December 2021

What's New in this Release

There are no new features in this release of Cisco Spaces.

What's Changed in this Release

Dashboard

The following enhancements are made in the Cisco Spaces Dashboard:

Right Now

- **Right Now WiFi** is enhanced to show the count of excluded devices that are not considered as visitors, or filtered during data processing.

- The excluded device count is displayed as a message in the **Note** section of the **Right Now Wifi**.

Captive Portal Runtime

- **Access Code Authentication**: The **Session Duration** and **Bandwidth Limit** configured at the access code level will now be considered by the captive portal. During authentication, the values are passed to the controller and override any default settings done at the controller for session duration and bandwidth.

Partner Dashboard

The following enhancements are made in the Cisco Spaces Partner Dashboard:

Event Notification: When a Cisco Spaces partner adds a new event to an already activated app, it will be sent through Firehose APIs only when the customer subscribes to the new event by accepting the permissions. Prior to this enhancement, customer permission was not required for new events.

- You are prompted with the `New Permission Required` notification message on the app tile, and you must click and accept the new app permission to subscribe to these new app events.

• An email notification is also sent to the customer indicating that a new event is added to the app.

Caveats

Caveats describe unexpected behavior in the Cisco Spaces application. The Resolved Caveats and Open Caveats sections list the caveats in this release.

The following information is provided for each caveat:

• Identifier: Each caveat is assigned a unique identifier (ID) with a pattern of CSC*xxNNNNN*, where *x* is any letter (a-z) and *N* is any number (0-9). These IDs are frequently referenced in Cisco documentation, such as Security Advisories, Field Notices, and other Cisco support documents. Cisco Technical Assistance Center (TAC) engineers or other Cisco staff can also provide you with the ID for a specific caveat.

• Description: A description of what is observed when the caveat occurs.

This section contains the following topics:

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a gateway to the Cisco bug-tracking system, which maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. The BST provides you with detailed defect information about your products and software.

Open Caveats

There are no open caveats in this release of Cisco Spaces.

Resolved Caveats

There are no resolved caveats in this release of Cisco Spaces.
