### Summary Data

Applicable Product(s) or Functional Area	All
Applicable Platform(s)	VPC-DI
Feature Default	Enabled - No configuration needed
Related Changes in This Release	Not applicable
Related Documentation	Not applicable

### Revision History

#### Important

Revision history details are not provided for features introduced before releases 21.2 and N5.1.

Revision Details	Release
The ova/ovf templates used to deploy VPC-DI no longer include serial ports in order to support deployments on VMware vCloud Director.	21.7
First introduced.	Pre 21.2

## Feature Changes

In Release 21.7 and later, the ova/ovf templates used to deploy VPC-DI no longer include serial ports in order to support deployments on VMware vCloud Director (VCD).

Serial ports can still be added by selecting the desired flavor in the OVA deployment configuration screen.
