ASR 5000 or ASR 5500, VPC (virtualized), card type and the StarOS release.

---

- [show card diag](#), on page 586
- [show card hardware \(ASR 5000\)](#), on page 587
- [show card hardware \(ASR 5500\)](#), on page 589
- [show card hardware \(VPC-DI\)](#), on page 597
- [show card info \(ASR 5000\)](#), on page 599
- [show card info \(ASR 5500\)](#), on page 601
- [show card info \(VPC-SI, VPC-DI\)](#), on page 604
- [show card mappings \(ASR 5000\)](#), on page 605
- [show card table](#), on page 606

# show card diag

Table 155: show card diag Command Output Descriptions

Field	Description
Counters	<p>Displays boot counter information for the card. The following counters are reported:</p> <ul style="list-style-type: none"> <li>• <b>Successful warm boots:</b> Warm boots occur upon a software reset of the card.</li> <li>• <b>Successful cold boots:</b> Cold boots occur when the card experiences a hardware reboot.</li> <li>• <b>Total boot attempts:</b> This is the sum of successful and unsuccessful warm and cold boots. If this number is not equal to the total number of successful warm boots and the number of successful cold boots, then boot failures have occurred. This situation may indicate a problem with this card that requires further investigation.</li> <li>• <b>In Service Date:</b> Timestamp indicating when this card was placed in service.</li> </ul> <p>Each of the above counters provide a timestamp indicating the most recent occurrence.</p> <p><b>NOTE:</b> Counters are <u>not</u> displayed for line card diagnostics.</p>
Status	<p>Status is reported for the following items:</p> <ul style="list-style-type: none"> <li>• <b>IDEEPROM Magic Number:</b> Indicates whether or not the device map has been initialized. The ID EEPROM device stores hardware, diagnostic and software configuration data.</li> <li>• <b>Boot Mode:</b> Displays the current boot mode. – Normal (boot to StarOS, default mode), Extended diagnostics or Diagnostic CLI.</li> <li>• <b>Card Diagnostics:</b> Indicates the current status of the card's internal diagnostics. The two possible states are: Pass (all diagnostics passed) and Failed (one or more diagnostics did not pass).</li> <li>• <b>Current Failure:</b> Indicates any failure that is currently being reported by this card. If no failures were detected, this item will display None.</li> <li>• <b>Last Failure:</b> Indicates the last failure reported by this card since its event log was last cleared.</li> <li>• <b>Card Usable:</b> Indicates whether or not the card is usable. "Usability" is based on the operational state of the card (active, standby, or offline), whether or not the Administrative state is enabled (the card is configured for use via software), and whether or not the card's interlock switch is locked. Either a Yes or a No will be displayed.</li> <li>• <b>Last Reset Cause:</b> Indicates the cause for the last reset of this card.</li> </ul> <p><b>Note: This field only appears if a card reset has occurred.</b></p>
Boot/Diag Log ASR 5000 only	<p>Displays the contents of the boot and diagnostics log.</p> <p><b>NOTE:</b> The boot and diagnostic log contents are <u>not</u> displayed for line card diagnostics.</p>

Field	Description
Error Log <b>ASR 5000 only</b>	Displays the contents of the error log. <b>NOTE:</b> The error log contents are <u>not</u> displayed for line card diagnostics.
Current Environment <b>Not displayed for VPC</b>	Displays the results for the following measurements: <ul style="list-style-type: none"> <li>• <b>Temperature measurements:</b> Indicates the current operating temperatures and provides the maximum safe temperature for comparison.</li> <li>• <b>Voltage measurements:</b> Indicates the current input status for the various DC sources and provides the acceptable upper and lower limits for comparison.</li> </ul>

## show card hardware (ASR 5000)

Table 156: show card hardware Command Output Descriptions (ASR 5000)

Field	Description
<b>Common to All Card Types</b>	
Card <number>	Slot number of the specified card.
Card Type	Description of the card in the specified slot, for example "System Management Card".
Card Description	SMC, PSCx, FELC, GELC/GLC2, QGLC, XGLC, CLC/CLC2, OLC/OLC2, SPIO, RCC
Part Number	Legacy part number (xxx-xx-xxxx xx).
Serial Number	Legacy part number (alphanumeric string).
CLEI Code	Common Language Equipment Identifier (CLEI) code.
UDI Product ID	Unique Device Identifier (UDI) Product Identifier (PID).
UDI Version ID	UDI version.
UDI Serial Number	UDI serial number (alphanumeric string).
UDI CLEI Code	UDI Common Language Equipment Identifier (CLEI) code.
UDI Top Assembly Number	UDI for top-level assembly.
UDI TAN Revision	UDI Top Assembly Number (TAN) revision level.
UDI Deviation Number	UDI deviation number (DEVNUM).
MAC Addresses	Media Access Controller hexadecimal starting address in format: xx-xx-xx-xx-xx-xx.

Field	Description
Switch Fabric Modes	Mode type – "control plane" and/or "switch fabric".
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
<b>System Management Card</b>	
Compact Flash	Status of PCMCIA flash memory card, for example "Present".
Type	Memory capacity of the Compact Flash card.
Model	Operational card type.
Serial Number	Serial number of this Compact Flash card.
PCMCIA1	Status of front panel Personal Computer Memory Card International Association (PCMCIA) card, for example "Not Present".
Hard Drive 1	Status of this hard drive, for example "present".
Type	Drive capacity in Mbytes.
Model	Manufacturer and model number.
Serial Number	Serial number of the hard drive.
SRM	Status, Reset, and Monitoring firmware.
BIOS	Basic Input/Output System.
CIF FPGA	Chassis Information (CIF) Field Programmable Gate Array (FPGA) firmware.
CPU 0 Type/Memory	Socket: 0, <processor type>, <processor speed>.
CPU 0 DIMM-A1 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-B1 P/N	Dual In-line Memory Module part number.
CPU 0 CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Packet Processing Card (PSC, PSC2, PSC3, PSCA, PPC)</b>	
NPU Microcode	Firmware running on the Network Processing Unit (NPU).
Slave SCB	Firmware component that allows non-SMC cards to communicate with the SMC over the system control bus (SCB).

Field	Description
PSR	Power, Status, and Reset firmware.
BIOS	Basic Input/Output System firmware.
DT FPGA, DT2 FPGA	Data Transport (DT) Field Programmable Gate Array (FPGA) firmware.
CPU 0 Type/Memory	Socket: 0, <processor type>, <processor speed>. Socket: 1, <processor type>, <processor speed>. Chipset: <components>.
CPU 0 DIMM-N0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0D1 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1D1 P/N	Dual In-line Memory Module part number.
CPU 1 Type/Memory	<processor type> <processor speed> <memory in MB>
CPU 0 CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Line Cards (SPIO, RCC, FELC, GELC/GLC2, QGLC, XGLC, CLC/CLC2, OLC/OLC2)</b>	
Slave SCB	Firmware component that allows non-SMC cards to communicate with the SMC over the system control bus (SCB).
FPGA	Field-Programmable Gate Array firmware.
SFP Info (Port 1 or 2)	Information about the Small Form-factor Pluggable (SFP) transceivers includes:  Vendor Name, Vendor IEEE ID, P/N (part number), S/N (serial number, date).

**Important** The output of this command will also display other types of information relative to the CPUs and firmware running on the specific card types. This information varies based on the platform type.

## show card hardware (ASR 5500)

*Table 157: show card hardware Command Output Descriptions (ASR 5500)*

Field	Description
<b>Common to All Card Types</b>	
Card <number>	Slot number of the specified card.

Field	Description
Card Type	Data Processing Card Data Processing Card 2 Management & 20x10Gb I/O Card Management 4x(10Gb&100Gb) I/O Card 2 System Status Card Fabric & 2x200GB Storage Card
Description	Card type – DPC, DPC2, MIO, MIO2, SSC, FSC.
Cisco Part Number	Cisco part number.
UDI Serial Number	Unique Device Identifier (UDI) serial number (alphanumeric string).
UDI Product ID	UDI Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
UDI Top Assem Num	UDI for top-level assembly.
<b>Data Processing Card (DPC)</b>	
Daughter Card #3	Daughter card number.
Card Type	DPC CCK Daughter Card (crypto).
Description	DPC_CRYPT0_DC.
Starent Part Number	Legacy part number (xxx-xx-xxxx xx).
UDI Serial Number	UDI serial number (alphanumeric string).
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF	Board Control FPGA firmware.
CAF	Control and Availability FPGA firmware.
CPU 0 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 0 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C1D0 P/N	Dual In-line Memory Module part number.

Field	Description
CPU 0 DIMM-N0C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 BIOS	Basic Input/Output System.
CPU 0 i82599	Intel 10GbE Controller firmware.
CPU 0 i82574	Intel Gigabit Ethernet Controller firmware.
CPU 0 CFE	Common Firmware Environment version.
CPU 1 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 1 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C2D2 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 BIOS	Basic Input/Output System.
CPU 1 i82599	Intel 10 GbE Controller firmware.
CPU 1 i82574	Intel Gigabit Controller firmware.
CPU 1 CFE	Common Firmware Environment version.
<b>Data Processing Card 2 (DPC2)</b>	
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF2	Board Control FPGA DPC2 firmware.
CAF2	Control and Availability FPGA DPC2 firmware.

Field	Description
CPU 0 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 0 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 BIOS	Basic Input/Output System.
CPU 0 i82599	Intel 10GbE Controller firmware.
CPU 0 i210	Intel Gigabit Ethernet Controller firmware.
CPU 0 CFE Loaded	Common Firmware Environment version.
CPU 0 CFE ROM	Multiple CFE versions.
CPU 0 DH89XXCC	Intel PCI Express root port.
CPU 1 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 1 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C1D1 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N0C2D2 P/N	Dual In-line Memory Module part number.
CPU 1 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 1 BIOS	Basic Input/Output System.
CPU 1 i82599	Intel 10 GbE Controller firmware.
CPU 1 i210	Intel Gigabit Controller firmware.
CPU 1 CFE Loaded	Common Firmware Environment version.
CPU 1 CFE ROM	Multiple CFE versions.
CPU 1 DH89XXCC	Intel PCI Express root port.
CPU 2 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 2 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 2 DIMM-N0C1D1 P/N	Dual In-line Memory Module part number.

Field	Description
CPU 2 DIMM-N0C2D2 P/N	Dual In-line Memory Module part number.
CPU 2 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 2 BIOS	Basic Input/Output System.
CPU 2 i82599	Intel 10 GbE Controller firmware.
CPU 2 i210	Intel Gigabit Controller firmware.
CPU 2 CFE Loaded	Common Firmware Environment version.
CPU 2 CFE ROM	Multiple CFE versions.
CPU 2 DH89XXCC	Intel PCI Express root port.
<b>Management Input/Output (MIO)</b>	
Daughter Card #<number>	Daughter card number.
Card Type	MIO 10x10Gb Daughter Card. MIO CCK Daughter Card (crypto).
Description	MDC MIO_CRYPT0_DC
Starent Part Number	Legacy part number (xxx-xx-xxxx xx)
Cisco Part Number	Cisco part number.
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].
Midplane:	Chassis EPROM information.
Card Type	Midplane EPROM Card.
MAC Addresses	Media Access Controller hexadecimal starting address in format: xx-xx-xx-xx-xx-xx.
MEC:	Midplane EEPROM Card.
Description	MEC.
Cisco Part Number	Cisco part number (nn-nnnnn-nn Ln).
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].
UDI Product ID	UDI Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
Midplane:	
Description	Midplane.

Field	Description
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
Chassis:	
Description	Chassis.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
UDI Product ID	Cisco Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
UDI Top Assem Num	UDI for top-level assembly.
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
SDHC Flash	Secure Digital High Capacity on-board flash memory (/flash drive).
Type	Disk capacity in Mbytes.
Model	Generic-UltraFastMedia.
USB 1	Status of front panel USB port, for example. "Not Present".
SFP+ Module On Port <number>:	Information on the SFP+ transceiver in the specified port (10 through 29).
Transceiver Info	SFP+ transceiver type.
Vendor Info	Vendor Name and Vendor IEEE ID.
Part Info	Cisco PID and serial number.
<b>Management Input/Output version 2 (MIO2)</b>	
Daughter Card #<number>	Daughter card number.
Card Type	MIO 2x(10Gb&100Gb) Daughter Card 2
Description	MDC
Cisco Part Number	Cisco part number.
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].

Field	Description
Midplane:	Chassis EPROM information.
Card Type	Midplane EPROM Card.
MAC Addresses	Media Access Controller hexadecimal starting address in format: xx-xx-xx-xx-xx-xx.
MEC:	Midplane EEPROM Card.
Description	MEC.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	Unique Device Identifier (UDI) serial number [alphanumeric string].
UDI Product ID	UDI Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
Midplane:	
Description	Midplane.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
Chassis:	
Description	Chassis.
Cisco Part Number	Cisco part number (nn-nnnnnn-nn Ln).
UDI Serial Number	UDI serial number (alphanumeric string).
UDI Product ID	Cisco Product Identifier (PID) [alphanumeric string].
UDI Version ID	UDI version (alphanumeric string).
UDI Top Assem Num	UDI for top-level assembly.
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.
SDHC Flash	Secure Digital High Capacity on-board flash memory (/flash drive).
Type	Disk capacity in Mbytes.

Field	Description
Model	Generic-UltraFastMedia.
USB 1	Status of front panel USB port, for example. "Not Present".
SFP+ Module On Port <number>:	Information on the SFP+ transceiver in the specified port (10 through 29).
Transceiver Info	SFP+ transceiver type.
Vendor Info	Vendor Name and Vendor IEEE ID.
Part Info	Cisco PID and serial number.
BCF2	Board Control FPGA DPC2 firmware.
CAF2	Control and Availability FPGA DPC2 firmware.
DC F	Daughter Card Firmware
CPU 0 Type/Memory	Socket 0: <processor type>, <processor speed> Socket 1: <processor type>, <processor speed>
CPU 0 DIMM-N0C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C1D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N0C2D0 P/N	Dual In-line Memory Module part number.
CPU 0 DIMM-N1C0D0 P/N	Dual In-line Memory Module part number.
CPU 0 BIOS	Basic Input/Output System.
CPU 0 i82599	Intel 10GbE Controller.
CPU 0 i82574	Intel Gigabit Ethernet Controller.
CPU 0 m88se9485	Marvell Serial Attached SCSI (SAS) I/O Controller
CPU 0 CFE Loaded	Common Firmware Environment version.
CPU 0 CFE ROM	Multiple CFE versions.
CPU 0 DH89XXCC	Intel PCI Express root port.
<b>System Status Card (SSC)</b>	
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.

Field	Description
BCF	Board Control FPGA firmware.
<b>Fabric and Storage Card (FSC)</b>	
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision. "up to date" – all software is current "out of date" – identifies one or more components do not have the most current software. "experimental/unreleased" – one or more components have experimental or unreleased software.
BCF	Board Control FPGA firmware.

## show card hardware (VPC-DI)

In a VPC-DI instance, card numbers correspond to the virtual slot numbers assigned to the virtual machines (VMs) that run StarOS within the virtual chassis created by hypervisor templates.

*Table 158: show card hardware Command Output Descriptions (VPC-DI)*

Field	Description
<b>Control Function and Service Function Cards</b>	
Card <number>	Virtual slot number of the specified card. Slots 1 and 2 = CF; Slots 3 – 48 = SF.
Card Type	Control Function Virtual Card or 2-Port Service Function Virtual Card.
CPU Packages	Number of vCPUs.
CPU nodes	Number of CPU nodes.
CPU Cores/Threads	Number of cores/threads.
Memory	vMemory in Megabytes
Platform	Hypervisor type.
CFE/Diags	Common Firmware Environment/Diagnostic firmware.
<b>Network Interfaces</b>	
cpeth0	VPC-DI network communication port.
Address	MAC address.
Device	Device type.

Field	Description
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type.
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
loeth0	<b>CF only:</b> LOCAL management port (Console).
Address	MAC address.
Device	Device type.
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type. (alphanumeric string)
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
port_slot_port	<b>SF only:</b> Service port.
Address	MAC address.
Device	Device type.
ID	VPC-DI identifier (hexadecimal).
Driver	Driver type. (alphanumeric string)
RxQ(s)/RINGSZ/COALESCE	Receive queue information from hypervisor.
TxQ(s)/RINGSZ/COALESCE	Transmit queue information from hypervisor.
<b>Storage Devices</b>	
Virtual Flash	Indicates whether or not the virtual /flash drive is Present.
Type	Virtual drive type (alphanumeric string).
Model	Virtual drive model (alphanumeric string).
Hard Drive 1	Indicates whether virtual Hard Drive 1 is Present.
Type	Virtual drive type (alphanumeric string).
Model	Virtual drive model (alphanumeric string).
Hard Drive 2	Indicates whether virtual Hard Drive 2 is Present.
USB 1	Indicates whether virtual USB port 1 is Present (must be configured via hypervisor).

Field	Description
USB 2	Indicates whether virtual USB port 2 is Present (must be configured via hypervisor).
CDROM 1	Indicates whether virtual a CDROM is Present (must be configured via hypervisor).
Type	CDROM drive type (alphanumeric string).
Model	CDROM drive model (alphanumeric string).
Card Programmables	Indicates if the software on any of the programmable components on the card is not at the current revision.  "up to date" – all software is current  "out of date" – identifies one or more components do not have the most current software.  "experimental/unreleased" – one or more components have experimental or unreleased software.

## show card info (ASR 5000)

Table 159: show card info (ASR 5000) Command Output Descriptions

Field	Applicable Card(s)	Description
Slot Type	All	Displays the acronym for the card type.
Card Type	All	Indicates the type of card installed.
Operational State	All	Displays the operational state of the card. The possible operational states are: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because it is not completely installed (such as, the card interlock switch is not locked}. Refer to the <i>ASR 5000 Installation Guide</i> for additional information.</li> </ul>
Desired Mode	Processing Cards, SPIOs and line cards only	Displays the configured mode of the card. Through software configuration the card could be placed into either the active or standby mode.
Last State Change	All	Displays the time of the last operational state change for the card.

Field	Applicable Card(s)	Description
Administrative State	All	Indicates whether or not the card has been configured for use via software. If it has been configured, Enabled will be displayed. If not, Disabled will be displayed.
Card Lock	All	Displays whether or not the card's interlock switch is Locked or Unlocked.
Halt Issued	All	Displays whether or not this card was the target of a <b>halt</b> command issued by an administrator or operator. The <b>halt</b> command stops all tasks and processes running on the card. If the card has been halted, a Yes will be displayed. If not, a No will be displayed.
Reboot Pending	All	Displays whether or not the card will be undergoing a reboot. If the card is being rebooted, a Yes will be displayed. If not, a No will be displayed.
Upgrade In Progress	SPC/SMC, PSCx	Indicates whether an upgrade is in progress. The following operations are not allowed while a card is upgrading: <ul style="list-style-type: none"> <li>• change card [no] shutdown (config)</li> <li>• change card active (config)</li> <li>• change card redundancy (config)</li> <li>• card halt (exec)</li> <li>• card reboot (exec)</li> <li>• start an online upgrade</li> </ul> Level unlock operations are ignored while a card is upgrading.
Card Usable	All	Indicates whether or not the card is usable. "Usability" is based on the operational state of the card (active, standby, or offline), whether or not the Administrative state is enabled (the SPC/SMC can communicate with it), and whether or not the card's interlock switch is locked. Either a Yes or a No will be displayed.
Single Point of Failure	All	Displays whether or not the component is a single point of failure (SPOF) in the system. If the component is a SPOF, then a Yes will appear in this column. If not, a No will be displayed.
Attachments	SPC/SMC, PSCx	Displays the slot number and card type(s) that this card is associated with. For example, if this information is being displayed for a Processing Card, then the line card(s) that the Processing Card is associated with will be displayed.
Temperature	All	Indicates the current operating temperature and provides the maximum safe temperature for comparison.
Voltages	All	Indicates whether the power levels that the card is receiving are within acceptable limits.  Every card in the system has at least two power inputs. If all of the power inputs are within specification, a Good will be displayed. If even one of these inputs is out of the acceptable range, then a Bad <b>***ALARM***</b> will be displayed.

Field	Applicable Card(s)	Description
Card LEDs	All	<p>Displays the state of the Run/Fail, Active, and Standby light emitting diodes (LEDs) on the front panels of each of the cards. The LEDs will be displayed as either Green, Red, or Off.</p> <ul style="list-style-type: none"> <li>• <b>Run/Fail LED:</b> Green is normal, Red or Off indicate a problem.</li> </ul> <p><b>NOTE:</b> If the Run/Fail LED is either Red or Off, refer to the <i>ASR 5000 System Administration Guide</i> for information on troubleshooting the problem.</p> <ul style="list-style-type: none"> <li>• <b>Active:</b> Green indicates that the card is in active mode. Off indicates that the card is in standby mode.</li> <li>• <b>Standby LED:</b> Green indicates that the card is in standby mode. Off indicates that the card is in active mode.</li> </ul>
System LEDs	SPC/SMC	<p>Displays the state of the Status and Service LEDs on the SPC/SMC. The Status LED will be displayed as either Green, Red, or Off. The Service LED will be displayed as either Amber, or Off.</p> <ul style="list-style-type: none"> <li>• <b>Status LED:</b> Green is normal, Red or Off indicate a problem.</li> </ul> <p><b>NOTE:</b> If the Run/Fail LED is either Red or Off, refer to <i>ASR 5000 System Administration Guide</i> for information on troubleshooting the problem.</p> <ul style="list-style-type: none"> <li>• <b>Service LED:</b> Amber indicates that maintenance is needed. Off indicates that no maintenance is necessary.</li> </ul> <p><b>NOTE:</b> If the Status LED is Amber, refer to <i>ASR 5000 System Administration Guide</i> for information on troubleshooting the problem.</p>
CPU 0 through 3	SMC, PSCx	Displays how the CPUs on the card are being used.

## show card info (ASR 5500)

Table 160: show card info (ASR 5500) Command Output Descriptions

Field	Applicable Card(s)	Description
Slot Type	All	Displays the acronym for the card type.
Card Type	All	Indicates the type of card installed.
Daughter Cards	MIO/UMIO/MIO2	Lists the number of daughter cards installed, for example "DC1, DC2".

Field	Applicable Card(s)	Description
Operational State	All	Displays the operational state of the card. The possible operational states are: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because it is not completely installed (such as, the card interlock switch is not locked}. Refer to the <i>ASR 5500 Installation Guide</i> for additional information.</li> </ul>
Desired Mode	DPC/UDPC, DPC2/UDPC2	Displays the configured mode of the card. Through software configuration the card could be placed into either the active or standby mode.
Last State Change	All	Displays the time of the last operational state change for the card.
Administrative State	All	Indicates whether or not the card has been configured for use via software. If it has been configured, Enabled will be displayed. If not, Disabled will be displayed.
Card Lock	All	Displays whether or not the card's interlock switch is Locked or Unlocked.
Halt Issued	All	Displays whether or not this card was the target of a <b>halt</b> command issued by an administrator or operator. The <b>halt</b> command stops all tasks and processes running on the card. If the card has been halted, a Yes will be displayed. If not, a No will be displayed.
Reboot Pending	All	Displays whether or not the card will be undergoing a reboot. If the card is being rebooted, a Yes will be displayed. If not, a No will be displayed.
Upgrade In Progress	MIO/UMIO/MIO2, DPC/UPDC, DPC2/UDPC2	Indicates whether an upgrade is in progress. The following operations are not allowed while a card is upgrading: <ul style="list-style-type: none"> <li>• change card [no] shutdown (config)</li> <li>• change card active (config)</li> <li>• change card redundancy (config)</li> <li>• card halt (exec)</li> <li>• card reboot (exec)</li> <li>• start an online upgrade</li> </ul> Level unlock operations are ignored while a card is upgrading.
Session Busy-Out	DPC/UDPC, DPC2/UDPC2	Indicates whether a busy-out command has been initiated. Busy-out moves processes from the source DPC/UDPC to the destination DPC/UDPC, or disables the DPC/UDPC from accepting any new calls.

Field	Applicable Card(s)	Description
Card Usable	MIO/UMIO/MIO2	Indicates whether or not the card is usable. "Usability" is based on the operational state of the card (active, standby, or offline), whether or not the Administrative state is enabled MIO/UMIO can communicate with it), and whether or not the card's interlock switch is locked. Either a Yes or a No will be displayed.
Single Point of Failure	All	Displays whether or not the component is a single point of failure (SPOF) in the system. If the component is a SPOF, then a Yes will appear in this column. If not, a No will be displayed.
Temperature	All	Indicates relative operating temperature.
Voltages	All	Indicates whether the power levels that the card is receiving are within acceptable limits.  Every card in the system has at least two power inputs. If all of the power inputs are within specification, a Good will be displayed. If even one of these inputs is out of the acceptable range, then a Bad <b>***ALARM***</b> will be displayed.
Card LEDs	All	Displays the state of the Run/Fail, Active and Redundancy light emitting diodes (LEDs) on the front panels of each of the cards.  <ul style="list-style-type: none"> <li>• <b>Run/Fail LED:</b> Green is normal, Red or Off indicate a problem.</li> <li>• <b>Active:</b> Green indicates that the software is loaded or is being loaded (blinking) on the card.</li> <li>• <b>Redundancy:</b> Green indicates that the card is in standby mode.</li> </ul> <p><b>NOTE:</b> If the Run/Fail LED is either Red or Off, refer to <i>ASR 5500 System Administration Guide</i> for information on troubleshooting the problem. Refer to the <i>ASR 5500 Installation Guide</i> for additional information.</p>
Card LEDs	MIO/UMIO/MIO2	The following LEDs appear on the MIO/UMIO only:  <ul style="list-style-type: none"> <li>• <b>Master:</b> Green indicates that the card is in Active mode.</li> <li>• <b>Busy:</b> Green indicates that the card is accessing the RAID solid state drives on the FSCs.</li> </ul>
Card LEDs	FSC	The following LEDs appear on the FSC only:  <ul style="list-style-type: none"> <li>• <b>Drive 1 Activity and Drive 2 Activity:</b> Indicate that the RAID solid state drives are being accessed by the MIO/UMIO.</li> </ul>
Card LEDs	SSC	The following LEDs appear on the SSC only:  <ul style="list-style-type: none"> <li>• <b>System Status:</b> Red indicates the that there is a loss of service somewhere in the system. For example, the system could not locate a valid software image at boot-up, or a high temperature condition exists.</li> <li>• <b>System Service:</b> Illuminates amber to indicate that the system has experienced a hardware component failure.</li> </ul>

Field	Applicable Card(s)	Description
CPU 0, CPU 1	MIO/UMIO/MIO2, DPC/UDPC, DPC2/UDPC2	Displays whether an Error ID Log or Boot Progress Log is present for the CPU.

## show card info (VPC-SI, VPC-DI)

Table 161: show card info (VPC-SI, VPC-DI) Command Output Descriptions

Field	Applicable Card(s)	Description
Slot Type	Virtual	Displays the acronym for the card type.
Card Type	Virtual	Indicates the type of card installed.
Operational State	Virtual	Displays the operational state of the card. The possible operational states are: <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be because it is not completely installed (such as, the card interlock switch is not locked).</li> </ul>
Redundant With <b>VPC-DI CF only</b>	Virtual	Indicates with which slot this CF maintains 1:1 redundancy.
Last State Change	Virtual	Displays the time of the last operational state change for the card.
Administrative State	Virtual	Indicates whether or not the card has been configured for use via software. If it has been configured, Enabled will be displayed. If not, Disabled will be displayed.
Card Lock	Virtual	Displays whether or not the card's interlock switch is Locked or Unlocked.
Reboot Pending	Virtual	Displays whether or not the card will be undergoing a reboot. If the card is being rebooted, a Yes will be displayed. If not, a No will be displayed.

Field	Applicable Card(s)	Description
Upgrade In Progress	Virtual	<p>Indicates whether an upgrade is in progress.</p> <p>The following operations are not allowed while a card is upgrading:</p> <ul style="list-style-type: none"> <li>• change card [no] shutdown (config)</li> <li>• change card active (config)</li> <li>• change card redundancy (config)</li> <li>• card halt (exec)</li> <li>• card reboot (exec)</li> <li>• start an online upgrade</li> </ul> <p>Level unlock operations are ignored while a card is upgrading.</p>
Session Busy-Out <b>Not supported for VPC-DI, CF</b>	Virtual	Indicates whether a busy-out command has been initiated (Enabled or Disabled).
Card Usable	Virtual	Indicates whether or not the card is usable. "Usability" is based on the operational state of the card (active, standby, or offline), whether or not the Administrative state is enabled, and whether or not the card's interlock switch is locked. Either a Yes or a No will be displayed.
Single Point of Failure	Virtual	Displays whether or not the component is a single point of failure (SPOF) in the system. Not applicable for virtual cards.
Card LEDs	Virtual	Not displayed for virtual cards.
CPU 0	Virtual	Displays how the CPU on the card is being used.

## show card mappings (ASR 5000)

*Table 162: show card mappings Command Output Descriptions (ASR 5000)*

Field	Description
Slot (left-most column)	Displays the chassis slot number and the type of line card installed.

Field	Description
Mapping	<p>Displays the mapping or communication path from the line card to the application card. The possible mappings are:</p> <ul style="list-style-type: none"> <li>• <b>Direct:</b> The line card is operating in conjunction with the application card installed directly in front of it.</li> <li>• <b>Cross:</b> The SPIO installed in slot 24 is operating in conjunction with the SMC installed in slot 9 or the SPIO in slot 25 is operating in conjunction with the SMC in slot 8.</li> </ul> <p><b>NOTE:</b> Cross mappings only occur if the SPC/SMC that the SPIO was formerly operating behind became disabled (either automatically due to an error, or through manual configuration).</p> <ul style="list-style-type: none"> <li>• <b>RCC 40:</b> A line card (non-SPIO) installed in chassis slots 17 through 23 or 26 through 32 is operating in conjunction with a Processing Card installed in a slot that is not directly in front via the RCC in slot 40.</li> <li>• <b>RCC 41:</b> A line card (non-SPIO) installed in chassis slots 33 through 39 or 42 through 48 is operating in conjunction with a Processing Card installed in a slot that is not directly in front via the RCC in slot 41.</li> </ul> <p><b>NOTE:</b> RCC 40 and RCC 41 mappings will only occur if the Processing Card that the line card was formerly operating behind became disabled (either automatically due to an error, or through manual configuration).</p>
Slot (right-most column)	Displays the chassis slot number and the type of application card installed.

## show card table

Table 163: show card table Command Output Descriptions

Field	Description
Slot	Displays the chassis slot number and card type acronym.
Card Type	Displays the type of card installed.
Oper State	<p>Displays the operational state of the card. The possible operational states are:</p> <ul style="list-style-type: none"> <li>• <b>Active:</b> Indicates that the card is an active component that will be used to process subscriber data sessions.</li> <li>• <b>Standby:</b> Indicates that the card is a redundant component. Redundant components will become active through manual configuration or automatically should a failure occur.</li> <li>• <b>Offline:</b> Indicates that the card is installed but is not ready to process subscriber data sessions. This could be due to the fact that it is not completely installed (such as, the card interlock switch is not locked). Refer to the <i>Installation Guide</i> for additional information.</li> </ul>

Field	Description
SPOF	Displays whether or not the component is a single point of failure (SPOF) in the system. If the component is a SPOF, then a Yes will appear in this column. If not, a No will be displayed.
Attach <b>ASR 5000 only</b>	This column is valid only for the ASR 5000 platform. It displays the line card that the Processing Cards and SMCs are using for network access.  This column will only be populated for the RCCs in the event that tasks and processes were migrated from an active Processing Card to a standby Processing Card. The RCC creates a path from the standby Processing Card to the line cards.

# CHAPTER 22

## show cdr

This chapter includes the **show cdr** command output tables.

- [show cdr statistics, on page 609](#)
- [show cdr file-space-usage, on page 612](#)

## show cdr statistics

*Table 164: show cdr statistics Command Output Descriptions*

Field	Description
<b>EDR-UDR file Statistics</b>	
CDRMOD Instance Id	The CDRMOD instance identifier.
<b>Overall Statistics</b>	
Files rotated	Total number of EDR and UDR files rotated.
Files rotated due to volume limit	Total number of EDR and UDR files rotated due to volume limit.
Files rotated due to time limit	Total number of EDR and UDR files rotated due to time limit.
Files rotated due to tariff-time	Total number of EDR and UDR files rotated due to tariff time.
Files rotated due to records limit	Total number of files rotated because of record limits.
File rotation failures	Total number of times rotation failed for EDR and UDR file.
Files deleted	Total number of EDR and UDR files deleted.
Records deleted	Total number of records deleted.
Records received	Total number of records received.
Files received	Total number of EDR and UDR files received by service.
Time of last file deletion	Date and time of last EDR/UDR file deleted.
Current open files	Total number of EDR and UDR files open.

Field	Description
<b>REDR Specific Statistics</b>	
REDR files rotated	Total number of REDR files rotated.
REDR files rotated due to volume limit	Total number of REDR files rotated due to volume limit.
REDR files rotated due to time limit	Total number of REDR files rotated due to time limit.
REDR files rotated due to records limit	Total number of REDR files rotated due to records limit.
REDR file rotation failures	Total number of rotation failed for REDR files.
REDR files deleted	Total number of REDR files deleted.
REDR records deleted	Total number of REDR records deleted.
REDR records received	Total number of REDR records received.
Current open REDR files	Total number of REDR files open.
Time of last REDR file deletion	Date and time of last REDR file deleted.
<b>EDR Specific Statistics</b>	
EDR files rotated	Total number of EDR files rotated.
EDR files rotated due to volume limit	Total number of EDR files rotated due to volume limit.
EDR files rotated due to time limit	Total number of EDR files rotated due to time limit.
EDR files rotated due to records limit	Total number of EDR files rotated due to records limit.
EDR file rotation failures	Total number of rotation failed for EDR files.
EDR files deleted	Total number of EDR files deleted.
EDR records deleted	Total number of EDR records deleted.
EDR records received	Total number of EDR records received.
Current open EDR files	Total number of EDR files open.
Time of last EDR file deletion	Date and time of last EDR file deleted.
<b>UDR Specific Statistics</b>	
UDR files rotated	Total number of UDR files rotated.
UDR files rotated due to volume limit	Total number of UDR files rotated due to volume limit.
UDR files rotated due to time limit	Total number of UDR files rotated due to time limit.

Field	Description
UDR files rotated due to records limit	Total number of UDR files rotated due to records limit.
UDR files rotation failures	Total number of rotation failed for UDR file.
UDR files deleted	Total number of UDR files deleted.
UDR records deleted	Total number of UDR records deleted.
UDR records received	Total number of UDR records received.
Current open UDR files	Total number of UDR files open.
Time of last UDR file deletion	Date and time of last UDR file deletion.
<b>UDR-EDR-REDR PUSH Statistics</b>	
<b>Overall Statistics</b>	
<b>Primary Server Statistics</b>	
<b>Secondary Server Statistics</b>	
Successful File Transfers	Total number of successful file transfers.
Failed File Transfers	Total number of failed file transfers.
Num of times PUSH initiated	Total number of times an EDR/UDR push attempt was initiated.
Num of times PUSH Failed	Total number of times an EDR/UDR push attempt failed.
Num of times PUSH cancelled due to HD failure	Total number of times EDR/UDR push was cancelled due to hard disk failures.
Num of periodic PUSH	Total number of periodic push.
Num of manual PUSH	Total number of manual push.
Current status of PUSH	Indicates the current status of push – Running/Not Running.
Last completed PUSH time	The date and time the last push completed.
Num of file Pend transfer	Total number of EDR/UDR files that are present in the <i>/records/</i> directory waiting to be transferred to the remote server.
Num of file Queued transfer	Total number of EDR/UDR files that are currently queued to transfer to the remote server.
<b>Diameter-hdd-module Record Specific Statistics</b>	
Diameter-hdd-module files rotated	Total number of Diameter files rotated.
Diameter-hdd-module files rotated due to volume limit	Total number of Diameter files rotated due to volume limit.

Field	Description
Diameter-hdd-module files rotated due to time limit	Total number of Diameter files rotated due to time limit.
Diameter-hdd-module files rotated due to tariff-time	Total number of Diameter files rotated due to tariff time.
Diameter-hdd-module files rotated due to records limit	Total number of Diameter files rotated due to records limit.
Diameter-hdd-module file rotation failures	Total number of rotation failed for Diameter files.
Diameter-hdd-module files deleted	Total number of Diameter files deleted.
Diameter-hdd-module records deleted	Total number of Diameter records deleted.
Diameter-hdd-module records received	Total number of Diameter records received by service.
Current open Diameter-hdd-module files	Total number of Diameter files open.
Time of last Diameter-hdd-module file deletion	The date and time of last Diameter file deleted.

## show cdr file-space-usage

*Table 165: show cdr file-space-usage Command Output Descriptions*

Field	Description
CDRMOD Instance Id	The CDRMOD instance identifier.
UDR File Storage Limit	Displays the configured storage limit for UDR files.
UDR File Storage Usage	Displays the storage space utilized for the UDR files.
Percentage of UDR file store usage	Displays the percentage of storage space utilized for the UDR files.
EDR File Storage Limit	Displays the configured storage limit for EDR files.
EDR File Storage Usage	Displays the storage space utilized for the EDR files.
Percentage of EDR file store usage	Displays the percentage of storage space utilized for the EDR files.

# CHAPTER 23

## show cell-trace-module

This chapter includes the **show cell-trace-module** command output tables.

- [show cell-trace-module file-space-usage](#), on page 613
- [show cell-trace-module statistics](#), on page 613

## show cell-trace-module file-space-usage

*Table 166: show cell-trace-module file-space-usage Command Output Descriptions*

Field	Description
CDRMOD Instance Id	The CDRMOD instance identifier.
Cell-Trace File Storage Limit	Displays the configured storage limit for cell trace files.
Cell-Trace File Storage Usage	Displays the storage space utilized for cell trace files.
Percentage of Cell-Trace file store usage	Displays the percentage of storage space utilized for the cell trace files.

## show cell-trace-module statistics

*Table 167: show cell-trace-module statistics Command Output Descriptions*

Field	Description
CDRMOD Instance Id	The CDRMOD instance identifier.
<b>Cell-Trace Specific Statistics</b>	
Cell-Trace-module files rotated	Total number of cell trace files rotated.
Cell-Trace-module files rotated due to time limit	Total number of cell trace files rotated due to time limit.

Field	Description
Cell-Trace-module files rotated due to records limit	Total number of cell trace files rotated because of record limits.
Cell-Trace-module file rotation failures	Total number of times rotation failed for cell trace files.
Cell-Trace-module files deleted	Total number of cell trace files deleted.
Cell-Trace-module records deleted	Total number of cell trace records deleted.
Cell-Trace-module records received	Total number of cell trace records received.
Time of last Cell-Trace-module file deletion	Date and time of last cell trace file deleted.
<b>Cell-Trace-module PUSH Statistics</b>	
Successful File Transfers	Total number of successful file transfers.
Failed File Transfers	Total number of failed file transfers.
Num of times PUSH initiated	Total number of times a cell trace PUSH attempt was initiated.
Num of times PUSH Failed	Total number of times a cell trace PUSH attempt failed.
Num of times PUSH cancelled due to HD failure	Total number of times cell trace PUSH operation was cancelled due to hard disk failures.
Num of periodic PUSH	Total number of periodic PUSH operations.
Num of manual PUSH	Total number of manual PUSH operations.
Current status of PUSH	Indicates the current status of PUSH operation – Running/Not Running.
Last completed PUSH time	The date and time the last PUSH operation completed.

## CHAPTER 24

# show certificate

---

This chapter includes the **show certificate** command output tables.

- [show certificate, on page 615](#)

## show certificate

*Table 168: show certificate Command Output Descriptions*

Field	Description
Name	Certificate name
Data	Data output varies with content at the time of certificate creation but will include: X.509 version numberSerial numberAlgorithm typeIssuing authorityValid datesPublic key encrypted data

# CHAPTER 25

## show cli

This chapter includes the **show cli** command output tables.

- [show cli configuration-monitor](#), on page 617
- [show cli history](#), on page 618
- [show cli session](#), on page 618

## show cli configuration-monitor

*Table 169: show cli configuration-monitor Command Output Descriptions*

Field	Description
config monitor enabled?	Indicates whether or not the CLI configuration monitor has been enabled. The Global Configuration mode <b>cli configuration-monitor</b> command (yes/no).
monitoring config changes?	Indicates whether configuration changes are being monitored (yes/no).
monitoring enabled/disabled	Indicates whether monitoring has been enabled or disabled.
cli config monitor instance	Indicates the number of active CLI configuration monitoring instances.
cli config monitor status	Indicates the current status of the configuration monitor. For example: "idle".
# config change traps sent	Indicates the number of starConfigurationUpdate SNMP traps that have been sent. The Global Configuration mode <b>cli trap config-mode</b> command must be used to configure traps to be sent.
seconds until next monitor	Indicates the number of seconds remaining in a 15-minute window before the next <b>show configuration checksum</b> command is executed.
longest checksum time (sec)	Indicates in seconds the longest interval between configuration checksums.
time of last object change	Displays a timestamp associated with the last time a configuration object was changed.
last config object changed	Displays the name of the changed object.

## show cli history

*Table 170: show cli history Command Output Descriptions*

Field	Description
<Sequence No.>	Indicates the chronological sequence number for the listed CLI command.
<Timestamp>	Indicates day of week, date/time (MON DD hh:mm:ss TTT YYYY), CLI (<cli:n>), context (name), context ID, user, mode and hostname. <b>NOTE:</b> This information only appears if the optional <b>all</b> keyword has been used in the <b>show cli history</b> command.
<Command Name>	Displays the name of the CLI command that was run.

## show cli session

*Table 171: show cli session Command Output Descriptions*

Field	Description
User	Displays user information related to CLI session login.
Session started at	Indicates session start time in the format: DoW, MMM, DD hh:mm:ss TT
Security Level:	Displays information about the user's StarOS administrative level and other p

## CHAPTER 26

# show chassis-throughput

This chapter includes the **show chassis-throughput** command output table.

- [show chassis-throughput, on page 619](#)

## show chassis-throughput

*Table 172: show chassis-throughput Command Output Descriptions*

Field	Description
Chassis Throughput	Indicates the configured throughput of the chassis.
Card/Cpu	Indicates individual distribution of throughput on per card, per CPU board.
Throughput	Indicates the throughput for the individual card/CPU.

# CHAPTER 27

## show cloud

This chapter includes the **show cloud** command output tables.

The **show cloud** commands are only supported on virtualized platforms.

- [show cloud configuration, on page 621](#)
- [show cloud hardware, on page 622](#)
- [show cloud monitor, on page 622](#)

## show cloud configuration

*Table 173: show cloud configuration Command Output Descriptions*

Field	Description
Card <n>	Card slot number.
Config Disk Parameters	Information about the current virtual disk configuration.
Local Params:	
CARDSLOT=	Card slot number.
CARDTYPE=	Hexadecimal card type identifier.
CPUID=	Associated CPU number.
IFTASK_CORES=50	Core allocation on the SF card.
IFTASK_CRYPTOCORES=30	Core allocation for crypto on the SF card.
IFTASK_MCDMA_CORES=40	Core allocation for mcdma on the SF card.
CONTROL_THREAD_ENABLE=1	Control thread enabled.
MCDMA_THREAD_DISABLE=1	MCDMA thread disabled.

# show cloud hardware

Table 174: show cloud hardware Command Output Descriptions

Field	Description
CPU Nodes	Number of CPU nodes.
CPU Cores/Threads	Number of cores/threads.
Memory	vMemory in Megabytes.
Hugepage size	Page size.
<b>cpeth0:</b>	VPC-DI network communication port.
Driver	Driver type.
<b>loeth0:</b>	CF only: LOCAL management port (Console).
Driver	Driver type.
<i>portslot_port</i>	SF only: Service port.
Driver	Driver type.

# show cloud monitor

Table 175: show cloud monitor di-network summary Command Output Descriptions

Field	Description
The following fields appear for both <b>summary</b> and <b>detail</b> command options.	
Card <n> Test Results	Card slot number on which monitoring has been performed.
ToCard	Slot number of the card to which traffic was routed.
Health	"Bad" indicates a packet loss rate of larger than 1%. Otherwise the Health is "Good".
5MinLoss	Percentage of packets lost for the past five minutes.
60MinLoss	Percentage of packets lost for the past 60 minutes.
The following fields only appear for the <b>detail</b> command option.	
Dest	The reported statistics refer to the communication between this card and the card number specified when running the command.
TotalPkt	Total number of packets sent.
JumboPkt	Number of jumbo packets sent.

Field	Description
TotalDrops	Total number of jumbo and non-jumbo test packets that were dropped.
JumboDrops	Number of jumbo test packets that were dropped.
LongRTT	Longest Round Trip Time (RTT) in milliseconds.
AverageRTT	Average Round Trip Time (RTT) in milliseconds.
Last 10 RTT in milliseconds (starting from most current)	

**Table 176: show cloud monitor controlplane and dataplane Command Output Descriptions**

Field	Description
Cards	Indicates the card slot number that originated the monitoring request.
Src	Indicates the card slot number that originated the monitoring request.
Dst	Indicates the card slot number to which the request was directed.
15 Second Interval / 5 Minute Interval / 60 Minute Interval (Control Plane only)	
Xmit	Indicates the total number of packets transmitted for a 15-second interval.
Recv	Indicates the total number of packets received for a 15-second interval.
Miss%	Indicates the drop/lost percentage. If insufficient data is collected for a complete interval, “-incomplete” is displayed.
15 Second Interval / 5 Minute Interval / 60 Minute Interval (Data Plane only)	
Miss	Indicates the difference in the number of packets transmitted versus the number of packets received
Hit	Indicates the total number of packets received for a 15-second interval.
Pct	Indicates the drop/lost percentage. If insufficient data is collected for a complete interval, “-incomplete” is displayed.

# CHAPTER 28

## show cmp

This chapter includes the **show cmp** command output tables. CMP refers to IPSec Certificate Management Protocol v2.

**Important** The commands described in this chapter appear in the CLI for this release. However, they have not been qualified for use with any current Cisco StarOS gateway products.

- [show cmp history, on page 625](#)
- [show cmp outstanding-reg, on page 627](#)
- [show cmp statistics, on page 627](#)

## show cmp history

*Table 177: show cmp history Command Output Descriptions*

Field	Description
Trans id	Internal ID assigned to this Certificate Management Protocol v2 (CMPv2) transaction
Cert Name	CMPv2 certificate name

Field	Description
Src State	<p>Possible source states:</p> <ul style="list-style-type: none"> <li>• INIT – the initial state generates the public and private keys for the Initialize Response/Enrollment Response message, builds these messages and sends them to the CA.</li> <li>• RESP WAIT – waiting for a response for any of Initialize Response, Enrollment Response, Update Response or Polling Response messages. The response messages are handled in this state and appropriate actions taken based on the PKIStatus of the response.</li> <li>• POLL WAIT – there is no outstanding request for the certificate but the CA has not yet signed the certificate and has returned a PKIStatus of "waiting".</li> <li>• READY – the certificate is signed by CA and is ready for use.</li> <li>• CLEANUP – This is an error handling state that handles all error transitions and results in cleanup activities for the certificate.</li> </ul>
Trigger	<p>Transaction trigger:</p> <ul style="list-style-type: none"> <li>• cp (Enrollment Response)</li> <li>• cr (Enrollment Request)</li> <li>• ip (Initialize Response)</li> <li>• ir (Initialize Request)</li> <li>• kup (Update Response)</li> <li>• kur (Update Request)</li> </ul>
Dst State	<p>Possible destination states:</p> <ul style="list-style-type: none"> <li>• INIT – the initial state generates the public and private keys for the Initialize Response/Enrollment Response message, builds these messages and sends them to the CA.</li> <li>• RESP WAIT – waiting for a response for any of Initialize Response, Enrollment Response, Update Response or Polling Response messages. The response messages are handled in this state and appropriate actions taken based on the PKIStatus of the response.</li> <li>• POLL WAIT – there is no outstanding request for the certificate but the CA has not yet signed the certificate and has returned a PKIStatus of "waiting".</li> <li>• READY – the certificate is signed by CA and is ready for use.</li> <li>• CLEANUP – This is an error handling state that handles all error transitions and results in cleanup activities for the certificate.</li> </ul>
Status	Transaction status: OK or KEY_GEN_FAIL

## show cmp outstanding-reg

Table 178: show cmp outstanding-reg Command Output Descriptions

Field	Description
Cert name	Name of the CMPv2 certificate
Current State	<p>Possible states:</p> <ul style="list-style-type: none"> <li>• INIT – the initial state generates the public and private keys for the Initialize Response/Enrollment Response message, builds these messages and sends them to the Certificate Authority (CA).</li> <li>• RESP WAIT – waiting for a response for any of Initialize Response, Enrollment Response, Update Response or Polling Response messages. The response messages are handled in this state and appropriate actions taken based on the PKIStatus of the response.</li> <li>• POLL WAIT – there is no outstanding request for the certificate but the CA has not yet signed the certificate and has returned a PKIStatus of "waiting".</li> <li>• READY – the certificate is signed by CA and is ready for use.</li> <li>• CLEANUP – This is an error handling state that handles all error transitions and results in cleanup activities for the certificate.</li> </ul>
Outstanding Message	Possible messages: None and those states listed above

## show cmp statistics

Table 179: show cmp statistics Command Output Descriptions

Field	Description
<b>Protocol Statistics</b>	
Initialize Request (ir)	Number of Initialize Request messages
Initialize Response (ip)	Number of Initialize Response messages
Enrollment Request (cr)	Number of Enrollment Request messages
Enrollment Response (cp)	Number of Enrollment Response messages
Manual Update Request (kur)	Number of manual Update Request messages
Manual Update Response (kup)	Number of manual Update Response messages
Polling Request	Number of Polling Request messages

Field	Description
Polling Response	Number of Polling Response messages
Certconf Message	Number of Certificate Configuration messages
Error Message	Number of error messages
Accepted Initial Request	Number of accepted Initial Request messages
Accepted Enrollment Request	Number of accepted Enrollment Request messages
Accepted Update Request	Number of accepted Update Request messages
Accepted Polling Request	Number of accepted Polling Request messages
Auto Update (kur) Triggered	Number of times an automatic certificate update was triggered
Parse Response - CA Reject	Number of times messages have received Reject response from the Certificate Authority (CA)
Pkiconf Message	Number of Public Key Infrastructure (PKI) Configuration messages received
<b>Response Timeout</b>	
Initialize Request (ir)	Number of Initialize Request timeouts
Enrollment Request (cr)	Number of Enrollment Request timeouts
Update Request (kur)	Number of Update Request timeouts
Certconf	Number of Certificate Configuration timeouts
PollReq	Number of Polling Request timeouts
<b>Parse Failure</b>	
Initialize Response (ip)	Number of Initialize Response parsing error messages
Enrollment Response (cp)	Number of Enrollment Response parsing error messages
Update Response (kup)	Number of Update Response parsing error messages
Pkiconf Message	Number of PKI Configuration parsing error messages
Polling Response	Number of Polling Response parsing error messages
Unexpected Response Msg	Number of Unexpected Response messages
<b>Message Build Failure</b>	
Initialize Request (ir)	Number of Initialize Request message build failures
Enrollment Request (cr)	Number of Enrollment Request message build failures
Update Request (kur)	Number of Update Request message build failures

Field	Description
Certconf Message	Number of Certificate Configuration build failures
Polling Request	Number of Polling Request message build failures
<b>Internal Statistics</b>	
TCP Socket Connection Failure	Number of TCP socket connection failures
Failed Key Pair Generation	Number of times a key pair failed to be generated
Certificate Validation Failure	Number of times a certificate validation failed
Certificate Storage Failure	Number of times a certificate failed to be stored
Certificate Configuration Failure	Number of times a certificate failed to be configured
DNS Host Failures	Number of DNS host failures
Other Internal Error	Number of other internal errors
Manual CMP Certificate Cleared	Number of times a CMP certificate was manually cleared
<b>Redundancy Statistics</b>	
Certificate Recovery Succeeded	Number of times a certificate was successfully recovered
Certificate Recovery Failed	Number of times a certificate failed to be recovered

# CHAPTER 29

## show confdmgr

This chapter includes the **show confdmgr** command output tables. ConfD is the engine supporting the NETCONF protocol interface with the Cisco Network Service Orchestrator (NSO) and Elastic Services Controller (ESC).

- [show confdmgr](#), on page 631
- [show confdmgr subscriptions](#), on page 633

## show confdmgr

*Table 180: show confdmgr Command Output Descriptions*

Field	Description
State Information	
State	Indicates current state of the confdmgr procllet: Starting, Started, Stopped.
Subscriptions	Indicates configuration points defined in the Yang model for which confdmgr will be notified when a change occurs.
Last successful id	ID number for the last successful request instance.
Last failed id	ID number for the last failed request instance.
Autosave url	URL specified by the NETCONF Protocol Configuration mode <b>autosave-confdmgr</b> command. <b>Note</b> This command was made obsolete in 21.2; this field is no longer displayed in 21.2 and higher releases.
Username	Username specified by the NETCONF Protocol Configuration mode <b>confdmgr-username</b> command.
Bulkstats	Displays whether event bulkstats collection and reporting on the REST interface is enabled or disabled.
Kpi interval	Displays the time interval in seconds for gathering NSLB Key Performance Indicator (KPI) information. If set to 0, this functionality is disabled.

Field	Description
Event notification level	Displays the configured severity level of StarOS events to be sent out as NETCONF notifications: critical (1), error (2), warning (3), unusual (4), info (5). This level dictates the lowest event severity level that results in a notification.
SNMP notifications	Displays whether SNMP alert and alarm reporting via NETCONF is enabled or disabled.
REST interface authentication	Displays the certificate verification done on client interfaces: none, peer, or peer-fa
REST interface certificate	Displays the name of the certificate.
REST interface host name	If configured, displays the host name the web server will serve. If configured, mandates the web server to only service requests whose Host field matches this configured host name. Otherwise displays "Not configured".
Interface / Status / Port	
The current status (Enabled/Disabled) and configured port number for the NETCONF and REST interfaces.	
Statistics	
Triggers	Number of times confdmgr has requested ConfD to dump the CDB contents back to confdmgr which results in a config synchronization by SCT (Shared configuration T
Replays	Number of times a transaction has been replayed. A replay is initiated if, upon starting the last successful transaction ID in confdmgr does not match that of ConfD. This occurs, for example, if confdmgr task restarted when processing the notification for a configuration transaction.
Notifications	Number of times ConfD has sent a configuration update to confdmgr. For example, this can occur as the result of a "commit" via confd_cli or during a trigger event.
Notification failures	Number of times an update received from ConfD was not processed successfully. The number of successes and failures should always equal the total number of notifications.
Trigger failures	Number of times a CDB dump to confdmgr failed.
Replay failures	Number of times an attempt to replay a transaction failed.
NETCONF notification failures	Number of times an attempt to issue a NETCONF notification failed.
Unexpected failures	Number of times an unexpected condition was encountered. An error is generated for each case.
Successful notifications	Number of times an update received from ConfD was successfully processed.  <b>Note</b> This field was deprecated in 21.2.

# show confdmgr subscriptions

*Table 181: show confdmgr subscriptions Command Output Descriptions*

Field	Description
Subscriptions	
Path	Pathname for configuration points defined in the Yang model for which confdmgr to be notified when a change occurs.
Index	Assigned index number
Namespace	staros

# CHAPTER 30

## show configuration

This chapter includes the **show configuration** command output tables.

- [show configuration iftask boot-options](#), on page 635
- [show configuration iftask boot-options verbose](#), on page 636
- [show config](#) , on page 636
- [show config apn](#), on page 637
- [show configuration access-link](#), on page 637
- [show config context](#), on page 637
- [show configuration srp](#), on page 638
- [show config context verbose](#), on page 638

## show configuration iftask boot-options

*Table 182: show config iftask boot-options Command Output Descriptions*

Field		Description
priority		Indicates the priority for the configuration to be applied.
	cdrom	Indicates CDROM configuration as priority.
	cli	Indicates CLI configuration as priority.
sfc		Indicates startup configuration parameters for Service Function card.
	cores	Indicates percentage of iftask-cores in the virtual card.
	crypto	Indicates percentage of crypto cores out of the iftask-cores in the virtual card.
	mc dma	Indicates percentage of mc dma cores out of the iftask-cores in the virtual card.
sfc		
	thread-enable	Indicates that thread-enable flag is on.

Field		Description
	control	Indicates control-thread is enabled.
	mcdma	Indicates mcdma-thread is enabled.

## show configuration iftask boot-options verbose

Table 183: show config iftask boot-options Command Output Descriptions

Field		Description
priority		Indicates the priority for the configuration to be applied.
	cdrom	Indicates CDROM configuration as priority.
	cli	Indicates CLI configuration as priority.
sfc		Indicates startup configuration parameters for Service Function card.
	cores	Indicates percentage of iftask-cores in the virtual card.
	crypto	Indicates percentage of crypto cores out of the iftask-cores in the virtual card.
	mcdma	Indicates percentage of mcdma cores out of the iftask-cores in the virtual card.
sfc		
	thread-enable	Indicates that thread-enable flag is on.
	control	Indicates control-thread is enabled.
	mcdma	Indicates mcdma-thread is enabled.

## show config

The output of this CLI command displays the following parameters.

Field	Description
<b>gtp attribute secondary-rat-usage</b>	Specify this option to include the Secondary RAT reports field in the CDR.
<b>gtp suppress-secondary-rat-usage zero-volume</b>	Enables the exclusion of the zero volume Secondary RAT reports in the CDR.

Field	Description
gtp limit-secondary-rat-usage	Enables limiting the number of Secondary RAT Usage reports in CDR with the configured value.

## show config apn

**show config apn <apn\_name>**

The output of this command displays the following parameter:

Field	Description
access-link ip-frag: df-ignore	Displays the application logic applied to the APN. APN-Configured confirms if the application logic is derived from the APN (True) or from the Global level (False).

## show configuration access-link

**show configuration access-link**

The output of this command displays the following parameter:

Field	Description
access-link ip-fragmentation normal	Displays the respective value, if configured at Global level. If the configuration is set to default or df-ignore then, no output is displayed

**show configuration access-link verbose**

The output of this command displays the following parameter:

Field	Description
access-link ip-fragmentation df-ignore	Displays the respective value, if configured at Global level. If the configuration is set to default or df-ignore then, df-ignore is displayed.

## show config context

*Table 184: show config context <context name> Command Output Descriptions*

Field	Description
S-GW Service:	

Field	Description
egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi	Indicates that CLI is enabled under S-GW service.
<b>P-GW Service:</b>	
egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi	Indicates that CLI is enabled under P-GW service.
flexible-services-container	Indicates that an optional TLV Flexible Services Container is sent in Pilot packets.
<b>ggsn-service</b>	
handover-immediate-flush-enabled	Shows that the GGSN Service is associated with the saegw-service with an immediate flush of handover information from sessmgr to demux (egtpinmgr).

## show configuration srp

The output of this command is enhanced to display the following field.

*Table 185: show configuration srp Command Output Descriptions*

Field	Description
vrf-srp-validate	Enables the SRP validation for BGP VRF configuration.

## show config context verbose

*Table 186: show config context <context name> verbose Command Output Descriptions*

Field	Description
<b>S-GW Service:</b>	
no egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi	Indicates that CLI is disabled under S-GW service.
<b>P-GW Service:</b>	
no egtp change-notification-req rat-type eutran ignore-uli-with-rai-sai-cgi	Indicates that CLI is disabled under P-GW service.

# CHAPTER 31

## show congestion-control

This chapter includes the **show congestion-control** command output tables.

- [show congestion-control configuration, on page 639](#)
- [show congestion-control statistics allmgr instance, on page 640](#)
- [show congestion-control statistics asngwmgr instance, on page 640](#)
- [show congestion-control statistics egtpinmgr, on page 641](#)
- [show congestion-control statistics mme full, on page 641](#)

## show congestion-control configuration

*Table 187: show congestion-control configuration Command Output Descriptions*

Field	Description
system cpu utilization	Displays the current congestion-control configuration. If the demuxmgr exclusion is configured while calculating system CPU utilization, then relevant data regarding exclusion is mentioned in the output.
system memory utilization	Displays the current congestion-control configuration. If the demuxmgr exclusion is configured while calculating system memory utilization, then relevant data regarding exclusion is mentioned in the output.
demuxmgr average cpu utilization	Displays the current congestion-control configuration. If the demuxmgr CPU utilization threshold is configured, then the respective facility is monitored for the CPU utilization.
connected-sessions-utilization	Displays the current congestion-control configuration. If the total connected session monitoring is configured, then the system wide connected session value is monitored.

## show congestion-control statistics a11mgr instance

Table 188: show congestion-control statistics a11mgr instance Command Output Descriptions

Field	Description
Current congestion status	The current congestion control state as "Cleared" or "Applied".
Congestion applied	Displays the number of times the system invoked a congestion control policy for the specified service type.
Congestion Control Resource Limits	Indicates the congestion control threshold that was triggered. For more information, refer to the <b>congestion-control threshold</b> command in the Global Configuration Mode chapter of the <i>Command Line Interface Reference</i> .

## show congestion-control statistics asngwmgr instance

Table 189: show congestion-control statistics asngwmgr instance Command Output Descriptions

Field	Description
current congestion status	The current congestion control state as "Cleared" or "Applied".
congestion applied	Displays the number of times the system invoked a congestion control policy for the specified service type.
congestion Control Resource Limits	Indicates the congestion control threshold that was triggered. For more information, refer to the <b>congestion-control threshold</b> command in the Global Configuration Mode chapter of the <i>Command Line Interface Reference</i> .
system cpu use exceeded	Indicates the number of time the ASNGW Manager exceeded the system CPU usage limit.
service cpu use exceeded	Indicates the number of time the ASNGW Manager exceeded the CPU usage limit specified for this service.
system memory use exceeded	Indicates the number of time the ASNGW Manager exceeded the allocated system memory usage limit.
port rx use exceeded	Indicates the number of time the ASNGW Manager exceeded the Rx port usage limit.
port tx use exceeded	Indicates the number of time the ASNGW Manager exceeded the Tx port usage limit.
port specific rx use exceeded	Indicates the number of time the ASNGW Manager exceeded the Rx port usage limit for a specific port number.
port specific tx use exceeded	Indicates the number of time the ASNGW Manager exceeded the Tx port usage limit for a specific port number.

Field	Description
max sess use exceeded	Indicates the number of time the ASNGW Manager exceeded the maximum session usage limit for a service.
license use exceeded	Indicates the number of time the ASNGW Manager exceeded the maximum license usage limit.
msg queue size use exceeded	Indicates the number of time the ASNGW Manager exceeded the message queue size usage.
msg queue wait time exceeded	Indicates the number of time the ASNGW Manager exceeded the message queue wait time.
license threshold exceeded	Indicates the number of time the ASNGW Manager exceeded the license threshold limit.
max sess threshold exceeded	Indicates the number of time the ASNGW Manager exceeded the maximum session threshold limit.
sessions disconnected due to overload disconnect	Indicates the total number of sessions disconnected due to overload.

## show congestion-control statistics egtpinmgr

Table 190: show congestion-control statistics egtpinmgr Command Output Descriptions

Field	Description
demuxmgr cpu use	Displays the current congestion-control statistics. If a congestion policy is applied, then an entry is made for the resource types with congestion applied.
connected sess threshold exceeded	Displays the current congestion-control statistics. If there is a congestion applied, then an entry is made for the resource types with congestion applied.

## show congestion-control statistics mme full

Table 191: show congestion-control statistics mme full Command Output Descriptions

Field	Description
<b>Critical/Major/Minor Congestion Policy Action</b>	This section provides statistics for the Critical, Major or Minor congestion policy actions that were triggered for the MME.
Congestion Policy Applied	Displays the number of times the system invoked a congestion control policy.
PS attaches Rejected/Dropped	Indicates the number of packet switched Attach requests that were rejected/dropped.
Combined attaches Rejected/Dropped	Indicates the number of Combined Attach requests that were rejected/dropped.

Field	Description
S1-Setup Rejected/Dropped	Indicates the number of S1-Setup attempts that were rejected/dropped.
Handover Rejected/Dropped	Indicates the number of handover attempts that were rejected/dropped.
Addn-pdn-connect Rejected/Dropped	Indicates the number of additional PDN context connection attempts that were rejected/dropped.
Addn-brr-connect Rejected/Dropped	Indicates the number of additional Bearer Resource Requests that were rejected/dropped.
Brr-ctxt-mod-request Rejected/Dropped	Indicates the number of Bearer Resource Context Modification Requests dropped or rejected during a congestion condition.
Service-Request Rejected/Dropped	Indicates the number of service requests that were rejected/dropped.
TAU-Request Rejected/Dropped	Indicates the number of TAU requests that were rejected/dropped.
S1AP Overload Start Sent	Indicates the number of S1AP Overload Start messages that were sent.
S1AP Overload Stop Sent	Indicates the number of S1AP Overload Stop messages that were sent.
Excluded Emergency Events	Indicates the number of emergency events that were excluded from the Congestion Control policy based on the configuration of the <b>exclude-emergency-events</b> command. These events were allowed to proceed during a congestion condition.
Excluded Voice Events	Indicates the number of voice calls that were excluded from the Congestion Control policy based on the configuration of the <b>exclude-voice-events</b> command. These calls were allowed to proceed when a congestion condition.

## CHAPTER 32

# show connectedapps

This chapter describes the output of the **show connectedapps** command.

- [show connectedapps, on page 643](#)

## show connectedapps

*Table 192: show connectedapps Command Output Descriptions*

Field	Description
CA session userid	Username for the current CA session.
CA session password	Password for the current CA session.
CA session name	Name assigned to the current CA session.
CA session IP address	IP address of the current CA session
HA chassis mode	High Availability chassis mode: <ul style="list-style-type: none"><li>• <b>Inter</b> – between ASR 9000 chassis</li><li>• <b>Intra</b> – within an ASR 9000 VSM</li><li>• <b>Standalone</b> – No HA (standalone VSM)</li></ul>
HA network mode	High Availability network mode: <ul style="list-style-type: none"><li>• <b>L2</b> – Layer 2</li><li>• <b>L3</b> – Layer 3</li><li>• <b>NA</b> – Not Applicable (standalone VSM)</li></ul>
CA session Activation	YES (activated) or NO (not activated)
CA SRP Status	Current Session Recovery Protocol status (ICSR): <ul style="list-style-type: none"><li>• <b>INIT</b> – Initializing</li><li>• <b>UP</b></li><li>• <b>DOWN</b></li></ul>

Field	Description
CA SRP State	Current Session Recovery Protocol state (ICSR): <ul style="list-style-type: none"><li>• INIT – Initializing</li><li>• UP</li><li>• DOWN</li></ul>

## CHAPTER 33

# show content-filtering

This chapter includes the **show content-filtering** command output tables.

- [show content-filtering category database](#), on page 645
- [show content-filtering category database all](#), on page 646
- [show content-filtering category database facility srdmbr all](#), on page 647
- [show content-filtering category policy-id id](#), on page 648
- [show content-filtering category statistics](#), on page 649
- [show content-filtering category statistics facility srdmbr all](#), on page 649
- [show content-filtering category url <url> policy-id <id> verbose](#), on page 650
- [show content-filtering server-group name](#), on page 651
- [show content-filtering server-group statistics](#), on page 652

## show content-filtering category database

*Table 193: show content-filtering category database active verbose Command Output Descriptions*

Field	Description
Database Status	Indicates latest status of rating databases. Possible status are: <ul style="list-style-type: none"><li>• <b>OK</b>: Indicates all SRDB tasks are running and database is good.</li><li>• <b>ERROR-Database Corrupt</b>: Indicates all SRDB tasks are running and database is bad or corrupt.</li><li>• <b>ERROR-No database at specified pathname</b>: Indicates all SRDB tasks are running and database is not available at specified path/location/directory.</li><li>• <b>MERGING</b>: Displayed during merging of the incremental database with full OPTCMDB database.</li><li>• <b>LOADING</b>: Displayed during loading of the database.</li><li>• <b>n/a</b>: Indicates that specified database is not loaded and its status is unknown.</li></ul>

Field	Description
Path	Path specified to base location or folder for Static Rating Databases (SRDB). It may have one of the following flags: <ul style="list-style-type: none"> <li>• <b>*ACTIVE*</b>: Indicates database is valid and good.</li> <li>• <b>*NOT LODAED*</b>: Indicates that there is an error in database.</li> </ul>
Last Upgrade Status	Status of last attempt of rating database upgrade. Possible status are: <ul style="list-style-type: none"> <li>• <b>Successful</b>: Displayed after the upgrade is completed successfully.</li> <li>• <b>Failure</b>: Displayed in case of failure system will rollback to previous database.</li> <li>• <b>n/a</b>: Displayed in case of first time loading of database.</li> </ul>
Type	Type of SRDB with checksum. Type of SRDB may be Full or Incremental.
Version	Latest version status of SRDB.
Creation Time	Time of creation of SRDB in DAY MM DD HH:MM:SS YYYY format.
Hostname	Host server name where SRDB base directory existing.
Comment	User defined remarks/description about database.
Last Access Time	Date and time in DAY MM DD HH:MM:SS YYYY format when database was last accessed.
Last Modified Time	Date and time in DAY MM DD HH:MM:SS YYYY format when database was last modified.
Last Status Change Time	Date and time in DAY MM DD HH:MM:SS YYYY format when status of access time or modified time was changed.

## show content-filtering category database all

Table 194: show content-filtering category database all Command Output Descriptions

Field	Description
<b>Content Filtering Static Rating Databases:</b>	
Last Upgrade Status	Status of the last attempt of rating database upgrade. Possible statuses are: <ul style="list-style-type: none"> <li>• <b>Success</b>: Displayed after the upgrade is completed successfully.</li> <li>• <b>Failure</b>: Displayed in case the full upgrade failed. System will rollback to previous database.</li> <li>• <b>n/a</b>: Displayed in case of first time loading of database.</li> </ul>

Field	Description
Path	Path specified to base location or folder for Static Rating Databases (SRDB). It may have one of the following flags: <ul style="list-style-type: none"> <li>• <b>*ACTIVE*</b>: to indicate database is valid and good.</li> <li>• <b>*NOT LODAED*</b>: to indicate that there is an error in database.</li> </ul>
Database Status	Latest status of rating databases. Possible status are: <ul style="list-style-type: none"> <li>• <b>OK</b>: Indicates all SRDB tasks are running and database is good.</li> <li>• <b>ERROR-Database Corrupt</b>: Indicates all SRDB tasks are running and database is bad or corrupt.</li> <li>• <b>ERROR-No database at specified pathname</b>: Indicates all SRDB tasks are running and database is not available at specified path/location/directory.</li> <li>• <b>MERGING</b>: Displayed during merging of the incremental database with full OPTCMDB database.</li> <li>• <b>LOADING</b>: Displayed during loading of the database.</li> <li>• <b>n/a</b>: Indicates that specified database is not loaded and its status is unknown.</li> </ul>

## show content-filtering category database facility srdmgrp all

Table 195: show content-filtering category database facility srdmgrp all Command Output Descriptions

Field	Description
<b>Content Filtering SRDB Instance Based Database Configuration:</b>	
SRDB Instance	Indicates the running Static Rating Database (SRDB) Manager instance number.
DB Load Status	Indicates the database load status.
DB Version	Indicates the version of loaded database.
Volume	Indicates the database volume number.
Number of URLs	Indicates the number of URLs available in specific volume of database.
Number of Blocks/Page	Indicates the average number of blocks per page rated in URLs available in specific volume of database.
The following indicate Dynamic Content Filtering statistics at SRDB level:	
Dynamic SRDB Instance	Indicates the running Dynamic SRDB Manager instance number.

Field	Description
RaterPkg Load Status	Indicates the Dynamic Rater Package load status: <ul style="list-style-type: none"> <li>• Loaded</li> <li>• Not-loaded</li> </ul>
Number of Model files	Indicates the number of model files (used for language detection and category recognition) available.
Standby Dynamic SRDB Instance	Indicates standby Dynamic SRDB instance number.
RaterPkg Load Status	Indicates the Dynamic Rater Package load status: <ul style="list-style-type: none"> <li>• Loaded</li> <li>• Not-loaded</li> </ul>
Number of Model files	Indicates the number of model files (used for language detection and category recognition) available.

## show content-filtering category policy-id id

Table 196: show content-filtering category policy-id Command Output Descriptions

Field	Description
Service Name	The content filtering service name.
Content Filtering Policy	The content filtering policy ID, and description, if set.
<b>Content filtering Categories:</b>	
Category	Category of the content rated.
Priority	Priority of the CF Category in the CF Policy.
Action	Action taken for the indicated result of CF analysis.
Content Insert	The content string inserted in place of message returned from prohibited or restricted site or content server.
Redirect	The URL to redirect subscriber.
EDR	The EDR file format name to generate separate CF EDRs based on action and content category.
Timeout Action	The timeout end condition if rating cannot be performed.
Discarded-Flow-Content-ID	The content ID for the discarded flows. If not configured, this field is not displayed.

## show content-filtering category statistics

*Table 197: show content-filtering category statistics Command Output Descriptions*

Field	Description
Service Name	Name of the Content Filtering service.
Content Filtering status	Status of the current Content Filtering service.
Overall Status	Indicates capability of the system to perform Content Filtering service.
Content Filtering Statistics	Indicates the Content Filtering statistics group information.
Static Rating	Information on static rating content-filtering.
SRDB Request Count	Total number of requests received.
SRDB Response Total	Total number of responses sent for requests.
SRDB Response Successful	Total number of responses for successful requests.
SRDB Response Not Rated	Total number of responses for requests without rating.
SRDB Response Not in DB	Total number of responses for unknown or undefined requests.
Number of Incremental DB Received	Total number of incremental rating database received by the Content Filtering subsystem.
Number of Successful Incremental Upgrade Performed	Total number of incremental upgrades performed successfully with incremental rating database.
Number of Full DB Received	Total number of full rating database received by the Content Filtering subsystem.
Number of Successful Full Upgrade Performed	Total number of full upgrades performed successfully with incremental rating database.
Time Since Last Upgrade (dd:hh:mm:ss)	Time since last upgraded, full or incremental, performed.

## show content-filtering category statistics facility srbmgr all

*Table 198: show content-filtering category statistics facility srbmgr all Command Output Descriptions*

Field	Description
Content Filtering status	Indicates Content Filtering service status.
Overall Status	Indicates the system's ability to perform content filtering.
Dynamic Content Filtering status	Indicates Dynamic Content Filtering service status.

show content-filtering category url &lt;url&gt; policy-id &lt;id&gt; verbose

Field	Description
Overall Status	Indicates the system's ability to perform dynamic content filtering.
Content Filtering SRDB Instance Based Statistics	Indicates the group statistics of content filtering based on Static Rating Database Manager instance.
Instance Number	Indicates the SRDB Manager's instance number.
<b>Static Rating:</b>	
Request Count	Total number of requests received.
Response Total	Total number of responses sent for requests.
Response Successful	Total number of responses for successful requests.
Response Not Rated	Total number of responses for requests without rating.
Response Not in DB	Total number of responses for unknown or undefined requests.
Average Ratings/sec	Indicates the average ratings performed per second.
Number of URLs rated by domain	Total number of URLs rated with given domain.
<b>Dynamic Content Filtering SRDB Instance Based Statistics:</b>	
Instance Number	Indicates the instance number of SRDB manager.
<b>Dynamic Rating:</b>	
Request Count	Total number of requests received.
Response Total	Total number of responses sent for requests.
Response Successful	Total number of responses for successful requests.
Response Not Rated	Total number of responses for requests without rating.
Histogram based on URL length	Indicates the histogram statistics of URLs grouped by length of URL.
Histogram for number of URLs hit per SN category (sorted on no. of URLs):	Indicates the specific category and the number of URLs hit per category. If, during runtime, an x-category was added, the x-category is also displayed.

## show content-filtering category url <url> policy-id <id> verbose

Table 199: show content-filtering category url <url> policy-id <id> verbose Command Output Descriptions

Field	Description
URL	The URL path for Static Rating Category Database.

Field	Description
URL Root Domain	The URL's root domain information.
URL OPTCMDB Volume	The Optimized Content Rating Master Database (OPTCMDB) volume and version.
URL Hash	Indicates the URL hash in URL OPTCMDB.
Domain Used For Rating	Indicates whether domain name is used for URL rating. Possible values are: <ul style="list-style-type: none"> <li>• TRUE</li> <li>• FALSE</li> </ul>
URL Category	The URL's category.
Action Configured	Indicates the action configured. <b>Important</b> In case of multiple categories, the action configured for a category with highest priority is displayed. If Dynamic Content Filtering is enabled, the action configured for DYNAM and UNKNOW is displayed as <b>Dynamic</b> (i.e. the URL is sent for Dynamic categorization). In case more than one category is returned with DYNAM and if it is configured with higher priority then, that action will be shown.
Content Insertion String	Indicates the content insertion string. <b>Important</b> This field is displayed only if Dynamic CF is not enabled.
Redirect URL	Indicates the redirected URL. <b>Note</b> This field is displayed only in the case of multiple categories.

## show content-filtering server-group name

Table 200: show content-filtering server-group name Command Output Descriptions

Field	Description
Content Filtering Group	The name of the Content Filtering Server Group (CFSG).
Context	The name of the content in which CFSG is configure.
Origin Address	IP address of the origin endpoint or ICAP client.
ICAP Address(Port)	IP address and port number of ICAP server with in CF Server Group.
Max Outstanding	Total number of unanswered outstanding messages to this ICAP server.
Failure Action	Displays the action taken on connection failure.

Field	Description
Response Timeout	Displays the configured response-timeout duration to wait for response.
Connection Retry Timeout	Displays the configured connection retry timeout duration to check the TCP connection status between ICAP sever and client.
Dictionary	Displays the configured dictionary to use for encoding the requests to the server(s).
Deny Message	Displays the configured text string message that is returned to the subscriber in a deny response.
Header Extension Options	Displays the ICAP header information if configured or displays "None" if no ICAP header is configured.

## show content-filtering server-group statistics

*Table 201: show content-filtering server-group statistics Command Output Descriptions*

Field	Description
Content Filtering Group	The name of the Content Filtering Server Group (CFSG).
Connection Statistics	Displays the ICAP connection related statistics.
Current Open Connections	Total number of open connections.
Connection DHOST requests	Total number of DHOST requests.
Successfull Connections	Total number of successful connections.
Connections DHOST remove	Total number of connections removed from DHOST.
Connection SHUTDOWN req	Total number of requests for SHUTDOWN.
ACF Unreachable(read)	Total number of attempts for Active Content Filter server (ICAP server) to read.
ACF Unreachable(write)	Total number of attempts for Active Content Filter server (ICAP server) to write.
Reconnect attempts	Total number of reconnect attempts for ACF server (ICAP server).
Connection Timeout	Total number of connections timeout after reconnect attempts for ACF server (ICAP server).
Connection Failure Statistics	Displays connection failure statistics.
Connection DHOST errors	Total number of connection DHOST errors in connection.
Connection CONNECT error	Total number of connection CONNECT errors in connection.
Socket open errors	Total number of errors due to SOCKET open in connection.

Field	Description
Connection bind errors	Total number of BIND errors in connection.
Connection setvr errors	Total number of SETVER errors in connection.
Connection NONBLOCK errors	Total number of NONBLOCK errors in connection.
Connection SHUTDOWN errors	Total number of SHUTDOWN errors in connection.
Incomplete 3-way handshaking	Total number of errors due to incomplete 3-way handshaking in TCP connection.
ACF Statistics	Displays Active Content Filter (ICAP server) statistics.
ACF Requests Created	Total number of requests created for ACF.
Response Timeout	Total number of response timeout for requests to ACF.
Write request success	Total number of successful WRITE requests.
Write request failed	Total number of failed WRITE requests.
Read response success	Total number of successful READ response.
Read response failed	Total number of failed READ response.
HTTP Permit	Total number of HTTP URLs permitted from ACF.
WAP Permit	Total number of WAP URLs permitted from ACF.
HTTP Denny	Total number of HTTP URLs denied from ACF.
WAP Denny	Total number of WAP URLs denied from ACF.
HTTP Redirect	Total number of HTTP URLs redirected from ACF.
WAP Redirect	Total number of WAP URLs redirected from ACF.
Invalid ACTION	Total number of invalid ACTION message from ACF.
Redirect URL not defined	Total number of errors due to undefined redirect URL.
Buffer List Empty	Total number of errors due to empty buffer list.
Failure action Permit	Total number of connections permitted after connection failure.
Failure action Deny	Total number of connections denied after connection failure.
Failure action Discard	Total number of connections discarded after connection failure.
Failure action Terminate	Total number of connections terminated after connection failure.
Failure actions taken	Total number of actions taken after failure in connection failure.
Num pkts dropped for DENY	Total number of packets dropped after denying the connection due to failure in connection.

Field	Description
Num pkts dropped for REDIRECT	Total number of packets dropped after redirecting the connection due to failure in connection.
Num pkts dropped for DENY Timeout action	Total number of packets dropped after denying the connection due to timeout action.
Num pkts dropped for REDIRECT Timeout action	Total number of packets dropped after redirecting the connection due to timeout action.
ACF Resp Parse Statistics	Displays the statistics related to ACF response parsing.
Parse ACF resp success	Total number of successful ACF parse response.
Parse ACF resp ver err	Total number of successful ACF parse response version error.
Misc Statistics	Displays the miscellaneous statistics.
Total pkts sent	Total number of packets sent through ICAP connection.
Invalid ACF group config	Total number of errors due to invalid CF Server Group (Active Content Filter server groups) configuration.
Invalid bind address	Total number of errors due to invalid binding address configuration.
Invalid ICAP address	Total number of errors due to invalid ICAP server addresses.
Num req to standby server	Total number of requests sent to the standby server.

## CHAPTER 34

# show chassis-throughput

This chapter includes the **show chassis-throughput** command output table.

- [show chassis-throughput, on page 655](#)

## show chassis-throughput

*Table 202: show chassis-throughput Command Output Descriptions*

Field	Description
Chassis Throughput	Indicates the configured throughput of the chassis.
Card/Cpu	Indicates individual distribution of throughput on per card, per CPU board.
Throughput	Indicates the throughput for the individual card/CPU.

## CHAPTER 35

# show context all

---

This chapter includes the **show context all** command output tables.

- [show context all, on page 657](#)

## show context all

*Table 203: show context all Command Output Descriptions*

Field	Description
Context Name	The name of a configured context.
Context ID	The system ID of the context.
State	The current state of the context. The possible states are:  <b>Active:</b> The VPN Manager task is running and is ready to respond to the requests. <b>Initializing:</b> The Context is configured but not yet started. The VPN Controller knows about it and is in the process of starting the VPN Manager. In other words, the VPN Manager services are not available yet. <b>Inactive:</b> The VPN Manager is configured but either the task is not running yet or the VPN Manager has just crashed and the restart process is going on.

# CHAPTER 36

## show cpu

This chapter includes the **show cpu** command output tables.

**Important** The outputs of **show cpu** commands vary based on platform ASR 5000 or ASR 5500, VPC (virtualized), card type and the StarOS release.

- [show cpu info, on page 659](#)
- [show cpu info verbose, on page 660](#)
- [show cpu table, on page 662](#)

## show cpu info

*Table 204: show cpu info Command Output Descriptions*

Field	Description
Card	Displays the slot number of the card.
CPU	Displays the CPU number as an integer.
Status	Indicates the CPU status: <b>Active:</b> The CPU is active and available for session processing. <b>Standby:</b> The CPU is on standby. Also indicates if <b>Kernel Running</b> and <b>Tasks Running</b> .
Load Average	Indicates the average CPU load.
Total Memory	Indicates the total physical memory available to the CPU in megabytes.
Kernel Uptime	Indicates how long the kernel has been up since last boot in Days, Hours and Minutes.
Last Reading:	Displays current CPU usage statistics (snapshot).
CPU Usage	Indicates the percentage of use for user, system, I/O, IRQ and idle. In VPC systems, the value displayed excludes the poll CPU values.

Field	Description
Poll CPUs	Indicates the number of the IFTASK threads. The IFTASK threads are omitted from the CPU utilization calculation for this command output as well as the bulk statistics output. This means that the reported CPU utilization is more accurate.
Processes / Tasks	Indicates the total number of running processes and tasks.
Network	Indicates the number of packets and bytes received and transmitted.
File Usage	Indicates the number of open and available files.
Memory Usage	Indicates the amount of physical memory used in bytes and as a percentage of available memory.
Maximum/Minimum:	Displays maximum and minimum usage statistics.
CPU Usage	Indicates the percentage of use for user, system, I/O, IRQ and idle.
Poll CPUs	Indicates the number of the IFTASK threads. The IFTASK threads are omitted from the CPU utilization calculation for this command output as well as the bulk statistics output. This means that the reported CPU utilization is more accurate.
Processes / Tasks	Indicates the number of running processes and tasks.
Network	Indicates the number of packets and bytes received and transmitted.
File Usage	Indicates the number of open and available files.
Memory Usage	Indicates the amount of physical memory used in bytes and as a percentage of available memory.  <b>Important</b> In release 21.1, <b>show cpu info</b> outputs are standardized to use Megabytes (M) as the unit of measurement for memory usage.

## show cpu info verbose

Table 205: show cpu info verbose Command Output Descriptions

Field	Description
Card	Displays the slot number of the card.
CPU	Displays the CPU number as an integer.
Status	Indicates the CPU status:  <b>Active:</b> The CPU is active and available for session processing. <b>Standby:</b> The CPU is on standby.  Also indicates <b>Kernel Running</b> and <b>Tasks Running</b> .
Load Average	Indicates the average CPU load.

Field	Description
Total Memory	Indicates the total physical memory available to the CPU in megabytes.
Kernel Uptime	Indicates how long the kernel has been up since last boot in Days, Hours and Minutes.
Last Reading:	Displays current CPU usage statistics (snapshot).
CPU Usage All	Indicates the percentage of use across all cores for user, system, I/O, IRQ and idle. In VPC systems, the value displayed excludes the poll CPU values.
Core <i>n</i>	Indicates the percentage of use for an individual core within the CPU for user, system, I/O, IRQ and idle.  (VPC-DI only) Any Cores that are indicated as Poll CPUs are IFTASK threads that are not included in the CPU calculations.
Poll CPUs	(VPC-DI only) Number of IFTASK threads that are not included in the CPU calculations. reported by this command.
Core <i>n</i>	(VPC-DI only) Indicates the percentage of use for an individual Poll CPU core.  <b>Note</b> 100% CPU utilization for DPDK is an expected behavior as the Poll Mode Driver (PMD) thread runs continuously on a core as per the DPDK driver architecture.
Processes / Tasks	Indicates the total number of running processes and tasks.
Network loeth0	Indicates the number of packets and bytes received and transmitted on the management interface.
Network ports <i>_p</i>	Indicates the number of packets and bytes received and transmitted on a service interface ( <i>slot_port</i> ).
File Usage	Indicates the number of open and available files.
Memory Usage	Indicates the amount of physical memory used in bytes and as a percentage of available memory.
Memory Usage	Indicates the amount of physical memory used in bytes and as a percentage of available memory.  <b>Important</b> In release 21.1, <b>show cpu info</b> outputs are standardized to use Megabytes (M) as the unit of measurement for memory usage.
Memory Details:	Displays more detailed memory usage statistics.
Static	Indicates the amount of memory used by the kernel and system files in megabytes.
System	Indicates the amount of memory used for temp storage, buffers and caches in megabytes.
Process/Task	Indicates the amount of memory used for processes and tasks.
Free	Indicates the amount of free (available) memory (including reserved).
Usable	Indicates the amount of unreserved available memory.

Field	Description
5-Minute Average	Displays the average CPU usage statistics for the last five minutes.
15-Minute Average	Displays the average CPU usage statistics for the last 15 minutes.

## show cpu table

Table 206: show cpu table Command Output Descriptions

Field	Description
CPU	Displays the number of the CPU in the format <i>slot_number/cpu_number</i> .
State	Indicates the CPU state as one of the following: <b>Active:</b> The CPU is active and available for session processing. <b>Standby:</b> The CPU is on standby.
Load	Indicates the CPU load for the following time intervals: <b>Now:</b> Current load <b>5min:</b> Load within the last 5 minutes <b>15min:</b> Load within the last 15 minutes
CPU-Usage	Indicates the CPU usage as a percentage for the following time intervals: <b>Now:</b> Current usage <b>5min:</b> Usage within the last 5 minutes <b>15min:</b> Usage within the last 15 minutes
Memory	Indicates the memory usage for the following time intervals: <b>Now:</b> Current usage <b>5min:</b> Usage within the last 5 minutes <b>15min:</b> Usage within the last 15 minutes  In addition, the <b>total</b> memory available on the CPU is displayed.  The PSC has two CPUs, the main CPU (CPU 0) contains 16 GB of memory. The second CPU is contained within the card's NPU and provides an additional 512 MB of memory. The PSC2 has two CPUs, the main CPU (CPU 0) contains 32 GB of memory.

## CHAPTER 37

### show crash

- [show crash config](#), on page 663
- [show crash list](#), on page 664
- [show crash all](#), on page 664
- [show crash number](#) , on page 664

### show crash config

This chapter includes the **show crash config** command output table.

*Table 207: show crash config Command Output Descriptions*

Field	Description
URL	Specifies the URL where cores are stored.
Disk Space Limit	Specifies the limit for the disk space. Displays "Not Configured" if the limit is not configured.
Rotate Core Files Limit	Specifies the limit for the rotate core files.
Core File Max-Size	Specifies the maximum size for the core file.
Core File Compression	Specifies the compression format of the core file.
Core Transmit Timeout	Specifies the timeout for core transmission.
Core Obfuscation	Specifies whether core obfuscation is enabled or disabled.
Async Core Transfer	Specifies whether async core transfer is enabled or disabled.
Mandatory VPP Core Transfer	Specifies whether mandatory VPP core transfer is enabled or disabled.
Critical Task	Specifies whether critical task is enabled or disabled.

## show crash list

The following command shows list of all fatal crash records.

*Table 208: show crash list Command Output Descriptions*

Field	Description
Card	Serial number for the fatal crash records.
Time	The actual time at which the fatal crash occurred.
Process	Shows the name of the Snapped Process.
Card/CPU/PID	Shows list of Card numbers, CPU complexity and PID numbers.
Hardware Serial Number	Shows list of hardware serial numbers of the crashed records.

Use the following commands to view fatal crash records.

- `show crash list clear crash list <no>` : Clears list of Fatal crash record.
- `show crash number clear crash number <no>` : Copies particular Fatal crash record to location.

## show crash all

The following command shows all fatal crash records.

*Table 209: show crash all Command Output Descriptions*

Field	Description
SW Version	Shows software version numbers of all fatal crash records.
Similar Crash Count	Shows all similar crash count numbers of fatal crash records.
Time of First Crash	Shows the actual time of the first fatal crash occurrence.

## show crash number

The following command shows a particular Fatal crash record.

*Table 210: show crash number Command Output Descriptions*

Field	Description
SW Version	Shows the software version number of the fatal crash records.

Field	Description
Similar Crash Count	Shows the total count number of similar fatal crashes.
Time of First Crash	Shows the actual time of the first fatal crash record.

## CHAPTER 38

# show crypto

This chapter includes the **show crypto** command output tables.

- [show crypto group summary](#), on page 667
- [show crypto ikev2-ikesa security-associations summary](#), on page 668
- [show crypto ikev2-ikesa security-associations summary spi](#), on page 668
- [show crypto ipsec security-associations](#), on page 669
- [show crypto ipsec security-associations statistics](#), on page 672
- [show crypto ipsec security-associations summary](#), on page 675
- [show crypto isakmp keys](#), on page 675
- [show crypto isakmp security-associations](#), on page 676
- [show crypto managers](#), on page 676
- [show crypto managers instance](#), on page 677
- [show crypto managers summary](#), on page 678
- [show crypto map summary](#), on page 678
- [show crypto statistics](#), on page 681
- [show crypto statistics ikev2](#), on page 687
- [show crypto template summary](#), on page 696

## show crypto group summary

*Table 211: show crypto group summary Command Output Descriptions*

Field	Description
Crypto Group	Name of the crypto group
Primary Tunnel	Configuration information for the primary tunnel.
Secondary Tunnel	Configuration information for the secondary tunnel.

## show crypto ikev2-ikesa security-associations summary

Table 212: show crypto ikev2-ikesa security-associations summary Command Output Descriptions

Field	Description
Mgr ID	SA Manager ID number
VPN	SA VPN number
Local IPsec GW	Local default gateway IP address
Port	UDP port number
Remote IPsec GW	Remote default gateway IP address
Port	UDP port number
Hostname	Name of the remote gateway
State	Authentication state <ul style="list-style-type: none"> <li>• I = Initiator</li> <li>• R = Responder</li> </ul>
Lifetime/Remaining	Originally configured lifetime for the SA in seconds/number of seconds left in this lifetime.

## show crypto ikev2-ikesa security-associations summary spi

Table 213: show crypto ikev2-ikesa security-associations summary spi Command Output Descriptions

Field	Description
Local IPsec GW	Local default gateway IP address
Remote IPsec GW	Remote default gateway IP address
Initiator SPI	SPI (Security Parameter Index) of the Initiator
Responder SPI	SPI of the Responder
Lifetime	Originally configured lifetime for the SA in seconds/number of seconds left in this lifetime.

## show crypto ipsec security-associations

Field	Description
Map Name	The name of the crypto map facilitating the security association.
Local Address	The IP address of the interface on the security gateway facilitating the security association.
Current Peer	The IP address of the interface on the peer gateway facilitating the security association.
Peer Hostname	The name of the peer.
Crypto Type	The type of crypto map facilitating the security association, which can be: <ul style="list-style-type: none"> <li>• Dynamic Map</li> <li>• IKEv1 Map</li> <li>• IKEv2 Map</li> <li>• Manual Map</li> </ul>
SA State	The state of the security association, which can be: <ul style="list-style-type: none"> <li>• Established</li> <li>• Partially Established</li> <li>• No SAs</li> </ul>
IPSec Manager	The identifying number of the IPsec manager facilitating the security association.
Rekeying	The state of rekeying for the security association, which can be: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
Redundancy Status	The state of the security association, which can be: <ul style="list-style-type: none"> <li>• Original Tunnel: No failure has occurred.</li> <li>• Recovered Session: A failure has occurred and a recovered session has been created.</li> </ul>
Allocated Address	The IP address allocated to the Network Access Identifiers (NAIs) of the users.
Phase 1	The NAI used in Phase 1 authentication.
Phase 2	The NAI used in Phase 2 authentication.
Encoded	The number of packets and bytes of data that have been encoded for the security association.
Encoded Errors	The number of errors that occurred while the packets were being encoded.

Field	Description
Decoded	The number of packets and bytes of data that have been decoded for the security association.
Decoded Errors	The number of errors that occurred while the packets were being decoded.
Authentication Errors	The number of errors that occurred during authentication.
Replay Errors	The number of replay errors that occurred.
Too short Errors	The number of too short errors that occurred.
<b>IPSec SA</b>	
Diffie-Hellman Group	The number of the Diffie-Hellman group to which the security association belongs.
<b>Outbound esp sas</b>	
spi	The Security Parameter Index (SPI) of the outbound ESP security association.
<b>transform</b>	
hmac	The keyed-Hash Message Authentication Code used for the outbound ESP security association, which can be: <ul style="list-style-type: none"> <li>• sha1-96</li> <li>• md5-96</li> </ul>
cipher	The cipher used for the outbound ESP security association, which can be: <ul style="list-style-type: none"> <li>• null</li> <li>• des</li> <li>• 3des</li> <li>• aes-cbc-128</li> <li>• aes-cbc-256</li> </ul>
negotiated soft lifetime (kb/sec)	The soft lifetime in kilobits and/or seconds for the outbound ESP security association, created when a successful rekey has occurred. The soft lifetime is used to warn that the security association is about to expire, allowing the security gateway to create a new lifetime prior to the expiration of the hard lifetime.
remaining soft lifetime (kb/sec)	The remaining soft lifetime in kilobits and/or seconds.
negotiated hard lifetime (kb/sec)	The hard lifetime in kilobits and/or seconds for the outbound ESP security association. The hard lifetime is the number of kilobits and/or seconds used before the security association expires.
remaining hard lifetime (kb/sec)	The remaining hard lifetime in kilobits and/or seconds.
Encoded	The number of encoded packets and bytes of data for the outbound ESP security association.

Field	Description
Encoded Errors	The number of errors that occurred while the packets were being encoded.
<b>Inbound esp sas</b>	
spi	The Security Parameter Index (SPI) of the inbound ESP security association.
<b>transform</b>	
hmac	The keyed-Hash Message Authentication Code used for the inbound ESP security association, which can be: <ul style="list-style-type: none"> <li>• sha1-96</li> <li>• md5-96</li> </ul>
cipher	The cipher used for the inbound ESP security association, which can be: <ul style="list-style-type: none"> <li>• null</li> <li>• des</li> <li>• 3des</li> <li>• aes-cbc-128</li> <li>• aes-cbc-256</li> </ul>
negotiated soft lifetime (kb/sec)	The soft lifetime in kilobits and/or seconds for the inbound ESP security association, created when a successful rekey has occurred. The soft lifetime is used to warn that the security association is about to expire, allowing the security gateway to create a new lifetime prior to the expiration of the hard lifetime.
remaining soft lifetime (kb/sec)	The remaining soft lifetime in kilobits and/or seconds.
negotiated hard lifetime (kb/sec)	The hard lifetime in kilobits and/or seconds for the inbound ESP security association. The hard lifetime is the number of kilobits and/or seconds used before the security association expires.
remaining hard lifetime (kb/sec)	The remaining hard lifetime in kilobits and/or seconds.
Decoded	The number of packets and bytes of data that have been decoded for the inbound ESP security association.
Decoded Errors	The number of errors that occurred while the packets were being decoded.
Authentication Errors	The number of errors that occurred during authentication.
Replay Errors	The number of replay errors that occurred.
Too short Errors	The number of too short errors that occurred.

# show crypto ipsec security-associations statistics

Table 214: show crypto ipsec security-associations statistics Command Output Descriptions

Field	Description
Map Name	The name of the crypto map for which statistics are being displayed.
Application Map Name	The application map name that concatenates the following: <ul style="list-style-type: none"> <li>• <b>Application Supported:</b> MIP or L2TP</li> <li>• <b>Local Address:</b> The IP address of the interface on the system facilitating the security association (SA).</li> <li>• <b>Peer Address:</b> The IP address of the peer security gateway facilitating the SA.</li> <li>• <b>Traffic Type:</b> Control, GRE encapsulated data, or IPIP (IP-in-IP) encapsulated data</li> </ul> <p><b>NOTE:</b> When a crypto map does not have any IPSec SAs established yet, i.e. No IKE negotiation has taken place OR the tunnel had been brought down after inactivity during the entire lifetime of the SAs, is marked as "Security Association is not established&amp;excl;"</p>
local addr	The IP address of the interface on the system facilitating the security association (SA).
ACL	For ISAKMP or manual crypto maps, this is the name of the access control list (ACL) that is matched to the crypto map.
current peer	The IP address of the peer security gateway facilitating the SA.
Tunnel is keyed 1 times.	The number of times the tunnel was keyed. In this example, the tunnel was keyed once.
Encoded	The number of packets and bytes that have been encoded for the SA.
Encode Errors	The number of errors that have occurred while encoding packets.
Decoded	The number of packets and bytes that have been decoded for the SA.
Decode Errors	The number of errors that have occurred while decoding packets.
Authentication Errors	The number of errors that occurred during the system/security gateway authentication process.
Replay Errors	The number of replay errors that occurred for the SA.
outbound esp sas	
spi	The outbound (from the system to the security gateway) security parameter index (SPI) used for the Encapsulating Security Payload protocol.
transform	The protocols configured for the transform set used by the crypto map for outbound tunnels.

Field	Description
negotiated soft lifetime (kb/sec)	The soft lifetime negotiated by the system and the security gateway for outbound SAs. The lifetime is measured in terms kilobytes (kb) and/or seconds (sec). The soft lifetime is used to warn that the SA is about to expire allowing the systems to negotiate a new lifetime prior to the expiration of the hard lifetime.
remaining soft lifetime (kb/sec)	The amount of kilobytes and/or seconds remaining to the soft lifetime from what was initially negotiated.
negotiated hard lifetime (kb/sec)	The hard lifetime negotiated by the system and the security gateway for outbound SAs. The lifetime is measured in terms kilobytes (kb) and/or seconds (sec). The hard lifetime that dictates the maximum duration for the SA before its termination.
remaining hard lifetime (kb/sec)	The amount of kilobytes and/or seconds remaining to the hard lifetime from what was initially negotiated.
Encoded	The number of packets and bytes that have been encoded for the SA.
Encode Errors	The number of errors that have occurred while encoding packets.
inbound esp sas	
spi	The inbound (from the system to the security gateway) security parameter index (SPI) used for the Encapsulating Security Payload protocol.
transform	The protocols configured for the transform set used by the crypto map for inbound tunnels.
negotiated soft lifetime (kb/sec)	The soft lifetime negotiated by the system and the security gateway for inbound SAs. The lifetime is measured in terms kilobytes (kb) and/or seconds (sec). The soft lifetime is used to warn that the SA is about to expire allowing the systems to negotiate a new lifetime prior to the expiration of the hard lifetime.
remaining soft lifetime (kb/sec)	The amount of kilobytes and/or seconds remaining to the soft lifetime from what was initially negotiated.
negotiated hard lifetime (kb/sec)	The hard lifetime negotiated by the system and the security gateway for inbound SAs. The lifetime is measured in terms kilobytes (kb) and/or seconds (sec). The hard lifetime that dictates the maximum duration for the SA before its termination.
remaining hard lifetime (kb/sec)	The amount of kilobytes and/or seconds remaining to the hard lifetime from what was initially negotiated.
Decoded	The number of packets and bytes that have been decoded for the SA.
Decode Errors	The number of errors that have occurred while decoding packets.
Authentication Errors	The number of errors that occurred during the system/security gateway authentication process.
Replay Errors	The number of replay errors that occurred for the SA.

Field	Description
Too Short Errors	The number of too short errors that occurred for the SA.
ISAKMP sessions established for this tunnel	The total number of sessions successfully connected by this SA.
ISAKMP sessions failed for this tunnel	The total number of sessions that failed to be connected by this SA.
ISAKMP for this tunnel	<b>NOTE:</b> These items are displayed for the life of the ISAKMP SA.
Phase1 Completed as Responder	Indicates the state of the Phase 1 IPSec negotiation stage and role of the system (either responder or initiator).
Statistics	Displays statistics for the ISAKMP SA.
IN	The number of packets/bytes received.
OUT	The number of packets/bytes transmitted.
1 Phase2 negotiations	The number of negotiations that have taken place in Phase 2.
Negotiated Hard lifetime	The hard lifetime negotiated by the system and the security gateway for inbound SAs. The lifetime is measured in terms kilobytes (kb) and/or seconds (sec). The hard lifetime that dictates the maximum duration for the SA before its termination.

## show crypto ipsec security-associations summary

Table 215: show crypto ipsec security-associations summary Command Output Descriptions

Field	Description
vvv	<p>The first value (v) indicates the state of the security association (SA State), which can be:</p> <ul style="list-style-type: none"> <li>• <b>E</b>: Established</li> <li>• <b>P</b>: Partially Established</li> <li>• <b>N</b>: No SAs</li> </ul> <p>The second value (v) indicates the state of rekeying (Rekey/Keepalive), which can be:</p> <ul style="list-style-type: none"> <li>• <b>D</b>: Rekey Disabled</li> <li>• <b>E</b>: Rekey Enabled/No Keepalive</li> <li>• <b>K</b>: Rekey Enabled/Keepalive</li> </ul> <p>The third value (v) indicates the type of crypto map (Crypto Type) facilitating the security association, which can be:</p> <ul style="list-style-type: none"> <li>• <b>D</b>: Dynamic Map</li> <li>• <b>I</b>: IKEv1 Map</li> <li>• <b>J</b>: IKEv2 Map</li> <li>• <b>M</b>: Manual Map</li> </ul>
Map Name	The name of the crypto map facilitating the security association.
Rekeys	The number of rekeys that occurred for the security association.
En Pkts	The number of packets that have been encrypted and transmitted over the security association.
De Pkts	The number of packets that have been received over the security association and decrypted.

## show crypto isakmp keys

Table 216: show crypto isakmp keys Command Output Descriptions

Field	Description
Peer IP Address	The IP address of the security gateway(s).

Field	Description
Preshared Key	The pre-shared key(s) (in Hex) exchanged by the security gateway.

## show crypto isakmp security-associations

Table 217: show crypto isakmp security-associations Command Output Descriptions

Field	Description
Local IPsec GW	The IP address of the local IPsec gateway.
Remote IPsec GW	The IP address of the remote IPsec gateway.
State	<p>This displays the state of the SA.</p> <p>The two letters at the beginning of the state define the IKE mode as follows:</p> <ul style="list-style-type: none"> <li>• MM - Main Mode</li> <li>• QM - Quick Mode</li> <li>• AM - Aggressive Mode</li> </ul> <p>The letter in parentheses ( ) at the end of the state, describe where the state message was initiated as follows:</p> <ul style="list-style-type: none"> <li>• I - Initiator</li> <li>• R - Responder</li> </ul>
Lifetime	The lifetime (time) the security association is active and amount of time remaining.

## show crypto managers

Table 218: show crypto managers Command Output Descriptions

Field	Description
Total IKEv2 Invalid-MsgId Notify Sent	<p>An invalid KE Payload was received and the receiver sent back a NOTIFY payload to indicate this.</p> <p>This is the number of times a NOTIFY payload was sent to indicate this error condition.</p>
Total IKEv2 Invalid-MsgId Notify Received	A NOTIFY Payload was received indicating that the KE which had been previously sent to the peer was deemed invalid by the peer.
Total IKEv2 Invalid-KE Notify Sent	<p>An IKE packet was received for which the message-id is invalid. A NOTIFY payload was sent to the peer to indicate that the received message-id was invalid.</p> <p>This maintains the count of the number of times that such a NOTIFY payload was sent.</p>

Field	Description
Total IKEv2 Invalid-KE Notify Received	A NOTIFY payload was received indicating that the message-id which had been previously sent to the peer was deemed invalid by the peer.
Total IKEv2 No-Prop-Chosen Notify Sent	The receiver could not accept the protocol proposal which was sent. A NOTIFY payload was sent back to indicate this.  This maintains the count of the number of times such a NOTIFY payload was sent.
Total IKEv2 No-Prop-Chosen Notify Received	A NOTIFY payload was received indicating that the proposals which had been previously sent to the peer could not be accepted.

## show crypto managers instance

Table 219: show crypto managers instance Command Output Descriptions

Field	Description
IKEv2 DoS Cookie-Challenge Status	Denial of Service status. <ul style="list-style-type: none"> <li>• On</li> <li>• Off</li> </ul>
Certificate Information	For non-expired certificates: <ul style="list-style-type: none"> <li>• Serial number: <i>&lt;string&gt;</i></li> <li>• Monitoring Timer: Running</li> <li>• Status: Not Expired</li> <li>• Next Timer <i>&lt;datetime&gt;</i></li> <li>• Expiry: <i>&lt;datetime&gt;</i></li> </ul> For expired certificates <ul style="list-style-type: none"> <li>• Serial number: <i>&lt;string&gt;</i></li> <li>• Monitoring Timer: Stopped</li> <li>• Status: Expired</li> <li>• Next Timer: Not Scheduled</li> <li>• Expiry: <i>&lt;datetime&gt;</i></li> </ul>
IKEv2 Statistics	This displays the IKEv2 statistics for this manager instance
Current IKEv2 SAs	The total number of all IKEv2 SAs for this manager instance
Current half-open IKEv2 SAs	The number of IKEv2 SAs in half-open state for this manager instance

Field	Description
Current Connecting IKEv2 SAs	The number of IKEv2 SAs trying to connect for this manager instance
Current Established IKEv2 SAs	The number of established IKEv2 SAs for this manager instance
Internal Failure Sent	Indicates an internal failure in ipsecmgr or dcarmgr and a Notify message was sent to the peer.

## show crypto managers summary

Table 220: show crypto managers summary Command Output Descriptions

Field	Description
demux-stats	Display sessions demux statistics on each IPsec Manager.
distribution	Display IPsec Manager distribution info.
handoff-stats	Display IKE request handoff Statistics on each IPsec Manager.
ike-stats	Display IKE statistics on each IPsec Manager.
ikev2-stats	Display IKEv2 statistics on each IPsec Manager.
ipsec-sa-stats	Display IPsec SA statistics on each IPsec Manager.

## show crypto map summary

Table 221: show crypto map summary Command Output Descriptions

Field	Description
Total Crypto maps	The total number of crypto maps of all types.
Configured maps	The total number of configured crypto maps.
Service maps	The total number of service maps. There is one map per service.
Subscriber maps	The total number of subscriber maps.
<b>Map Types</b>	
ipsec-dynamic	The total number of dynamic IPsec tunnel crypto maps.
ipsec-l2tp	The total number of L2TP IPsec tunnel crypto maps.
ipsec-ikev1	The total number of IKEv1 IPsec tunnel crypto maps.
ipsec-manual	The total number of manual (static) IPsec tunnel crypto maps.

Field	Description
ipsec-ikev2-subscriber	The total number of IKEv2 subscriber tunnel crypto maps.
ipsec-mobile-ip	The total number of mobile IP IPsec tunnel crypto maps.
<b>IKEv2 SA</b>	
Cipher null	The total number of IKEv2 security associations using the block cipher NULL. All IKEv2 security association protected traffic is sent in the clear.
Cipher des	The total number of IKEv2 security associations using the block cipher Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher 3des	The total number of IKEv2 security associations using the block cipher Triple Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-128	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 128-bit key in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-256	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 256-bit key in Cypher Block Chaining (CBC) mode.
PRF sha1	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) with the cryptographic hash function Secure Hash Algorithm-1.
PRF md5	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) with the cryptographic hash function Message Digest 5.
HMAC sha1	The total number of IKEv2 security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Secure Hash Algorithm-1 truncated to 96 bits.
HMAC md5	The total number of IKEv2 security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Message Digest 5 truncated to 96 bits.
DH Group 1	The total number of IKEv2 security associations using Diffie-Hellman Group 1 security (the lowest security level). DH Group 1 provides 768 bits of key exchange cryptographic strength. This is a modular exponential (MODP) DH group.
DH Group 2	The total number of IKEv2 security associations using Diffie-Hellman Group 2 security. DH Group 2 (the default) provides 1024 bits of key exchange cryptographic strength. This is a modular exponential (MODP) DH group.
DH Group 5	The total number of IKEv2 security associations using Diffie-Hellman Group 5 security. DH Group 5 provides 1536 bits of key exchange cryptographic strength. This is a modular exponential (MODP) DH group.

Field	Description
DH Group 14	The total number of IKEv2 security associations using Diffie-Hellman Group 14 security (the highest security level). DH Group 14 provides 2048 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
<b>IPSec SA</b>	
Protocol esp	The total number of IPsec security associations using Encapsulating Security Payload (ESP) protocol.
Protocol ah	The total number of IPsec security associations using Authentication Header (AH) protocol.
Cipher null	The total number of IPsec security associations using the block cipher NULL. All IKEv2 IPsec security association derived traffic is sent in the clear.
Cipher des	The total number of IPsec security associations using the block cipher Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher 3des	The total number of IPsec security associations using the block cipher Triple Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-128	The total number of IPsec security associations using the block cipher Advanced Encryption Standard with a 128-bit key in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-256	The total number of IPsec security associations using the block cipher Advanced Encryption Standard with a 256-bit key in Cypher Block Chaining (CBC) mode.
HMAC sha1-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Secure Hash Algorithm-1 truncated to 96 bits (the default).
HMAC md5-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Message Digest 5 truncated to 96 bits.
DH Group 1	The total number of IPsec security associations using Diffie-Hellman Group 1 security (the lowest security level). DH Group 1 provides 768 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 2	The total number of IPsec security associations using Diffie-Hellman Group 2 security. DH Group 2 (the default) provides 1024 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 5	The total number of IPsec security associations using Diffie-Hellman Group 5 security. DH Group 5 provides 1536 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.

Field	Description
DH Group 14	The total number of IPsec security associations using Diffie-Hellman Group 14 security (the highest security level). DH Group 14 provides 2048 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.

## show crypto statistics

Table 222: show crypto statistics Command Output Descriptions

Field	Description
Combined ipsec statistics for context <context-name>	The name of the system context for which statistics are displayed.
<b>Transmit Statistics</b>	
ESP Encode	The total number of packets and bytes that were transmitted having been encoded for the SA using the Encapsulating Security Payload (ESP) protocol.
AH Encode	The total number of packets and bytes that were transmitted having been encoded for the SA using the Authentication Header (AH) protocol.
<b>Transmit Error Counters</b>	
Encode Packets	The total number of packets which have errors while encoding.
Encode Bytes	The total number of bytes which have errors while encoding.
<b>Receive Statistics</b>	
ESP Decode	The total number of packets and bytes that were received having been encoded for the SA using the Encapsulating Security Payload (ESP) protocol.
AH Decode	The total number of packets and bytes that were received having been encoded for the SA using the Authentication Header (AH) protocol.
<b>Receive Error Counters</b>	
Decode Packets	The total number of packets which have errors while decoding.
Decode Bytes	The total number of bytes which have errors while encoding.
Replay Packets	The total number of packets which have been replayed.
Replay Bytes	The total number of bytes which have been replayed.
Combined Control Statistics for Context	The name of the system context for which statistics are displayed.
<b>IKE Flow Counts</b>	

Field	Description
IKE Gateway Flows	The number of UDP flows, incremented when UDP flows are allocated and decremented when UDP flows are freed.
IKE Session Flows	The number of cookie flows, incremented when cookie flows are allocated and decremented when cookie flows are freed.
<b>Transmit Statistics</b>	
IKE Packets	The total number of total IKE packets transmitted.
<b>Receive Statistics</b>	
IKE Packets Received	The total number of IKE packets received.
New IKE Req	The total number of IKE packets sent for new IKE requests.
Gateway Flow Packets	The total number of UDP flow packets received.
Session Flow Packets	The total number of cookie flow packets received.
<b>Rekey Statistics</b>	
IKE Rekeys	The total number of times the IKE SAs negotiated during phase 1 of the IPsec negotiation have been rekeyed. This field is for IKEv1 only and it will be 0 for IKEv2.
<b>Dead Peer Detection (DPD) Statistics</b>	
Req Sent	The total number of DPD R-U-THERE packets sent.
Rsp Rcvd	The total number of DPD R-U-THERE-ACK packets received.
Req Rcvd	The total number of DPD R-U-THERE packets received.
Rsp Sent	The total number of DPD R-U-THERE-ACK packets sent.
Disconnects	The total number of DPD disconnects that occurred between the peers.
Timeouts	The total number of ISAKMP DPD protocol messages that have exceeded their configured timeout period.
<b>NAT-T Statistics</b>	
Keepalives Sent	The total number of NATT keepalive packets sent.
Keepalives Rcvd	The total number of NATT keepalive packets received.
<b>Detailed IKE Statistics</b>	
Active IKE SAs	The total number of SAs: <ul style="list-style-type: none"> <li>• Initiated</li> <li>• Responded.</li> </ul>

Field	Description
Total IKE SAs	The total number of SAs (cumulative history): <ul style="list-style-type: none"> <li>• Initiated</li> <li>• Responded.</li> </ul>
Total Attempts	The total cumulative attempts made to establish SAs: <ul style="list-style-type: none"> <li>• Initiated</li> <li>• Responded.</li> </ul>
Total IKE SA Deletes	<ul style="list-style-type: none"> <li>• Req Sent</li> <li>• Rsp Rcvd</li> <li>• Req Rcvd</li> <li>• Rsp Sent</li> </ul>
Total Packets In	The total cumulative IKE packets received.
Total Packets Out	The total cumulative IKE packets sent.
Total Octets In	The total cumulative IKE octets received.
Total Octets Out	The total cumulative IKE octets sent.
<b>Establishment Failure Statistics</b>	
Initiation Neg Error	The total number of initiated negotiations that failed because of errors.
Initiation Neg Time Out	The total number of initiated negotiations that failed because of timeouts (no response).
Response Neg Error	The total number of responded negotiations that failed because of errors.
Congestion Reject	The total number of packets which were rejected due to congestion control.
Congestion Drop	The total number of packets which were dropped due to congestion control.
Total Cookie Error	Total errors in cookie challenge. Refer to the detailed counters in IKEv2 section.
Total Auth Failures	Total errors due to authentication failures during IKE_AUTH exchanges.
<b>IKEv2 Statistics</b>	
Current state:	<ul style="list-style-type: none"> <li>• Current IKEv2 SAs</li> <li>• Current half-open IKEv2 SAs</li> <li>• Current connecting IKEv2 SAs</li> <li>• Current established IKEv2 SAs</li> <li>• Current child SAs</li> </ul>

Field	Description
IKEv2 Timer Stats	<ul style="list-style-type: none"> <li>• Total IKESA Retrans expirations</li> <li>• Total IKESA Setup expirations (no exchange)</li> <li>• Total IKESA Setup expirations</li> <li>• Total IKESA Lifetime (soft) expirations</li> <li>• Total IKESA Lifetime (hard) expirations</li> <li>• Total TSELSA Lifetime (soft) expirations</li> <li>• Total TSELSA Lifetime (hard) expirations</li> </ul>
IKEv2 Exchanges dropped	<ul style="list-style-type: none"> <li>• Total IKEv2 Resp Pkts Drop - No IKESA</li> <li>• Total invalid resp</li> <li>• Total non-init exch drop--no IKESA</li> <li>• Total invalid message ID</li> <li>• Total invalid major version</li> <li>• Total IKESA error</li> <li>• Total unknown critical payload</li> </ul>
IKEv2 Cookie Statistics	<ul style="list-style-type: none"> <li>• Total cookie notify packets sent</li> <li>• Total cookie notify packets received</li> <li>• Total cookie notify match</li> <li>• Total cookie notify not match</li> </ul>
IKEv2 Rekey Statistics	<ul style="list-style-type: none"> <li>• Total IKESA Rekey sent</li> <li>• Total IKESA Rekey received</li> <li>• Total IKESA Rekey ignored</li> <li>• Total ChildSA Rekey sent</li> <li>• Total ChildSA Rekey received</li> <li>• Total ChildSA Rekey ignored</li> </ul>
IKEv2 MOBIKE Statistics	<ul style="list-style-type: none"> <li>• Total MOBIKE notify sent</li> <li>• Total MOBIKE received</li> <li>• Total Mobike ignored</li> </ul>
IKEv2 Misc Statistics	<ul style="list-style-type: none"> <li>• Total SA create failure</li> <li>• Total SA flow operation failure</li> <li>• Total NAT Keepalive received</li> <li>• Total Invalid-KE notify sent</li> <li>• Total Invalid-KE notify received</li> <li>• Total Invalid-msgID notify received</li> <li>• Total No-Prop-Chosen notify sent</li> <li>• Total No-Prop-Chosen notify received</li> </ul>

Field	Description
IKEv2 Exchange Decode failure statistics	<ul style="list-style-type: none"> <li>• Total pkts failure</li> <li>• Total internal errors</li> <li>• Total invalid IP HDR</li> <li>• Total invalid UDR HDR</li> <li>• Total invalid IKE HDR</li> <li>• Total invalid IKE HDR payload</li> <li>• Total invalid IKE HDR MJ ver</li> <li>• Total invalid IKE HDR MN ver</li> <li>• Total invalid IKE HDR exchange type</li> <li>• Total invalid IKE HDR Rsvd flag</li> <li>• Total invalid IKE HDR length</li> <li>• Total invalid payload syntax</li> <li>• Total invalid payload len</li> <li>• Total unknown crit payload</li> <li>• Total too many payloads</li> <li>• Total invalid SA payload len</li> <li>• Total invalid SA proposal HDR</li> <li>• Total invalid SA proposal HDR Reserved</li> <li>• Total too many transforms</li> <li>• Total invalid SA proposal HDR len</li> <li>• Total too many proposals</li> <li>• Total invalid protocol ID</li> <li>• Total invalid first SA proposal num</li> <li>• Total invalid SA proposal num</li> <li>• Total invalid transform len</li> <li>• Total invalid transform HDR</li> <li>• Total invalid transform HDR Rsvd</li> <li>• Total invalid transform type</li> <li>• Total invalid transform ID</li> </ul>

Field	Description
IKEv2 Exchange Decode failure statistics (continued)	<ul style="list-style-type: none"> <li>• Total invalid KE payload len</li> <li>• Total invalid KE DH Group len</li> <li>• Total invalid ID payload type</li> <li>• Total invalid ID payload len</li> <li>• Total invalid KE DH group</li> <li>• Total invalid KE DH groups</li> <li>• Total invalid Transform ID</li> <li>• Total invalid auth payload len</li> <li>• Total invalid nonce payload len</li> <li>• Total invalid notify payload len</li> <li>• Total invalid notify payload SPI size</li> <li>• Total Invalid Notify payload Proto ID</li> <li>• Total invalid notify payload NATT</li> <li>• Total invalid notify payload Cookie</li> <li>• Total Invalid notify payload Rekey</li> <li>• Total invalid notify payload NATT</li> <li>• Total invalid notify payload Cookie</li> <li>• Total invalid notify payload Rekey</li> <li>• Total invalid EAP payload len</li> <li>• Total invalid CP payload len</li> <li>• Total invalid CP payload attr len</li> <li>• Total invalid payload unknown attr</li> <li>• Total invalid Encrypted Payload len</li> <li>• Total invalid TS payload len</li> <li>• Total invalid TS payload Rsvd</li> <li>• Total invalid TS payload TS-type</li> <li>• Total unsupported crit payload</li> <li>• Total unsupported cert payload</li> <li>• Total unsupported Auth method</li> </ul>
IKEv2 Exchange Decode failure statistics (continued)	<ul style="list-style-type: none"> <li>• Total unsupported SA payload Prot AH</li> <li>• Total unsupported Notify Prot AH</li> <li>• Total unsupported payload Crit VID</li> <li>• Total unsupported TS payload TS_Type</li> <li>• Total unsupported method</li> <li>• Total unknown error</li> </ul>
IKEv2 Decrypt Failure statistics	<ul style="list-style-type: none"> <li>• Total Pkts failure</li> <li>• Total HMAC mismatch</li> <li>• Total pad length error</li> </ul>

Field	Description
IKEv2 Xchg statistics	<ul style="list-style-type: none"> <li>• Total Bad Msg ID</li> <li>• Total bad response</li> <li>• Total stale message ID</li> <li>• Total unknown error</li> <li>• Total state lookup failure</li> </ul>

## show crypto statistics ikev2

Table 223: show crypto statistics IKEv2 Command Output Descriptions

Field	Description
<b>Flow Counts</b>	
Current UDP flows	The total number of UDP port based flows in the data path.
Current Cookie flows	The total number of cookie challenge based flows in the data path.
<b>Transmit Statistics</b>	
IKE Packets	The total number of total IKE packets transmitted.
<b>Receive Statistics</b>	
IKE Packets Received	The total number of IKE packets received.
New IKE Requests	The total number of IKE packets sent for new IKE requests.
UDP flow Packets	The total number of packets that matched the UDP flow.
Cookie flow Packets	The total number of packets that matched the cookie flow.
<b>Rekey Statistics</b>	
IKE Rekeys	The total number of successful IKE_SA rekeys.
<b>Dead Peer Detection (DPD) Statistics</b>	
Requests sent	The total number of DPD R-U-THERE packets sent.
Replies received	The total number of DPD R-U-THERE-ACK packets received.
Requests received	The total number of DPD R-U-THERE packets received.
Replies sent	The total number of DPD R-U-THERE-ACK packets sent.
Collisions	The total number of events that IKEv2 keepalive exchanges occur simultaneously from the PDIF and the MS.
Disconnects	The total number of DPD disconnects that occurred between the peers.

Field	Description
Timeouts	The total number of DPD protocol messages that have exceeded their configured timeout period.
<b>NAT-T Statistics</b>	
Keepalives sent	The total number of NAT-T keepalive packets sent.
<b>Detailed IKE Statistics</b>	
Active IKE SAs	The total number of IKE SAs.
Initiated	The total number of the active SAs initiated locally.
Responded	The total number of the active SAs responded.
Total IKE SAs so far	The total number of SAs (cumulative history).
Initiated	The total cumulative IKE SAs initiated locally.
Responded	The total cumulative IKE SAs responded to.
Total attempts so far	The total cumulative attempts made to establish SAs.
Initiated	The total number of SA establishment attempts initiated locally.
Responded	The total number of SA establishment attempts responded to.
Total deletes so far	The total cumulative deletes so far.
Requests received	The total number of requests received.
Requests sent	The total number of requests sent.
Replies received	The total number of replies received.
Replies sent	The total number of replies sent.
Total packets in	The total cumulative IKEv2 packets received.
Total packets out	The total cumulative IKEv2 packets sent.
Total octets in	The total cumulative IKEv2 octets received.
Total octets out	The total cumulative IKEv2 octets sent.
Failed initiated negotiations with errors	The total number of initiated negotiations that failed because of errors.
Failed initiated negotiations with time out:	The total number of initiated negotiations that failed because of timeouts (no response).
Failed responded negotiations with errors	The total number of responded negotiations that failed because of errors.
Total cookie errors	The total number of cookie errors encountered.

Field	Description
Congestion rejects	The total number of packets rejected due to congestion.
Congestion drops	The total number of packets dropped due to congestion.
Total Unknown Exchange SPI	The total number of unknown exchange SPIs.
<b>IKEv2 Detail Statistics</b>	
<b>Current State</b>	
Current IKEv2 SAs	The number of current IKEv2 SAs.
Current Half-Open IKEv2 SAs	The number of IKEv2 SAs in a half-open state.
Current Connecting IKEv2 SAs	The number of IKEv2 SAs currently connecting.
Current Established IKEv2 SAs	The number of established IKEv2 SAs.
Current Child SAs	The number of current child SAs.
<b>Total IKEv2 Timer Statistics</b>	
IKESA Retrans Expirations	The total number of retransmission expirations.
IKESA Setup Expirations (no Xchg)	The number of IKESA setups that expired with no exchange.
IKESA Setup Expirations	The total number of IKESA Session setups expired.
IKESA Lifetime (Soft) Expirations	The number of IKESA soft lifetime timer expirations.
IKESA Lifetime (Hard) Expirations	The number of IKESA hard lifetime timer expirations.
CHILD_SA Setup Expirations (no Xchg)	The number of Child SA setups that expired with no exchange.
CHILD_SA Lifetime (Soft) Expirations	The number of Child SA soft lifetime timer expirations.
CHILD_SA Lifetime (Hard) Expirations	The number of Child SA hard lifetime timer expirations.
<b>Total IKEv2 Multiple Authentication Statistics</b>	
Phase 1 Auth Successes	The number of multi-auth Phase 1 EAP authentication successes.
Phase 1 Auth Failures	The number of multi-auth Phase 1 EAP authentication failures.
Phase 1 Auth Req Sent	The number of multi-auth Phase 1 EAP authentication requests sent.
Phase 1 Auth Resp Rcvd	The number of multi-auth Phase 1 EAP authentication responses received.
Phase 2 Auth Successes	The number of multi-auth Phase 2 EAP authentication successes.
Phase 2 Auth Failures	The number of multi-auth Phase 2 EAP authentication failures.

Field	Description
Phase 2 Auth Req Sent	The number of multi-auth Phase 2 EAP authentication requests sent.
Phase 2 Auth Resp Rcvd	The number of multi-auth Phase 2 EAP authentication responses received.
Phase 2 Auth MD5 Successes	The number of multi-auth Phase 2 EAP authentication with MD5 successes.
Phase 2 Auth MD5 Failures	The number of multi-auth Phase 2 EAP authentication with MD5 failures.
Phase 2 Auth GTC Successes	The number of multi-auth Phase 2 EAP authentication with GTC mode successes.
Phase 2 Auth GTC Failures	The number of multi-auth Phase 2 EAP authentication with GTC mode failures.
Hash match failures	The number of hash match failures.
Signing failures	The number of signing failures.
MSK missing at phase 1 comp	The number of EAP Master Session Keys (MSK) not found.
Miss Another Auth Follows	The number of missed authentications that follow.
<b>Total IKEv2 Exchanges Dropped</b>	
Resp Pkts Drop - No IKESA	The number of IKEv2 response packets dropped without an IKEv2 SA being created.
Invalid Resp	The total number of invalid response messages.
Non-Init Exch Drop - No IKESA	The total number of IKEv2 exchanges dropped without an IKEv2 SA being created.
Invalid MSG ID	The total number of sessions dropped due to packets with invalid MSG ID.
Invalid Major Version	The total number of sessions dropped due to packets with invalid major version.
IKESA error	The total number of IKESA error messages.
Unknown Crit Payload	The total number of unknown critical payload messages.
Retransmitted request	IKEV2 Stack does not process the packets in the order they are received. New packets are queued if any packet is under processing. After completing the processing, stack consider processing the packets queue first instead of taking the latest packet received from network directly and leaving the packets in queue for later. And if any message is received with same message ID which is currently under processing, then that message will be discarded as retransmitted message received. The count for such request is 'Retransmitted Request'.
<b>Total IKEv2 Notify Statistics</b>	
Cookie Notify Sent	The total number of IKEv2 Denial of Service (DoS) cookie notify packets sent.
Cookie Notify Received	The total number of IKEv2 DoS cookie notify packets received.
Cookie Notify Match	The total number of IKEv2 DoS cookie notify messages that match.
Cookie Notify Not Match	The total number of IKEv2 DoS cookie notify messages that do not match.

Field	Description
Multi Auth Supported	The total number of multiple authentications supported.
Another Auth Follows	The total number of authentications that follow.
<b>Total IKEv2 Rekey Statistics</b>	
IKESA Rekey Sent	The total number of IKESA Rekey Request messages sent.
IKESA Rekey Rcvd	The total number of IKESA Rekey Request messages received.
IKESA Rekey Ignored	The total number of IKESA Rekey messages ignored.
ChildSA Rekey Req Sent	The total number of Child SA Rekey Request messages sent.
ChildSA Rekey Req Rcvd	The total number of Child SA Rekey Request messages received.
ChildSA Rekey Rsp Sent	The total number of Child SA Rekey Response messages sent.
ChildSA Rekey Rsp Rcvd	The total number of Child SA Rekey Response messages received.
ChildSA Rekey Ignored	The total number of Child SA Rekey messages ignored.
<b>Total IKEv2 MOBIKE Statistics</b>	
MOBIKE Notify Sent	The total number of MOBIKE notify messages sent. MOBIKE is not supported. All MOBIKE messages are treated as if they were never received.
MOBIKE Rcvd	The total number of MOBIKE packets received.
MOBIKE Ignored	The total number of MOBIKE packets dropped.
<b>Total IKEv2 Misc Statistics</b>	
SA Create Failure	The total number of SA creations failed.
SA Flow Operation Failure	The total number of SA flow operations failed.
<b>Total IKEv2 Notify Payload Sent Statistics</b>	
Invalid KE Payload	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Invalid KE Payload.
Invalid Major Version	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Invalid Major Version.
Invalid Message ID	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Invalid Message ID.
Invalid Syntax	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Invalid Syntax.
No Additional SAs	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type No Additional SAs.

Field	Description
No Proposal Chosen	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type No Proposal Chosen.
TS Unacceptable	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type TS Unacceptable.
Unsupported Critical Payload	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Unsupported Critical Payload.
Internal Failure Sent	The total number of IKEv2 NOTIFY payloads sent of the NOTIFY type Internal Failure Sent.
<b>Total IKEv2 Notify Payload Received Statistics</b>	
Invalid KE Payload	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type Invalid KE Payload.
Invalid Major Version	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type Invalid Major Version.
Invalid Message ID	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type Invalid Message ID.
Invalid Syntax	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type Invalid Syntax.
No Additional SAs	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type No Additional SAs.
No Proposal Chosen	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type No Proposal Chosen.
TS Unacceptable	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type TS Unacceptable.
Unsupported Critical Payload	The total number of IKEv2 NOTIFY payloads received of the NOTIFY type Unsupported Critical Payload.
<b>IKEv2 Exchange Decode Failure Statistics</b>	
Packet Failures	The number of IKEv2 packets that fail to decode.
Internal Errors	The total number of failures due to internal errors.
Invalid IP HDR	The total number of failures due to an invalid IP header.
Invalid UDP HDR	The total number of failures due to an invalid UDP header.
Invalid IKE HDR	The total number of failures due to an invalid IKE header.
Invalid IKE HDR Payload	The total number of failures due to an invalid IKE header payload.
Invalid IKE HDR Init SPI	The total number of failures due to an invalid IKE header initiator security parameter index.

Field	Description
Invalid IKE HDR Resp SPI	The total number of failures due to an invalid IKE header responder security parameter index.
Invalid IKE HDR Major Ver	The total number of failures due to an invalid IKE header major version.
Invalid IKE HDR Minor Ver	The total number of failures due to an invalid IKE header minor version.
Invalid IKE HDR Xchg Type	The total number of failures due to an invalid IKE header exchange type.
Invalid IKE HDR Rcvd Flag	The total number of failures due to an invalid IKE header received flags.
Invalid IKE HDR Len	The total number of failures due to an invalid IKE header length.
Invalid Syntax	The total number of failures due to an invalid syntax.
Invalid Payload Syntax	The total number of failures due to an invalid payload syntax.
Invalid Payload Len	The total number of failures due to an invalid payload length.
Unknown Crit Payload	The total number of failures due to an unknown critical payload.
Too many payloads	The total number of failures due to many payloads.
Invalid SA Payload Len	The total number of failures due to an invalid SA payload length.
Invalid SA Proposal HDR	The total number of failures due to an invalid SA proposal header.
Invalid SA Proposal HDR Rcvd	The total number of failures due to an invalid SA proposal header received.
Too many transforms	The total number of failures due to many transform-sets in the SA payload.
Invalid SA Proposal HDR Len	The total number of failures due to an invalid SA proposal header length.
Too many proposals	The total number of failures due to many proposals in SA payload.
Invalid first SA Proposal num	The total number of failures due to an invalid first SA proposal number.
Invalid SA Proposal ID	The total number of failures due to an invalid Protocol ID in SA payload.
Invalid SA Proposal num	The total number of failures due to an invalid SA proposal number.
Invalid Transform Len	The total number of failures due to an invalid transform-set length.
Invalid Transform HDR	The total number of failures due to an invalid transform-set header.
Invalid Transform HDR Rcvd	The total number of failures due to an invalid transform-set header received.
Invalid Transform Type	The total number of failures due to an invalid transform-set type.
Invalid Transform ID	The total number of failures due to an invalid transform-set ID.
Invalid KE Payload Len	The total number of failures due to an invalid key exchange payload length.
Invalid KE DH Group	The total number of failures due to an invalid key exchange Diffie-Hellman group number.

Field	Description
Invalid KE DH Group Len	The total number of failures due to an invalid ID payload length.
Invalid ID Pld Len	The total number of failures due to an invalid ID payload length.
Invalid ID Pld Type	The total number of failures due to an invalid ID payload type.
Invalid ID Pld Data	The total number of packets for which ID payload syntax validation has failed.
Invalid Auth Pld Len	The total number of failures due to an invalid authorization payload length.
Invalid Nonce Payload Len	The total number of failures due to an invalid nonce payload length.
Invalid Notify Payload Len	The total number of failures due to an invalid notify payload length.
Invalid Notify Payload SPI Len	The total number of failures due to an invalid notify payload security parameter index size.
Invalid Notify Payload NAT	The total number of failures due to an invalid notify payload Network Address Translation-Traversal.
Invalid Notify payload Proto Id	The total number of failures due to an invalid notify payload protocol ID.
Invalid EAP Payload len	The total number of failures due to an invalid Encapsulation Authentication Protocol payload length.
Invalid Notify Payload Rekey	The total number of failures due to an invalid notify payload rekey.
Invalid CP Payload len	The total number of failures due to an invalid CP payload length.
Invalid Notify Payload Cookie	The total number of failures due to an invalid notify payload cookie.
Invalid TS Payload len	The total number of failures due to an invalid transform-set payload length.
Invalid CP Payload Attr Len	The total number of failures due to an invalid CP payload unknown attribute length.
Invalid TS Payload Rcvd	The total number of failures due to an invalid transform-set payload received.
Invalid Encrypted Payload Len	The total number of failures due to an invalid encrypted payload length.
Invalid TS payload TS-Type	The total number of failures due to an invalid transform-set payload transform-set type.
Unsupported Crit Payload	The total number of failures due to an unsupported critical payload.
Unsupported Cert Payload	The total number of failures due to an unsupported certified payload.
Unsupported Notify Prot AH	The total number of failures due to an unsupported notify payload protocol Authentication Header.
Unsupported Auth method	The total number of failures due to an unsupported authentication method.
Unsupported Payload Crit VID	The total number of failures due to an unsupported payload critical V-LAN ID.
Unsupported method	The total number of failures due to an unsupported method.
Unknown Error	The total number of failures due to an unknown error.

Field	Description
Unsupported SA Payload Prot AH	The total number of failures due to an unsupported SA payload protocol Authentication Header.
Unsupported TS payload TS-Num	The total number of failures due to an unsupported transform-set payload number.
Unsupported TS Payload TS-Type	The total number of failures due to an unsupported transform-set payload transform-set-type.
Unsupported TS Payload TS-Prot	The total number of failures due to an unsupported transform-set payload protocol.
Unsupported CP Payload No IP Attr	The total number of failures due to an invalid CP because of no available IP attribute.
Invalid CP Payload UNK ATTR	The total number of failures due to an invalid CP because of an unknown attribute.
<b>Total IKEv2 Decrypt Failure Statistics</b>	
Packets Failure	The total number of session failures due to packets that failed to decrypt.
HMAC mismatch	The total number of session failures due to a HMAC mismatch.
Pad length error	The total number of failures due to a pad length error in the packet.
<b>Total IKEv2 Xchg Statistics</b>	
Bad Msg Id	The total number of session failures due to a bad message ID.
Bad Response	The total number of session failures due to a bad response.
Stale Msg ID	The total number of session failures due to a stale message ID.
Unknown error	The total number of session failures due to unknown errors.
Stale Lookup Failure	The total number of session failures due to a stale lookup failure.
<b>Combined Crypto map Statistics</b>	
Current Tunnels	The number of tunnels currently connected by the SA.
Current Tunnels Established	The number of tunnels successfully connected by the SA.
IKE Fails	The total number of tunnels that failed to be connected by the SA.
Total Tunnels	The total number of tunnels connected by the SA.
Total Tunnels Established	The total number of tunnels successfully connected by the SA.
Call Req Rejects	The total number of call request reject messages.
<b>IKEv2 Authentication Failures Statistics</b>	
No DEA message	The total number of non DEA messages.
Missing AVP in DEA	The total number of missing AVPs in the DEA message.
Invalid APN	The total number of invalid APNs.

Field	Description
Key mismatch	The total number of key mismatches in the authentication vectors.
Invalid result code or AVP in DEA	The total number of invalid result code or AVP in the DEA message.
Invalid NAI format	The total number of invalid NAI formats.
APN validation failed	The total number of failed APN validations.
Misc. auth failures	The total number of miscellaneous authentication failures.

## show crypto template summary

Table 224: show crypto template summary Command Output Descriptions

Field	Description
<b>Total Crypto maps</b>	
Configured maps	The total number of crypto maps configured in this context.
Service maps	The total number of service maps. There is one map per service.
Subscriber maps	The total number of subscriber maps.
<b>Map Types:</b>	
ipsec-dynamic	The total number of dynamic IPsec tunnel crypto maps.
ipsec-ikev1	The total number of IKEv1 IPsec tunnel crypto maps.
ipsec-ikev1pst-subscr	The total number of IKEv1 PST subscriber tunnel maps.
ipsec-ikev2	The total number of IKEv2 subscriber tunnel crypto maps.
ipsec-ikev2-subscriber	The total number of IKEv2 subscriber tunnel crypto maps.
ipsec-l2tp	The total number of L2TP IPsec tunnel crypto maps.
ipsec-manual	The total number of manual (static) IPsec tunnel crypto maps.
ipsec-mobile-ip	The total number of mobile IP IPsec tunnel crypto maps.
<b>IKEv2 SA:</b>	
Cipher 3des	The total number of IKEv2 security associations using the block cipher Triple Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-128	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 128-bit key in Cypher Block Chaining (CBC) mode.

Field	Description
Cipher aes-cbc-256	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 256-bit key in Cypher Block Chaining (CBC) mode.
Cipher des	The total number of IKEv2 security associations using the block cipher Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher null	The total number of IKEv2 security associations using the block cipher NULL. All IKEv2 security association protected traffic is sent in the clear.
DH Group 1	The total number of IKEv2 security associations using Diffie-Hellman Group 1 security (the lowest security level). DH Group 1 provides 768 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 2	The total number of IKEv2 security associations using Diffie-Hellman Group 2 security. DH Group 2 (the default) provides 1024 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 5	The total number of IKEv2 security associations using Diffie-Hellman Group 5 security. DH Group 5 provides 1536 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 14	The total number of IKEv2 security associations using Diffie-Hellman Group 14 security (the highest security level). DH Group 14 provides 2048 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
HMAC aes-xcbc-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) using the AES block cipher with a block size of 128 bits.
HMAC md5-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Message Digest 5 truncated to 96 bits.
HMAC sha2-256-128	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) in conjunction with the SHA-256 algorithm truncated to 128 bits.
HMAC sha2-384-192	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) in conjunction with the SHA-384 algorithm truncated to 192 bits.
HMAC sha2-512-256	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) in conjunction with the SHA-512 algorithm truncated to 256 bits.
PRF sha1	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) with the cryptographic hash function Secure Hash Algorithm-1.

Field	Description
PRF aes-xcbc-128	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) in conjunction with Advanced Encryption Standard (AES) with a key length restriction of 128 bits.
PRF md5	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) with the cryptographic hash function Message Digest 5.
PRF sha2-256	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) using the SHA-2 algorithm truncated to 256 bits.
PRF sha2-384	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) using the SHA-2 algorithm truncated to 384 bits.
PRF sha2-512	The total number of IKEv2 security associations using the IKE pseudo-random function (PRF) using the SHA-2 algorithm truncated to 512 bits.
<b>IPSec SA</b>	
Protocol esp	The total number of IPsec security associations using Encapsulating Security Payload (ESP) protocol.
Protocol ah	The total number of IPsec security associations using Authentication Header (AH) protocol.
Cipher 3des	The total number of IKEv2 security associations using the block cipher Triple Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-129	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 129-bit key in Cypher Block Chaining (CBC) mode.
Cipher aes-cbc-256	The total number of IKEv2 security associations using the block cipher Advanced Encryption Standard with a 256-bit key in Cypher Block Chaining (CBC) mode.
Cipher des	The total number of IKEv2 security associations using the block cipher Data Encryption Standard in Cypher Block Chaining (CBC) mode.
Cipher null	The total number of IKEv2 security associations using the block cipher NULL. All IKEv2 security association protected traffic is sent in the clear.
DH Group 1	The total number of IKEv2 security associations using Diffie-Hellman Group 1 security (the lowest security level). DH Group 1 provides 768 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 2	The total number of IKEv2 security associations using Diffie-Hellman Group 2 security. DH Group 2 (the default) provides 1024 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.
DH Group 5	The total number of IKEv2 security associations using Diffie-Hellman Group 5 security. DH Group 5 provides 1536 bits of key exchange cryptographic strength.  This is a modular exponential (MODP) DH group.

Field	Description
DH Group 14	<p>The total number of IKEv2 security associations using Diffie-Hellman Group 14 security (the highest security level). DH Group 14 provides 2048 bits of key exchange cryptographic strength.</p> <p>This is a modular exponential (MODP) DH group.</p>
HMAC aes-xcbc-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) using the AES block cipher with a block size of 128 bits.
HMAC md5-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Message Digest 5 truncated to 96 bits.
HMAC sha1-96	The total number of IPsec security associations using a keyed-Hash Message Authentication Code (HMAC) with the cryptographic hash function Secure Hash Algorithm-1 truncated to 96 bits (the default).

# CHAPTER 39

## show cs-network

This chapter includes the **show cs-network** command output tables.

- [show cs-network all status, on page 701](#)
- [show cs-network statistics ranap-only, on page 703](#)
- [show cs-network statistics sccp-only, on page 707](#)

## show cs-network all status

**Important** In Release 20 and later, HNBGW is not supported. For more information, contact your Cisco account representative.

**Table 225: show cs-network all status Command Output Descriptions**

Field	Description
CS Network name	Indicates the name of the Circuit Switched (CS) network instance for which status is displayed.
Associated SCCP-Network	Indicates the name of the Signalling Connection Control Part (SCCP) network service instance which in associated with referenced CS network instance.
Associated Alcap-Service	Indicates the name of the Access Link Control Application Protocol (ALCAP) service instance which in associated with referenced CS network instance.
Alcap Context Name	Indicates the name of the context in which ALCAP service instance is configured.
Associated RTP Pool	Indicates the name of the RTP IP pool configured and associated with referenced CS network instance for RTP stream management.
RTP Pool Context Name	Indicates the name of the context in which RTP IP pool is configured for RTP stream management.
MSC Point Code	Indicates the address of MSC in SS7 point code notation which is serving the referenced CS network instance.
Status	Indicates the status of MSC which is serving the referenced CS network instance.

Field	Description
Network Status	Indicates the status of network in which the referenced CS network instance is placed.
RTP IP Addresses	Indicates the session manager instances and associated IP pools with them for RTP stream management support.
NRI	Indicates the Network Resource Identification (NRI) bit configuration status for the referenced CS network.
IDNNS	Indicates the Intra-Domain NAS Node Selector (IDNNS) configuration status for the referenced CS network to transport the NRI value.
Lac range <nnn> to <nnn> MSC Point-code <x.x.x>	Indicates the mapping configured between MSC point-code and range of LAC for multiple MSC selection without Iu-Flex in CS network.
CORE NODE MAP	Indicates the core node mapping configuration status for the referenced CS network.
Initiated Ranap Reset	Indicates if the HNB-GW Initiated RANAP Reset function is enabled or disabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Ack Timer	The timer value, in seconds, that defines how long the HNB-GW waits for a RESET ACK message from the MSC after transmitting a RESET message. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Maximum Retransmissions	Sets the maximum number of retries allowed for the HNB-GW to transmit a RANAP RESET message to the MSC if the RESET ACK timer expires. This setting is used only if the HNB-GW Initiated RANAP Reset function is enabled. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Ranap Reset Guard Timer	The timer that the HNB-GW starts after receiving a RESET message from the CS core network. While this timer is running, the HNB-GW discards any new RESET messages that it receives. <b>Important</b> Before StarOS 14.0 release, this counter was displayed in show hnbgw-service command outputs.
Global RNC-Id	This group displays the information related to global Radio Network Controller settings for use by the CS core network for HNB-GW service(s) on a chassis. It is configured under the PLMN-ID.
MCC	The Mobile Country Code defined for use with this HNB-GW service. It consists of the first 3 digits of the Available Radio Network PLMN ID.
MNC	The Mobile Network Code defined for use with this HNB-GW service. It consists of the last 3 digits of the Available Radio Network PLMN ID.

Field	Description
Id	The Radio Network Controller ID provided to HNBs for use by the CS core network for this HNB-GW service. It is configured under the PLMN-ID

## show cs-network statistics ranap-only

Table 226: show cs-network statistics ranap-only Command Output Descriptions

Field	Description
RANAP	This group displays the statistics of RANAP in a CS network on chassis.
Initial UE Tx	Total number of initial UE requests transmitted.
Direct Transfer Rx	Total number of Direct Transfer requests received.
Direct Transfer Tx	Total number of Direct Transfer responses sent.
Reset Rx	Total number of RESET requests received.
Reset Tx	Total number of RESET responses sent.
Reset Ack Rx	Total number of RESET Ack requests received.
Reset Ack Tx	Total number of responses against RESET Ack request sent.
Reset Resource Rx	Total number of RESET RESOURCE requests received.
Reset Resource Tx	Total number of RESET RESOURCE responses sent.
Reset Resource Ack Rx	Total number of RESET RESOURCE Ack requests received.
Reset Resource Ack Tx	Total number of responses against RESET RESOURCE Ack request sent.
Iu Release Request Tx	Total number of Iu RELEASE requests sent.
Iu Release Command Rx	Total number of Iu RELEASE command received.
Iu Release Complete Tx	Total number of Iu RELEASE Complete response sent.
Paging Request Rx	Total number of Paging requests received.
RAB Assignment Request Rx	Total number of RAB assignment requests received.
RAB Setup/Mod Rx	Total number of RAB setup or modification requests received.
RAB Release Rx	Total number of RAB Release requests received.
RAB Assignment Response Tx	Total number of responses against RAB assignment requests sent.
RAB Setup/Mod Success Tx	Total number of RAB setup or modification Success response sent.
Total RAB Setup/Mod Fail Tx	Total number of RAB setup or modification Fail response sent.

Field	Description
RAB Setup/Mod Fail(Local) Tx	Total number of RAB setup or modification Fail response sent where RAB setup or modification failed due to local reason/cause.
RAB Release Success Tx	Total number of RAB Release Success response sent.
Total RAB Release Fail Tx	Total number of RAB Release Success response sent.
RAB Release Fail(Local) Tx	Total number of RAB Release Fail response sent where RAB Release failed due to local reason/cause.
RAB Queued Tx	Total number of RAB messages queseed for transmission.
RAB Setup/Mod Timer Exp	Total number of instances where RAB setup/modification timer expired before process of request.
RAB Release Timer Exp	Total number of instances where RAB Reelase timer expired before process of request.
RAB Set/Mod/Rel Local Fail	This group displays the total number of RAB setup or modification or release requests failed due to local reason/cause.
Local Failure Cause	This group idendifies the local cause for RAB setup or modification or release request failure.
Radio Network Layer Cause	This group idendifies the total number of RAB setup or modification or release request failure due to error in radio network layer.
Invalid Rab Id	Total number of RAB setup or modification or release requests failed due to invalid RAB id in radio network layer.
Interaction With Other Proc	Total number of RAB setup or modification or release requests failed as system was interacting with another process.
Transport Layer Cause	This group idendifies the total number of RAB setup or modification or release request failure due to error in Transport layer.
Sig Trans Res Fail	Total number of RAB setup or modification or release requests failed due to Sig trans Resource failure in transport layer.
Iu Tran Conn failed to Estab	Total number of RAB setup or modification or release requests failed where Iu Transmission connection failed to establish in transport layer.
Protocol Layer Cause	This group idendifies the total number of RAB setup or modification or release request failure due to error in Protocol layer.
Transfer syntax error	Total number of RAB setup or modification or release requests failed due to transfer syntax error in Protocol layer.
Asn error(Reject)	Total number of RAB setup or modification or release requests failed due to ASN (Reject) syntax error in Protocol layer.
Asn error	Total number of RAB setup or modification or release requests failed due to ASN syntax error in Protocol layer.

Field	Description
Msg not comp with Rcvr state	Total number of RAB setup or modification or release requests failed as message was not compatible with Recovery state in Protocol layer.
Semantic error	Total number of RAB setup or modification or release requests failed due to semantic error in Protocol layer.
Asn error(Falsey const msg)	Total number of RAB setup or modification or release requests failed due to ASN error (falsely constructed messages) in Protocol layer.
Miscellaneous Cause	This group identifies the total number of RAB setup or modification or release request failure due to miscellaneous cause (not listed in this table).
No Resource Available	Total number of RAB setup or modification or release requests failed due to non availability of resource.
Unspecified	Total number of RAB setup or modification or release request failure due to unspecified cause (not listed in this table).
<codec_name> Codec	This group displays the total number of RAB setup or modification or release request failure grouped in Codec name <codec_name>. <p>Following groups are supported:</p> <ul style="list-style-type: none"> <li>• UMTS AMR Codec</li> <li>• UMTS AMR2 Codec</li> <li>• Other Codec</li> <li>• No Codec</li> <li>• Unknown Codec</li> </ul>
RAB Setup/Mod Rx	Total number of RAB setup or modification requests received for specific codec.
RAB Setup/Mod Success Tx	Total number of RAB setup or modification success messages sent for specific codec.
RAB Release Rx	Total number of RAB Release requests received for specific codec.
Total RAB Setup/Mod Fail Tx	Total number of RAB setup or modification failure messages sent for specific codec.
RAB Setup/Mod Fail(Local) Tx	Total number of RAB setup or modification failure messages sent for specific codec where RAB setup or modification failed due to local reason/cause.
RAB Release Success Tx	Total number of RAB Release success messages sent for specific codec.
Total RAB Release Fail Tx	Total number of RAB Release fail messages sent for specific codec.
RAB Release Fail(Local) Tx	Total number of RAB Release fail messages sent for specific codec where RAB setup or modification failed due to local reason/cause.
RAB Queued Tx	Total number of RAB messages queued for processing or transmission.
Relocation Request Rx	Total number of RAB Relocation request received by system for this CS network.
RAB Setup Rx	Total number of RAB Relocation setup request received by system for this CS network.

Field	Description
Relocation Request ACK Tx	Total number of RAB Relocation Ack messages sent against setup request received by system for this CS network.
RAB Setup Success Tx	Total number of RAB setup success messages sent against setup request received by system for this CS network.
Total RAB Setup Fail Tx	Total number of RAB setup fail messages sent against setup request received by system for this CS network.
RAB Setup Fail(Local) Tx	Total number of RAB setup failure messages sent from this system where RAB setup or modification failed due to local reason/cause.
Local Failure Cause	This group identifies the local cause for RAB setup or modification or release request failure.
Radio Network Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in radio network layer.
Invalid Rab Id	Total number of RAB setup or modification or release requests failed due to invalid RAB id in radio network layer.
Interaction With Other Proc	Total number of RAB setup or modification or release requests failed as system was interacting with another process.
Transport Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Transport layer.
Sig Trans Res Fail	Total number of RAB setup or modification or release requests failed due to Sig trans Resource failure in transport layer.
Iu Tran Conn failed to Estab	Total number of RAB setup or modification or release requests failed where Iu Transmission connection failed to establish in transport layer.
Protocol Layer Cause	This group identifies the total number of RAB setup or modification or release request failure due to error in Protocol layer.
Transfer syntax error	Total number of RAB setup or modification or release requests failed due to transfer syntax error in Protocol layer.
Asn error(Reject)	Total number of RAB setup or modification or release requests failed due to ASN (Reject) syntax error in Protocol layer.
Asn error	Total number of RAB setup or modification or release requests failed due to ASN syntax error in Protocol layer.
Msg not comp with Rcvr state	Total number of RAB setup or modification or release requests failed as message was not compatible with Recovery state in Protocol layer.
Semantic error	Total number of RAB setup or modification or release requests failed due to semantic error in Protocol layer.
Asn error(False const msg)	Total number of RAB setup or modification or release requests failed due to ASN error (falsely constructed messages) in Protocol layer.

Field	Description
Miscellaneous Cause	This group identifies the total number of RAB setup or modification or release request failure due to miscellaneous cause (not listed in this table).
No Resource Available	Total number of RAB setup or modification or release requests failed due to non availability of resource.
Unspecified	Total number of RAB setup or modification or release request failure due to unspecified cause (not listed in this table).
<codec_name> Codec	This group displays the total number of RAB Setup request grouped in Codec name <codec_name>.
RAB Setup Rx	Total number of RAB setup requests received for specific codec.
RAB Setup Success Tx	Total number of RAB setup success messages sent for specific codec.
Total RAB Setup Fail Tx	Total number of RAB setup failure messages sent for specific codec.
RAB Setup Fail(Local) Tx	Total number of RAB setup failure messages sent for specific codec where RAB setup failed due to local reason/cause.
Relocation Detect Tx	Total number of RAB Relocation Detect messages sent by system in this CS network.
Relocation Required Tx	Total number of RAB Relocation Required request messages sent by system in this CS network.
Fwd SRNS Context Request Tx	Total number of FWD SRNS Context request messages sent by system in this CS network.
Relocation Prep Failure Rx	Total number of Relocation Preparation failure response messages sent by system in this CS network.
Relocation Cancel Tx	Total number of Relocation cancel command messages received by system in this CS network.
Relocation Command Rx	Total number of Relocation command messages received by system in this CS network.
Srns Context Request Rx	Total number of SRNS Context Request messages received by system in this CS network.
Srns Context Response Tx	Total number of response sent for SRNS Context Request messages received by system in this CS network.

## show cs-network statistics sccp-only

### Important

In Release 20, 21.0 and 21.1, HeNBGW is not supported. For more information, contact your Cisco account representative.

Table 227: show cs-network statistics sccp-only Command Output Descriptions

Field	Description
SCCP	This group displays the statistics of SCCP in a CS network on chassis.
SCCP Connection Request Rx	Total number of SCCP connection Request received by HNB-GW from the Core Node. This counter changes when Core Node initiates SCCP connection during Relocation.
SCCP Connection Request Tx	Total number of SCCP connection Request sent by HNB-GW towards the CN after getting RUA Connect Request for a Registered UE. This counter changes when RUA Connect Request sent for a Registered UE.
SCCP Connection Confirm Rx	Total number of SCCP Connection Confirmation messages received by HNB-GW from the Core Node. This counter changes when CN sends the SCCP connection confirmation for a requested SCCP Connection Request.
SCCP Connection Confirm Tx	Total number of SCCP Connection Confirmation response messages sent by HNB-GW to the Core Node. This counter changes when HNB-GW sends the SCCP connection confirmation response for a requested SCCP Connection Request to CN.
SCCP Connection Reject Rx	Total number of SCCP Connection Reject messages received by HNB-GW from the Core Node. This counter changes when Core node Rejects the SCCP Conn Request due to some parameter mismatch, etc.
SCCP Connection Reject Tx	Total number of SCCP Connection Rejection response messages sent by HNB-GW to the Core Node. This counter changes when HNBGW initiates the tear Down on receiving RUA disconnect from HNB which doesn't contain RANAP Iu-release complete message and other failure scenarios.
SCCP Connection Data Rx	Total data received by HNB-GW over SCCP connection between HNB-GW and Core Node. This counter changes when CN sends the data towards HNB-GW over SCCP connection.
SCCP Connection Data Tx	Total data sent by HNB-GW over SCCP connection between HNB-GW and Core Node. This counter changes when HNB-GW sends the data towards CN over SCCP connection.
SCCP Disconnect Rx	Total number of SCCP Disconnect messages received by HNB-GW from Core Node. This counter changes when CN initiate tear-down procedure for SCCP connection.
SCCP Disconnect Tx	Total number of SCCP Disconnect response messages sent by HNB-GW to Core Node. This counter changes when HNBGW initiates the tear-down procedure on receiving RUA disconnect from HNB which doesn't contain RANAP Iu-release complete message and other failure scenarios.

Field	Description
SCCP Uni Data Rx	<p>Total Connection-less data, like paging, received by HNB-GW over SCCP connection between HNB-GW and Core Node.</p> <p>This counter changes when CN sends any connection-less data, like paging, towards HNB-GW over SCCP connection.</p>
SCCP Uni Data Tx	<p>Total Connection-less data, RANAP Reset, RANAP reset Resource, sent by HNB-GW over SCCP connection between HNB-GW and Core Node.</p> <p>This counter changes when HNB-GW sends or forward any Connection-less data, like RANAP reset, RANAP Reset Resource, towards CN over SCCP connection.</p>

## CHAPTER 40

# show cscf

This chapter includes the **show cscf** command output tables.

- [show cscf nat media mapping all](#), on page 711
- [show cscf peer-servers full](#), on page 712
- [show cscf service li-packet-cable statistics](#), on page 713
- [show cscf service statistics name <service\\_name> all](#), on page 713
- [show cscf sessions counters](#), on page 732
- [show cscf sessions duration](#), on page 734
- [show cscf sip statistics](#), on page 735
- [show cscf tcp connections](#), on page 740

## show cscf nat media mapping all

*Table 228: show cscf nat media mapping all Command Output Descriptions*

Field	Description
UE-Origin	The IP address and port number of the UE origin.
UE-Destination	The IP address and port number of the UE destination.
Nwk-Origin	The IP address and port number of the network origin.
Nwk-Destination	The IP address and port number of the network destination.
Nwk-Core-context	The context in which the network core configuration resides.
UE-Access-context	The context in which the UE access configuration resides.

## show cscf peer-servers full

Table 229: show cscf peer-servers full Command Output Descriptions

Field	Description
Peer-Server name	The name of the peer server group.
Context	The context in which the peer server group configuration resides.
Server type	The type of servers in the peer server group.
Hunting-method	The hunting method used by the servers in the peer server group.
server	The name of the peer server.
Address	The IP address of the peer server expressed in IPv4 or IPv6 dotted decimal notation.
domain	The domain name of the peer server.
Monitor status	The monitoring status of the peer servers as determined by the CLI command Enabled/Disabled.
monitor-interval (seconds)	The time period, in seconds, between monitor intervals.
monitor-message	The SIP message (OPTIONS) to be sent after each monitoring interval.
monitor-response-timer (seconds)	The response wait timer, in seconds, for each monitor message.
Server mode	The mode of the peer server as determined by the CLI command Active/Standby.
Server status	The status of the peer server. Possible statuses are: <ul style="list-style-type: none"> <li>• OUT_OF_SERVICE — Peer server mode changed to standby through CLI command.</li> <li>• AVAILABLE — Peer server mode is Active and peer server sends response to monitor message.</li> <li>• UNAVAILABLE— Peer server mode is Active, however, peer server does not send response to monitor message.</li> </ul>
Network session template	Binds the nw-session-template name with the peer server.
IMS Capable	Indicates if the peer server is ims-capable or not.
Request Rx	The number of requests received by the sip-as peer server from S-CSCF during load balancing.

## show cscf service li-packet-cable statistics

Refer to the *ASR 5000 Lawful Intercept Configuration Guide* for descriptions of these statistics.

### show cscf service statistics name <service\_name> all

**Table 230: show cscf service statistics name <service\_name> all Command Output Descriptions**

Field	Description
CSCF Service	The name of the service and context.
<b>CSCF Active Subscriptions</b>	
Originating	The total current number of active subscriptions originating on this service.
Terminating (UE originated)	The total current number of UE-originated active subscriptions terminating on this service.
Terminating (PCSCF Originated)	The total current number of Proxy CSCF-originated active subscriptions terminating on this service.
Terminating (AS Originated)	The total current number of AS-originated active subscriptions terminating on this service.
Proxied	The total current number of active subscriptions proxied on this service.
<b>CSCF Calls</b>	
Total CallSetupAttempts Rx	The total current number of call setup attempts received by this service.
Total CallSetupAttempts Tx	The total current number of call setup attempts transmitted by this service.
Total CallSetupSuccess Rx	The total current number of successful call setups received by this service.
Total CallSetupSuccess Tx	The total current number of call setups successfully transmitted by this service.
Total CallSetupFailures Rx	The total current number of call setup failures received by this service.
Total CallSetupFailures Tx	The total current number of failed call setups transmitted by this service.
Total 3xx Responses Rx	The total current number of 3xx responses received by this service.
Total 3xx Responses Tx	The total current number of 3xx responses transmitted by this service.
Total 402 Payment Required Rx	The total current number of 402 Payment Required responses received by this service.
Total 402 Payment Required Tx	The total current number of 402 Payment Required responses transmitted by this service.
Total 403 Forbidden Rx	The total current number of 403 Forbidden responses received by this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
Total 403 Forbidden Tx	The total current number of 403 Forbidden responses transmitted by this service.
Total 404 Not Found Rx	The total current number of 404 Not Found responses received by this service.
Total 404 Not FoundTx	The total current number of 404 Not Found responses transmitted by this service.
Total 405 Method Not Allowed Rx	The total current number of 405 Method Not Allowed responses received by this service.
Total 405 Method Not AllowedTx	The total current number of 405 Method Not Allowed responses transmitted by this service.
Total 407 Proxy Auth Required Rx	The total current number of 407 Proxy Auth Required responses received by this service.
Total 407 Proxy Auth Required Tx	The total current number of 407 Proxy Auth Required responses transmitted by this service.
Total 408 Request Timeout Rx	The total current number of 408 Request Timeout responses received by this service.
Total 408 Request Timeout Tx	The total current number of 408 Request Timeout responses transmitted by this service.
Total 420 Bad Extension Rx	The total current number of 420 Bad Extension responses received by this service.
Total 420 Bad Extension Tx	The total current number of 420 Bad Extension responses transmitted by this service.
Total 421 Extension Required Rx	The total current number of 421 Extension Required responses received by this service.
Total 421 Extension Required Tx	The total current number of 421 Extension Required responses transmitted by this service.
Total 480 Temp Not Available Rx	The total current number of 480 Temp Not Available responses received by this service.
Total 480 Temp Not Available Tx	The total current number of 480 Temp Not Available responses transmitted by this service.
Total 486 Busy Here Rx	The total current number of 486 Busy Here responses received by this service.
Total 486 Busy Here Tx	The total current number of 486 Busy Here responses transmitted by this service.
Total 487 Request Cancel Rx	The total current number of 487 Request Cancel responses received by this service.
Total 487 Request Cancel Tx	The total current number of 487 Request Cancel responses transmitted by this service.
Total 488 Not Acceptable Media Rx	The total current number of 488 Not Acceptable Media responses received by this service.

Field	Description
Total 488 Not Acceptable Media Tx	The total current number of 488 Not Acceptable Media responses transmitted by this service.
Total 4xx Responses Rx	The total current number of 4xx responses received by this service.
Total 4xx Responses Tx	The total current number of 4xx responses transmitted by this service.
Total 5xx Responses Rx	The total current number of 5xx responses received by this service.
Total 5xx Responses Tx	The total current number of 5xx responses transmitted by this service.
Total 500 Internal Error Rx	The total current number of 500 Internal Error responses received by this service.
Total 500 Internal Error Tx	The total current number of 500 Internal Error responses transmitted by this service.
Total 503 Service Unavailable Rx	The total current number of 503 Service Unavailable responses received by this service.
Total 503 Service Unavailable Tx	The total current number of 503 Service Unavailable responses transmitted by this service.
Total 6xx Responses Rx	The total current number of 6xx responses received by this service.
Total 6xx Responses Tx	The total current number of 6xx responses transmitted by this service.
Total CallReleaseAttempts Rx	The total current number of call release attempts received by this service.
Total CallReleaseAttempts Tx	The total current number of call release attempts transmitted by this service.
Total CallReleaseSuccess Rx	The total current number of call releases successfully received by this service.
Total CallReleaseSuccess Tx	The total current number of successful call releases transmitted by this service.
Total CallReleaseFailures Rx	The total current number of call release failures received by this service.
Total CallReleaseFailures Tx	The total current number of failed call releases transmitted by this service.
Total Call Attempts Challenged	The total current number of call attempts challenged on this service.
Total Session Timer Expires	The total current number of sessions on this service with expired timers.
Total Call Rejects from PCRF/PDF	The total current number of calls rejected by the PCRF/PDF from this service.
Total Call Rejects from Proxy (local)	The total current number of calls rejected by the local proxy from this service.
Total Too Large SIP Messages	The total current number of too large SIP messages on this service.
Total HSS Accesses	The total current number of HSS accesses by this service.
Total Emergency Calls	The total current number of emergency calls made through this service.
Total Toll Free Calls	The total current number of toll-free calls made through this service.
Total Premium Service Calls	The total current number of premium-service calls made through this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
Total International Calls	The total current number of international calls made through this service.
Total LongDistance Calls	The total current number of long distance calls made through this service.
Total Operator Assisted Calls	The total current number of operator-assisted calls made through this service.
Total Directory Assisted Calls	The total current number of directory-assisted calls made through this service.
Total Media (audio) Loss Call Releases	The total current number of media (audio) loss call releases by this service.
Total RTP Packets Sent	The total current number of RTP packets sent by this service.
Total RTP Packets Received	The total current number of RTP packets received by this service.
Total MSRP Packets Sent	The total current number of MSRP TCP packets sent by this service.
Total MSRP Packets Received	The total current number of MSRP TCP packets received by this service.
Total RTCP Packets Sent	The total current number of RTCP packets sent by this service.
Total RTCP Packets Received	The total current number of RTCP packets received by this service.
Total Call Releases initiated by UE	The total current number of UE-initiated call releases. <ul style="list-style-type: none"> <li>• For P-CSCF, the number of BYE initiated by UE.</li> <li>• For S-CSCF, the number of BYE received from P-CSCF (initiated by UE/P-CSCF).</li> </ul>
Total Call Releases initiated by Network	The total current number of network-initiated call releases. <ul style="list-style-type: none"> <li>• For P-CSCF, the number of BYE received from S-CSCF.</li> <li>• For S-CSCF, the number of BYE received from AS, etc.</li> </ul>
Total Call Releases initiated by Radio Loss	The total current number of Radio Loss-initiated call releases; the number of BYE originated by P-CSCF due to radio coverage loss of UE.
Total Call Releases initiated by CSCF (Local)	The total current number of CSCF (Local)-initiated call releases; the number of BYE originated by CSCF due to CLI, radio loss, network-initiated de-registration, and internal processing failure.
Total Calls rejected due to Concurrent Call limit exceeded	The total current number of calls rejected due to concurrent call limit exceeded by this service.
<b>CSCF Congestion Control Statistics</b>	
Registration Attempts Rejected	The total current number of registration (SIP REGISTER message) attempts rejected by CSCF service due to congestion trigger.
Re-Registration Attempts Rejected	The total current number of re-registration (SIP REGISTER message) attempts rejected by CSCF service due to congestion trigger.

Field	Description
Call Setup Attempts Rejected	The total current number of call setup attempts (SIP INVITE) rejected by CSCF service due to congestion trigger.
Message Attempts Rejected	The total current number of SIP MESSAGE requests rejected by CSCF service due to congestion trigger.
Subscription Attempts Rejected	The total current number of SIP SUBSCRIBE requests rejected by CSCF service due to congestion trigger.
Notification Attempts Rejected	The total current number of SIP NOTIFY requests rejected by CSCF service due to congestion trigger.
Publish Attempts Rejected	The total current number of SIP PUBLISH attempts rejected by CSCF service due to congestion trigger.
Other SIP Message Attempts Rejected	The total current number of other SIP requests (excepts those mentioned above) rejected by CSCF service due to congestion trigger.
Messages dropped due to congestion	The total current number of SIP messages dropped by CSCF service due to congestion trigger.
TCP packets dropped due to congestion	The total current number of TCP packets dropped by CSCF service due to congestion trigger.
Number of times congestion applied	The number of times the sessmgr congestion control is triggered. This value is collected from all sessmgrs running the CSCF service.
Number of times congestion cleared	The number of times the sessmgr congestion control is cleared. This value is collected from all sessmgrs running the CSCF service.
<b>CSCF MESSAGE Statistics</b>	
Message Attempts Received	The total current number of message attempts received by this service.
Message Attempts Transmitted	The total current number of message attempts transmitted by this service.
Message Success Received	The total current number of successful messages received by this service.
Message Success Transmitted	The total current number of messages successfully transmitted by this service.
Message Failures Received	The total current number of message failures received by this service.
Message Failures Transmitted	The total current number of failed messages transmitted by this service.
3xx Response Received	The total current number of 3xx Response messages received on this service.
3xx Response Transmitted	The total current number of 3xx Response messages transmitted by this service.
400 Bad Request Received	The total current number of 400 Bad Request messages received on this service.
400 Bad Request Transmitted	The total current number of 400 Bad Request messages transmitted by this service.
403 Forbidden Received	The total current number of 403 Forbidden messages received on this service.

Field	Description
403 Forbidden Transmitted	The total current number of 403 Forbidden messages transmitted by this service.
404 Not Found Received	The total current number of 404 Not Found messages received on this service.
404 Not Found Transmitted	The total current number of 404 Not Found messages transmitted by this service.
413 Request Entity Too Large	The total current number of 413 Request Entity Too Large messages received on this service.
413 Request Entity Too Large	The total current number of 413 Request Entity Too Large messages transmitted by this service.
415 Unsupport Media Type Received	The total current number of 415 Unsupport Media Type messages received on this service.
415 Unsupport Media Type Transmitted	The total current number of 415 Unsupport Media Type messages transmitted by this service.
416 Unsupport URI Scheme Received	The total current number of 416 Unsupport URI Scheme messages received on this service.
416 Unsupport URI Scheme Transmitted	The total current number of 416 Unsupport URI Scheme messages transmitted by this service.
420 Bad Extension Received	The total current number of 420 Bad Extension messages received on this service.
420 Bad Extension Transmitted	The total current number of 420 Bad Extension messages transmitted by this service.
421 Extension Required Received	The total current number of 421 Extension Required messages received on this service.
421 Extension Required Transmitted	The total current number of 421 Extension Required messages transmitted by this service.
480 Temp Not Available Received	The total current number of 480 Temp Not Available messages received on this service.
480 Temp Not Available Transmitted	The total current number of 480 Temp Not Available messages transmitted by this service.
488 Not Acceptable Media Received	The total current number of 488 Not Acceptable Media messages received on this service.
488 Not Acceptable Mediad Transmitted	The total current number of 488 Not Acceptable Media messages transmitted by this service.
4xx Response Received	The total current number of 4xx Response messages received on this service.
4xx Response Transmitted	The total current number of 4xx Response messages transmitted by this service.
500 Internal Error Received	The total current number of 500 Internal Error messages received on this service.

Field	Description
500 Internal Error Transmitted	The total current number of 500 Internal Error messages transmitted by this service.
513 Message Too Large Received	The total current number of 513 Message Too Large messages received on this service.
513 Message Too Large Transmitted	The total current number of 513 Message Too Large messages transmitted by this service.
5xx Response Received	The total current number of 5xx Response messages received on this service.
5xx Response Transmitted	The total current number of 5xx Response messages transmitted by this service.
6xx Response Received	The total current number of 6xx Response messages received on this service.
6xx Response Transmitted	The total current number of 6xx Response messages transmitted by this service.
<b>CSCF Performance</b>	
Invite Processing Time	Minimum and maximum time (in ms) required to process an INVITE message (time elapsed between the INVITE entering the proxy and the INVITE forwarded out of the proxy).
First Response Time	Minimum and maximum time (in ms) between sending an INVITE message out of the proxy and the first response received for the INVITE (any 1xx).
Post Dial Delay	Minimum and maximum time (in ms) between sending an INVITE message out of the proxy and receiving the ringing message or any final response to the INVITE.
Session Setup Delay	Minimum and maximum time (in ms) between when an INVITE message was received by the proxy and a 200 OK (invite) sent out of the proxy.
Post Answer Delay	Minimum and maximum time (in ms) between a 200 OK INVITE message received by the proxy and the ACK message (for invite) sent out of the proxy.
Session Release Delay	Minimum and maximum time (in ms) between when a BYE message is received by the proxy and a 200 OK BYE is sent out of the proxy.
<b>CSCF Registrations</b>	
Current Registered Users	The current number of users registered to this service.
Current Secure Connections	The current number of secure connections to this service.
Current Unsecure Connections	The current number of unsecure connections to this service.
Total Failed Authentications	The total current number of failed authentications for this service.
Total Registration Expires	The total current number of expired registrations on this service.
Total Registration from Roaming UE	The total number of registrations from Roaming UE.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
Total Successful Registration from Roaming UE	The total number 200 ok to registrations from Roaming UE.
Total Failed Registration from Roaming UE	The total number of failed registrations from Roaming UE.
Total 403 response to Registration from Roaming UE	The total number of 403 response to registration from Roaming UE.
Total Re-Registration from Roaming UE	The total number of re-registration from Roaming UE.
Total Successful Re-Registration from Roaming UE	The total number 200 ok to re-registrations from Roaming UE.
Total Failed Re-Registration from Roaming UE	The total number of failed re-registrations from Roaming UE.
Total 403 response to Re-Registration from Roaming UE	The total number of 403 response to re-registration from Roaming UE.
Total De-Registration from Roaming UE	The total number of de-registration from Roaming UE.
Total Successful De-Registration from Roaming UE	The total number 200 ok to de-registrations from Roaming UE.
Total Failed De-Registration from Roaming UE	The total number of failed de-registrations from Roaming UE.
Total 403 response to De-Registration from Roaming UE	The total number of 403 response to de-registration from Roaming UE.
Total De-registrations initiated by UE	The total current number of UE-initiated de-registration requests on this service.
Total De-registrations initiated by Network	The total current number of network-initiated de-registration requests received by P-CSCF from S-CSCF or by S-CSCF/SIP Proxy from internal/HSS trigger on this service.
Total Secure Registrations	The total current number of secure registrations on this service.
Total Failed Secure Registrations	The total current number of failed secure registrations on this service.
Registration Statistics	
Registration Attempts Received	The total current number of registration attempts received on this service.
Registration Attempts Transmitted	The total current number of registration attempts transmitted by this service.
Registration Success Received	The total current number of registration successes received on this service.
Registration Success Transmitted	The total current number of registration successes transmitted by this service.
Registration Failures Received	The total current number of registration failures received on this service.
Registration Failures Transmitted	The total current number of registration failures transmitted by this service.

Field	Description
401 Unauthorized (Registration) Received	The total current number of 401 Unauthorized responses to registration received on this service.
401 Unauthorized (Registration) Transmitted	The total current number of 401 Unauthorized responses to registration transmitted by this service.
403 Forbidden (Registration) Received	The total current number of 403 Forbidden responses to registration received on this service.
403 Forbidden (Registration) Transmitted	The total current number of 403 Forbidden responses to registration transmitted by this service.
404 Not Found (Registration) Received	The total current number of 404 Not Found responses to registration received on this service.
404 Not Found (Registration) Transmitted	The total current number of 404 Not Found responses to registration transmitted by this service.
420 Bad Extension (Registration) Received	The total current number of 420 Bad Extension responses to registration received on this service.
420 Bad Extension (Registration) Transmitted	The total current number of 420 Bad Extension responses to registration transmitted by this service.
439 First HopLackOb (Registration) Received	The total current number of 439 First Hop Lack Outbound responses to registration received on this service.
439 First HopLackOb (Registration) Transmitted	The total current number of 439 First Hop Lack Outbound responses to registration transmitted by this service.
4xx Responses (Registration) Received	The total current number of 4xx responses to registration received on this service.
4xx Responses (Registration) Transmitted	The total current number of 4xx responses to registration transmitted by this service.
500 Internal Error (Registration) Received	The total current number of 500 Internal Error responses to registration received on this service.
500 Internal Error (Registration) Transmitted	The total current number of 500 Internal Error responses to registration transmitted by this service.
5xx Responses (Registration) Received	The total current number of 5xx responses to registration received on this service.
5xx Responses (Registration) Transmitted	The total current number of 5xx responses to registration transmitted by this service.
6xx Responses (Registration) Received	The total current number of 6xx responses to registration received on this service.
6xx Responses (Registration) Transmitted	The total current number of 6xx responses to registration transmitted by this service.
Re-Registration Statistics	

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
Re-Registration Attempts Received	The total current number of re-registration attempts received on this service.
Re-Registration Attempts Transmitted	The total current number of re-registration attempts transmitted by this service.
Re-Registration Success Received	The total current number of re-registration successes received on this service.
Re-Registration Success Transmitted	The total current number of re-registration successes transmitted by this service.
Re-Registration Failures Received	The total current number of re-registration failures received on this service.
Re-Registration Failures Transmitted	The total current number of re-registration failures transmitted by this service.
401 Unauthorized (Re-Registration) Received	The total current number of 401 Unauthorized responses to re-registration received on this service.
401 Unauthorized (Re-Registration) Transmitted	The total current number of 401 Unauthorized responses to re-registration transmitted by this service.
403 Forbidden (Re-Registration) Received	The total current number of 403 Forbidden responses to re-registration received on this service.
403 Forbidden (Re-Registration) Transmitted	The total current number of 403 Forbidden responses to re-registration transmitted by this service.
404 Not Found (Re-Registration) Received	The total current number of 404 Not Found responses to re-registration received on this service.
404 Not Found (Re-Registration) Transmitted	The total current number of 404 Not Found responses to re-registration transmitted by this service.
420 Bad Extension (Re-Registration) Received	The total current number of 420 Bad Extension responses to re-registration received on this service.
420 Bad Extension (Re-Registration) Transmitted	The total current number of 420 Bad Extension responses to re-registration transmitted by this service.
439 First HopLackOb (Re-Registration) Received	The total current number of 439 First Hop Lack Outbound responses to re-registration received on this service.
439 First HopLackOb (Re-Registration) Transmitted	The total current number of 439 First Hop Lack Outbound responses to re-registration transmitted by this service.
4xx Responses (Re-Registration) Received	The total current number of 4xx responses to re-registration received on this service.
4xx Responses (Re-Registration) Transmitted	The total current number of 4xx responses to re-registration transmitted by this service.
500 Internal Error (Re-Registration) Received	The total current number of 500 Internal Error responses to re-registration received on this service.
500 Internal Error (Re-Registration) Transmitted	The total current number of 500 Internal Error responses to re-registration transmitted by this service.

Field	Description
5xx Responses (Re-Registration) Received	The total current number of 5xx responses to re-registration received on this service.
5xx Responses (Re-Registration) Transmitted	The total current number of 5xx responses to re-registration transmitted by this service.
6xx Responses (Re-Registration) Received	The total current number of 6xx responses to re-registration received on this service.
6xx Responses (Re-Registration) Transmitted	The total current number of 6xx responses to re-registration transmitted by this service.
De-Registration Statistics	
De-Registration Attempts Received	The total current number of de-registration attempts received on this service.
De-Registration Attempts Transmitted	The total current number of de-registration attempts transmitted by this service.
De-Registration Success Received	The total current number of de-registration successes received on this service.
De-Registration Success Transmitted	The total current number of de-registration successes transmitted by this service.
De-Registration Failures Received	The total current number of de-registration failures received on this service.
De-Registration Failures Transmitted	The total current number of de-registration failures transmitted by this service.
401 Unauthorized (De-Registration) Received	The total current number of 401 Unauthorized responses to de-registration received on this service.
401 Unauthorized (De-Registration) Transmitted	The total current number of 401 Unauthorized responses to de-registration transmitted by this service.
403 Forbidden (De-Registration) Received	The total current number of 403 Forbidden responses to de-registration received on this service.
403 Forbidden (De-Registration) Transmitted	The total current number of 403 Forbidden responses to de-registration transmitted by this service.
404 Not Found (De-Registration) Received	The total current number of 404 Not Found responses to de-registration received on this service.
404 Not Found (De-Registration) Transmitted	The total current number of 404 Not Found responses to de-registration transmitted by this service.
420 Bad Extension (De-Registration) Received	The total current number of 420 Bad Extension responses to de-registration received on this service.
420 Bad Extension (De-Registration) Transmitted	The total current number of 420 Bad Extension responses to de-registration transmitted by this service.
439 First HopLackOb (De-Registration) Received	The total current number of 439 First Hop Lack Outbound responses to de-registration received on this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
439 First HopLackOb (De-Registration) Transmitted	The total current number of 439 First Hop Lack Outbound responses to de-registration transmitted by this service.
4xx Responses (De-Registration) Received	The total current number of 4xx responses to de-registration received on this service.
4xx Responses (De-Registration) Transmitted	The total current number of 4xx responses to de-registration transmitted by this service.
500 Internal Error (De-Registration) Received	The total current number of 500 Internal Error responses to de-registration received on this service.
500 Internal Error (De-Registration) Transmitted	The total current number of 500 Internal Error responses to de-registration transmitted by this service.
5xx Responses (Re-Registration) Received	The total current number of 5xx responses to de-registration received on this service.
5xx Responses (De-Registration) Transmitted	The total current number of 5xx responses to de-registration transmitted by this service.
6xx Responses (De-Registration) Received	The total current number of 6xx responses to de-registration received on this service.
6xx Responses (De-Registration) Transmitted	The total current number of 6xx responses to de-registration transmitted by this service.
Unclassified Requests (Registration) Received	The total current number of unclassified request responses to registration received on this service.
4XX Responses (Unclassified Requests) Transmitted	The total current number of 4XX responses (Unclassified Requests) transmitted by this service.
5XX Responses (Unclassified Requests) Transmitted	The total current number of 5XX Responses (Unclassified Requests) transmitted by this service.
<b>IP-Security Statistics</b>	
Total Secure Connection	The total number of subscribers with secure connections on this service.
Total Unsecure Connection	The total number of subscribers with unsecure connections on this service.
Total Security Association Rejects	The total number of security association rejections on this service.
Total Secure Registrations	The total number of secure registrations on this service.
Total Secure Re-registrations	The total number of secure re-registrations on this service.
Total Secure De-registrations	The total number of secure de-registrations on this service.
Total Emergency Registrations	The total number of emergency registrations on this service.
Total Failed Secure Registrations	The total number of failed secure registrations on this service.

Field	Description
Total IP-Sec Packets Received	The total number of IPSec packets received on this service.
Total IP-Sec Packets Transmitted	The total number of IPSec packets transmitted by this service.
Total IP-Sec Octets Received	The total number of IPSec octets received on this service.
Total IP-Sec Octets Transmitted	The total number of IPSec octets transmitted by this service.
Total Registration Rejects Due to Sec-Agree	The total number of registration rejections due to security agreement on this service.
Total Registration Rejects Due to Algorithm Mismatch	The total number of registration rejections due to algorithm mismatch on this service.
Total Messages Dropped Due to Error	The total number of messages dropped due to error on this service.
Total Messages With Incorrect Security Verify	The total number of messages with incorrect security verification on this service.
<b>MSRP TCP Connection Statistics</b>	
Total TCP Subscribers	The total number of subscribers having TCP connections for MSRP Signaling on this service.
Active Connections	The total number of active TCP connections for MSRP Signaling on this service.
Total Connections Closed	The total number of TCP connections for MSRP Signaling closed on this service.
Total Successful Outgoing Connections	The total number of successful outgoing TCP connections for MSRP Signaling on this service.
Total Failed Outgoing Connections	The total number of failed outgoing TCP connections for MSRP Signaling on this service.
Total Successful Incoming Connections	The total number of successful incoming TCP connections for MSRP Signaling on this service.
Total Failed Incoming Connections	The total number of failed incoming TCP connections for MSRP Signaling on this service.
Total Packets Sent	The total number of TCP/IP packets transmitted by CSCF service.
Total Packets Received	The total number of TCP/IP packets received by CSCF service.
Total Bytes Sent	The total number of bytes transmitted.
Total Bytes Received	The total number of bytes received.
<b>Others</b>	
Current CSCF Sessions	The number of currently active CSCF sessions existing on this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
Total CSCF Sessions	Total number of CSCF sessions created so far for originating/proxying SIP messages. This counter should not include CSCF sessions created for internal processing, like ROUTE REQUEST. Also, this counter should not get incremented for REGISTER requests received by S-CSCF as it acts as registrar and S-CSCF callleg itself can handle this.
Total TCP Subscribers	Total number of subscribers with an active TCP connection (MSRP, SIP, or both) existing on this service.
Active TCP Connections	Total number of currently active TCP connections for both MSRP and SIP existing on this service.
Current IPsec TCP Connections	Total number of currently active IPsec TCP connections existing on this service.
405 Method Not Allowed Rejections	Total number of 405 Method Not Allowed Rejections existing on this service.
<b>SigComp Statistics</b>	
Total Requests Compressed	The total number of SIP request messages compressed by this service.
Total Requests Decompressed	The total number of SIP request messages decompressed by this service.
Total Responses Compressed	The total number of SIP response messages compressed by this service.
Total Responses Decompressed	The total number of SIP response messages decompressed by this service.
Total NACK Packets Received	The total number of NACK (negative acknowledgement) packets received by this service.
Total NACK Packets Transmitted	The total number of NACK (negative acknowledgement) packets transmitted by this service.
Total Compression Failures	The current total number of compression failures that occurred in this service.
Total Decompression Failures	The current total number of decompression failures that occurred in this service.
<b>SigComp Effectiveness</b>	
Ratio results in this section are derived using the following formula: $(S_b - S_a) * 100 / (S_b)$ where $S_b$ = the size of the message before compression and $S_a$ = the size of the message after compression.	
Best compression ratio (Outgoing message)	The current best compression ratio achieved for messages sent by this service.
Worst compression ratio (Outgoing message)	The current worst compression ratio achieved for messages sent by this service. Usually this will be a negative value indicating that the message had expanded instead of compressed.
Average compression ratio (Outgoing message)	The running average compression of messages sent by this service. The average is derived using the following formula: $(S(S_b) - S(S_a)) * 100 / (S(S_b))$ .
Best compression ratio (Incoming message)	The current best compression ratio achieved for messages received by this service.

Field	Description
Worst compression ratio (Incoming message)	The current worst compression ratio achieved for messages received by this service. Usually this will be a negative value indicating that the message had expanded instead of compressed.
Average compression ratio (Incoming message)	The running average compression of messages received by this service. The average is derived using the following formula: $(S(Sb) - S(Sa)) * 100 / (S(Sb))$ .
<b>SIP TCP Connection Statistics</b>	
Total TCP Subscribers	The total number of subscribers having TCP connections for SIP Signaling on this service.
Active Connections	The total number of active TCP connections for SIP Signaling on this service.
Total Connections Closed	The total number of TCP connections for SIP Signaling closed on this service.
Total Successful Outgoing Connections	The total number of successful outgoing TCP connections for SIP Signaling on this service.
Total Failed Outgoing Connections	The total number of failed outgoing TCP connections for SIP Signaling on this service.
Total Successful Incoming Connections	The total number of successful incoming TCP connections for SIP Signaling on this service.
Total Failed Incoming Connections	The total number of failed incoming TCP connections for SIP Signaling on this service.
Total Migrated Connections	The total number of TCP connections migrated from Cscfmgr to Sessmgr for load balancing.
Total Packets Sent	The total number of TCP/IP packets transmitted by CSCF service.
Total Packets Received	The total number of TCP/IP packets received by CSCF service.
Total Bytes Sent	The total number of bytes transmitted.
Total Bytes Received	The total number of bytes received.
<b>Subscription Package</b>	
Subscription Attempts Received	The total current number of subscription attempts received on this service.
Subscription Attempts Transmitted	The total current number of subscription attempts transmitted by this service.
Subscription Success Received	The total current number of subscription successes received on this service.
Subscription Success Transmitted	The total current number of subscription successes transmitted by this service.
Subscription Failures Received	The total current number of subscription failures received on this service.
Subscription Failures Transmitted	The total current number of subscription failures transmitted by this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
200 OK (Subscription) Received	The total current number of 200 OK responses to registration received on this service.
200 OK (Subscription) Transmitted	The total current number of 200 OK responses to registration transmitted by this service.
202 Accepted (Subscription) Received	The total current number of 202 Accepted responses to registration received on this service.
202 Accepted (Subscription) Transmitted	The total current number of 202 Accepted responses to registration transmitted by this service.
400 Bad Request (Subscription) Received	The total current number of 400 Bad Request responses to registration received on this service.
400 Bad Request (Subscription) Transmitted	The total current number of 400 Bad Request responses to registration transmitted by this service.
403 Forbidden (Subscription) Received	The total current number of 403 Forbidden responses to registration received on this service.
403 Forbidden (Subscription) Transmitted	The total current number of 403 Forbidden responses to registration transmitted by this service.
481 Trans Does Not Exist (Subscription) Received	The total current number of 481 Trans Does Not Exist responses to registration received on this service.
481 Trans Does Not Exist (Subscription) Transmitted	The total current number of 481 Trans Does Not Exist responses to registration transmitted by this service.
489 Bad Event (Subscription) Received	The total current number of 489 Bad Event responses to registration received on this service.
489 Bad Event (Subscription) Transmitted	The total current number of 489 Bad Event responses to registration transmitted by this service.
500 Internal Error (Subscription) Received	The total current number of 500 Internal Error responses to registration received on this service.
500 Internal Error (Subscription) Transmitted	The total current number of 500 Internal Error responses to registration transmitted by this service.
Re-Subscription Attempts Received	The total current number of re-subscription attempts received on this service.
Re-Subscription Attempts Transmitted	The total current number of re-subscription attempts transmitted by this service.
Re-Subscription Success Received	The total current number of re-subscription successes received on this service.
Re-Subscription Success Transmitted	The total current number of re-subscription successes transmitted by this service.
Re-Subscription Failures Received	The total current number of re-subscription failures received on this service.
Re-Subscription Failures Transmitted	The total current number of re-subscription failures transmitted by this service.

Field	Description
200 OK (Re-Subscription) Received	The total current number of 200 OK responses to re-registration received on this service.
200 OK (Re-Subscription) Transmitted	The total current number of 200 OK responses to re-registration transmitted by this service.
202 Accepted (Re-Subscription) Received	The total current number of 202 Accepted responses to re-registration received on this service.
202 Accepted (Re-Subscription) Transmitted	The total current number of 202 Accepted responses to re-registration transmitted by this service.
400 Bad Request (Re-Subscription) Received	The total current number of 400 Bad Request responses to re-registration received on this service.
400 Bad Request (Re-Subscription) Transmitted	The total current number of 400 Bad Request responses to re-registration transmitted by this service.
403 Forbidden (Re-Subscription) Received	The total current number of 403 Forbidden responses to re-registration received on this service.
403 Forbidden (Re-Subscription) Transmitted	The total current number of 403 Forbidden responses to re-registration transmitted by this service.
481 Trans Does Not Exist (Re-Subscription) Received	The total current number of 481 Trans Does Not Exist responses to re-registration received on this service.
481 Trans Does Not Exist (Re-Subscription) Transmitted	The total current number of 481 Trans Does Not Exist responses to re-registration transmitted by this service.
489 Bad Event (Re-Subscription) Received	The total current number of 489 Bad Event responses to re-registration received on this service.
489 Bad Event (Re-Subscription) Transmitted	The total current number of 489 Bad Event responses to re-registration transmitted by this service.
500 Internal Error (Re-Subscription) Received	The total current number of 500 Internal Error responses to re-registration received on this service.
500 Internal Error (Re-Subscription) Transmitted	The total current number of 500 Internal Error responses to re-registration transmitted by this service.
Un-Subscription Attempts Received	The total current number of un-subscription attempts received on this service.
Un-Subscription Attempts Transmitted	The total current number of un-subscription attempts transmitted by this service.
Un-Subscription Success Received	The total current number of un-subscription successes received on this service.
Un-Subscription Success Transmitted	The total current number of un-subscription successes transmitted by this service.
Un-Subscription Failures Received	The total current number of un-subscription failures received on this service.
Un-Subscription Failures Transmitted	The total current number of un-subscription failures transmitted by this service.

show cscf service statistics name &lt;service\_name&gt; all

Field	Description
200 OK (Un-Subscription) Received	The total current number of 200 OK responses to un-registration received on this service.
200 OK (Un-Subscription) Transmitted	The total current number of 200 OK responses to un-registration transmitted by this service.
202 Accepted (Un-Subscription) Received	The total current number of 202 Accepted responses to un-registration received on this service.
202 Accepted (Un-Subscription) Transmitted	The total current number of 202 Accepted responses to un-registration transmitted by this service.
400 Bad Request (Un-Subscription) Received	The total current number of 400 Bad Request responses to un-registration received on this service.
400 Bad Request (Un-Subscription) Transmitted	The total current number of 400 Bad Request responses to un-registration transmitted by this service.
403 Forbidden (Un-Subscription) Received	The total current number of 403 Forbidden responses to un-registration received on this service.
403 Forbidden (Un-Subscription) Transmitted	The total current number of 403 Forbidden responses to un-registration transmitted by this service.
481 Trans Does Not Exist (Un-Subscription) Received	The total current number of 481 Trans Does Not Exist responses to un-registration received on this service.
481 Trans Does Not Exist (Un-Subscription) Transmitted	The total current number of 481 Trans Does Not Exist responses to un-registration transmitted by this service.
489 Bad Event (Un-Subscription) Received	The total current number of 489 Bad Event responses to un-registration received on this service.
489 Bad Event (Un-Subscription) Transmitted	The total current number of 489 Bad Event responses to un-registration transmitted by this service.
500 Internal Error (Un-Subscription) Received	The total current number of 500 Internal Error responses to un-registration received on this service.
500 Internal Error (Un-Subscription) Transmitted	The total current number of 500 Internal Error responses to un-registration transmitted by this service.
Notify Attempts Received	The total current number of notify attempts received on this service.
Notify Attempts Transmitted	The total current number of notify attempts transmitted by this service.
Notify Success Received	The total current number of notify successes received on this service.
Notify Success Transmitted	The total current number of notify successes transmitted by this service.
Notify Failures Received	The total current number of notify failures received on this service.
Notify Failures Transmitted	The total current number of notify failures transmitted by this service.

Field	Description
Publish Attempts Received	The total current number of publish attempts received on this service.
Publish Attempts Transmitted	The total current number of publish attempts transmitted by this service.
Publish Success Received	The total current number of publish successes received on this service.
Publish Success Transmitted	The total current number of publish successes transmitted by this service.
Publish Failures Received	The total current number of publish failures received on this service.
Publish Failures Transmitted	The total current number of publish failures transmitted by this service.
Un-Publish Attempts Received	The total current number of un-publish attempts received on this service.
Un-Publish Attempts Transmitted	The total current number of un-publish attempts transmitted by this service.
Un-Publish Success Received	The total current number of un-publish successes received on this service.
Un-Publish Success Transmitted	The total current number of un-publish successes transmitted by this service.
Un-Publish Failures Received	The total current number of un-publish failures received on this service.
Un-Publish Failures Transmitted	The total current number of un-publish failures transmitted by this service.
<b>TCP Connection Statistics</b>	
Active IP-Sec Connections	The total number of active IPSec TCP connections on this service.
Total IP-Sec Connections Closed	The total number of IPSec TCP connections closed on this service.
Total Successful IP-Sec Outgoing Connections	The total number of successful outgoing IPSec TCP connections on this service.
Total Failed IP-Sec Outgoing Connections	The total number of failed outgoing IPSec TCP connections on this service.
Total Successful IP-Sec Incoming Connections	The total number of successful incoming IPSec TCP connections on this service.
Total Failed IP-Sec Incoming Connections	The total number of failed incoming IPSec TCP connections on this service.
<b>ATCF Call Statistics</b>	
Access Transfer Attempts	Total number of Access Transfer Attempts received/transmitted.
Access Transfer Success	Total number of Access Transfer Successes received/transmitted.
Access Transfer Failures	Total number of Access Transfer Failures received/transmitted.
404 Error Response	Total number of 404 received/transmitted for Access Transfer requests.
500 Internal Error	Total number of 500 internal errors received/transmitted for Access Transfer requests.
488 Response	Total number of 488 received/transmitted for Access Transfer requests.

Field	Description
4xx Responses	Total number of 4XX received/transmitted for Access Transfer requests.
5xx Responses	Total number of 5XX received/transmitted for Access Transfer requests.
6xx Responses	Total number of 6XX received/transmitted for Access Transfer requests.
<b>EATF Call Statistics</b>	
Total Emergency call Access Transfer Request	The total number of Emergency call Access Transfer (EATF) requests.
Total Emergency call Access Transfer Success	The total number of Emergency call Access Transfer (EATF) successes.
Total Emergency call Access Transfer Failure	The total number of Emergency call Access Transfer (EATF) failures.
480 Error responses	The total number of 480 responses received.
488 Error responses	The total number of 488 responses received.
500 Error responses	The total number of 500 responses received.
4xx Error responses	The total number of 4XX responses received.
5xx Error responses	The total number of 5XX responses received.
Internal Error responses	The total number of internal error responses received.

## show cscf sessions counters

Table 231: show cscf sessions counters Command Output Descriptions

Field	Description
<b>Interval</b>	
<200ms	The number of sessions that had a duration of less than 200 millisecond.
200..400ms	The number of sessions that had a duration between 200 and 400 milliseconds.
400..600ms	The number of sessions that had a duration between 400 and 600 milliseconds.
600..800ms	The number of sessions that had a duration between 600 and 800 milliseconds.
800..1000ms	The number of sessions that had a duration between 800 and 1000 milliseconds.
1000..1200ms	The number of sessions that had a duration between 1000 and 1200 milliseconds.
1200..1400ms	The number of sessions that had a duration between 1200 and 1400 milliseconds.
1400..1600ms	The number of sessions that had a duration between 1400 and 1600 milliseconds.

Field	Description
1600..1800ms	The number of sessions that had a duration between 1600 and 1800 milliseconds.
1800..2000ms	The number of sessions that had a duration between 1800 and 2000 milliseconds.
2000..2200ms	The number of sessions that had a duration between 2000 and 2200 milliseconds.
2200..2400ms	The number of sessions that had a duration between 2200 and 2400 milliseconds.
2400..2600ms	The number of sessions that had a duration between 2400 and 2600 milliseconds.
2600..2800ms	The number of sessions that had a duration between 2600 and 2800 milliseconds.
2800..3000ms	The number of sessions that had a duration between 2800 and 3000 milliseconds.
3..5sec	The number of sessions that had a duration between three and five seconds.
5..7sec	The number of sessions that had a duration between five and seven seconds.
7..9sec	The number of sessions that had a duration between seven and nine seconds.
9..11sec	The number of sessions that had a duration between nine and 11 seconds.
11..13sec	The number of sessions that had a duration between 11 and 13 seconds.
13..15sec	The number of sessions that had a duration between 13 and 15 seconds.
15..17sec	The number of sessions that had a duration between 15 and 17 seconds.
17..19sec	The number of sessions that had a duration between 17 and 19 seconds.
19..21sec	The number of sessions that had a duration between 19 and 21 seconds.
>21sec	The number of sessions that had a duration of more than 21 seconds.
<b>Count</b>	
The following provide total counts for each session type per specified interval.	
Invite Processing Time	Time required to process an INVITE message (time elapsed between the INVITE entering the proxy and the INVITE forwarded out of the proxy).
First Response Delay	Time between sending an INVITE message out of the proxy and the first response received for the INVITE (any 1xx).
Post Dial Delay	Time between sending an INVITE message out of the proxy and receiving the ringing message or any final response to the INVITE.
Session Setup Delay	Time between when an INVITE message was received by the proxy and a 200 OK (invite) sent out of the proxy.
Post Answer Delay	Time between a 200 OK INVITE message received by the proxy and the ACK message (for invite) sent out of the proxy.
Session Release Delay	Time between when a BYE message is received by the proxy and a 200 OK BYE is sent out of the proxy.

# show cscf sessions duration

Table 232: show cscf sessions duration Command Output Descriptions

Field	Description
<1s	The number of sessions that had a duration of less than one second.
01..10sec	The number of sessions that had a duration between one and 10 seconds.
10..30sec	The number of sessions that had a duration between 10 and 30 seconds.
30..60sec	The number of sessions that had a duration between 30 and 60 seconds.
01..03min	The number of sessions that had a duration between one and three minutes.
03..05min	The number of sessions that had a duration between three and five minutes.
05..07min	The number of sessions that had a duration between five and seven minutes.
07..09min	The number of sessions that had a duration between seven and nine minutes.
09..11min	The number of sessions that had a duration between nine and 11 minutes.
11..13min	The number of sessions that had a duration between 11 and 13 minutes.
13..15min	The number of sessions that had a duration between 13 and 15 minutes.
15..17min	The number of sessions that had a duration between 15 and 17 minutes.
17..19min	The number of sessions that had a duration between 17 and 19 minutes.
19..21min	The number of sessions that had a duration between 19 and 21 minutes.
21..23min	The number of sessions that had a duration between 21 and 23 minutes.
23..25min	The number of sessions that had a duration between 23 and 25 minutes.
25..27min	The number of sessions that had a duration between 25 and 27 minutes.
27..29min	The number of sessions that had a duration between 27 and 29 minutes.
29..60min	The number of sessions that had a duration between 29 and 60 minutes.
>60min	The number of sessions that had a duration of more than 60 minutes.
<1hr	The number of sessions that had a duration of less than one hour.
1..2hrs	The number of sessions that had a duration between one and two hours.
2..3hrs	The number of sessions that had a duration between two and three hours.
3..4hrs	The number of sessions that had a duration between three and four hours.
4..5hrs	The number of sessions that had a duration between four and five hours.

Field	Description
5..6hrs	The number of sessions that had a duration between five and six hours.
6..7hrs	The number of sessions that had a duration between six and seven hours.
7..8hrs	The number of sessions that had a duration between seven and eight hours.
8..9hrs	The number of sessions that had a duration between eight and nine hours.
9..10hrs	The number of sessions that had a duration between nine and 10 hours.
>10hrs	The number of sessions that had a duration of more than 10 hours.

## show cscf sip statistics

*Table 233: show cscf sip statistics Command Output Descriptions*

Field	Description
CSCF Service	The name of the service and context.
Peer IP Address	The IP address of the peer server expressed in IPv4 or IPv6 dotted decimal notation.
<b>SIP Request Statistics</b>	
Register	The total number of SIP Register requests received (Rx) or transmitted (Tx) by this service.
Invite	The total number of INVITE requests received (Rx) or transmitted (Tx) by this service.
Ack	The total number of ACK requests received (Rx) or transmitted (Tx) by this service.
Bye	The total number of Bye requests received (Rx) or transmitted (Tx) by this service.
Info	The total number of Info requests received (Rx) or transmitted (Tx) by this service.
Prack	The total number of PRACK requests received (Rx) or transmitted (Tx) by this service.
Refer	The total number of Refer requests received (Rx) or transmitted (Tx) by this service.
Cancel	The total number of Cancel requests received (Rx) or transmitted (Tx) by this service.
Notify	The total number of Notify requests received (Rx) or transmitted (Tx) by this service.
Update	The total number of Update requests received (Rx) or transmitted (Tx) by this service.

Field	Description
Message	The total number of Message requests received (Rx) or transmitted (Tx) by this service.
Options	The total number of Options requests received (Rx) or transmitted (Tx) by this service.
Publish	The total number of Publish requests received (Rx) or transmitted (Tx) by this service.
Subscribe	The total number of Subscribe requests received (Rx) or transmitted (Tx) by this service.
Notify	The total number of Notify requests received (Rx) or transmitted (Tx) by this service.
<b>SIP Response Statistics</b>	
100 Trying	The total number of 100 Trying responses received (Rx) or transmitted (Tx) by this service.
180 Ringing	The total number of 180 Ringing responses received (Rx) or transmitted (Tx) by this service.
181 Forwarding	The total number of 181 Forwarded responses received (Rx) or transmitted (Tx) by this service.
182 Queued	The total number of 182 Queued responses received (Rx) or transmitted (Tx) by this service.
183 Progress	The total number of 183 Progress responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Register)	The total number of 200 OK Register responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Invite)	The total number of 200 OK Invite responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Bye)	The total number of 200 OK Bye responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Info)	The total number of 200 OK Info responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Prack)	The total number of 200 OK PRACK responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Refer)	The total number of 200 OK Refer responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Cancel)	The total number of 200 OK Cancel responses received (Rx) or transmitted (Tx) by this service.

Field	Description
200 Ok (Notify)	The total number of 200 OK Notify responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Update)	The total number of 200 OK Update responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Message)	The total number of 200 OK Message responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Options)	The total number of 200 OK Options responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Publish)	The total number of 200 OK Publish responses received (Rx) or transmitted (Tx) by this service.
200 Ok (Subscribe)	The total number of 200 OK Subscribe responses received (Rx) or transmitted (Tx) by this service.
202 Accepted (Refer)	The total number of 202 Accepted Refer responses received (Rx) or transmitted (Tx) by this service.
202 Accepted (Subscribe)	The total number of 202 Accepted Subscribe responses received (Rx) or transmitted (Tx) by this service.
300 Multiple Choices	The total number of Multiple Choices responses received (Rx) or transmitted (Tx) by this service.
301 Moved Permanently	The total number of Moved Permanently responses received (Rx) or transmitted (Tx) by this service.
302 Moved Temporarily	The total number of Moved Temporarily responses received (Rx) or transmitted (Tx) by this service.
305 Use Proxy	The total number of Use Proxy responses received (Rx) or transmitted (Tx) by this service.
380 Alternative Service	The total number of Alternative Service responses received (Rx) or transmitted (Tx) by this service.
400 Bad Request	The total number of 400 Bad Request errors received (Rx) or transmitted (Tx) by this service.
401 Unauthorized	The total number of 401 Unauthorized errors received (Rx) or transmitted (Tx) by this service.
403 Forbidden	The total number of 403 Forbidden errors received (Rx) or transmitted (Tx) by this service.
404 Not Found	The total number of 404 Not Found errors received (Rx) or transmitted (Tx) by this service.

Field	Description
405 Method Not Allowed	The total number of 405 Method Not Allowed errors received (Rx) or transmitted (Tx) by this service.
406 Not Acceptable	The total number of 406 Not Acceptable errors received (Rx) or transmitted (Tx) by this service.
407 Proxy Auth Required	The total number of 407 Proxy Auth Required errors received (Rx) or transmitted (Tx) by this service.
408 Request Timeout	The total number of 408 Request Timeout errors received (Rx) or transmitted (Tx) by this service.
410 Gone	The total number of 410 Gone errors received (Rx) or transmitted (Tx) by this service.
412 Conditional Req Fail	The total number of 412 Conditional Request Fail errors received (Rx) or transmitted (Tx) by this service.
413 Req Entity Too Large	The total number of 413 Request Entity Too Large errors received (Rx) or transmitted (Tx) by this service.
414 Req URI Too Long	The total number of 414 Request URI Too Long errors received (Rx) or transmitted (Tx) by this service.
415 Unsupport Media Type	The total number of 415 Unsupported Media Type errors received (Rx) or transmitted (Tx) by this service.
416 Unsupport URI Scheme	The total number of 416 Unsupported URI Scheme errors received (Rx) or transmitted (Tx) by this service.
420 Bad Extension	The total number of 420 Bad Extension errors received (Rx) or transmitted (Tx) by this service.
421 Extension Required	The total number of 421 Extension Required errors received (Rx) or transmitted (Tx) by this service.
423 Interval Too Brief	The total number of 423 Interval Too Brief errors received (Rx) or transmitted (Tx) by this service.
480 Temp Not Available	The total number of 480 Temp Not Available errors received (Rx) or transmitted (Tx) by this service.
481 Trans Does Not Exist	The total number of 481 Transaction Does Not Exist errors received (Rx) or transmitted (Tx) by this service.
482 Loop Detected	The total number of 482 Loop Detected errors received (Rx) or transmitted (Tx) by this service.
483 Too Many Hops	The total number of 483 Too Many Hops errors received (Rx) or transmitted (Tx) by this service.
484 Address Incomplete	The total number of 484 Address Incomplete errors received (Rx) or transmitted (Tx) by this service.

Field	Description
485 Ambiguous	The total number of 485 Ambiguous errors received (Rx) or transmitted (Tx) by this service.
486 Busy Here	The total number of 486 Busy Here errors received (Rx) or transmitted (Tx) by this service.
487 Request Cancel	The total number of 487 Request Cancel errors received (Rx) or transmitted (Tx) by this service.
488 Not Acceptable Media	The total number of 488 Not Acceptable Media errors received (Rx) or transmitted (Tx) by this service.
489 Bad Event	The total number of 489 Bad Event errors received (Rx) or transmitted (Tx) by this service.
491 Request Pending	The total number of 491 Request Pending errors received (Rx) or transmitted (Tx) by this service.
493 Undecipherable	The total number of 493 Undecipherable errors received (Rx) or transmitted (Tx) by this service.
500 Internal Error	The total number of 500 Internal Error errors received (Rx) or transmitted (Tx) by this service.
501 Not Implemented	The total number of 501 Not Implemented errors received (Rx) or transmitted (Tx) by this service.
502 Bad Gateway	The total number of 502 Bad Gateway errors received (Rx) or transmitted (Tx) by this service.
503 Service Unavailable	The total number of 503 Service Unavailable errors received (Rx) or transmitted (Tx) by this service.
504 Gateway Timeout	The total number of 504 Gateway Timeout errors received (Rx) or transmitted (Tx) by this service.
505 Bad SIP Version	The total number of 505 Bad SIP Version errors received (Rx) or transmitted (Tx) by this service.
513 Message Too Large	The total number of 513 Message Too Large errors received (Rx) or transmitted (Tx) by this service.
580 Precondition Failure	The total number of 580 Precondition Failure errors received (Rx) or transmitted (Tx) by this service.
600 Busy Everywhere	The total number of 600 Busy Everywhere errors received (Rx) or transmitted (Tx) by this service.
603 Decline	The total number of 603 Decline errors received (Rx) or transmitted (Tx) by this service.

Field	Description
604 Not Exist Anywhere	The total number of 604 Not Exist Anywhere errors received (Rx) or transmitted (Tx) by this service.
606 Not Acceptable	The total number of 606 Not Acceptable errors received (Rx) or transmitted (Tx) by this service.
Total Invalid Messages	The total number of SIP Invalid Messages received (Rx) or transmitted (Tx) by this service.
Total Messages	The total number of SIP Messages received (Rx) or transmitted (Tx) by this service.
TCP Request	The total number of SIP requests received (Rx) or transmitted (Tx) over TCP by this service.
TCP Response	The total number of SIP responses received (Rx) or transmitted (Tx) over TCP by this service.
Auto switch to TCP on MTU size limit	The total number of times CSCF switched from UDP to TCP because of message size larger than MTU.

## show cscf tcp connections

Table 234: show cscf tcp connections Command Output Descriptions

Field	Description
TCP Connection Details	
LocalIp	The local IP address, expressed in IPv4 or IPv6 dotted decimal notation, of the TCP connection.
Local Port	The local port number of the TCP connection.
RemoteIp	The remote IP address, expressed in IPv4 or IPv6 dotted decimal notation, of the TCP connection.
Remote Port	The remote port number of the TCP connection.
Facility	Facility type for which connection details have to be retrieved—CscfMgr or SessMgr.
Instance	The instance number of the facility that the connection belongs to.
SockDesc	The socket descriptor id.

Field	Description
State	The state of the connection. TCP states are: <ul style="list-style-type: none"> <li>• CLOSED</li> <li>• LISTEN</li> <li>• SYNCSSENT</li> <li>• SYNCRVD</li> <li>• ESTABLISHED</li> <li>• CLOSEWAIT</li> <li>• FINWAIT1</li> <li>• CLOSING</li> <li>• LASTACK</li> <li>• FINWAIT2</li> <li>• TIMEWAIT</li> <li>• INVALID</li> </ul>
BytesInRecvQueue	Data size in the receive queue, in bytes.
BytesInSendQueue	Data size in the send queue, in bytes.
RecvQueueSize	Size of the receive queue, in bytes.
SendQueueSize	Size of the send queue, in bytes.
MaxSendWind	Maximum send window seen so far.
SndUna	Send unacknowledged sequence value.
SndNext	Send next sequence value.
MaxSndNext	Highest sequence number sent.
Iss	Initial send sequence number.
Irs	Initial receive sequence number.
Rto	Retransmission timeout.
SndWL1	Send segment sequence number used for last window update.
SndWL2	Send segment acknowledgment number used for last window update.
MaxSndWind	Maximum send window seen so far.
RecvNxt	Receive next sequence.
RecvWind	Receive window sequence.

Field	Description
RecvAdv	Sequence number of right edge of advertised window.
CWind	Send congestion window.
Ssthresh	Send slow start threshold size.
BackLog	Back logs.
DupAck	Duplicate ACKs.
RetransSegments	Number of retransmitted segments.
AckAfterRetrans	Number of non duplicate acks after duplicate ACK.
TcpFlags	TCP flags.
Total TCP sockets	The total number of TCP sockets.

# CHAPTER 41

## show decor

This chapter includes the **show decor** command output tables.

- [show decor-profile full all](#), on page 743

## show decor-profile full all

*Table 235: show decor-profile full all Command Output Descriptions*

Field	Description
Decor Profile Name	Displays the configured decor-profile name.
UE Usage Types	Displays the configured UE usage types.
MMEGI	Displays the MMEGI value.
DNS	Indicates whether DNS is enabled or disabled.
DCN Id	Displays the configured DCN identifier. Displays "Not Defined" if not configured.
PLMN ID	Displays the configured PLMN identifier. Displays "Not Defined" if not configured.
Serving DCN	Indicates whether MME is serving the DCN. Displays "Not Defined" if not configured.
Relative Capacity	Indicates the configured relative capacity.
DNS Service Param	Displays the configured DNS service parameter.

# CHAPTER 42

## show demux-mgr

This chapter includes the **demux-mgr** command output tables.

- [show demux-mgr statistics egtpegmgr all](#), on page 745
- [show demux-mgr statistics egtpinmgr all](#), on page 745
- [show demux-mgr sessions egtpinmgr all](#), on page 746

## show demux-mgr statistics egtpegmgr all

*Table 236: show demux-mgr statistics egtpegmgr all Command Output Descriptions*

Field	Description
<b>IMSI Manager Stats</b>	
max sess threshold exceeded	Indicates if the maximum session threshold is exceeded.
connected sess threshold exceeded	Indicates if the connected sessions threshold is exceeded.
Sessions disconnected due to overload disconnect	Indicates the number of sessions disconnected due to an overload.
<b>Peer Salvation Stats</b>	
No of peer salvation requests sent by demux	Indicates the number of peer salvation requests sent by the Demux.
No of peer salvaged on demux	Indicates the number of peers salvaged on the Demux.

## show demux-mgr statistics egtpinmgr all

*Table 237: show demux-mgr statistics egtpinmgr all Command Output Descriptions*

Field	Description
<b>IMSI Manager Stats</b>	
max sess threshold exceeded	Indicates if the maximum session threshold is exceeded.

Field	Description
connected sess threshold exceeded	Indicates if the connected sessions threshold is exceeded.
Sessions disconnected due to overload disconnect	Indicates the number of sessions disconnected due to an overload.
<b>Peer Salvation Stats</b>	
No of peer salvation requests sent by demux	Indicates the number of peer salvation requests sent by the Demux.
No of peer salvaged on demux	Indicates the number of peers salvaged on the Demux.
<b>DCNR</b>	
#DCNR	Indicates the instance number of the DCNR session.

## show demux-mgr sessions egtpinmgr all

*Table 238: show demux-mgr statistics egtpinmgr all Command Output Descriptions*

Field	Description
DCNR Session	Indicates if the session is a DCNR session or not.

# CHAPTER 43

## show dhcp

This chapter includes the **show dhcp** command output tables.

- [show dhcp call-id](#), on page 747
- [show dhcp chaddr](#), on page 750
- [show dhcp dhcp-service](#), on page 750
- [show dhcp msid](#), on page 753
- [show dhcp full msid](#), on page 753
- [show dhcp status](#), on page 756
- [show dhcp-service](#), on page 757
- [show dhcp statistics](#), on page 759
- [show dhcp username](#), on page 764
- [show dhcp full username](#), on page 765

## show dhcp call-id

*Table 239: show dhcp call-id Command Output Descriptions*

Field	Description
<b>Session Counters</b>	
Total Current	The total number of currently active sessions on the system that received DHCP-assigned IP addresses.
DHCP Proxy	The total number of currently active sessions that were assigned IP addresses using the DHCP Proxy method.
<b>DHCP Messages</b>	
DISCOVER TX	The number of DHCPDISCOVER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retransmitted	The number of DHCPDISCOVER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER relayed	The number of DHCPDISCOVER messages relayed by the system to the mobile as part of the DHCP Relay method.

Field	Description
OFFER RX	The number of DHCPOFFER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER Discarded	The number of DHCPOFFER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER relayed	The number of DHCPOFFER messages relayed by the system to the mobile as part of the DHCP Relay method.
REQUEST TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST retransmitted	The number of DHCPREQUEST messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST relayed	The number of DHCPREQUEST messages relayed by the system to the mobile as part of the DHCP Relay method.
ACK RX	The number of DHCPACK messages received from the DHCP server as part of the DHCP Proxy method.
ACK for INFORM	The number of acknowledgements received for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
ACK relayed	The number of DHCPACK messages relayed by the system to the mobile as part of the DHCP Relay method.
NAK RX	The number of DHCPNAK messages received from the DHCP server as part of the DHCP Proxy method.
NAK for INFORM	The number of number of negative acknowledgements for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
NAK relayed	The number of DHCPNAK messages relayed by the system to the mobile as part of the DHCP Relay method.
DECLINE relayed	The number of DHCPDECLINE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE relayed	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
INFORM relayed	The number of DHCPINFORM messages relayed by the system to the DHCP server on behalf of the mobile as part of the DHCP Relay method.
DHCP OFFER Discard Reasons: (dhcp-proxy)	

Field	Description
Parse error	The number of DHCPOFFER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
Lease less than min	The number of DHCPOFFER messages discarded by the system due to the offered lease time being less than the minimum acceptable value configured on the system.
Lease greater than max	The number of DHCPOFFER messages discarded by the system due to the offered lease time being greater than the maximum acceptable value configured on the system.
IP Validation failed	The number of DHCPOFFER messages discarded by the system due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.
XID mismatch:	The number of DHCPOFFER messages discarded by the system due to an XID mismatch.
DHCP ACK Discard Reasons: (dhcp-proxy)	
Parse error	The number of DHCPACK messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
XID mismatch:	The number of DHCPACK messages discarded by the system due to an XID mismatch.
DHCP DECLINE Reasons: (dhcp-proxy)	
IP mismatch	The number of DHCP DECLINE messages sent by the system due to a mismatch in the IP address returned in the OFFER and the IP address returned in ACK. A DECLINE message is sent for the IP address sent in the OFFER.
IP Lease Renewals	The number of address lease renewal requests successfully processed.
DHCP Call Type	Type of DHCP call.

Field	Description
DHCP State	Status of DHCP call. <ul style="list-style-type: none"> <li>• Bound : Call Established</li> <li>• Renewing: Call renewing after expiry of leased time.</li> <li>• Rebinding: Making call for same call id after expiry of</li> </ul>
Lease time received	Time in seconds allotted for a specific call-Id.
Lease time remaining	Time in seconds available for a specific call-Id.

## show dhcp chaddr

Table 240: show dhcp chaddr Command Output Descriptions

Field	Description
User Name	The user name associated with this session.
User Address	The IP address of the user's PDP context in dotted decimal notation.
DHCP Service	The DHCP service name.
Server Address	The server address.
DHCP Call Type	The DHCP call type.
DHCP State	The DHCP state.
Lease time received	The IP address lease time received.
Lease time remaining	The IP address lease time remaining.
Total DHCP sessions matching specified criteria	The total number of DHCP sessions matching specified criteria.

## show dhcp dhcp-service

Table 241: show dhcp dhcp-service Command Output Descriptions

Field	Description
<b>Session Counters</b>	
Total Current	The total number of currently active PDP contexts on the system that received DHCP-assigned IP addresses as facilitated by the specified criteria.

Field	Description
DHCP Proxy	The total number of PDP contexts that were assigned IP addresses using the DHCP Proxy method.
DHCP Relay Agent	The total number of PDP contexts that were assigned IP addresses using the DHCP Relay method.
<b>DHCP Messages</b>	
DISCOVER TX	The number of DHCPDISCOVER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retransmitted	The number of DHCPDISCOVER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER relayed	The number of DHCPDISCOVER messages relayed by the system to the mobile as part of the DHCP Relay method.
OFFER RX	The number of DHCPOFFER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER Discarded	The number of DHCPOFFER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER relayed	The number of DHCPOFFER messages relayed by the system to the mobile as part of the DHCP Relay method.
REQUEST TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST retransmitted	The number of DHCPREQUEST messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST relayed	The number of DHCPREQUEST messages relayed by the system to the mobile as part of the DHCP Relay method.
ACK RX	The number of DHCPACK messages received from the DHCP server as part of the DHCP Proxy method.
ACK for INFORM	The number of acknowledgements received for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
ACK relayed	The number of DHCPACK messages relayed by the system to the mobile as part of the DHCP Relay method.
NAK RX	The number of DHCPNAK messages received from the DHCP server as part of the DHCP Proxy method.
NAK for INFORM	The number of negative acknowledgements for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
NAK relayed	The number of DHCPNAK messages relayed by the system to the mobile as part of the DHCP Relay method.

Field	Description
DECLINE relayed	The number of DHCPDECLINE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE relayed	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
INFORM relayed	The number of DHCPINFORM messages relayed by the system to the DHCP server on behalf of the mobile as part of the DHCP Relay method.
<b>DHCP OFFER Discard Reasons</b>	
Parse error	The number of DHCPPOFFER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
Lease less than min	The number of DHCPPOFFER messages discarded by the system due to the offered lease time being less than the minimum acceptable value configured on the system.
Lease greater than max	The number of DHCPPOFFER messages discarded by the system due to the offered lease time being greater than the maximum acceptable value configured on the system.
IP Validation failed	The number of DHCPPOFFER messages discarded by the system due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.
<b>DHCP ACK Discard Reasons: (dhcp-proxy)</b>	
Parse error	The number of DHCPACK messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>DHCP DECLINE Reasons: (dhcp-proxy)</b>	
IP mismatch	The number of DHCPDECLINE messages sent by the system due to a mismatch in the IP address returned in the OFFER and the IP address returned in ACK. A DECLINE message is sent for the IP address sent in the OFFER.
IP Lease Renewals	The number of address lease renewal requests successfully processed.

## show dhcp msid

Table 242: show dhcp msid Command Output Descriptions

Field	Description
User Name	The user name associated with this session.
User Address	IP address of the user's PDP context in dotted decimal notation.
DHCP Service	The DHCP service name.
Server Address	The server address.
DHCP Chaddr of MS	The Client Hardware (MAC) Address (CHADDR) of MS.
DHCP Call Type	The DHCP call type.
DHCP State	The DHCP state.
Lease time received	The IP address lease time received.
Lease time remaining	The IP address lease time remaining.
Total DHCP sessions matching specified criteria	The total number of DHCP sessions matching specified criteria.

## show dhcp full msid

Table 243: show dhcp full msid Command Output Descriptions

Field	Description
User Name	The user name associated with this session.
User Address	IP address of the user's PDP context in dotted decimal notation.
DHCP Service	The DHCP service name.
Server Address	The server address.
DHCP Call Type	The DHCP call type.
DHCP State	The DHCP status.
Lease time received	Time allotted in seconds.
Lease time remaining	Time available in seconds.
<b>DHCP Messages:</b>	

Field	Description
DISCOVER TX	The number of DHCPDISCOVER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retransmitted	The number of DHCPDISCOVER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER RX	The number of DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retried RX	The number of retried DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER relayed	The number of DHCPDISCOVER messages relayed by the system to the mobile as part of the DHCP Relay method.
OFFER RX	The number of DHCPOFFER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER Discarded	The number of DHCPOFFER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER relayed	The number of DHCPOFFER messages relayed by the system to the mobile as part of the DHCP Relay method.
REQUEST TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST retransmitted	The number of DHCPREQUEST messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST RX	The number of DHCPREQUEST messages received by the system as part of the DHCP Proxy method.
REQUEST renewal RX	The number of DHCPREQUEST renewal messages received by the system as part of the DHCP Proxy method.
REQUEST relayed	The number of DHCPREQUEST messages relayed by the system to the mobile as part of the DHCP Relay method.
ACK RX	The number of DHCPACK messages received from the DHCP server as part of the DHCP Proxy method.
ACK for INFORM	The number of acknowledgements received for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
ACK TX	The number of DHCPACK messages send to the DHCP server as part of the DHCP Proxy method.
ACK Renewing TX	The number of DHCPACK messages renewed from the DHCP server as part of the DHCP Proxy method.

Field	Description
ACK relayed	The number of DHCPACK messages relayed by the system to the mobile as part of the DHCP Relay method.
NAK RX	The number of DHCPNAK messages received from the DHCP server as part of the DHCP Proxy method.
NAK for INFORM	The number of number of negative acknowledgements for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
NAK TX	The number of DHCPNAK messages sent to the DHCP server as part of the DHCP Proxy method.
NAK relayed	The number of DHCPNAK messages relayed by the system to the mobile as part of the DHCP Relay method.
DECLINE relayed	The number of DHCPDECLINE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE relayed	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
INFORM relayed	The number of DHCPINFORM messages relayed by the system to the DHCP server on behalf of the mobile as part of the DHCP Relay method.
<b>DHCP OFFER Discard Reasons: (dhcp-proxy)</b>	
Parse error	The number of DHCPOFFER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
Lease less than min	The number of DHCPOFFER messages discarded by the system due to the offered lease time being less than the minimum acceptable value configured on the system.
Lease greater than max	The number of DHCPOFFER messages discarded by the system due to the offered lease time being greater than the maximum acceptable value configured on the system.
IP Validation failed	The number of DHCPOFFER messages discarded by the system due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.
<b>DHCP ACK Discard Reasons: (dhcp-proxy)</b>	

Field	Description
Parse error	The number of DHCPACK messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>DHCP DECLINE Reasons: (dhcp-proxy)</b>	
IP mismatch	The number of DHCP DECLINE messages sent by the system due to a mismatch in the IP address returned in the OFFER and the IP address returned in ACK. A DECLINE message is sent for the IP address sent in the OFFER.
IP Lease Renewals	The number of address lease renewal requests successfully processed.
<b>Session Counters:</b>	
Total Current	The total number of currently active sessions on the system that received DHCP-assigned IP addresses.
DHCP Proxy	The total number of sessions that were assigned IP addresses using the DHCP Proxy method.
DHCP Relay Agent	The total number of sessions that were assigned IP addresses using the DHCP Relay method.
DHCP Server	The DHCP server's IP address.
Total DHCP sessions matching specified criteria	The total number of DHCP sessions matching the specified criteria.

## show dhcp status

Table 244: show dhcp status Command Output Descriptions

Field	Description
DHCP Type	Indicates the type of DHCP service active. Possible types are: <ul style="list-style-type: none"> <li>• (P) - DHCP Proxy</li> <li>• (R) - DHCP Relay</li> <li>• (S) - DHCP Server</li> <li>• (u) - unknown call</li> </ul>
Lease State	The lease state for the DHCP service.

Field	Description
DHCP Service	The name of the DHCP service.
DHCP Server	The IP address of DHCP server.
Status	Indicates the status of the DHCP server. Possible status are: <ul style="list-style-type: none"> <li>• Up</li> <li>• Active</li> </ul>
Current Leased Address	The total number of DHCP Relay-assigned IP addresses currently leased to this service.
Total Leased Address	The total number of DHCP Relay-assigned IP addresses available for this service.

## show dhcp-service

*Table 245: show dhcp-service name Command Output Descriptions*

Field	Description
Service name	The DHCP service name.
Context	The context name.
Bind	Indicates the bind status.
Local IP Address	The IP address of DHCP server.
Next Hop Address	Indicates the nexthop-forwarding address configured in DHCP service for MPLS traffic.
DHCP Subnet mask used	Indicates the host mask.
MPLS-label	Indicates the MPLS labels configured in DHCP service for MPLS traffic.
Service Status	Indicates the service status, whether started or not.
Retransmission Timeout	The retransmission timeout period that must pass with no response before the system re-attempts to communicate with the DHCP server, in milliseconds.
Max Retransmissions	The maximum number of times that the system attempts to communicate with unresponsive DHCP server before it is considered a failure.
Lease Time	The lease time, in seconds.
Minimum Lease Duration	The minimum allowable lease duration accepted in responses from DHCP servers, in seconds.
Maximum Lease Duration	The maximum allowable lease duration accepted in responses from DHCP servers, in seconds.

Field	Description
DHCP Dead Time	The DHCP deadtime, in seconds, indicating the time period that the system waits prior to re-communicating with a DHCP server that was previously marked as down.
DHCP Dead consecutive Failure	The number of consecutive failures for the to be declared dead.
DHCP T1 Threshold Timer	The DHCP T1 threshold timer indicating the percentage of the allocated IP address lease time at which the DHCP call-line state is changed to "RENEWING".
DHCP T2 Threshold Timer	The DHCP T2 threshold timer indicating the percentage of the allocated IP address lease time at which the DHCP call-line state is changed to "REBINDING".
DHCP Client Identifier	Indicates the behavior relating to inclusion of client identifier DHCP option in DHCP messages. Possible values are: <ul style="list-style-type: none"> <li>• msisdh</li> <li>• none.</li> </ul>
DHCP Algorithm	The algorithm used to select DHCP servers with which to communicate when multiple servers are configured.
DHCP Servers configured	The IP address and priority information of the DHCP servers configured.
VRF Name	Indicates the name of the virtual routing and forwarding context instance associated with this DHCP service.  Note: For DHCP over MPLS feature to work in StarOS 9.0 onward VRF context must be associated in DHCP service. Without this association the DHCP service using MPLS labels will not be started.
Input	Indicates the MPLS labels configured in DHCP service for inward MPLS traffic.  Note: For DHCP over MPLS feature to work in StarOS 9.0 onward VRF context must be associated in DHCP service. Without this association the DHCP service using MPLS labels will not be started.
Output	Indicates the MPLS labels configured in DHCP service for outward MPLS traffic.
DHCP server rapid-commit	Indicates if the rapid commit option is enabled/disabled for DHCP server.
DHCP client rapid-commit	Indicates if the rapid commit option is enabled/disabled for DHCP clients.
DHCP server check msg size	Indicates if the checking of message size is enabled/disabled for DHCP messages sent from server to client.
DHCP relay agent option	Indicates if the DHCP relay agent option is enabled/disabled.
DHCP chaddr validation	Indicates the behavior of the client hardware address (chaddr) validation in DHCP messages.

# show dhcp statistics

Table 246: show dhcp statistics Command Output Descriptions

Field	Description
<b>Session Stats</b>	
Total Current	The total number of currently active sessions on the system that received DHCP-assigned IP addresses.
DHCP Proxy	The total number of currently active sessions that were assigned IP addresses using the DHCP Proxy method.
DHCP Relay Agent	The total number of currently active sessions that were assigned IP addresses using the DHCP Relay method.
DHCP Server	The total number of currently active sessions that were assigned IP addresses using the DHCP Server.
Total Setup	The cumulative total number of sessions facilitated by the system that received DHCP-assigned IP addresses.
DHCP Proxy	The cumulative total number of sessions facilitated by the system that were assigned IP addresses using the DHCP Proxy method.
DHCP Relay Agent	The cumulative total number of sessions facilitated by the system that were assigned IP addresses using the DHCP Relay method.
DHCP Server	The cumulative total number of sessions facilitated by the system that were assigned IP addresses using the DHCP Server.
Total Released	The total number of IP addresses that have been returned to the DHCP server(s).
<b>Session Release Reasons: (dhcp-proxy)</b>	
Admin Releases	The number of DHCP Proxy-assigned IP addresses released due to administrative intervention.
Bearer Call Terminated	The number of DHCP Proxy-assigned IP addresses released due to session termination.
Lease Exp Policy	The number of DHCP Proxy-assigned IP addresses released due to the expiration of the address lease policy.
Lease Renew Failure	The number of DHCP Proxy-assigned IP addresses released due to a failure experienced during lease renewal.
IP Address mismatch	The number of DHCP Proxy-assigned IP addresses released due to the offering of an invalid IP address.
Lease time mismatch	The number of DHCP Proxy-assigned IP addresses released due to the offering of an unacceptable lease time.

Field	Description
Chaddr mismatch	The number of DHCP Proxy-assigned IP addresses released due to the mis-match in client hardware address (MAC) or unknown/invalid client hardware address.
Client-identifier mis-match	The number of DHCP Proxy-assigned IP addresses released due to the mis-match in client id or unknown/invalid client id.
Other Reasons	The number of DHCP Proxy-assigned IP addresses released due to reasons other than those listed here.
<b>Session Release Reasons: (dhcp-relay)</b>	
Admin Releases	The number of DHCP Relay-assigned IP addresses released due to administrative intervention.
Bearer Call Terminated	The number of DHCP Relay-assigned IP addresses released due to session termination.
Lease Timed-out	The number of DHCP Relay-assigned IP addresses released due to the expiration of the address lease.
Other Reasons	The number of DHCP Relay-assigned IP addresses released due to reasons other than those listed here.
<b>Session Release Reasons: (dhcp-local-server)</b>	
Admin Releases	The number of DHCP local-server-assigned IP addresses released due to administrative intervention.
Bearer Call Terminated	The number of DHCP local-server-assigned IP addresses released due to session termination.
Lease Timed-out	The number of DHCP local-server-assigned IP addresses released due to the expiration of the address lease.
Other Reasons	The number of DHCP local-server-assigned IP addresses released due to reasons other than those listed here.
<b>DHCP Messages</b>	
DISCOVER TX	The number of DHCPDISCOVER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retransmitted	The number of DHCPDISCOVER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER RX	The number of DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retried RX	The number of retried DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER relayed	The number of DHCPDISCOVER messages relayed by the system to the mobile as part of the DHCP Relay method.

Field	Description
DISCOVER retransmitted relayed	The number of retransmitted DHCPDISCOVER messages relayed by the system to the mobile as part of the DHCP Relay
OFFER RX	The number of DHCP OFFER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER Discarded	The number of DHCP OFFER messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER relayed	The number of DHCP OFFER messages relayed by the system to the mobile as part of the DHCP Relay method.
REQUEST TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST retransmitted	The number of DHCPREQUEST messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST relayed	The number of DHCPREQUEST messages relayed by the system to the mobile as part of the DHCP Relay method.
REQUEST renewing relayed	The number of DHCPREQUEST renewal messages relayed by the system to the mobile as part of the DHCP Relay method.
ACK RX	The number of DHCPACK messages received from the DHCP server as part of the DHCP Proxy method.
ACK for INFORM	The number of acknowledgements received for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
ACK Renewing RX	The number of DHCPACK renewal messages received from the DHCP server as part of the DHCP Proxy method.
ACK TX	The number of DHCPACK messages sent to the DHCP server as part of the DHCP Proxy method.
ACK Renewing TX	The number of DHCPACK renewal messages sent to the DHCP server as part of the DHCP Proxy method
ACK relayed	The number of DHCPACK messages relayed by the system to the mobile as part of the DHCP Relay method.
ACK renewing relayed	The number of DHCPACK renewal messages relayed by the system to the mobile as part of the DHCP Relay method.
NAK RX	The number of DHCPNAK messages received from the DHCP server as part of the DHCP Proxy method.
NAK for INFORM	The number of number of negative acknowledgements for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
NAK TX	The number of DHCPNAK messages sent to the DHCP server as part of the DHCP Proxy method.

Field	Description
NAK relayed	The number of DHCPNAK messages relayed by the system to the mobile as part of the DHCP Relay method.
DECLINE TX	The number of DHCPDECLINE messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DECLINE RX	The number of DHCPDECLINE messages received from the DHCP server as part of the DHCP Proxy method.
DECLINE relayed	The number of DHCPDECLINE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE TX	The number of DHCPRELEASE messages sent by the system to the DHCP server as part of the DHCP Proxy method.
RELEASE RX	The number of DHCPRELEASE messages received from the DHCP server as part of the DHCP Proxy method.
RELEASE relayed	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE for relay call	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
INFORM TX	The number of DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
INFORM retransmitted	The number of DHCPINFORM messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
INFORM RX	The number of DHCPINFORM messages received from the DHCP server as part of the DHCP Proxy method.
INFORM relayed	The number of DHCPINFORM messages relayed by the system to the DHCP server on behalf of the mobile as part of the DHCP Relay method.
<b>DHCP OFFER Discard Reasons:</b>	
Parse error	The number of DHCP OFFER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
Lease less than min	The number of DHCP OFFER messages discarded by the system due to the offered lease time being less than the minimum acceptable value configured on the system.
Lease greater than max	The number of DHCP OFFER messages discarded by the system due to the offered lease time being greater than the maximum acceptable value configured on the system.

Field	Description
IP Validation failed	The number of DHCPOFFER messages discarded by the system due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.
XID mismatch:	The number of DHCPOFFER messages discarded by the system due to an XID mismatch.
<b>DHCP ACK Discard Reasons:</b>	
Parse error	The number of DHCPACK messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
XID mismatch:	The number of DHCPACK messages discarded by the system due to an XID mismatch.
<b>DHCP DECLINE Reasons: (dhcp-proxy)</b>	
IP mismatch	The number of DHCPDECLINE messages sent by the system due to a mismatch in the IP address returned in the OFFER and the IP address returned in ACK. A DECLINE message is sent for the IP address sent in the OFFER.
<b>DHCP DISCOVER Discard Reasons:</b>	
Parse error	The number of DHCPDISCOVER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>DHCP REQUEST Discard Reasons:</b>	
Parse error	The number of DHCPREQUEST messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>DHCP RELEASE Discard Reasons:</b>	

Field	Description
Parse error	The number of DHCPRELEASE messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>Renewal Statistics: (dhcp-proxy)</b>	
IP Lease Renewals	The number of address lease renewal requests successfully processed.
Failed IP Lease Renewals	The number of address lease renewal requests for which failures occurred. This is the sum of the following errors: <ul style="list-style-type: none"> <li>• No reply from server</li> <li>• Server NAK</li> <li>• IP address mis-match</li> <li>• Lease mismatch</li> </ul>
No reply from server	The number of address lease renewal requests made for which there was no reply from the DHCP server within the stipulated time. The time required to wait for the server's response is described in RFC 2131, section 4.4.5.
Server NAK	The number of address lease renewal requests for which a negative acknowledgement was received from the server.
IP address mis-match	The number of address lease renewal requests for which there was an IP address mis-match condition- the IP Addresses assigned to the client (in the first ACK) and the IP address returned in the successive ACK (in response to lease renewal DHCP REQUEST) did not match.
Lease mis-match	The number of address lease renewal requests for which there was a lease time mis-match condition- to be lease returned in the first ACK was within the limits of the DHCP Service Configuration parameters, but the lease returned in the ACK (in response to lease renewal DHCP REQUEST) did not match.

## show dhcp username

Table 247: show dhcp username Command Output Descriptions

Field	Description
User Name	The user name associated with this session.

Field	Description
User Address	IP address of the user's PDP context in dotted decimal notation.
DHCP Service	The DHCP service name.
Server Address	The server address.
DHCP Call Type	The DHCP call type.
DHCP State	The DHCP state.
Lease time received	The IP address lease time received.
Lease time remaining	The IP address lease time remaining.
Total DHCP sessions matching specified criteria	The total number of DHCP sessions matching specified criteria.

## show dhcp full username

*Table 248: show dhcp full username Command Output Descriptions*

Field	Description
User Name	The user name associated with this session.
User Address	IP address of the user's PDP context in dotted decimal notation.
DHCP Service	The DHCP service name.
Server Address	The server address.
DHCP Chaddr of MS	The Client Hardware (MAC) Address (CHADDR) of MS.
Primary DNS Address	Specifies the primary Domain Name Server (DNS) IP address in IPv4 notation. <b>NOTE:</b> This is the DNS/NBNS value received from the DHCP server for the particular subscriber session sent to the subscriber in a GTP Create PDP Context Response message. If the DNS/NBNS value received from DHCP is not sent to the subscriber, nothing will be displayed.
Secondary DNS Address	Specifies the secondary Domain Name Server (DNS) IP address in IPv4 notation. <b>NOTE:</b> This is the DNS/NBNS value received from the DHCP server for the particular subscriber session sent to the subscriber in a GTP Create PDP Context Response message. If the DNS/NBNS value received from DHCP is not sent to the subscriber, nothing will be displayed.

Field	Description
Primary NBNS Address	Specifies the primary NetBIOS Name Server (NBNS) IP address in IPv4 notation. <b>NOTE:</b> This is the DNS/NBNS value received from the DHCP server for the particular subscriber session sent to the subscriber in a GTP Create PDP Context Response message. If the DNS/NBNS value received from DHCP is not sent to the subscriber, nothing will be displayed.
Secondary NBNS Address	Specifies the secondary NetBIOS Name Server (NBNS) IP address in IPv4 notation. <b>NOTE:</b> This is the DNS/NBNS value received from the DHCP server for the particular subscriber session sent to the subscriber in a GTP Create PDP Context Response message. If the DNS/NBNS value received from DHCP is not sent to the subscriber, nothing will be displayed.
DHCP Call Type	The DHCP call type.
DHCP State	The DHCP state.
Lease time received	The IP address lease time received.
Lease time remaining	The IP address lease time remaining.
<b>DHCP Messages:</b>	
DISCOVER TX	The number of DHCPDISCOVER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retransmitted	The number of DHCPDISCOVER messages retransmitted by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER RX	The number of DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER retried RX	The number of retried DHCPDISCOVER messages received by the system to the DHCP server as part of the DHCP Proxy method.
DISCOVER relayed	The number of DHCPDISCOVER messages relayed by the system to the DHCP server as part of the DHCP Proxy method.
OFFER RX	The number of DHCPOFFER messages received by the system to the DHCP server as part of the DHCP Proxy method.
OFFER Discarded	The number of DHCPOFFER messages discarded by the system to the DHCP server as part of the DHCP Proxy method.
OFFER TX	The number of DHCPOFFER messages sent by the system to the DHCP server as part of the DHCP Proxy method.
OFFER relayed	The number of DHCPOFFER messages relayed by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST TX	The number of DHCPREQUEST messages sent by the system to the DHCP server as part of the DHCP Proxy method.

Field	Description
REQUEST retransmitted	The number of DHCPREQUEST messages re-sent by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST RX	The number of DHCPREQUEST messages received by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST renewal RX	The number of DHCPREQUEST renewal messages received by the system to the DHCP server as part of the DHCP Proxy method.
REQUEST relayed	The number of DHCPREQUEST messages relayed by the system to the DHCP server as part of the DHCP Proxy method.
ACK RX	The number of DHCPACK messages received from the DHCP server as part of the DHCP Proxy method.
ACK for INFORM	The number of acknowledgements received for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
ACK TX	The number of DHCPACK messages sent to the DHCP server as part of the DHCP Proxy method.
ACK Renewing TX	The number of DHCPACK renewal messages sent to the DHCP server as part of the DHCP Proxy method.
ACK relayed	The number of DHCPACK messages relayed by the system to the mobile as part of the DHCP Relay method.
NAK RX	The number of DHCPNAK messages received from the DHCP server as part of the DHCP Proxy method.
NAK for INFORM	The number of negative acknowledgements for DHCPINFORM messages sent by the system to the DHCP server as part of the DHCP Proxy method.
NAK TX	The number of DHCPNAK messages sent to the DHCP server as part of the DHCP Proxy method.
NAK relayed	The number of DHCPNAK messages relayed by the system to the mobile as part of the DHCP Relay method.
DECLINE relayed	The number of DHCPDECLINE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
RELEASE relayed	The number of DHCPRELEASE messages relayed by the system to the DHCP server as part of the DHCP Relay method.
INFORM relayed	The number of DHCPINFORM messages relayed by the system to the DHCP server on behalf of the mobile as part of the DHCP Relay method.
<b>DHCP OFFER Discard Reasons: (dhcp-proxy)</b>	

Field	Description
Parse error	The number of DHCPOFFER messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
Lease less than min	The number of DHCPOFFER messages discarded by the system due to the offered lease time being less than the minimum acceptable value configured on the system.
Lease greater than max	The number of DHCPOFFER messages discarded by the system due to the offered lease time being greater than the maximum acceptable value configured on the system.
IP Validation failed	The number of DHCPOFFER messages discarded by the system due to a failure with the validation of the IP address. This occurs because the IP address returned by DHCP Server is not present in the static pool in the destination context.
<b>DHCP ACK Discard Reasons: (dhcp-proxy)</b>	
Parse error	The number of DHCPACK messages discarded by the system due to parsing errors in the OFFER message such as: <ul style="list-style-type: none"> <li>• "magic cookie invalid"</li> <li>• missing "end" option</li> <li>• "xid" does not match xid of any outstanding requests</li> <li>• the message is a "short message"</li> </ul>
<b>DHCP DECLINE Reasons: (dhcp-proxy)</b>	
IP mismatch	The number of DHCPDECLINE messages sent by the system due to a mismatch in the IP address returned in the OFFER and the IP address returned in ACK. A DECLINE message is sent for the IP address sent in the OFFER.
IP Lease Renewals	The number of address lease renewal requests successfully processed.
<b>Session Counters</b>	
Total Current	The total number of currently active sessions on the system that received DHCP-assigned IP addresses.
DHCP Proxy	The total number of currently active sessions that were assigned IP addresses using the DHCP Proxy method.
DHCP Relay Agent	The total number of sessions that were assigned IP addresses using the DHCP Relay method.
DHCP Server	The DHCP server's IP address.

Field	Description
Total DHCP sessions matching specified criteria	The total number of DHCP sessions matching specified criteria.

show dhcp full username

# CHAPTER 44

## show diameter

This chapter includes the **show diameter** command output tables.

- [show diameter aaa-statistics](#), on page 771
- [show diameter aaa-statistics misc-data](#), on page 783
- [show diameter authentication servers](#), on page 784
- [show diameter diactrl proxy-vm-map](#), on page 784
- [show diameter dynamic-dictionary all](#), on page 785
- [show diameter endpoints all](#), on page 785
- [show diameter message-queue counters outbound endpoint](#), on page 786
- [show diameter osid-info sessmgr](#), on page 788
- [show diameter osid-info sessmgr all](#), on page 788
- [show diameter peers full all](#), on page 789
- [show diameter statistics](#), on page 790
- [show diameter tps-statistics verbose](#), on page 798

## show diameter aaa-statistics

*Table 249: show diameter aaa-statistics Command Output Descriptions*

Field	Description
<b>Authentication Servers Summary</b>	
<b>Message Stats</b>	Total Diameter session message statistics.
Total MA Requests	Total number of Multimedia-Auth-Requests.
Total MA Answers	Total number of Multimedia-Auth-Answers.
MAR - Retries	Total number of Multimedia-Auth-Request retries.
MAA Timeouts	Total number of Multimedia-Auth-Answer timeouts.
MAA - Dropped	Total number of Multimedia-Auth-Answer dropped.
Total SA Requests	Total number of Server-Assignment-Requests.

Field	Description
Total SA Answers	Total number of Server-Assignment-Answers.
SAR - Retries	Total number of Server-Assignment-Request retries.
SAA Timeouts	Total number of Server-Assignment-Answer timeouts.
SAA - Dropped	Total number of Server-Assignment-Answers dropped.
Total UA Requests	Total number of User-Authorization-Requests.
Total UA Answers	Total number of User-Authorization-Answers.
UAR - Retries	Total number of User-Authorization-Request retries.
UAA Timeouts	Total number of User-Authorization-Answer timeouts.
UAA - Dropped	Total number of User-Authorization-Answers dropped.
Total LI Requests	Total number of Location-Info-Requests.
Total LI Answers	Total number of Location-Info-Answers.
LIR - Retries	Total number of Location-Info-Request retries.
LIA Timeouts	Total number of Location-Info-Answer timeouts.
LIA - Dropped	Total number of Location-Info-Answers dropped.
Total RT Requests	Total number of Registration-Termination-Requests.
Total RT Answers	Total number of Registration-Termination-Answers.
RTR - Rejected	Total number of Registration-Termination-Requests rejected.
Total PP Requests	Total number of Push-Profile-Requests.
Total PP Answers	Total number of Push-Profile-Answers.
PPR - Rejected	Total number of Push-Profile-Requests rejected.
Total DE Requests	Total number of Diameter-EAP-Requests.
Total DE Answers	Total number of Diameter-EAP-Answers.
DEA - Accept	Total number of Diameter-EAP-Answers accepted.
DEA - Reject	Total number of Diameter-EAP-Answers rejected.
DER - Retries	Total number of Diameter-EAP-Request retries.
DEA Timeouts	Total number of Diameter-EAP-Answer timeouts.
DEA - Dropped	Total number of Diameter-EAP-Answer dropped.

Field	Description
Total AA Requests	Indicates the total number of AA (Authentication and/or Authorization) Request messages sent by P-GW on S6b interface to AAA Server/Proxy.
Total AA Answers	Indicates the total number of AA (Authentication and/or Authorization) Answer messages received by P-GW on S6b interface from AAA Server/Proxy.
AAR - Retries	Indicates the total number of AAR (AA Request) messages retransmitted by P-GW on S6b interface to AAA Server/Proxy.
AAA Timeouts	Indicates the total number of AAA (AA Answer) messages timed-out due to no response from AAA Server/Proxy.
AAA - Dropped	Indicates the total number of AAA (AA Answer) messages dropped due any reason from AAA Server/Proxy.
ASR	Total number of Abort-Session-Requests.
ASA	Total number of Abort-Session-Answers.
RAR	Total number of Re-Auth-Requests.
RAA	Total number of Re-Auth-Answers.
STR	Total number of Session-Termination-Requests.
STA	Total number of Session-Termination-Answers.
STR - Retries	Total number of Session-Termination-Request retries.
AAA-Failure-Indication	Total number of times the AAA-Failure-Indication AVP is sent over Diameter Authentication interfaces (S6b/SWm/STa).
<b>DE Message Error Stats</b>	
Diameter Protocol Errs	Total number of Diameter protocol errors.
Bad Answers	Total number of bad answers.
Unknown Session Reqs	Total number of unknown session requests.
Unknown Command Code	Total number of unknown command codes.
Request Timeouts	Total number of request timeouts.
Parse Errors	Total number of parse errors.
Request Retries	Total number of request retries.
<b>Session Stats</b>	Diameter Session Statistics.
Total Sessions	Total number of sessions.
Freed Sessions	Total number of freed sessions.

Field	Description
Session Timeouts	Total number of session timeouts.
Active Auth Sessions	Total number of active authentication sessions.
Active Acct Sessions	Total number of active accounting sessions.
<b>FH Behavior (emps)</b>	
<b>Continue</b>	Indicated the number of times the failure handling action "Continue" was triggered.
With Retry	Indicates the number of times failure handling action "continue with Retry" is taken using the eMPS template.
Without Retry	Indicates the number of times failure handling action "continue without Retry" is taken using the eMPS template.
<b>Retry and Terminate</b>	Indicates the number of times failure handling "Retry and Terminate" was triggered.
Retry and Terminate	Indicates the number of times failure handling "retry and terminate" is taken using eMPS template.
Retry Term without STR	Indicates the number of times failure handling "retry and terminate without STR" is taken using eMPS template.
<b>Termination</b>	Indicates the number of times failure handling "Termination" was triggered.
Terminate	Indicates the number of times failure handling "terminate" is taken using eMPS template.
Terminate without STR	Indicates the number of times failure handling "terminate without STR" is taken using eMPS template.
<b>STR Termination Cause Stats</b>	Session-Termination-Request termination cause statistics.
Diameter Logout	Total number of Session-Termination-Request terminations due to Diameter logouts.
Service Not Provided	Total number of Session-Termination-Request terminations due to service not provided.
Bad Answer	Total number of Session-Termination-Request terminations due to bad answers.
Administrative	Total number of Session-Termination-Request terminations due to administrative reasons.
Link Broken	Total number of Session-Termination-Request terminations due to links broken.
Auth Expired	Total number of Session-Termination-Request terminations due to auth expiry.
User Moved	Total number of Session-Termination-Request terminations due to user moves.

Field	Description
Session Timeout	Total number of Session-Termination-Request terminations due to session timeouts.
User Request	Total number of Session-Termination-Request terminations due to user requests.
Lost Carrier	Total number of Session-Termination-Request terminations due to lost carriers.
Lost Service	Total number of Session-Termination-Request terminations due to lost service.
Idle Timeout	Total number of Session-Termination-Request terminations due to idle timeouts.
NAS Session Timeout	Total number of Session-Termination-Request terminations due to NAS session timeouts.
Admin Reset	Total number of Session-Termination-Request terminations due to admin resetting.
Admin Reboot	Total number of Session-Termination-Request terminations due to admin reboots.
Port Error	Total number of Session-Termination-Request terminations due to port errors.
NAS Error	Total number of Session-Termination-Request terminations due to NAS errors.
NAS Request	Total number of Session-Termination-Request terminations due to NAS requests.
NAS Reboot	Total number of Session-Termination-Request terminations due to NAS reboots.
Port Unneeded	Total number of Session-Termination-Request terminations due to unneeded ports.
Port Preempted	Total number of Session-Termination-Request terminations due to preempted ports.
Port Suspended	Total number of Session-Termination-Request terminations due to suspended ports.
Service Unavailable	Total number of Session-Termination-Request terminations due to unavailable service.
Callback	Total number of Session-Termination-Request terminations due to callback.
User Error	Total number of Session-Termination-Request terminations due to user errors.
Host Request	Total number of Session-Termination-Request terminations due to host requests.
<b>Result Code Stats</b>	

Field	Description
Result Code 1xxx	Total number of S6b messages processed and responded with the result code 1xxx.
Result Code 2xxx	Total number of S6b messages processed and responded with the result code 2xxx.
Result Code 3xxx	Total number of S6b messages processed and responded with the result code 3xxx.
Result Code 4xxx	Total number of S6b messages processed and responded with the result code 4xxx.
Result Code 5xxx	Total number of S6b messages processed and responded with the result code 5xxx.
Other Result Code	Total number of S6b messages processed and responded with the result code other than 1xxx –5xxx.
<b>Protocol Errors (3xxx]</b>	
Result Code (3002)	Shows the DIAMETER_UNABLE_TO_DELIVER result code value (3002), if Diameter cannot deliver the message to the destination, either because no host within the realm supporting the required application was available to process the request or because the Destination-Host AVP was specified without the associated Destination-Realm AVP.
Result Code (3004)	Displays the DIAMETER_TOO_BUSY error result code value (3004) only when a specific server is requested and it cannot provide the requested service.
Result Code (3005)	Shows the DIAMETER_LOOP_DETECTED result code value (3005), when an agent detected a loop while trying to get the message to the intended recipient. The message may be sent to an alternate peer, if one is available, but the peer reporting the error has identified a configuration problem.
Result Code (3008)	Shows DIAMETER_INVALID_HDR_BITS result code value (3008), if a request was received whose bits in the Diameter header were set either to an invalid combination or to a value that is inconsistent with the Command Code definition.
Result Code (3009)	Shows DIAMETER_INVALID_AVP_BITS result code value (3009), if a request was received that included an AVP whose flag bits are set to an unrecognized value or that is inconsistent with the AVP definition.
Result Code Others	Total number of other messages processed and responded.
<b>Transient Failures (4xxx)</b>	
Result Code 4001	Shows the DIAMETER_AUTHENTICATION_REJECTED result code value (4001), when the authentication process for the user fails, due to an invalid password used by the user. Further attempts must only be allowed after prompting the user for a new password.

Field	Description
Result Code 4002	Shows the DIAMETER_OUT_OF_SPACE Result code value (4002), when a Diameter node receives the accounting request but was unable to commit it to stable storage due to a temporary lack of space.
Result Code Others	Total number of other messages processed and responded.
<b>Permanent Failures (5xxx]</b>	
Result Code 5002	Displays the DIAMETER_UNKNOWN_SESSION_ID result code value (5002), if the request contains an unknown Session-Id.
Result Code 5003	Displays the DIAMETER_AUTHORIZATION_REJECTED (5003) result code value, if a request was received for which the user could not be authorized. This error occurs if the requested service is not permitted to the user.
Result Code 5005	Displays the DIAMETER_MISSING_AVP (5005) result code value, if a request did not contain an AVP that is required by the Command Code definition.  <b>Important</b> If this value is sent in the Result-Code AVP, a Failed-AVP should be included in the message. The Failed-AVP must contain an example of the missing AVP complete with the Vendor-Id if applicable. The value field of the missing AVP should be of correct minimum length and contain zeroes.
Result Code 5006	Displays the DIAMETER_RESOURCES_EXCEEDED (5006) result code value, when a request was received that cannot be authorized because the user has already expended allowed resources. For example, error occurs when a user is restricted to one dial-up PPP port, attempts to establish a second PPP connection.
Result Code 5012	Displays DIAMETER_UNABLE_TO_COMPLY (5012) result code value, if an error is returned when a request is rejected for unspecified reasons.
Result Code 5030	Displays the total number of DIAMETER_USER_UNKNOWN (5030) result code value.
<b>Experimental Result Code Stats</b>	
Exp Result Code 5199	Total number of times the Experimental-Result-Code "DIAMETER_NEWER_SESSION_DETECTED (5199)" is received in the authentication response message. This result code is introduced to detect stale message requests and support session uniqueness.
Exp Result Code 5001	Total number of times the Experimental-Result-Code DIAMETER_ERROR_USER_UNKNOWN (5001) is received in the authentication response message.
Exp Result Code 5004	Total number of times the Experimental-Result-Code DIAMETER_ERROR_ROAMING_NOT_ALLOWED (5004) is received in the authentication response message.

Field	Description
Exp Result Code 5041	Total number of times the Experimental-Result-Code DIAMETER_ERROR_USER_NO_WLAN_SUBSCRIPTION (5041) is received in the authentication response message.
<b>S6b Stats</b>	
Total Assume-positive	Total number of active subscribers which are in S6b by-passed state (assume positive). That is, the total count of active number of PDN sessions for which S6b by-passed.  This statistics is available per aaamgr-instance level.
<b>FH Behavior</b>	
Continue	
With Retry	Total number of times the failure handling action "continue" is applied through the failure-handling-template.
Without Retry	Total number of times the failure handling action "continue-without-retry" is applied through the failure-handling-template. This failure action implies that the call will be continued without retrying to the secondary PCRF server.
Retry and Terminate	
Retry and Terminate	Total number of times the failure handling action "retry and terminate" is applied through the failure-handling-template.
Retry Term without STR	Total number of times the failure handling action "retry and terminate" is applied without sending the Session Terminate Request (STR) on call termination.
Termination	
Terminate	Total number of times the failure handling action "terminate" is applied through the failure-handling-template.
Terminate without STR	Total number of times the failure handling action "terminate" is applied through the failure-handling-template without the Session Terminate Request (STR).
<b>Diameter Overload Control Stats</b>	
AAA	Total number of times the Diameter Experimental Result-Code "DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY" (5198) is received in AAA message.
DEA	Total number of times the Diameter Experimental Result-Code "DIAMETER_OVERLOAD_RETRY_NOT_ALLOWED_TO_ANY" (5198) is received in DEA message.
<b>Accounting Servers Summary</b>	
Message Stats	Accounting message statistics.

Field	Description
Total AC Requests	Total number of AC-Requests.
Total AC Answers	Total number of AC-Answers.
ACR-Start	Total number of AC-Request starts.
ACA-Start	Total number of AC-Answer starts.
ACR-Start Retries	Total number of AC-Request start retries.
ACA-Start Timeouts	Total number of AC-Answer timeouts. <b>Important</b> This statistics is not supported in 17. 0 and later releases.
ACA-Start Req-Timeouts	Total number of times the AC-Answer Start Request timeout happens happens due to no response from CCF/peer.
ACA-Start Res-Timeouts	Total number of times the AC-Answer Start Response timeout happens due to no response from CCF/peer.
ACA-Interim Req-Timeouts	Total number of times the AC-Answer Interim Request timeout happens due to no response from CCF/peer.
ACA-Interim Res-Timeouts	Total number of times the AC-Answer Interim Response timeout happens due to no response from CCF/peer.
ACA-Stop Req-Timeouts	Total number of times the AC-Answer Stop Request timeout happens due to no response from CCF/peer.
ACA-Stop Res-Timeouts	Total number of times the AC-Answer Stop Response timeout happens due to no response from CCF/peer.
ACR-Interim	Total number of AC-Request interim.
ACA-Interim	Total number of AC-Answer interim.
ACR-Interim Retries	Total number of AC-Request interim retries.
ACA-Interim Timeouts	Total number of AC-Answer interim timeouts. <b>Important</b> This statistics is not supported in 17. 0 and later releases.
ACR-Event	Total number of AC-Request events.
ACA-Event	Total number of AC-Answer events.
ACR-Stop	Total number of AC-Request stops.
ACA-Stop	Total number of AC-Answer stops.
ACR-Stop Retries	Total number of AC-Request stop retries.

Field	Description
ACA-Stop Timeouts	Total number of AC-Answer stop timeouts. <b>Important</b> This statistics is not supported in 17.0 and later releases.
ACA-Dropped	Total number of AC-Answers dropped.
<b>ACR-Stop Event Stats</b>	Accounting message Event statistics.
Service-Sp-Unit-Limit	Total number of ACR-STOP messages that are sent with the change-condition "SERVICE-SPECIFIC-UNIT-LIMIT".
<b>AC Message Error Stats</b>	Accounting message error statistics.
Diameter Protocol Errs	Total number of Diameter protocol errors.
Bad Answers	Total number of bad answers.
Unknown Session Reqs	Total number of unknown session requests.
Unknown Command Code	Total number of unknown command codes.
Request Timeouts	Total number of request timeouts.
Response Timeouts	Total number of response timeouts.
Parse Errors	Total number of parse errors.
Request Retries	Total number of request retries.
<b>ACR Message Interim Event Stats</b>	
Volume-limit	The total number of ACR-Interims that were triggered because of the event trigger "Volume-Limit"
Time-Limit	The total number of ACR-Interims that were triggered because of the event trigger "Time-Limit"
RAT-Change	The total number of ACR-Interims that were triggered because of the event trigger "RAT-Change"
TimeZone-Change	The total number of ACR-Interims that were triggered because of the event trigger "Timezone-Change"
PLMN-Change	The total number of ACR-Interims that were triggered because of the event trigger "PLMN-Change"
Max-Charging-Condition	The total number of ACR-Interims that were triggered because of the event trigger "Max-Charging-Condition"
Service-Data-Time-Limit	The total number of ACR-Interims that were triggered because of the event trigger "Service-Data-Time-Limit"
Service-Data-Vol-Limit	The total number of ACR-Interims that were triggered because of the event trigger "Service-Data-Volume-Limit"

Field	Description
AII-Timer	The total number of ACR-Interims that were triggered because of the event trigger "AII-Timer"
<b>Result Code Stats</b>	
Result Code 1xxx	Total number of Diameter accounting messages processed and responded with the result code 1xxx.
Result Code 2xxx	Total number of accounting messages processed and responded with the result code 2xxx.
Result Code 3xxx	Total number of accounting messages processed and responded with the result code 3xxx.
Result Code 4xxx	Total number of accounting messages processed and responded with the result code 4xxx.
Result Code 5xxx	Total number of accounting messages processed and responded with the result code 5xxx.
Other Result Code	Total number of accounting messages processed and responded with the result code other than 1xxx –5xxx.
<b>Backpressure Stats</b>	Diameter Backpressure statistics
<b>Protocol Errors (3xxx]</b>	
Result Code (3002)	Shows the DIAMETER_UNABLE_TO_DELIVER result code value (3002), if Diameter cannot deliver the message to the destination, either because no host within the realm supporting the required application was available to process the request or because the Destination-Host AVP was specified without the associated Destination-Realm AVP.
Result Code (3004)	Displays the DIAMETER_TOO_BUSY error result code value (3004) only when a specific server is requested and it cannot provide the requested service.
Result Code (3005)	Shows the DIAMETER_LOOP_DETECTED result code value (3005), when an agent detected a loop while trying to get the message to the intended recipient. The message may be sent to an alternate peer, if one is available, but the peer reporting the error has identified a configuration problem.
Result Code (3008)	Shows DIAMETER_INVALID_HDR_BITS result code value (3008), if a request was received whose bits in the Diameter header were set either to an invalid combination or to a value that is inconsistent with the Command Code definition.
Result Code (3009)	Shows DIAMETER_INVALID_AVP_BITS result code value (3009), if a request was received that included an AVP whose flag bits are set to an unrecognized value or that is inconsistent with the AVP definition.
Result Code Others	Total number of other messages processed and responded.
<b>Transient Failures (4xxx)</b>	

Field	Description
Result Code 4001	Shows the DIAMETER_AUTHENTICATION_REJECTED result code value (4001), when the authentication process for the user fails, due to an invalid password used by the user. Further attempts must only be allowed after prompting the user for a new password.
Result Code 4002	Shows the DIAMETER_OUT_OF_SPACE Result code value (4002), when a Diameter node receives the accounting request but was unable to commit it to stable storage due to a temporary lack of space.
Result Code Others	Total number of other messages processed and responded.
<b>Permanent Failures (5xxx]</b>	
Result Code 5002	Displays the DIAMETER_UNKNOWN_SESSION_ID result code value (5002), if the request contains an unknown Session-Id.
Result Code 5003	Displays the DIAMETER_AUTHORIZATION_REJECTED (5003) result code value, if a request was received for which the user could not be authorized. This error occurs if the requested service is not permitted to the user.
Result Code 5005	Displays the DIAMETER_MISSING_AVP (5005) result code value, if a request did not contain an AVP that is required by the Command Code definition.  <b>Important</b> If this value is sent in the Result-Code AVP, a Failed-AVP should be included in the message. The Failed-AVP must contain an example of the missing AVP complete with the Vendor-Id if applicable. The value field of the missing AVP should be of correct minimum length and contain zeroes.
Result Code 5006	Displays the DIAMETER_RESOURCES_EXCEEDED (5006) result code value, when a request was received that cannot be authorized because the user has already expended allowed resources. For example, error occurs when a user is restricted to one dial-up PPP port, attempts to establish a second PPP connection.
Result Code 5012	Displays DIAMETER_UNABLE_TO_COMPLY (5012) result code value, if an error is returned when a request is rejected for unspecified reasons.
Result Code 5030	Displays the total number of DIAMETER_USER_UNKNOWN (5030) result code value.
<b>Experimental Result Code Stats</b>	
Exp Result Code 5001	Total number of times the Experimental-Result-Code DIAMETER_ERROR_USER_UNKNOWN (5001) is received in the authentication response message.
Exp Result Code 5004	Total number of times the Experimental-Result-Code DIAMETER_ERROR_ROAMING_NOT_ALLOWED (5004) is received in the authentication response message.

Field	Description
Exp Result Code 5041	Total number of times the Experimental-Result-Code DIAMETER_ERROR_USER_NO_WLAN_SUBSCRIPTION (5041) is received in the authentication response message.
Peer BP Queue Length	Displays the peer backpressure queue length.
Peer BP Queue Insertions	Displays the peer backpressure insertions to the queue.
Peer BP Queue deletions	Displays the peer backpressure deletions from the queue.
Global BP Queue Length	Displays the global backpressure queue length.
Global BP Queue Insertions	Displays the global backpressure insertions to the queue.
Global BP Queue Deletions	Displays the global backpressure deletions from the queue.
<b>Duplicate Accounting Records Stats</b>	
ACR-Start Dropped	Displays the total number of duplicate Rf START records which were dropped because of the failure in sending the Accounting records instead of adding them to HDD or archival list.
ACR-Interim Dropped	Displays the total number of duplicate Rf INTERIM records which were dropped because of the failure in sending the Accounting records instead of adding them to HDD or archival list.
ACR-Stop Dropped	Displays the total number of duplicate Rf STOP records which were dropped because of the failure in sending the Accounting records instead of adding them to HDD or archival list.

## show diameter aaa-statistics misc-data

*Table 250: show diameter aaa-statistics misc-data Command Output Descriptions*

Field	Description
Facility	The AAA manager facility name.
Instance	The AAA manager instance number which has the highest backpressure statistics.
Max Peer BP Queue Length	The maximum peer backpressure queue length.
Max BP Time	The timestamp at which the maximum peer backpressure happened.

## show diameter authentication servers

Table 251: show diameter authentication servers Command Output Descriptions

Field	Description
Context Name	Name of the context in which the Diameter servers are configured.
AAA Group	Name of the AAA group.
Endpoint	Name of the Diameter endpoint.
Peer	Name of the Diameter server host.
No of Instance in UP state	The number of instances between Diameter server and AAA Manager in up state.
No of Instance in DOWN state	The number of instances between Diameter server and AAA Manager in down state.
Priority	The relative priority of this server considered when the system is selecting which Diameter server to use. Lower number has higher priority.
Message Sent/Queued	The number of messages sent/queued from Diameter server to AAA Manager.

## show diameter diactrl proxy-vm-map

Table 252: show diameter diactrl proxy-vm-map Command Output Descriptions

Field	Description
If the MAX mode is configured and if the Diameter proxy to VM mapping is available, the following new fields are displayed:	
diamproxy instance	Indicates the Diameter proxy instance.
Started on VM	Indicates the VM on which the Diameter proxy instance exists.
VM served	Indicates the number of VMs served for a particular Diameter proxy instance.
If the MAX mode is configured and if Diameter proxy to VM mapping is not available, the following message is displayed:  Error: no valid diameter proxy to VM mapping present in diactrl	
If MAX mode is not configured, the following message is displayed:  Info: proxy-vm-map CLI is valid only for max mode configuration of diamproxy	

## show diameter dynamic-dictionary all

Table 253: show diameter dynamic-dictionary all Command Output Descriptions

Field	Description
Dynamic Dictionary Name	Indicates the name of the configured Diameter dynamic dictionary.
vids	Indicates the vendor ID.
Base static dictionary	<p>Displays the static dictionary number and name from which the dynamic dictionary is derived.</p> <p><b>Important</b> This field will be displayed only if the "!base-dict &lt;dictionary-number&gt;" is configured in the dynamic dictionary's ABNF text file.</p> <p>If "!base-dict &lt;dictionary-number&gt;" is configured in the ABNF text file, the output will be of the form "&lt;dictionary-number&gt; / &lt;dictionary-name&gt;". By default, "Base static dictionary: 0 / dictzero" will be displayed.</p>
Command Code (CC) followed by AVP list	Displays the list of AVPs and command codes defined in the dynamic dictionary.
Number of Command Codes defined	Indicates the number of command codes defined.
Number of AVPs defined	Indicates the number of AVPs defined.
Total Number of dynamic-dictionaries configured	Indicates the total number of dynamic dictionaries configured.

## show diameter endpoints all

Table 254: show diameter endpoints all Command Output Descriptions

Field	Description
Context	Name of the configured context.
Endpoint	Name of the endpoint.
Realm	Domain (Realm) name for subscriber.
Task	Task running on ACSMgr or AAAMgr.
CPU	Indicates the Card and CPU number.
Application	Indicates the application running on ACSMgr or AAAMgr.
Total endpoints matching specified criteria	Indicates the total number of matching endpoints.

# show diameter message-queue counters outbound endpoint

Table 255: show diameter message-queue counters outbound endpoint Command Output Descriptions

Field	Description
Context	Name of the configured context.
Endpoint	Name of the endpoint.
Peer Host	Name of the peer host.
Peer Realm	Name of the peer realm.
Accounting-Answer	The number of outbound Accounting-Answer messages for the specified endpoint.
Accounting-Request	The number of outbound Accounting-Request messages for the specified endpoint.
Abort-Session-Answer	The number of outbound Abort-Session-Answer messages for the specified endpoint.
Abort-Session-Request	The number of outbound Abort-Session-Request messages for the specified endpoint.
Authorization-Authentication-Ans	The number of outbound Authorization-Authentication-Ans messages for the specified endpoint.
Authorization-Authentication-Req	The number of outbound Authorization-Authentication-Req messages for the specified endpoint.
Capabilities-Exchange-Answer	The number of outbound Capabilities-Exchange-Answer messages for the specified endpoint.
Capabilities-Exchange-Request	The number of outbound Capabilities-Exchange-Request messages for the specified endpoint.
Credit-Control-Answer	The number of outbound Credit-Control-Answer messages for the specified endpoint.
Credit-Control-Request	The number of outbound Credit-Control-Request messages for the specified endpoint.
Device-Watchdog-Answer	The number of outbound Device-Watchdog-Answer messages for the specified endpoint.
Device-Watchdog-Request	The number of outbound Device-Watchdog-Request messages for the specified endpoint.
Diameter-EAP-Answer	The number of outbound Diameter-EAP-Answer messages for the specified endpoint.
Diameter-EAP-Request	The number of outbound Diameter-EAP-Request messages for the specified endpoint.

Field	Description
Disconnect-Peer-Answer	The number of outbound Disconnect-Peer-Answer messages for the specified endpoint.
Disconnect-Peer-Request	The number of outbound Disconnect-Peer-Request messages for the specified endpoint.
Location-Info-Answer	The number of outbound Location-Info-Answer messages for the specified endpoint.
Location-Info-Request	The number of outbound Location-Info-Request messages for the specified endpoint.
Multimedia-Auth-Answer	The number of outbound Multimedia-Auth-Answer messages for the specified endpoint.
Multimedia-Auth-Request	The number of outbound Multimedia-Auth-Request messages for the specified endpoint.
Profile-Update-Answer	The number of outbound Profile-Update-Answer messages for the specified endpoint.
Profile-Update-Request	The number of outbound Profile-Update-Request messages for the specified endpoint.
Push-Profile-Answer	The number of outbound Push-Profile-Answer messages for the specified endpoint.
Push-Profile-Request	The number of outbound Push-Profile-Request messages for the specified endpoint.
Re-Auth-Answer	The number of outbound Re-Auth-Answer messages for the specified endpoint.
Re-Auth-Request	The number of outbound Re-Auth-Request messages for the specified endpoint.
Registration-Termination-Answer	The number of outbound Registration-Termination-Answer messages for the specified endpoint.
Registration-Termination-Request	The number of outbound Registration-Termination-Request messages for the specified endpoint.
Server-Assignment-Answer	The number of outbound Server-Assignment-Answer messages for the specified endpoint.
Server-Assignment-Request	The number of outbound Server-Assignment-Request messages for the specified endpoint.
Session-Termination-Answer	The number of outbound Session-Termination-Answer messages for the specified endpoint.
Session-Termination-Request	The number of outbound Session-Termination-Request messages for the specified endpoint.
User-Authorization-Answer	The number of outbound User-Authorization-Answer messages for the specified endpoint.

Field	Description
User-Authorization-Request	The number of outbound User-Authorization-Request messages for the specified endpoint.
User-Data-Answer	The number of outbound User-Data-Answer messages for the specified endpoint.
User-Data-Request	The number of outbound User-Data-Request messages for the specified endpoint.
Total peers matching specified criteria	Indicates the total number of matching peers.

## show diameter osid-info sessmgr

Table 256: show diameter osid-info sessmgr Command Output Descriptions

Field	Description
SessMgr Inst	Session Manager instance number.
Peer Hostname	Name of the peer host.
Peer Realm	Peer domain (realm) name for Subscriber.
OSID	Peer origin state identifier.
Timestamp	Timestamp at which the maximum peer backpressure occurred.
Calls Cleared	Number of calls cleared.

## show diameter osid-info sessmgr all

Table 257: show diameter osid-info sessmgr all Command Output Descriptions

Field	Description
SessMgr Inst	Session Manager instance number.
Peer Hostname	Name of the peer host.
Peer Realm	Peer domain (realm) name for Subscriber.
OSID	Peer origin state identifier.
Timestamp	Timestamp at which the maximum peer backpressure occurred.
Calls Cleared	Number of calls cleared.

## show diameter peers full all

Table 258: show diameter peers full all Command Output Descriptions

Field	Description
Context	Name of the context.
Endpoint	Name of the endpoint.
<b>Inbound listening sockets</b>	Displays listening Diameter interface:ports information when origin-host is configured as of "accept-inbound" connection type. If no inbound sockets are present these fields are not displayed.
Local Host	Name of the local host.
Local Address	IP address and port number of the local host.
Endpoint	Name of the endpoint.
Task	The task instance running on ACSMgr or AAAMgr.
Peer Hostname	Name of the peer host.
Local Hostname	Name of the local host.
Peer Realm	Peer domain (realm) name for Subscriber.
Local Realm	Local domain (realm) name for Subscriber.
Peer Address	Address of peer domain (realm).
Local Address	Address of local domain (realm).
State	Indicates the connection status.
CPU	The Card and CPU number.
Messages Out/Queued	The number of messages sent out/queued. <b>Important</b> Release 12.0 onwards, this statistic will not indicate the count of outstanding messages for Diameter proxy peers.
Task	The task running on ACSMgr or AAAMgr.
Supported Vendor IDs	The supported vendor IDs.
Admin Status	Indicates the admin status. Whether the user can administratively disable a peer while still preserving its configuration.
DPR Disconnect	Indicates the Disconnect-Peer-Request disconnect cause.
Peer Backoff Timer State	Indicates whether or not the peer-backoff-timer is running.

Field	Description
Peer Origin-State-Id	Peer origin state identifier of the peer (if enabled).
Total peers matching specified criteria	The total number of peers matching the criteria.

## show diameter statistics

Table 259: show diameter statistics Command Output Descriptions

Field	Description
<b>Connection statistics</b>	
Connection attempts	The total number of connections attempted.
Connection failures	The total number of connections failed.
Connection reads	The total number of connections read.
Connection starts	The total number of connections started.
Connection disconnects	The total number of connections disconnected
Connection closes	The total number of connections closes.
Connection DHOST requests	The total number of connections with DHOST requested.
Connection DHOST removes	The total number of connections with DHOST removed.
Connection Timeouts	The total number of connections timed out.
Tc Expire Connection Attempts	The total number of connections attempted due to <b>Tc</b> timer expired. Note: The <b>Tc</b> timer controls the frequency that transport connection attempts are done to a peer with whom no active transport connection exists.
Tw Expire Connection Closes	The total number of connections closed due to <b>Tw</b> timer expired.
Tx Expire	On the expiry of application level timer (Tx/Pending timeout), the application like Gy and Gx will decide what failure handling has to be taken for the message sent to the server. This stats will be incremented if this application level Tx timer expires.
Application initiated Retries	If the application determines a failure on one connection on which the request message was sent to, it will retry the message to an alternate server if available. This stats will be used if the application decides to retry the message to alternate server.
<b>Connection failure statistics</b>	
Connection bind errors	The total number of connections failed during binding errors.

Field	Description
Connection connect errors	The total number of connections failed during connect errors.
Connection address errors	The total number of connections failed due to address errors.
Connection misc errors	The total number of connections failed due to other errors not mentioned in output.
Connection DHOST errors	The total number of connections failed due to DHOST errors.
<b>Capabilities Exchange Request and Answers statistics</b>	
Connection CER sent	The total number of Capabilities Exchange Request (CER) messages sent for connection.
Connection CER send errors	The total number of connections failed due to errors during CER messages sent.
CERs received	The total number of CER messages received.
Connection CER create failures	The total number of connections failed during CER message creation.
CEAs received	The total number of Capabilities Exchange Answer (CEA) messages received.
CEA AVPs unknown	The total number of unknown Attribute Value Pairs (AVPs) related to CEA message.
CEA Application ID mismatch	The total number of CEA Application ID mismatch.
Read CEA Messages	The total number of READ messages for CEA.
Read CEA Messages Unexpected	The total number of unexpected READ messages for CEA.
Read CEA Missing	The total number of missing READ messages for CEA.
Read CEA Negotiation Failure	The total number of failures in READ messages negotiation for CEA.
Read CER Messages	The total number of READ messages for CER.
Read CER Messages Unexpected	The total number of unexpected READ messages for CER.
Read CER Missing	The total number of missing READ messages for CER.
Tw Expire Waiting for CEA	The total number of CEAs waiting for answer due to <b>Tw</b> timer expired. <b>NOTE:</b> The <b>Tw</b> timer controls the changing of a peer to the SUSPECT state when no answer is received to a watchdog request.
<b>Device Watchdog Requests and Answers statistics</b>	
DWA attempts	The total number of attempts for Device Watchdog Answer (DWA).
DWA handle allocation failures	The total number of failures to handle allocation of DWA.
DWAs sent	The total number of DWA messages sent.

Field	Description
DWR send errors	The total number of errors while sending DWR messages.
Read DWA Messages	The total number of READ messages for DWA.
Read DWA Messages Unexpected	The total number of unexpected READ messages for DWA.
Read DWR Messages	The total number of missing READ messages for DWR.
Tw Expire Send DWR	The total number of DWRs sent due to <b>Tw</b> timer expired.
Send DWR Attempts	The total number of attempts to send 'DWR Sent' messages.
Send DWR Send Errors	The total number of errors while sending 'DWR Sent' messages.
Send DWR Calls	The total number of calls for 'DWR Sent' messages.
Send DWR MH Errors	The total number of message handling errors for 'DWR Sent' messages.
<b>Disconnect Peer Request and Answers statistics</b>	
DPRs Sent	If the diameter base protocol decides to close a connection, it will send a Disconnect-Peer-Request (DPR) to the server to notify the reason for disconnection. This statistics will be incremented when diameter base protocol sends a DPR to the system.
DPA's Received	This statistics will be incremented for the reception of Answer message the server responded for the Disconnect-Peer-Request that was sent earlier.
DPR attempts	This statistics will be incremented when the diameter base protocol decides to send a Disconnect-Peer-Answer to the server as a response to the Disconnect-Peer-Request that was sent earlier. This will be the same as "DPA's Sent" statistics if there is no failure in sending the DPA out.
DPA's Sent	This statistics will be incremented if a Disconnect-Peer-Answer is sent to the server as a response to the Disconnect-Peer-Request that was sent earlier. This will happen in case of server initiated connection closure. This will be the same as "DPR attempts" statistics if there is no failure in sending the DPA out.
DPR send errors	When a DPR is sent out for connection closure and if the sending of DPR is failed due to some connection issue, this statistics will be incremented.
DPA Message handle allocation	When a DPA is sent out for connection closure and if the sending of DPA is failed due to failure in creating the DPA message, this statistics will be incremented.
DPR error immclose	When a DPA is sent out for connection closure and if the sending of DPA is failed due to failure in creating the DPA message, the connection will be closed immediately. This statistics is incremented for those immediate closures without sending a DPA.
Read DPR Messages	This statistics will be incremented when the DPR request received from the server is successfully parsed.

Field	Description
DPA No Host Error	This statistics will be incremented if a DPR message is received without including Origin-Host AVP.
<b>Session Discovery Request and Answer Statistics</b>	
Read SDRs	The total number of SDR read success
Read SDR Errors	The total number of SDR read failures
Write SDAs	The total number of SDR write success
Write SDA Errors	The total number of SDR write errors
Session Not Found	The total number of requests received to recover the session but the session is not found.
<b>Create Messages statistics</b>	
Calls	The total number of calls for 'Create' message.
Success	The total number of messages successful for 'Create' message.
Routed	The total number of messages routed for 'Create' message.
Directed	The total number of messages directed for 'Create' message.
Buffer Errors	The total number of errors for 'Create' message buffer.
Peer Never Up Errors	The total number of errors due to peer failure for 'Create' message.
Window Errors	The total number of errors due to 'Create' message window.
Unsupported Application Errors	The total number of errors due to unsupported applications for 'Create' message.
<b>Message Parse statistics</b>	
Message Pool Expand Attempts	The total number of attempts for message pool expansion.
Buffer Expand Attempts	The total number of attempts for buffer expansion.
Calls	The total number of calls for message parsing.
Too Many AVP Errors	The total number of message parsed having excessive AVP errors.
Header Errors	The total number of message parsed having header errors.
AVP Unknown Errors	The total number of message parsed having unknown AVP errors (errors not listed here).
Runt Errors	The total number of message parsed having runtime errors.
AVP Header Errors	The total number of message parsed having AVP header errors.
Message Protocol Error	The total number of message parsed having protocol errors.

Field	Description
Mand AVP Unknown Errors	The total number of message parsed having unknown errors for mandatory AVP.
Message aborts	The total number of message aborted during parsing.
<b>Send Message statistics</b>	
Calls	The total number of calls for 'Send' message.
Truncated Errors	The total number of truncated errors for 'Send' message.
<b>Read Statistics</b>	
Read Bytes	The total number of bytes read.
Read Messages Total	The total number of 'Read' messages.
Requests Read	The total number of requests for 'Read' messages.
Requests Timed Out	The total number of requests timed out for 'Read' messages.
Answers Read	The total number of answers read for 'Read' messages.
Answers Timed Out	The total number of answers timed out for 'Read' messages.
Read Application Messages	The total number of 'Read application' messages.
Unexpected Answers Read	The total number of unexpected answers for 'Read' messages.
<b>Read Parse statistics</b>	
Begin	The total number of parsing begins for 'Read' message.
E2E Errors	The total number of End-to-End (E2E) errors during parsing of 'Read' message.
Success	The total number of successful parsing of 'Read' message.
Application ID Errors	The total number of errors with Application Id during parsing of 'Read' message.
Command/Flag Errors	The total number of command or flag errors during parsing of 'Read' message.
Diameter Protocol Errors	The total number of Diameter protocol errors during parsing of 'Read' message.
Errors	The total number of errors during parsing of 'Read' message.
Length Padding Errors	The total number of 'Length Padding' errors during parsing of 'Read' message.
H2H Errors	The total number of Host-to-Host (H2H) errors during parsing of 'Read' message.
Length Too Long	The total number of message parsed having excessive length of 'Read' message.
Command Unknown	The total number of message parsed having unknown command in 'Read' message.

Field	Description
Length Sanity Errors	The total number of message parsed having invalid length of 'Read' message.
Length-v-SCTP EOR Errors	The total number of "Length-v-SCTP EOR" errors during parsing of "Read" message.
SCTP Missing EOR Errors	The total number of "SCTP Missing EOR" errors during parsing of "Read" message.
<b>Write statistics</b>	
total	The total number of calls for 'Write' message.
while OPEN	The total number of calls for 'Write' message while connection is OPEN.
while IDLE	The total number of calls for 'Write' message while connection is IDLE.
in other states	The total number of calls for 'Write' message while connection state is other than OPEN or IDLE state.
backpressure events	The total number of Write messages over the maximum number of outstanding messages to queue.
Written bytes	The total number of bytes written.
iterations	The total number of write iterations.
Written messages	The total number of messages written.
EOFs	The total number of 'Write' messages with End-of-File (EOFs).
errors	The total number of 'Write' message with errors.
<b>Peer Calls statistics</b>	
Open Calls	The total number of calls to open a peer.
Close Calls	The total number of calls to close a peer.
Open New Peer	The total number of calls to open a new peer.
Open Unknown Peer Errors	The total number of calls to open an unknown peer.
Open Misses	The total number of missed attempts to open a peer.
<b>Route statistics</b>	
Adds	The total number of routes added.
Expires	The total number of routes expired.
Hits	The total number of hits to a route.
Misses	The total number of routes missed.
Indirects	The total number of indirect route.

Field	Description
Installs	The total number of redirected routes installed.
<b>Dynamic Route statistics</b>	
Adds	The total number of dynamic routes added.
Add Failures	The total number of failures in adding dynamic routes.
Removes	The total number of dynamic routes removed.
Hits	The total number of hits to a dynamic route.
Expires	The total number of dynamic routes expired.
<b>Latency statistics</b>	
Last Round Trip Time (ms)	The last round trip time, in milliseconds.
Average Round Trip Time (ms)	The average round trip time in milliseconds.
Renegotiate Peer Messages	The number of times the diabase interacts with Diameter proxy to renegotiate peer connections when the Diameter dictionary changes.
<b>Redirect Host Usage:</b>	
Redirected Host	The number of times the host is redirected.
Redirect Not Cached	The number of times the redirected host is not cached.
Redirect All Session	The number of times all messages within the session are sent to Redirect-Host.
Redirect All Realm	The number of times all messages destined to Realm are sent to Redirect-Host.
Redirect Realm and Application	The number of times the messages for application requested to Realm are sent to Redirect-Host.
Redirect All Application	The number of times all messages for application are sent to Redirect-Host.
Redirect All Host	The number of times the messages sent to Redirect-Host AVP value instead of Redirect-Host value sent by the host.
Redirect All User	The number of times the message for user sent to Redirect-Host value.
<b>Peer Backoff Timer</b>	
Start-count	The total number of times the peer-backoff-timer is started.
Stop-count	The total number of times the peer-backoff-timer is expired.
<b>Diameter DNS Statistics</b>	
DNS Init	The total number of times an application (diabase/proxy) initialized an instance of a DNS library.

Field	Description
DNS De-Init	The total number of times an application (diabase/proxy) closed an instance of a DNS library.
VPN Init Request	The total number of init request messages sent to VPN managers from a library.
VPN Init Response	The total number of init response messages received from the VPN managers to a library.
VPN Init Success	The total number of init success messages received from the VPN managers to a library.
VPN Init Timeout	The total number of failed init responses received from the VPN managers to a library due to a timeout.
DNS A Requests	The total number of A-type (IPv4) requests sent to the VPN from the library.
DNS A Responses	The total number of A-type (IPv4) responses received by the library from the VPN.
DNS A Hits	The total number of A-type (IPv4) responses received by the library from the VPN with valid addresses.
DNS A Timeouts	The total number of A-type (IPv4) response failures due to timeout.
DNS AAAA Requests	The total number of AAAA-type (IPv6) requests sent to the VPN from the library.
DNS AAAA Responses	The total number of AAAA-type (IPv6) responses received by the library from the VPN.
DNS AAAA Hits	The total number of AAAA-type (IPv6) responses received by the library from the VPN with valid addresses.
DNS AAAA Timeouts	The total number of AAAA-type (IPv6) response failures due to timeout.
DNS NAPTR Requests	The total number of Naming Authority Pointer requests sent to the VPN from the library.
DNS NAPTR Responses	The total number of Naming Authority Pointer responses received by the library from the VPN.
DNS NAPTR Hits	The total number of Naming Authority Pointer responses received by the library from the VPN with valid URIs.
DNS NAPTR Timeouts	The total number of Naming Authority Pointer response failures due to timeout.
DNS SRV Requests	The total number of Service Locator requests sent to the VPN from the library.
DNS SRV Responses	The total number of Service Locator responses received by the library from the VPN.
DNS SRV Hits	The total number of Service Locator responses received by the library from the VPN with valid locations.

Field	Description
DNS SRV Timeouts	The total number of Service Locator response failures due to timeout.
A Type App Request	The total number of A-type requests made by the application to the library. Single application request can result in multiple library to VPN manager requests and vice versa.
AAAA Type App Request	The total number of AAAA-type requests made by the application to the library. Single application request can result in multiple library to VPN manager requests and vice versa.
NAPTR Type App Request	The total number of Naming Authority Pointer requests made by the application to the library. Single application request can result in multiple "library to VPN manager requests and vice versa.

## show diameter tps-statistics verbose

Table 260: show diameter tps-statistics verbose Command Output Descriptions

Field	Description
Application/ID	The name and the identifier of all configured Diameter applications for which the TPS KPI statistics are collected. The Diameter applications, for example, could be Gx, Gy, Rf, etc.
Average TPS	This is the sum average of all TPS values computed.
Maximum TPS	Indicates the maximum TPS value for the specified configuration.
Last 1 Sec Average TPS	Average value of TPS computed for the last 1 second.
Last 10 Secs Average TPS	Average value of TPS computed for the last 10 seconds.
Last 30 Secs Average TPS	Average value of TPS computed for the last 30 seconds.
Last 60 Secs Average TPS	Average value of TPS computed for the last 60 seconds.
Last 5 Mins Average TPS	Average value of TPS computed for the last 5 minutes.
Last 10 Mins Average TPS	Average value of TPS computed for the last 10 minutes.
Last 15 Mins Average TPS	Average value of TPS computed for the last 15 minutes.
Total number of TPS Statistics found	Shows the total number of TPS statistics collected.

**Important**

---

The output of **show diameter tps-statistics diamproxy** *diamproxy\_num*, **show diameter tps-statistics application** *application\_name* **summary**, **show diameter tps-statistics application** *application\_name* **endpoint** *endpoint\_name* **summary**, **show diameter tps-statistics application** *application\_name* **endpoint** *endpoint\_name* **verbose** commands are almost similar to the **show diameter tps-statistics verbose** command output. The output fields might vary depending on the configuration.

---

# CHAPTER 45

## show diameter-hdd-module

This chapter includes the **show diameter-hdd-module** command output tables.

- [show diameter-hdd-module file-space-usage](#), on page 801
- [show diameter-hdd-module statistics](#), on page 801

## show diameter-hdd-module file-space-usage

*Table 261: show diameter-hdd-module file-space-usage Command Output Descriptions*

Field	Description
CDRMOD Instance Id	The CDRMOD instance identifier.
Diameter-hdd-module File Storage LIMIT	Displays the configured storage limit for Diameter files.
Diameter-hdd-module File Storage USAGE	Displays the hard disk space utilized for the Diameter files.
Percentage of Diameter-hdd-module file store usage	Displays the percentage of hard-disk space utilized for the Diameter files.

## show diameter-hdd-module statistics

*Table 262: show diameter-hdd-module statistics Command Output Descriptions*

Field	Description
<b>Diameter-hdd-Module file Statistics</b>	
CDRMOD Instance Id	The CDRMOD instance identifier.
<b>Overall Statistics</b>	
Diameter-hdd-module files rotated	Total number of Diameter files rotated.
Diameter-hdd-module files rotated due to volume limit	Total number of Diameter files rotated due to volume limit.

Field	Description
Diameter-hdd-module files rotated due to time limit	Total number of Diameter files rotated due to time limit.
Diameter-hdd-module files rotated due to tariff-time	Total number of Diameter files rotated due to tariff time.
Diameter-hdd-module files rotated due to records limit	Total number of Diameter files rotated because of record limits.
Diameter-hdd-module file rotation failures	Total number of times rotation failed for Diameter file.
Diameter-hdd-module files deleted	Total number of Diameter files deleted.
Diameter-hdd-module records deleted	Total number of Diameter records deleted.
Diameter-hdd-module records received	Total number of Diameter records received by the service.
Current open Diameter-hdd-module files	Total number of Diameter files that are currently open.
Time of last Diameter-hdd-module file deletion	Date and time of last Diameter file deleted.
<b>Diameter-hdd-module PUSH Statistics</b>	
<b>Overall Statistics</b>	
<b>Primary Server Statistics</b>	
<b>Secondary Server Statistics</b>	
Successful File Transfers	Total number of successful file transfers.
Failed File Transfers	Total number of failed file transfers.
Num of times PUSH initiated	Total number of times a Diameter-hdd push attempt was initiated.
Num of times PUSH Failed	Total number of times a Diameter-hdd push attempt failed.
Num of times PUSH cancelled due to HD failure	Total number of times a Diameter-hdd push was cancelled due to hard disk failures.
Num of periodic PUSH	Total number of periodic push.
Num of manual PUSH	Total number of manual push.
Current status of PUSH	Indicates the current status of push – Running/Not Running.
Last completed PUSH time	The date and time the last push completed.

# CHAPTER 46

## show dns-client

This chapter includes the **show dns-client** command output tables.

- [show dns-client](#), on page 803
- [show dns-client statistics dns-query NF P-CSCF apn name \*apn-name\*](#), on page 805
- [show dns-client statistics dns-query NF P-CSCF apn all](#), on page 805

## show dns-client

**Table 263: show dns-client statistics client <client\_name> Command Output Descriptions**

Field	Description
DNS Usage Statistics	
Query Type	The type of DNS queries performed. Possible type of DNS queries are: A: The total A (IPv4 address record) type of queries. SRV: The total SRV (service locator) type of queries. AAAA: The total AAAA (IPv6 address record) type of queries. NAPTR: The total NAPTR (Naming Authority Pointer) type of queries.
Attempts	The total number of DNS query of specific type attempted.
Successes	The total number of attempted and successful DNS query of specific type.
Failures	The total number of attempted but failed DNS query of specific type.
Total queries	The total number of queries including A, SRV, and NAPTR type of queries.
DNS Cache Statistics	
Central Cache	The domain name lookups cached in central (remote) location.
Local Cache	The domain name lookups cached in local location.

Field	Description
Total Lookups	The total domain name lookups cached in central (remote) and local location.
Cache Hits (Positive Response)	The total number of hits with positive response.
Cache Hits (Negative Response)	The total number of hits with negative response.
Not Found in Cache	The total number of hits which have no record in central or local cache memory.
Hit Ratio (Percentage)	The percentage of domain records hit and found in central or local cache memory.
DNS Resolver Statistics	
Primary (or Secondary) Name Server	The IP address of the primary or secondary DNS (as specified by the display field title).
Query Type	The type of DNS queries performed. Possible type of DNS queries are: A: The total A (IPv4 address record) type of queries. SRV: The total SRV (service locator) type of queries. AAAA: The total AAAA (IPv6 address record) type of queries. NAPTR: The total NAPTR (Naming Authority Pointer) type of queries.
Attempts	The total number of DNS query of specific type attempted.
Successes	The total number of attempted and successful DNS query of specific type.
Failures	The total number of attempted but failed DNS query of specific type.
Total Resolver Queries	The total number of resolver queries made to the specified DNS of all query types.
Successful Queries	The total number of queries resolved successfully.
Query Timeouts	The total number of queries went timeout.
Domain Not Found	The total number of queries where domain name not found.
Connection Refused	The total number of queries for a domain for which connection refused.
Other Failures	The total number of queries failed due to reasons other that listed here.

## show dns-client statistics dns-query NF P-CSCF apn name apn-name

Table 264: show dns-client statistics dns-query NF P-CSCF apn name apn-name Command Output Descriptions

Field	Description
Total Queries Sent	The total number of queries.
Success Queries	The total number of attempted and successful DNS queries of a specific type.
Success Positive Cache Queries	The total number of successful queries from the DNS cache.
Domain Not Found	The total number of queries where the domain name is not found.
Query Timeouts	The total number of queries that timed out.
Socket Related Error	The total number of queries when the DNS client encounters a socket.
Unable to Connect	The total number of unsuccessful queries when unable to connect to the DNS server.
Cache Corrupted	The total number of unsuccessful queries due to cache corruption.
Other Failures	The total number of queries failed due to other failure reasons.

## show dns-client statistics dns-query NF P-CSCF apn all

Table 265: show dns-client statistics dns-query NF P-CSCF apn all Command Output Descriptions

Field	Description
Total Queries Sent	The total number of queries.
Success Queries	The total number of attempted and successful DNS queries of a specific type.
Success Positive Cache Queries	The total number of successful queries from the DNS cache.
Domain Not Found	The total number of queries where the domain name is not found.
Query Timeouts	The total number of queries that timed out.
Socket Related Error	The total number of queries when the DNS client encounters a socket.
Unable to Connect	The total number of unsuccessful queries when unable to connect to the DNS server.
Cache Corrupted	The total number of unsuccessful queries due to cache corruption.

Field	Description
Other Failures	The total number of queries failed due to other failure reasons.

## CHAPTER 47

# show dynamic-policy

This chapter includes the **show dynamic-policy** command output tables.

- [show dynamic-policy statistics, on page 807](#)

## show dynamic-policy statistics

*Table 266: show dynamic-policy statistics Command Output Descriptions*

Field	Description
Dynamic Policy Stats	
PCC rule stats	
Install requests	Total number of Policy Control and Charging (PCC) rule install requests.
Remove requests	Total number of PCC rule removal requests.
Installed uplink	Total number of PCC rules installed for uplink direction.
Installed downlink	Total number of PCC rules installed for downlink direction.
Activate requests	Total number of PCC rule activate requests.
Deactivate requests	Total number of PCC rule deactivate requests.
Activate group	Total number of policy groups activated.
Deactivate group	Total number of policy groups deactivated.
PCC rule failure stats	
Install failure	Total number of PCC rule install failures.
Remove failure	Total number of PCC rule removal failures.
Activation failure	Total number of PCC rule activation failures.
Deactivation failure	Total number of PCC rule deactivation failures.

Field	Description
Group activation failure	Total number of policy group activation failures.
Group deactivation failure	Total number of policy group deactivation failures.
Event stats	
Session up	Total number of subscriber sessions up.
Session down	Total number of subscriber sessions down.
Handoff	Total number of handoffs occurred.
RAT change	Total number of Radio Access Type (RAT) changes occurred.
User location change	Total number of user location changes occurred.
Default Bearer QoS change	Total number of default bearer QoS changes occurred.
Flow create	Total number of flows created.
Flow delete	Total number of flows deleted.
Bearer loss	Total number of bearer loss.
Bearer recovery	Total number of bearer recoveries after loss of bearer.
Update tft	Total number of Traffic Flow Template (TFT) updates.
Update qos	Total number of QoS updates.
UE Time Zone change	Total number of UE time zone changes occurred.
Event failure stats	
Session up	Total number of session up failures.
Session down	Total number of session down failures.
Handoff	Total number of handoff failures.
RAT change	Total number of RAT change failures.
User location change	Total number of user location change failures.
Default Bearer QoS change	Total number of default bearer QoS change failures.
Flow create	Total number of flow creation failures.
Flow delete	Total number of flow deletion failures.
Bearer loss	Total number of bearer loss failures.
Bearer recovery	Total number of bearer recovery failures.
Update tft	Total number of TFT update failures.

Field	Description
Update qos	Total number of QoS update failures.
UE Time Zone change	Total number of UE time zone change failures.
Auth stats	
Auth request	Total number of authorization requests sent.
Auth failure	Total number of authorization request failures.
Reauth request	Total number of re-authorization requests sent.
Reauth request failure	Total number of re-authorization request failures.
Terminate request	Total number of terminate requests sent.
Terminate request failure	Total number of terminate request failures.

# CHAPTER 48

## show egtp

This chapter includes the **show egtp** command output tables.

- [show egtpc peers interface](#), on page 811
- [show egtpc peers path-failure-history](#), on page 812
- [show egtpc statistics path-failure-reasons](#), on page 813
- [show egtp-service all](#), on page 815
- [show egtpc sessions](#), on page 818
- [show egtpc statistics](#), on page 820
- [show egtpc statistics verbose](#), on page 853
- [show egtp-service all](#), on page 869

## show egtpc peers interface

*Table 267: show egtpc peers interface Command Output Descriptions*

Field	Description
Status	The status of the GTPC session. - <b>A</b> : Online/Active - <b>I</b> : Offline/Inactive
GTPC Echo	Displays whether GTPC echo is enable or not. - <b>D</b> : Disabled - <b>E</b> : Enabled
Restart Counter	Displays whether restart counter messages have been sent or not. - <b>S</b> : Sent - <b>N</b> : Not Sent
Peer Restart Counter	Displays the status of the peer restart counter. - <b>K</b> : Known - <b>U</b> : Unknown

Field	Description
Type of Node	Indicates the type of node with which the interface communicates. - <b>S</b> : SGW - <b>P</b> : PGW - <b>M</b> : MME - <b>G</b> : SGSN
Node Feature	Indicates the Node Feature capability of the peer. - <b>P</b> : P-GW Restart Notification - <b>M</b> : Modify Access Bearer Request - <b>N</b> : Network triggered Service Request
Service ID	The Service ID for the eGTP service
Peer Address	Indicates the IP address of the peer service (MME/P-GW/S-GW).
Restart Counter	Indicates the restart counter value.
No. of restarts	Indicates the number of restarts of the peer node (MME/S-GW/P-GW).
Current sessions	Indicates the number of sessions currently active on eGTP service.
Max sessions	Indicates the total number of sessions allowed on this eGTP service.

## show egtpc peers path-failure-history

This command provides path failure history information for the last five path failures per peer. This information assists operators in isolating the root cause of eGTP-C path failures in the network

Field	Description
Peer Address	The IP address of the peer involved in the GTP-C path failure.
Time of Path Failure	The date and time of the GTP-C path failure.
Reason	The reason for the GTP-C path failure.
Event/Msg Type	The event or message type related to the GTP-C path failure.
Old RC	The old restart counter value.
New RC	The new restart counter value.
Session Count	The total number of sessions at the time of the GTP-C path failure.
IMSI	The subscriber IMSI at the time of the GTP-C path failure.
Local TEID	The local tunnel endpoint identifier.

Field	Description
Remote TEID	The remote tunnel endpoint identifier.

## show egtpc statistics path-failure-reasons

The output of this command provides detailed statistics for the types of eGTP-C path failures that have been detected. These statistics assist operators in isolating the root cause of eGTP-C path failures in the network.

*Table 268: show egtpc statistics path-failure-reasons Command Output Descriptions*

Field	Description
<b>Reasons for path failure at EGTPC</b>	
Echo Request restart counter change	The total number of GTP-C path failures detected due to an Echo Request restart counter change.
Echo Response restart counter change	The total number of GTP-C path failures detected due to an Echo Response restart counter change.
No Echo Response received	The total number of GTP-C path failures detected due to an no Echo Response received.
<b>Control message restart counter change at demux</b>	
Create Session Request	The total number of GTP-C path failures detected due to a Create Session Request control message restart counter change at the demuxmgr.
Forward Relocation Request	The total number of GTP-C path failures detected due to a Forward Relocation Request control message restart counter change at the demuxmgr.
MBMS Session Start Request	The total number of GTP-C path failures detected due to an MBMS Session Start Request control message restart counter change at the demuxmgr.
<b>Control message restart counter change at sessmgr</b>	
Modify Bearer Request	The total number of GTP-C path failures detected due to a Modify Bearer Request control message restart counter change at the sessmgr.
Create Session Response	The total number of GTP-C path failures detected due to a Create Session Response control message restart counter change at the sessmgr.
Modify Bearer Response	The total number of GTP-C path failures detected due to a Create Session Response control message restart counter change at the sessmgr.
Delete Session Response	The total number of GTP-C path failures detected due to a Delete Session Response control message restart counter change at the sessmgr.

Field	Description
Delete Bearer Response	The total number of GTP-C path failures detected due to a Delete Bearer Response control message restart counter change at the sessmgr.
Update Bearer Response	The total number of GTP-C path failures detected due to a Update Bearer Response control message restart counter change at the sessmgr.
Create Bearer Response	The total number of GTP-C path failures detected due to a Create Bearer Response control message restart counter change at the sessmgr.
Release Access Bearer Response	The total number of GTP-C path failures detected due to a Release Access Bearer Response control message restart counter change at the sessmgr.
Downlink Data Notification Acknowledge	The total number of GTP-C path failures detected due to a Release Access Bearer Response control message restart counter change at the sessmgr.
Delete Bearer Command Failure Indication	The total number of GTP-C path failures detected due to a Delete Bearer Command Failure Indication control message restart counter change at the sessmgr.
Bearer Resource Command Failure Indication	The total number of GTP-C path failures detected due to a Bearer Resource Command Failure Indication control message restart counter change at the sessmgr.
Modify Bearer Command Failure Indication	The total number of GTP-C path failures detected due to a Modify Bearer Command Failure Indication control message restart counter change at the sessmgr.
Create Ind Data Forwarding Response	The total number of GTP-C path failures detected due to a Create Ind Data Forwarding Response control message restart counter change at the sessmgr.
Delete Ind Data Forwarding Response	The total number of GTP-C path failures detected due to a Delete Ind Data Forwarding Response control message restart counter change at the sessmgr.
Forward Relocation Complete Acknowledge	The total number of GTP-C path failures detected due to a Forward Relocation Complete Acknowledge control message restart counter change at the sessmgr.
MBMS Session Start Response	The total number of GTP-C path failures detected due to a MBMS Session Start Response control message restart counter change at the sessmgr.
MBMS Session Stop Response	The total number of GTP-C path failures detected due to a MBMS Session Stop Response control message restart counter change at the sessmgr.
MBMS Session Update Response	The total number of GTP-C path failures detected due to a MBMS Session Update Response control message restart counter change at the sessmgr.

Field	Description
<b>Total path failures detected</b>	The total number of GTP-C path failures detected for any reason.
<b>Path failure detection ignored at EGTPC</b>	
Echo Request/Response restart counter change	The total number of GTP-C path failures ignored at EGTPC due to an Echo Request/Echo Response restart counter change.
No Echo Response received	The total number of GTP-C path failures ignored at EGTPC due to an Echo Response not received.
Control message restart counter change	The total number of GTP-C path failures ignored at EGTPC due to a control message restart counter change.
Control Rsp message restart counter change	The total number of GTP-C path failures ignored at EGTPC due to a control Response message restart counter change.
Control Rsp message received from wrong peer	The total number of GTP-C path failures ignored at EGTPC due to a control Response message received from the wrong peer.

## show egtp-service all

Table 269: show egtp service all Command Output Descriptions

Field	Description
Service name	The name of the service configured in the named context.
Service-ID	A system generated ID number applied to the service.
Context	The name of the context where the service is configured.
Interface Type	<p>The type of LTE interface this service is supporting.</p> <p>The following fields are in the output of the show egtp-service all command to accept or reject Create Session Request (CSR) on GTP based S2a and S2b interfaces.</p> <ul style="list-style-type: none"> <li>• s5/s8</li> <li>• s2a</li> <li>• s2b</li> </ul> <p><b>Important</b> This is a license-controlled feature. A valid feature license must be installed prior to configuring this feature. Contact your Cisco account representative for more information. These fields are only visible if the license is enabled.</p>
Status	The status of the service, i.e., "STARTED".
Restart Counter	Specifies the restart counter.

Field	Description
Max Remote Restart Counter Change	An integer from 1 to 255 that specifies the value configured with the <b>gtpc max-restart-counter-change</b> command in <i>eGTP-C Configuration Mode</i> . This value represents the counter change after which the node will detect a peer restart. Note that a peer restart will be detected only if the absolute difference between the New and Old restart counters is less than the value configured. For example, if the <b>max-remote-restart-counter-change</b> is 10 and current peer restart counter is 251, then eGTP will detect a peer restart only if the new restart counter is 252 through 255 or 0 through 5. Similarly, if the stored restart counter is 1, eGTP will detect a peer restart only if the new restart counter is 2 through 11. The default value is 255.
Message Validation Mode	The type of IE validation to be performed on messages received by this service.
GTPC Retransmission Timeout	The number of seconds between the re-sending of GTP-C echo messages.
GTPC Maximum Request Retransmissions	The number of control packet request message retransmissions that can be sent before an error condition is established.
GTPC IP QOS DSCP value	The IP QoS DSCP per-hop behavior to be marked on the outer header of signalling packets originating from the LTE component.
GTPC Echo	Identifies if GTP-C echo messages will be sent.
GTPC Echo Interval	The duration between the sending of GTP-C echo messages.
GTP-C Bind IPv4 Address	The IPv4 address of the interface to which this service is bound.
GTP-C Bind IPv6 Address	The IPv6 address of the interface to which this service is bound.
GTPC Peer Salvation	Indicates if peer salvation is enabled or disabled.
<b>GTPC path failure detection policy</b>	
Echo Timeout	Indicates if the Echo Timeout failure detection policy is enabled/disabled.
Echo Req/Rsp Restart counter change	Indicates if the Echo Req/Rsp Restart counter failure detection policy is enabled/disabled. If enabled, path failure detection occurs when the restart counter in Echo Request/Echo Response messages changes.
Control Mesg Restart counter change	Indicates if the Control Mesg Restart counter failure detection policy is enabled/disabled. If enabled, path failure detection occurs when the restart counter in Control Request/Control Response messages changes.

Field	Description
<b>Collision handling</b> DBcmd when MBreq pending	The collision handling setting for a Delete Bearer command (DBcmd) message when the Modify Bearer Request (MBreq) message for the default bearer is pending at the P-GW. Possible settings are: <ul style="list-style-type: none"> <li>• Queue DBcmd: Queue the DBcmd message when the MBreq message is pending.</li> <li>• Drop DBcmd: Drop the DBcmd message when the MBreq message is pending.</li> <li>• Abort MBreq and handle Dbcmd: Abort the MBreq message and handle the DBcmd message.</li> </ul>
GTPC Private Extension Overcharging Protection	Indicates if <b>gtpc private-extension overcharge-protection</b> is enabled in the egtp-service. If it is enabled, then EGTPC will encode/decode Overcharge-protection related data in/from private extension instead of Indication IE. If this option is disabled, then by default the EGTPC layer will encode/decode Overcharge-protection related data in the Indication IE.
GTPC Node Feature GTPC Lte-M RAT	Displays the node features enabled in this egtp service.  Indicates that if the <b>allow-Item-rat</b> type is Enabled or Disabled in the egtp-service.

## show egtpc sessions

Table 270: show egtpc sessions Command Output Descriptions

Field	Description
vvvv	<p>From left to right, the first value indicates the <b>Interface Type</b>.</p> <ul style="list-style-type: none"> <li>- <b>M</b>: MME Egress</li> <li>- <b>P</b>: PGW Ingress</li> <li>- <b>S</b>: SGW Ingress</li> </ul> <p>vs: SGW Egress</p> <ul style="list-style-type: none"> <li>- <b>G</b>: SGSN Egress</li> </ul> <p>The second value indicates the <b>PDN Type</b>.</p> <ul style="list-style-type: none"> <li>- <b>N</b>: Non-Data Forwarding</li> <li>- <b>F</b>: Data Forwarding</li> </ul> <p>The third value indicates the <b>UEID Type</b>.</p> <ul style="list-style-type: none"> <li>- <b>M</b>: MEI (Mobile Equipment ID)</li> <li>- <b>I</b>: IMSI (International Mobile Subscriber Identity)</li> </ul> <p>The fourth value is a string of characters that indicate the <b>Bearer States</b>.</p> <ul style="list-style-type: none"> <li>- <b>A</b>: Active</li> <li>- <b>C</b>: Create Session Pending</li> <li>- <b>D</b>: Delete Session Pending</li> <li>- <b>d</b>: Delete Bearer Pending</li> <li>- <b>M</b>: Modify Bearer Pending</li> <li>- <b>R</b>: Release Access Bearer Pending</li> <li>- <b>L</b>: Downlink Data Notification Pending</li> <li>- <b>u</b>: Update User Plane Pending</li> <li>- <b>c</b>: Create Bearer Pending</li> <li>- <b>U</b>: Update Bearer Pending</li> <li>- <b>E</b>: Delete Bearer Command Pending</li> <li>- <b>B</b>: Bearer Resource Command Pending</li> </ul>

Field	Description
vvvv ( <i>cont.</i> )	<ul style="list-style-type: none"> <li>- <b>m</b>: Modify Bearer Command Pending</li> <li>- <b>I</b>: Create Indirect Data Forwarding Pending</li> <li>- <b>i</b>: Delete Indirect Forwarding Pending</li> <li>- <b>t</b>: Context Acknowledge Pending</li> <li>- <b>T</b>: Context Request Pending</li> <li>- <b>F</b>: Identification Request Pending</li> <li>- <b>W</b>: Forward Relocation Pending</li> <li>- <b>X</b>: Forward Access Context Notification Pending</li> <li>- <b>w</b>: Forward Relocation Complete Pending</li> <li>- <b>r</b>: Release Cancel pending</li> <li>- <b>S</b>: Suspend Pending</li> <li>- <b>Y</b>: Resume Pending</li> <li>- <b>P</b>: PS to CS Response Pending</li> <li>- <b>p</b>: PS to CS Complete Pending</li> <li>- <b>Q</b>: PS to CS Cancel Pending</li> <li>- <b>.</b>: Inactive</li> </ul>
<b>SVC ID</b>	Displays the Service ID.
<b>IMSI/MEI</b>	Displays the IMSI or MEI number.
<b>Def EBI</b>	Displays the default EPS Bearer Identity
<b>EBIs</b>	EBI Bearer States (see fourth value indicators described above).
<b>Control TEIDs</b>	Lists the Tunnel Endpoint Identifiers (TEIDs)
Local	Local TEID.
Remote	Remote TEID.
<b>CallID</b>	Displays the Call Identifier.
<b>Peer Address</b>	Displays the IP address of the eGTP-C peer.
Total sessions matching specified criteria	Displays the total number of eGTP-C sessions matching the specified criteria.

## show egtpc statistics

Table 271: show egtpc statistics Command Output Descriptions

Field	Description
<b>Tunnel Management Messages</b>	
<b>Create Session Request</b>	
Total TX	The total number of tunnel - create session request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - create session request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted create session request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted create session request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create session request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted create session request messages received by this system, the specified service, or the specified interface.
<b>Create Session Response</b>	
Total TX	The total number of tunnel - create session response messages sent by this system, a specified service, or a specified interface.
Total RX	The total number of tunnel - create session response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted create session response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted create session response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted create session request messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted create session response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create session response messages sent by this system, the specified service, or the specified interface.

Field	Description
<b>Modify Bearer Request</b>	
Total TX	The total number of tunnel - modify bearer request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - modify bearer request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted modify bearer request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted modify bearer request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted modify bearer request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted modify bearer request messages received by this system, the specified service, or the specified interface.
Discarded	The total number of tunnel - retransmitted modify bearer request messages discarded by the system, the specified service, or the specified interface.
No Rsp RX	The total number of tunnel - retransmitted modify bearer request messages sent but where no response was received by the system, the specified service, or the specified interface.
<b>Modify Bearer Response</b>	
Total TX	The total number of tunnel - modify bearer response messages sent by this system, a specified service, or a specified interface.
Total RX	The total number of tunnel - modify bearer response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted modify bearer response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted modify bearer response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted modify bearer request messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted modify bearer response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted modify bearer response messages sent by this system, the specified service, or the specified interface.

Field	Description
Discarded	The total number of tunnel - retransmitted modify bearer response messages discarded by the system, the specified service, or the specified interface.
<b>Delete Session Request</b>	
Total TX	The total number of tunnel - delete session request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete session request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted delete session request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted delete session request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete session request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted delete session request messages received by this system, the specified service, or the specified interface.
<b>Delete Session Response</b>	
Total TX Accepted Denied	The total number of tunnel - delete session response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - delete session response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Total RX Accepted Denied	The total number of tunnel - delete session request messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - delete session response (accept or denied) messages received by the system, the specified service, or the specified interface.
<b>Downlink Data Notification Request</b>	
Total TX	The total number of tunnel - downlink data notification request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - downlink data notification request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted downlink data notification request messages sent by the system, the specified service, or the specified interface.

Field	Description
Initial RX	The total number of tunnel - initially transmitted downlink data notification request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted downlink data notification request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted downlink data notification request messages received by this system, the specified service, or the specified interface.
<b>Downlink Data Notification Response</b>	
Total TX	The total number of tunnel - downlink data notification response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - downlink data notification response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted downlink data notification response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - initially transmitted downlink data notification response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted downlink data notification response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - initially transmitted downlink data notification response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted downlink data notification response messages sent by the system, the specified service, or the specified interface.
<b>Downlink Data Failure Indication</b>	
Initial TX	The total number of tunnel - initially transmitted downlink data failure indication messages sent by this system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted downlink data failure indication messages received by this system, the specified service, or the specified interface.
<b>Release Access Bearers Request</b>	
Total TX	The total number of tunnel - release access bearers request messages sent by this system, the specified service, or the specified interface.

Field	Description
Total RX	The total number of tunnel - release access bearers request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted release access bearers request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted release access bearers request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted release access bearers request messages sent by this system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted release access bearers request messages received by this system, the specified service, or the specified interface.
<b>Release Access Bearer Response</b>	
Total TX	The total number of tunnel - release access bearer response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - release access bearer response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted release access bearer response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - initially transmitted release access bearer response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted release access bearer response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - initially transmitted release access bearer response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted release access bearer response messages sent by the system, the specified service, or the specified interface.
<b>Create Bearer Request</b>	
Total TX	The total number of tunnel - create bearer request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - create bearer request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted create bearer request messages sent by the system, the specified service, or the specified interface.

Field	Description
Initial RX	The total number of tunnel - initially transmitted create bearer request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create bearer request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted create bearer request messages received by this system, the specified service, or the specified interface.
<b>Create Bearer Response</b>	
Total TX	The total number of tunnel - create bearer response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - create bearer response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted create bearer response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted create bearer response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted create bearer response messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted create bearer response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create bearer response messages sent by the system, the specified service, or the specified interface.
<b>Update Bearer Request</b>	
Total TX	The total number of tunnel - update bearer request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - update bearer request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted update bearer request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted update bearer request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted update bearer request messages sent by the system, the specified service, or the specified interface.

Field	Description
Retrans RX	The total number of tunnel - retransmitted update bearer request messages received by this system, the specified service, or the specified interface.
<b>Update Bearer Response</b>	
Total TX	The total number of tunnel - update bearer response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - update bearer response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted update bearer response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted update bearer response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted update bearer response messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - initially transmitted update bearer response (accept or denied) messages received by the system, the specified service, or the specified interface.
<b>Delete Bearer Request</b>	
Total TX	The total number of tunnel - delete bearer request messages sent by the system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete bearer request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted delete bearer request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted delete bearer request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete bearer request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted delete bearer request messages received by this system, the specified service, or the specified interface.
<b>Delete Bearer Response</b>	
Total TX Accepted Denied	The total number of tunnel - delete bearer response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of tunnel - delete bearer response (accept or denied) messages sent by the system, the specified service, or the specified interface.

Field	Description
Total RX Accepted Denied	The total number of tunnel - initially transmitted update bearer response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of tunnel - delete bearer response (accept or denied) messages received by the system, the specified service, or the specified interface.
<b>Modify Bearer Command</b>	
Total TX	The total number of tunnel - modify bearer command messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - modify bearer command messages received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted modify bearer command messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted modify bearer command messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted modify bearer command messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted modify bearer command messages received by this system, the specified service, or the specified interface.
<b>Modify Bearer Failure Indication</b>	
Total TX	The total number of tunnel - modify bearer failure indication messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - modify bearer failure indication messages received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted modify bearer failure indication messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted modify bearer failure indication messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted modify bearer failure indication messages sent by the system, the specified service, or the specified interface.
<b>Bearer Resource Command</b>	
Total TX	The total number of tunnel - bearer resource command messages sent by this system, the specified service, or the specified interface.

Field	Description
Total RX	The total number of tunnel - bearer resource command messages received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted bearer resource command messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted bearer resource command messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted bearer resource command messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted bearer resource command messages received by this system, the specified service, or the specified interface.
Discarded	The total number of tunnel - retransmitted bearer resource command messages discarded by the system, the specified service, or the specified interface.
No Rsp RX	The total number of tunnel - retransmitted bearer resource command messages sent but where no response was received by the system, the specified service, or the specified interface.
<b>Bearer Resource Failure Indication</b>	
Total TX	The total number of tunnel - bearer resource failure indication messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - bearer resource failure indication messages received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted bearer resource failure indication messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted bearer resource failure indication messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted bearer resource failure indication messages sent by the system, the specified service, or the specified interface.
Discarded	The total number of tunnel - retransmitted bearer resource failure indication messages discarded by the system, the specified service, or the specified interface.
<b>Delete Bearer Command</b>	
Total TX	The total number of tunnel - delete bearer command messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete bearer command messages received by this system, the specified service, or the specified interface.

Field	Description
Initial TX	The total number of tunnel - initially transmitted delete bearer command messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted delete bearer command messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete bearer command messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of tunnel - retransmitted delete bearer command messages received by this system, the specified service, or the specified interface.
Discarded	The total number of tunnel - retransmitted delete bearer command messages discarded by the system, the specified service, or the specified interface.
<b>Delete Bearer Failure Indication</b>	
Total TX	The total number of tunnel - delete bearer failure indication messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete bearer failure indication messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted delete bearer failure indication messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted delete bearer failure indication messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete bearer failure indication messages sent by the system, the specified service, or the specified interface.
<b>Create Ind Data Forwarding Tunnel Request</b>	
Total TX	The total number of tunnel - create indirect data forwarding tunnel requests sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - create indirect data forwarding tunnel requests received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted create indirect data forwarding tunnel requests sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted create indirect data forwarding tunnel requests received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create indirect data forwarding tunnel requests sent by the system, the specified service, or the specified interface.

Field	Description
Retrans RX	The total number of tunnel - retransmitted create indirect data forwarding tunnel requests received by this system, the specified service, or the specified interface.
<b>Create Ind Data Forwarding Tunnel Response</b>	
Total TX	The total number of tunnel - create indirect data forwarding tunnel response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - create indirect data forwarding tunnel response messages received by this system, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted create indirect data forwarding tunnel response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of create indirect data forwarding tunnel response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted create indirect data forwarding tunnel response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of create indirect data forwarding tunnel response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted create indirect data forwarding tunnel response messages sent by the system, the specified service, or the specified interface.
<b>Delete Ind Data Forwarding Tunnel Request</b>	
Total TX	The total number of tunnel - delete indirect data forwarding tunnel requests sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete indirect data forwarding tunnel requests received by this system, or the specified interface.
Initial TX	The total number of tunnel - initially transmitted delete indirect data forwarding tunnel requests sent by the system, the specified service, or the specified interface.
Initial RX	The total number of tunnel - initially transmitted delete indirect data forwarding tunnel requests received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete indirect data forwarding tunnel requests sent by the system, the specified service, or the specified interface.

Field	Description
Retrans RX	The total number of tunnel - retransmitted delete indirect data forwarding tunnel requests received by this system, the specified service, or the specified interface.
<b>Delete Ind Data Forwarding Tunnel Response</b>	
Total TX	The total number of tunnel - delete indirect data forwarding tunnel response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of tunnel - delete indirect data forwarding tunnel response messages received by this system, or the specified interface.
Initial TX Accepted Denied	The total number of tunnel - initially transmitted delete indirect data forwarding tunnel response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of delete indirect data forwarding tunnel response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of tunnel - initially transmitted delete indirect data forwarding tunnel response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of delete indirect data forwarding tunnel response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of tunnel - retransmitted delete indirect data forwarding tunnel response messages sent by the system, the specified service, or the specified interface.
<b>Stop Paging Indication</b>	
Total TX	The total number of stop paging indication messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of stop paging indication messages received by this system, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted stop paging indication messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of stop paging indication (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted stop paging indication messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of delete indirect data forwarding tunnel response (accept or denied) messages received by the system, the specified service, or the specified interface.

Field	Description
Retrans TX	The total number of retransmitted stop paging indication messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted stop paging indication messages sent by the system, the specified service, or the specified interface.
<b>Change Notification Request</b>	
Total TX	The total number of change notification request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of change notification request messages received by this system, or the specified interface.
Initial TX	The total number of initially transmitted change notification request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of initially transmitted change notification request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted change notification request messages sent by the system, the specified service, or the specified interface.
<b>Change Notification Response</b>	
Total TX	The total number of change notification response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of change notification response messages received by this system, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted change notification response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of change notification response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted change notification response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of change notification response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted change notification response messages sent by the system, the specified service, or the specified interface.
<b>PGW Restart Notification Request</b>	
Total TX	The total number of P-GW restart notification request messages sent by this system, the specified service, or the specified interface.

Field	Description
Total RX	The total number of P-GW restart notification request messages received by this system, or the specified interface.
Initial TX	The total number of initially transmitted P-GW restart notification request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of initially transmitted P-GW restart notification request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted P-GW restart notification request messages sent by the system, the specified service, or the specified interface.
Discarded	The total number of retransmitted P-GW restart notification request messages discarded by the system, the specified service, or the specified interface.
No Rsp RX	The total number of P-GW restart notification request messages sent but where no response was received by the system, the specified service, or the specified interface.
<b>PGW Restart Notification Ack</b>	
Total TX	The total number of P-GW restart notification acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of P-GW restart notification acknowledge messages received by this system, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted P-GW restart notification acknowledge messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of P-GW restart notification acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted P-GW restart notification acknowledge messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of P-GW restart notification acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted P-GW restart notification acknowledge messages sent by the system, the specified service, or the specified interface.
Discarded	The total number of retransmitted P-GW restart notification request messages discarded by the system, the specified service, or the specified interface.
<b>Path Management Messages</b>	
<b>Echo Request</b>	

Field	Description
Total TX	The total number of path - echo request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of path - echo request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of path - initially transmitted echo request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of path - initially transmitted echo request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of path - retransmitted echo request messages sent by the system, the specified service, or the specified interface.
<b>Echo Response</b>	
Total TX	The total number of path - echo response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of path - echo response messages received by this system, the specified service, or the specified interface.
<b>Version Not Supported</b>	
Total TX	The total number of path - version not supported messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of path - version not supported messages received by this system, the specified service, or the specified interface.
<b>Mobility Management Messages</b>	
<b>Context Request</b>	
Total TX	The total number of mobility - context request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - context request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted context request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted context request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted mobility context request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of mobility - retransmitted context response messages received by the system, the specified service, or the specified interface.

Field	Description
<b>Context Response</b>	
Total TX	The total number of mobility - context response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - context response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted context response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted context response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted context response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted context response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans RX	The total number of mobility - retransmitted identification request messages received by the system, the specified service, or the specified interface.
<b>Context Acknowledge</b>	
Total TX	The total number of mobility - context acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - context acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted context acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted context acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted context acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted context acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted context acknowledge messages sent by the system, the specified service, or the specified interface.
<b>Identification Request</b>	

Field	Description
Total TX	The total number of mobility - identification request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - identification request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted identification request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted identification request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted identification request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of mobility - retransmitted identification request messages received by the system, the specified service, or the specified interface.
<b>Identification Response</b>	
Total TX Accepted Denied	The total number of mobility - identification response messages sent by this system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - identification response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Total RX Accepted Denied	The total number of mobility - identification response messages received by this system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - identification response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted identification response messages sent by the system, the specified service, or the specified interface.
<b>Forward Relocation Request</b>	
Total TX	The total number of mobility - forward relocation request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward relocation request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted forward relocation request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted forward relocation request messages received by the system, the specified service, or the specified interface.

Field	Description
Retrans TX	The total number of mobility - retransmitted forward relocation request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of mobility - retransmitted forward relocation request messages received by the system, the specified service, or the specified interface.
<b>Forward Relocation Response</b>	
Total TX	The total number of mobility - forward relocation response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward relocation response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted forward relocation response messages sent by the system, the specified service, or the specified interface. Accepted and Denied display the total number of mobility - initially transmitted forward relocation response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted forward relocation response messages received by the system, the specified service, or the specified interface. Accepted and Denied display the total number of mobility - initially transmitted forward relocation response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted forward relocation response messages sent by the system, the specified service, or the specified interface.
<b>Forward Access Context Notification</b>	
Total TX	The total number of mobility - forward access context notification messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward access context notification messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted forward access context notification messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted forward access context notification messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted forward access context notification messages sent by the system, the specified service, or the specified interface.

Field	Description
Retrans RX	The total number of mobility - retransmitted forward access context notification messages received by the system, the specified service, or the specified interface.
<b>Forward Access Context Acknowledge</b>	
Total TX	The total number of mobility - forward access context acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward access context acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted forward access context acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted forward access context acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted forward access context acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted forward access context acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted forward access context acknowledge messages sent by the system, the specified service, or the specified interface.
<b>Forward Relocation Complete Notification</b>	
Total TX	The total number of mobility - forward relocation complete notification messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward relocation complete notification messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted forward relocation complete notification messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted forward relocation complete notification messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted forward relocation complete notification messages sent by the system, the specified service, or the specified interface.

Field	Description
Retrans RX	The total number of mobility - retransmitted forward relocation complete notification messages received by the system, the specified service, or the specified interface.
<b>Forward Relocation Complete Acknowledge</b>	
Total TX	The total number of mobility - forward relocation complete acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - forward relocation complete acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted forward relocation complete acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted forward relocation complete acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted forward relocation complete acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted forward relocation complete acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted forward relocation complete acknowledge messages sent by the system, the specified service, or the specified interface.
<b>Relocation Cancel Request</b>	
Total TX	The total number of mobility - relocation cancel request messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - relocation cancel request messages received by this system, the specified service, or the specified interface.
Initial TX	The total number of mobility - initially transmitted relocation cancel request messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of mobility - initially transmitted relocation cancel request messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted relocation cancel request messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of mobility - retransmitted relocation cancel request messages received by the system, the specified service, or the specified interface.

Field	Description
<b>Relocation Cancel Response</b>	
Total TX	The total number of mobility - relocation cancel response messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of mobility - relocation cancel response messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of mobility - initially transmitted relocation cancel response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted relocation cancel response (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of mobility - initially transmitted relocation cancel response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of mobility - initially transmitted relocation cancel response (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of mobility - retransmitted relocation cancel response messages sent by the system, the specified service, or the specified interface.
<b>RAN Information Relay</b>	
Initial TX	The total number of initially transmitted RAN Information Management (RIM) messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of initially transmitted RAN Information Management (RIM) messages received by the system, the specified service, or the specified interface.
<b>Configuration Transfer Tunnel</b>	
Initial TX	The total number of initially transmitted configuration transfer tunnel messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of initially transmitted configuration transfer tunnel messages received by the system, the specified service, or the specified interface.
<b>Detach Notification</b>	
Total TX	The total number of detach notification messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of detach notification messages received by this system, the specified service, or the specified interface.

<b>Field</b>	<b>Description</b>
Initial TX Accepted Denied	The total number of initially transmitted detach notification messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of detach notification (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted detach notification messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of detach notification (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted detach notification messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted detach notification messages received by the system, the specified service, or the specified interface.
<b>Detach Acknowledge</b>	
Total TX	The total number of detach acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of detach acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted detach acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of detach acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted detach acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of detach acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
<b>Alert MME Notification</b>	
Total TX	The total number of alert MME notification messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of alert MME notification messages received by this system, the specified service, or the specified interface.

Field	Description
Initial TX Accepted Denied	The total number of initially transmitted alert MME notification messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of alert MME notification (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted alert MME notification messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of alert MME notification (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted alert MME notification messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted alert MME notification messages received by the system, the specified service, or the specified interface.
<b>Alert MME Acknowledge</b>	
Total TX	The total number of alert MME acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of alert MME acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted alert MME acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of detach notification (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted alert MME acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of alert MME acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of initially retransmitted alert MME acknowledge messages sent by the system, the specified service, or the specified interface.
<b>UE Activation Notification</b>	
Total TX	The total number of UE activation messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of UE activation messages received by this system, the specified service, or the specified interface.

<b>Field</b>	<b>Description</b>
Initial TX Accepted Denied	The total number of initially transmitted UE activation messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of UE activation (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted UE activation messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of UE activation (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted UE activation messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted UE activation messages received by the system, the specified service, or the specified interface.
<b>UE Activity Acknowledge</b>	
Total TX	The total number of UE activity acknowledge messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of UE activity acknowledge messages received by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted UE activity acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of UE activity acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted UE activity acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of UE activity acknowledge (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of initially retransmitted UE activity acknowledge messages sent by the system, the specified service, or the specified interface.
<b>CS Paging Indication</b>	
Total TX	The total number of CS (Circuit Switched) paging indication messages sent by this system, the specified service, or the specified interface.
Total RX	The total number of CS paging indication messages received by this system, the specified service, or the specified interface.

Field	Description
Initial TX Accepted Denied	The total number of initially transmitted CS paging indication messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of CS paging indication (accept or denied) messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of initially transmitted CS paging indication messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of CS paging indication (accept or denied) messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted CS paging indication messages sent by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted CS paging indication messages received by the system, the specified service, or the specified interface.
<b>SRVCC Messages (Single Radio Voice Call Continuity)</b>	
<b>PS to CS Request</b>	
Total TX	The total number of PS (Packet Switched) to CS (Circuit Switched) request messages sent by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted PS to CS request messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of PS to CS request (accept or denied) messages sent by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted PS to CS request messages sent by the system, the specified service, or the specified interface.
Discarded	Not used.
No Rsp Rcvd	The total number of times the MME did not receive an expected response from an MSC for a PS to CS request.  Note: For a given subscriber, retransmitted requests to the same MSC do not increment this counter.  For retransmitted requests to different MSCs, if no response is received from either MSC, this counter will increment twice.
<b>PS to CS Response</b>	
Total RX	The total number of PS (Packet Switched) to CS (Circuit Switched) response messages received by this system, the specified service, or the specified interface.

Field	Description
Initial RX Denied	The total number of initial PS to CS response messages received by the system, the specified service, or the specified interface.
Accepted	The total number of PS to CS response messages received and accepted by the system, the specified service, or the specified interface.
Denied	The total number of PS to CS response messages received and denied by the system, the specified service, or the specified interface.  Note: Denied will be incremented when the PS to CS response is received with cause code of EGTP_CAUSE_REQ_ACCEPTED.
Discarded	The total number of PS to CS response messages received and discarded by the system, the specified service, or the specified interface.  The system/interface will discard the message when a decoding error occurs (for example due to wrong header length, wrong IE format, etc.).
<b>PS to CS Complete Notification</b>	
Total RX	The total number of PS (Packet Switched) to CS (Circuit Switched) complete notification messages received by this system, the specified service, or the specified interface.
Initial RX	The total number of initially transmitted PS to CS complete notification messages received by the system, the specified service, or the specified interface.
Retrans RX	The total number of retransmitted PS to CS complete notification messages received by the system, the specified service, or the specified interface.
Discarded	The total number of PS to CS complete notification messages received and discarded by the system, the specified service, or the specified interface.  The system/interface will discard the message when a decoding error occurs (for example due to wrong header length, wrong IE format, etc.).
<b>PS to CS Complete Acknowledge</b>	
Total TX	The total number of PS (Packet Switched) to CS (Circuit Switched) complete acknowledge messages sent by this system, the specified service, or the specified interface.
Initial TX	The total number of initially transmitted PS to CS complete acknowledge messages sent by the system, the specified service, or the specified interface.
Accepted	The total number of PS to CS complete acknowledge messages sent by the system, the specified service, or the specified interface, with a cause code of ACCEPTED.
Denied	The total number of PS to CS complete acknowledge messages sent by the system, the specified service, or the specified interface, with a cause code of DENIED.

Field	Description
Retrans TX	The total number of retransmitted PS to CS complete acknowledge messages sent by the system, the specified service, or the specified interface.
Discarded	Not used.
<b>PS to CS Cancel Notification</b>	
Total TX	The total number of PS (Packet Switched) to CS (Circuit Switched) cancel notification messages sent by this system, the specified service, or the specified interface.
Initial TX	The total number of initially transmitted PS to CS cancel notification messages sent by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted PS to CS cancel notification messages sent by the system, the specified service, or the specified interface.
<b>PS to CS Cancel Acknowledge</b>	
Total TX	The total number of PS (Packet Switched) to CS (Circuit Switched) cancel acknowledge messages sent by this system, the specified service, or the specified interface.
Initial TX Accepted Denied	The total number of initially transmitted PS to CS cancel acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of PS to CS cancel acknowledge (accept or denied) messages sent by the system, the specified service, or the specified interface.
<b>Trace Management Messages</b>	
<b>Trace Session Activation</b>	
Initial TX	The total number of trace - initially transmitted session activation messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of trace - initially transmitted session activation messages received by the system, the specified service, or the specified interface.
<b>Trace Session Deactivation</b>	
Initial TX	The total number of trace - initially transmitted session deactivation messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of trace - initially transmitted session deactivation messages received by the system, the specified service, or the specified interface.
<b>CS Fallback Messages (CSFB)</b>	
<b>Suspend Notification</b>	

Field	Description
Initial TX	The total number of CSFB (Circuit Switched Fallback) - initially transmitted suspend notification messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of CSFB - initially transmitted suspend notification messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of CSFB (Circuit Switched Fallback) - retransmitted suspend notification messages that had to be retransmitted by the system, the specified service, or the specified interface.
Discarded	The total number of CSFB (Circuit Switched Fallback) - suspend notification messages that were discarded.
Retrans RX	The total number of CSFB (Circuit Switched Fallback) - suspend notification messages received by this system, the specified service, or the specified interface.
<b>Suspend Acknowledge</b>	
Initial TX Accepted Denied	The total number of CSFB - initially transmitted suspend acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display total number of CSFB (Circuit Switched Fallback) - suspend acknowledge messages received by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of CSFB - initially transmitted suspend acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display total number of CSFB (Circuit Switched Fallback) - suspend acknowledge messages received by the system, the specified service, or the specified interface.
Discarded	The total number of CSFB (Circuit Switched Fallback) - suspend acknowledge messages that were discarded.
<b>Resume Notification</b>	
Initial TX	The total number of CSFB - initially transmitted resume notification messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of CSFB - initially transmitted resume notification messages received by the system, the specified service, or the specified interface.
Retrans TX	The total number of retransmitted CSFB - resume notification messages that had to be retransmitted by the system, the specified service, or the specified interface.
Discarded	The total number of CSFB (Circuit Switched Fallback) - resume notification messages that were discarded.

Field	Description
No Rsp RX	The total number of CSFB (Circuit Switched Fallback) - resume notification messages for which no response was received.
Retrans RX	The total number of retransmitted CSFB (Circuit Switched Fallback) - resume notification messages received by this system, the specified service, or the specified interface.
<b>Resume Acknowledge</b>	
Initial TX Accepted Denied	The total number of CSFB - initially transmitted resume acknowledge messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of CSFB (Circuit Switched Fallback) - resume acknowledge messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of CSFB - initially transmitted resume acknowledge messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of CSFB (Circuit Switched Fallback) - resume acknowledge messages sent by the system, the specified service, or the specified interface.
Discarded	The total number of CSFB (Circuit Switched Fallback) - resume acknowledge messages that were discarded.
<b>Total Signalling Packets</b>	
TX	The total number of signalling packets sent by the system, the specified service, or the specified interface.
RX	The total number of signalling packets received by the system, the specified service, or the specified interface.
<b>Total Signalling Bytes</b>	
TX	The total number of signalling bytes sent by the system, the specified service, or the specified interface.
RX	The total number of signalling bytes received by the system, the specified service, or the specified interface.
<b>Control Request Messages</b>	
Initial TX	The total number of control request messages sent by the system, the specified service, or the specified interface.
Retrans TX	The total number of control request retransmitted messages sent by the system, the specified service, or the specified interface.
Initial RX	The total number of control request messages received by the system, the specified service, or the specified interface.
Discarded	The total number of control request messages that were discarded.

Field	Description
No Response RX	The total number of control request messages that are not received.
<b>Control Response Messages</b>	
Initial TX Accepted Denied	The total number of control response messages sent by the system, the specified service, or the specified interface.  Accepted and Denied display the total number of control response messages sent by the system, the specified service, or the specified interface.
Retrans TX	The total number of control response retransmitted messages sent by the system, the specified service, or the specified interface.
Initial RX Accepted Denied	The total number of control response messages received by the system, the specified service, or the specified interface.  Accepted and Denied display the of control response messages received by the system, the specified service, or the specified interface.
Discarded	The total number of control response messages that were discarded.
Retrans RX	The total number of control response messages received by this system, the specified service, or the specified interface.
<b>Load Control Information TX</b>	
No of times Load Control info TX	The total number of times that Load Control information has been transmitted to a peer or peers for any reason.
Accepted	The total number of times that load control information has been sent to the peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Homer: The total number of times that load control information has been sent to the home PLMN.</li> <li>• Non Homer: The total number of times that load control information has been sent to the visited PLMN.</li> </ul>
Ignored	The total number of times that this node ignored load control information and the load control information was not sent to the peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Homer: The total number of times that load control info was Ignored and not sent to the home PLMN.</li> <li>• Non Homer: The total number of times that load control info was ignored and not sent to visited PLMN.</li> <li>• No config: The total number of times that the node ignored load control information because there is no load control association configured.</li> <li>• Wrong Sequence Number: The total number of times the node ignored load control information due to an incorrect sequence number.</li> </ul>

Field	Description
Current Load Factor	The currently configured load control factor, as a percentage of 100.
Sequence Number	Indicates the current unique sequence number that will be sent to the peer along with the load control information element.
<b>Overload Control Information TX</b>	
No of times Overload Control info TX	The total number of times Overload Control information has been transmitted to a peer or peers.
Accepted	The total number of times that overload control information has been sent to the peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Homer: The total number of times that overload control information has been sent to the home PLMN.</li> <li>• Non Homer: The total number of times that overload control information has been sent to the visited PLMN.</li> </ul>
Ignored	The total number of times that this node ignored overload control information and overload control information was not sent to the peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Total number of times that overload control info was Ignored and not sent to home PLMN.</li> <li>• Non Homer: Total number of times that overload control info was Ignored and not sent to visited PLMN.</li> <li>• No config: Total number of times that the node ignored overload control information because there is no load control configuration association on this node.</li> <li>• Wrong Sequence Number: Total number of times this node ignored overload control information due to an incorrect sequence number.</li> </ul>
Current Overload Factor	The currently configured overload factor, as a percentage of 100.
Current Overload Reduction Metric	The overload reduction metric configured on the node. This metric is sent to the peer node for load balancing purposes.
Sequence Number	Indicates the current unique sequence number that will be sent to the peer along with the overload control information element.
Validity Period(Secs)	The currently configured validity period. This value indicates how long the overload control information is considered valid.
No of times Overload Threshold Reached	The total number of times the overload threshold has been reached on this node. This is based on how many times the node has reached the overload condition that is configured with <b>self-protection-limit</b> command.

Field	Description
Number of Messages Throttled	<p>The total number of transmitted messages throttled due to the node signaling that it has reached its overload control limit and has been instructed by the peer node to reduce its signaling. This statistic is further subdivided into:</p> <ul style="list-style-type: none"> <li>• Message group 1: Total number of messages throttled in <b>group1</b> as configured via the <b>message-prioritization</b> command.</li> <li>• Message group 2: Total number of messages throttled in <b>group2</b> as configured via the <b>message-prioritization</b> command.</li> <li>• Self Protection: The total number of messages throttled due to the node being in self-protection mode and cannot handle any new messages.</li> </ul>
Number of Messages Accepted in Self Protection	<p>The total number of messages accepted in self-protection mode for any reason. This statistic is further subdivided into:</p> <ul style="list-style-type: none"> <li>• APN level: The total number of messages accepted in self-protection mode for the configured APN level(s).</li> <li>• EARP level: The total number of messages accepted in self-protection mode for the configured EARP level(s).</li> </ul>
<b>Load Control Information RX</b>	
No of times Load Control info RX	The total number of times that Load Control information has been received from a peer for any reason.
Accepted	<p>The total number of times that load control information has been received from the peer node. This statistic is also subdivided into:</p> <ul style="list-style-type: none"> <li>• Homer: The total number of times that load control information has been received from the home PLMN.</li> <li>• Non Homer: The total number of times that load control information has been received from the visited PLMN.</li> </ul>
Ignored	<p>The total number of times that this node ignored load control information and the load control information was not received from the peer node. This statistic is also subdivided into:</p> <ul style="list-style-type: none"> <li>• Homer: The total number of times that load control info was Ignored and not received from the home PLMN.</li> <li>• Non Homer: The total number of times that load control info was ignored and not received from the visited PLMN.</li> <li>• No config: The total number of times that the node ignored load control information received because there is no load control association configured.</li> <li>• Wrong Sequence Number: The total number of times the node ignored load control information received due to an incorrect sequence number.</li> </ul>
Current Load Factor	The currently configured load control factor, as a percentage of 100.
Sequence Number	Indicates the current unique sequence number that will be received from the peer along with the load control information element.
<b>Overload Control Information RX</b>	

Field	Description
No of times Overload Control info TX	The total number of times Overload Control information has been received from a peer for any reason.
Accepted	The total number of times that overload control information has been received from a peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Homer: The total number of times that overload control information has been received from the home PLMN.</li> <li>• Non Homer: The total number of times that overload control information has been received from the visited PLMN.</li> </ul>
Ignored	The total number of times that this node ignored overload control information and overload control information was not received from the peer node. This statistic is also subdivided into: <ul style="list-style-type: none"> <li>• Total number of times that overload control info was ignored and not received from the home PLMN.</li> <li>• Non Homer: Total number of times that overload control info was ignored and not received by the visited PLMN.</li> <li>• No config: Total number of times that the node ignored received overload control information because there was no load control configuration association on the node.</li> <li>• Wrong Sequence Number: Total number of times this node ignored overload control information due to an incorrect sequence number.</li> </ul>
Current Overload Factor	The currently configured overload factor, as a percentage of 100.
Current Overload Reduction Metric	The overload reduction metric configured on the node. This metric is sent to the peer node for load balancing purposes.
Sequence Number	Indicates the current unique sequence number that will be sent to the peer along with the overload control information element.
Validity Period(Secs)	The currently configured validity period. This value indicates how long the overload control information is considered valid.
No of times Overload Threshold Reached	The total number of times the overload threshold has been reached on this node. This is based on how many times the node has reached the overload condition that is configured with <b>self-protection-limit</b> command.
Number of Messages Throttled	The total number of received messages throttled due to the node signaling that it has reached its overload control limit and has been instructed by the peer node to reduce its signaling. This statistic is further subdivided into: <ul style="list-style-type: none"> <li>• Message group 1: Total number of messages throttled in <b>group1</b> as configured via the <b>message-prioritization</b> command.</li> <li>• Message group 2: Total number of messages throttled in <b>group2</b> as configured via the <b>message-prioritization</b> command.</li> <li>• Self Protection: The total number of messages throttled due to the node being in self-protection mode and cannot handle any new messages.</li> </ul>

Field	Description
Number of Messages Accepted in Self Protection	<p>The total number of messages accepted in self-protection mode for any reason. This statistic is further subdivided into:</p> <ul style="list-style-type: none"> <li>• APN level: The total number of messages accepted in self-protection mode for the configured APN level(s).</li> <li>• EARP level: The total number of messages accepted in self-protection mode for the configured EARP level(s).</li> </ul>

## show egtpc statistics verbose

### 3GPP Release 9, 29.274

The **show egtpc statistics verbose** command includes all of the data provided in the **show egtpc statistics** command and appends detailed rejection statistics for the following call request/response/notification denials [3GPP Release 9, 29.274]:

- Reject Statistics
- Modify Bearer Request Denied
- Delete Bearer Request Denied
- Delete Session Request Denied
- Downlink Data Notification Denied
- Release Access Bearers Denied
- Create Bearer Denied
- Update Bearer Denied
- Delete Bearer Command Denied
- Modify Bearer Command Denied
- Bearer Resource Command Denied
- Create Indirect Data Forwarding Tunnel Request Denied
- Delete Indirect Data Forwarding Tunnel Request Denied
- Change Notification Request Denied
- Context Request Denied
- Context Response Denied
- Identification Request Denied
- Forward Relocation Request Denied
- Forward Access Context Notification Denied
- Forward Relocation Complete Notification Denied
- Relocation Cancel Request Denied
- Suspend Notification Denied
- Resume Notification Denied

The table below lists and describes the transmit and receive parameters output for all of the call denials listed above.

Table 272: show egtpc statistics verbose Command Output Descriptions -- 3GPP Release 9, 29.274

Field	Description
Context not existent TX	The total number of Context Does Not Exist messages sent by this system, the specified service, or the specified interface.
Context not existent RX	The total number of Context Does Not Exist messages received by this system, the specified service, or the specified interface.
Invalid message format TX	The total number of Invalid Message Format messages sent by the system, the specified service, or the specified interface.
Invalid message format RX	The total number of Invalid Message Format messages received by the system, the specified service, or the specified interface.
Version not supported TX	The total number of Version Not Supported messages sent by the system, the specified service, or the specified interface.
Version not supported RX	The total number of Version Not Supported messages received by this system, the specified service, or the specified interface.
Invalid length TX	The total number of Invalid Length messages sent by the system, the specified service, or the specified interface.
Invalid length RX	The total number of Invalid Length messages received by this system, the specified service, or the specified interface.
Mandatory IE incorrect TX	The total number of Mandatory IE (Information Element) Incorrect messages sent by the system, the specified service, or the specified interface.
Mandatory IE incorrect RX	The total number of Mandatory IE Incorrect messages received by this system, the specified service, or the specified interface.
Mandatory IE missing TX	The total number of Mandatory IE Missing messages sent by the system, the specified service, or the specified interface.
Mandatory IE missing RX	The total number of Mandatory IE Missing messages received by this system, the specified service, or the specified interface.
System failure TX	The total number of System Failure messages sent by the system, the specified service, or the specified interface.
System failure RX	The total number of System Failure messages received by this system, the specified service, or the specified interface.
No resources available TX	The total number of No Resources Available messages sent by the system, the specified service, or the specified interface.
No resources available RX	The total number of No Resources Available messages received by the system, the specified service, or the specified interface.
Semantic error in TFT TX	The total number of Semantic Error in TFT (Traffic Flow Template) messages sent by the system, the specified service, or the specified interface.

Field	Description
Semantic error in TFT RX	The total number of Semantic Error in TFT messages received by this system, the specified service, or the specified interface.
Syntactic error in TFT TX	The total number of Syntactic Error in TFT messages sent by the system, the specified service, or the specified interface.
Syntactic error in TFT RX	The total number of Syntactic Error in TFT messages received by this system, the specified service, or the specified interface.
Semantic error in Pkt Fltr TX	The total number of Semantic Error in Packet Filtering messages sent by the system, the specified service, or the specified interface.
Semantic error in Pkt Fltr RX	The total number of Semantic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Syntactic error in Pkt Fltr TX	The total number of Syntactic Error in Packet Filtering messages sent by the system, the specified service, or the specified interface.
Syntactic error in Pkt Fltr RX	The total number of Syntactic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Missing or unknown APN TX	The total number of Missing or Unknown APN (Access Point number) messages sent by the system, the specified service, or the specified interface.
Missing or unknown APN RX	The total number of Missing or Unknown APN messages received by this system, the specified service, or the specified interface.
GRE key not found TX	The total number of GRE (Generic Routing Encapsulation) Key Not Found messages sent by the system, the specified service, or the specified interface.
GRE key not found RX	The total number of GRE Key Not Found messages received by this system, the specified service, or the specified interface.
Reallocation failure TX	The total number of Reallocation Failure messages sent by the system, the specified service, or the specified interface.
Reallocation failure RX	The total number of Reallocation Failure messages received by this system, the specified service, or the specified interface.
Denied in RAT TX	The total number of Denied in RAT (Radio Access Technology) messages sent by the system, the specified service, or the specified interface.
Denied in RAT RX	The total number of Denied in RAT messages received by this system, the specified service, or the specified interface.
Pref. PDN type unsupported TX	The total number of Preferred PDN Type Unsupported messages sent by the system, the specified service, or the specified interface.
Pref. PDN type unsupported RX	The total number of Preferred PDN Type Unsupported messages received by this system, the specified service, or the specified interface.
All dynamic addr occupied TX	The total number of All Dynamic Addresses Occupied messages sent by the system, the specified service, or the specified interface.

Field	Description
All dynamic addr occupied RX	The total number of All Dynamic Addresses Occupied messages received by this system, the specified service, or the specified interface.
UE ctx w/o TFT activated TX	The total number of UE Context without TFT (Traffic Flow Template) Already Activated messages sent by the system, the specified service, or the specified interface.
UE ctx w/o TFT activated RX	The total number of UE Context without TFT Already Activated messages received by this system, the specified service, or the specified interface.
Prot type not supported TX	The total number of Protocol Type Not Supported messages sent by the system, the specified service, or the specified interface.
Prot type not supported RX	The total number of Protocol Type Not Supported messages received by this system, the specified service, or the specified interface.
UE not responding TX	The total number of UE (User Equipment) Not Responding messages sent by the system, the specified service, or the specified interface.
UE not responding RX	The total number of UE Not Responding messages received by this system, the specified service, or the specified interface.
UE refuses TX	The total number of UE Refuses messages sent by the system, the specified service, or the specified interface.
UE refuses RX	The total number of UE Refuses messages received by this system, the specified service, or the specified interface.
Service denied TX	The total number of Service Denied messages sent by the system, the specified service, or the specified interface.
Service denied RX	The total number of Service Denied messages received by this system, the specified service, or the specified interface.
Unable to page UE TX	The total number of Unable to Page UE (User Equipment) messages sent by the system, the specified service, or the specified interface.
Unable to page UE RX	The total number of Unable to Page UE messages received by this system, the specified service, or the specified interface.
No Memory TX	The total number of No Memory messages sent by the system, the specified service, or the specified interface.
No Memory RX	The total number of No Memory messages received by this system, the specified service, or the specified interface.
User Auth Failed TX	The total number of User Authentication Failed messages sent by the system, the specified service, or the specified interface.
User Auth Failed RX	The total number of User Authentication Failed messages received by this system, the specified service, or the specified interface.

Field	Description
Apn Access Denied TX	The total number of APN (Access Point Number) Access Denied messages sent by the system, the specified service, or the specified interface.
Apn Access Denied RX	The total number of APN Access Denied messages received by this system, the specified service, or the specified interface.
Request Rejected TX	The total number of Request Rejected messages sent by the system, the specified service, or the specified interface.
Request Rejected RX	The total number of Request Rejected messages received by this system, the specified service, or the specified interface.
Semantic error in TAD TX	The total number of Semantic Error in TAD (Traffic Aggregate Description) messages sent by the system, the specified service, or the specified interface.
Semantic error in TAD RX	The total number of Semantic Error in TAD messages received by this system, the specified service, or the specified interface.
Syntactic error in TAD TX	The total number of Syntactic Error in TAD messages sent by the system, the specified service, or the specified interface.
Syntactic error in TAD RX	The total number of Syntactic Error in TAD messages received by this system, the specified service, or the specified interface.
Collision with Nw init Req TX	The total number of Collision with Network Initiated Request messages sent by the system, the specified service, or the specified interface.
Collision with Nw init Req RX	The total number of Collision with Network Initiated Request messages received by this system, the specified service, or the specified interface.
UE page unable due to Susp TX	The total number of Unable to Page UE (User Equipment) Due to Suspension messages sent by the system, the specified service, or the specified interface.
UE page unable due to Susp RX	The total number of Unable to Page UE Due to Suspension messages received by this system, the specified service, or the specified interface.
Conditional IE missing TX	The total number of Conditional IE (Information Element) Missing messages sent by the system, the specified service, or the specified interface.
Conditional IE missing RX	The total number of Conditional IE Missing messages received by this system, the specified service, or the specified interface.
Apn Restr Type Incompatible TX	The total number of APN (Access Point Number) Restriction Type Incompatible with Currently Active PDN Connection messages sent by the system, the specified service, or the specified interface.
Apn Restr Type Incompatible RX	The total number of APN Restriction Type Incompatible with Currently Active PDN Connection messages received by this system, the specified service, or the specified interface.
Invalid len Piggybacked msg TX	The total number of Invalid Overall Length of the Triggered Response Message and a Piggybacked Initial Message messages sent by the system, the specified service, or the specified interface.

Field	Description
Invalid len Piggybacked msg RX	The total number of Invalid Overall Length of the Triggered Response Message and a Piggybacked Initial Message messages received by this system, the specified service, or the specified interface.
Invalid remote Peer reply TX	The total number of Invalid Reply from Remote Peer messages sent by the system, the specified service, or the specified interface.
Invalid remote Peer reply RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
PTMSI signature mismatch TX	The total number of PTMSI (Packet Temporary Mobile Subscriber Identity) Signature Mismatch messages sent by the system, the specified service, or the specified interface.
PTMSI signature mismatch RX	The total number of PTMSI Signature Mismatch messages received by this system, the specified service, or the specified interface.
IMSI not Known TX	The total number of IMSI (International Mobile Subscriber Identity) Not Known messages sent by the system, the specified service, or the specified interface.
IMSI not Known RX	The total number of IMSI Not Known messages received by this system, the specified service, or the specified interface.
Peer not responding TX	The total number of Remote Peer Not Responding messages sent by the system, the specified service, or the specified interface.
Peer not responding RX	The total number of Remote Peer Not Responding messages received by this system, the specified service, or the specified interface.
Data Fwding not supported TX	The total number of Data Forwarding Not Supported messages sent by the system, the specified service, or the specified interface.
Data Fwding not supported RX	The total number of Data Forwarding Not Supported messages received by this system, the specified service, or the specified interface.
Fallback to GTPV1 TX	The total number of Fallback to GTPv1 messages sent by the system, the specified service, or the specified interface.
Fallback to GTPV1 RX	The total number of Fallback to GTPv1 messages received by this system, the specified service, or the specified interface.
Invalid Peer TX	The total number of Invalid Reply from Remote Peer messages sent by the system, the specified service, or the specified interface.
Invalid Peer RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
Temp Rej due to HO in prog TX	The total number of Temporarily Rejected Due to Handover Procedure in Progress messages sent by the system, the specified service, or the specified interface.

Field	Description
Temp Rej due to HO in prog RX	The total number of Temporarily Rejected Due to Handover Procedure in Progress messages received by this system, the specified service, or the specified interface.
GTPC Entity Congestion TX	The number of times this peer has transmitted an overload condition indication to a peer.
GTPC Entity Congestion RX	The number of times this node has received an overload condition indication from a peer.
Unknown TX	The total number of Unknown (unspecified rejection cause) messages sent by the system, the specified service, or the specified interface.
Unknown RX	The total number of Unknown (unspecified rejection cause) messages received by this system, the specified service, or the specified interface.

## SRVCC Messages

The **show egtpc statistics verbose** command includes all of the data provided in the **show egtpc statistics** command, and appends the detailed rejection statistics as described in the table above as well the following statistic is ties for SRVCC (Single Radio Voice Call Continuity) requests and notifications:

- PS to CS Request Denied [RX only]
- PS to CS Complete Notification Denied [TX only]
- PS to CS Cancel Notification Denied [RX only]

**Table 273: show egtpc statistics verbose Command Output Descriptions -- SRVCC Messages**

Field	Description
<b>PS to CS Request Denied [RX only]</b>	
Context not existent RX	The total number of Context Does Not Exist messages received by this system, the specified service, or the specified interface.
Invalid message format RX	The total number of Invalid Message Format messages received by this system, the specified service, or the specified interface.
Version not supported RX	The total number of Version Not Supported messages received by this system, the specified service, or the specified interface.
Invalid length RX	The total number of Invalid Length messages received by this system, the specified service, or the specified interface.
Service not supported	The total number of Service not Supported messages received by this system, the specified service, or the specified interface.
Mandatory IE incorrect RX	The total number of Mandatory IE Incorrect messages received by this system, the specified service, or the specified interface.

Field	Description
Mandatory IE missing RX	The total number of Mandatory IE Missing messages received by this system, the specified service, or the specified interface.
System failure RX	The total number of System Failure messages received by this system, the specified service, or the specified interface.
No resources available RX	The total number of No Resources Available messages received by the system, the specified service, or the specified interface.
Semantic error in TFT RX	The total number of Semantic Error in TFT (Traffic Flow Template) messages received by this system, the specified service, or the specified interface.
Syntactic error in TFT RX	The total number of Syntactic Error in TFT messages received by this system, the specified service, or the specified interface.
Semantic error in Pkt Fltr RX	The total number of Semantic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Syntactic error in Pkt Fltr RX	The total number of Syntactic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Missing or unknown APN RX	The total number of Missing or Unknown APN (Access Point number) messages received by this system, the specified service, or the specified interface.
GRE key not found RX	The total number of GRE (Generic Routing Encapsulation) Key Not Found messages received by this system, the specified service, or the specified interface.
Reallocation failure RX	The total number of Reallocation Failure messages received by this system, the specified service, or the specified interface.
Denied in RAT RX	The total number of Denied in RAT (Radio Access Technology) messages received by this system, the specified service, or the specified interface.
Pref. PDN type unsupported RX	The total number of Preferred PDN Type Unsupported messages received by this system, the specified service, or the specified interface.
All dynamic addr occupied RX	The total number of All Dynamic Addresses Occupied messages received by this system, the specified service, or the specified interface.
UE ctx w/o TFT activated RX	The total number of UE (User Equipment) Context without TFT Already Activated messages received by this system, the specified service, or the specified interface.
Prot type not supported RX	The total number of Protocol Type Not Supported messages received by this system, the specified service, or the specified interface.
UE not responding RX	The total number of UE (User Equipment) Not Responding messages received by this system, the specified service, or the specified interface.
UE refuses RX	The total number of UE Refuses messages received by this system, the specified service, or the specified interface.

Field	Description
Service denied RX	The total number of Service Denied messages received by this system, the specified service, or the specified interface.
Unable to page UE RX	The total number of Unable to Page UE messages received by this system, the specified service, or the specified interface.
No Memory RX	The total number of No Memory messages received by this system, the specified service, or the specified interface.
User Auth Failed RX	The total number of User Authentication Failed messages received by this system, the specified service, or the specified interface.
Apn Access Denied RX	The total number of APN (Access Point Number) Access Denied messages received by this system, the specified service, or the specified interface.
Request Rejected RX	The total number of Request Rejected messages received by this system, the specified service, or the specified interface.
Semantic error in TAD RX	The total number of Semantic Error in TAD (Traffic Aggregate Description) messages received by this system, the specified service, or the specified interface.
Syntactic error in TAD RX	The total number of Syntactic Error in TAD messages received by this system, the specified service, or the specified interface.
Collision with Nw init Req RX	The total number of Collision with Network Initiated Request messages received by this system, the specified service, or the specified interface.
UE page unable due to Susp RX	The total number of Unable to Page UE Due to Suspension messages received by this system, the specified service, or the specified interface.
Conditional IE missing RX	The total number of Conditional IE Missing messages received by this system, the specified service, or the specified interface.
Apn Restr Type Incompatible RX	The total number of APN (Access Point Name) Restriction Type Incompatible with Currently Active PDN Connection messages sent by the system, the specified service, or the specified interface.
Invalid len Piggybacked msg RX	The total number of Invalid Overall Length of the Triggered Response Message and a Piggybacked Initial Message messages received by this system, the specified service, or the specified interface.
Invalid remote Peer reply RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
PTMSI signature mismatch RX	The total number of PTMSI (Packet Temporary Mobile Subscriber Identity) Signature Mismatch messages received by this system, the specified service, or the specified interface.
IMSI not Known RX	The total number of IMSI (International Mobile Subscriber Identity) Not Known messages received by this system, the specified service, or the specified interface.

Field	Description
Peer not responding RX	The total number of Remote Peer Not Responding messages received by this system, the specified service, or the specified interface.
Data Fwding not supported RX	The total number of Data Forwarding Not Supported messages received by this system, the specified service, or the specified interface.
Fallback to GTPV1 RX	The total number of Fallback to GTPv1 messages received by this system, the specified service, or the specified interface.
Invalid Peer RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
Temp Rej due to HO in prog RX	The total number of Temporarily Rejected Due to Handover Procedure in Progress messages received by this system, the specified service, or the specified interface.
GTPC Entity Congestion RX	The number of times this node has received an overload condition indication from a peer.
Unknown RX	The total number of Unknown (unspecified rejection cause) messages received by this system, the specified service, or the specified interface.
<b>PS to CS Complete Notification Denied [TX only]</b>	
Context not existent TX	The total number of Context Does Not Exist messages sent by this system, the specified service, or the specified interface.
Invalid message format TX	The total number of Invalid Message Format messages sent by the system, the specified service, or the specified interface.
Version not supported TX	The total number of Version Not Supported messages sent by the system, the specified service, or the specified interface.
Invalid length TX	The total number of Invalid Length messages sent by the system, the specified service, or the specified interface.
Mandatory IE incorrect TX	The total number of Mandatory IE (Information Element) Incorrect messages sent by the system, the specified service, or the specified interface.
Mandatory IE missing TX	The total number of Mandatory IE Missing messages sent by the system, the specified service, or the specified interface.
System failure TX	The total number of System Failure messages sent by the system, the specified service, or the specified interface.
No resources available TX	The total number of No Resources Available messages sent by the system, the specified service, or the specified interface.
Semantic error in TFT TX	The total number of Semantic Error in TFT (Traffic Flow Template) messages sent by the system, the specified service, or the specified interface.
Syntactic error in TFT TX	The total number of Syntactic Error in TFT messages sent by the system, the specified service, or the specified interface.

Field	Description
Semantic error in Pkt Fltr TX	The total number of Semantic Error in Packet Filtering messages sent by the system, the specified service, or the specified interface.
Syntactic error in Pkt Fltr TX	The total number of Syntactic Error in Packet Filtering messages sent by the system, the specified service, or the specified interface.
Missing or unknown APN TX	The total number of Missing or Unknown APN (Access Point number) messages sent by the system, the specified service, or the specified interface.
GRE key not found TX	The total number of GRE (Generic Routing Encapsulation) Key Not Found messages sent by the system, the specified service, or the specified interface.
Reallocation failure TX	The total number of Reallocation Failure messages sent by the system, the specified service, or the specified interface.
Denied in RAT TX	The total number of Denied in RAT (Radio Access Technology) messages sent by the system, the specified service, or the specified interface.
Pref. PDN type unsupported TX	The total number of Preferred PDN Type Unsupported messages sent by the system, the specified service, or the specified interface.
All dynamic addr occupied TX	The total number of All Dynamic Addresses Occupied messages sent by the system, the specified service, or the specified interface.
UE ctx w/o TFT activated TX	The total number of UE Context without TFT (Traffic Flow Template) Already Activated messages sent by the system, the specified service, or the specified interface.
Prot type not supported TX	The total number of Protocol Type Not Supported messages sent by the system, the specified service, or the specified interface.
UE not responding TX	The total number of UE (User Equipment) Not Responding messages sent by the system, the specified service, or the specified interface.
UE refuses TX	The total number of UE Refuses messages sent by the system, the specified service, or the specified interface.
Service denied TX	The total number of Service Denied messages sent by the system, the specified service, or the specified interface.
Unable to page UE TX	The total number of Unable to Page UE (User Equipment) messages sent by the system, the specified service, or the specified interface.
No Memory TX	The total number of No Memory messages sent by the system, the specified service, or the specified interface.
User Auth Failed TX	The total number of User Authentication Failed messages sent by the system, the specified service, or the specified interface.
Apn Access Denied TX	The total number of APN (Access Point Number) Access Denied messages sent by the system, the specified service, or the specified interface.

Field	Description
Request Rejected TX	The total number of Request Rejected messages sent by the system, the specified service, or the specified interface.
Semantic error in TAD TX	The total number of Semantic Error in TAD (Traffic Aggregate Description) messages sent by the system, the specified service, or the specified interface.
Syntactic error in TAD TX	The total number of Syntactic Error in TAD messages sent by the system, the specified service, or the specified interface.
Collision with Nw init Req TX	The total number of Collision with Network Initiated Request messages sent by the system, the specified service, or the specified interface.
UE page unable due to Susp TX	The total number of Unable to Page UE (User Equipment) Due to Suspension messages sent by the system, the specified service, or the specified interface.
Conditional IE missing TX	The total number of Conditional IE (Information Element) Missing messages sent by the system, the specified service, or the specified interface.
Apn Restr Type Incompatible TX	The total number of APN (Access Point Number) Restriction Type Incompatible with Currently Active PDN Connection messages sent by the system, the specified service, or the specified interface.
Invalid len Piggybacked msg TX	The total number of Invalid Overall Length of the Triggered Response Message and a Piggybacked Initial Message messages sent by the system, the specified service, or the specified interface.
Invalid remote Peer reply TX	The total number of Invalid Reply from Remote Peer messages sent by the system, the specified service, or the specified interface.
PTMSI signature mismatch TX	The total number of PTMSI (Packet Temporary Mobile Subscriber Identity) Signature Mismatch messages sent by the system, the specified service, or the specified interface.
IMSI not Known TX	The total number of IMSI (International Mobile Subscriber Identity) Not Known messages sent by the system, the specified service, or the specified interface.
Peer not responding TX	The total number of Remote Peer Not Responding messages sent by the system, the specified service, or the specified interface.
Data Fwding not supported TX	The total number of Data Forwarding Not Supported messages sent by the system, the specified service, or the specified interface.
Fallback to GTPV1 TX	The total number of Fallback to GTPv1 messages sent by the system, the specified service, or the specified interface.
Invalid Peer TX	The total number of Invalid Reply from Remote Peer messages sent by the system, the specified service, or the specified interface.
Temp Rej due to HO in prog TX	The total number of Temporarily Rejected Due to Handover Procedure in Progress messages sent by the system, the specified service, or the specified interface.

Field	Description
GTPC Entity Congestion TX	The number of times this node has transmitted and overload condition indication to a peer.
Unknown TX	The total number of Unknown (unspecified rejection cause) messages sent by the system, the specified service, or the specified interface.
<b>PS to CS Cancel Notification Denied [RX only]</b>	
Context not existent RX	The total number of Context Does Not Exist messages received by this system, the specified service, or the specified interface.
Invalid message format RX	The total number of Invalid Message Format messages received by the system, the specified service, or the specified interface.
Version not supported RX	The total number of Version Not Supported messages received by this system, the specified service, or the specified interface.
Invalid length RX	The total number of Invalid Length messages received by this system, the specified service, or the specified interface.
Mandatory IE incorrect RX	The total number of Mandatory IE (Information Element) Incorrect messages received by this system, the specified service, or the specified interface.
Mandatory IE missing RX	The total number of Mandatory IE Missing messages received by this system, the specified service, or the specified interface.
System failure RX	The total number of System Failure messages received by this system, the specified service, or the specified interface.
No resources available RX	The total number of No Resources Available messages received by the system, the specified service, or the specified interface.
Semantic error in TFT RX	The total number of Semantic Error in TFT (Traffic Flow Template) messages received by this system, the specified service, or the specified interface.
Syntactic error in TFT RX	The total number of Syntactic Error in TFT messages received by this system, the specified service, or the specified interface.
Semantic error in Pkt Fltr RX	The total number of Semantic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Syntactic error in Pkt Fltr RX	The total number of Syntactic Error in Packet Filtering messages received by this system, the specified service, or the specified interface.
Missing or unknown APN RX	The total number of Missing or Unknown APN (Access Point Number) messages received by this system, the specified service, or the specified interface.
GRE key not found RX	The total number of GRE Key Not Found messages received by this system, the specified service, or the specified interface.
Reallocation failure RX	The total number of Reallocation Failure messages received by this system, the specified service, or the specified interface.

Field	Description
Denied in RAT RX	The total number of Denied in RAT (Radio Access Technology) messages received by this system, the specified service, or the specified interface.
Pref. PDN type unsupported RX	The total number of Preferred PDN Type Unsupported messages received by this system, the specified service, or the specified interface.
All dynamic addr occupied RX	The total number of All Dynamic Addresses Occupied messages received by this system, the specified service, or the specified interface.
UE ctx w/o TFT activated RX	The total number of UE (User Equipment) Context without TFT Already Activated messages received by this system, the specified service, or the specified interface.
Prot type not supported RX	The total number of Protocol Type Not Supported messages received by this system, the specified service, or the specified interface.
UE not responding RX	The total number of UE Not Responding messages received by this system, the specified service, or the specified interface.
UE refuses RX	The total number of UE Refuses messages received by this system, the specified service, or the specified interface.
Service denied RX	The total number of Service Denied messages received by this system, the specified service, or the specified interface.
Unable to page UE RX	The total number of Unable to Page UE (User Equipment) messages received by this system, the specified service, or the specified interface.
No Memory RX	The total number of No Memory messages received by this system, the specified service, or the specified interface.
User Auth Failed RX	The total number of User Authentication Failed messages received by this system, the specified service, or the specified interface.
Apn Access Denied RX	The total number of APN (Access Point Name) Access Denied messages received by this system, the specified service, or the specified interface.
Request Rejected RX	The total number of Request Rejected messages received by this system, the specified service, or the specified interface.
Semantic error in TAD RX	The total number of Semantic Error in TAD (Traffic Aggregate Description) messages received by this system, the specified service, or the specified interface.
Syntactic error in TAD RX	The total number of Syntactic Error in TAD messages received by this system, the specified service, or the specified interface.
Collision with Nw init Req RX	The total number of Collision with Network Initiated Request messages received by this system, the specified service, or the specified interface.
UE page unable due to Susp RX	The total number of Unable to Page UE Due to Suspension messages received by this system, the specified service, or the specified interface.

Field	Description
Conditional IE missing RX	The total number of Conditional IE Missing messages received by this system, the specified service, or the specified interface.
Apn Restr Type Incompatible RX	The total number of APN Restriction Type Incompatible with Currently Active PDN Connection messages sent by the system, the specified service, or the specified interface.
Invalid len Piggybacked msg RX	The total number of Invalid Overall Length of the Triggered Response Message and a Piggybacked Initial Message messages received by this system, the specified service, or the specified interface.
Invalid remote Peer reply RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
PTMSI signature mismatch RX	The total number of PTMSI (Packet Temporary Mobile Subscriber Identity) Signature Mismatch messages received by this system, the specified service, or the specified interface.
IMSI not Known RX	The total number of IMSI (International Mobile Subscriber Identity) Not Known messages received by this system, the specified service, or the specified interface.
Peer not responding RX	The total number of Remote Peer Not Responding messages received by this system, the specified service, or the specified interface.
Data Fwding not supported RX	The total number of Data Forwarding Not Supported messages received by this system, the specified service, or the specified interface.
Fallback to GTPV1 RX	The total number of Fallback to GTPv1 messages received by this system, the specified service, or the specified interface.
Invalid Peer RX	The total number of Invalid Reply from Remote Peer messages received by this system, the specified service, or the specified interface.
Temp Rej due to HO in prog RX	The total number of Temporarily Rejected Due to Handover Procedure in Progress messages received by this system, the specified service, or the specified interface.
GTPC Entity Congestion RX	The number of times this node has received an overload condition indication from a peer.
Unknown RX	The total number of Unknown (unspecified rejection cause) messages received by this system, the specified service, or the specified interface.

## IMSI/IMEI Statistics

The **show egtpc statistics verbose** command includes all of the data provided in the **show egtpc statistics** command, and appends the detailed rejection statistics and statistics for SRVCC requests and notifications, as described in the tables above. In addition, it tracks PDN session handling for invalid IMEI and IMSI-less devices.

Table 274: show egtpc statistics verbose Command Output Descriptions -- IMSI/IMEI Statistics

Field	Description
<b>IMSI/IMEI Statistics:</b>	
IMSI Invalid Length	The total number of IMSI with invalid length.
IMSI All Zero	The total number of invalid value IMSI with all 0 content.
IMSI Not BCD	The total number of invalid IMSI with value violating 3GPP defined format.
IMEI Invalid Length	The total number of valid IMSI but Invalid IMEI with Protocol violations.
IMEI All Zero	The total number of valid IMSI but Invalid value IMEI with all 0 content.
IMEI Not BCD	The total number of valid IMSI but Invalid IMEI with value violating 3GPP defined format.
IMEI All Zero (unauthenticated imsi)	The total number of Emergency PDN connections with missing IMSI and invalid value IMEI with all 0 content.
IMEI Not BCD (unauthenticated imsi)	The total number of Emergency PDN connections with missing IMSI and Invalid IMEI with value violating 3GPP defined format.
IMEI All Zero (unauthenticated imsi and context replacement)	The total number of Emergency PDN connections with missing IMSI and IMEI session replacements because of invalid value IMEI with all 0 content.
IMEI Not BCD (unauthenticated imsi and context replacement)	The total number of Emergency PDN connections with missing IMSI and IMEI session replacements because of invalid IMEI with value violating 3GPP defined format.

## Collision Counter Support in the GTP Layer

GTPv2 message collisions occur in the network when a node is expecting a particular procedure message from a peer node but instead receives a different procedure message from the peer. The SAEGW software has been enhanced so that these collisions are now tracked by statistics and handled based on a pre-defined action for each message collision type.

If the SAEGW is configured as a pure P-GW or a pure S-GW, operators will still see the respective collision statistics if they occur.

The output of this command has been enhanced to provide information on GTPv2 message collisions, including:

- **Interface:** The interface on which the collision occurred: SGW (S4/S11), SGW (S5), or PGW (S5).
- **Old Proc (Msg Type):** Indicates the ongoing procedure at eGTP-C when a new message arrived at the interface which caused the collision. The Msg Type in brackets specifies which message triggered this ongoing procedure.
- **New Proc (Msg Type):** The new procedure and message type.
- **Action:** The pre-defined action taken to handle the collision. The action can be one of:
  - **No Collision Detected**
  - **Suspend Old:** Suspend processing of the original (old) message, process the new message, then resume old message handling.

- **Abort Old:** Abort the original message handling and processes the new message.
  - **Reject New:** The new message is rejected, and the original (old) message is processed.
  - **Silent Drop New:** Drop the new incoming message, and the old message is processed.
  - **Parallel Hndl:** Both the original (old) and new messages are handled in parallel.
  - **Buffer New:** The new message is buffered and processed once the original (old) message processing is done.
- **Counter:** The number of times each collision type has occurred.

**Important** The *Message Collision Statistics* section of the command output only appears if any of the collision statistics have a counter total that is greater than zero.

#### Sample output:

```
Message Collision Statistics
  Interface      Old Proc (Msg Type)          New Proc (Msg Type)          Action
Counter
  SGW(S5)       NW Init Bearer Create (95)   NW Init PDN Delete (99)   Abort Old    1
```

In this instance, the output states that at the S-GW egress interface (S5) a Bearer creation procedure is going on due to a CREATE BEARER REQUEST(95) message from the P-GW. Before its response comes to the S-GW from the MME, a new procedure PDN Delete is triggered due to a DELETE BEARER REQUEST(99) message from the P-GW.

The action that is carried out due to this collision at eGTP-C is to abort (Abort Old) the Bearer Creation procedure and carry on normally with the PDN Delete procedure. The Counter total of 1 indicates that this collision happened only once.

## show egtp-service all

*Table 275: show egtp service all Command Output Descriptions*

Field	Description
Service name	The name of the service configured in the named context.
Service-ID	A system generated ID number applied to the service.
Context	The name of the context where the service is configured.

Field	Description
Interface Type	<p>The type of LTE interface this service is supporting.</p> <p>The following fields are in the output of the show egtp-service all command to accept or reject Create Session Request (CSR) on GTP based S2a and S2b interfaces.</p> <ul style="list-style-type: none"> <li>• s5/s8</li> <li>• s2a</li> <li>• s2b</li> </ul> <p><b>Important</b> This is a license-controlled feature. A valid feature license must be installed prior to configuring this feature. Contact your Cisco account representative for more information. These fields are only visible if the license is enabled.</p>
Status	The status of the service, i.e., "STARTED".
Restart Counter	Specifies the restart counter.
Max Remote Restart Counter Change	An integer from 1 to 255 that specifies the value configured with the <b>gtpc max-restart-counter-change</b> command in <i>eGTP-C Configuration Mode</i> . This value represents the counter change after which the node will detect a peer restart. Note that a peer restart will be detected only if the absolute difference between the New and Old restart counters is less than the value configured. For example, if the <b>max-remote-restart-counter-change</b> is 10 and current peer restart counter is 251, then eGTP will detect a peer restart only if the new restart counter is 252 through 255 or 0 through 5. Similarly, if the stored restart counter is 1, eGTP will detect a peer restart only if the new restart counter is 2 through 11. The default value is 255.
Message Validation Mode	The type of IE validation to be performed on messages received by this service.
GTPC Retransmission Timeout	The number of seconds between the re-sending of GTP-C echo messages.
GTPC Maximum Request Retransmissions	The number of control packet request message retransmissions that can be sent before an error condition is established.
GTPC IP QoS DSCP value	The IP QoS DSCP per-hop behavior to be marked on the outer header of signalling packets originating from the LTE component.
GTPC Echo	Identifies if GTP-C echo messages will be sent.
GTPC Echo Interval	The duration between the sending of GTP-C echo messages.
GTP-C Bind IPv4 Address	The IPv4 address of the interface to which this service is bound.
GTP-C Bind IPv6 Address	The IPv6 address of the interface to which this service is bound.
GTPC Peer Salvation	Indicates if peer salvation is enabled or disabled.
<b>GTPC path failure detection policy</b>	

Field	Description
Echo Timeout	Indicates if the Echo Timeout failure detection policy is enabled/disabled.
Echo Req/Rsp Restart counter change	Indicates if the Echo Req/Rsp Restart counter failure detection policy is enabled/disabled. If enabled, path failure detection occurs when the restart counter in Echo Request/Echo Response messages changes.
Control Mesg Restart counter change	Indicates if the Control Mesg Restart counter failure detection policy is enabled/disabled. If enabled, path failure detection occurs when the restart counter in Control Request/Control Response messages changes.
<b>Collision handling</b> DBcmd when MBreq pending	<p>The collision handling setting for a Delete Bearer command (DBcmd) message when the Modify Bearer Request (MBreq) message for the default bearer is pending at the P-GW. Possible settings are:</p> <ul style="list-style-type: none"> <li>• Queue DBcmd: Queue the DBcmd message when the MBreq message is pending.</li> <li>• Drop DBcmd: Drop the DBcmd message when the MBreq message is pending.</li> <li>• Abort MBreq and handle Dbcmd: Abort the MBreq message and handle the DBcmd message.</li> </ul>
GTPC Private Extension Overcharging Protection	Indicates if <b>gtpc private-extension overcharge-protection</b> is enabled in the egtp-service. If it is enabled, then EGTPC will encode/decode Overcharge-protection related data in/from private extension instead of Indication IE. If this option is disabled, then by default the EGTPC layer will encode/decode Overcharge-protection related data in the Indication IE.
GTPC Node Feature	Displays the node features enabled in this egtpc service.
GTPC Lte-M RAT	Indicates that if the <b>allow-Item-rat</b> type is Enabled or Disabled in the egtp-service.

## CHAPTER 49

# show epdg-service statistics

- [show epdg-service statistics](#), on page 873
- [show epdg-service statistics suppress-ir-handover](#), on page 874
- [show epdg-service statistics interworking-5g](#), on page 874
- [show epdg-service name](#) , on page 877
- [show epdg-service name \*name\*](#), on page 878

## show epdg-service statistics

The output of this command is enhanced to display the following fields.

**Table 276: show epdg-service statistics Command Output Descriptions**

Field	Description
<b>show epdg-service statistics-All ePDG services</b>	
show epdg-service statistics handoff-disc-reasons	Displays the statistics corresponding to LTE to Wi-Fi HO Disconnect reasons for all services.
clear epdg-service statistics handoff-disc-reasons	Removes the statistics corresponding to LTE to Wi-Fi HO Disconnect reasons for all services.
<b>show epdg-service statistics-for Specific ePDG Services</b>	
show epdg-service statistics name <epdg1> handoff-disc-reasons	Displays the statistics corresponding to LTE to Wi-Fi HO Disconnect reasons for specific services.
clear epdg-service statistics name <epdg1> handoff-disc-reasons	Removes the statistics corresponding to LTE to Wi-Fi HO Disconnect reasons for specific services.
show bulkstats variables epdg-handoff-disc	Displays the bulkstats corresponding to LTE to Wi-Fi HO disconnect reasons.

## show epdg-service statistics suppress-ir-handover

This section provides information regarding show commands and their outputs for this feature.

### show epdg-service statistics suppress-ir-handover

The output of this command includes the following fields:

Fields/Counters	Description
<b>Attempts: 1</b>	Total number of ePDG sessions for which international roaming handoff attempted on international roaming HO suppression supported ePDG.
<b>Success: 1</b>	Total number of ePDG sessions for which international roaming handoff attempts succeeded on international roaming HO suppression supported ePDG.
<b>Failures: 0</b>	Total number of ePDG sessions for which international roaming handoff attempts failed on international roaming HO suppression supported ePDG.
<b>Active: 1</b>	Total number of current active ePDG sessions for which international roaming handoff attempts succeeded on international roaming HO suppression supported ePDG.

## show epdg-service statistics interworking-5g

The **show epdg-service statistics interworking-5g** command displays output of Interworking 5G statistics at system-level. The **show epdg-service name *epdg-service-name* statistics interworking-5g** command displays output of Interworking 5G statistics for a particular ePDG-service. The **interworking-5g** option is available only with ePDG 5G license.

Table 277: show epdg-service statistics interworking-5g Command Output Descriptions

Field	Description
<b>5G Sessions – Counter for sessions from N1 mode capable UEs</b>	
Attempts	The number of times that ePDG receives a call with N1_mode_capable (PDUSession) from UE.
Setup	The number of times that ePDG receives a call with N1_mode_capable (PDUSession) from UE and that call succeeds.

Field	Description
Failures	The number of times that ePDG receives a call with N1_mode_capable (PDU Session) from UE and that call fails due to some failure reason.
<b>P-GW/SMF selection type – Based on the 5G capability flags and related CLI, the PDN request is forwarded to P-GW or SMF+PGW-IWK</b>	
SMF preferred	The number of times that SMF is chosen for this call, but IWK flag is not set.
SMF only	The number of times that ePDG selects SMF for this call, IWK flag is set, and PDU Session ID is forwarded to SMF.
DNS provided SMF	The number of times that SMF is selected from DNS responses.
Locally configured SMF	The number of times that SMF is selected from the local ePDG configuration.
AAA provided SMF IP	The number of times that ePDG selects SMF from the AAA server provided IP attribute.
P-GW only	The number of times P-GW is selected.
DNS provided P-GW	The number of times that P-GW is selected from DNS responses.
Locally configured P-GW	The number of times that P-GW is selected from the local ePDG configuration.
AAA provided P-GW IP	The number of times that P-GW is selected from the AAA server provided IP attribute.
<b>P-GW or SMF not available reasons - Provide counters on how many times the SMF or P-GW selection is failed due to P-GW or SMF is not locally configured.</b>	
No P-GW configured locally	The number of times that P-GW selection failed due to missing configuration.
No SMF configured locally	The number of times that SMF+PGW-IWK selection failed due to missing configuration.
<b>SMF Fallback Support Statistics for GTP nodes – Fallback-related counters for SMF provided by AAA, DNS, and local configuration. In general, an attempt for second SMF or P-GW after the first SMF or P-GW is failed is considered as fallback.</b>	
SMF Fallback Attempted	The number of times that fallback is attempted when SMF is preferred. Increments after it fails to connect to the first SMF and attempts the second SMF. This includes SMFs provided by AAA, DNS, and the local configuration.
SMF Fallback Success	The number of times that a session connected to SMF is selected through the fallback algorithm.
SMF Fallback Failure	The number of times that a session, which is unable to connect to SMF is selected through a fallback algorithm.
Alternate SMF not found	The number of failed attempts to SMF and there is no alternate SMF available to attempt and connect to a session.

Field	Description
Local SMF resolution	Fallback related counters for SMF by local configuration. These counters are not incremented if the first SMF is selected from the local configuration despite trying to connect to the DNS/AAA provided SMF.
SMF Fallback Attempted	The number of times that fallback is attempted when SMF is preferred. Increments after it fails to connect to the first SMF and attempts the second SMF. This includes SMFs provided by AAA, DNS, and local configuration.
SMF Fallback Success	The number of times that a session connected to SMF is selected through the fallback algorithm.
SMF Fallback Failure	The number of times that a session, which is unable to connect to SMF is selected through the fallback algorithm.
Alternate SMF not found	The number of times that attempts to SMF fail and there is no alternate SMF available for a session to connect.
P-GW Fallback Support Stats for GTP nodes - Fallback related counters for P-GW provided by AAA, DNS, and local configuration. In general, an attempt considers as fallback, after failed to connect to the first SMF/P-GW.	
P-GW Fallback Attempted	The number of times that fallback is attempted when P-GW is preferred. Increments after it fails to connect to the first P-GW and attempts for the second P-GW. This includes P-GW provided by AAA, DNS, and local configuration.
P-GW Fallback Success	The number of times that a session connected to P-GW is selected through the fallback algorithm.
P-GW Fallback Failure	The number of times that a session, which is unable to connect to P-GW is selected through the fallback algorithm.
Alternate P-GW not found	The number of failed attempts to all P-GW, and there is no alternate P-GW available to attempt for a session to connect.
Local P-GW resolution	Fallback related counters for P-GW provided by local configuration. These counters do not get incremented if the first SMF selected from the local configuration gets connected, even after attempting the DNS/AAA provided SMF.
P-GW Fallback Attempted	The number of times that fallback is attempted when P-GW is preferred. Increments after it fails to connect to the first P-GW and attempts for the second P-GW. This includes P-GW provided by AAA, DNS, and local configuration.
P-GW Fallback Success	The number of times that a session connected to P-GW is selected through the fallback algorithm.
P-GW Fallback Failure	The number of times that a session fails to connect to P-GW and selected through the fallback algorithm.
Alternate P-GW not found	The number of failed attempts to all P-GW, and there is no alternate P-GW available to attempt for a session to connect.
<b>DNS-related Failures</b>	
DNS server not reachable	The number of times when no response from DNS.

Field	Description
No resource records	The number of times that the DNS server responded with no resource records.
No matching P-GW service params	The number of times that the DNS server responded with no P-GW in the resource records, when P-GW is the preferred gateway for the session.
No matching SMF service params	The number of times that the DNS server responded with no SMFs in the resource records, when SMF is the preferred gateway for the session.
DNS P-GW list exhausted	The number of failed attempts to connect to all the P-GW provided by DNS response, when P-GW is the preferred gateway for the session.
DNS SMF list exhausted	The number of failed attempts to connect to all the SMF provided by DNS response, when SMF is the preferred gateway for the session.

## show epdg-service name

If the following commands are configured, the output of **show epdg-service name** *service name* CLI command displays the following parameters under ePDG-service:

- Service name:
  - **interworking-5g**: Displays enabled 5G interworking for the ePDG service.
  - **pgw-selection select pgw**: Displays the enabled P-GW for 4G-only-UE and 5GS indicator.
  - **pgw-selection select pgw no-5gs-interworking**: Displays the enabled P-GW selection for 5Gs interworking.
  - **pgw-selection select pgw smf-not-configured**: Displays the enabled P-GW selection. ePDG ignores SMF, even if the SMF IP/FQDN is configured in DNS/local ePDG config.

The following is a sample output:

```
Service name: epdg1
Context: pdif
Bind: Done
Max Sessions : 100000
IP address: 111.111.11.2 UDP Port : 500
Crypto-template: boston
Reporting Action:
Event Record: Enabled
Service State: Started Service Id: 6
EGTP service : egtp-epdg-egress-v4
MAG service : n/a
MAG context : n/a
PLMN Id: MCC:242 , MNC:002
Setup Timeout (sec) : 60
dns-pgw context: pdif
dns-pgw selection : weight,topology
fqdn: n/a
pgw-selection agent-info error-handling: terminate
pgw-selection select PGW: 4G Only UE, No 5GS Interworking, SMF Not Configured
Custom SWm-SWu Error Mapping: Disabled
Custom S2b-SWu Error Mapping: Disabled
```

```

3GPP SWu Private Notify Error Types: Disabled
Preferred PGW selection mechanism: AAA/DNS
vendor-specific-attr dns-server-req: APCO
vendor-specific-attr pscsf-server-req: Private Extension
Username MAC Address Stripping : Disabled
QCI QOS Mapping Table : epdg_mapping
Username MAC Address Validate : Enabled Failure-handling : Continue
Newcall Policy : None
Duplicate precedence in TFT - Allowed
IP Fragment-Chain Timeout : 5 sec and Max OOO Fragment : 45
EBI :
Allowed Range 10 to 13
Username MAC Address Delimiter - colon-or-NAI-Label
Subscriber Map : map1
AAA Send Framed-MTU Size : Disabled
Data Buffering : Enabled
PDN-type IPv6 Path-MTU : Enabled
GTPC Overload Control Profile : None
GTPC Load Control Profile: None
LTE Emergency Profile: emergency
Timeout Idle : Disabled
Suppress International Roamer Handover : Disabled
5G Interworking : Enabled

```

## show epdg-service name *name*

The output of this command includes the following fields to check whether IR suppress handover is enabled or disabled.

Fields/Counters	Description
<b>Suppress International Roamer Handover</b>	Specifies if the suppress international roamer HO is enabled or disabled.

# CHAPTER 50

## show event-notif

This chapter includes the **show event-notif** command output table.

- [show event-notif statistics, on page 879](#)

## show event-notif statistics

*Table 278: show event-notif statistics Command Output Descriptions*

Field	Description
Notification Interface Endpoint	The name of the interface endpoint used for event notification selected for statistics display.
Peer Name	The name of peer which is connected to the interface endpoint and for which statistics are displayed.
Event	This group displays the statistics for the total number of successful or failed Event Notification messages processed by a peer.
Log	This group displays the statistics for the total number of successful or failed logging events notified a peer.
Successful	The total of successful events or logs processed on a particular peer.
Failed	The total of failed events or logs processed on a particular peer.
Failure stats due to no peer available	This group displays the statistics for the total number of failed events or logs processed on the notification interface due to non-availability of a peer.
Failed Event	The total number of failed events reported on the notification interface due to non-availability of a peer.
Failed Logs	The total number of failed logs reported on the notification interface due to non-availability of a peer.

# CHAPTER 51

## show event-record statistics

This chapter includes the **show event-record statistics** command output tables.

- [Show event-record statistics epdg, on page 881](#)
- [show event-record statistics pgw, on page 882](#)
- [show event-record statistics, on page 883](#)

### Show event-record statistics epdg

*Table 279: show event-record statistics ePDG Command Output Descriptions*

Field	Description
Total Number of Event Records	The total number of event records (GTPv2 + Diameter + IKE + RA).
GTPv2 Event Records	The total number of GTPv2 records
CSR	The number of CSR (Create Session Request) events.
CBR	The number of CBR (Create Bearer Request) events.
DSR	The number of DSR (Delete Session Request) events.
DBR	The number of DBR (Delete Bearer Request) events.
UBR	The number of UBR (Update Bearer Request) events.
IKEv2 Event Records	The total number of IKE events.
IKE_SA_INIT	The number of IKE_SA_INIT events.
IKE_AUTH	The number of IKE_AUTH events.
IKE_INFORMATION	The number of IKE_INFORMATION events.
CREATE_CHILD_SA	The number of CREATE_CHILD_SA events.
IPV6 RA Event Records	The total number of IPV6 RA event records.
RA Prefix	The number of RA prefix events.

Field	Description
Diameter Event Records	The total number of Diameter event records.
SWm Procedures	The number of SWm interface specific events.
AAR	The number AAR (AA-Request) events.
RAR	The number of RAR (Re-Auth-Request) events
ASR	The number of ASR (Abort Session Request) events
STR	The number of STR (Session Termination Request) events.
DER	The number of DER (DE-Request) events.

## show event-record statistics pgw

Table 280: show event-record statistics pgw Command Output Descriptions

Field	Description
Total Number of Event Records	The total number of event records (GTPv2 + Diameter).
GTPv2 Event Records	The total number of GTPv2 records
CSR	The number of CSR (Create Session Request) events.
CBR	The number of CBR (Create Bearer Request) events.
DSR	The number of DSR (Delete Session Request) events.
DBR	The number of DBR (Delete Bearer Request) events.
MBR	The number of MBR (Modify Bearer Request) events.
UBR	The number of UBR (Update Bearer Request) events.
PMIPv6 Event Records	The number of RTT (Real Time Tool) CDR records generated for PMIP P-GW events.
PBU-PBA	The number of records generated post PBA event at PMIP P-GW (record contains collated information of PBU and PBA).
BRI-BRA/Timeouts	The number of records generated post BRA event received/BRI timed out (records contains collated information of BRI and BRA).
Diameter Event Records	The total number of Diameter event records (S6b + Gx + Gy).
S6b Procedures	The number of events tracked over the S6b interface (AAR + RAR + ASR + STR).
AAR	The number AAR (AA-Request) events.
RAR	The number of RAR (Re-Auth-Request) events

Field	Description
ASR	The number of ASR (Abort Session Request) events
STR	The number of STR (Session Termination Request) events.
Gx Procedures	The number of events tracked over the Gx interface (CCR-I, CCR-U, CCR-T + RAR).
CCR-I	The number of CCR-I (Credit Control Request - Initialization) events.
CCR-U	The number of CCR-I (Credit Control Request - Update) events.
CCR-T	The number of CCR-I (Credit Control Request - Termination) events.
RAR	The number of RAR (Re-Auth-Request) events
Gy Procedures	The number of events tracked over the Gy interface (CCR-I, CCR-U, CCR-T + RAR).
CCR-I	The number of CCR-I (Credit Control Request - Initialization) events.
CCR-U	The number of CCR-I (Credit Control Request - Update) events.
CCR-T	The number of CCR-I (Credit Control Request - Termination) events.
RAR	The number of RAR (Re-Auth-Request) events

## show event-record statistics

Table 281: show event-record statistics Command Output Descriptions

Field	Description
Total Number of Event Records	The total number of event records (GTPv2 + Diameter + IKE + RA + Radius + DHCP).
GTPv2 Event Records	The total number of GTPv2 records
CSR	The total number of CSR (Create Session Request) events.
CBR	The total number of CBR (Create Bearer Request) events.
DSR	The total number of DSR (Delete Session Request) events.
DBR	The total number of DBR (Delete Bearer Request) events.
UBR	The total number of UBR (Update Bearer Request) events.
IPV6 RA Event Records	The total number of IPV6 RA event records.
RA Prefix	The total number of RA prefix events.
Diameter Event Records	The total number of Diameter event records (S6b + SWm + STa + Gx + Gy).

Field	Description
<b>ePDG Events</b>	
IKEv2 Event Records	The total number of IKE events.
IKE_SA_INIT	The total number of IKE_SA_INIT events.
IKE_AUTH	The total number of IKE_AUTH events.
IKE_INFORMATION	The total number of IKE_INFORMATION events.
CREATE_CHILD_SA	The total number of CREATE_CHILD_SA events.
<b>SaMOG Events</b>	
Radius Auth Event Records	The total number of Radius authentication event records.
Access Req/Challenge	The total number of Radius Authentication access request challenge event records.
Access Req/Accept	The total number of Radius Authentication access request accept event records.
Disconnect Req	The total number of Radius Authentication disconnect request event records.
Radius Accounting Event Records	The total number of Radius accounting event records.
Accounting Req from WLC	The total number of Radius accounting event records from WLC.
Accounting Req to Radius Server	The total number of Radius accounting event records to the Radius server.
STa Procedures	The total number of STa interface specific events.
AAR	The total number AAR (AA-Request) events.
RAR	The total number of RAR (Re-Auth-Request) events.
ASR	The total number of ASR (Abort Session Request) events.
STR	The total number of STR (Session Termination Request) events.
DER	The total number of DER (DE-Request) events.
DHCP Event Records	The total number of DHCP event records.
Discover/Offer	The total number of DHCPv4 discovery offer event records.
Release/Ack	The total number of DHCPv4 release ack event records.
Request/Ack	The total number of DHCPv4 request ack event records.

# CHAPTER 52

## show fans

This chapter includes the **show fans** command output tables.

- [show fans](#), on page 885

## show fans

**Important** On some platforms, the output will change to show the state of the fan controller and the speed of each fan.

*Table 282: show fans Command Output Descriptions*

Field	Description
Upper Fan Controller	The Upper Fan Tray pulls air through the chassis and exhausts it from the upper rear of the chassis.
Lower Fan Controller	The Lower Fan Tray pulls ambient air into the chassis and pushes it upward and through the chassis.
State	<p>Displays the operational state of the fan tray and fan tray controller. The possible states are:</p> <p><b>Normal:</b> There are no errors. This is the normal operating condition.</p> <p><b>Multiple Fan Failure:</b> Multiple fans on the fan tray have failed.</p> <p><b>Single Fan Failure:</b> A single fan on the fan tray has failed.</p> <p><b>Heartbeat Error:</b> The redundant fan controller on the fan tray did not respond to the heartbeat signal.</p> <p><b>Fan A Communication Error:</b> An error has occurred on the primary fan controller bus for the fan tray.</p> <p><b>Fan B Communication Error:</b> An error has occurred on the redundant fan controller bus for the fan tray.</p> <p><b>Communication Error:</b> An inter-bus communication error was experienced between the primary and redundant fan controllers on the fan tray.</p> <p><b>NOTE:</b> If any of the error conditions above are reported for your system, it is likely that the fan tray will need to be repaired or replaced. Please contact your local sales representative for additional information.</p>

Field	Description
Speed	<p>Indicates the rate at which the fans on the fan tray are spinning as a percentage of the maximum speed.</p> <p>Lower percentages indicate that the fans are having to do less work to keep the chassis cool and should be the normal operating condition.</p> <p>Higher percentages indicate that the fans are having to work harder to keep the chassis cool. This could be due to a number of reasons including improper ventilation of the chassis, individual fan failures, or even a dirty air filter. Please refer to the <i>System Administration Guide</i> for information on troubleshooting the problem.</p> <p><b>NOTE:</b> Systems equipped with the dual-speed fan tray controller display the fan speed as follows:</p> <p><b>Normal:</b> The fans on the fan tray are operating at a normal speed to maintain a safe operating temperature for the chassis and its components.</p> <p><b>High:</b> The fans on the fan tray are operating in high speed to maintain a safe operating temperature for the chassis and its components.</p>
Temp	<p>Displays the temperature of the chassis in degrees Celsius at the fan tray.</p> <p>The ambient air temperature shown for the Lower Fan Controller should not exceed 40 degrees Celsius for an extended period of time.</p> <p>The exhaust air temperature shown for the Upper Fan Controller should not exceed 55 degrees Celsius.</p> <p>For additional information on air temperature, refer to the description of the <b>show temperature</b> command in this guide.</p>

# CHAPTER 53

## show fa-service

This chapter includes the **show fa-service** command output tables.

- [show fa-service, on page 887](#)

## show fa-service

*Table 283: show fa-service name Command Output Descriptions*

Field	Description
Service name	The name of the FA service for which the information are displayed.
Context	The name of the context in which this service is configured.
Bind	Status of connectivity of this service with context and IP address.
Max Subscribers	The number of subscribers are allowed to configure in this service.
Local IP Address	IP address to which this service is bound and communicate with HA.
Local IP Port	The port number on which this service is to communicate with HA.
Lifetime	The maximum time that the FA session can exist before it becomes expired.
Registration Timeout	The maximum duration of inactivity for a session registration before it becomes expired.
Advt Lifetime	Lifetime for an advertisement message.
Advt Interval	Interval between two advertisement messages.
Num Advt	The total number of advertisement messages broadcasted.
Advt Prefix Length Extn	Indicates the setting of prefix extension length in advertisement message.
Reverse Tunnel	Status of reverse tunnel.
GRE Encapsulation	Status of Generic Routing Encapsulation (GRE).
Optimize Tunnel Reassembly	Status of tunnel reassembly optimization.

Field	Description
Allow Priv Addr w/o Rev Tunnel	Status of setting to allow private addresses without reverse tunnelling.
Dynamic MIP Key Update	Status of setting to update dynamic MIP key.
Ignore Dynamic MIP Key	Status of setting to ignore dynamic MIP keys.
Remove MN-AAA/MN-FAC extns	Status of setting to remove MN-AAA and/or MN-FA extensions from messages.
Standalone FA service	Show the standalone FA service status. If "Enabled" system performs as a standalone FA only.
Proxy MIP	Status of Proxy Mobile IP support.
Proxy MIP Max Retransmissions	Total number of retransmission for Proxy Mobile IP support.
Proxy MIP Retrans Timeout	Timeout duration in seconds between two of retransmissions for Proxy MIP support.
Proxy MIP Renew Percent Time:	Percentage of timeout duration. Once this much percent of timeout duration exhausted the Proxy MIP message will be retransmitted.  For example, If retransmission timeout is set for 4 secs. and renew percent time is configured for 75%, the Proxy MIP messages will be retransmitted after 3 seconds.
SPI(s)	The configured Security Parameter Index (SPI) number between FA and HA.
<b>FAHA</b>	
Remote Addr	IP address of HA.
Hash Algorithm:	Hashing algorithm applicable for HA.
SPI Num	SPI number set for HA.
Replay Protection:	Type of reply protection enabled for reply messages.
Timestamp Tolerance	Total variation allowed in timestamp mismatch.
HA Monitoring:	Status of HA monitoring configuration.
GRE Sequence Numbers	Status of GRE sequence number setting in messages.
GRE Sequence Mode	Specifies the GRE sequence mode.
GRE reorder Timeout	Total timeout duration for GRE reorder.
GRE Checksum	Status of GRE Checksum setting in messages.
GRE Checksum Verification	Status of GRE Checksum verification setting.
Registration Revocation	Status of registration revocation setting.
Reg-Revocation I Bit	Status of I-bit setting for registration revocation.
Reg-Revocation Max Retries	Maximum number of retries allowed for registration revocation.

Field	Description
Reg-Revocation Timeout	Total duration allowed between two retries for registration revocation.
Reg-Rev on InternalFailure	Specifies whether registration revocation will be triggered on internal failure or not.
Default Subscriber	Name of the default subscriber.
Max sessions	Maximum number of subscriber sessions allowed.
Max challenge len	Length of challenge key for subscriber authentication.
Challenge Window	total number of windows opened for challenge.
Service Status	Status of this service.
MN-AAA Auth Policy	Specifies the lookup criteria for authentication policy between MN and AAA in RRP. Possible settings are: alwaysignore-after-handoffinit-reginit-reg-except-handoffrenew-and-dereg-noauthrenew-reg-noauth
Optimize-Retries	Status of setting for optimized retries when authentication policy is not received for MN and AAA.
MN-HA Auth Policy	Specifies the lookup criteria for authentication policy between MN and HA in RRP.
AAA Distributed MIP Keys Override	Specifies the setting for the FA service to override dynamic keys from AAA with static keys to support MIP registration with HAs which do not support dynamic keys.
Newcall Policy	Specify that new call policy enabled or disabled to handle new calls.
Idle Timeout Mode	Idle timeout mode allowed for this service.
Ignore Stale Challenge	Status of setting to ignore old/stale challenge messages.
Limit Reg Lifetime	Status of setting to limit registration lifetime.
Dynamic HA Failover	Status of setting to handle dynamic HA failovers.
AAA HA override	Status of setting to override HA settings if received from AAA.
HA Failover	Status of setting to handle HA failovers.
Retrans Timeout	Timeout duration between two retransmission of probe on HA failover.
Retries Before Swtichover	Total number of retries before switching to another HA.
Maximum retries	Total number of retries allowed.
Load Balance	Status of setting to handle HA performance issues or HAa failovers by load balancing.
HA Monitoring	Status of setting to monitor HA.
Inactivity Timeout	Timeout duration after which a probe message will be sent to HA.
Monitor Reply Timeout	Timeout duration to wait for reply from HA after which a probe message will be resent to HA.

Field	Description
Maximum retries	Total number of retries allowed.

# CHAPTER 54

## show fng-service statistics

This chapter includes the **show fng-service statistics** command output tables.

- [show fng-service statistics, on page 891](#)

## show fng-service statistics

*Table 284: show fng-service statistics Command Output Description*

Field	Description
<b>Session Statistics</b>	
Current sessions total	Total number of sessions in progress including transient sessions.
Active current	Total number of currently active sessions.
Dormant current	Total number of currently dormant sessions.
Active IPv4 current	Total number of currently active IPv4 sessions.
Active IPv6 current	Total number of currently active IPv6 sessions.
Dormant IPv4 current	Total number of currently dormant IPv4 sessions.
Dormant IPv6 current	Total number of currently dormant IPv6 sessions.
Total setup attempts	Total number of session setup attempts.
Total setup success	Total number of successful session attempts.
Total attempts failed	Total number of failed session attempts.
Disconnect locally	Total number of sessions released locally.
Disconnect remotely	Total number of sessions released remotely.
Disconnect remotely before connect	Total number of sessions released remotely before connecting.
<b>Session Disconnect Reasons</b>	

Field	Description
Remote disconnect ipsec	Number of sessions disconnected because of remote party (mobile) hang-up. Description: Number of sessions disconnected because of IPSEC Type: Proprietary Counter/Int32 Availability: per FNG service
Admin disconnect	Number of sessions disconnected by the administrator.
Idle timeout	Number of sessions disconnected because the idle timer has timed out.
Absolute timeout	Number of sessions disconnected because the Absolute timer has timed out.
Long duration timeout	Number of sessions disconnected because the long duration timer has timed out.
Session setup timeout	Number of sessions disconnected because the Session Manager's session setup timer has timed out.
No resource	Number of sessions disconnected because the system has run out of resources (flows, memory resources, etc.).
Auth failure	Number of sessions disconnected because of an authentication failure.
Flow add failure	Number of sessions disconnected because a flow could not be added on the NPU.
Invalid dest-context	Number of sessions disconnected because the destination context received from the AAA server is invalid.
Source address violation	Number of sessions disconnected because the source IP address is invalid.
Duplicate Request	Number of sessions disconnected because of duplicate requests.
Addr assign failure	Number of sessions disconnected because no remote IP address has been assigned.
Miscellaneous reasons	Number sessions disconnected because of miscellaneous reasons.
<b>Data Stats</b>	
Total Bytes Sent	Total number of bytes sent.
Total Packets Sent	Total number of packets sent.
Total Bytes Rcvd	Total number of bytes received.
Total Packets Rcvd	Total number of packets received.
<b>EAP Server Statistics</b>	
Total Received	Total number of EAP messages received from the EAP server in pass-through mode.

<b>Field</b>	<b>Description</b>
Success Received	Total Number of EAP success messages received from the EAP server in pass-through mode.
Challenge Received	Total number of EAP challenge messages received from the EAP server in pass-through mode.
Failures Received	Total number of EAP failure messages received from the EAP server in pass-through mode.
Total Sent	Total number of EAP messages transmitted to the EAP server in pass-through mode.
Initial Requests	Total number of initial EAP messages transmitted to the EAP server in pass-through mode.
Requests Forwarded	Total number of EAP requests forwarded to the EAP server in pass-through mode.

## CHAPTER 55

# show ggsn-service

This chapter includes the **show ggsn-service** command output tables.

- [show ggsn-service sgsn-table](#), on page 895
- [show ggsn-service all](#), on page 896

## show ggsn-service sgsn-table

*Table 285: show ggsn-service sgsn-table Command Output Descriptions*

Field	Description
GTP Version	GPRS Tunnelling Protocol. (0) - GTPRS (1) - UMTS
Active	GTP condition. (I) - Inactive (A) - Active
GTPC Echo	GPRS Tunneling Protocol-Control message (D) - Disabled (E) - Enabled
PLMN Type	Public land mobile network type. (H) - Home (F) - Foreign (U) - Unknown
SGSN Stats	SGSN statistics. (A) - Available (U) - Unavailable
Service ID	GGSN Service ID.
SGSN Address	IP address of each active SGSN.
Restart Counter	The restart counter sent by the SGSN. Increments by 1 with each restart.
Number of Restarts	Number of times the restart of the particular SGSN is detected, i.e., the number of times a NEW restart counter is received from the SGSN in a GTPC request message.
Curr Subs	Number of current subscribers to each SGSN.
Max Subs	Maximum number of permitted subscribers to each SGSN.

# show ggsn-service all

Displays the configuration information for all GGSN services configured on the system.

*Table 286: show ggsn-service all Command Output Descriptions*

Field	Description
Service name	The name of the GGSN service.
Context	The context name where the GGSN service is configured.
Associated PGW svc	The name of the P-GW service associated to the GGSN service.
Associated GTPU svc	The name of the GTP-U service associated to the GGSN service.
Associated IPNE svc	The name of the IPNE service associated to the GGSN service.
Associated Peer map	The name of the peer map associated to the GGSN service.
Accounting Context Name	The context name where the accounting configuration and/or interface(s) are configured.
3g to 4g HO Immediate flush to Demux	Specifies if the 3G to 4G handover of immediate flush information to Demux is Yes or No.
dns-client Context Name	The context name in which a DNS client configuration is present.
Authorize	Enables/disables subscriber session authorization with HSS over S6b Diameter interface.
S6b IPv6 Reporting	Specifies if the IPv6 address reporting through AAR towards the S6b interface is enabled or disabled.
Fqdn-name	The name of Fully Qualified Domain Name (FQDN) which is used for authorization over S6b interface between GGSN and 3GPP AAA/HSS.
Bind	Binds the GGSN service to a logical IP interface serving as the Gn interface.
Local IP Address	The IP address (IPv4 and/or IPv6) of the interface configured as the Gn interface.
Self PLMN Id	Specifies the GGSN's public land mobile network (PLMN) identifiers.
Retransmission Timeout	The time to control the retransmission of GTP control packets when no response is received from an SGSN.
Max Retransmissions	Indicates the maximum number of times that GTP control packets are retransmitted.
Restart Counter	Specifies the restart counter
Echo Interval	Specifies the frequency at which the GGSN service sends GTPv1-C Echo packets to the SGSN(s) it is configured to communicate with.

Field	Description
GTPC Echo Mode	Specifies if GTP-C echo mode is set as default.
GTPC Echo Retransmission Timeout	Specifies the frequency at which the GGSN service retransmits GTPv1-C Echo packets to the SGSN(s) it is configured to communicate with.
Guard Interval	Specifies the amount of time that must pass before a GGSN service treats a redundant PDP context request as a new request instead of a re-send of a previous request.
PLMN Policy	Specifies the public land mobile network (PLMN) policy.
Setup Timeout	Specifies the maximum amount of time the GGSN service allows for the setting up of PDP contexts.
S-GW Interface Excluded	Excludes the specified interface.
SGSN MCC MNC preference	Specifies the MCC and MNC preference for SGSN.
Unlisted SGSN PLMN Id.	Specifies the PLMN ID of the unlisted SGSN.
Unlisted SGSN rat-type	Specifies the type of the radio access technology for unlisted SGSN.
<b>Reject Code Policy</b>	
Authentication Server Timeout	Specifies the reject code used by the GGSN if communication with an authentication server times out.
Accounting Server Timeout	Specifies the reject code used by the GGSN if communication with an accounting server times out.
Ran Procedure Ready	Specifies if the RAN Procedure Ready feature is enabled/disabled for the specified GGSN service.
NSAPI in Create PDP response	Specifies the Network Service Access Point Identifier in the Create PDP response.
Map MBR to AMBR in Update PDP request	Indicates the status of MBR to AMBR mapping in Update PDP Context Request message.
Suppress NRUPC triggered by CPC	Indicates if suppress NRUPC triggered by CPC is enabled or disabled.
Suppress NRUPC triggered by UPC	Indicates if suppress NRUPC triggered by UPC is enabled or disabled.
Support e-ARP	Indicates if the support for enhanced ARP is enabled or disabled.
Support MS QoS Change	Indicates if the support for MS QoS change is enabled or disabled.
Decode MCC MNC parameter of ULI as HexaDecimal Digits	Indicates if the decoding of MCC and MNC parameters of ULI as hexadecimal digits has been enabled or disabled.
Duplicate Subscriber Address Request	Specifies the status of duplicate subscriber address request.
trace-collection-entity	Specifies the trace collection entity which is the destination node in Network management where trace files are transferred to and stored.

Field	Description
Path Failure Detection on gtp msgs	Specifies the path failure detection policy on GTP-U echo messages that have been retransmitted the maximum number of retry times.
GTP Private Extensions	Specifies the customer specific private extension in GTP-C messages.
Max IP sessions	Specifies the maximum number of IP sessions.
Max PPP sessions	Specifies the maximum number of PPP sessions in GGSN service.
Max sessions	Specifies the total number of maximum sessions including IP and PPP in GGSN service.
Max Primary sessions	Specifies the total number of maximum primary sessions including IP and PPP in GGSN service.
Max Sec-per-primary sessions	Specifies the total number of maximum secondary sessions per primary session in GGSN service.
Service Status	Specifies the status of the GGSN service.
Newcall Policy	Specifies if the new call related behavior of GGSN service is enabled/disabled when duplicate sessions with same IP address request is received.
MBMS Policy	Specifies the configured MBMS policy for Multicast and/or Broadcast mode in this GGSN service.
MBMS Charging ID Optimization	Specifies if the MBMS charging ID optimization is enabled/disabled for the GGSN service.
GTPC Prioritized APN(s)	Specifies if the prioritized APNs have been added for prioritized handling of VoLTE/Emergency calls even under congestion for the GGSN service.
GTPC Prioritized ARP(s)	Specifies if the prioritized ARPs have been added for prioritized handling of VoLTE/Emergency calls even under congestion for the GGSN service.
GTPC Prioritized Rel99 ARP(s)	Specifies if the prioritized Release 99 ARPs have been configured for prioritized handling of VoLTE/Emergency calls even under congestion for the GGSN service.
3GPP Qos to DSCP Mapping (for G-PDUs)	This group indicates the 3GPP QoS to DSCP mapping information.
qci 1: ef	Indicates the DSCP configured for QCI1 type of traffic.
qci 2: ef	Indicates the DSCP configured for QCI2 type of traffic.
qci 3: af11	Indicates the DSCP configured for QCI3 type of traffic.
qci 4: af11	Indicates the DSCP configured for QCI4 type of traffic.
qci 5: ef	Indicates the DSCP configured for QCI5 type of traffic.
qci 6: ef	Indicates the DSCP configured for QCI6 type of traffic.
qci 7: af21	Indicates the DSCP configured for QCI7 type of traffic.

Field	Description
qci 8: af21	Indicates the DSCP configured for QCI8 type of traffic.
qci 9: be	Indicates the DSCP configured for QCI9 type of traffic.
3GPP Qos to DSCP Mapping based on Alloc. Prio	This group indicates the 3GPP QoS to DSCP mapping information based on allocation priority.
qci 5 ( Alloc.P 1): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 1.
qci 5 ( Alloc.P 2): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 2.
qci 5 ( Alloc.P 3): ef	Indicates the DSCP configured for QCI5 type of traffic with allocation priority 3.
qci 6 ( Alloc.P 1): ef	Indicates the DSCP configured for QCI6 type of traffic with allocation priority 1.
qci 6 ( Alloc.P 2): ef	Indicates the DSCP configured for QCI6 type of traffic with allocation priority 2.
qci 6 ( Alloc.P 3): ef	Indicates the DSCP configured for QCI6 type of traffic with and allocation priority 3.
qci 7 ( Alloc.P 1): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 1.
qci 7 ( Alloc.P 2): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 2.
qci 7 ( Alloc.P 3): af21	Indicates the DSCP configured for QCI7 type of traffic with allocation priority 3.
qci 8 ( Alloc.P 1): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 1.
qci 8 ( Alloc.P 2): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 2.
qci 8 ( Alloc.P 3): af21	Indicates the DSCP configured for QCI8 type of traffic with allocation priority 3.
GTPC messages	Indicates the Best effort forwarding PHB for GTPC messages.
CC Behavior	Specifies the 3GPP behavior bit associated with the GGSN's charging characteristics.
Charging Characteristics (CC) Profiles	This group provides the charging characteristics profiles configured in this GGSN service.
Bucket	Specifies the charging bucket configured for charging characteristic in this GGSN service

Field	Description
SGSN Configuration List	Specifies the list of SGSNs that this GGSN service is allowed to communicate with.
GTPC Outgoing Throttling	Specifies if outgoing throttling has been enabled, which indicates the number of messages that were removed from the queue (due to any collision, or max retransmission expired).
RLF Template Name	Specifies the template name for RLF for throttling support.
GTPC Incoming Throttling Params	Specifies if the incoming throttling of GTPC has been configured. It includes following parameters:
Message Rate (per sec)	Indicates the number of messages per second. Default: 20000
Delay Tolerance (secs)	Indicates the delay tolerance in seconds. Default: 5
Queue Size	Indicates the queue size. Default: 10000

# CHAPTER 56

## show gmb

This chapter includes the **show gmb** command output tables.

- [show gmb statistics, on page 901](#)

## show gmb statistics

*Table 287: show gmb statistics Command Output Descriptions*

Field	Description
MBMS Context Stats	
Total Current	Total number of MBMS contexts currently in active status on Gmb interface.
Total Setup	Total number of MBMS contexts are in setup status on Gmb interface.
Total Released	Total number of MBMS contexts release on Gmb interface.
Total Denied	Total number of MBMS contexts requests denied on Gmb interface.
MBMS UE	Total number of UEs in active/setup status or released/denied on this Gmb interface for MBMS service.
MBMS Mcast Bearer	Total number of multicast bearers in active/setup status or released/denied on this Gmb interface for MBMS service.
MBMS Bcast Bearer	Total number of broadcast bearers in active/setup status or released/denied on this Gmb interface for MBMS service.
MBMS UE Context Management Stats	
MBMS UE Auth	Total number of UE Auth Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of UE Auth Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of UE Auth Request messages received and denied on this Gmb interface for MBMS service.

Field	Description
MBMS UE Update	Total number of UE Update Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of UE Update Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of UE Update Request messages received and denied on this Gmb interface for MBMS service.
MBMS UE Delete Tx	Total number of UE Delete Request messages transmitted on this Gmb interface for MBMS service.
Accepted	Total number of UE Delete Request messages transmitted and accepted on this Gmb interface for MBMS service.
Denied	Total number of UE Delete Request messages transmitted and denied on this Gmb interface for MBMS service.
MBMS UE Delete Rx	Total number of UE Delete Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of UE Delete Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of UE Delete Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of UE Delete Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Bearer (Multicast) Context Management Stats	
MBMS Bearer Reg	Total number of Multicast Bearer Context Register request messages received on this Gmb interface for MBMS service.
Accepted	Total number of Multicast Bearer Context Register request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Bearer Context Register request messages received and denied on this Gmb interface for MBMS service.
MBMS Bearer Dereg TX	Total number of Multicast Bearer Context Dereg Request messages transmitted on this Gmb interface for MBMS service.
Accepted	Total number of Multicast Bearer Context Dereg Request messages transmitted and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Bearer Context Dereg Request messages transmitted and denied on this Gmb interface for MBMS service.
MBMS Bearer Dereg RX	Total number of Multicast Bearer Context Dereg messages received on this Gmb interface for MBMS service.

Field	Description
Accepted	Total number of Multicast Bearer Context Dereg Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Bearer Context Dereg Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Multicast Bearer Context Dereg Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Mcast Sess Start	Total number of Multicast Session Start Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of Multicast Session Start Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Session Start Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Multicast Session Start Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Mcast Sess Stop	Total number of Multicast Session Stop Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of Multicast Session Stop Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Session Stop Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Multicast Session Stop Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Mcast Sess Update	Total number of Multicast Session Update Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of Multicast Session Update Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Multicast Session Update Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Multicast Session Update Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Bearer (Broadcast) Context Management Stats	
MBMS Bcast Sess Start	Total number of Broadcast Session Start Request messages received on this Gmb interface for MBMS service.
Accepted	Total number of Broadcast Session Start Request messages received and accepted on this Gmb interface for MBMS service.

Field	Description
Denied	Total number of Broadcast Session Start Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Broadcast Session Start Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Bcast Sess Stop	Total number of Broadcast Session Stop messages received on this Gmb interface for MBMS service.
Accepted	Total number of Broadcast Session Stop Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Broadcast Session Stop Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Broadcast Session Stop Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Bcast Sess Update	Total number of Broadcast Session Update messages received on this Gmb interface for MBMS service.
Accepted	Total number of Broadcast Session Update Request messages received and accepted on this Gmb interface for MBMS service.
Denied	Total number of Broadcast Session Update Request messages received and denied on this Gmb interface for MBMS service.
Discarded	Total number of Broadcast Session Update Request messages received but discarded on this Gmb interface for MBMS service.
MBMS Bearer (Unknown Service Type) Stats	
MBMS Unknown Sess Start denied	Total number of unknown type of Session Start messages received and denied on this Gmb interface for MBMS service.
MBMS Unknown Sess Stop denied	Total number of unknown type of Session Stop messages received and denied on this Gmb interface for MBMS service.
MBMS Unknown Sess Update denied	Total number of unknown type of Session Update messages received and denied on this Gmb interface for MBMS service.

# CHAPTER 57

## show gmm-sm

This chapter includes the **show gmm-sm** command output tables.

- [show gmm-sm statistics, on page 905](#)
- [show gmm-sm statistics verbose, on page 934](#)

## show gmm-sm statistics

*Table 288: show gmm-sm statistics Command Output Descriptions*

Field	Description
Session Statistics	
Attached Subscribers	Statistics for attached subscribers.
Total Attached	Total subscribers attached for 2G and 3G.
3G Attached	Total subscribers attached for 3G only.
2G Attached	Total subscribers attached for 3G only.
Home Subscribers	Statistics for attached home subscribers.
Total Home	Total home subscribers attached for 2G and 3G.
3G Home	Total home subscribers attached for 3G only.
2G Home	Total home subscribers attached for 3G only.
Visiting National Subscribers	Statistics for attached visiting national subscribers.
Total-Visiting-National	Total visiting national subscribers attached for 2G and 3G.
3G-Visiting-National	Total visiting national subscribers attached for 3G only.
2G-Visiting-National	Total visiting national subscribers attached for 3G only.
Visiting Foreign Subscribers	Statistics for attached visiting foreign subscribers.
Total-Visiting-Foreign	Total visiting foreign subscribers attached for 2G and 3G.

Field	Description
3G-Visiting-Foreign	Total visiting foreign subscribers attached for 3G only.
2G-Visiting-Foreign	Total visiting foreign subscribers attached for 2G only.
Network Sharing Subscribers	Statistics for network sharing subscribers.
3G-Supporting-UE	Total number of 3G Network Sharing Supporting User Equipment currently in the system.  This counter pegs when: A network sharing supporting UE connects with the 3G SGSN.
3G-Non-Supporting-UE	Total number of 3G Network Sharing Non-supporting User Equipment currently in the system.  This counter pegs when: A network sharing non-supporting UE connects with the 3G SGSN.
Subscribers in PMM-REGISTERED state	Total subscribers in PMM registered state, including connected and idle.
PMM-CONNECTED	Total number of subscribers in PMM connected state.
PMM-IDLE	Total number of subscribers in PMM idle state.
Activated Subscribers	Statistics for activated subscribers.
Total Activated	Total number of activated 2G and 3G subscriber.
3G Activated	Total number of activated 3G subscribers only.
2G Activated	Total number of activated 2G subscribers only.
Activate PDP Contexts	Statistics for activated PDP contexts.
Total Actv PDP Ctx	Total number of activated 2G and 3G PDP contexts.
3G-Actv Pdp Ctx	Total number of activated 3G PDP contexts only.
2G-Actv Pdp Ctx	Total number of activated 2G PDP contexts only.
Total Actv Pdp Ctx with Direct Tunnel	Total number of activated PDP contexts through direct tunnel.
Activated HSPA Subscribers	Displays the list of active HSPA subscribers.
Activated HSPA subscribers (16-32Mbps)	This counter displays the number of subscribers having: <ul style="list-style-type: none"> <li>• One PDP context with negotiated MBR in the range 16-32 Mbps, or</li> <li>• One or more PDP context with negotiated MBR in the range 16-32 Mbps, or</li> <li>• One PDP context with negotiated MBR in the range 16-32 Mbps and rest with MBR less than 16 Mbps</li> </ul>

Field	Description
Activated HSPA subscribers (32-64Mbps)	This counter displays the number of subscribers having: <ul style="list-style-type: none"> <li>• One PDP context with negotiated MBR in the range 32-64 Mbps, or</li> <li>• One or more PDP context with negotiated MBR in the range 32-64 Mbps, or</li> <li>• One PDP context with negotiated MBR in the range 32-64 Mbps and rest with MBR less than 32 Mbps</li> </ul>
Activated HSPA subscribers (64-128Mbps)	This counter displays the number of subscribers having: <ul style="list-style-type: none"> <li>• One PDP context with negotiated MBR in the range 64-128 Mbps, or</li> <li>• One or more PDP context with negotiated MBR in the range 64-128 Mbps, or</li> <li>• One PDP context with negotiated MBR in the range 64-128 Mbps and rest with MBR less than 64 Mbps</li> </ul>
Activated HSPA subscribers (128-256Mbps)	This counter displays the number of subscribers having: <ul style="list-style-type: none"> <li>• One PDP context with negotiated MBR in the range 128-256 Mbps, or</li> <li>• One or more PDP context with negotiated MBR in the range 128-256 Mbps, or</li> <li>• One PDP context with negotiated MBR in the range 128-256 Mbps and rest with MBR less than 128 Mbps</li> </ul>
Activated HSPA PDP Contexts	Displays the list of active HSPA PDP contexts.
Activated HSPA PDP Contexts (16-32Mbps)	Displays the number of HSPA PDP contexts with the negotiated MBR in the range 16-32 Mbps.
Activated HSPA PDP Contexts (32-64Mbps)	Displays the number of HSPA PDP contexts with the negotiated MBR in the range 32-64 Mbps.
Activated HSPA PDP Contexts (64-128Mbps)	Displays the number of HSPA PDP contexts with the negotiated MBR in the range 64-128 Mbps.
Activated HSPA PDP Contexts (128-256Mbps)	Displays the number of HSPA PDP contexts with the negotiated MBR in the range 128-256 Mbps.
Message Statistics	Indicates the statistics of messages.
Specific Procedures	Indicates the statistics related to specific procedures.
Attach Request	Total number of messages for Attach Request
Total-Attach	Indicates the statistics of total attach.
IMSI	Total attach through international mobile subscriber identity (IMSI).

Field	Description
Total-IMSI-Attach	Total international mobile subscriber identity (IMSI) attach including 2G and 3G.
3G-IMSI-Attach	3G-IMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 3G-IMSI attach with GPRS only access.
Combined Attached	Total 3G-IMSI attach with combined (PS and CS) access.
2G-IMSI-Attach	2G-IMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 2G-IMSI attach with GPRS only access.
Combined Attached	Total 2G-IMSI attach with combined (PS and CS) access.
PTMSI	Total attach through Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Total-PTMSI-Attach	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach including 2G and 3G.
3G-PTMSI-Attach	3G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 3G-P-TMSI attach with GPRS only access.
Combined Attached	Total 3G-P-TMSI attach with combined (PS and CS) access.
2G-PTMSI-Attach	2G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 2G-P-TMSI attach with GPRS only access.
Combined Attached	Total 2G-P-TMSI attach with combined (PS and CS) access.
Attach Accept	Statistics of total attach accepts.
Total-Attach-Accept	Total attach accepts including 2G and 3G.
3G-Attach-Accept	3G-attach accept statistics for GPRS and non-GPRS.
Gprs-Attached	Total 3G-attach accepts with GPRS only access.
Comb-Attached	Total 3G-attach accepts with combined (PS and CS) access.
2G-Attach-Accept	2G-attach accept statistics for GPRS and non-GPRS.
Gprs-Attached	Total 2G-attach accepts with GPRS only access.
Comb-Attached	Total 2G-attach accepts with combined (PS and CS) access.
Attach Complete	Statistics of total attach completed.

Field	Description
Total-Attach-Complete	Total attach completed including 2G and 3G.
3G-Attach-Complete	3G-attach complete statistics for GPRS and non-GPRS.
2G-Attach-Complete	Total 2G-attach completed with GPRS only access.
Attach Reject	Total 2G and 3G attach rejected statistics.
Total-Attach-Reject	Total 2G and 3G attach rejected statistics for GPRS and non-GPRS.
3G-Attach-Reject	Total 3G-attach rejected for GPRS only access.
2G-Attach-Reject	Total 2G-attach rejected for combined (PS and CS) access.
Routing Area Update Request	RAU request statistics.
Total-RAU	Total RAU request messages.
Total-Intra-SGSN-RAU	Total intra-SGSN RAU request messages.
Total-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN Routing Area (RA) updates.
3G-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN Routing Area (RA) updates for 3G.
2G-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN RA updates for 2G.
Total-Periodic-Intra-RAU	Total messages for periodic intra-RA updates.
3G-Periodic-Intra-RAU	Total messages for periodic intra-RA updates for 3G.
2G-Periodic-Intra-RAU	Total messages for periodic intra-RA updates for 2G.
Total-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) services.
3G-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) 3G services.
2G-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) 2G services.
Total-PS-Inter-SGSN-RAU	Total packet switched, inter-SGSN-RA update request messages.
3G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages for 3G service.
2G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages for 2G service.

Field	Description
Total-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages.
3G-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages for 3G service.
2G-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages for 2G service.
Routing Area Update Accept	Statistics of accepted routing area update messages.
Total-RAU-Accept	Total number of routing area update messages accepted.
3G-RAU-Accept	Total number of routing area update messages accepted for 3G service.
3G-Intra-SGSN-RAU-Accept	Total number of intra-SGSN routing area update messages accepted for 3G service.
RA-Updated	Total number of routing area information updated for 3G service.
Comb RA/LA-Updated	Total number of combined (PS and CS) routing area or location area information updated for 3G service.
2G-RAU-Accept	Total number of routing area update messages accepted for 2G service.
2G-Intra-SGSN-RAU-Accept	Total number of intra-SGSN routing area update messages accepted for 2G service.
RA-Updated	Total number of routing area information updated for 2G service.
Comb RA/LA-Updated	Total number of combined (PS and CS) routing area or location area information updated for 2G service.
3G-Inter-SGSN-RAU-Accept	Total number of inter-SGSN routing area update messages accepted for 3G service.
RA-Updated	Total number of routing area information updated for 3G service.
Comb RA/LA-Updated	Total number of combined (PS and CS) routing area or location area information updated for 3G service.
2G-RAU-Accept	Total number of routing area update messages accepted for 2G service.
2G-Inter-SGSN-RAU-Accept	Total number of inter-SGSN routing area update messages accepted for 2G service.

Field	Description
RA-Updated	Total number of routing area information updated for 2G service.
Comb RA/LA-Updated	Total number of combined (PS and CS) routing area or location area information updated for 2G service.
Routing Area Update Complete	Routing area update complete messages statistics.
Total-RAU-Complete	Total number of routing area update complete messages.
3G-RAU-Complete	Total number of routing area update complete messages for 3G service.
2G-RAU-Complete	Total number of routing area update complete messages for 2G service.
Routing Area Update Reject	Routing Area Update (RAU) reject messages statistics.
Total-RAU-Reject	Total number of RAU reject messages.
3G-RAU-Reject	Total number of RAU reject messages for 3G service.
2G-RAU-Reject	Total number of RAU reject messages for 2G service.
Detach Request	Detach request message statistics.
Dropped-Detach-Req	Total number of dropped detach request messages.
3G-MS-Init-IMSI-Detach-Req-During-actv/sms-auth-ongoing	This counter is incremented if UE-Init-IMSI-Detach-Request is dropped when it is received during ongoing authentication of Activation/SMS.
Total-Detach-Req	Total number of detach request messages.
Total-MS-Init-Detach-Req	Total number of Mobile Station (MS) initiated detach requests.
3G-MS-Init-GPRS-Detach-Req	Total number of MS initiated GPRS (PS) detach requests for 3G service.
3G-MS-Init-IMSI-Detach-Req	Total number of MS initiated IMSI (CS) detach requests for 3G service.
3G-MS-Init-Comb-Detach-Req	Total number of MS initiated combined (IMSI and GPRS) detach requests for 3G service.
2G-MS-Init-GPRS-Detach-Req	Total number of MS initiated GPRS detach requests for 2G service.
2G-MS-Init-IMSI-Detach-Req	Total number of MS initiated IMSI detach requests for 2G service.
2G-MS-Init-Comb-Detach-Req	Total number of MS initiated combined (PS and CS) detach requests for 2G service.

Field	Description
Total-Nw-Init-Detach-Req	Total number of network initiated detach requests.
3G-Nw-Init-Reattach-Req	<p>During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. This Detach Request has a detach type -Reattach required, when it wants the MS to attach to the network again for GPRS services.</p> <p><b>This counter pegs when:</b> A clear subscriber detach operation is performed.</p>
2G-Nw-Init-Reattach-Req	<p>During the network initiated detach for 2G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type -Reattach required, when it wants the MS to attach again for GPRS services.</p> <p><b>This counter pegs when:</b> when a clear subscriber operation is performed.</p>
3G-Nw-Init-Reattach-Not-Req	<p>During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type -Reattach not required, when it does not expect the MS to attach again for GPRS services.</p> <p><b>This counter pegs when:</b> reception of a Cancel-Location (subscription-withdrawn) or a DSD (all-gprs-subscription withdrawn) is incremented.</p>
2G-Nw-Init-Reattach-Not-Req	<p>During the network initiated detach for 2G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type -Reattach not required, when it does not expect the MS to attach again for GPRS services.</p> <p><b>This counter pegs when:</b> reception of a Cancel-Location (subscription-withdrawn) or a DSD (all-gprs-subscription withdrawn) is incremented.</p>
3G-Nw-Init-IMSI-Detach	<p>When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS.</p> <p><b>This counter pegs when:</b> VLR-reset indication and a next uplink activity from MS is incremented.</p>
2G-Nw-Init-IMSI-Detach	<p>When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS.</p> <p><b>This counter pegs when:</b> VLR-reset indication and a next uplink activity from MS is incremented.</p>

Field	Description
Detach Accept	Detach request accept messages statistics.
Total-Detach-Acc	Total number of detach request accept messages.
Total-MS-Init-Detach-Acc	Total number of MS initiated detach requests accepted.
3G-MS-Init-Detach-Acc	Total number of MS initiated GPRS detach requests accepted for 3G service.
2G-MS-Init-Detach-Acc	Total number of MS initiated IMSI detach requests accepted for 2G service.
Total-Nw-Init-Detach-Acc	Total number of network initiated detach requests accepted.
3G-Nw-Init-Detach-Acc	Total number of network initiated detach requests accepted for 3G service.
3G-Nw-Init-GPRS-Detach-Acc	Total number of network initiated GPRS (PS) detach requests accepted for 3G service.
3G-Nw-Init-IMSI-Detach-Acc	Total number of network initiated IMSI (CS) detach request accepted for 3G service.
3G-Nw-Init-Comb-Detach-Acc	Total number of network initiated combined (PS and CS) detach requests accepted for 3G service.
2G-Nw-Init-Detach-Acc	Total number of network initiated detach requests accepted for 2G service.
2G-Nw-Init-GPRS-Detach-Acc	Total number of network initiated GPRS (PS) detach requests accepted for 2G service.
2G-Nw-Init-IMSI-Detach-Acc	Total number of network initiated IMSI (CS) detach requests accepted for 2G service.
2G-Nw-Init-Comb-Detach-Acc	Total number of network initiated combined (PS and CS) detach requests accepted for 2G service.
Service Request	Service request messages statistics.
Total-Serv-Req	Total number of service request messages.
Total-Signalling-Serv-Req	Total signalling service requests messages.
3G-Signalling-Serv-Req	Total signalling service requests messages for 3G service.
2G-Signalling-Serv-Req	Total signalling service requests messages for 2G service.
Total-Page-Rsp-Serv-Req	Total paging responses for service requests messages.
3G-Page-Rsp-Serv-Req	Total paging responses for service requests messages for 3G service.

Field	Description
2G-Page-Rsp-Serv-Req	Total paging responses for service requests messages for 2G service.
Total-Data-Serv-Req	Total data service requests messages.
3G-Data-Serv-Req	Total data service requests messages for 3G service.
2G-Data-Serv-Req	Total data service requests messages for 2G service.
Service Accept	Statistics of accepted service request messages.
Total-Serv-Resp	Total service response messages.
3G-Service-Resp	Total service response messages for 3G service.
2G-Service-Resp	Total service response messages for 2G service.
Service Reject	Statistics of rejected service request messages.
Total-Serv-Rej	Total service rejected messages.
3G-Service-Rej	Total service rejected messages for 3G service.
2G-Service-Rej	Total service rejected messages for 2G service.
Paging Initiated	Statistics of paging initiated procedures.
Total-Page-Requests	Total paging request messages.
3G-PS-Page-Requests	Total paging request messages in packet switching (PS) domain for 3G service.
3G-CS-Page-Requests	Total paging request messages in circuit switching (CS) domain for 3G service.
2G-PS-Page-Requests	Total paging request messages in packet switching (PS) domain for 2G service.
2G-CS-Page-Requests	Total paging request messages in circuit switching (CS) domain for 2G service.
Total-Page-Responses	Total paging request response messages.
3G-PS-Page-Responses	Total paging request response messages in packet switching (PS) domain for 3G service.
3G-CS-Page-Responses	Total paging request response messages in circuit switching (CS) domain for 3G service.
2G-PS-Page-Responses	Total paging request response messages in packet switching (PS) domain for 2G service.
2G-CS-Page-Responses	Total paging request response messages in circuit switching (CS) domain for 2G service.

Field	Description
Gmm Status Message	GPRS Mobility Management (GMM) procedure status messages.
Total-Gmm-Status-Sent	Total GMM procedure status messages sent.
3G-Gmm-Status-Sent	Total GMM procedure status messages sent for 3G service.
2G-Gmm-Status-Sent	Total GMM procedure status messages sent for 2G service.
Total-Gmm-Status-Rcvd	Total GMM procedure status messages received.
3G-Gmm-Status-Rcvd	Total GMM procedure status messages received for 3G service.
2G-Gmm-Status-Rcvd	Total GPRS Mobility Management (GMM) procedure status messages received for 2G service.
Gmm Information Sent	Statistics of messages sent with GPRS mobility management information.
Total-Gmm-Information-Sent	Total messages sent with GMM information.
3G-Gmm-Information-Sent	Total messages sent with GPRS Mobility Management (GMM) information for 3G service.
2G-Gmm-Information-Sent	Total messages sent with GMM information for 2G service.
Common Procedures	Statistics of common procedures in GPRS mobility management.
Authentication And Ciphering Request	Statistics of authentication and ciphering request messages.
Total-Auth-Cipher-Req	Total authentication and ciphering request messages.
3G-Auth-Cipher-Req	Total authentication and ciphering request messages for 3G service.
2G-Auth-Cipher-Req	Total authentication and ciphering request messages for 2G service.
Authentication And Ciphering Response	Statistics of authentication and ciphering request response messages
Total-Auth-Cipher-Resp	Total authentication and ciphering request response messages.
3G-Auth-Cipher-Resp	Total authentication and ciphering request response messages for 3G service.
2G-Auth-Cipher-Resp	Total authentication and ciphering request response messages for 2G service.

Field	Description
Authentication And Ciphering Response With SRES Mismatch	Indicates the statistics of authentication and ciphering request response messages having Signed RESponse (SRES) mismatch.
Total-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch.
3G-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch for 3G service.
2G-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch for 2G service.
Authentication And Ciphering Reject	Statistics of authentication and ciphering request reject messages.
Total-Auth-Cipher-Rej	Total authentication and ciphering requests rejected messages.
3G-Auth-Cipher-Rej	Total authentication and ciphering requests rejected messages for 3G service.
2G-Auth-Cipher-Rej	Total authentication and ciphering requests rejected messages for 2G service.
Authentication And Ciphering Failure	Statistics of authentication and ciphering request failure messages.
Total-Auth-Cipher-Failure	Total authentication and ciphering request failures.
3G-Auth-Cipher-Mac-Failure	Total authentication and ciphering failures due to Message Authentication Code (MAC) for 3G service.
2G-Auth-Cipher-Mac-Failure	Total authentication and ciphering failures due to Message Authentication Code (MAC) for 2G service.
3G-Auth-Cipher-Sync-Failure	Total authentication and ciphering failures due to synchronisation failure for 3G service.
2G-Auth-Cipher-Syn-Failure	Total authentication and ciphering failures due to synchronisation failure for 2G service.
3G-Auth-Unacceptable	Total authentication and ciphering failures due to unacceptable delay for 3G service.
2G-Auth-Unacceptable	Total authentication and ciphering failures due to unacceptable delay for 2G service.
P-TMSI Realloc	Statistics of Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedures.

Field	Description
Total-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedures.
3G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation procedures for 3G service.
2G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation procedures for 2G service.
P-TMSI Realloc Complete	Statistics of completed P-TMSI reallocation procedures.
Total-PTMSI Realloc Complete	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure completed.
3G-PTMSI Realloc Complete	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure completed for 3G service.
2G-PTMSI Realloc Complete	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure completed for 2G service.
Identity Request	Indicates the statistics of identity request messages.
Total-Identity-Req	Total identity request messages.
Total-IMSI-Identity-Req	Total international mobile subscriber identity (IMSI) identity request messages.
3G-IMSI-Identity-Req	Total IMSI identity request messages for 3G service.
2G-IMSI-Identity-Req	Total IMSI identity request messages for 2G service.
Total-IMEI-Identity-Req	Total International Mobile Equipment Identity (IMEI) request messages.
3G-IMEI-Identity-Req	Total IMEI identity request messages for 3G service.
2G-IMEI-Identity-Req	Total IMEI identity request messages for 2G service.
Total-IMEISV-Identity-Req	Total International Mobile Equipment Identity-software version (IMEI-SV) identity request messages.
3G-IMEISV-Identity-Req	Total IMEI-SV identity request messages for 3G service.
2G-IMEISV-Identity-Req	Total IMEI-SV identity request messages for 2G service.
Total-(P)TMSI-Identity-Req	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) request messages.
3G-(P)TMSI-Identity-Req	Total P-TMSI identity request messages for 3G service.
2G-(P)TMSI-Identity-Req	Total P-TMSI identity request messages for 2G service.
Identity Response	Indicates the statistics of identity request messages.

Field	Description
Total-Identity-Rsp	Total identity request response messages.
Total-IMSI-Identity-Rsp	Total international mobile subscriber identity (IMSI) identity request response messages.
3G-IMSI-Identity-Rsp	Total IMSI identity request response messages for 3G service.
2G-IMSI-Identity-Rsp	Total IMSI identity request response messages for 2G service.
Total-IMEI-Identity-Rsp	Total International Mobile Equipment Identity (IMEI) request response messages.
3G-IMEI-Identity-Rsp	Total IMEI identity request response messages for 3G service.
2G-IMEI-Identity-Rsp	Total IMEI identity request response messages for 2G service.
Total-IMEISV-Identity-Rsp	Total International Mobile Equipment Identity-Software Version (IMEI-SV) identity request response messages.
3G-IMEISV-Identity-Rsp	Total IMEI-SV identity request response messages for 3G service.
2G-IMEISV-Identity-Rsp	Total IMEI-SV identity request response messages for 2G service.
Total-(P)TMSI-Identity-Rsp	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) request response messages.
3G-(P)TMSI-Identity-Rsp	Total P-TMSI identity request response messages for 3G service.
2G-(P)TMSI-Identity-Rsp	Total P-TMSI identity request response messages for 2G service.
Total-Unknown-Identity-Rsp	Total identity request response messages for unknown identity.
3G-Unknown-Identity-Rsp	Total identity request response messages for unknown identity for 3G service.
2G-Unknown-Identity-Rsp	Total identity request response messages for unknown identity for 2G service.
Timers	Message and procedure timers statistics.
Total-T3350-Expiry	Total number of times the T3350 timer timed-out.
3G-T3350-Expiry	Total number of times the T3350 timer timed-out for 3G service.

Field	Description
2G-T3350-Expiry	Total number of times the T3350 timer timed-out for 2G service.
Total-T3360-Expiry	Total number of times the T3360 timer timed-out.
3G-T3360-Expiry	Total number of times the T3360 timer timed-out for 3G service.
2G-T3360-Expiry	Total number of times the T3360 timer timed-out for 2G service.
Total-T3370-Expiry	Total number of times the T3370 timer timed-out.
3G-T3370-Expiry	Total number of times the T3370 timer timed-out for 3G service.  <b>Note</b> This counter is deprecated from release R 16.0 onwards. New counters are introduced to replace this counter. The new counters are based on Identity type.
2G-T3370-Expiry	Total number of times the T3370 timer timed-out for 2G service.  <b>Note</b> This counter is deprecated from release R 16.0 onwards. New counters are introduced to replace this counter. The new counters are based on Identity type.
3G-T3370-Expiry-IMSI	Total number of times the T3370 timer timed-out for 3G IMSI identity request.
2G-T3370-Expiry-IMSI	Total number of times the T3370 timer timed-out for 2G IMSI identity request.
3G-T3370-Expiry-IMEI	Total number of times the T3370 timer timed-out for 3G IMEI identity request.
2G-T3370-Expiry-IMEI	Total number of times the T3370 timer timed-out for 2G IMEI identity request.
3G-T3370-Expiry-IMEISV	Total number of times the T3370 timer timed-out for 3G IMEISV identity request.
2G-T3370-Expiry-IMEISV	Total number of times the T3370 timer timed-out for 2G IMEISV identity request.
3G-T3370-Expiry-TMSI	Total number of times the T3370 timer timed-out for 3G TMSI identity request.
2G-T3370-Expiry-TMSI	Total number of times the T3370 timer timed-out for 2G TMSI identity request.

Field	Description
3G-T3370-Expiry-Other	Total number of times the T3370 timer timed-out for 3G identity request for unknown reason.
2G-T3370-Expiry-Other	Total number of times the T3370 timer timed-out for 2G identity request for unknown reason.
Total-T3322-Expiry	Total number of times the T3322 timer timed-out.
3G-T3322-Expiry	Total number of times the T3322 timer timed-out for 3G service.
2G-T3322-Expiry	Total number of times the T3322 timer timed-out for 2G service.
Total-T3313-Expiry	Total number of times the T3313 timer timed-out.
3G-T3313-Expiry	Total number of times the T3313 timer timed-out for 3G service.
2G-T3313-Expiry	Total number of times the T3313 timer timed-out for 2G service.
Ranap Procedures	Indicates the statistics of Radio Access Network Application Part (RANAP) procedures.
Initial UE Rcvd	Total number of initial User Equipment (UE) messages received.
Common Id sent	Total number of common identifier messages sent.
Direct Transfer Sent	Total number of direct transfer messages sent.
Direct Transfer Rcvd	Total number of direct transfer messages received.
Security Mode Command	Total number of security mode commands received.
Security Mode Complete	Total number of security mode completed.
Security Mode Reject	Total number of security mode commands rejected.
Iu Release Request	Total number of Iu interface release request received.
Iu Release Command	Total number of Iu interface release commands received.
Iu Release Complete	Total number of Iu interface release completed.
Reset Rcvd	Total number of reset requests received.
Retransmitted Reset Rcvd	Total number of retransmitted reset requests received.
Reset Ack Sent	Total number of reset request acknowledgement sent.
Reset Sent	Total number of reset requests sent.

Field	Description
Retransmitted Reset Sent	Total number of reset requests retransmitted.
Reset Ack Rcvd	Total number of reset request acknowledgements received.
Resource Reset Rcvd	Total number of resource reset requests received.
Resource Reset Dropped	Total number of resource reset requests dropped as a result of throttling mechanism which handles flurries of such messages to the MMgr.
Resource Reset Ack Sent	Total number of resource reset request acknowledgements sent.
Resource Reset Sent	Total number of resource reset requests sent.
Resource Reset Ack Rcvd	Total number of resource reset request acknowledgements received.
Overload ctrl Rcvd	Total number of resource overload control messages received.
PC Congested Received	Total number of Point Code (PC) congested messages received.
Error Indication Rcvd	Total number of error indication messages received.
Error Indication Sent	Total number of error indication messages sent.
Relocation Required	Total number of messages received for Serving Radio Network Subsystem (SRNS) relocation required.
Relocation Command	Total number of messages received with SRNS relocation command.
Relocation Request	Total number of SRNS relocation requests received.
Relocation Request Ack	Total number of SRNS relocation requests Ack sent.
Relocation Failure	Total number of SRNS relocation failure messages received.
Relocation Prep Failure	Total number of SRNS relocation preparation failure messages received.
Relocation Cancel	Total number of SRNS relocation cancel messages received.
Relocation Cancel Ack	Total number of SRNS relocation cancel acknowledge messages sent.
Relocation Detect	Total number of SRNS relocation detected.
Relocation Complete	Total number of SRNS relocation completed.

Field	Description
Forward SRNS Context	Total number of SRNS contexts forwarded.
NAS-PDU Stats	Protocol Data Units (PDUs) for Network Access Server (NAS) statistics.
Received	Indicates the total all type of PDUs received through NAS interface.
Sent	Indicates the total all type of PDUs sent through NAS interface.
Total-Received-NAS-Pdu	Total all type of Protocol Data Units received through NAS interface.
Total-Sent-NAS-Pdu	Total all type of PDUs sent through NAS interface.
GMM-Received-NAS-Pdu	Total PDUs received by GPRS mobility management (GMM) service through NAS interface.
GMM-Sent-NAS-Pdu	Total PDUs sent by GMM service through NAS interface.
SM-Received-NAS-Pdu	Total PDUs received by Service Management (SM) service through NAS interface.
SM-Sent-NAS-Pdu	Total PDUs sent by SM service through NAS interface.
UnIdentified-NAS-Pdu	Total number of unknown type PDUs received through NAS interface.
Dropped NAS-PDUS	Statistics of Protocol Data Units (PDUs) dropped through NAS interface.
Total-Dropped-NAS-Pdu	Total number of PDUs dropped through NAS interface.
Redirection Indication	Indicates the causes for redirection indication.
PLMN not allowed	<p>The Attach/RAU Reject message is sent with GMM cause -PLMN not allowed" or any other values not specifically mapped to the other causes.</p> <p><b>This counter pegs when:</b> Attach-reject/RAU-reject is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.</p>
Location area not allowed	<p>The Attach/RAU Reject message is sent with GMM cause -Location Area not allowed.</p> <p><b>This counter pegs when:</b> Attach-reject/RAU-reject message is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.</p>

Field	Description
Roaming not allowed in LA	The Attach/RAU Reject message is sent with GMM cause - Roaming not allowed in this location area.  <b>This counter pegs when:</b> Attach-reject/RAU-reject message is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.
No GPRS services in PLMN	The Attach/RAU Reject message is sent with GMM cause -GPRS services not allowed in this PLMN.  <b>This counter pegs when:</b> Attach-reject/RAU-reject message is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.
CS/PS co-ord required	SGSN while interacting with the IMSI of the MS, rejects the MS to facilitate the RNC to choose the right CN operator.  <b>This counter pegs when:</b> Attach-reject/RAU-reject message is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.
Unknown Reasons	The RANAP message is sent with none of the valid cause values. If the value is non-zero, it reflects an error in SGSN software.  <b>This counter pegs when:</b> Attach-reject/RAU-reject message is sent in a MOCN configuration and the RNC tries the Attach/RAU at the next SGSN with the specific cause.
SMS Error Stats	Statistics of errors related to Short Message Service (SMS).
CP-ERROR (Tx)	Total number of control program errors sent ( in upload direction) for short message service (SMS).
<b>Network Overload Protection</b>	
Attach requests queued in the pacing queue	Total number of Attach Request messages in the pacing queue waiting to be processed.
Inter SGSN RAU requests queued in the pacing queue	Total number of Inter SGSN RAU Request messages that have been buffered in the pacing queue.
Number of Inter SGSN RAU and Attach requests in the pacing queue	Total number of Attach Request messages and Inter SGSN Routing Area Update (RAU) Request messages that have been buffered in the pacing queue.
Attach requests successfully dequeued from the pacing queue	Total number of Attach Request messages that have been successfully removed from the pacing queue to be sent to the Session Manager for further processing.

Field	Description
Inter SGSN RAU requests successfully dequeued from the pacing queue	Total number of Inter SGSN RAU Request messages that have successfully been removed from the pacing queue and sent to the Session Manager for further processing.
Attaches rejected	Total number of Attach Request messages that were rejected due to a network overload situation.
Inter SGSN RAUs rejected	Total number of Inter SGSN RAU Request messages that were rejected due to a network overload situation.
Attaches dropped	Total number of Attaches that were dropped due to a network overload situation.
Inter SGSN RAUs dropped	Total number of Inter SGSN RAU Request messages that were dropped due to a network overload situation.
Attaches discarded due to excess wait time in the pacing queue	Total number of Attach Request messages that were discarded because the requests waited in the pacing queue for more than the t3310 timer value, which would have resulted in a timeout at the MS.
Inter SGSN RAUs discarded due to excess wait time in the pacing queue	Total number of Inter SGSN RAU messages that were discarded from the pacing queue as the requests waited more than the t3315 timer value, which would have resulted in a timeout at the MS.
Number of valid packets processed in the last sec	Total number of valid packets processed in the last second.
Number of packets in Q in the last tick	Total number of packets in the queue in the last tick.
Packets to be dequeued in the last tick	Total number of packets dequeued in the last tick.
Number of new requests processed from the pacing queue in the last tick	Total number of new requests processed from the pacing queue in the last tick.
Number of requests dropped from the pacing queue in the last tick	Total number of requests dropped from the pacing queue in the last tick.
Average Number of requests processed per min (1 min)	The average number of requests processed per minute.
Average Number of requests processed per min (5 min)	The average number of requests processed per minute.
Average Number of requests processed per min (10 min)	The average number of requests processed per minute.
<b>Session Management Messages Statistics</b>	
Activate Context Request	Statistics related to active context request in Session Management (SM) service.
Total-Actv-Request	Total number of request messages received for 2G and 3G context activation including primary and secondary contexts.

Field	Description
3G-Actv-Request	Total number of request messages received for 3G context activation including primary and secondary contexts.
2G-Actv Request	Total number of request messages received for 2G context activation including primary and secondary contexts.
Primary-Actv-Request	Total number of request messages received for 2G and 3G primary context activation.
3G-Primary-Actv-Request	Total number of request messages received for 3G primary context activation.
2G-Primary-Actv-Request	Total number of request messages received for 2G primary context activation.
Secondary-Actv-Request	Total number of request messages received for 2G and 3G secondary context activation.
3G-Secondary-Actv-Request	Total number of request messages received for 3G secondary context activation.
2G-Secondary-Actv-Request	Total number of request messages received for 2G secondary context activation.
Activate Context Accept	Statistics relaetd to active context requests accepted in Session Management service.
Total-Actv-Accept	Total number of request messages accepted for 2G and 3G context activation including primary and secondary type of context.
3G-Actv-Accept	Total number of request messages accepted for 3G context activation including primary and secondary type of context.
2G-Actv Accept	Total number of request messages accepted for 2G context activation including primary and secondary type of context.
Primary-Actv-Accept	Total number of request messages accepted for 2G and 3G primary context activation.
3G-Primary-Actv-Accept	Total number of request messages accepted for 3G primary context activation.
2G-Primary-Actv-Accept	Total number of request messages accepted for 2G primary context activation.
Secondary-Actv-Accept	Total number of request messages accepted for 2G and 3G secondary context activation.
3G-Secondary-Actv-Accept	Total number of request messages accepted for 3G secondary context activation.

Field	Description
2G-Secondary-Actv-Accept	Total number of request messages accepted for 2G secondary context activation.
Activate Context Reject	Statistics of request messages rejected for 2G and 3G context activation including primary and secondary type of contexts.
Total-Actv-Reject	Total number of request messages rejected for 2G and 3G context activation including primary and secondary type of contexts.
3G-Actv-Reject	Total number of request messages rejected for 3G context activation including primary and secondary type of contexts.
2G-Actv-Reject	Total number of request messages rejected for 2G context activation including primary and secondary type of contexts.
Primary-Actv-Reject	Total number of request messages rejected for 2G and 3G primary context activation.
3G-Primary-Actv-Reject	Total number of request messages rejected for 3G primary context activation.
2G-Primary-Actv-Reject	Total number of request messages rejected for 2G primary context activation.
Secondary-Actv-Reject	Total number of request messages rejected for 2G and 3G secondary context activation.
3G-Secondary-Actv-Reject	Total number of request messages rejected for 3G secondary context activation.
2G-Secondary-Actv-Reject	Total number of request messages rejected for 2G secondary context activation.
Actv-Reject-Nrspca	Total number of request messages rejected for Network Requested Secondary PDP Context Activation.
3G-Actv-Reject-Nrspca	Total number of NRSPCA request messages rejected for 3G secondary context activation.
Activate Context Failure	
Total-Actv-Failure	Total number of context activation failures for 2G and 3G services, including primary and secondary types.
3G-Actv-Failure	Total number of context activation failures for 3G services.
2G-Actv Failure	Total number of context activation failures for 2G services.

Field	Description
Primary-Actv-Failure	Total number of failed primary context activations for 2G and 3G service.
3G-Primary-Actv-Failure	Total number of failed primary context activations for 3G service.
2G-Primary-Actv-Failure	Total number of failed primary context activations for 2G service.
Secondary-Actv-Failure	Total number of failed secondary context activations for 2G and 3G service.
3G-Secondary-Actv-Failure	Total number of failed secondary context activations for 3G service .
2G-Secondary-Actv-Failure	Total number of failed secondary context activations for 2G and 3G service .
Duplicate Activate Request	Statistics of duplicate context activation requests for 2G and 3G service received.
Total-Dup-Actv Req Received	Total number of duplicate context activation requests for 2G and 3G service received.
Total-Dup-3G-Actv Req Received	Total number of duplicate context activation requests for 3G service received.
3G-Dup Req In PDP-ACTIVE State	Statistics of duplicate context activation requests for 3G service in PDP activate state.
Duplicate TI	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate Transaction Identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate Network Service Access Point Identifier (NSAPI) for 3G service.
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate PDP address and access point name for 3G service.
Total-Dup-2G-Actv Req Received	Total number of duplicate context activation requests for 2G service received.
2G-Dup Req In PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 2G service in PDP activate state.
Duplicate TI	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate Transaction Identifiers (TIs).

Field	Description
Duplicate NSAPI	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate PDP address and access point name.
3G-Dup Req In NOT PDP-ACTIVE State	Statistics of duplicate context activation requests for 3G service which are not in PDP active state.
Duplicate TI	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate PDP address and access point name.
2G-Dup Req In NOT PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 2G service which are not in PDP active state.
Duplicate TI	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate PDP address and access point name.
Request Pdp Context Activation	Indicates the statistics of PDP context activation requests for 2G and 3G service.
Total-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 2G and 3G service.
3G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 3G service.
2G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 2G service.
Request Pdp Context Activation Reject	Indicates the statistics of PDP context activation requests rejected for 2G and 3G service.

Field	Description
Total-Request-Pdp-Ctxt-Req Reject	Total number of PDP context activation requests rejected for 2G and 3G service.
3G-Request-Pdp-Ctxt-Req Reject	Total number of PDP context activation requests rejected for 3G service.
2G-Request-Pdp-Ctxt-Req Reject	Total number of PDP context activation requests rejected for 2G service.
Modify Context Request	Statistics of MS and network initiated PDP context modification requests received for 2G and 3G service.
Total-Modify-Request	Total number of MS and network initiated PDP context modification requests received for 2G and 3G service.
3G-Modify-Request	Total number of MS and network initiated PDP context modification requests received for 3G service.
2G-Modify Request	Total number of MS and network initiated PDP context modification requests received for 2G service.
MS-Modify-Request	Total number of MS initiated PDP context modification requests received for 2G and 3G service.
3G-MS-Modify-Request	Total number of MS initiated PDP context modification requests received for 3G service.
2G-MS-Modify-Request	Total number of MS initiated PDP context modification requests received for 2G service.
NW-Modify-Request	Total number of network initiated PDP context modification requests received for 2G and 3G service.
3G-NW-Modify-Request	Total number of network initiated PDP context modification requests received for 3G service.
2G-NW-Modify-Request	Total number of network initiated PDP context modification requests received for 2G service.
Modify Context Accept	Statistics of MS and network initiated PDP context modification requests accepted for 2G and 3G service.
Total-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 2G and 3G service.
3G-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 3G service.
2G-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 2G service.
MS-Modify-Accept	Total number of MS initiated PDP context modification requests accepted for 2G and 3G service.

Field	Description
3G-MS-Modify-Accept	Total number of MS initiated PDP context modification requests accepted for 3G service.
2G-MS-Modify-Accept	Total number of MS initiated PDP context modification requests accepted for 2G service.
NW-Modify-Accept	Total number of network initiated PDP context modification requests accepted for 2G and 3G service.
3G-NW-Modify-Accept	Total number of network initiated PDP context modification requests received for 3G service.
2G-NW-Modify-Accept	Total number of network initiated PDP context modification requests accepted for 2G service.
Modify Context Reject	Indicates the statistics of MS and network initiated PDP context modification requests rejected for 2G and 3G service.
Total-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 2G and 3G service.
3G-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 3G service.
2G-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 2G service.
MS-Modify-Reject	Total number of MS initiated PDP context modification requests rejected for 2G and 3G service.
3G-MS-Modify-Reject	Total number of MS initiated PDP context modification requests rejected for 3G service.
2G-MS-Modify-Reject	Total number of MS initiated PDP context modification requests rejected for 2G service.
NW-Modify-Reject	Total number of network initiated PDP context modification requests rejected for 2G and 3G service.
3G-NW-Modify-Reject	Total number of network initiated PDP context modification requests rejected for 3G service.
2G-NW-Modify-Reject	Total number of network initiated PDP context modification requests rejected for 2G service.
Deactivate Context Request	Statistics of MS and network initiated PDP context deactivation requests received for 2G and 3G service.
Total-Deactv-Request	Total number of MS and network initiated PDP context deactivation requests received for 2G and 3G service.

Field	Description
3G-Deactiv-Request	Total number of MS and network initiated PDP context deactivation requests received for 3G service.
2G-Deactiv-Request	Total number of MS and network initiated PDP context deactivation requests received for 2G service.
MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 2G and 3G service.
3G-MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 3G service.
2G-MS-Deactiv-Request	Total number of MS initiated PDP context deactivation requests received for 2G service.
NW-Deactiv-Request	Total number of network initiated PDP context deactivation requests received for 2G and 3G service.
3G-NW-Deactiv-Request	Total number of network initiated PDP context deactivation requests received for 3G service.
2G-NW-Deactiv-Request	Total number of network initiated PDP context deactivation requests received for 2G service.
Deactivate Context Accept	Statistics of MS and network initiated PDP context deactivation requests accepted for 2G and 3G service.
Total-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 3G service.
2G-Deactiv-Accept	Total number of MS and network initiated PDP context deactivation requests accepted for 2G service.
MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 3G service.
2G-MS-Deactiv-Accept	Total number of MS initiated PDP context deactivation requests accepted for 2G service.
NW-Deactiv-Accept	Total number of network initiated PDP context deactivation requests accepted for 2G and 3G service.
3G-NW-Deactiv-Accept	Total number of network initiated PDP context deactivation requests accepted for 3G service.
2G-NW-Deactiv-Accept	Total number of network initiated PDP context deactivation requests accepted for 2G service.

Field	Description
SM Status Messages	Indicates the statistics of the service manager status messages for 2G and 3G service.
Total-SM-Status-Sent	Total number of service manager status messages sent for 2G and 3G service.
3G-SM-Status-Sent	Total number of service manager status messages sent for 3G service.
2G-SM-Status-Sent	Total number of service manager status messages sent for 2G service.
Total-SM-Status-Rcvd	Total number of service manager status messages received for 2G and 3G service.
3G-SM-Status-Rcvd	Total number of service manager status messages received for 3G service.
2G-SM-Status-Rcvd	Total number of service manager status messages received for 2G service.
RNC Initiated RAB Messages	Statistics of the Radio Network Controller (RNC) initiated Radio Access Bearer (RAB) messages for 2G and 3G service.
Total Rab Mod Requested	Total number of requests for Radio Access Bearer (RAB) modification initiated by Radio Network Controller (RNC).
Num Rab Mod	Total number of RABs modified on request for modification initiated by RNC.
Total Rab Rel Requested	Total number of requests for RAB release initiated by RNC.
Num Rab Rel	Total number of RABs modified on request for release initiated by RNC.
SGSN Initiated RAB Messages	Indicates the statistics of the SGSN initiated radio access bearer (RAB) messages for 2G and 3G service.
Total Rab Assign Requested	Total number of SGSN initiated RAB assign requests messages received.
Total Rab Assign Rsp Rcvd	Total number of SGSN initiated RAB assign response messages received.
Rab Setup/Mod Attempted	Total number of SGSN initiated setup and modification attempted for RAB.
Rab Setup/Mod Accepted	Total number of SGSN initiated setup and modifications accepted for RAB.

Field	Description
Rab Setup Attempted	This proprietary counter tracks the number of RAB Setup Request messages initiated by the SGSN.
Rab Setup Accepted	This proprietary counter tracks the number of successful RAB Setup Request messages. The SGSN initiates RAB Setup Request towards the RNC to setup a RAB.
Rab Modify Attempted	This proprietary counter tracks the number of RAB Modify Request messages initiated by the SGSN.
Rab Modify Accepted	This proprietary counter tracks the number of successful RAB Modify Request messages. The SGSN initiates RAB Modify Request towards the RNC to modify a RAB
Rab Setup/Mod Timer Expired	Total number of SGSN initiated RAB setup and modification events where procedure timer was exhausted.
Rab Setup/Mod Failed	Total number of SGSN initiated RAB setup and modification events failed.
Rab Setup Timer Expired	This proprietary counter tracks the number of RAB Setup Request messages that timeout.  The SGSN initiates RAB Setup Request towards the RNC and starts a timer. When no response is received within a certain time, the SGSN performs an action appropriate to the procedure – during activation, the SGSN sends Activation Reject. For other procedures, the PDP context is preserved.
Rab Setup Failed	This proprietary counter tracks the number of unsuccessful RAB Setup Request messages. The SGSN initiates RAB Setup Request towards the RNC to setup a RAB.
Rab Modify Timer Expired	This proprietary counter tracks the number of RAB Modify Request messages that timeout.  The SGSN initiates RAB Modify Request towards the RNC and starts a timer. When no response is received within a certain time, the SGSN performs an action appropriate to the procedure – during activation, the SGSN sends Activation Reject. For other procedures, the PDP context is preserved.
Rab Modify Failed	This proprietary counter tracks the number of unsuccessful RAB Modify Request messages. The SGSN initiates RAB Modify Request towards the RNC to modify a RAB.
Rab Rel Attempted	Total number of SGSN initiated RAB release procedure attempted.
Rab Rel Accepted	Total number of SGSN initiated RAB release procedure accepted.

Field	Description
Rab Rel Timer Expired	Total number of SGSN initiated RAB release procedure where procedure timer exhausted.
Rab Rel Failed	Total number of SGSN initiated RAB release procedure failed.
Rab Queued	Total number of SGSN initiated RAB messages in queue.
Rab Setup Reattempted (Diff IP)	Total number of SGSN initiated RAB setup reattempted with different IP address.
Total Set/Mod/Rel Rab Rejected	Total number of SGSN initiated RAB setup, modification/release rejected.
SRNS Context Transfer Messages	Statistics of SGSN Radio Network Subsystem (SRNS) context transfer messages.
SRNS Context Req Send	Total number of SRNS context transfer request messages sent.
SRNS Context Rsp Rcvd	Total number of SGSN Radio Network Subsystem (SRNS) context transfer response messages received.
SRNS Context Req Timer Expired	Total number of events when timer exhausted for SRNS context transfer request messages.
Total PDP-Ctxt Accepted	Total number of PDP context accepted for SRNS.
Total PDP-Ctxt Rejected	Total number of PDP context rejected for SRNS.
SRNS Data Fwd Cmd Send	Total number of SRNS data forward commands sent.

## show gmm-sm statistics verbose

Table 289: show gmm-sm statistics verbose Command Output Descriptions

Field	Description
Session Statistics	
Attached Subscribers	Statistics for attached subscribers.
Total Attached	Total subscribers attached for 2G and 3G.
3G Attached	Total subscribers attached for 3G only.
2G Attached	Total subscribers attached for 2G only.
Home Subscribers	Statistics for attached home subscribers.
Total Home	Total home subscribers attached for 2G and 3G.

Field	Description
3G Home	Total home subscribers attached for 3G only.
2G Home	Total home subscribers attached for 3G only.
Visiting National Subscribers	Statistics for attached visiting national subscribers.
Total-Visiting-National	Total visiting national subscribers attached for 2G and 3G.
3G-Visiting-National	Total visiting national subscribers attached for 3G only.
2G-Visiting-National	Total visiting national subscribers attached for 3G only.
Visiting Foreign Subscribers	Statistics for attached visiting foreign subscribers.
Total-Visiting-Foreign	Total visiting foreign subscribers attached for 2G and 3G.
3G-Visiting-Foreign	Total visiting foreign subscribers attached for 3G only.
2G-Visiting-Foreign	Total visiting foreign subscribers attached for 2G only.
Network Sharing Subscribers	Statistics for network sharing subscribers.
3G-Supporting-UE	Total number of 3G Network Sharing Supporting User Equipment currently in the system. <b>This counter pegs when:</b> Increments when a network sharing supporting UE connects with the 3G SGSN.
3G-Non-Supporting-UE	Total number of 3G Network Sharing Non Supporting User Equipment currently in the system. <b>This counter pegs when:</b> A network sharing non-supporting UE connects with the 3G SGSN.
Subscribers in PMM-REGISTERED state	Total subscribers in Packet Mobility Management-registered (PMM-REGISTERED) state, including connected and idle.
PMM-CONNECTED	Total subscribers in PMM connected state.
PMM-IDLE	Total subscribers in PMM idle state.
Subscribers in GPRS-CONNECTED state	Total number of subscribers in GPRS-CONNECTED state. It is a Gauge type of counter.
GPRS-STANDBY	Total number of subscribers in GPRS-STANDBY state. It is a Gauge type of counter.
GPRS-READY	Total number of subscribers in GPRS-READY state. It is a Gauge type of counter.
Activated Subscribers	Statistics of activated subscribers.
Total Activated	Total number of activated 2G and 3G subscribers.

Field	Description
3G Activated	Total number of activated 3G subscribers only.
2G Activated	Total number of activated 2G subscribers only.
Activate PDP Contexts	Statistics of activated PDP contexts.
Total Actv PDP Ctx	Total number of activated 2G and 3G PDP contexts.
3G-Actv Pdp Ctx	Total number of activated 3G PDP contexts only.
2G-Actv Pdp Ctx	Total number of activated 2G PDP contexts only.
Total Actv Pdp Ctx with Direct Tunnel	Total number of activated PDP contexts through direct tunnel.
Message Statistics	Statistics of messages.
Specific Procedures	Indicates the statistics related to specific procedures.
Attach Request	Total number of messages for Attach Request.
Total-Attach	Statistics of total attach messages.
IMSI	Indicates the statistics of total attach through international mobile subscriber identity (IMSI).
Total-IMSI-Attach	Total international mobile subscriber identity (IMSI) attach including 2G and 3G.
3G-IMSI-Attach	3G-IMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 3G-IMSI attach with GPRS only access.
Combined Attached	Total 3G-IMSI attach with combined (PS and CS) access.
2G-IMSI-Attach	2G-IMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 2G-IMSI attach with GPRS only access.
Combined Attached	Total 2G-IMSI attach with combined (PS and CS) access.
PTMSI	Statistics of total attach through Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Total-PTMSI-Attach	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach including 2G and 3G.
3G-PTMSI-Attach	3G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 3G-P-TMSI attach with GPRS only access.
Combined Attached	Total 3G-P-TMSI attach with combined (PS and CS) access.
2G-PTMSI-Attach	Indicates the 2G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total 2G-P-TMSI attach with GPRS only access.

Field	Description
Combined Attached	Total 2G-P-TMSI attach with combined (PS and CS) access.
Local-PTMSI	Statistics of total attach through local Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Total-loc-PTMSI-Attach	Total local Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach including 2G and 3G.
3G-loc-PTMSI-Attach	Local 3G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total local 3G-P-TMSI attach with GPRS only access.
Combined Attached	Total local 3G-P-TMSI attach with combined (PS and CS) access.
2G-loc-PTMSI-Attach	Indicates the local 2G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total local 2G-P-TMSI attach with GPRS only access.
Combined Attached	Total local 2G-P-TMSI attach with combined (PS and CS) access.
Remote-PTMSI	Statistics of total attach through remote Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Total-remo-PTMSI-Attach	Total remote Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach including 2G and 3G.
3G-remote-PTMSI-Attach	3G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total remote 3G-P-TMSI attach with GPRS only access.
Combined Attached	Total remote 3G-P-TMSI attach with combined (PS and CS) access.
2G-remote-PTMSI-Attach	Remote 2G-P-TMSI attach statistics for GPRS and non-GPRS.
GPRS-only Attached	Total remote 2G-P-TMSI attach with GPRS only access.
Combined Attached	Total remote 2G-P-TMSI attach with combined (PS and CS) access.
Retransmission	Statistics of retransmitted messages.
Ret-Total-Attach	Statistics of total retransmitted attach requests.
IMSI	Statistics of total attach through retransmitted International Mobile Subscriber Identity (IMSI) .
Ret-Total-IMSI-Attach	Total IMSI attach including retransmitted 2G and 3G .
Ret-3G-IMSI-Attach	3G-IMSI attach statistics for retransmitted GPRS and non-GPRS.
GPRS-only Attached	Total 3G-IMSI attach retransmitted with GPRS only access .
Combined Attached	Total 3G-IMSI attach with combined (PS and CS) access messages.
Ret-2G-IMSI-Attach	Indicates the retransmitted 2G-IMSI attach statistics for GPRS and non-GPRS.

Field	Description
GPRS-only Attached	Total 2G-IMSI attach retransmitted with GPRS only access .
Combined Attached	Total 2G-IMSI attach retransmitted with combined (PS and CS) access .
PTMSI	Statistics of total attach through retransmitted Packet-Temporary Mobile Subscriber Identity (P-TMSI) .
Ret-Total-PTMSI-Attach	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach retransmitted including 2G and 3G.
Ret-3G-PTMSI-Attach	3G-P-TMSI attach retransmitted statistics for GPRS and non-GPRS .
GPRS-only Attached	Total 3G-P-TMSI attach retransmitted with GPRS only access.
Combined Attached	Total 3G-P-TMSI attach retransmitted with combined (PS and CS) access .
Ret-2G-PTMSI-Attach	2G-P-TMSI attach retransmitted statistics for GPRS and non-GPRS .
GPRS-only Attached	Total 2G-P-TMSI attach retransmitted with GPRS only access .
Combined Attached	Total 2G-P-TMSI attach with combined (PS and CS) access retransmitted.
Local-PTMSI	Statistics of total attach through retransmitted local Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Ret-Total-loc-PTMSI-Attach	Total retransmitted local Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach including 2G and 3G.
Ret-3G-loc-PTMSI-Attach	Local 3G-P-TMSI attach retransmitted statistics for GPRS and non-GPRS.
GPRS-only Attached	Total local 3G-P-TMSI attach retransmitted with GPRS only access .
Combined Attached	Total local 3G-P-TMSI attach retransmitted with combined (PS and CS) access .
Ret-2G-loc-PTMSI-Attach	Statistics for local 2G-P-TMSI attach retransmitted for GPRS and non-GPRS .
GPRS-only Attached	Total local 2G-P-TMSI attach retransmitted with GPRS only access .
Combined Attached	Total local 2G-P-TMSI attach retransmitted with combined (PS and CS) access.
Remote-PTMSI	Statistics of total attach through retransmitted remote Packet-Temporary Mobile Subscriber Identity (P-TMSI).
Ret-Total-remo-PTMSI-Attach	Total remote Packet-Temporary Mobile Subscriber Identity (P-TMSI) attach retransmitted for 2G and 3G .
Ret-3G-remote-PTMSI-Attach	Statistics for remote 3G-P-TMSI attach for GPRS and non-GPRS retransmitted.
GPRS-only Attached	Total remote 3G-P-TMSI attach with GPRS only access retransmitted.
Combined Attached	Total remote 3G-P-TMSI attach with combined (PS and CS) access retransmitted.
Ret-2G-remote-PTMSI-Attach	Indicates the remote 2G-P-TMSI attach statistics for GPRS and non-GPRS retransmitted.

Field	Description
GPRS-only Attached	Total remote 2G-P-TMSI attach with GPRS only access retransmitted.
Combined Attached	Total remote 2G-P-TMSI attach with combined (PS and CS) access retransmitted.
Attach Accept	Indicates the statistics of total attach accepts.
Total-Attach-Accept	Total attach accepts including 2G and 3G.
3G-Attach-Accept	Indicates the 3G-attach accept statistics for GPRS and non-GPRS.
Gprs-Attached	Total 3G-attach accepts with GPRS only access.
Comb-Attached	Total 3G-attach accepts with combined (PS and CS) access.
2G-Attach-Accept	Indicates the 2G-attach accept statistics for GPRS and non-GPRS.
Gprs-Attached	Total 2G-attach accepts with GPRS only access.
Comb-Attached	Total 2G-attach accepts with combined (PS and CS) access.
Retransmission	Indicates the statistics of total attach accepts retransmitted.
Ret-Total-Attach-Accept	Total attach accepts including 2G and 3G retransmitted.
Ret-3G-Attach-Accept	Indicates the 3G-attach accept retransmitted statistics for GPRS and non-GPRS.
Gprs-Attached	Total 3G-attach accepts with GPRS only access retransmitted.
Comb-Attached	Total 3G-attach accepts with combined (PS and CS) access retransmitted.
Ret-2G-Attach-Accept	Indicates the 2G-attach accept statistics for GPRS and non-GPRS retransmitted.
Gprs-Attached	Total 2G-attach accepts with GPRS only access retransmitted.
Comb-Attached	Total 2G-attach accepts with combined (PS and CS) access retransmitted.
Attach Complete	Indicates the statistics of total attach completed.
Total-Attach-Complete	Total attach completed including 2G and 3G.
3G-Attach-Complete	Indicates the 3G-attach complete statistics for GPRS and non-GPRS.
2G-Attach-Complete	Total 3G-attach completed with GPRS only access.
Attach Reject	Total 3G-attach completed with combined (PS and CS) access.
Total-Attach-Reject	Indicates the 2G-attach complete statistics for GPRS and non-GPRS.
3G-Attach-Reject	Total 2G-attach completed with GPRS only access.
2G-Attach-Reject	Total 2G-attach completed with combined (PS and CS) access.
Gprs-Attach Reject Causes	Indicates the statistics of causes for GPRS attach rejected for 2G and 3G service.
3G-IMSI Unknown in HLR	Total number of GPRS attach rejected for 3G service due to unknown IMSI in HLR.

Field	Description
2G-IMSI Unknown in HLR	Total number of GPRS attach rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of GPRS attach rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of GPRS attach rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of GPRS attach rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of GPRS attach rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of GPRS attach rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of GPRS attach rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of GPRS attach rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of GPRS attach rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MSId not derived by Nw	Total number of GPRS attach rejected for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of GPRS attach rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of GPRS attach rejected for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of GPRS attach rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of GPRS attach rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of GPRS attach rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of GPRS attach rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of GPRS attach rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of GPRS attach rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of GPRS attach rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of GPRS attach rejected for 3G service due to GPRS service not allowed in specific PLMN.

Field	Description
2G-GPRS service not allowed in this PLMN	Total number of GPRS attach rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of GPRS attach rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of GPRS attach rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of GPRS attach rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of GPRS attach rejected for 2G service as MSC not reachable.
3G-Network Failure	Total number of GPRS attach rejected for 3G service due to network failure.
2G-Network Failure	Total number of GPRS attach rejected for 2G service due to network failure.
3G-MAC Failure	Total number of GPRS attach rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of GPRS attach rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of GPRS attach rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of GPRS attach rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of GPRS attach rejected for 3G service due to network congestion.
2G-Congestion	Total number of GPRS attach rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of GPRS attach rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of GPRS attach rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of GPRS attach rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of GPRS attach rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of GPRS attach rejected for 3G service as PDP context activation was tried from new mobile cell.
2G-Retry from new cell	Total number of GPRS attach rejected for 2G service as PDP context activation was tried from new mobile cell.
3G-Semantically Wrong Msg	Total number of GPRS attach rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrong Msg	Total number of GPRS attach rejected for 2G service as attach request message is semantically wrong.

Field	Description
3G-Invalid Mandatory Info	Total number of GPRS attach rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of GPRS attach rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of GPRS attach rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of GPRS attach rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of GPRS attach rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of GPRS attach rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of GPRS attach rejected for 3G service rejected due to non-existence of information element.
2G-IE Non Existent	Total number of GPRS attach rejected for 2G service rejected due to non-existence of information element.
3G-Conditional IE Error	Total number of GPRS attach rejected for 3G service due to error in conditional information element.
2G-conditional IE Error	Total number of GPRS attach rejected for 2G service due to error in conditional information element.
3G-Message not compatible with protocol state	Total number of GPRS attach rejected for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of GPRS attach rejected for 2G service as message is not compatible with protocol state.
3G-protocol Error	Total number of GPRS attach rejected for 3G service due to protocol error in message.
2G-protocol Error	Total number of GPRS attach rejected for 2G service due to protocol error in message.
3G-Unknown cause	Total number of GPRS attach rejected for 3G service where cause is unknown or not specified here.
2G-Unknown cause	Total number of GPRS attach rejected for 2G service where cause is unknown or not specified here.
Comb-Attach Reject Causes	Indicates the statistics of causes for combined GPRS (PS and CS) attach rejected for 2G and 3G service.
3G-IMSI Unknown in HLR	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to unknown IMSI in HLR.

Field	Description
2G-IMSI Unknown in HLR	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MSId not derived by Nw	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to roaming not allowed in specific location area.

Field	Description
2G-Roaming not allowed in this Location Area	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of combined GPRS (PS and CS) attach rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of combined GPRS (PS and CS) attach rejected for 2G service as MSC not reachable.
3G-Network Failure	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to network failure.
2G-Network Failure	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to network failure.
3G-MAC Failure	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to network congestion.
2G-Congestion	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of combined GPRS (PS and CS) attach rejected for 3G service as PDP context is not activated.

Field	Description
2G-No PDP contexts activated	Total number of combined GPRS (PS and CS) attach rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of combined GPRS (PS and CS) attach rejected for 3G service as PDP context activation was tried from new mobile cell.
2G-Retry from new cell	Total number of combined GPRS (PS and CS) attach rejected for 2G service as PDP context activation was tried from new mobile cell.
3G-Semantically Wrong Msg	Total number of combined GPRS (PS and CS) attach rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrong Msg	Total number of combined GPRS (PS and CS) attach rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of combined GPRS (PS and CS) attach rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of combined GPRS (PS and CS) attach rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of combined GPRS (PS and CS) attach rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of combined GPRS (PS and CS) attach rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to inclusion of non-existent information element (IE) in message.
2G-IE Non Existent	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to error in conditional information element.
2G-Conditional IE Error	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to error in conditional information element.
3G-Message not compatible with protocol state	Total number of combined GPRS (PS and CS) attach rejected for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of combined GPRS (PS and CS) attach rejected for 2G service as message is not compatible with protocol state.
3G-protocol Error	Total number of combined GPRS (PS and CS) attach rejected for 3G service due to protocol error in message.

Field	Description
2G-protocol Error	Total number of combined GPRS (PS and CS) attach rejected for 2G service due to protocol error in message.
3G-Unknown cause	Total number of combined GPRS (PS and CS) attach rejected for 3G service where cause is unknown or not specified here.
2G-Unknown cause	Total number of combined GPRS (PS and CS) attach rejected for 2G service where cause is unknown or not specified here.
Attach Failure	This group displays the statistics for failures occurred during attach procedure.
Total Attach Failure	This group displays the statistics for total failures occurred during 2G and 3G attach procedure.
3G-Attach-Failure	Total number of failures occurred during attach procedure for 3G service.
Gprs-Attach-Failure	Total number of failures occurred during GPRS attach procedure for 3G service.
Comb-Attach-Failure	Total number of failures occurred during combined (PS and CS) service attach procedure for 3G service.
2G-Attach-Failure	Total number of failures occurred during attach procedure for 2G service.
Gprs-Attach-Failure	Total number of failures occurred during GPRS attach procedure for 2G service.
Comb-Attach-Failure	Total number of failures occurred during combined (PS and CS) service attach procedure for 2G service.
Gprs-Attach Failure Causes	This group displays the causes for failure occurred during GPRS attach procedure.
3G-Iu release before Attach over	Total number of 3G GPRS attach procedure failures due to 3G Iu interface release happened before attach procedure completed.
3G-Failure due to Other Ongoing Procedure	Total number of 3G GPRS attach procedure failed due to other procedure was in process while attach requested.
2G-Failure due to Other Ongoing Procedure	Total number of 2G attach procedure failed due to other procedure was in process while attach requested.
Comb-Attach Failure Causes	This group displays the causes for failure occurred during combined (PS and CS) service attach procedure.
3G-Iu release before Attach over	Total number of combined attach procedure failed due to 3G Iu interface release happened before completion of attach procedure
3G-Failure due to Other Ongoing Procedure	Total number of combined 3G attach procedure failed due to other procedure was in process while attach requested.
2G-Failure due to Other Ongoing Procedure	Total number of combined 2G attach procedure failed due to other procedure was in process while attach requested.
Routing Area Update Request	Indicates the statistics of RAU request.
Total-RAU	Indicates the total RAU request.

Field	Description
Total-Intra-SGSN-RAU	Total intra-SGSN RAU request messages.
Total-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN RA updates.
3G-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN RA updates for 3G.
2G-Ra-Up-Intra-SGSN-RAU	Total routing area update request messages for intra-SGSN RA updates for 2G.
Total-Periodic-Intra-RAU	Total periodic intra-RA update messages.
3G-Periodic-Intra-RAU	Total periodic intra-RA update messages for 3G.
2G-Periodic-Intra-RAU	Total periodic intra-RA update messages for 2G.
Total-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) services.
3G-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) 3G services.
2G-Comb-Intra-SGSN-RAU	Total intra-SGSN RAU request messages for combined (PS and CS) 2G services.
Total-PS-Inter-SGSN-RAU	Total packet switching inter-SGSN-RA update request messages.
3G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages for 3G service.
2G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages for 2G service.
Total-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages.
3G-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages for 3G service.
2G-Comb-Inter-SGSN-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages for 2G service.
Total-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of GPRS only Inter RAT RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of GPRS only Inter RAT RAU Requests received in a 3G service from a 2G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of GPRS only Inter RAT RAU Requests received in a 2G service from a 3G service. <b>Availability:</b> per RA, per GPRS service
Total-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of Combined Inter RAT RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of Combined Inter RAT RAU Requests received in a 3G service from a 2G service. <b>Availability:</b> per RA, per RNC, per SGSN service

Field	Description
2G-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of Combined Inter RAT RAU Requests received in a 2G service from a 3G service. <b>Availability:</b> per RA, per GPRS service
Total-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of GPRS only Inter Service RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of GPRS only Inter Service RAU Requests from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of GPRS only Inter Service RAU Requests from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Total-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of Combined Inter Service RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of Combined Inter Service RAU Requests from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of Combined Inter Service RAU Requests from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Retransmission	Indicates the statistics of RAU requests retransmitted.
Ret-Total-RAU	Indicates the total RAU requests retransmitted.
Ret-Total-Intra-SGSN-RAU	Total intra-SGSN RAU request messages retransmitted.
Ret-Total-Ra-Up-Intra-SGSN	Total routing area update request messages retransmitted for intra-SGSN RA updates.
Ret-3G-Ra-Up-Intra-SGSN	Total routing area update request messages retransmitted for intra-SGSN RA updates for 3G.
Ret-2G-Ra-Up-Intra-SGSN	Total routing area update request messages retransmitted for intra-SGSN RA updates for 2G.
Ret-Total-Perio-Intra-RAU	Total periodic intra-RA update messages retransmitted.
Ret-3G-Perio-Intra-RAU	Total periodic intra-RA update messages retransmitted for 3G.
Ret-2G-Perio-Intra-RAU	Total periodic intra-RA update messages retransmitted for 2G.

Field	Description
Ret-Total-Comb-Intra-RAU	Total intra-SGSN RAU request messages retransmitted for combined (PS and CS) services.
Ret-3G-Comb-Intra-RAU	Total intra-RAU request messages retransmitted for combined (PS and CS) 3G services.
Ret-2G-Comb-Intra-RAU	Total intra-RAU request messages retransmitted for combined (PS and CS) 2G services.
Ret-Total-PS-Inter-SGSN-RAU	Total packet switching inter-SGSN-RA update request messages retransmitted.
Ret-3G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages retransmitted for 3G service.
Ret-2G-PS-Inter-SGSN-RAU	Total packet switched inter-SGSN-RA update request messages retransmitted for 2G service.
Ret-Total-Comb-Inter-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages retransmitted.
Ret-3G-Comb-Inter-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages retransmitted for 3G service.
Ret-2G-Comb-Inter-RAU	Total combined (PS and CS) inter-SGSN-RA update request messages retransmitted for 2G service.
Ret-Total-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Requests received in a 3G service from a 2G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Ps-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Requests received in a 2G service from a 3G service. <b>Availability:</b> per RA, per GPRS service
Ret-Total-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Requests received in a 3G service from a 2G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Comb-Inter-Rat-RAU	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Requests received in a 2G service from a 3G service. <b>Availability:</b> per RA, per GPRS service

Field	Description
Ret-Total-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Requests from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Ps-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Requests from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Ret-Total-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Requests received in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Requests from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Comb-Inter-Serv-RAU	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Requests from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Routing Area Update Accept	Indicates the statistics of routing area update accept messages on system.
Total-RAU-Accept	Total number of routing area update accept messages sent by SGSN.
Total-Intra-RAU-Accept	Total number of intra-SGSN routing area update accept messages sent by SGSN.
Total-Ra-Up-Intra-RAU-Acc	Total number of intra-SGSN RAU accept messages sent by SGSN for 2G and 3G service.
3G-Ra-Up-Intra-RAU-Accept	Total number of intra-SGSN RAU accept messages sent by SGSN for 3G service.
2G-Ra-Up-Intra-RAU-Accept	Total number of intra-SGSN RAU accept messages sent by SGSN for 2G service.
Total-Periodic-RAU-Accept	Total number of periodic RAU accept messages sent by SGSN for 2G and 3G service.
3G-Periodic-RAU-Accept	Total number of periodic RAU accept messages sent by SGSN for 3G service.
2G-Periodic-RAU-Accept	Total number of periodic RAU accept messages sent by SGSN for 2G service.
Total-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages sent by SGSN for 2G and 3G service.
3G-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages sent by SGSN for 3G service.

Field	Description
2G-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages sent by SGSN for 2G service.
Total-Inter-SGSN-RAU-Acc	This group displays inter SGSN RAU Accept message statistics on SGSN.
Total-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 2G and 3G services sent by SGSN.
3G-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 3G service sent by SGSN.
2G-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 2G service sent by SGSN.
Total-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 2G and 3G services sent by SGSN.
3G-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 3G services sent by SGSN.
2G-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 2G services sent by SGSN.
Total-Ps-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of GPRS only Inter RAT RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Ps-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of GPRS only Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 2G service to a 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Ps-Inter-Rat-Acc	<b>Description:</b> Total number of GPRS only Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 3G service to a 2G service. <b>Availability:</b> per RA, per GPRS service
Total-Comb-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of Combined Inter RAT RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Comb-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of Combined Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 2G service to a 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Comb-Inter-Rat-Acc	<b>Description:</b> Total number of Combined Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 3G service to a 2G service. <b>Availability:</b> per RA, per GPRS service

Field	Description
Total-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of GPRS only Inter Service RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of GPRS only Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of GPRS only Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Total-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of Combined Inter Service RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
3G-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of Combined Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of Combined Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Retransmission	Indicates the statistics of routing area update messages retransmitted.
Ret-Total-RAU-Accept	Total number of routing area update accept messages retransmitted by SGSN.
Ret-Total-Intra-RAU-Accept	Total number of intra-SGSN routing area update accept messages retransmitted by SGSN.
Ret-Total-Ra-Up-Intra-RAU-Acc	Total number of intra-SGSN RAU accept messages retransmitted by SGSN for 2G and 3G service.
Ret-3G-Ra-Up-Intra-RAU-Acc	Total number of intra-SGSN RAU accept messages retransmitted by SGSN for 3G service.
Ret-2G-Ra-Up-Intra-RAU-Acc	Total number of intra-SGSN RAU accept messages retransmitted by SGSN for 2G service.
Ret-Total-Periodic-RAU-Acc	Total number of periodic RAU accept messages retransmitted by SGSN for 2G and 3G service.
Ret-3G-Periodic-RAU-Acc	Total number of periodic RAU accept messages retransmitted by SGSN for 3G service.
Ret-2G-Periodic-RAU-Acc	Total number of periodic RAU accept messages retransmitted by SGSN for 2G service.
Ret-Total-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages retransmitted by SGSN for 2G and 3G service.

Field	Description
Ret-3G-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages retransmitted by SGSN for 3G service.
Ret-2G-Comb-Intra-RAU-Acc	Total number of combined (PS and CS) intra-RAU accept messages retransmitted by SGSN for 2G service.
Ret-Total-Inter-SGSN-RAU-Acc	This group displays inter SGSN RAU Accept message statistics on SGSN.
Ret-Total-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 2G and 3G services retransmitted by SGSN.
Ret-3G-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 3G service retransmitted by SGSN.
Ret-2G-PS-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in PS network for 2G service retransmitted by SGSN.
Ret-Total-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 2G and 3G services retransmitted by SGSN.
Ret-3G-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 3G services retransmitted by SGSN.
Ret-2G-Comb-Inter-RAU-Acc	Total number of inter SGSN RAU accept messages in combined (PS and CS) network for 2G services retransmitted by SGSN.
Ret-Total-Ps-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Ps-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 2G service to a 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Ps-Inter-Rat-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 3G service to a 2G service. <b>Availability:</b> per RA, per GPRS service
Ret-Total-Comb-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Comb-Inter-Rat-RAU-Acc	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 3G service to a 2G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Comb-Inter-Rat-Acc	<b>Description:</b> Total number of retransmitted Combined Inter RAT RAU Accepts sent against RAU Requests from subscribers moving from a 2G service to a 3G service. <b>Availability:</b> per RA, per GPRS service

Field	Description
Ret-Total-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Ps-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted GPRS only Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Ret-Total-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Accepts sent in both 2G and 3G services. <b>Availability:</b> per RA, per RNC, per GPRS/SGSN service
Ret-3G-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 3G service to another 3G service. <b>Availability:</b> per RA, per RNC, per SGSN service
Ret-2G-Comb-Inter-Serv-RAU-Acc	<b>Description:</b> Total number of retransmitted Combined Inter Service RAU Accepts sent against RAU Requests from subscribers moving from one 2G service to another 2G service. <b>Availability:</b> per RA, per GPRS service
Routing Area Update Complete	Indicates the statistics of routing area update complete messages.
Total-RAU-Complete	Total number of routing area update complete messages.
3G-RAU-Complete	Total number of routing area update complete messages for 3G service.
2G-RAU-Complete	Total number of routing area update complete messages for 2G service.
Routing Area Update Reject	Indicates the statistics of routing area update reject messages.
Total-RAU-Reject	Total number of routing area update reject messages.
Total-Intra-RAU-Reject	Total number of intra-SGSN routing area update reject messages sent by SGSN.
Total-Ra-up-Intra-RAU-Rej	Total number of intra-SGSN RAU reject messages reject by SGSN for 2G and 3G service.
3G-Ra-Up-Intra-RAU-Reject	Total number of intra-SGSN RAU reject messages sent by SGSN for 3G service.
2G-Ra-Up-Intra-RAU-Reject	Total number of intra-SGSN RAU reject messages sent by SGSN for 2G service.
Total-Periodic-RAU-Reject	Total number of periodic RAU reject messages sent by SGSN for 2G and 3G service.

Field	Description
3G-Periodic-RAU-Reject	Total number of periodic RAU reject messages sent by SGSN for 3G service.
2G-Periodic-RAU-Reject	Total number of periodic RAU reject messages sent by SGSN for 2G service.
Total-Comb-Intra-RAU-Rej	Total number of combined (PS and CS) intra-RAU reject messages sent by SGSN for 2G and 3G service.
3G-Comb-Intra-RAU-Reject	Total number of combined (PS and CS) intra-RAU reject messages sent by SGSN for 3G service.
2G-Comb-Intra-RAU-Reject	Total number of combined (PS and CS) intra-RAU reject messages sent by SGSN for 2G service.
Total-Inter-SGSN-RAU-Rej	This group displays inter SGSN RAU reject message statistics on SGSN.
Total-PS-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in PS network for 2G and 3G services sent by SGSN.
3G-PS-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in PS network for 3G service sent by SGSN.
2G-PS-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in PS network for 2G service sent by SGSN.
Total-Comb-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in combined (PS and CS) network for 2G and 3G services sent by SGSN.
3G-Comb-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in combined (PS and CS) network for 3G services sent by SGSN.
2G-Comb-Inter-RAU-Rej	Total number of inter SGSN RAU reject messages in combined (PS and CS) network for 2G services sent by SGSN.
Total-Inter-RAT-RAU-Rej	This group displays inter Radio Access Technology (RAT) RAU reject message statistics on SGSN.
Total-PS-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in PS network for 2G and 3G services sent by SGSN.
3G-PS-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in PS network for 3G service sent by SGSN.
2G-PS-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in PS network for 2G service sent by SGSN.
Total-Comb-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in combined (PS and CS) network for 2G and 3G services sent by SGSN.
3G-Comb-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in combined (PS and CS) network for 3G services sent by SGSN.
2G-Comb-Inter-RAT-RAU-Rej	Total number of inter RAT RAU reject messages in combined (PS and CS) network for 2G services sent by SGSN.

Field	Description
Total-Inter-SRV-RAU-Rej	This group displays inter-SRV RAU reject message statistics on SGSN.
Total-PS-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in PS network for 2G and 3G services sent by SGSN.
3G-PS-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in PS network for 3G service sent by SGSN.
2G-PS-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in PS network for 2G service sent by SGSN.
Total-Comb-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in combined (PS and CS) network for 2G and 3G services sent by SGSN.
3G-Comb-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in combined (PS and CS) network for 3G services sent by SGSN.
2G-Comb-Inter-SRV-RAU-Rej	Total number of inter SRV RAU reject messages in combined (PS and CS) network for 2G services sent by SGSN.
Intra Ra-Updated Routing Area Update Reject Causes	This group displays the causes for intra-RAT routing area update reject messages.
3G-IMSI Unknown in HLR	Total number of intra RAT routing area update requests rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of intra RAT routing area update requests rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of intra RAT routing area update requests rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of intra RAT routing area update requests rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of intra RAT routing area update requests rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of intra RAT routing area update requests rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of intra RAT routing area update requests rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of intra RAT routing area update requests rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of intra RAT routing area update requests rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of intra RAT routing area update requests rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.

Field	Description
3G-MSId not derived by Nw	Total number of intra RAT routing area update requests rejected for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of intra RAT routing area update requests rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of intra RAT routing area update requests rejected for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of intra RAT routing area update requests rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of intra RAT routing area update requests rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of intra RAT routing area update requests rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of intra RAT routing area update requests rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of intra RAT routing area update requests rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this location area	Total number of intra RAT routing area update requests rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this location area	Total number of intra RAT routing area update requests rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of intra RAT routing area update requests rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of intra RAT routing area update requests rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of intra RAT routing area update requests rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of intra RAT routing area update requests rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of intra RAT routing area update requests rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of intra RAT routing area update requests rejected for 2G service as MSC not reachable.
3G-Network Failure	Total number of intra RAT routing area update requests rejected for 3G service due to network failure.
2G-Network Failure	Total number of intra RAT routing area update requests rejected for 2G service due to network failure.

Field	Description
3G-MAC Failure	Total number of intra RAT routing area update requests rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of intra RAT routing area update requests rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of intra RAT routing area update requests rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of intra RAT routing area update requests rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of intra RAT routing area update requests rejected for 3G service due to network congestion.
2G-Congestion	Total number of intra RAT routing area update requests rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of intra RAT routing area update requests rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of intra RAT routing area update requests rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of intra RAT routing area update requests rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of intra RAT routing area update requests rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of intra RAT routing area update requests rejected for 3G service as UE retried the update from new cell.
2G-Retry from new cell	Total number of intra RAT routing area update requests rejected for 2G service as UE retried the update from new cell.
3G-Semantically Wrong Msg	Total number of intra RAT routing area update request rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrg Msg	Total number of intra RAT routing area update request rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of intra RAT routing area update request rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of intra RAT routing area update request rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of intra RAT routing area update request rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of intra RAT routing area update request rejected for 2G service due to non-existent type of message.

Field	Description
3G-MSG type not compatible with protocol state	Total number of intra RAT routing area update request rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of intra RAT routing area update request rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of intra RAT routing area update request rejected for 3G service due to inclusion of non-existent information element (IE) in message.
2G-IE Non Existent	Total number of intra RAT routing area update request rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of intra RAT routing area update request rejected for 3G service due to error in conditional informational element.
2G-Conditional IE Error	Total number of intra RAT routing area update request rejected for 2G service due to error in conditional informational element.
3G-Message not compatible with protocol state	Total number of intra RAT routing area update request rejected for 3G service due to incompatible protocol state in message.
2G-Message not compatible with protocol state	Total number of intra RAT routing area update request rejected for 2G service due to incompatible protocol state in message
3G-Protocol Error	Total number of intra RAT routing area update request rejected for 3G service due to protocol error in message.
2G-Protocol Error	Total number of intra RAT routing area update request rejected for 2G service due to protocol error in message
3G-Unknown cause	Total number of intra RAT routing area update request rejected for 3G service due to reasons other than listed here in message.
2G-Unknown cause	Total number of intra RAT routing area update request rejected for 2G service due to reasons other than listed here in message.
Intra Periodic Routing Area Update Reject Causes	This group displays the intra RAT periodic RAU reject causes on SGSN.
3G-IMSI Unknown in HLR	Total number of intra RAT periodic RAU requests rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of intra RAT periodic RAU requests rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of intra RAT periodic RAU requests rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of intra RAT periodic RAU requests rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of intra RAT periodic RAU requests rejected for 3G service due to illegal mobile equipment.

Field	Description
2G-Illegal ME	Total number of intra RAT periodic RAU requests rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of intra RAT periodic RAU requests rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of intra RAT periodic RAU requests rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of intra RAT periodic RAU requests rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of intra RAT periodic RAU requests rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MSId not derived by Nw	Total number of intra RAT periodic RAU requests rejected for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of intra RAT periodic RAU requests rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly Detached	Total number of intra RAT periodic RAU requests rejected for 3G service due to implicitly detach.
2G-Implicitly Detached	Total number of intra RAT periodic RAU requests rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of intra RAT periodic RAU requests rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of intra RAT periodic RAU requests rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of intra RAT periodic RAU requests rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of intra RAT periodic RAU requests rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of intra RAT periodic RAU requests rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of intra RAT periodic RAU requests rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of intra RAT periodic RAU requests rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of intra RAT periodic RAU requests rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of intra RAT periodic RAU requests rejected for 3G service due to non availability of suitable cell in specific location area.

Field	Description
2G-No suitable cells in this Location Area	Total number of intra RAT periodic RAU requests rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSR not reachable	Total number of intra RAT periodic RAU requests rejected for 3G service as MSR not reachable.
2G-MSR not reachable	Total number of intra RAT periodic RAU requests rejected for 2G service as MSR not reachable.
3G-Network Failure	Total number of intra RAT periodic RAU requests rejected for 3G service due to network failure.
2G-Network Failure	Total number of intra RAT periodic RAU requests rejected for 2G service due to network failure.
3G-MAC Failure	Total number of intra RAT periodic RAU requests rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of intra RAT periodic RAU requests rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of intra RAT periodic RAU requests rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of intra RAT periodic RAU requests rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of intra RAT periodic RAU requests rejected for 3G service due to network congestion.
2G-Congestion	Total number of intra RAT periodic RAU requests rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of intra RAT periodic RAU requests rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of intra RAT periodic RAU requests rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of intra RAT periodic RAU requests rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of intra RAT periodic RAU requests rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of intra RAT periodic RAU requests rejected for 3G service as UE retried the update from new cell.
2G-Retry from new cell	Total number of intra RAT periodic RAU requests rejected for 2G service as UE retried the update from new cell.
3G-Semantically Wrong Msg	Total number of intra RAT periodic RAU requests rejected for 3G service as attach request message is semantically wrong.

Field	Description
2G-Semantically Wrg Msg	Total number of intra RAT periodic RAU requests rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of intra RAT periodic RAU requests rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of intra RAT periodic RAU requests rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of intra RAT periodic RAU requests rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of intra RAT periodic RAU requests rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of intra RAT periodic RAU requests rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of intra RAT periodic RAU requests rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of intra RAT periodic RAU requests rejected for 3G service due to inclusion of non-existent information element (IE) in message.
2G-IE Non Existent	Total number of intra RAT periodic RAU requests rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of intra RAT periodic RAU requests rejected for 3G service due to error in conditional informational element.
2G-Conditionanl IE Error	Total number of intra RAT periodic RAU requests rejected for 2G service due to error in conditional informational element.
3G-Message not compatible with protocol state	Total number of intra RAT periodic RAU requests rejected for 3G service due to incompatible protocol state in message.
2G-Message not compatible with protocol state	Total number of intra RAT periodic RAU requests rejected for 2G service due to incompatible protocol state in message
3G-Protocol Error	Total number of intra RAT periodic RAU requests rejected for 3G service due to protocol error in message.
2G-Protocol Error	Total number of intra RAT periodic RAU requests rejected for 2G service due to protocol error in message
3G-Unknown cause	Total number of intra RAT periodic RAU requests rejected for 3G service due to reasons other than listed here in message.
2G-Unknown cause	Total number of intra RAT periodic RAU requests rejected for 2G service due to reasons other than listed here in message.
Intra Combo. Routing Area Update Reject Causes	This group displays the intra RAT combined (PS and CS) RAU request reject causes on SGSN.

Field	Description
3G-IMSI Unknown in HLR	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MsId not derived by Nw	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to network failed to derive MSID from attach message.
2G-MsId not derived by Nw	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly Detached	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to implicitly detach.
2G-Implicitly Detached	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to specific location area not allowed.

Field	Description
3G-Roaming not allowed in this Location Area	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as MSC not reachable.
3G-Network Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to network failure.
2G-Network Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to network failure.
3G-MAC Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to network congestion.
2G-Congestion	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to unacceptable authentication from GSM network.

Field	Description
3G-No PDP contexts activated	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as UE retried the update from new cell.
2G-Retry from new cell	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as UE retried the update from new cell.
3G-Semantically Wrong Msg	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrg Msg	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to inclusion of non-existent information element (IE) in message.
2G-IE Non Existent	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to error in conditional informational element.
2G-Conditional IE Error	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to error in conditional informational element.
3G-Message not compatible with protocol state	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to incompatible protocol state in message.
2G-Message not compatible with protocol state	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to incompatible protocol state in message

Field	Description
3G-protocol Error	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to protocol error in message.
2G-protocol Error	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to protocol error in message
3G-Unknown cause	Total number of intra RAT combined (PS and CS) RAU requests rejected for 3G service due to reasons other than listed here in message.
2G-Unknown cause	Total number of intra RAT combined (PS and CS) RAU requests rejected for 2G service due to reasons other than listed here in message.
Inter SGSN PS Only Routing Area Update Reject Causes	This group displays the inter SGSN PS-only RAU request reject causes on SGSN.
3G-IMSI Unknown in HLR	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS and Non-GPRS service not allowed	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MsId not derived by Nw	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to network failed to derive MSID from attach message.
2G-MsId not derived by Nw	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly Detached	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to implicitly detach.

Field	Description
2G-Implicitly Detached	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of inter SGSN PS-only RAU requests rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of inter SGSN PS-only RAU requests rejected for 2G service as MSC not reachable.
3G-Network Failure	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to network failure.
2G-Network Failure	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to network failure.
3G-MAC Failure	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to context synchronization failure.

Field	Description
2G-SYNC Failure	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to network congestion.
2G-Congestion	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of inter SGSN PS-only RAU requests rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of inter SGSN PS-only RAU requests rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of inter SGSN PS-only RAU requests rejected for 3G service as UE retried the update from new cell.
2G-Retry from new cell	Total number of inter SGSN PS-only RAU requests rejected for 2G service as UE retried the update from new cell.
3G-Semantically Wrong Msg	Total number of inter SGSN PS-only RAU requests rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrg Msg	Total number of inter SGSN PS-only RAU requests rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of inter SGSN PS-only RAU requests rejected for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of inter SGSN PS-only RAU requests rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of inter SGSN PS-only RAU requests rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of inter SGSN PS-only RAU requests rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to inclusion of non-existent information element (IE) in message.

Field	Description
2G-IE Non Existent	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to error in conditional informational element.
2G-Conditional IE Error	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to error in conditional informational element.
3G-Message not compatible with protocol state	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to incompatible protocol state in message.
2G-Message not compatible with protocol state	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to incompatible protocol state in message
3G-Protocol Error	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to protocol error in message.
2G-Protocol Error	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to protocol error in message
3G-Unknown cause	Total number of inter SGSN PS-only RAU requests rejected for 3G service due to reasons other than listed here in message.
2G-Unknown cause	Total number of inter SGSN PS-only RAU requests rejected for 2G service due to reasons other than listed here in message.
Inter SGSN Comb. Routing Area Update Reject Causes	This group displays the combined (PS and CS) inter-SGSN RAU request reject causes on SGSN.
3G-IMSI Unknown in HLR	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to GPRS service not allowed for subscriber.

Field	Description
3G-GPRS and Non-GPRS service not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS and Non-GPRS service not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MSId not derived by Nw	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this location area	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this location area	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as MSC not reachable.

Field	Description
3G-Network Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to network failure.
2G-Network Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to network failure.
3G-MAC Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to MAC failure.
3G-SYNC Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to context synchronization failure.
3G-Congestion	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to network congestion.
2G-Congestion	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as PDP context is not activated.
3G-Retry from new cell	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as update was retried from different cell than original RAU request by MS.
2G-Retry from new cell	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as update was retried from different cell than original RAU request by MS.
3G-Semantically Wrong Msg	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as attach request message is semantically wrong.
2G-Semantically Wrg Msg	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as mandatory information in message is invalid.

Field	Description
2G-Invalid Mandatory Info	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as message type is not compatible with protocol state.
3G-IE Non Existent	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to inclusion of non-existent information element (IE) in message.
2G-IE Non Existent	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to inclusion of non-existent information element (IE) in message.
3G-Conditional IE Error	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to error in conditional information element.
2G-Conditional IE Error	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service due to error in conditional information element.
3G-Message not compatible with protocol state	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 2G service as message is not compatible with protocol state.
3G-protocol Error	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to protocol error in message.
2G-protocol Error	Total number of combined (PS and CS) inter-SGSN routing area update requests rejected for 3G service due to protocol error in message.
3G-Unknown cause	Total number of combined (PS and CS) inter-SGSN attach rejected for 3G service where cause is unknown or not specified here.
2G-Unknown cause	Total number of combined (PS and CS) inter-SGSN attach rejected for 2G service where cause is unknown or not specified here.
Inter RAT PS Only Routing Area Update Reject Causes	

Field	Description
3G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to SAI-Req/GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to SAI-Req/GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal MS	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Illegal MS".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to SAI-Req/GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal MS	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Illegal MS".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Illegal ME	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal ME	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-MSID not derived by Nw	<p><b>Description:</b> Total number of GPRS only inter-service routing area update request rejects sent with cause "MSID not derived by network" against Inter-Service-RAU requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting periodic RAU with old RAI as a non-local RAI</li> <li>• When PTMSI-IE is missing in RAU</li> <li>• When old RAI has invalid location area values (0x0000 or 0xfffe) for PTMSI-attaches/RAUs</li> <li>• When getting a RAU with old RAI in 2G and PTMSI is unknown</li> <li>• When getting PTMSI-SIG-MISMATCH for a SGSN Context Request sent with IMSI Validated</li> <li>• When getting a RAU Request while an attach with the same peer-SGSN-PTMSI is in progress</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSID not derived by Nw	<p><b>Description:</b> Total number of GPRS only inter-service routing area update request rejects sent with cause "MSID not derived by network" against Inter-Service-RAU requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When SGSN-Context-Resp arrives with any cause other than "accepted"</li> <li>• When GMM-Identity-Req with MS fails</li> <li>• When GTP-Identity-Req with MS fails</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Implicitly Detached	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RAU at 3G when subscriber was detached from 2G</li> <li>• When we get a different IMSI in SGSN Context Response for an SGSN Context Request sent with IMSI validated</li> <li>• When we get RAU while awaiting a Detach Accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Implicitly Detached	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When we get an RAU from an unknown MS</li> <li>• On T3350 expiry for the Attach-accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-PLMN not allowed	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-PLMN not allowed	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Location Area not allowed	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Location Area not allowed	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When rejecting as a shared SGSN due to no operator accepting the given IMSI</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When rejecting as a shared SGSN due to no operator accepting the given IMSI</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of GPRS only RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of GPRS only RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSC not reachable	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSC not reachable	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Network Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RNC is overloaded</li> <li>• Not enough credits at session manager</li> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• Too many IUs for the same IMSI</li> <li>• On getting a RAU with a peer SGSN PTMSI when another Attach is ongoing with the same PTMSI</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Network Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• On XID failure for RAU</li> <li>• Inability to send an SGSN-Ctx-Req out for an RAU.</li> <li>• Inability to send a Check-IMEI Request out</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MAC Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MAC Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-SYNC Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-SYNC Failure	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Congestion	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Congestion	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-No PDP contexts activated	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No PDP contexts activated	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Retry from new cell	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Retry from new cell	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Semantically Wrong Msg	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Semantically Wrong Msg	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Invalid Mandatory Info	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Invalid Mandatory Info	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type Non Existent	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSG type Non Existent	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-IE Non Existent	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IE Non Existent	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Conditional IE Error	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Conditional IE Error	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Message not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When getting an Attach Request before getting Relocation-complete during SRNS</li> <li>• When getting periodic RAU in a direct transfer message</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Message not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Protocol Error	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "protocol error".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Protocol Error	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "protocol error".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When the PLMN ID in BSSGP message does not match the configured PLMN at GPRS service</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Unknown cause	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 3G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Unknown cause	<p><b>Description:</b> Total number of GPRS only Inter RAT RAU Rejects in 2G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per GPRS service</p>
Inter RAT Comb. Routing Area Update Reject Causes	
3G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to a SAI-Req/GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal MS	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Illegal MS".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Illegal MS	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Illegal MS".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal ME	<p><b>Description:</b> Total number of Combined Inter RAT RAU rejects in 3G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal ME	<p><b>Description:</b> Total number of Combined Inter RAT RAU rejects in 3G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSID not derived by Nw	<p><b>Description:</b> Total number of Combined Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting periodic RAU with old RAI as a non-local RAI</li> <li>• When PTMSI-IE is missing in RAU</li> <li>• When old RAI has invalid location area values (0x0000 or 0xffff) for PTMSI-attaches/RAUs</li> <li>• When getting a RAU with old RAI in 2G and PTMSI is unknown</li> <li>• When getting PTMSI-SIG-MISMATCH for a SGSN Context Request sent with IMSI Validated</li> <li>• When getting a RAU Request while an attach with the same peer-SGSN-PTMSI is in progress</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSID not derived by Nw	<p><b>Description:</b> Total number of Combined Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When SGSN-Context-Resp arrives with any cause other than "accepted"</li> <li>• When GMM-Identity-Req with MS fails</li> <li>• When GTP-Identity-Req with MS fails</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Implicitly Detached	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RAU at 3G when subscriber was detached from 2G</li> <li>• When we get a different IMSI in SGSN Context Response for an SGSN Context Request sent with IMSI validated</li> <li>• When we get RAU while awaiting a Detach Accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Implicitly Detached	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When we get an RAU from an unknown MS</li> <li>• On T3350 expiry for the attach-accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-PLMN not allowed	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-PLMN not allowed	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Location Area not allowed	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Location Area not allowed	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When rejecting as a shared SGSN due to no operator accepting the given IMSI</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of Combined RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of Combined RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSC not reachable	<p><b>Description:</b> Total number of Combined Inter RAT RAU rejects in 3G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSC not reachable	<p><b>Description:</b> Total number of Combined Inter RAT RAU rejects in 2G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Network Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RNC is overloaded</li> <li>• Not enough credits at session manager</li> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• Too many IUs for the same IMSI</li> <li>• On getting a RAU with a peer SGSN PTMSI when another Attach is ongoing with the same PTMSI</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Network Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• On XID failure for RAU</li> <li>• Inability to send an SGSN-Ctx-Req out for an RAU</li> <li>• Inability to send a Check-IMEI Request out</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MAC Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MAC Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-SYNC Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-SYNC Failure	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Congestion	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Congestion	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-No PDP contexts activated	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No PDP contexts activated	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Retry from new cell	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Retry from new cell	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Semantically Wrong Msg	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Semantically Wrong Msg	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Invalid Mandatory Info	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Invalid Mandatory Info	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type Non Existent	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSG type Non Existent	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-IE Non Existent	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IE Non Existent	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Conditional IE Error	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Conditional IE Error	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Message not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When getting an Attach Request before getting Relocation-complete during SRNS</li> <li>• When getting periodic RAU in a direct transfer message</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Message not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Protocol Error	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "protocol error".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Protocol Error	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "protocol error".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When the PLMN ID in BSSGP message does not match the configured PLMN at GPRS service</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Unknown cause	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 3G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Unknown cause	<p><b>Description:</b> Total number of Combined Inter RAT RAU Rejects in 2G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per GPRS service</p>
Inter Service PS Only Routing Area Update Reject Causes	
3G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to a SAI-Req or GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to a SAI-Req or GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal MS	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Illegal M".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to a SAI-Req or GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Illegal MS	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Illegal MS".</p> <ul style="list-style-type: none"> <li>• <b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal ME	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal ME	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-MSID not derived by Nw	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting periodic RAU with old RAI as a non-local RAI</li> <li>• When PTMSI-IE is missing in RAU</li> <li>• When old RAI has invalid location area values (0x0000 or 0xfffe) for PTMSI-attaches/RAUs</li> <li>• When getting a RAU with old RAI in 2G and PTMSI is unknown</li> <li>• When getting PTMSI-SIG-MISMATCH for a SGSN Context Request sent with IMSI Validated</li> <li>• When getting a RAU Request while an attach with the same peer-SGSN-PTMSI is in progress</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSID not derived by Nw	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When SGSN-Context-Resp arrives with any cause other than "accepted"</li> <li>• When GMM-Identity-Req with MS fails</li> <li>• When GTP-Identity-Req with MS fails</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Implicitly Detached	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RAU at 3G when subscriber was detached from 2G</li> <li>• When we get a different IMSI in SGSN Context Response for an SGSN Context Request sent with IMSI validated</li> <li>• When we get RAU while awaiting a Detach Accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Implicitly Detached	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When we get an RAU from an unknown MS</li> <li>• On T3350 expiry for the attach-accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-PLMN not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-PLMN not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Location Area not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU rejects in 3G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Location Area not allowed	<p><b>Description:</b> Total number of GPRS only Inter Service RAU rejects in 2G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter Service RAU rejects in 3G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When rejecting as a shared SGSN due to no operator accepting the given IMSI</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter Service RAU rejects in 2G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of GPRS only RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of GPRS only RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSR not reachable	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "MSR not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSC not reachable	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Network Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RNC is overloaded</li> <li>• Not enough credits at session manager</li> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• Too many IUs for the same IMSI</li> <li>• On getting a RAU with a peer SGSN PTMSI when another Attach is ongoing with the same PTMSI</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Network Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• On XID failure for RAU</li> <li>• Inability to send an SGSN-Ctx-Req out for an RAU.</li> <li>• Inability to send a Check-IMEI Request out</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MAC Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MAC Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-SYNC Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-SYNC Failure	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Congestion	<p><b>Description:</b> Total number of GPRS Only Inter Service RAU Rejects in 3G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Congestion	<p><b>Description:</b> Total number of GPRS Only Inter Service RAU Rejects in 2G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-No PDP contexts activated	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No PDP contexts activated	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Retry from new cell	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Retry from new cell	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Semantically Wrong Msg	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Semantically Wrong Msg	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Invalid Mandatory Info	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Invalid Mandatory Info	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type Non Existent	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSG type Non Existent	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-IE Non Existent	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IE Non Existent	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Conditional IE Error	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Conditional IE Error	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Message not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When getting an Attach Request before getting Relocation-complete during SRNS</li> <li>• When getting periodic RAU in a direct transfer message</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Message not compatible with protocol state	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Protocol Error	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
2G-Protocol Error	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "protocol error".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per SGSN service</p>
3G-Unknown cause	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 3G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Unknown cause	<p><b>Description:</b> Total number of GPRS only Inter Service RAU Rejects in 2G service with cause "unknown error".</p> <p><b>Availability:</b> per RA, per GPRS service</p>
Inter Service Comb. Routing Area Update Reject Causes	
3G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On HLR sending a bad response to a SAI-Req/GLU-Req</li> <li>• On getting zero auth vectors for HLR for a SAI-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IMSI Unknown in HLR	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "IMSI unknown at HLR".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Illegal MS	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 3G service with cause "Illegal MS".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal MS	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 2G service with cause "Illegal MS".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Illegal ME	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 3G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• Unable to retrieve IMEI/IMEISV from MS</li> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Illegal ME	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 2G service with cause "Illegal ME".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On IMEI verification failure with EIR</li> <li>• On getting unknown equipment failure from EIR/HLR</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a cl (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS services not allowed in this PLMN" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting a ci (subs-with) while an attach/RAU is in progress</li> <li>• On getting "Subscriber Unknown" failure from HLR for SAI-Req/GLU-Req</li> <li>• For rejecting attaches due to subscriber control inactivity</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS and Non-GPRS service not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects sent with cause "GPRS and non-GPRS service not allowed for subscriber" against Inter-service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "IMSI unknown" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-MSID not derived by Nw	<p><b>Description:</b> Total number of Combined Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting periodic RAU with old RAI as a non-local RAI</li> <li>• When PTMSI-IE is missing in RAU</li> <li>• When old RAI has invalid location area values (0x0000 or 0xffff) for PTMSI-attaches/RAUs</li> <li>• When getting a RAU with old RAI in 2G and PTMSI is unknown</li> <li>• When getting PTMSI-SIG-MISMATCH for a SGSN Context Request sent with IMSI Validated</li> <li>• When getting a RAU Request while an attach with the same peer-SGSN-PTMSI is in progress</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSID not derived by Nw	<p><b>Description:</b> Total number of Combined Inter Service RAU Request Rejects sent with cause "MSID not derived by network" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When SGSN-Context-Resp arrives with any cause other than "accepted"</li> <li>• When GMM-Identity-Req with MS fails</li> <li>• When GTP-Identity-Req with MS fails</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Implicitly Detached	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RAU at 3G when subscriber was detached from 2G</li> <li>• When we get a different IMSI in SGSN Context Response for an SGSN Context Request sent with IMSI validated</li> <li>• When we get RAU while awaiting a Detach Accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Implicitly Detached	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Implicitly detached".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When we get an RAU from an unknown MS</li> <li>• On T3350 expiry for the attach-accept</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-PLMN not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-PLMN not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "PLMN not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Location Area not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Location Area not allowed	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Location area not allowed".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When rejecting as a shared SGSN due to no operator accepting the given IMSI</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Roaming not allowed in this Location Area	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Roaming area not allowed in the given location area".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of Combined RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 3G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GPRS service not allowed in this PLMN	<p><b>Description:</b> Total number of Combined RAU Rejects sent with cause "GPRS service not allowed in this PLMN" against Inter-Service-RAU Requests in 2G service.</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "Roaming not allowed" from HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No suitable cells in this Location Area	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "No cells in location area".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting "UMTS access control" from Siemens HLR for SAI-Req/GLU-Req</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSC not reachable	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 3G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSC not reachable	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 2G service with cause "MSC not reachable".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On sending an attach/RAU Accept with cause "GPRS only attached" or "RA updated" for a combined CS/PS request either because: <ul style="list-style-type: none"> <li>• the request is timed out</li> <li>• inability to send to VLR</li> </ul> </li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Network Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• RNC is overloaded</li> <li>• Not enough credits at session manager</li> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• Too many IUs for the same IMSI</li> <li>• On getting a RAU with a peer SGSN PTMSI when another Attach is ongoing with the same PTMSI</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Network Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Network Failure".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On getting cause "data missing from HLR" in SAI-Req/GLU-Req</li> <li>• On XID failure for RAU</li> <li>• Inability to send an SGSN-Ctx-Req out for an RAU</li> <li>• Inability to send a Check-IMEI Request out</li> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MAC Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MAC Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Message Authenticate Code (MAC) Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-SYNC Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-SYNC Failure	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Context Synchronization Failure".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Congestion	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Congestion	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Network Congestion".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On congestion, if configured for attach-throttling</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-GSM Auth Unacceptable	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "GSM Authentication unacceptable".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-No PDP contexts activated	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-No PDP contexts activated	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "PDP context not activated".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Retry from new cell	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Retry from new cell	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Subscriber retried from a new cell".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Semantically Wrong Msg	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Semantically Wrong Msg	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Semantically wrong message".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Invalid Mandatory Info	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Invalid Mandatory Info	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Invalid Mandatory Info".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type Non Existent	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-MSG type Non Existent	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Message type does not exist".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-MSG type not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Message type not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-IE Non Existent	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-IE Non Existent	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "Information element not existent".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Conditional IE Error	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Conditional IE Error	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "error in conditional informational element".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• On decode failure of messages</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Message not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When getting an Attach Request before getting Relocation-complete during SRNS</li> <li>• When getting periodic RAU in a direct transfer message</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Message not compatible with protocol state	<p><b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "message not compatible with protocol state".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per GPRS service</p>
3G-Protocol Error	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 3G service with cause "protocol error".</p> <p><b>Triggers:</b> Increments when operator policy is configured with this value as the reject cause for attaches/RAUs.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Protocol Error	<p><b>Description:</b> Total number of Combined Inter Service RAU rejects in 2G service with cause "protocol error".</p> <p><b>Triggers:</b></p> <ul style="list-style-type: none"> <li>• When the PLMN ID in BSSGP message does not match the configured PLMN at GPRS service</li> <li>• When operator policy is configured with this value as the reject cause for attaches/RAUs</li> </ul> <p><b>Availability:</b> per RA, per GPRS service</p>

Field	Description
3G-Unknown cause	<b>Description:</b> Total number of Combined Inter Service RAU Rejects in 3G service with cause "unknown error". <b>Availability:</b> per RA, per RNC, per SGSN service
2G-Unknown cause	<b>Description:</b> Total number of Combined Inter Service RAU Rejects in 2G service with cause "unknown error". <b>Availability:</b> per RA, per GPRS service
Routing Area Update Failure	This group displays the statistics of total RAU failures on SGSN.
Total-RAU-Failure	This subgroup indicates all type of Routing Area Update message failures including 2G and 3G occurred on SGSN.
Total-Intra-RAU-Failure	Total all type of intra-routing area RAU failures including 2G and 3G occurred on SGSN.
Total-Ra-Up-Intra-RAU-Fail	Total intra-routing area RAU failures including 2G and 3G occurred on SGSN.
3G-Ra-Up-Intra-RAU-Failure	Total intra-routing area RAU failures occurred on SGSN for 3G service.
2G-Ra-Up-Intra-RAU-Failure	Total intra-routing area RAU failures occurred on SGSN for 2G service.
Total-Periodic-RAU-Failure	Total periodic RAU failures including 2G and 3G occurred on SGSN.
3G-Periodic-RAU-Failure	Total periodic RAU failures occurred on SGSN for 3G service.
2G-Periodic-RAU-Failure	Total periodic RAU failures occurred on SGSN for 2G service.
Total-Comb-Intra-RAU-Fail	Total combined (PS and CS) RAU failures including 2G and 3G occurred on SGSN.
3G-Comb-Intra-RAU-Failure	Total combined (PS and CS) RAU failures occurred on SGSN for 3G service.
2G-Comb-Intra-RAU-Failure	Total combined (PS and CS) RAU failures occurred on SGSN for 2G service.
Total-Inter-SGSN-RAU-Fail	Total all type of inter-SGSN RAU failures including 2G and 3G occurred on SGSN.
Total-PS-Inter-RAU-Failure	Total inter-SGSN RAU failures including 2G and 3G occurred on SGSN for PS-only service.
3G-PS-Inter-RAU-Failure	Total inter-SGSN RAU failures for 3G occurred on SGSN for PS-only service.
2G-PS-Inter-RAU-Failure	Total inter-SGSN RAU failures for 2G occurred on SGSN for PS-only service.
Total-Comb-Inter-RAU-Fail	Total inter-SGSN RAU failures including 2G and 3G occurred on SGSN for combined (PS and CS) service.
3G-Comb-Inter-RAU-Failure	Total inter-SGSN RAU failures for 3G occurred on SGSN for combined (PS and CS) service.
2G-Comb-Inter-RAU-Failure	Total inter-SGSN RAU failures for 2G occurred on SGSN for combined (PS and CS) service.

Field	Description
Total-Ps-Inter-Rat-RAU-Fail	Total PS-only inter-RAT RAU failures including 2G and 3G services occurred on SGSN.
3G-Ps-Inter-Rat-RAU-Fail	Total PS-only inter-RAT RAU failures for 3G service occurred on SGSN.
2G-Ps-Inter-Rat-Fail	Total PS-only inter-RAT RAU failures for 2G service occurred on SGSN.
Total-Comb-Inter-Rat-RAU-Fai	Total combined (PS and CS) inter-RAT RAU failures including 2G and 3G services occurred on SGSN.
3G-Comb-Inter-Rat-RAU-Fail	Total combined (PS and CS) inter-RAT RAU failures for 3G service occurred on SGSN.
2G-Comb-Inter-Rat-Fail	Total combined (PS and CS) inter-RAT RAU failures for 2G service occurred on SGSN.
Total-Ps-Inter-Serv-RAU-Fail	Total PS-only inter-service RAU failures including 2G and 3G services occurred on SGSN.
3G-Ps-Inter-Serv-RAU-Fail	Total PS-only inter-service RAU failures for 3G service occurred on SGSN.
2G-Ps-Inter-Serv-RAU-Fail	Total PS-only inter-service RAU failures for 2G service occurred on SGSN.
Total-Comb-Inter-Ser-RAU-Fai	Total combined (PS and CS) inter-service RAU failures including 2G and 3G services occurred on SGSN.
3G-Comb-Inter-Ser-RAU-Fai	Total combined (PS and CS) inter-service RAU failures for 3G service occurred on SGSN.
2G-Comb-Inter-Ser-RAU-Fai	Total combined (PS and CS) inter-service RAU failures for 2G service occurred on SGSN.
Intra Ra-Upd Routing Area Update Failure Causes	This group displays the failure causes for intra-routing area RAU request failures on SGSN.
3G-Iu release before RAU over	Total number of intra-routing area RAU request failures occurred due to 3G Iu released before RAU procedure was over.
3G-Failure due to Other Ongoing Procedure	Total number of intra-routing area RAU request failures occurred as another procedure was ongoing in 3G service.
2G-Failure due to Other Ongoing Procedure	Total number of intra-routing area RAU request failures occurred as another procedure was ongoing in 2G service.
Intra Periodic Routing Area Update Failure Causes	This group displays the failure causes for periodic area RAU request failures on SGSN.
3G-Iu release before RAU over	Total number of periodic RAU request failures occurred due to 3G Iu released before RAU procedure was over.
3G-Failure due to Other Ongoing Procedure	Total number of periodic RAU request failures occurred as another procedure was ongoing in 3G service.

Field	Description
2G-Failure due to Other Ongoing Procedure	Total number of periodic RAU request failures occurred as another procedure was ongoing in 2G service.
Intra Combo. Routing Area Update Failure Causes	This group displays the failure causes for combined (PS and CS) RAU request failures on SGSN.
3G-Iu release before RAU over	Total number of combined (PS and CS) RAU request failures occurred due to 3G Iu released before RAU procedure was over.
3G-Failure due to Other Ongoing Procedure	Total number of combined (PS and CS) RAU request failures occurred as another procedure was ongoing in 3G service.
2G-Failure due to Other Ongoing Procedure	Total number of combined (PS and CS) RAU request failures occurred as another procedure was ongoing in 2G service.
Inter SGSN PS Only Routing Area Update Failure Causes	This group displays the failure causes for PS-only RAU request failures on SGSN.
3G-Iu release before RAU over	Total number of PS-only RAU request failures occurred due to 3G Iu released before RAU procedure was over.
3G-Failure due to Other Ongoing Procedure	Total number of PS-only RAU request failures occurred as another procedure was ongoing in 3G service.
2G-Failure due to Other Ongoing Procedure	Total number of PS-only RAU request failures occurred as another procedure was ongoing in 2G service.
Inter SGSN Comb. Routing Area Update Failure Causes	This group displays the failure causes for inter-SGSN combined (PS and CS) RAU request failures on SGSN.
3G-Iu release before RAU over	Total number of inter-SGSN combined (PS and CS) RAU request failures occurred due to 3G Iu released before RAU procedure was over.
3G-Failure due to Other Ongoing Procedure	Total number of inter-SGSN combined (PS and CS) RAU request failures occurred as another procedure was ongoing in 3G service.
2G-Failure due to Other Ongoing Procedure	Total number of inter-SGSN combined (PS and CS) RAU request failures occurred as another procedure was ongoing in 2G service.
Detach Request	Indicates the statistics of detach request messages.
Total-Detach-Req	Total number of detach request messages.
Total-MS-Init-Detach-Req	Total number of MS initiated detach request.
3G-MS-Init-GPRS-Detach-Req	Total number of MS initiated GPRS (PS) detach request for 3G service.
2G-MS-Init-GPRS-Detach-Req	Total number of MS initiated GPRS detach request for 2G service.
3G-MS-Init-IMSI-Detach-Req	Total number of MS initiated IMSI (CS) detach request for 3G service.
2G-MS-Init-IMSI-Detach-Req	Total number of MS initiated IMSI detach request for 2G service.

Field	Description
3G-MS-Init-Comb-Detach-Req	Total number of MS initiated combined (IMSI and GPRS) detach request for 3G service.
2G-MS-Init-Comb-Detach-Req	Total number of MS initiated combined (PS and CS) detach request for 2G service.
Total-Nw-Init-Detach-Req	Total number of network initiated detach request.
3G-Nw-Init-Reattach-Req	<p><b>Description:</b> During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach required" when it wants the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments when a clear subscriber is performed.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Nw-Init-Reattach-Req	<p><b>Description:</b> During the network initiated detach for 2G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach required" when it wants the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments when a clear subscriber is performed.</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
3G-Nw-Init-Reattach-Not-Req	<p><b>Description:</b> During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach not required" when it does not expect the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon reception of a Cancel-Location (subscription-withdrawn) or a DSD (all-gprs-subscription withdrawn).</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Nw-Init-Reattach-Not-Req	<p><b>Description:</b> During the network initiated detach for 2G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach not required" when it does not expect the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon reception of a Cancel-Location (subscription-withdrawn) or a DSD (all-gprs-subscription withdrawn).</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
3G-Nw-Init-IMSI-Detach	<p><b>Description:</b> When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS.</p> <p><b>Triggers:</b> Increments upon VLR-reset indication and a next uplink activity from MS.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>

Field	Description
2G-Nw-Init-IMSI-Detach	<p><b>Description:</b> When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS.</p> <p><b>Triggers:</b> Increments upon VLR-reset indication and a next uplink activity from MS.</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
Retransmission	Indicates the statistics of detach request messages retransmitted.
Ret-Total-Detach-Req	Total number of detach request messages retransmitted.
Ret-Total-MS-Init-Det-Req	Total number of MS initiated detach request messages retransmitted.
Ret-3G-MS-Init-GPRS-Det-Re	Total number of MS initiated GPRS (PS) detach request messages retransmitted for 3G service.
Ret-3G-MS-Init-IMSI-Det-Re	Total number of MS initiated IMSI (CS) detach request messages retransmitted for 3G service.
Ret-3G-MS-Init-Comb-Det-Re	Total number of MS initiated combined (IMSI and GPRS) detach request messages retransmitted for 3G service.
Ret-2G-MS-Init-GPRS-Det-Re	Total number of MS initiated GPRS detach request messages retransmitted for 2G service.
Ret-2G-MS-Init-IMSI-Det-Re	Total number of MS initiated IMSI detach request messages retransmitted for 2G service.
Ret-2G-MS-Init-Comb-Det-Re	Total number of MS initiated combined (PS and CS) detach request messages retransmitted for 2G service.
Ret-Total-Nw-Init-Det-Req	Total number of network initiated detach request messages retransmitted.
Ret-3G-Nw-Init-Reattach-Req	<p><b>Description:</b> During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach required" when it wants the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "Reattach Required".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
Ret-2G-Nw-Init-Reattach-Req	<p><b>Description:</b> During the network initiated detach for 2G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach required" when it wants the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "Reattach Required".</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>

Field	Description
Ret-3G-Nw-Init-Reattach-Not	<p><b>Description:</b> During the network initiated detach for 3G service, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach not required" when it does not expect the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "Reattach Not Required".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
Ret-2G-Nw-Init-Reattach-Not	<p><b>Description:</b> During the network initiated detach, the SGSN informs the MS that it has been detached by sending a detach request. The Detach Request has a detach type - "Reattach not required" when it does not expect the MS to attach again for GPRS services.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "Reattach Not Required".</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
Ret-3G-Nw-Init-IMSI-Detach	<p><b>Description:</b> When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS in a 3G service.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "IMSI Detach".</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
Ret-2G-Nw-Init-IMSI-Detach	<p><b>Description:</b> When the SGSN loses the GS-context for the MS due to a VLR-reset indication, it notifies the MS by sending an IMSI-detach on the next signalling activity by the MS in a 2G service.</p> <p><b>Triggers:</b> Increments upon the 1st, 2nd, 3rd and 4th expiry of T3322 for a detach of type "IMSI Detach".</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
Detach Accept	Indicates the statistics of detach request accept messages.
Total-Detach-Acc	Total number of detach request accept messages.
Total-MS-Init-Detach-Acc	Total number of MS initiated detach request accepted.
3G-MS-Init-Detach-Acc	Total number of MS initiated GPRS detach request accepted for 3G service.
2G-MS-Init-Detach-Acc	Total number of MS initiated IMSI detach request accepted for 2G service.
Total-Nw-Init-Detach-Acc	Total number of network initiated detach request accepted.
3G-Nw-Init-Detach-Acc	Total number of network initiated detach request for 3G service.
2G-Nw-Init-Detach-Acc	Total number of network initiated detach request for 2G service.
3G-Nw-Init-GPRS-Detach-Acc	Total number of network initiated GPRS (PS) detach request accepted for 3G service.

Field	Description
2G-Nw-Init-GPRS-Detach-Acc	Total number of network initiated GPRS (PS) detach request accepted for 2G service.
3G-Nw-Init-IMSI-Detach-Acc	Total number of network initiated IMSI (CS) detach request accepted for 3G service.
2G-Nw-Init-IMSI-Detach-Acc	Total number of network initiated IMSI (CS) detach request accepted for 2G service.
3G-Nw-Init-Comb-Detach-Acc	Total number of network initiated combined (PS and CS) detach request accepted for 3G service.
2G-Nw-Init-Comb-Detach-Acc	Total number of network initiated combined (PS and CS) detach request accepted for 2G service.
Service Request	Indicates the statistics of service request messages.
Total-Serv-Req	Indicates the statistics of total service request messages.
Total-Signalling-Serv-Req	Total signalling service requests messages.
3G-Signalling-Serv-Req	Total signalling service requests messages for 3G service.
2G-Signalling-Serv-Req	Total signalling service requests messages for 2G service.
Total-Page-Rsp-Serv-Req	Total paging response for service requests messages.
3G-Page-Rsp-Serv-Req	Total paging response for service requests messages for 3G service.
2G-Page-Rsp-Serv-Req	Total paging response for service requests messages for 2G service.
Total-Data-Serv-Req	Total data service requests messages.
3G-Data-Serv-Req	Total data service requests messages for 3G service.
2G-Data-Serv-Req	Total data service requests messages for 2G service.
Retransmission	Indicates the statistics of service request messages retransmitted.
Ret-Total-Serv-Req	Indicates the statistics of total service request messages retransmitted.
Ret-Total-Sig-Serv-Req	Total signalling service requests messages retransmitted.
Ret-3G-Sig-Serv-Req	Total signalling service requests messages retransmitted for 3G service.
Ret-2G-Signalling-Serv-Req	Total signalling service requests messages retransmitted for 2G service.
Ret-Total-PageRsp-Serv-Req	Total paging response for service requests messages retransmitted.
Ret-3G-PageRsp-Serv-Req	Total paging response for service requests messages retransmitted for 3G service.
Ret-2G-Page-Rsp-Serv-Req	Total paging response for service requests messages retransmitted for 2G service.
Ret-Total-Data-Serv-Req	Total data service requests messages retransmitted.
Ret-3G-Data-Serv-Req	Total data service requests messages retransmitted for 3G service.
Ret-2G-Data-Serv-Req	Total data service requests messages retransmitted for 2G service.

Field	Description
Service Accept	Indicates the statistics of service request messages.
Total-Serv-Resp	Total service response messages.
3G-Service-Resp	Total service response messages for 3G service.
2G-Service-Resp	Total service response messages for 2G service.
Service Reject	Total paging response for service requests messages.
Total-Serv-Rej	Total service reject messages.
3G-Service-Rej	Total service reject messages for 3G service.
2G-Service-Rej	Total service reject messages for 2G service.
Service Reject Causes	Indicates the statistics of causes for service request reject for 2G and 3G service.
3G-Network Failure	Total number of service request rejected for 3G service due to network failure.
2G-Network Failure	Total number of service request rejected for 2G service due to network failure.
3G-IMSI Unknown in HLR	Total number of service request rejected for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of service request rejected for 2G service due to unknown IMSI in HLR.
3G-MsId can not derived by Nw	Total number of service request rejected for 3G service as MSID can not derived by network from message.
2G-MsId can not derived by Nw	Total number of service request rejected for 3G service as MSID can not derived by network from message.
3G-Implicitly detached	Total number of service request rejected for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of service request rejected for 2G service due to implicitly detach.
3G-Illegal MS	Total number of service request rejected for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of service request rejected for 2G service due to illegal mobile subscriber.
3G-Message not compatible with protocol state	Total number of service request rejected for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of service request rejected for 2G service as message is not compatible with protocol state.
3G-No PDP contexts activated	Total number of service request rejected for 3G service as no PDP context is activated.
2G-No PDP contexts activated	Total number of service request rejected for 2G service as no PDP context is activated.
3G-Semantically Wrong Msg	Total number of service request rejected for 3G service as request message is semantically wrong.

Field	Description
2G-Semantically Wrong Msg	Total number of service request rejected for 2G service as request message is semantically wrong.
3G-Unknown cause	Total number of service request rejected for 3G service due to unknown cause or reason not specified here.
2G-Unknown cause	Total number of service request rejected for 3G service due to unknown cause or reason not specified here.
Paging Initiated	Indicates the statistics of paging initiated procedure.
Total-Page-Requests	Total paging request messages.
3G-PS-Page-Requests	Total paging request messages in packet switching (PS) domain for 3G service.
3G-CS-Page-Requests	Total paging request messages in circuit switching (CS) domain for 3G service.
2G-PS-Page-Requests	Total paging request messages in packet switching (PS) domain for 2G service.
2G-CS-Page-Requests	Total paging request messages in circuit switching (CS) domain for 2G service.
Total-Page-Responses	Total paging request response messages.
3G-PS-Page-Responses	Total paging request response messages in packet switching (PS) domain for 3G service.
3G-CS-Page-Responses	Total paging request response messages in circuit switching (CS) domain for 3G service.
2G-PS-Page-Responses	Total paging request response messages in packet switching (PS) domain for 2G service.
2G-CS-Page-Responses	Total paging request response messages in circuit switching (CS) domain for 2G service.
Retransmission	Indicates the statistics of paging initiated procedure retransmitted.
Ret-Total-Page-Requests	Total paging request messages.
Ret-3G-Page-Requests	Total paging request messages retransmitted in for 3G service.
Ret-2G-Page-Requests	Total paging request messages retransmitted in for 2G service.
Gmm Status Message	Indicates the statistics of GPRS mobility management procedure status messages.
Total-Gmm-Status-Sent	Total GPRS mobility management procedure status messages sent.
3G-Gmm-Status-Sent	Total GPRS mobility management procedure status messages sent for 3G service.
2G-Gmm-Status-Sent	Total GPRS mobility management procedure status messages sent for 2G service.
Total-Gmm-Status-Rcvd	Total GPRS mobility management procedure status messages received.
3G-Gmm-Status-Rcvd	Total GPRS mobility management procedure status messages received for 3G service.

Field	Description
2G-Gmm-Status-Rcvd	Total GPRS mobility management procedure status messages received for 2G service.
GMM Status Sent Causes	Indicates the statistics of causes for GPRS mobility management status messages sent for 2G and 3G service.
3G-IMSI Unknown in HLR	Total number of GMM status messages sent for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of GMM status messages sent for 2G service due to unknown IMSI in HLR.
3G-Illegal MS	Total number of GMM status messages sent for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of GMM status messages sent for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of GMM status messages sent for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of GMM status messages sent for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of GMM status messages sent for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of GMM status messages sent for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS & Non-GPRS services not allowed	Total number of GMM status messages sent for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS & Non-GPRS services not allowed	Total number of GMM status messages sent for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MSId not derived by Nw	Total number of GMM status messages sent for 3G service due to network failed to derive MSID from attach message.
2G-MSId not derived by Nw	Total number of GMM status messages sent for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of GMM status messages sent for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of GMM status messages sent for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of GMM status messages sent for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of GMM status messages sent for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of GMM status messages sent for 3G service due to specific location area not allowed.

Field	Description
2G-Location Area not allowed	Total number of GMM status messages sent for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of GMM status messages sent for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of GMM status messages sent for 2G service due to roaming not allowed in specific location area.
3G-GPRS service not allowed in this PLMN	Total number of GMM status messages sent for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of GMM status messages sent for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of GMM status messages sent for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of GMM status messages sent for 2G service due to non availability of suitable cell in specific location area.
3G-MSR not reachable	Total number of GMM status messages sent for 3G service as MSR not reachable.
2G-MSR not reachable	Total number of GMM status messages sent for 2G service as MSR not reachable.
3G-Network Failure	Total number of GMM status messages sent for 3G service due to network failure.
2G-Network Failure	Total number of GMM status messages sent for 2G service due to network failure.
3G-MAC Failure	Total number of GMM status messages sent for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of GMM status messages sent for 2G service due to MAC failure.
3G-SYNC Failure	Total number of GMM status messages sent for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of GMM status messages sent for 2G service due to context synchronization failure.
3G-Congestion	Total number of GMM status messages sent for 3G service due to network congestion.
2G-Congestion	Total number of GMM status messages sent for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of GMM status messages sent for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of GMM status messages sent for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of GMM status messages sent for 3G service as PDP context is not activated.

Field	Description
2G-No PDP contexts activated	Total number of GMM status messages sent for 2G service as PDP context is not activated.
3G-Semantically Wrong Msg	Total number of GMM status messages sent for 3G service as attach request message is semantically wrong.
2G-Semantically Wrg Msg	Total number of GMM status messages sent for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of GMM status messages sent for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of GMM status messages sent for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of GMM status messages sent for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of GMM status messages sent for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of GMM status messages sent for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of GMM status messages sent for 2G service as message type is not compatible with protocol state.
3G-Conditional IE Error	Total number of GMM status messages sent for 3G service due to error in conditional information element.
2G-conditional IE Error	Total number of GMM status messages sent for 2G service due to error in conditional information element.
3G-Message not compatible with protocol state	Total number of GMM status messages sent for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of GMM status messages sent for 2G service as message is not compatible with protocol state.
3G-protocol Error	Total number of GMM status messages sent for 3G service due to protocol error in message.
2G-protocol Error	Total number of GMM status messages sent for 2G service due to protocol error in message.
GMM Status Rcvd Causes	Indicates the statistics of causes for GPRS mobility management status messages received for 2G and 3G service.
3G-IMSI Unknown in HLR	Total number of GMM status messages received for 3G service due to unknown IMSI in HLR.
2G-IMSI Unknown in HLR	Total number of GMM status messages received for 2G service due to unknown IMSI in HLR.

Field	Description
3G-Illegal MS	Total number of GMM status messages received for 3G service due to illegal mobile subscriber.
2G-Illegal MS	Total number of GMM status messages received for 2G service due to illegal mobile subscriber.
3G-Illegal ME	Total number of GMM status messages received for 3G service due to illegal mobile equipment.
2G-Illegal ME	Total number of GMM status messages received for 2G service due to illegal mobile equipment.
3G-GPRS service not allowed	Total number of GMM status messages received for 3G service due to GPRS service not allowed for subscriber.
2G-GPRS service not allowed	Total number of GMM status messages received for 2G service due to GPRS service not allowed for subscriber.
3G-GPRS & Non-GPRS services not allowed	Total number of GMM status messages received for 3G service due to GPRS and non-GPRS service not allowed for subscriber.
2G-GPRS & Non-GPRS services not allowed	Total number of GMM status messages received for 2G service due to GPRS and non-GPRS service not allowed for subscriber.
3G-MsId not derived by Nw	Total number of GMM status messages received for 3G service due to network failed to derive MSID from attach message.
2G-MsId not derived by Nw	Total number of GMM status messages received for 2G service due to network failed to derive MSID from attach message.
3G-Implicitly detached	Total number of GMM status messages received for 3G service due to implicitly detach.
2G-Implicitly detached	Total number of GMM status messages received for 2G service due to implicitly detach.
3G-PLMN not allowed	Total number of GMM status messages received for 3G service due to specific PLMN not allowed.
2G-PLMN not allowed	Total number of GMM status messages received for 2G service due to specific PLMN not allowed.
3G-Location Area not allowed	Total number of GMM status messages received for 3G service due to specific location area not allowed.
2G-Location Area not allowed	Total number of GMM status messages received for 2G service due to specific location area not allowed.
3G-Roaming not allowed in this Location Area	Total number of GMM status messages received for 3G service due to roaming not allowed in specific location area.
2G-Roaming not allowed in this Location Area	Total number of GMM status messages received for 2G service due to roaming not allowed in specific location area.

Field	Description
3G-GPRS service not allowed in this PLMN	Total number of GMM status messages received for 3G service due to GPRS service not allowed in specific PLMN.
2G-GPRS service not allowed in this PLMN	Total number of GMM status messages received for 2G service due to GPRS service not allowed in specific PLMN.
3G-No suitable cells in this Location Area	Total number of GMM status messages received for 3G service due to non availability of suitable cell in specific location area.
2G-No suitable cells in this Location Area	Total number of GMM status messages received for 2G service due to non availability of suitable cell in specific location area.
3G-MSC not reachable	Total number of GMM status messages received for 3G service as MSC not reachable.
2G-MSC not reachable	Total number of GMM status messages received for 2G service as MSC not reachable.
3G-Network Failure	Total number of GMM status messages received for 3G service due to network failure.
2G-Network Failure	Total number of GMM status messages received for 2G service due to network failure.
3G-MAC Failure	Total number of GMM status messages received for 3G service due to message authenticate code (MAC) failure.
2G-MAC Failure	Total number of GMM status messages received for 2G service due to MAC failure.
3G-SYNC Failure	Total number of GMM status messages received for 3G service due to context synchronization failure.
2G-SYNC Failure	Total number of GMM status messages received for 2G service due to context synchronization failure.
3G-Congestion	Total number of GMM status messages received for 3G service due to network congestion.
2G-Congestion	Total number of GMM status messages received for 2G service due to network congestion.
3G-GSM Auth Unacceptable	Total number of GMM status messages received for 3G service due to unacceptable authentication from GSM network.
2G-GSM Auth Unacceptable	Total number of GMM status messages received for 2G service due to unacceptable authentication from GSM network.
3G-No PDP contexts activated	Total number of GMM status messages received for 3G service as PDP context is not activated.
2G-No PDP contexts activated	Total number of GMM status messages received for 2G service as PDP context is not activated.
3G-Semantically Wrong Msg	Total number of GMM status messages received for 3G service as attach request message is semantically wrong.

Field	Description
2G-Semantically Wrong Msg	Total number of GMM status messages received for 2G service as attach request message is semantically wrong.
3G-Invalid Mandatory Info	Total number of GMM status messages received for 3G service as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of GMM status messages received for 2G service as mandatory information in message is invalid.
3G-MSG type Non Existent	Total number of GMM status messages received for 3G service due to non-existent type of message.
2G-MSG type Non Existent	Total number of GMM status messages received for 2G service due to non-existent type of message.
3G-MSG type not compatible with protocol state	Total number of GMM status messages received for 3G service as message type is not compatible with protocol state.
2G-MSG type not compatible with protocol state	Total number of GMM status messages received for 2G service as message type is not compatible with protocol state.
3G-Conditional IE Error	Total number of GMM status messages received for 3G service due to error in conditional information element.
2G-conditional IE Error	Total number of GMM status messages received for 2G service due to error in conditional information element.
3G-Message not compatible with protocol state	Total number of GMM status messages received for 3G service as message is not compatible with protocol state.
2G-Message not compatible with protocol state	Total number of GMM status messages received for 2G service as message is not compatible with protocol state.
3G-protocol Error	Total number of GMM status messages received for 3G service due to protocol error in message.
2G-protocol Error	Total number of GMM status messages received for 2G service due to protocol error in message.
Gmm Information Sent	Indicates the statistics of messages sent with GPRS mobility management information.
Total-Gmm-Information-Sent	Total messages sent with GPRS mobility management information.
3G-Gmm-Information-Sent	Total messages sent with GPRS mobility management information for 3G service.
2G-Gmm-Information-Sent	Total messages sent with GPRS mobility management information for 2G service.
Inter-System Procedures	This group displays the statistics of inter-system procedures.
3G-Ra-Up-RAU	Total numbers of RAU messages (Accept+Reject) sent for 3G routing area update procedure.

Field	Description
2G-Ra-Up-RAU	Total numbers of RAU messages (Accept+Reject) sent for 2G routing area update procedure.
3G-Comb-RAU	Total numbers of combined (PS and CS) RAU messages (Accept+Reject) sent for 3G routing area update procedure.
2G-Comb-RAU	Total numbers of combined (PS and CS) RAU messages (Accept+Reject) sent for 2G routing area update procedure.
3G-Ra-Up-RAU-Rej	Total numbers of RAU Reject messages sent for 3G routing area update procedure.
2G-Ra-Up-RAU-Rej	Total numbers of RAU Reject messages sent for 2G routing area update procedure.
3G-Comb-RAU-Rej	Total numbers of combined (PS and CS) RAU Reject messages sent for 3G routing area update procedure.
2G-Comb-RAU-Rej	Total numbers of combined (PS and CS) RAU Reject messages sent for 2G routing area update procedure.
3G-Ra-Up-RAU-Acc	Total numbers of RAU Accept messages sent for 3G routing area update procedure.
2G-Ra-Up-RAU-Acc	Total numbers of RAU Accept messages sent for 2G routing area update procedure.
3G-Comb-RAU-Acc	Total numbers of combined (PS and CS) RAU Accept messages sent for 3G routing area update procedure.
2G-Comb-RAU-Acc	Total numbers of combined (PS and CS) RAU Accept messages sent for 2G routing area update procedure.
3G-Attach	Total numbers of Attach messages (Accept+Reject) sent for 3G subscriber attach procedure.
2G-Attach	Total numbers of Attach messages (Accept+Reject) sent for 2G subscriber attach procedure.
3G-Comb-Attach	Total numbers of combined (PS and CS) Attach messages (Accept+Reject) sent for 3G subscriber attach procedure.
2G-Comb-Attach	Total numbers of combined (PS and CS) Attach messages (Accept+Reject) sent for 3G subscriber attach procedure.
3G-Attach-Rej	Total numbers of Attach Reject messages sent for 3G subscriber attach procedure.
2G-Attach-Rej	Total numbers of Attach Reject messages sent for 2G subscriber attach procedure.
3G-Comb-Attach-Rej	Total numbers of combined (PS and CS) Attach Reject messages sent for 3G subscriber attach procedure.
2G-Comb-Attach-Rej	Total numbers of combined (PS and CS) Attach Reject messages sent for 2G subscriber attach procedure.
3G-Attach-Acc	Total numbers of Attach Accept messages sent for 3G subscriber attach procedure.
2G-Attach-Acc	Total numbers of Attach Accept messages sent for 2G subscriber attach procedure.

Field	Description
3G-Comb-Attach-Acc	Total numbers of combined (PS and CS) Attach Accept messages sent for 3G subscriber attach procedure.
2G-Comb-Attach-Acc	Total numbers of combined (PS and CS) Attach Accept messages sent for 2G subscriber attach procedure.
Common Procedures	Indicates the statistics of common procedures in GPRS mobility management procedure.
Authentication And Ciphering Request	Indicates the statistics of authentication and ciphering request messages.
Total-Auth-Cipher-Req	Total authentication and ciphering request messages.
3G-Auth-Cipher-Req	Total authentication and ciphering request messages for 3G service.
2G-Auth-Cipher-Req	Total authentication and ciphering request messages for 2G service.
Retransmission	Indicates the statistics of authentication and ciphering request messages retransmitted.
Ret-Total-Auth-Cipher-Req	Total authentication and ciphering request messages retransmitted.
Ret-3G-Auth-Cipher-Req	Total authentication and ciphering request messages retransmitted for 3G service.
Ret-2G-Auth-Cipher-Req	Total authentication and ciphering request messages retransmitted for 2G service.
Authentication And Ciphering Response	Indicates the statistics of authentication and ciphering request response messages.
Total-Auth-Cipher-Resp	Total authentication and ciphering request response messages.
3G-Auth-Cipher-Resp	Total authentication and ciphering request response messages for 3G service.
2G-Auth-Cipher-Resp	Total authentication and ciphering request response messages for 2G service.
Authentication And Ciphering Response With SRES Mismatch	Indicates the statistics of authentication and ciphering request response messages having Signed RESponse (SRES) mismatch.
Total-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch.
3G-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch for 3G service.
2G-Auth-Cipher-Resp with Sres Mismatch	Total authentication and ciphering request response messages having Signed RESponse (SRES) mismatch for 2G service.
Authentication And Ciphering Reject	Indicates the statistics of authentication and ciphering request reject messages.
Total-Auth-Cipher-Rej	Total authentication and ciphering request reject messages.
3G-Auth-Cipher-Rej	Total authentication and ciphering request reject messages for 3G service.
2G-Auth-Cipher-Rej	Total authentication and ciphering request reject messages for 2G service.

Field	Description
Authentication And Ciphering Reject Reasons	Indicates the statistics of reasons for authentication and ciphering request rejects.
3G-XRes Mismatch	Total authentication and ciphering requests rejected for 3G service due to mismatch in expected authentication response (XRES) from subscriber.
2G-XRes Mismatch	Total authentication and ciphering requests rejected for 2G service due to mismatch in expected authentication response (XRES) from subscriber
3G-SYNC does not have AUTS	Total authentication and ciphering requests rejected for 3G service where synchronization is missing Authentication Token for Re-synchronization (AUTS).
2G-SYNC does not have AUTS	Total authentication and ciphering requests rejected for 2G service where synchronization is missing Authentication Token for Re-synchronization (AUTS).
3G-Too many SYNC Failures	Total authentication and ciphering requests rejected for 3G service due to synchronization failure beyond allowed number of time.
2G-Too many SYNC Failures	Total authentication and ciphering requests rejected for 3G service due to synchronization failure beyond allowed number of time.
3G-Too many MAC Failures	Total authentication and ciphering requests rejected for 3G service due to message authentication code failure beyond allowed number of time.
2G-Too many MAC Failures	Total authentication and ciphering requests rejected for 2G service due to message authentication code failure beyond allowed number of time.
3G-Gsm Auth Unacc	Total GSM authentication and ciphering requests rejected for 3G service due to unacceptable GSM network failure in procedure.
2G-Gsm Auth Unacc	Total GSM authentication and ciphering requests rejected for 2G service due to unacceptable GSM network failure in procedure.
3G-Other cause	Total authentication and ciphering requests rejected for 3G service due reasons not already listed as "Authentication and Ciphering Reject Reasons".
2G-Other cause	Total authentication and ciphering requests rejected for 2G service due reasons not already listed as "Authentication and Ciphering Reject Reasons".
Authentication And Ciphering Failure	Indicates the statistics of authentication and ciphering request failures.
Total-Auth-Cipher-Failure	Total authentication and ciphering request failures.
3G-Auth-Cipher-Mac-Failure	Total authentication and ciphering failures due to message authentication code (MAC) for 3G service.
2G-Auth-Cipher-Mac-Failure	Total authentication and ciphering failures due to message authentication code (MAC) for 2G service.
3G-Auth-Cipher-Sync-Failure	Total authentication and ciphering failures due to synchronisation for 3G service.
2G-Auth-Cipher-Syn-Failure	Total authentication and ciphering failures due to synchronisation for 2G service.

Field	Description
3G-Auth-Unacceptable	Total authentication and ciphering failures due to unacceptable delay for 3G service.
2G-Auth-Unacceptable	Total authentication and ciphering failures due to unacceptable delay for 2G service.
P-TMSI Realloc	Indicates the statistics of Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedure.
Total-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedure.
3G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure for 3G service.
2G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure for 2G service.
Retransmission	Indicates the statistics of Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation messages retransmitted.
Ret-Total-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedure messages retransmitted.
Ret-3G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation messages retransmitted for 3G service.
Ret-2G-PTMSI Realloc	Total Packet-Temporary Mobile Subscriber Identity reallocation procedure messages retransmitted for 2G service.
P-TMSI Realloc Complete	Statistics related to completed Packet-Temporary Mobile Subscriber Identity (P-TMSI) reallocation procedures.
Total-PTMSI Realloc Complete	Total (P-TMSI) reallocation procedures completed.
3G-PTMSI Realloc Complete	Total (P-TMSI) reallocation procedures completed for 3G service.
2G-PTMSI Realloc Complete	Total (P-TMSI) reallocation procedures completed for 2G service.
Identity Request	Identity request messages statistics.
Total-Identity-Req	Total identity request messages.
Total-IMSI-Identity-Req	Total International Mobile Subscriber Identity (IMSI) identity request messages
3G-IMSI-Identity-Req	Total IMSI identity request messages for 3G service.
2G-IMSI-Identity-Req	Total IMSI identity request messages for 2G service.
Total-IMEI-Identity-Req	Total International Mobile Equipment Identity (IMEI) request messages.
3G-IMEI-Identity-Req	Total IMEI identity request messages for 3G service.
2G-IMEI-Identity-Req	Total IMEI identity request messages for 2G service.
Total-IMEISV-Identity-Req	Total International Mobile Equipment Identity-Software Version (IMEI-SV) identity request messages.

Field	Description
3G-IMEISV-Identity-Req	Total IMEI-SV identity request messages for 3G service.
2G-IMEISV-Identity-Req	Total IMEI-SV identity request messages for 2G service.
Total-(P)TMSI-Identity-Req	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) request messages.
3G-(P)TMSI-Identity-Req	Total P-TMSI identity request messages for 3G service.
2G-(P)TMSI-Identity-Req	Total P-TMSI identity request messages for 2G service.
Retransmission	Identity request messages retransmission statistics.
Ret-Tot-Identity-Req	Total identity request messages.
Ret-Tot-IMSI-Identity-Req	Total international mobile subscriber identity (IMSI) identity request messages retransmitted.
Ret-3G-IMSI-Identity-Req	Total IMSI identity request messages retransmitted for 3G service.
Ret-2G-IMSI-Identity-Req	Total IMSI identity request messages retransmitted for 2G service.
Ret-Tot-IMEI-Identity-Req	Total international mobile equipment identity (IMEI) request messages retransmitted.
Ret-3G-IMEI-Identity-Req	Total IMEI identity request messages retransmitted for 3G service.
Ret-2G-IMEI-Identity-Req	Total IMEI identity request messages retransmitted for 2G service.
Ret-Tot-IMEISV-Identity-Req	Total international mobile equipment identity-software version (IMEI-SV) identity request messages retransmitted.
Ret-3G-IMEISV-Identity-Req	Total IMEI-SV identity request messages retransmitted for 3G service.
Ret-2G-IMEISV-Identity-Req	Total IMEI-SV identity request messages retransmitted for 2G service.
Ret-Tot-(P)TMSI-Ident-Req	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) request messages retransmitted.
Ret-3G-(P)TMSI-Ident-Req	Total P-TMSI identity request messages retransmitted for 3G service.
Ret-2G-(P)TMSI-Ident-Req	Total P-TMSI identity request messages retransmitted for 2G service.
Identity Response	Indicates the statistics of identity request messages.
Total-Identity-Rsp	Total identity request response messages.
Total-IMSI-Identity-Rsp	Total international mobile subscriber identity (IMSI) identity request response messages.
3G-IMSI-Identity-Rsp	Total IMSI identity request response messages for 3G service.
2G-IMSI-Identity-Rsp	Total IMSI identity request response messages for 2G service.
Total-IMEI-Identity-Rsp	Total international mobile equipment identity (IMEI) request response messages.
3G-IMEI-Identity-Rsp	Total IMEI identity request response messages for 3G service.

Field	Description
2G-IMEI-Identity-Rsp	Total IMEI identity request response messages for 2G service.
Total-IMEISV-Identity-Rsp	Total international mobile equipment identity-software version (IMEI-SV) identity request response messages.
3G-IMEISV-Identity-Rsp	Total IMEI-SV identity request response messages for 3G service.
2G-IMEISV-Identity-Rsp	Total IMEI-SV identity request response messages for 2G service.
Total-(P)TMSI-Identity-Rsp	Total Packet-Temporary Mobile Subscriber Identity (P-TMSI) request response messages.
3G-(P)TMSI-Identity-Rsp	Total P-TMSI identity request response messages for 3G service.
2G-(P)TMSI-Identity-Rsp	Total P-TMSI identity request response messages for 2G service.
Total-Unknown-Identity-Rsp	Total identity response messages for unknown identity.
3G-Unknown-Identity-Rsp	Total identity response messages for unknown identity for 3G service.
2G-Unknown-Identity-Rsp	Total identity response messages for unknown identity for 2G service.
Timers	Indicates the statistics of different message and procedure timers.
Total-T3350-Expiry	Total number of times the T3350 timer timed-out.
3G-T3350-Expiry	Total number of times the T3350 timer timed-out for 3G service.
2G-T3350-Expiry	Total number of times the T3350 timer timed-out for 2G service.
Total-T3360-Expiry	Total number of times the T3360 timer timed-out.
3G-T3360-Expiry	Total number of times the T3360 timer timed-out for 3G service.
2G-T3360-Expiry	Total number of times the T3360 timer timed-out for 2G service.
Total-T3370-Expiry	Total number of times the T3370 timer timed-out.
3G-T3370-Expiry	Total number of times the T3370 timer timed-out for 3G service.
2G-T3370-Expiry	Total number of times the T3370 timer timed-out for 2G service.
Total-T3322-Expiry	Total number of times the T3322 timer timed-out.
3G-T3322-Expiry	Total number of times the T3322 timer timed-out for 3G service.
2G-T3322-Expiry	Total number of times the T3322 timer timed-out for 2G service.
Total-T3313-Expiry	Total number of times the T3313 timer timed-out.
3G-T3313-Expiry	Total number of times the T3313 timer timed-out for 3G service.
2G-T3313-Expiry	Total number of times the T3313 timer timed-out for 2G service.
2G Specific Timers	Indicates the statistics of 2G specific timers timeout events.

Field	Description
T3314-Expiry(Ready Timer)	Total number of times the 2G specific ready timer timed-out for 2G service.
Ranap Procedures	Indicates the statistics of Radio Access Network Application Part (RANAP) procedures.
Initial UE Rcvd	Total number of initial user equipment (UE) messages received.
Common Id sent	Total number of common identifier messages sent.
Direct Transfer Sent	Total number of direct transfer messages sent.
Direct Transfer Rcvd	Total number of direct transfer messages received.
Security Mode Command	Total number of security mode commands received.
Security Mode Complete	Total number of security mode completed.
Security Mode Reject	Total number of security mode commands rejected.
Iu Release Request	Total number of Iu interface release request received.
Iu Release Command	Total number of Iu interface release commands received.
Iu Release Complete	Total number of Iu interface release completed.
Reset Rcvd	Total number of reset requests received.
Retransmitted Reset Rcvd	Total number of retransmitted reset requests received.
Reset Ack Sent	Total number of reset request acknowledgement sent.
Reset Sent	Total number of reset requests sent.
Retransmitted Reset Sent	Total number of reset requests retransmitted.
Reset Ack Rcvd	Total number of reset request acknowledgement received.
Resource Reset Rcvd	Total number of resource reset requests received.
Resource Reset Dropped	Total number of resource reset requests dropped as a result of throttling mechanism which handles flurries of such messages to the MMgr.
Resource Reset Ack Sent	Total number of resource reset request acknowledgement sent.
Resource Reset Sent	Total number of resource reset request sent.
Resource Reset Ack Rcvd	Total number of resource reset request acknowledgement received.
Overload ctrl Rcvd	Total number of resource overload control message received.
PC Congested Received	Total number of point code (PC) congested message received.
Error Indication Rcvd	Total number of error indication message received.
Error Indication Sent	Total number of error indication message sent.

Field	Description
Location Reporting Control	Total number of Location Reporting Control procedure messages sent from SGSN.
Location Report	Total number of messages sent with Location Report from SGSN.
Relocation Required	Total number of message received for Serving Radio Network Subsystem (SRNS) relocation required.
Relocation Command	Total number of message received with SRNS relocation command.
Relocation Request	Total number of SRNS relocation requests received.
Relocation Request Ack	Total number of SRNS relocation requests Ack sent.
Relocation Failure	Total number of SRNS relocation failure messages received.
Relocation Prep Failure	Total number of SRNS relocation preparation failure messages received.
Relocation Cancel	Total number of SRNS relocation cancel messages received.
Relocation Cancel Ack	Total number of SRNS relocation cancel acknowledge messages sent.
Relocation Detect	Total number of SRNS relocation detected.
Relocation Complete	Total number of SRNS relocation completed.
Forward SRNS Context Rcvd	Total number of SRNS contexts forward messages received.
Forward SRNS Context Sent	Total number of SRNS contexts forward messages sent.
NAS-PDU Stats	Indicates the statistics of PDUs for Non-Access Stratum (NAS) signalling procedure.
Received	Indicates the total all type of protocol data units received for NAS procedure.
Sent	Indicates the total all type of protocol data units sent for NAS procedure.
Total-Received-NAS-Pdu	Total all type of protocol data units received for NAS procedure.
Total-Sent-NAS-Pdu	Total all type of protocol data units sent for NAS signalling procedure.
GMM-Received-NAS-Pdu	Total protocol data units received by GPRS mobility management (GMM) service through NAS signalling procedure.
GMM-Sent-NAS-Pdu	Total protocol data units sent by GMM service through NAS signalling procedure.
SM-Received-NAS-Pdu	Total protocol data units received by Service Management (SM) service through NAS procedure.
SM-Sent-NAS-Pdu	Total protocol data units sent by SM service for NAS procedure.
SMS-Received-NAS-Pdu	Total number of SMS messages received by SGSN with NAS packet data unit (PDU).
SMS-Sent-NAS-Pdu	Total number of SMS messages sent by SGSN with NAS packet data unit (PDU).
UnIdentified-NAS-Pdu	Total number of unknown type PDUs received for NAS procedure.

Field	Description
Dropped NAS-PDUS	Indicates the statistics of protocol data units dropped for NAS procedure.
Total-Dropped-NAS-Pdu	Total number of PDUs dropped for NAS procedure.
Redirection Indication	This group indicates the statistics of counters related to Redirection indication reasons.
PLMN not allowed	Total number of redirections occurred due to requested PLMN not allowed for specific session.
Location area not allowed	Total number of redirections occurred due to requested Location Area not allowed for specific session.
Roaming not allowed in LA	Total number of redirections occurred due to roaming was not allowed in a location area for specific session.
No GPRS services in PLMN	Total number of redirections occurred due to non-availability of GPRS service in PLMN for specific session.
CS/PS co-ord required	Total number of redirections occurred as co-ordination between CS and PS service was missing for specific session.
Unknown Reasons	Total number of redirections occurred for specific session due to reasons other than listed in this table.
Drop Reason	Indicates the statistics of NAS protocol data unit drop reasons.
Nas-Un-identified type	Total number of NAS-PDUs dropped due to unidentified type of PDU.
Nas-Invalid Remote Address	Total number of NAS-PDUs dropped due to invalid remote address in PDU.
Nas-NAS-PDU not present	Total number of NAS-PDUs dropped due to missing NAS information.
Nas-Invalid Local Address	Total number of NAS-PDUs dropped due to invalid local address in PDU.
Nas-From unknown RNC	Total number of NAS-PDUs dropped as PDU from unknown RNC.
Nas-From unknown RA	Total number of NAS-PDUs dropped as PDU from unknown routing area.
Nas-From unknown Subscriber	Total number of NAS-PDUs dropped as PDU from unknown subscriber.
Duplicate-iu-con-id	Total number of NAS-PDUs dropped as PDU contains duplicate Iu control identifier.
Iu-Con-id processing failed	The total number of PDUs dropped for NAS procedure as Iu connection id processing failed in procedure.
Nas-From unknown PLMN	The total number of PDUs dropped for NAS procedures as NAS signalling was requested from unknown PLMN.
Another iu or 2g available	The total number of PDUs dropped for NAS procedures as another Iu interface of 2G session was available for specific NAS signalling procedure.
Internal Errors	Indicates the statistics of NAS protocol data unit dropped due to internal errors.
Total-Internal-Errors	Total number of NAS PDU dropped due to internal errors.

Field	Description
Attach Requests Drops	Indicates the statistics of NAS PDU dropped due to attach request errors.
Memory Failures	Total number of NAS PDU dropped due to memory failures.
Decode Failures	Total number of NAS PDU dropped due to decoding failures.
Msg in Invalid state	Total number of NAS PDU dropped due to invalid state of message.
Another Proc in Progress	Total number of NAS PDU dropped as another procedure is in progress.
Sent Msg Unavailable	Total number of NAS PDU dropped due to unavailability of sent messages.
Other Failures	Total number of NAS PDU dropped due to failures other than listed in this table.
Routing Area Update Requests Drops	Indicates the statistics of NAS PDU dropped due to routing area update request drops.
Memory Failures	Total number of NAS PDUs dropped due to routing area update request drops by memory failures.
Decode Failures	Total number of NAS PDUs dropped due to routing area update request drops by decoding failures.
Msg in Invalid state	Total number of NAS PDUs dropped due to routing area update request drops where message is not in valid state.
Another Proc in Progress	Total number of NAS PDUs dropped due to routing area update request drops where another procedure is in progress.
Sent Msg Unavailable	Total number of NAS PDUs dropped due to routing area update request drops where sent messages are not available.
Other Failures	Total number of NAS PDUs dropped due to routing area update request drops where reasons are other than listed in this table.
Detach Requests Drops	Indicates the statistics of NAS PDU dropped due to detach request drops.
Memory Failures	Total number of NAS PDUs dropped due to detach request drops by memory failures.
Decode Failures	Total number of NAS PDUs dropped due to detach request drops by decoding failures.
Msg in Invalid state	Total number of NAS PDUs dropped due to detach request drops where message is not in valid state.
Another Proc in Progress	Total number of NAS PDUs dropped due to detach request drops where another procedure is in progress.
Sent Msg Unavailable	Total number of NAS PDUs dropped due to detach request drops where sent messages are not available.
Other Failures	Total number of NAS PDUs dropped due to detach request drops where reasons are other than listed in this table.
Service Requests Drops	Indicates the statistics of NAS PDU dropped due to service request drops.

Field	Description
Memory Failures	Total number of NAS PDUs dropped due to service request drops by memory failures.
Decode Failures	Total number of NAS PDUs dropped due to service request drops by decoding failures.
Msg in Invalid state	Total number of NAS PDUs dropped due to service request drops where message is not in valid state.
Another Proc in Progress	Total number of NAS PDUs dropped due to service request drops where another procedure is in progress.
Sent Msg Unavailable	Total number of NAS PDUs dropped due to service request drops where sent messages are not available.
Other Failures	Total number of NAS PDUs dropped due to service request drops where reasons are other than listed in this table.
SMS Message Drops	Indicates the statistics of NAS PDU dropped due to SMS Message drops.
Memory Failures	Total number of NAS PDUs dropped due to SMS Message drops by memory failures.
Decode Failures	Total number of NAS PDUs dropped due to SMS Message drops by decoding failures.
Msg in Invalid state	Total number of NAS PDUs dropped due to SMS Message drops where message is not in valid state.
Unexpected Message	Total number of NAS PDUs dropped due to SMS Message drops where reason as unexpected message arrived.
Other Drops	Indicates the statistics of NAS PDU dropped due to other drops.
Memory Failures	Total number of NAS PDUs dropped due to other drops by memory failures.
Decode Failures	Total number of NAS PDUs dropped due to other drops by decoding failures.
Msg in Invalid state	Total number of NAS PDUs dropped due to other drops where message is not in valid state.
Other Failures	Total number of NAS PDUs dropped due to other drops where reasons are other than listed in this table.
Iu cleared due to other failures	Indicates the statistics of causes for NAS PDU dropped due to Iu interface cleared by other failures.
Reset-received	Total number of NAS PDU dropped due to Iu interface cleared when reset message received.
Reset-resource-received	Total number of NAS PDU dropped due to Iu interface cleared when reset resource message received.
RNC-PC-Down	Total number of NAS PDU dropped due to Iu interface cleared by RNC and/or PC down.
Total Relocation Failure	This group displays the statistics of total relocation procedure failures.

Field	Description
Relocation Failure Causes	This group displays the statistics of relocation procedure failure causes.
RAB Preempted	Total number of relocation procedure failure occurred due to RAB Preempted cause.
Trelocoverall Expiry	Total number of relocation procedure failure occurred due to expiry of Relocation Overall timer.
Trelocprep Expiry	Total number of relocation procedure failure occurred due to expiry of Relocation Preparation timer.
Treloc complete Expiry	Total number of relocation procedure failure occurred due to expiry of Relocation Complete timer.
Tqueuing Expiry	Total number of relocation procedure failure occurred due to expiry of Relocation Queuing timer.
Relocation Triggered	Total number of relocation procedures failed due to triggering of another relocation procedure.
Unable to establ dur reloc	Total number of relocation procedures failed due to unable to establish the connection during relocation procedure.
Unknown Target RNC	Total number of relocation procedures failed due to unknown target RNC.
Relocation Cancelled	Total number of relocation procedures failed due to cancellation of relocation procedures.
Successful Relocation	Total number of relocation procedures failed due to successful completion of relocation procedure.
Req integ protec algo NS	Total number of relocation procedures failed due to required integrity protection algorithms in name server (NS) system.
Conflict with integ proc	Total number of relocation procedures failed due to conflict with integrity procedure.
Failure in Radio Intf Proc	Total number of relocation procedures failed due to failure in radio interface procedure.
Release due to UTRAN	Total number of relocation procedures failed due to RELEASE command from UTRAN.
User Inactivity	Total number of relocation procedures failed due to inactivity at user level.
Time Critical Relocation	Total number of relocation procedures failed due to time critical relocation procedure happened or triggered.
Requested Traffic Class NA	Total number of relocation procedures failed due to non-availability to requested traffic class for user session.
Invalid RAB Params value	Total number of relocation procedures failed due to invalid value in RAB parameters.
Requested Max Bit Rate NA	Total number of relocation procedures failed due to non-availability to requested MBR for user session in uplink and downlink direction.

Field	Description
Req Max Bit Rate NA for DL	Total number of relocation procedures failed due to non-availability to requested MBR for user session in downlink direction.
Req Max Bit Rate NA for UL	Total number of relocation procedures failed due to non-availability to requested MBR for user session in uplink direction.
Req Guaran Bit Rate NA	Total number of relocation procedures failed due to non-availability to requested GBR for user session in uplink and downlink direction.
Req Guaran Bit Rate NA DL	Total number of relocation procedures failed due to non-availability to requested GBR for user session in downlink direction.
Req Guaran Bit Rate NA UL	Total number of relocation procedures failed due to non-availability to requested GBR for user session in uplink direction.
Req Trans-delay not achiev	Total number of relocation procedures failed as requested transmission delay was not achieved.
Invalid RAB params comb	Total number of relocation procedures failed due to invalid combination in RAB parameters.
Cond violation for SDU	Total number of relocation procedures failed due to condition violation for service data unit (SDU).
Cond viol traff handling	Total number of relocation procedures failed due to condition violation in traffic handling.
Cond viol guaran bit rate	Total number of relocation procedures failed due to condition violation in GBR.
User plane vers no support	Total number of relocation procedures failed as user plan version is not supported.
Iu UP Failure	Total number of relocation procedures failed due to user plan failure in Iu interface.
TRELOCalloc Expiry	Total number of relocation procedures failed due to expiry to relocation timer.
Reloc Fail in Tgt system	Total number of relocation procedures failed due to relocation procedure failure in target system.
Invalid RAB ID	Total number of relocation procedures failed due to invalid RAB identifier.
No Remaining RAB	Total number of relocation procedures failed as no RAB was available for this procedure.
Interact with other proc	Total number of relocation procedures failed as system was interacting with other system procedures at the time of relocation trigger.
Repeated Integ Check Fail	Total number of relocation procedures failed due to repeated failure in integrity check.
Requested Req type not sup	Total number of relocation procedures failed as request type was not supported.
Request superseded	Total number of relocation procedures failed as relocation procedure request was superseded by another request.

Field	Description
UE gen signal conn release	Total number of relocation procedures failed as signal connection was released by UE.
Resource opt relocation	Total number of relocation procedures failed due to optimization of resource during relocation procedure.
Requested info not avail	Total number of relocation procedures failed as requested information for this procedure was not available.
Relocation desirable for radio reasons	Total number of relocation procedures failed as relocation was desirable for radio reasons and now not required.
Relocation no sup in tgt	Total number of relocation procedures failed as relocation procedure was not supported in target system.
Directed Retry	Total number of relocation procedures failed because system directed the Retry command.
Radio conn with UE lost	Total number of relocation procedures failed due to radio connection lost with UE.
RNC unabl to establish RFC	Total number of relocation procedures failed as RNC couldn't establish all RAB subflow combinations indicated within the RAB Parameters IE.
Deciphering keys not avail	Total number of relocation procedures failed due to non-availability of de-ciphering keys.
Dedicated Assist data NA	Total number of relocation procedures failed because RNC is not able to successfully deliver the requested dedicated assistance data to the UE.
Relocation tgt not allow	Total number of relocation procedures failed as relocation is not allowed on the target system.
Location report congestion	Total number of relocation procedures failed due to congestion status in location report.
Reduce load in serving cel	Total number of relocation procedures failed as system was reducing load in service cell.
No radio res in tgt cell	Total number of relocation procedures failed due to no radio resource was available in target cell.
GERAN Iu-mode failure	Total number of relocation procedures failed as the GERAN cannot provide an appropriate RAB due to limited capabilities within GERAN.
Access restricted due to shared nws	Total number of relocation procedures failed as access to target system restricted due to shared networks.
Incoming relocation no support due to PUESBINE	Total number of relocation procedures failed as the incoming relocation cannot be accepted by the target RNC because of the Provision of UE Specific Behavior Information to Network Entities (PUESBINE) feature.
Load in tgt great than src	Total number of relocation procedures failed because the target cell's traffic load is higher than that in the source cell.

Field	Description
MBMS-No multicast for UE	Total number of relocation procedures failed because the UE does not have any active multicast service.
MBMS-Unknown UE ID	Total number of relocation procedures failed because the CN does not know the UE or unknown UE identifier.
MBMS session start success no data bearer necessary	Total number of relocation procedures failed because the MBMS Session Start procedure was successfully performed, but the RNC does not have any interested UE.
MBMS-supersede due to NNSF	Total number of relocation procedures failed as the MBMS Session Start procedure was rejected because NAS Node Selection Function (NNSF) towards another CN node.
MBMS-UE link already done	Total number of relocation procedures failed because the UE has already been linked to the given Multicast service
MBMS-UE delink failure	Total number of relocation procedures failed because the UE had not been linked to the given Multicast service.
TMGI Unknown	Total number of relocation procedures failed due to requested MBMS action failure because of the indicated Temporary Mobile Group Identity (TMGI) is unknown.
IP Multicast addr & APN invalid	Total number of relocation procedures failed due to requested MBMS registration failed as the IP Multicast Address and APN are not valid.
MBMS deregistration reject	Total number of relocation procedures failed as the MBMS De-registration was rejected because of implicit registration.
MBMS-Request superseded	Total number of relocation procedures failed as MBMS Registration or De-registration was superseded due to another ongoing procedure.
MBMS Dereg during sess nal	Total number of relocation procedures failed as MBMS De-registration is not allowed during the MBMS session.
MBMS-No data bearer necess	Total number of relocation procedures failed as the RNC no longer have any UEs interested in the MBMS data bearer.
Periodic Loc info no avail	Total number of relocation procedures failed as no UE position estimate or location information was available when the periodic report was triggered.
GTP resources unavailable	Total number of relocation procedures failed as the RNC initiates RAB Release Request procedure when GTP resource was not available and error cause value, if it received, with a GTP-U error indication.
TMGI in use and overlap MBMS srvc in area	Total number of relocation procedures failed as the RNC has an MBMS Session up and running with that Temporary Mobile Group Identity (TMGI) and a parallel MBMS session with the same TMGI in another overlapping MBMS Service Area is not allowed.
MBMS-no cell in MBMS area	Total number of relocation procedures failed as the RNC does not have any cell of the indicated MBMS Service Area.

Field	Description
No Iu CS UP relocation	Total number of relocation procedures failed as the relocation is triggered by CS call and the source RNC has no Iu CS user plane.
Successful MBMS sess start IP MC bearer established	Total number of relocation procedures failed because the MBMS Session Start procedure was successfully performed and IP multicast bearer already established.
CS Fallback triggered	Total number of relocation procedures failed as CS fallback to support earlier version of service triggered.
Unknown	Total number of relocation procedures failed due to reasons not listed in this table or unknown to system.
Miscellaneous Statistics	Indicates the miscellaneous statistics of causes for NAS PDU dropped.
Mismatching PTMSI signatures	Indicates the statistics of number of NAS PDU dropped due to mismatch in P-TMSI signatures.
Total-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures for attach and detach procedures.
Total-Att-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in attach procedures for 2G and 3G service.
3G-Att-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in attach procedures for 3G service.
2G-Att-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in attach procedures for 2G service.
Total-Det-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in detach procedures for 2G and 3G service.
3G-Det-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in detach procedures for 3G service.
2G-Det-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in detach procedures for 2G service.
Total-Rau-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in routing area update procedures for 2G and 3G service.
3G-Rau-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in routing area update procedures for 3G service.
2G-Rau-PTMSI-Sig-Mismatch	Total number of NAS PDU dropped due to mismatch in P-TMSI signatures in routing area update procedures for 2G service.

Field	Description
Auth Triplets Reuse Counter	<p><b>Description:</b> Total authentication triplet reuse by SGSN.</p> <p>SGSN tries to get authentication vectors from HLR; when it does not receive response/vectors from HLR, SGSN authenticates MS successfully using existing/locally stored vectors provided reuse of the triplet vector is enabled in configuration.</p> <p><b>Triggers:</b> Increments when the SGSN sends Auth Request to MS with total triplet reuse of vectors (2G and 3G) for the above condition.</p> <p><b>Availability:</b> per RA, per RNC, per GPRS/SGSN service</p>
3G-Auth Triplets Reuse	<p><b>Description:</b> Total authentication triplet reuse for 3G service.</p> <p>SGSN tries to get authentication vectors from HLR; when it does not receive response/vectors from HLR, SGSN authenticates MS successfully using existing/locally stored vectors provided reuse of the triplet vector is enabled in configuration.</p> <p><b>Triggers:</b> Increments when the SGSN sends Auth Request to MS with 3G triplet reuse of vector for the above condition.</p> <p><b>Availability:</b> per RA, per RNC, per SGSN service</p>
2G-Auth Triplets Reuse	<p><b>Description:</b> Total authentication triplet reuse for 2G service.</p> <p>SGSN tries to get authentication vectors from HLR; when it does not receive response/vectors from HLR, SGSN authenticates MS successfully using existing/locally stored vectors provided reuse of the triplet vector is enabled in configuration.</p> <p><b>Triggers:</b> Increments when the SGSN sends Auth Request to MS with 2G triplet reuse of vector for the above condition.</p> <p><b>Availability:</b> per RA, per RNC, per GPRS service</p>
New Connection rejected due to overload	Total number of NAS PDU dropped as new connection rejected due to overload.
Rnc Overload Statistics	Indicates the RNC overload statistics.
Total Procedures Rejected due to overload	Total number of procedures rejected due to overload at RNC.
Dropped Attaches	Total number of attach procedures dropped due to overload at RNC.
Dropped Serv-req(data)	Total number of service request procedures dropped due to overload at RNC.
Skipped Ptmsi reallocations	Total number of P-TMSI reallocation requests skipped due to overload at RNC.
Skipped Authentication	Total number of authentication procedures skipped due to overload at RNC.
GPRS MOCN Attach Statistics	
Total Redirection Attempts Rcvd:	
Redirection attempts rcvd with bssgp imsi:	

Field	Description
Redirection attempts rcvd without bssgp imsi:	
Total Redirection Completes Sent	
Successful Redirection completes sent	
Failure Redirection completes sent	
Total Redirection Indications Sent	
Illegal LA	
No roamin	
No gprs PLMN	
No cell in LA	
CS/PS Coord Rqrd	
Others	
GPRS MOCN RAU Statistics	
Total Redirection Attempts Rcvd	
Redirection attempts rcvd with bssgp imsi:	
Redirection attempts rcvd without bssgp imsi:	
Total Redirection Completes Sent:	
Successful Redirection completes sent	
Failure Redirection completes sent	
Total Redirection Indications Sent	
Illegal PLMN	
Illegal LA	
No roaming	
No gprs PLMN	
No cell in LA	
CS/PS Coord Rqrd	
Others	

Field	Description
SMS Error Stats	
CP-ERROR (Tx)	Total number of control program errors sent (in upload direction) for short message service (SMS).
Congestion	Total number of control program errors sent (in upload direction) for short message service (SMS) due to congestion.
Invalid Mandatory Info	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid information in mandatory field.
Invalid Message Type	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid message type.
Invalid semantic	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid semantic in message.
Invalid Protocol State	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid state of protocol in message.
Invalid IE	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid information element in message.
Protocol Error	Total number of control program errors sent (in upload direction) for short message service (SMS) due to invalid protocol error.
Network Overload Protection	
Attach requests queued in the pacing queue	Total number of attach requests queued in the pacing queue by network overload protection function.
Inter SGSN RAU requests queued in the pacing queue	Total number of Inter SGSN RAU requests queued in the pacing queue by network overload protection function.
Number of Inter SGSN RAU and Attach requests in the pacing queue	Total number of Inter SGSN RAU and attach requests queued in the pacing queue by network overload protection function.
Attach requests successfully dequeued from the pacing queue	Total number of attach requests successfully removed from the pacing queue by network overload protection function.
Inter SGSN RAU requests successfully dequeued from the pacing queue	Total number of Inter SGSN RAU requests successfully removed from the pacing queue by network overload protection function.
Attaches rejected	Total number of attach requests rejected by network overload protection function.
Inter SGSN RAUs rejected	Total number of Inter SGSN RAUs requests rejected by network overload protection function.
Attaches dropped	Total number of attach requests dropped by network overload protection function.
Inter SGSN RAUs dropped	Total number of Inter SGSN RAUs requests dropped by network overload protection function.

Field	Description
Attaches discarded due to excess wait time in the pacing queue	Total number of attach requests discarded by network overload protection function due to excess wait time in the pacing queue.
Inter SGSN RAUs discarded due to excess wait time in the pacing queue	Total number of Inter SGSN RAUs requests discarded by network overload protection function due to excess wait time in the pacing queue.
Session Management Messages Statistics	
Activate Context Request	Indicates the statistics of context activate request in session management service.
Total-Actv-Request	Total number of request messages received for 2G and 3G context activation including primary and secondary.
3G-Actv-Request	Total number of request messages received for 3G context activation including primary and secondary.
2G-Actv Request	Total number of request messages received for 2G context activation including primary and secondary.
Primary-Actv-Request	Total number of request messages received for 2G and 3G primary context activation.
3G-Primary-Actv-Request	Total number of request messages received for 3G primary context activation.
2G-Primary-Actv-Request	Total number of request messages received for 2G primary context activation.
Secondary-Actv-Request	Total number of request messages received for 2G and 3G secondary context activation.
3G-Secondary-Actv-Request	Total number of request messages received for 3G secondary context activation.
2G-Secondary-Actv-Request	Total number of request messages received for 2G secondary context activation.
Actv-Request-Nrpca	Total number of Network Requested PDP Context Activation request messages received from GGSN.
Active-Request-Nrspca	Total number of Secondary Activate PDP Context Request messages from MS with Ti flag = 1.
3G-Actv-Request-Nrspca	Total number of Secondary Activate PDP Context Request messages from MS with Ti flag = 1 (in UMTS access).
2G-Actv-Request-Nrspca:	Total number of "Secondary Activate PDP Context Request" from MS with Ti flag = 1 (in GPRS access).
Activate Context Request Retransmitted	These counters indicates the retransmitted (received message as same as previous) Activate Secondary PDP Context Requests received from MS with Ti flag = 1. Retransmitted messages are dropped by SGSN.
3G-Primary-Actv-drop	Total number of Activate Primary PDP Context Requests that were dropped (in UMTS access).
2G-Primary-Actv-Drop	Total number of Activate Primary PDP Context Requests that were dropped (in GPRS access).

Field	Description
3G-Secondary-Actv-Drop	Total number of Activate Secondary PDP Context Requests that were dropped (in UMTS access).
2G-Secondary-Actv-Drop	Total number of Activate Secondary PDP Context Requests that were dropped (in GPRS access).
3G-Secondary-Actv-Drop-Nrspca	Total number of Network Requested Secondary PDP Context Requests that were dropped (in UMTS access).
2G-Secondary-Actv-Drop-Nrspca	Total number of Network Requested Secondary PDP Context Requests that were dropped (in GPRS access)
Activate Context Accept	Indicates the statistics of context activate request accepted in session management service.
Total-Actv-Accept	Total number of request messages accepted for 2G and 3G context activation including primary and secondary type.
3G-Actv-Accept	Total number of request messages accepted for 3G context activation including primary and secondary type.
2G-Actv Accept	Total number of request messages accepted for 2G context activation including primary and secondary type.
Primary-Actv-Accept	Total number of request messages accepted for 2G and 3G primary context activation.
3G-Primary-Actv-Accept	Total number of request messages accepted for 3G primary context activation.
2G-Primary-Actv-Accept	Total number of request messages accepted for 2G primary context activation.
Secondary-Actv-Accept	Total number of request messages accepted for 2G and 3G secondary context activation.
3G-Secondary-Actv-Accept	Total number of request messages accepted for 3G secondary context activation.
2G-Secondary-Actv-Accept	Total number of request messages accepted for 2G secondary context activation.
Actv-Accept-Nrspca	Total number of Secondary Activate PDP Context Accept messages to MS with Ti flag = 1.
3G-Act-Accept-Nrspca	Total number of Secondary Activate PDP Context Accept messages sent to MS with Ti flag = 1 (in UMTS access)
2G-Actv-Accept-Nrspca	Total number of Secondary Activate PDP Context Accept messages sent to MS with Ti flag = 1 (in GPRS access)
Activate Context Reject	Indicates the statistics of request messages rejected for 2G and 3G context activation including primary and secondary type.
Total-Actv-Reject	Total number of request messages rejected for 2G and 3G context activation including primary and secondary type.

Field	Description
3G-Actv-Reject	Total number of request messages rejected for 3G context activation including primary and secondary type.
2G-Actv-Reject	Total number of request messages rejected for 2G context activation including primary and secondary type.
Primary-Actv-Reject	Total number of request messages rejected for 2G and 3G primary context activation.
3G-Primary-Actv-Reject	Total number of request messages rejected for 3G primary context activation.
2G-Primary-Actv-Reject	Total number of request messages rejected for 2G primary context activation.
Secondary-Actv-Reject	Total number of request messages rejected for 2G and 3G secondary context activation.
3G-Secondary-Actv-Reject	Total number of request messages rejected for 3G secondary context activation.
Actv-Reject-Nrspca	Total number of Secondary Activate PDP Context Reject messages sent to MS with Ti flag = 1.
3G-Actv-Reject-Nrspca	Total number of Secondary Activate PDP Context Reject messages sent to MS with Ti flag = 1 (in UMTS access)
2G-Actv-Reject-Nrspca	Total number of Secondary Activate PDP Context Reject messages sent to MS with Ti flag = 1 (in GPRS access)
2G-Secondary-Actv-Reject	Total number of request messages rejected for 2G secondary context activation.
Activate Context Failure	
Total-Actv-Failure	Total number of combined primary and secondary PDP context activation failures for 2G and 3G services.
3G-Actv-Failure	Total number of PDP context activation failures for 3G services.
2G-Actv Failure	Total number of PDP context activation failures for 2G services.
Internal Failure	Total number of PDP context activation failures for 2G services due to internal failures.
Ongoing Procedure	Total number of PDP context activation failures for 2G services due to ongoing procedure collisions.
Primary-Actv-Failure	Total number of primary PDP context activation failures for 2G and 3G services.
3G-Primary-Actv-Failure	Total number of primary PDP context activation failures for 3G services.
2G-Primary-Actv-Failure	Total number of primary PDP context activation failures for 2G services.
Internal Failure	Total number of primary PDP context activation failures for 2G services due to internal failures.
Ongoing Procedure	Total number of primary PDP context activation failures for 2G services due to ongoing procedure collisions.
Secondary-Actv-Failure	Total number of secondary PDP context activation failures for 2G and 3G services.

Field	Description
3G-Secondary-Actv-Failure	Total number of secondary PDP context activation for 3G service failed.
2G-Secondary-Actv-Failure	Total number of secondary PDP context activation failures for 2G services.
Internal Failure	Total number of secondary PDP context activation failures for 2G services due to internal failures.
Ongoing Procedure	Total number of secondary PDP context activation failures for 2G services due to ongoing procedure collisions.
2G-Activation-Internal-Failure-Causes	
Resource Alloc Fail	Total number of 2G context activation failures due to internal failures of cause type 'resource allocation failure'.
CPC Send Fail	Total number of 2G context activation failures due to internal failures of cause type 'CPC send failure'.
Secondary Pdp Context Activation Request Ignored	Total number of Secondary PDP Context Activation Requests that were ignored. (verbose mode only)
Total-Actv-Request-Nrspca-Ignored	Total number of Network Requested Secondary PDP Context Activation Requests that were ignored.
3G-Actv-Request-Nrspca-Ignored	Total number of NRSPCA 3G context activation failures due to internal failures of cause type 'resource allocation failure'.
Activate Primary PDP Context Denied	
3G-Operator Determined Barring	Total number of requests to activate primary PDP context for 3G service rejected due to operator determined barring.
2G-Operator Determined Barring	Total number of requests to activate primary PDP context for 2G service rejected due to operator determined barring.
3G-Insufficient Resources	Total number of requests to activate primary PDP context for 3G service rejected due to insufficient resources.
2G-Insufficient Resources	Total number of requests to activate primary PDP context for 2G service rejected due to insufficient resources.
3G-Network Failure	Total number of requests to activate primary PDP context for 3G service rejected due to network failure.
2G-Network Failure	Total number of requests to activate primary PDP context for 2G service rejected due to network failure.
3G-Mising or Unknow APN	Total number of requests to activate primary PDP context for 3G service rejected due to missing or unknown APN in request message.
2G-Mising or Unknow APN	Total number of requests to activate primary PDP context for 2G service rejected due to missing or unknown APN in request message.

Field	Description
3G-Unknown PDP Addr/type	Total number of requests to activate primary PDP context for 3G service rejected due to unknown type/address in request.
2G-Unknown PDP Addr/type	Total number of requests to activate primary PDP context for 2G service rejected due to unknown type/address in request.
3G-User Auth Failed	Total number of requests to activate primary PDP context for 3G service rejected due to failure in user authentication.
2G-User Auth Failed	Total number of requests to activate primary PDP context for 2G service rejected due to failure in user authentication.
3G-Rejected By GGSN	Total number of requests to activate primary PDP context for 3G service rejected as request rejected by the GGSN.
2G-Rejected By GGSN	Total number of requests to activate primary PDP context for 2G service rejected as request rejected by the GGSN.
3G-Unspecified Error	Total number of requests to activate primary PDP context for 3G service rejected due to error which is not specified in this table or unknown.
2G-Unspecified Error	Total number of requests to activate primary PDP context for 2G service rejected due to error which is not specified in this table or unknown.
3G-Svc Option Not Supported	Total number of requests to activate primary PDP context for 3G service rejected as requested service is not supported.
2G-Svc Option Not Supported	Total number of requests to activate primary PDP context for 2G service rejected as requested service is not supported.
3G-Svc Opt Not Subscribed	Total number of requests to activate primary PDP context for 3G service rejected as subscriber is not subscriber to requested service.
2G-Svc Opt Not Subscribed	Total number of requests to activate primary PDP context for 2G service rejected as subscriber is not subscriber to requested service.
3G-Svc Opt Tmp Out of Order	Total number of requests to activate primary PDP context for 3G service rejected as requested service option is temporarily out of order.
2G-Svc Opt Tmp Out of Order	Total number of requests to activate primary PDP context for 2G service rejected as requested service option is temporarily out of order.
3G-APN-Restriction Incompatible	Total number of requests to activate primary PDP context for 3G service rejected due to restriction of aPN or incompatibility of APN for service.
2G-APN-Restriction Incompatible	Total number of requests to activate primary PDP context for 2G service rejected due to restriction of aPN or incompatibility of APN for service.
3G-Semantically Incorrect	Total number of requests to activate primary PDP context for 3G service rejected due to semantically incorrect message.
2G-Semantically Incorrect	Total number of requests to activate primary PDP context for 2G service rejected due to semantically incorrect message.

Field	Description
3G-Invalid Mandatory Info	Total number of requests to activate primary PDP context for 3G service rejected as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of requests to activate primary PDP context for 2G service rejected as mandatory information in message is invalid.
3G-Msg Non Existent	Total number of requests to activate primary PDP context for 3G service rejected due to non-existent type of message.
2G-Msg Non Existent	Total number of requests to activate primary PDP context for 2G service rejected due to non-existent type of message.
3G-IE Non Existent	Total number of requests to activate primary PDP context for 3G service rejected due to non-existence of information element.
2G-IE Non Existent	Total number of requests to activate primary PDP context for 2G service rejected due to non-existence of information element.
3G-Conditional IE Error	Total number of requests to activate primary PDP context for 3G service rejected due to error in conditional information element.
2G-Conditional IE Error	Total number of requests to activate primary PDP context for 2G service rejected due to error in conditional information element.
3G-Msg Not Compatible with State	Total number of requests to activate primary PDP context for 3G service rejected as message type is not compatible with protocol state.
2G-Msg Not Compatible with State	Total number of requests to activate primary PDP context for 2G service rejected as message type is not compatible with protocol state.
3G-Recovery on Timer Expiry	Total number of requests to activate primary PDP context for 3G service rejected as timer expired for recovery.
2G-Recovery on Timer Expiry	Total number of requests to activate primary PDP context for 2G service rejected as timer expired for recovery.
3G-Proto Err Unspecified	Total number of requests to activate primary PDP context for 3G service rejected due to unspecified protocol error.
2G-Proto Err Unspecified	Total number of requests to activate primary PDP context for 2G service rejected due to unspecified protocol error.
Activate Secondary PDP Context Denied	Indicates the statistics of reason to deny secondary PDP context activation for 2G and 3G service denied.
3G-Operator Determined Barring	Total number of requests to activate primary PDP context for 3G service rejected due to operator determined barring.
2G-Operator Determined Barring	Total number of requests to activate primary PDP context for 2G service rejected due to operator determined barring.
3G-Insufficient Resources	Total number of requests to activate secondary PDP context for 3G service rejected due to insufficient resources.

Field	Description
2G-Insufficient Resources	Total number of requests to activate secondary PDP context for 2G service rejected due to insufficient resources.
3G-Rej By Ggsn	Total number of requests to activate secondary PDP context for 3G service rejected as request rejected by the GGSN.
2G-Rej By Ggsn	Total number of requests to activate secondary PDP context for 2G service rejected as request rejected by the GGSN.
3G-Actv Rej Unspecified	Total number of requests to activate secondary PDP context for 3G service rejected due to error which is not specified in this table or unknown.
2G-Actv Rej Unspecified	Total number of requests to activate secondary PDP context for 2G service rejected due to error which is not specified in this table or unknown.
3G-Svc Opt Not Supported	Total number of requests to activate secondary PDP context for 3G service rejected as requested service option is not supported.
2G-Svc Opt Not Supported	Total number of requests to activate secondary PDP context for 2G service rejected as requested service option is not supported.
3G-Svc Opt Not Subscribed	Total number of requests to activate secondary PDP context for 3G service rejected as subscriber is not subscriber to requested service.
2G-Svc Opt Not Subscribed	Total number of requests to activate secondary PDP context for 2G service rejected as subscriber is not subscriber to requested service.
3G-Svc Option Tmp Out Of Order	Total number of requests to activate secondary PDP context for 3G service rejected as requested service option is temporarily out of order.
2G-Svc Option Tmp Out Of Order	Total number of requests to activate secondary PDP context for 2G service rejected as requested service option is temporarily out of order.
3G-Sem Error In TFT Op	Total number of requests to activate secondary PDP context for 3G service rejected due to semantic error in subscriber traffic flow template operation.
2G-Sem Error In TFT Op	Total number of requests to activate secondary PDP context for 2G service rejected due to semantic error in subscriber traffic flow template operation.
3G-Syn Error In TFT Op	Total number of requests to activate secondary PDP context for 3G service rejected due to syntax error in subscriber traffic flow template operation.
2G-Syn Error In TFT Op	Total number of requests to activate secondary PDP context for 2G service rejected due to syntax error in subscriber traffic flow template operation.
3G-Unknown Ctx	Total number of requests to activate secondary PDP context for 3G service rejected due to unknown PDP context name in request message.
2G-Unknown Ctx	Total number of requests to activate secondary PDP context for 2G service rejected due to unknown PDP context name in request message.
3G-Sem Error In Pkt Filter	Total number of requests to activate secondary PDP context for 3G service rejected due to semantic error in packet filter.

Field	Description
2G-Sem Error In Pkt Filter	Total number of requests to activate secondary PDP context for 2G service rejected due to semantic error in packet filter.
3G-Syn Errors In Pkt Filter	Total number of requests to activate secondary PDP context for 3G service rejected due to syntax error in packet filter.
2G-Syn Errors In Pkt Filter	Total number of requests to activate secondary PDP context for 2G service rejected due to syntax error in packet filter.
3G-Ctx No-TFT Already Actv	Total number of requests to activate secondary PDP context for 3G service rejected as no TFT is active for subscriber.
2G-Ctx No-TFT Already Actv	Total number of requests to activate secondary PDP context for 2G service rejected as no TFT is active for subscriber.
3G-Sem Incorrect Msg	Total number of requests to activate secondary PDP context for 3G service rejected due to semantically incorrect message.
2G-Sem Incorrect Msg	Total number of requests to activate secondary PDP context for 2G service rejected due to semantically incorrect message.
3G-Invalid Mandatory Info	Total number of requests to activate secondary PDP context for 3G service rejected as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of requests to activate secondary PDP context for 2G service rejected as mandatory information in message is invalid.
3G-Msg Non Existent	Total number of requests to activate secondary PDP context for 3G service rejected due to non-existent type of message.
2G-Msg Non Existent	Total number of requests to activate secondary PDP context for 2G service rejected due to non-existent type of message.
3G-IE Non Existent	Total number of requests to activate secondary PDP context for 3G service rejected due to non-existence of information element.
2G-IE Non Existent	Total number of requests to activate secondary PDP context for 2G service rejected due to non-existence of information element.
3G-Conditional IE error	Total number of requests to activate secondary PDP context for 3G service rejected due to error in conditional information element.
2G-Conditional IE error	Total number of requests to activate secondary PDP context for 2G service rejected due to error in conditional information element.
3G-Msg Not Compatible with State	Total number of requests to activate secondary PDP context for 3G service rejected as message type is not compatible with protocol state.
2G-Msg Not Compatible with State	Total number of requests to activate secondary PDP context for 2G service rejected as message type is not compatible with protocol state.
3G-Recovery on Timer Expiry	Total number of requests to activate secondary PDP context for 3G service rejected as timer expired for recovery.

Field	Description
2G-Recovery on Timer Expiry	Total number of requests to activate secondary PDP context for 2G service rejected as timer expired for recovery.
3G-Proto Err Unspecified	Total number of requests to activate secondary PDP context for 3G service rejected due to unspecified protocol error.
2G-Proto Err Unspecified	Total number of requests to activate secondary PDP context for 2G service rejected due to unspecified protocol error.
Activate Context Failure Causes	Indicates the statistics of reasons for context activation procedures for 2G and 3G service.
3G-Iu release before Activate over	Total number of context activation procedures rejected for 3G service due to Iu released before completion of activation procedure.
3G-Guard Timer Expiry	Total number of PDP context activation for 3G failed due to guard timer expiry.
2G-Guard Timer Expiry	Total number of PDP context activation for 2G failed due to guard timer expiry.
3G-Duplicate Activation	Total number of PDP context activation for 3G failed due to duplicate request for activation.
2G-Duplicate Activation	Total number of PDP context activation for 2G failed due to duplicate request for activation.
3G-Failure due to Other Ongoing Procedure	Total number of PDP context activation for 3G failed as other activation procedure for same request is in progress.
2G-Failure due to Other Ongoing Procedure	Total number of PDP context activation for 2G failed as other activation procedure for same request is in progress.
3G-Tunnel Deactivation	Total number of PDP context activation for 3G failed as session tunnel deactivated.
2G-Tunnel Deactivation	Total number of PDP context activation for 2G failed as session tunnel deactivated.
3G-HandOff before Activate over	Total number of PDP context activation for 3G failed as handoff happened before activation procedure completed.
2G-HandOff before Activate over	Total number of PDP context activation for 2G failed as handoff happened before activation procedure completed.
3G-Detach before Activate over	Total number of PDP context activation for 2G failed as detach procedure started before activation procedure completed.
2G-Detach before Activate over	Total number of PDP context activation for 2G failed as detach procedure started before activation procedure completed.
3G-Phase-2-Offload Failures	<p><b>Description:</b> This proprietary counter indicates the total number of PDP Activation failures due to Phase 2 offloading in 3G service.</p> <p><b>Triggers:</b> Increments when PDP Activation fails due to Phase 2 offloading.</p> <p><b>Availability:</b> per SGSN service, per RA, per RNC</p>

Field	Description
2G-Phase-2-Offload Failures	<b>Description:</b> This proprietary counter indicates the total number of PDP Activation failures due to Phase 2 offloading in 2G service. <b>Triggers:</b> Increments when PDP Activation fails due to Phase 2 offloading. <b>Availability:</b> per GPRS service, per RA
3G-Invalid Msg Content	Total number of PDP context activation for 3G failed as request message contains invalid information.
2G-Invalid Msg Content	Total number of PDP context activation for 2G failed as request message contains invalid information.
Duplicate Activate Request	Indicates the statistics of duplicate context activation requests for 2G and 3G service received.
Total-Dup-Actv Req Received	Total number of duplicate context activation requests for 2G and 3G service received.
Total-Dup-3G-Actv Req Received	Total number of duplicate context activation requests for 3G service received.
Total-Dup-2G-Actv Req Received	Total number of duplicate context activation requests for 2G service received.
3G-Dup Req In PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 3G service in PDP activate state.
Duplicate TI	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate Network Service Access Point Identifier (NSAPI) for 3G service.
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 3G service in PDP active state with duplicate PDP address and access point name for 3G service.
2G-Dup Req In PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 2G service in PDP activate state.
Duplicate TI	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 2G service in PDP active state with duplicate PDP address and access point name.
3G-Dup Req In NOT PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 3G service which are not in PDP active state.
Duplicate TI	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).

Field	Description
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 3G service which are not in PDP active state with duplicate PDP address and access point name.
2G-Dup Req In NOT PDP-ACTIVE State	Indicates the statistics of duplicate context activation requests for 2G service which are not in PDP active state.
Duplicate TI	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate transaction identifiers (TIs).
Duplicate NSAPI	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate Network Service Access Point Identifier (NSAPI).
Duplicate PDP-Addr and APN	Total number of duplicate context activation requests for 2G service which are not in PDP active state with duplicate PDP address and access point name.
Request Pdp Context Activation	Indicates the statistics of PDP context activation requests for 2G and 3G service.
Total-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 2G and 3G service.
3G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 3G service.
2G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests received for 2G service.
Retransmission	Indicates the statistics of PDP context activation requests retransmitted for 2G and 3G service.
Total-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests retransmitted for 2G and 3G service.
3G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests retransmitted for 3G service.
2G-Request-Pdp-Ctxt-Req	Total number of PDP context activation requests retransmitted for 2G service.
Request Pdp Context Activation Reject	Indicates the statistics of PDP context activation requests rejected for 2G and 3G service.
Total-Request-Pdp-Ctxt-Reject	Total number of PDP context activation requests rejected for 2G and 3G service.
3G-Request-Pdp-Ctxt-Reject	Total number of PDP context activation requests rejected for 3G service.
2G-Request-Pdp-Ctxt-Reject	Total number of PDP context activation requests rejected for 2G service.
Request Pdp Context Activation Denied	Indicates the statistics of PDP context activation requests Denied for 2G and 3G service.
3G-Insufficient Resources	Total PDP context activation requests denied due to insufficient resources in 3G service.
2G-Insufficient Resources	Total PDP context activation requests denied due to insufficient resources in 2G service.
3G-Actv Rej Unspecified	Total PDP context activation requests denied due to unspecified reasons in 3G service.
2G-Actv Rej Unspecified	Total PDP context activation requests denied due to unspecified reasons in 2G service.

Field	Description
3G-Feature Not Supported	Total PDP context activation requests denied due to requested feature not supported in 3G service.
2G-Feature Not Supported	Total PDP context activation requests denied due to requested feature not supported in 2G service.
3G-Svc Opt Tmp Out of Order	Total PDP context activation requests denied due to service option was temporarily out of order in 3G service.
2G-Svc Opt Tmp Out of Order	Total PDP context activation requests denied due to service option was temporarily out of order in 2G service.
Request Secondary Pdp Context Activation	This group of counters indicates the number of Request Secondary Context Activation messages sent to MS. The indicated count does include retransmissions. (verbose mode only).
Total-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages sent to MS.
3G-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages sent to MS (UMTS access).
2G-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages sent to MS (GPRS access).
Retransmission	This group of counters indicate the number of Request Secondary Context Activation messages retransmitted to MS.
Total-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages retransmitted to MS.
3G-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages retransmitted to MS (UMTS access).
2G-Request-Sec-Pdp-Ctxt-Req	Total number of Request Secondary PDP Context Activation messages retransmitted to MS (GPRS access).
Request Secondary PDP Context Activation Reject	This group of counters indicate the number of Request Secondary Context Activation Reject messages received from MS.
Total-Request-Sec-Pdp-Ctxt-Reject	Total number of Request Secondary PDP Context Activation Reject messages from MS.
3G-Total-Request-Sec-Pdp-Ctxt-Reject	Total number of Request Secondary PDP Context Activation Reject messages from MS (UMTS access).
2G-Total-Request-Sec-Pdp-Ctxt-Reject	Total number of Request Secondary PDP Context Activation Reject messages from MS (GPRS access).
Request Secondary PDP Context Activation Denied	This group of counters indicates the number of Request Secondary Context Activation Reject messages received from MS categorized under different SM causes.
3G-Insufficient Resources	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "insufficient resources (26)" in UMTS access.

Field	Description
3G-Actv Rej Unspecified	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "actv rejected, unspecified (31)" in UMTS access.
3G-Feature Not Supported	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "feature not supported (40)" in UMTS access.
3G-Sem Error In TFT Op	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Semantic Errors In TFT operation (44)" in UMTS access.
3G-Syn Error In TFT Op	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Syntactical Errors In TFT operation (41)" in UMTS access
3G-Unknown Ctx	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "unknown PDP context (43)" in UMTS access.
3G-Sem Error In Pkt Filter	Total number of Request Secondary PDP Context Activation Reject from MS with cause "Semantic Errors In Pkt Filter(s) (44)" in UMTS access.
3G-Syn Errors In Pkt Filter	Total number of Request Secondary PDP Context Activation Reject from MS with cause "Syntactical Errors In Pkt Filter(s) (45)" in UMTS access.
3G-Ctx No-TFT Already Actv	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "PDP Ctx without TFT already activated (46)" in UMTS access.
3G-Actv Rej BCM violation	Total number Request Secondary PDP Context Activation Reject messages from MS with cause "actv rejected, BCM violoation (48)" in UMTS access.
3G-Proto Err	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "protocol errors (95-111)" in UMTS access.
2G-Insufficient Resources	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "insufficient resources (26)" in GPRS access.
2G-Actv Rej Unspecified	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "actv rejected, unspecified (31)" in GPRS access.
2G-Feature Not Supported	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "feature not supported (40)" in GPRS access.
2G-Sem Error In TFT Op	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Semantic Errors In TFT operation (44)" in GPRS access.
2G-Syn Error In TFT Op	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Syntactical Errors In TFT operation (41)" i"GPRS access
2G-Unknown Ctx	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "unknown PDP context (43)" in GPRS access.
2G-Sem Error In Pkt Filter	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Semantic Errors In Pkt Filter(s) (44)" in GPRS access.
2G-Syn Errors In Pkt Filter	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "Syntactical Errors In Pkt Filter(s) (45)" in GPRS access.

Field	Description
2G-Ctx No-TFT Already	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "PDP Ctx without TFT already activated (46)" in GPRS access
2G-Actv Rej BCM violation	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "actv rejected, BCM violation (48)" in GPRS access.
2G-Proto Err	Total number of Request Secondary PDP Context Activation Reject messages from MS with cause "protocol errors (95-111)" in GPRS access
Secondary PDP Context Activation Request Ignored	This group of counters indicate the number of Activate Secondary PDP Context Requests messages (from MS with Ti flag = 1) ignored by SGSN. (verbose mode only)
Total-Actv-Request-Nrspca-Ignored	Total number of Secondary Activate PDP Context Request messages from MS with Ti flag = 1 and PDP not in activation in progress state.
3G-Actv-Request-Nrspca-Ignored	Total number of Secondary Activate PDP Context Request messages from MS with Ti flag = 1 (in UMTS access) and PDP not in activation in progress state.
2G-Actv-Request-Nrspca-Ignored	Total number of Secondary Activate PDP Context Request messages from MS with Ti flag = 1 (in GPRS access) and PDP not in activation in progress state.
Network Initiated Secondary Activation Aborted	This group of counters indicates the number of NRSPCA procedures aborted/rejected by SGSN for various GMM/SM procedure collisions, before receiving any response from MS in response to a Request Secondary PDP Context Activation.
3G-NRSPCA-Abort-GTP-Suspend	Total number of NRSPCA procedures aborted in UMTS access due to GTP Suspend from peer SGSN or Suspend from BSC in GPRS access. IPCA Response with cause "MS is GPRS Suspended" is sent in this case.  For S4-SGSN, CBR Response with cause "Unable to page UE due to Suspension" is sent.
3G-NRSPCA-Abort-Handoff	Total number of NRSPCA procedures aborted in UMTS access by handoff to peer SGSN. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
3G-NRSPCA-Abort-Max-Retry-Attempts	Total number of NRSPCA procedure aborted in UMTS access due to Request Secondary PDP context activation maximum retry attempts. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
3G-NRSPCA-Abort-Paging-Expiry	Total number of NRSPCA procedure aborted in UMTS access due to Paging Expiry. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
3G-NRSPCA-Abort-Linked-Ctx-Deactv	Total number of NRSPCA procedures aborted in UMTS access due to linked Context or bundle deactivation. No IPCA Response is sent in this case.

Field	Description
3G-NRSPCA-Abort-Linked-Ctx-Detach	Total number of NRSPCA procedures aborted in UMTS access due to Detach procedure. No IPCA Response is sent in this case.
3G-NRSPCA-Abort-Inter-RAT-Handoff	Total number of NRSPCA procedures aborted in UMTS access due to inter-RAT RAU. IPCA Response with cause "MS is not GPRS responding" is sent in this case. For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
3G-NRSPCA-Abort-Iu-release	Total number of NRSPCA procedures aborted in UMTS access due to Iu release. IPCA Response with cause "MS is not GPRS responding" is sent in this case. For S4-SGSN, CBR Response with cause "UE not responding" is sent.
3G-NRSPCA-Abort-SRNS-Handoff	Total number of NRSPCA procedures aborted in UMTS access due to old SGSN SRNS. IPCA Response with cause "MS is not GPRS responding" is sent in this case. For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
3G-NRSPCA-Abort-Intra-RAU	Total number of NRSPCA procedures aborted in UMTS access due to intra RAU. IPCA Response with cause "MS is not GPRS responding" is sent in this case. For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
3G-NRSPCA-Abort-Intra-SRNS	Total number of NRSPCA procedures aborted in UMTS access due to local SRNS. IPCA Response with cause "MS is not GPRS responding" is sent in this case. For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
3G-NRSPCA-Abort-RAB-Failure	Total number of NRSPCA procedures aborted in UMTS access due to RAB failure. NOTE: This is applicable only for S4-SGSN as RAB setup needs to be completed before sending CBR Response. (In Gn/Gp IPCA Rsp and Create PDP procedure is completed before RAB setup). CBR Response with cause "No resources available" is sent.
3G-NRSPCA-Abort-Ctx-Deactv	Total number of NRSPCA procedures aborted in UMTS access due to PDP deactivation events such as, <ul style="list-style-type: none"> <li>• GTPU Path failure during RAB establishment</li> <li>• RAB Release while waiting for RAB Assignment Response for other bearers in case of multiple bearers being activated in a single CBR Request</li> <li>• Iu release during RAB setup</li> </ul> NOTE: This is applicable only for S4-SGSN as RAB setup needs to be completed before sending CBR Response. (In Gn/Gp IPCA Rsp and Create PDP procedure is completed before RAB setup) CBR Response with cause "No resources available" is sent.

Field	Description
2G-NRSPCA-Abort-Subs-Suspend	Total number of NRSPCA procedures aborted in GPRS access due to GTP Suspend from peer SGSN. IPCA Response with cause "MS is GPRS Suspended" is sent in this case.  For S4-SGSN, CBR Response with cause "Unable to page UE due to Suspension" is sent.
2G-NRSPCA-Abort-Handoff	Total number of NRSPCA procedures aborted in GPRS access by handoff to peer SGSN. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
2G-NRSPCA-Abort-T3385-Expiry	Total number of NRSPCA procedures aborted in GPRS access due T3385 timer expiry. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
2G-NRSPCA-Abort-Paging-Expiry	Total number of NRSPCA procedures aborted in GPRS access due to Paging Expiry. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
2G-NRSPCA-Abort-Linked-Ctx-Deactv	Total number of NRSPCA procedures aborted in GPRS access due to linked context or bundle deactivation. No IPCA Response is sent in this case.
2G-NRSPCA-Abort-Linked-Ctx-Detach	Total number of NRSPCA procedures aborted in GPRS access due to Detach procedure. No IPCA Response is sent in this case.
2G-NRSPCA-Abort-Inter-RAT-Handoff	Total number of NRSPCA procedures aborted in GPRS access due to intra-RAT RAU. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "Temporarily rejected due to handover procedure in progress" is sent.
2G-NRSPCA-Abort-Ready-Tmr-Expiry	Total number of NRSPCA procedure aborted in GPRS access due to ready timer expiry during NRSPCA activation. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
2G-NRSPCA-Abort-Radio-Status	Total number of NRSPCA procedures aborted in GPRS access due Radio Status procedure from BSC during NRSPCA activation. IPCA Response with cause "MS is not GPRS responding" is sent in this case.  For S4-SGSN, CBR Response with cause "UE not responding" is sent.
2G-NRSPCA-Abort-BVC-Block-Or-Reset	Total number of NRSPCA procedures aborted in GPRS access due to BVC Block/Reset procedure from BSC during NRSPCA activation. IPCA Response with cause "No resources available" is sent in this case.  For S4-SGSN, CBR Response with cause "No resources available" is sent.
Modify Context Request	Indicates the statistics of MS and network initiated PDP context modification requests received for 2G and 3G service.

Field	Description
Total-Modify-Request	Total number of MS and network initiated PDP context modification requests received for 2G and 3G service.
3G-Modify-Request	Total number of MS and network initiated PDP context modification requests received for 3G service.
2G-Modify Request	Total number of MS and network initiated PDP context modification requests received for 2G service.
Modify-Request Rx	Total number of MS initiated PDP context modification requests received for 2G and 3G service.
3G-Modify-Request Rx	Total number of MS initiated PDP context modification requests received for 3G service.
2G-Modify-Request Rx	Total number of MS initiated PDP context modification requests received for 2G service.
Modify-Request Tx	Total number of network initiated PDP context modification requests received for 2G and 3G service.
3G-Modify-Request Tx	Total number of network initiated PDP context modification requests received for 3G service.
2G-Modify-Request Tx	Total number of network initiated PDP context modification requests received for 2G service.
Retransmission	Indicates the statistics of network initiated PDP context modification requests retransmitted for 2G and 3G service.
Total-Modify-Request Tx	Total number of network initiated PDP context modification requests retransmitted for 2G and 3G service.
3G-Modify-Request Tx	Total number of network initiated PDP context modification requests retransmitted for 3G service.
2G-Modify-Request Tx	Total number of network initiated PDP context modification requests retransmitted for 2G service.
Modify Context Accept	Indicates the statistics of MS and network initiated PDP context modification requests accepted for 2G and 3G service.
Total-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 2G and 3G service.
3G-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 3G service.
2G-Modify-Accept	Total number of MS and network initiated PDP context modification requests accepted for 2G service.
Modify-Accept Tx	Total number of MS initiated PDP context modification requests accepted for 2G and 3G service.

Field	Description
3G-Modify-Accept Tx	Total number of MS initiated PDP context modification requests accepted for 3G service.
2G-Modify-Accept Tx	Total number of MS initiated PDP context modification requests accepted for 2G service.
Modify-Accept Rx	Total number of network initiated PDP context modification requests accepted for 2G and 3G service.
3G-Modify-Accept Rx	Total number of network initiated PDP context modification requests received for 3G service.
2G-Modify-Accept Rx	Total number of network initiated PDP context modification requests accepted for 2G service.
Modify Context Reject	Indicates the statistics of MS and network initiated PDP context modification requests rejected for 2G and 3G service.
Total-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 2G and 3G service.
3G-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 3G service.
2G-Modify-Reject	Total number of MS and network initiated PDP context modification requests rejected for 2G service.
Modify-Reject Tx	Total number of MS initiated PDP context modification requests rejected for 2G and 3G service.
3G-Modify-Reject Tx	Total number of MS initiated PDP context modification requests rejected for 3G service.
2G-Modify-Reject Tx	Total number of MS initiated PDP context modification requests rejected for 2G service.
Modify-Reject Rx	Total number of network initiated PDP context modification requests rejected for 2G and 3G service.
3G-Modify-Reject Rx	Total number of network initiated PDP context modification requests rejected for 3G service.
2G-Modify-Reject Rx	Total number of network initiated PDP context modification requests rejected for 2G service.
Modify PDP Context Denied Tx	Indicates the reasons for denying MS initiated PDP context modifications for 2G and 3G services.
3G-Insufficient Resources	Total number of MS initiated requests to modify PDP context for 3G service rejected due to insufficient resources.
2G-Insufficient Resources	Total number of MS initiated requests to modify PDP context for 3G service rejected due to insufficient resources.

Field	Description
3G-Svc Option Not Supported	Total number of MS initiated requests to modify PDP context for 3G service rejected as requested service option is not supported.
2G-Svc Option Not Supported	Total number of MS initiated requests to modify PDP context for 2G service rejected as requested service option is not supported.
3G-Sem Err in TFT OP	Total number of MS initiated requests to modify PDP context for 3G service rejected due to semantic error in subscriber traffic flow template operation.
2G-Sem Err in TFT OP	Total number of MS initiated requests to modify PDP context for 2G service rejected due to semantic error in subscriber traffic flow template operation.
3G-Syntactic Err in TFT OP	Total number of MS initiated requests to modify PDP context for 3G service rejected due to syntax error in subscriber traffic flow template operation.
2G-Syntactic Err in TFT OP	Total number of MS initiated requests to modify PDP context for 2G service rejected due to syntax error in subscriber traffic flow template operation.
3G-Sem Err in Pkt Filter	Total number of MS initiated requests to modify PDP context for 3G service rejected due to semantic error in packet filter.
2G-Sem Err in Pkt Filter	Total number of MS initiated requests to modify PDP context for 2G service rejected due to semantic error in packet filter.
3G-Syntactic Err in Pkt Filter	Total number of MS initiated requests to modify PDP context for 3G service rejected due to syntax error in packet filter.
2G-Syntactic Err in Pkt Filter	Total number of MS initiated requests to modify PDP context for 2G service rejected due to syntax error in packet filter.
3G-Sem Incorrect Msg	Total number of MS initiated requests to modify PDP context for 3G service rejected due to semantically incorrect message.
2G-Sem Incorrect Msg	Total number of MS initiated requests to modify PDP context for 2G service rejected due to semantically incorrect message.
3G-Invalid Mandatory Info	Total number of MS initiated requests to modify PDP context for 3G service rejected as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of MS initiated requests to modify PDP context for 2G service rejected as mandatory information in message is invalid.
3G-Msg Non Existent	Total number of MS initiated requests to modify PDP context for 3G service rejected due to non-existent type of message.
2G-Msg Non Existent	Total number of MS initiated requests to modify PDP context for 2G service rejected due to non-existent type of message.
3G-IE Non Existent	Total number of MS initiated requests to modify PDP context for 3G service rejected due to non-existence of information element.
2G-IE Non Existent	Total number of MS initiated requests to modify PDP context for 2G service rejected due to non-existence of information element.

Field	Description
3G-Conditional IE Error	Total number of MS initiated requests to modify PDP context for 3G service rejected due to error in conditional information element.
2G-Conditional IE Error	Total number of MS initiated requests to modify PDP context for 2G service rejected due to error in conditional information element.
3G-Msg Not Compatible with State	Total number of MS initiated requests to modify PDP context for 3G service rejected as message type is not compatible with protocol state.
2G-Msg Not Compatible with State	Total number of MS initiated requests to modify PDP context for 2G service rejected as message type is not compatible with protocol state.
3G-Recovery on Timer Expiry	Total number of MS initiated requests to modify PDP context for 3G service rejected as timer expired for recovery.
2G-Recovery on Timer Expiry	Total number of MS initiated requests to modify PDP context for 2G service rejected as timer expired for recovery.
3G-Proto Err Unspecified	Total number of MS initiated requests to modify PDP context for 3G service rejected due to unspecified protocol error.
2G-Proto Err Unspecified	Total number of MS initiated requests to modify PDP context for 2G service rejected due to unspecified protocol error.
Modify PDP Context Rx	Indicates the statistics of reason to deny SGSN initiated PDP context modification for 2G and 3G service denied.
3G-Insufficient Resources	Total number of SGSN initiated requests received to modify PDP context for 3G service rejected due to insufficient resources.
2G-Insufficient Resources	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to insufficient resources.
3G-Svc Option Not Supported	Total number of SGSN initiated requests to modify PDP context for 3G service rejected as requested service option is not supported.
2G-Svc Option Not Supported	Total number of SGSN initiated requests to modify PDP context for 2G service rejected as requested service option is not supported.
3G-Sem Err in TFT OP	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to semantic error in subscriber traffic flow template operation.
2G-Sem Err in TFT OP	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to semantic error in subscriber traffic flow template operation.
3G-Syntactic Err in TFT OP	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to syntax error in subscriber traffic flow template operation.
2G-Syntactic Err in TFT OP	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to syntax error in subscriber traffic flow template operation.
3G-Sem Err in Pkt Filter	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to semantic error in packet filter.

Field	Description
2G-Sem Err in Pkt Filter	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to semantic error in packet filter.
3G-Syntactic Err in Pkt Filter	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to syntax error in packet filter.
2G-Syntactic Err in Pkt Filter	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to syntax error in packet filter.
3G-Sem Incorrect Msg	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to semantically incorrect message.
2G-Sem Incorrect Msg	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to semantically incorrect message.
3G-Invalid Mandatory Info	Total number of SGSN initiated requests to modify PDP context for 3G service rejected as mandatory information in message is invalid.
2G-Invalid Mandatory Info	Total number of SGSN initiated requests to modify PDP context for 2G service rejected as mandatory information in message is invalid.
3G-Msg Non Existent	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to non-existent type of message.
2G-Msg Non Existent	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to non-existent type of message.
3G-IE Non Existent	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to non-existence of information element.
2G-IE Non Existent	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to non-existence of information element.
3G-Conditional IE Error	Total number of SGSN initiated requests to modify PDP context for 3G service rejected due to error in conditional information element.
2G-Conditional IE Error	Total number of SGSN initiated requests to modify PDP context for 2G service rejected due to error in conditional information element.
3G-Msg Not Compatible with State	Total number of SGSN initiated requests to modify PDP context for 3G service rejected as message type is not compatible with protocol state.
