Managing and Monitoring Network Management Features

This feature module describes how to monitor, manage and deploy a variety of network management features, including Cisco Active Network Abstraction (ANA), Simple Network Management Protocol (SNMP) and Cisco Networking Services (CNS). The CNS software agent on the can communicate with a Cisco Configuration Engine to allow the to be deployed in the field without having to pre-stage it for configuration or image upgrade. The Zero-touch deployment capability enables the router to auto configure itself, download an updated image, connect to the network, and start the operation as soon as it is cabled and powered up.

For more information about the Cisco Configuration Engine, see http://www.cisco.com/en/US/prod/collateral/netmgtsw/ps6504/ps4617/qa_c67_598467.html.
