

show saegw

This chapter describes the output of the **show saegw** command.

- [show saegw-service statistics all-name](#) , on page 1
- [show saegw-service statistics all](#), on page 2

show saegw-service statistics all-name

Displays statistics information for SAEGW services.

Field	Description
Current Subscribers By RAT-Type:	
EUTRAN	The total number of EUTRAN PDNs by RAT-Type.
UTRAN	The total number of UTRANs PDNs by RAT-Type.
GERAN	The total number of GERANs PDNs by RAT-Type.
NB-IoT	The total number of NB-ToT PDNs.
LTE-M	The total number of LTE-M initiated PDNs.
Other	The total number of Others PDNs by RAT-Type.
Current PDNs by RAT-Type:	
EUTRAN	The total number of active EUTRAN PDNs by RAT-Type.
UTRAN	The total number of active UTRANs PDNs by RAT-Type.
GERAN	The total number of active GERANs PDNs by RAT-Type.
NB-IoT	The total number of active NB-IoT PDNs.
LTE-M	The total number of active LTE-M PDNs.
Other	The total number of Others PDNs by RAT-Type

show saegw-service statistics all

Identifies the real usage of 5G Data DCNR sessions for SAEGW.

Table 1: show saegw-service statistics all Command Output Descriptions

Field	Description
DCNR Secondary RAT Data PDN Statistics	
Collocated PDNs:	
Active	<p>The total number of currently active SAEGW DCNR Secondary RAT-Data PDN Sessions.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p>Note Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p> <p>Counter is decremented when the identified DCNR Secondary RAT Data session gets released.</p> <p>Note DCNR Secondary RAT Data statistics will be decremented only when the session gets released. There might be also a scenario where DCNR session receives Secondary RAT Data once or twice only and if it is not reported in the subsequent messages from MME / SAEGW, as per current proposed solution, DCNR Secondary RAT Data statistics will not be decremented till the session is released.</p>
Setup	<p>The total number of cumulative SAEGW DCNR Secondary RAT-Data PDN Sessions setup.</p> <p>Count is incremented when DCNR bit is set for a PDN session, and a Secondary RAT Data received first time for that session</p> <p>Note Irrespective of how many Secondary RAT Data Usage Reports are received for a DCNR PDN, it shall be counted as one. As intention is to count number of real usages of 5G Data DCNR PDNs session, not the Secondary RAT Data Usage Reports.</p>
Released	<p>The total number of cumulative SAEGW DCNR Secondary RAT Data PDNs sessions released.</p> <p>Counter is incremented when the DCNR Secondary RAT Data PDN Session release.</p> <p>It is a cumulative counter, so it will not be decremented</p>
PGW-Anchor PDNs:	
Active	The total number of active sessions using P-GW anchor PDNs.

Field	Description
Setup	The total number of setup sessions using P-GW anchor PDNs.
Released	The total number of releases sessions using P-GW anchor PDNs.
SGW-Anchor PDNs:	
Active	The total number of active sessions using S-GW anchor PDNs.
Setup	The total number of setup sessions using S-GW anchor PDNs.
Released	The total number of releases sessions using S-GW anchor PDNs.
