show aaa auth

To display the configuration settings for the AAA authentication server database, use the **show aaa auth** command.

show aaa auth

Syntax Description This command has no arguments or keywords.

Command Default None

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the configuration settings for the AAA authentication server database:

```
(Cisco Controller) > show aaa auth
Management authentication server order:
 1..... local
 2..... tacacs
```

Related Commands

- config aaa auth**
- config aaa auth mgmt**

show acl

To display the access control lists (ACLs) that are configured on the controller, use the **show acl** command.

```
show acl {cpu | detailed acl_name | summary | layer2 { summary | detailed acl_name } }
```

Syntax Description	cpu	Displays the ACLs configured on the Cisco WLC's central processing unit (CPU).
	detailed	Displays detailed information about a specific ACL.
	<i>acl_name</i>	ACL name. The name can be up to 32 alphanumeric characters.
	summary	Displays a summary of all ACLs configured on the controller.
	layer2	Displays the Layer 2 ACLs.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the access control lists on the CPU.

```
(Cisco Controller) >show acl cpu
```

```
CPU Acl Name.....
Wireless Traffic..... Disabled
Wired Traffic..... Disabled
Applied to NPU..... No
```

The following example shows how to display a summary of the access control lists.

```
(Cisco Controller) > show acl summary
```

```
ACL Counter Status          Disabled
-----
IPv4 ACL Name               Applied
-----
acl1                        Yes
acl2                        Yes
acl3                        Yes
-----
IPv6 ACL Name               Applied
```

```
-----
acl6                                     No
-----
```

The following example shows how to display the detailed information of the access control lists.

```
(Cisco Controller) > show acl detailed acl_name
```

	Source	Destination	Source Port	Dest Port					
I Dir	IP Address/Netmask	IP Address/Netmask	Prot	Range	Range	DSCP			
Action	Counter								
1	Any 0.0.0.0/0.0.0.0	0.0.0.0/0.0.0.0	Any	0-65535	0-65535	0	Deny		0
2	In 0.0.0.0/0.0.0.0	200.200.200.0/255.255.255.0	6	80-80	0-65535	Any	Permit		0
DenyCounter :		0							

Note The Counter field increments each time a packet matches an ACL rule, and the DenyCounter field increments each time a packet does not match any of the rules.

Related Commands

- clear acl counters
- config acl apply
- config acl counter
- config acl cpu
- config acl create
- config acl delete
- config interface acl
- config acl rule

show acl detailed

To display detailed DNS-based ACL information, use the **show acl detailed** command.

show acl detailed*acl_name*

Syntax Description	<i>acl_name</i> Name of the access control list.				
Command Default	None				
Command History	<table><tr><th>Release</th><th>Modification</th></tr><tr><td>7.6</td><td>This command was introduced.</td></tr></table>	Release	Modification	7.6	This command was introduced.
Release	Modification				
7.6	This command was introduced.				

The following is a sample output of the **show acl detailed** *acl_name* command.

```
(Cisco Controller) > show acl detailed android
```

```
No rules are configured for this ACL.
```

```
DenyCounter : 0
```

```
URLs configured in this ACL
```

```
-----
```

```
*.play.google.com
```

```
*.store.google.com
```

show acl summary

To display DNS-based ACL information, use the **show acl summary** command.

show aclsummary

Syntax Description	summary Displays DNS-based ACL information.				
Command Default	None				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

The following is a sample output of the **show acl summary** command.

```
(Cisco Controller) > show acl summary
```

```

ACL Counter Status          Disabled
-----
IPv4 ACL Name               Applied
-----
android                     No
StoreACL                    Yes
-----
IPv6 ACL Name               Applied
-----

```

1

show advanced 802.11 channel

To display the automatic channel assignment configuration and statistics, use the **show advanced 802.11 channel** command.

show advanced 802.11{a | b} channel

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the automatic channel assignment configuration and statistics:

```
(Cisco Controller) > show advanced 802.11a channel
Automatic Channel Assignment
  Channel Assignment Mode..... AUTO
  Channel Update Interval..... 600 seconds [startup]
  Anchor time (Hour of the day)..... 0
  Channel Update Contribution..... SNI.
  Channel Assignment Leader..... 00:1a:6d:dd:1e:40
  Last Run..... 129 seconds ago
  DCA Sensitivity Level: ..... STARTUP (5 dB)
  DCA Minimum Energy Limit..... -95 dBm
Channel Energy Levels
  Minimum..... unknown
  Average..... unknown
  Maximum..... unknown
Channel Dwell Times
  Minimum..... unknown
  Average..... unknown
  Maximum..... unknown
Auto-RF Allowed Channel List.....
36,40,44,48,52,56,60,64,149,
..... 153,157,161
Auto-RF Unused Channel List.....
100,104,108,112,116,132,136,
..... 140,165,190,196
DCA Outdoor AP option..... Enabled
```

show advanced 802.11 coverage

To display the configuration and statistics for coverage hole detection, use the **show advanced 802.11 coverage** command.

show advanced 802.11 {a | b} coverage

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the statistics for coverage hole detection:

```
(Cisco Controller) > show advanced 802.11a coverage
Coverage Hole Detection
 802.11a Coverage Hole Detection Mode..... Enabled
 802.11a Coverage Voice Packet Count..... 100 packets
 802.11a Coverage Voice Packet Percentage..... 50%
 802.11a Coverage Voice RSSI Threshold..... -80 dBm
 802.11a Coverage Data Packet Count..... 50 packets
 802.11a Coverage Data Packet Percentage..... 50%
 802.11a Coverage Data RSSI Threshold..... -80 dBm
 802.11a Global coverage exception level..... 25 %
 802.11a Global client minimum exception lev.... 3 clients
```

show advanced 802.11 group

To display 802.11a or 802.11b Cisco radio RF grouping, use the **show advanced 802.11 group** command.

show advanced 802.11{a | b} group

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display Cisco radio RF group settings:

```
(Cisco Controller) > show advanced 802.11a group
Radio RF Grouping
 802.11a Group Mode..... AUTO
 802.11a Group Update Interval..... 600 seconds
 802.11a Group Leader..... xx:xx:xx:xx:xx:xx
   802.11a Group Member..... xx:xx:xx:xx:xx:xx
 802.11a Last Run..... 133 seconds ago
```

show advanced 802.11 l2roam

To display 802.11a or 802.11b/g Layer 2 client roaming information, use the **show advanced 802.11 l2roam** command.

show advanced 802.11 { **a** | **b** } **l2roam** { **rf-param** | **statistics** } *mac_address*

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
	rf-param	Specifies the Layer 2 frequency parameters.
	statistics	Specifies the Layer 2 client roaming statistics.
	<i>mac_address</i>	MAC address of the client.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show advanced 802.11b l2roam rf-param** command:

```
(Cisco Controller) > show advanced 802.11b l2roam rf-param

L2Roam 802.11bg RF Parameters.....
  Config Mode..... Default
  Minimum RSSI..... -85
  Roam Hysteresis..... 2
  Scan Threshold..... -72
  Transition time..... 5
```

show advanced 802.11 logging

To display 802.11a or 802.11b RF event and performance logging, use the **show advanced 802.11 logging** command.

show advanced 802.11{a | b} logging

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display 802.11b RF event and performance logging:

```
(Cisco Controller) > show advanced 802.11b logging
RF Event and Performance Logging
Channel Update Logging..... Off
Coverage Profile Logging..... Off
Foreign Profile Logging..... Off
Load Profile Logging..... Off
Noise Profile Logging..... Off
Performance Profile Logging..... Off
TxPower Update Logging..... Off
```

show advanced 802.11 monitor

To display the 802.11a or 802.11b default Cisco radio monitoring, use the **show advanced 802.11 monitor** command.

show advanced 802.11 {a | b} monitor

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the radio monitoring for the 802.11b network:

```
(Cisco Controller) > show advanced 802.11b monitor
Default 802.11b AP monitoring
 802.11b Monitor Mode..... enable
 802.11b Monitor Channels..... Country channels
 802.11b RRM Neighbor Discovery Type..... Transparent
 802.11b AP Coverage Interval..... 180 seconds
 802.11b AP Load Interval..... 60 seconds
 802.11b AP Noise Interval..... 180 seconds
 802.11b AP Signal Strength Interval..... 60 seconds
```

show advanced 802.11 optimized roaming

To display the optimized roaming configurations for 802.11a/b networks, use the **show advanced 802.11 optimized roaming** command.

show advanced 802.11 {a | b} optimized roaming [stats]

Syntax Description	stats (Optional) Displays optimized roaming statistics for a 802.11a/b network.
Command Default	None
Command History	Release Modification
	8.0 This command was introduced.

The following example shows how to display the optimized roaming configurations for an 802.11a network:

```
(Cisco Controller) > show advanced 802.11a optimized roaming
OptimizedRoaming
  802.11a OptimizedRoaming Mode..... Enabled
  802.11a OptimizedRoaming Reporting Interval.... 20 seconds
  802.11a OptimizedRoaming Rate Threshold..... disabled
```

The following example shows how to display the optimized roaming statistics for an 802.11a network:

```
(Cisco Controller) > show advanced 802.11a optimized roaming stats
OptimizedRoaming Stats
  802.11a OptimizedRoaming Disassociations..... 2
  802.11a OptimizedRoaming Rejections..... 1
```

show advanced 802.11 profile

To display the 802.11a or 802.11b lightweight access point performance profiles, use the **show advanced 802.11 profile** command.

show advanced 802.11 {**a** | **b**} **profile** {**global** | *cisco_ap*}

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
	global	Specifies all Cisco lightweight access points.
	<i>cisco_ap</i>	Name of a specific Cisco lightweight access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the global configuration and statistics of an 802.11a profile:

```
(Cisco Controller) > show advanced 802.11 profile global
Default 802.11a AP performance profiles
 802.11a Global Interference threshold..... 10%
 802.11a Global noise threshold..... -70 dBm
 802.11a Global RF utilization threshold..... 80%
 802.11a Global throughput threshold..... 1000000 bps
 802.11a Global clients threshold..... 12 clients
 802.11a Global coverage threshold..... 12 dB
 802.11a Global coverage exception level..... 80%
 802.11a Global client minimum exception lev..... 3 clients
```

The following example shows how to display the configuration and statistics of a specific access point profile:

```
(Cisco Controller) > show advanced 802.11 profile AP1
Cisco AP performance profile not customized
```

This response indicates that the performance profile for this lightweight access point is using the global defaults and has not been individually configured.

show advanced 802.11 receiver

To display the configuration and statistics of the 802.11a or 802.11b receiver, use the **show advanced 802.11 receiver** command.

show advanced 802.11{a | b} receiver

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the configuration and statistics of the 802.11a network settings:

```
(Cisco Controller) > show advanced 802.11 receiver
802.11a Receiver Settings
RxStart   : Signal Threshold..... 15
RxStart   : Signal Lamp Threshold..... 5
RxStart   : Preamble Power Threshold..... 2
RxReStart : Signal Jump Status..... Enabled
RxReStart : Signal Jump Threshold..... 10
TxStomp   : Low RSSI Status..... Enabled
TxStomp   : Low RSSI Threshold..... 30
TxStomp   : Wrong BSSID Status..... Enabled
TxStomp   : Wrong BSSID Data Only Status..... Enabled
RxAabort  : Raw Power Drop Status..... Disabled
RxAabort  : Raw Power Drop Threshold..... 10
RxAabort  : Low RSSI Status..... Disabled
RxAabort  : Low RSSI Threshold..... 0
RxAabort  : Wrong BSSID Status..... Disabled
RxAabort  : Wrong BSSID Data Only Status..... Disabled
```

show advanced 802.11 summary

To display the 802.11a or 802.11b Cisco lightweight access point name, channel, and transmit level summary, use the **show advanced 802.11 summary** command.

show advanced 802.11 {a | b} summary

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display a summary of the 802.11b access point settings:

```
(Cisco Controller) > show advanced 802.11b summary
AP Name      MAC Address      Admin State  Operation State  Channel
TxPower
-----
CJ-1240      00:21:1b:ea:36:60  ENABLED      UP               161
1 ( )
CJ-1130      00:1f:ca:cf:b6:60  ENABLED      UP               56*
1 (*)
```

Note An asterisk (*) next to a channel number or power level indicates that it is being controlled by the global algorithm settings.

show advanced 802.11 txpower

To display the 802.11a or 802.11b automatic transmit power assignment, use the **show advanced 802.11 txpower** command.

show advanced 802.11{a | b} txpower

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the configuration and statistics of the 802.11b transmit power cost:

```
(Cisco Controller) > show advanced 802.11b txpower
Automatic Transmit Power Assignment
Transmit Power Assignment Mode..... AUTO
Transmit Power Update Interval..... 600 seconds
Transmit Power Threshold..... -65 dBm
Transmit Power Neighbor Count..... 3 APs
Transmit Power Update Contribution..... SN.
Transmit Power Assignment Leader..... xx:xx:xx:xx:xx:xx
Last Run..... 384 seconds ago
```

show advanced backup-controller

To display a list of primary and secondary backup WLCs, use the **show advanced backup-controller** command.

show advanced backup-controller

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the backup controller information:

```
(Cisco Controller) >
show advanced backup-controller
AP primary Backup Controller ..... controller 10.10.10.10
AP secondary Backup Controller ..... 0.0.0.0
```

show advanced dot11-padding

To display the state of over-the-air frame padding on a wireless LAN controller, use the **show advanced dot11-padding** command.

show advanced dot11-padding

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to view the state of over-the-air frame padding:

```
(Cisco Controller) > show advanced dot11-padding
dot11-padding..... Disabled
```

show advanced hotspot

To display the advanced HotSpot parameters, use the **show advanced hotspot** command.

show advanced hotspot

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the advanced HotSpot parameters:

```
(Cisco Controller) >show advanced hotspot
ANQP 4-way state..... Disabled
GARP Broadcast state: ..... Enabled
GAS request rate limit ..... Disabled
ANQP comeback delay in TUs(TU=1024usec)..... 50
```

show advanced max-1x-sessions

To display the maximum number of simultaneous 802.1X sessions allowed per access point, use the **show advanced max-1x-sessions** command.

show advanced max-1x-sessions

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the maximum 802.1X sessions per access point:

```
(Cisco Controller) >show advanced max-1x-sessions
Max 802.1x session per AP at a given time..... 0
```

show advanced probe

To display the number of probes sent to the Cisco WLC per access point per client and the probe interval in milliseconds, use the **show advanced probe** command.

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the probe settings for the WLAN controller:

```
(Cisco Controller) >show advanced probe
Probe request filtering..... Enabled
Probes fwd to controller per client per radio.... 12
Probe request rate-limiting interval..... 100 msec
```

show advanced rate

To display whether control path rate limiting is enabled or disabled, use the **show advanced rate** command.

show advanced rate

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the switch control path rate limiting mode:

```
(Cisco Controller) >show advanced rate
Control Path Rate Limiting..... Disabled
```

show advanced timers

To display the mobility anchor, authentication response, and rogue access point entry timers, use the **show advanced timers** command.

show advanced timers

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	The defaults are shown in the “Examples” section.
------------------------	---

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the system timers setting:

```
(Cisco Controller) >show advanced timers
Authentication Response Timeout (seconds)..... 10
Rogue Entry Timeout (seconds)..... 1200
AP Heart Beat Timeout (seconds)..... 30
AP Discovery Timeout (seconds)..... 10
AP Local mode Fast Heartbeat (seconds)..... disable
AP flexconnect mode Fast Heartbeat (seconds)..... disable
AP Primary Discovery Timeout (seconds)..... 120
```

show advanced client-handoff

To display the number of automatic client handoffs after retries, use the **show advanced client-handoff** command.

show advanced client-handoff

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the client auto handoff mode after excessive retries:

```
(Cisco Controller) >show advanced client-handoff
Client auto handoff after retries..... 130
```

show advanced eap

To display Extensible Authentication Protocol (EAP) settings, use the **show advanced eap** command.

show advanced eap

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the EAP settings:

```
(Cisco Controller) > show advanced eap
EAP-Identity-Request Timeout (seconds)..... 1
EAP-Identity-Request Max Retries..... 20
EAP Key-Index for Dynamic WEP..... 0
EAP Max-Login Ignore Identity Response..... enable
EAP-Request Timeout (seconds)..... 1
EAP-Request Max Retries..... 20
EAPOL-Key Timeout (milliseconds)..... 1000
EAPOL-Key Max Retries..... 2
```

Related Commands	config advanced eap config advanced timers eap-identity-request-delay config advanced timers eap-timeout
-------------------------	---

show advanced send-disassoc-on-handoff

To display whether the WLAN controller disassociates clients after a handoff, use the **show advanced send-disassoc-on-handoff** command.

show advanced send-disassoc-on-handoff

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show advanced send-disassoc-on-handoff** command:

```
(Cisco Controller) > show advanced send-disassoc-on-handoff
Send Disassociate on Handoff..... Disabled
```

show advanced sip-preferred-call-no

To display the list of preferred call numbers, use the **show advanced sip-preferred-call-no** command.

show advanced sip-preferred-call-no

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show advanced sip-preferred-call-no** command:

```
(Cisco Controller) > show advanced sip-preferred-call-no
Preferred Call Numbers List
Call Index      Preferred Call No
-----
1               911
2               100
3               101
4               102
5               103
6               104
```

show advanced sip-snooping-ports

To display the port range for call snooping, use the **show advanced sip-snooping-ports** command.

show advanced sip-snooping-ports

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show advanced sip-snooping-ports** command:

```
(Cisco Controller) > show advanced sip-snooping-ports
SIP Call Snoop Ports: 1000 - 2000
```

show arp kernel

To display the kernel Address Resolution Protocol (ARP) cache information, use the **show arp kernel** command.

show arp kernel

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
---------	--------------

7.6	This command was introduced in a release earlier than Release 7.6.
-----	--

The following is a sample output of the **show arp kernel** command:

```
(Cisco Controller) > show arp kernel
IP address      HW type    Flags      HW address    Mask    Device
192.0.2.1       0x1        0x2        00:1A:6C:2A:09:C2  *      dt10
192.0.2.8       0x1        0x6        00:1E:E5:E6:DB:56  *      dt10
```

show arp switch

To display the Cisco wireless LAN controller MAC addresses, IP addresses, and port types, use the **show arp switch** command.

show arp switch

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show arp switch** command:

```
(Cisco Controller) > show arp switch
MAC Address      IP Address      Port      VLAN      Type
-----
xx:xx:xx:xx:xx:xx  xxx.xxx.xxx.xxx  service port    1
xx:xx:xx:xx:xx:xx  xxx.xxx.xxx.xxx  service port
xx:xx:xx:xx:xx:xx  xxx.xxx.xxx.xxx  service port
```

show ap auto-rf

To display the auto-RF settings for a Cisco lightweight access point, use the **show ap auto-rf** command.

show ap auto-rf 802.11 { **a** | **b** } *cisco_ap*

Syntax Description	a	Specifies the 802.11a network.
	b	Specifies the 802.11b/g network.
	<i>cisco_ap</i>	Cisco lightweight access point name.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display auto-RF information for an access point:

```
(Cisco Controller) > show ap auto-rf 802.11a AP1

show ap aid-audit-mode

To view the AP aid-audit mode status, use the **show ap aid-audit mode** command.

show ap aid-audit mode

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	8.6	This command was introduced.

The following example shows how to display the aid-audit mode status:

```
(Cisco Controller) > show ap aid-audit-mode
Aid Audit Mode ..... Disabled
```

show ap ccx rm

To display an access point's Cisco Client eXtensions (CCX) radio management status information, use the **show ap ccx rm** command.

show ap ccx rm *ap_name* **status**

Syntax Description	<i>ap_name</i>	Specified access point name.
	status	Displays the CCX radio management status information for an access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the status of the CCX radio management:

```
(Cisco Controller) >show ap ccx rm AP1240-21ac status
A Radio
Channel Load Request ..... Disabled
Noise Histogram Request ..... Disabled
Beacon Request ..... Disabled
Frame Request ..... Disabled
Interval ..... 60
Iteration ..... 10
G Radio
Channel Load Request ..... Disabled
Noise Histogram Request ..... Disabled
Beacon Request ..... Disabled
Frame Request ..... Disabled
Interval ..... 60
Iteration ..... 10
```

show ap cdp

To display the Cisco Discovery Protocol (CDP) information for an access point, use the **show ap cdp** command.

show ap cdp { **all** | **ap-name** *cisco_ap* | **neighbors** { **all** | **ap-name** *cisco_ap* | **detail** *cisco_ap* } }

Syntax Description

all	Displays the CDP status on all access points.
ap-name	Displays the CDP status for a specified access point.
<i>cisco_ap</i>	Specified access point name.
neighbors	Displays neighbors using CDP.
detail	Displays details about a specific access point neighbor using CDP.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the CDP status of all access points:

```
(Cisco Controller) >show ap cdp all
AP CDP State
AP Name          AP CDP State
-----
SB_RAP1          enable
SB_MAP1          enable
SB_MAP2          enable
SB_MAP3          enable
```

The following example shows how to display the CDP status of a specified access point:

```
(Cisco Controller) >show ap cdp ap-name SB_RAP1
AP CDP State
AP Name          AP CDP State
-----
AP CDP State.....Enabled
AP Interface-Based CDP state
  Ethernet 0.....Enabled
  Slot 0.....Enabled
  Slot 1.....Enabled
```

The following example shows how to display details about all neighbors using CDP:

```
(Cisco Controller) >show ap cdp neighbor all
AP Name      AP IP      Neighbor Name      Neighbor IP      Neighbor Port
-----
-----
```

SB_RAP1	192.168.102.154	sjc14-41a-sw1	192.168.102.2	GigabitEthernet1/0/13
SB_RAP1	192.168.102.154	SB_MAP1	192.168.102.137	Virtual-Dot11Radio0
SB_MAP1	192.168.102.137	SB_RAP1	192.168.102.154	Virtual-Dot11Radio0
SB_MAP1	192.168.102.137	SB_MAP2	192.168.102.138	Virtual-Dot11Radio0
SB_MAP2	192.168.102.138	SB_MAP1	192.168.102.137	Virtual-Dot11Radio1
SB_MAP2	192.168.102.138	SB_MAP3	192.168.102.139	Virtual-Dot11Radio0
SB_MAP3	192.168.102.139	SB_MAP2	192.168.102.138	Virtual-Dot11Radio1

The following example shows how to display details about a specific neighbor with a specified access point using CDP:

```
(Cisco Controller) >show ap cdp neighbors ap-name SB_MAP2
```

AP Name	AP IP	Neighbor Name	Neighbor IP	Neighbor Port
SB_MAP2	192.168.102.138	SB_MAP1	192.168.102.137	Virtual-Dot11Radio1
SB_MAP2	192.168.102.138	SB_MAP3	192.168.102.139	Virtual-Dot11Radio0

The following example shows how to display details about neighbors using CDP:

```
(Cisco Controller) >show ap cdp neighbors detail SB_MAP2
```

AP Name:SB_MAP2
AP IP address:192.168.102.138

show ap channel

To display the available channels for a specific mesh access point, use the **show ap channel** command.

show ap channel *ap_name*

Syntax Description	<i>ap_name</i>	Name of the mesh access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the available channels for a particular access point:

```
(Cisco Controller) >show ap channel AP47
 802.11b/g Current Channel .....1
Allowed Channel List.....1,2,3,4,5,6,7,8,9,10,11
 802.11a Current Channel .....161
Allowed Channel List.....36,40,44,48,52,56,60,64,100,
.....104,108,112,116,132,136,140,
.....149,153,157,161
```

show ap config

To display the detailed configuration for a lightweight access point, use the **show ap config** command.

show ap config 802.11{a | b} [summary] cisco_ap

Syntax Description	802.11a	Specifies the 802.11a or 802.11b/g network.
	802.11b	Specifies the 802.11b/g network.
	summary	(Optional) Displays radio summary of all APs
	<i>cisco_ap</i>	Lightweight access point name.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the detailed configuration for an access point:

```
(Cisco Controller) >show ap config 802.11a AP02

```

show ap config global

To display the global syslog server settings for all access points that join the controller, use the **show ap config global** command.

show ap config global

Syntax Description

This command has no arguments and keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display global syslog server settings:

```
(Cisco Controller) >show ap config global
AP global system logging host..... 255.255.255.255
```

show ap core-dump

To display the memory core dump information for a lightweight access point, use the **show ap core-dump** command.

show ap core-dump *cisco_ap*

Syntax Description	<i>cisco_ap</i>	Cisco lightweight access point name.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display memory core dump information:

```
(Cisco Controller) >show ap core-dump AP02  
Memory core dump is disabled.
```

show ap crash-file

To display the list of both crash and radio core dump files generated by lightweight access points, use the **show ap crash-file** command.

show ap crash-file

Syntax Description	This command has no arguments or keywords.				
Command Default	None				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr></tbody></table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

The following example shows how to display the crash file generated by the access point:

```
(Cisco Controller) >show ap crash-file
```

show ap data-plane

To display the data plane status for all access points or a specific access point, use the **show ap data-plane** command.

show ap data-plane { **all** | *cisco_ap* }

Syntax Description	all	Specifies all Cisco lightweight access points.
	<i>cisco_ap</i>	Name of a Cisco lightweight access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the data plane status of all access points:

```
(Cisco Controller) >show ap data-plane all
```

Min Data	Data	Max Data	Last		
AP Name	Round Trip	Round Trip	Round Trip	Update	
1130	0.000s	0.000s	0.002s	18:51:23	
1240	0.000s	0.000s	0.000s	18:50:45	

show ap dtls-cipher-suite

To display the DTLS show cipher suite information, use the **show ap dtls-cipher-suite** command.

show ap dtls-cipher-suite

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	8.0	This command was introduced.

The following example shows how to display DTLS cipher suite information:

```
(Cisco Controller) > show ap dtls-cipher-suite
DTLS Cipher Suite..... RSA-AES256-SHA
```

show ap ethernet tag

To display the VLAN tagging information of an Ethernet interface, use the **show ap ethernet tag** command.

show ap ethernet tag {**summary** | *cisco_ap*}

Syntax Description

summary Displays the VLAN tagging information for all access points associated to the controller.

cisco_ap Name of the Cisco lightweight access point. Displays the VLAN tagging information for a specific access point associated to the controller.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

If the access point is unable to route traffic or reach the controller using the specified trunk VLAN, it falls back to the untagged configuration. If the access point joins the controller using this fallback configuration, the controller sends a trap to a trap server such as the WCS, which indicates the failure of the trunk VLAN. In this scenario, the "Failover to untagged" message appears in show command output.

The following example shows how to display the VLAN tagging information for all access points associated to the controller:

```
(Cisco Controller) >show ap ethernet tag summary
```

```
AP Name           Vlan Tag Configuration
-----
AP2               7 (Failover to untagged)
charan.AP1140.II  disabled
```

show ap eventlog

To display the contents of the event log file for an access point that is joined to the controller, use the **show ap eventlog** command.

show ap eventlog *ap_name*

Syntax Description	<i>ap_name</i>	Event log for the specified access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the event log of an access point:

```
(Cisco Controller) >show ap eventlog ciscoAP
AP event log download has been initiated
Waiting for download to complete
AP event log download completed.
===== AP Event log Contents =====
*Feb 13 11:54:17.146: %CAPWAP-3-CLIENTEVENTLOG: AP event log has been cleared from the
controller 'admin'
*Feb 13 11:54:32.874: *** Access point reloading. Reason: Reload Command ***
*Mar 1 00:00:39.134: %CDP_PD-4-POWER_OK: Full power - NEGOTIATED inline power source
*Mar 1 00:00:39.174: %LINK-3-UPDOWN: Interface Dot11Radio1, changed state to up
*Mar 1 00:00:39.211: %LINK-3-UPDOWN: Interface Dot11Radio0, changed state to up
*Mar 1 00:00:49.947: %CAPWAP-3-CLIENTEVENTLOG: Did not get vendor specific options from
DHCP.
...
```

show ap flexconnect

To view the details of APs in FlexConnect mode, use the **show ap flexconnect** command.

show ap flexconnect module-vlan *ap-name*

Syntax Description	module-vlan	Displays the status of FlexConnect local switching and VLAN ID value
	<i>ap-name</i>	Cisco AP name
Command History	Release	Modification
	8.1	This command was introduced

show ap image

To display the detailed information about the predownloaded image for specified access points, use the **show ap image** command.

show ap image { *cisco_ap* | **all** }

Syntax Description

<i>cisco_ap</i>	Name of the lightweight access point.
-----------------	---------------------------------------

all	Specifies all access points.
------------	------------------------------

Note If you have an AP that has the name *all*, it conflicts with the keyword **all** that specifies all access points. In this scenario, the keyword **all** takes precedence over the AP that is named *all*.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

show ap image status

To view download status on all APs, use the **show ap image status** command.

show ap image status

Syntax	Description
--------	-------------

	This command has no arguments or keywords.
--	--

Command History

Release	Modification
---------	--------------

8.2	This command was introduced.
-----	------------------------------

show ap inventory

To display inventory information for an access point, use the **show ap inventory** command.

show ap inventory {*ap-name* | **all**}

Syntax Description	<i>ap-name</i>	Inventory for the specified AP.
	all	Inventory for all the APs.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the inventory of an access point:

```
(Cisco Controller) >show ap inventory test101
NAME: "test101"      , DESCR: "Cisco Wireless Access Point"
PID: AIR-LAP1131AG-A-K9  ,  VID: V01,  SN: FTX1123T2XX
```

show ap join stats detailed

To display all join-related statistics collected for a specific access point, use the **show ap join stats detailed** command.

show ap join stats detailed *ap_mac*

Syntax Description	<i>ap_mac</i>	Access point Ethernet MAC address or the MAC address of the 802.11 radio interface.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display join information for a specific access point trying to join the controller:

```
(Cisco Controller) >show ap join stats detailed 00:0b:85:02:0d:20
Discovery phase statistics
- Discovery requests received..... 2
- Successful discovery responses sent..... 2
- Unsuccessful discovery request processing..... 0
- Reason for last unsuccessful discovery attempt..... Not applicable
- Time at last successful discovery attempt..... Aug 21 12:50:23:335
- Time at last unsuccessful discovery attempt..... Not applicable
Join phase statistics
- Join requests received..... 1
- Successful join responses sent..... 1
- Unsuccessful join request processing..... 1
- Reason for last unsuccessful join attempt.....RADIUS authorization is pending for
the AP
- Time at last successful join attempt..... Aug 21 12:50:34:481
- Time at last unsuccessful join attempt..... Aug 21 12:50:34:374
Configuration phase statistics
- Configuration requests received..... 1
- Successful configuration responses sent..... 1
- Unsuccessful configuration request processing..... 0
- Reason for last unsuccessful configuration attempt... Not applicable

- Time at last unsuccessful configuration attempt..... Not applicable
Last AP message decryption failure details
- Reason for last message decryption failure..... Not applicable
Last AP disconnect details
- Reason for last AP connection failure..... Not applicable
Last join error summary
- Type of error that occurred last..... Lwapp join request rejected
- Reason for error that occurred last..... RADIUS authorization is pending for
the AP
- Time at which the last join error occurred..... Aug 21 12:50:34:374
```

show ap join stats summary

To display the last join error detail for a specific access point, use the **show ap join stats summary** command.

show ap join stats summary *ap_mac*

Syntax Description	<i>ap_mac</i>	Access point Ethernet MAC address or the MAC address of the 802.11 radio interface.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
Usage Guidelines	To obtain the MAC address of the 802.11 radio interface, enter the show interface command on the access point.	

The following example shows how to display specific join information for an access point:

```
(Cisco Controller) >show ap join stats summary 00:0b:85:02:0d:20
Is the AP currently connected to controller..... No
Time at which the AP joined this controller last time..... Aug 21 12:50:36:061
Type of error that occurred last..... Lwapp join request
rejected
Reason for error that occurred last..... RADIUS authorization
is pending for the AP
Time at which the last join error occurred..... Aug 21 12:50:34:374
```

show ap join stats summary all

To display the MAC addresses of all the access points that are joined to the controller or that have tried to join, use the **show ap join stats summary all** command.

show ap join stats summary all

Syntax Description This command has no arguments or keywords.

Command Default None

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display a summary of join information for all access points:

```
(Cisco Controller) >show ap join stats summary all
Number of APs..... 4
Base Mac          AP EthernetMac    AP Name    IP Address    Status
00:0b:85:57:bc:c0  00:0b:85:57:bc:c0  AP1130     10.10.163.217  Joined
00:1c:0f:81:db:80  00:1c:63:23:ac:a0  AP1140     10.10.163.216  Not joined
00:1c:0f:81:fc:20  00:1b:d5:9f:7d:b2  AP1        10.10.163.215  Joined
00:21:1b:ea:36:60  00:0c:d4:8a:6b:c1  AP2        10.10.163.214  Not joined
```

show ap led-state

To view the LED state of all access points or a specific access point, use the **show ap led-state** command.

show ap led-state { **all** | *cisco_ap* }

Syntax Description	all	Shows the LED state for all access points.
	<i>cisco_ap</i>	Name of the access point whose LED state is to be shown.
Command Default	The AP LED state is enabled.	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to get the LED state of all access points:

```
(Cisco Controller) >show ap led-state all
Global LED State: Enabled (default)
```

show ap led-flash

To display the LED flash status of an access point, use the **show ap led-flash** command.

show ap led-flash *cisco_ap*

Syntax Description	<i>cisco_ap</i> Enter the name of the Cisco AP.	
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the LED flash status of an access point:

(Cisco Controller) >**show ap led-flash**

show ap link-encryption

To display the MAC addresses of all the access points that are joined to the controller or that have tried to join, use the **show ap link-encryption** command.

show ap link-encryption { **all** | *cisco_ap* }

Syntax Description	all	Specifies all access points.
	<i>cisco_ap</i>	Name of the lightweight access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the link encryption status of all access points:

```
(Cisco Controller) >show ap link-encryption all
```

AP Name	Encryption State	Dnstream Count	Upstream Count	Last Update
1240	Dis	4406	237553	Never
1130	En	2484	276308	19:31

show ap max-count summary

To display the maximum number of access points supported by the Cisco WLC, use the **show ap max-count summary** command.

show ap max-count summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.5	This command was introduced.

The following is a sample output of the **show ap max-count summary** command:

```
(Cisco Controller) >show ap max-count
```

```
The max number of AP's supported..... 500
```

show ap monitor-mode summary

To display the current channel-optimized monitor mode settings, use the **show ap monitor-mode summary** command.

show ap monitor-mode summary

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display current channel-optimized monitor mode settings:

```
(Cisco Controller) >show ap monitor-mode summary
AP Name           Ethernet MAC      Status      Scanning Channel List
-----
AP_004            xx:xx:xx:xx:xx:xx Tracking        1, 6, 11, 4
```

show ap module summary

To view detailed information about the external module, for a specific Cisco AP or for all Cisco APs, use the **show ap module summary** command.

show ap module summary { *ap-name* | **all** }

Syntax Description	<i>ap-name</i>	Cisco AP name that has the external module
	all	All Cisco APs that have the external module
Command History	Release	Modification
	8.1	This command was introduced.

show ap packet-dump status

To display access point Packet Capture configurations, use the **show ap packet-dump status** command.

show ap packet-dump status

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

Packet Capture does not work during intercontroller roaming.

The controller does not capture packets created in the radio firmware and sent out of the access point, such as the beacon or probe response. Only packets that flow through the Radio driver in the Tx path are captured.

The following example shows how to display the access point Packet Capture configurations:

```
(Cisco Controller) >show ap packet-dump status
Packet Capture Status..... Stopped
FTP Server IP Address..... 0.0.0.0
FTP Server Path.....
FTP Server Username.....
FTP Server Password..... *****
Buffer Size for Capture..... 2048 KB
Packet Capture Time..... 45 Minutes
Packet Truncate Length..... Unspecified
Packet Capture Classifier..... None
```

show ap prefer-mode stats

To view prefer-mode global and per AP group statistics, use the **show ap prefer-mode stats** command.

show ap prefer-mode stats

Syntax Description	stats Displays prefer-mode global and per AP group statistics				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

show ap retransmit

To display access point control packet retransmission parameters, use the **show ap retransmit** command.

show ap retransmit {**all** | *cisco_ap*}

Syntax Description	all	Specifies all access points.
	<i>cisco_ap</i>	Name of the access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the control packet retransmission parameters of all access points on a network:

```
(Cisco Controller) >show ap retransmit all
Global control packet retransmit interval: 3 (default)
Global control packet retransmit count: 5 (default)
AP Name           Retransmit Interval  Retransmit count
-----
AP_004             3 (default)          5 (WLC default),5 (AP default)
```

show ap stats

To display the statistics for a Cisco lightweight access point, use the **show ap stats** command.

show ap stats {**802.11**{**a** | **b**} | **wlan** | **ethernet summary**} *cisco_ap* [**tsm** {*client_mac* | **all**}]

Syntax Description		
802.11a		Specifies the 802.11a network
802.11b		Specifies the 802.11b/g network.
wlan		Specifies WLAN statistics.
ethernet		Specifies AP ethernet interface statistics.
summary		Displays ethernet interface summary of all the connected Cisco access points.
<i>cisco_ap</i>		Name of the lightweight access point.
tsm		(Optional) Specifies the traffic stream metrics.
<i>client_mac</i>		(Optional) MAC address of the client.
all		(Optional) Specifies all access points.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.0	This command was modified. The OEAP WMM Counters were added to the output.

The following example shows how to display statistics of an access point for the 802.11b network:

```

show ap summary

To display a summary of all lightweight access points attached to the controller, use the **show ap summary** command.

show ap summary [*cisco_ap*]

Syntax Description	<i>cisco_ap</i> (Optional) Type sequence of characters that make up the name of a specific AP or a group of APs, or enter a wild character search pattern.	
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
Usage Guidelines	A list that contains each lightweight access point name, number of slots, manufacturer, MAC address, location, and the controller port number appears. When you specify	

The following example shows how to display a summary of all connected access points:

```
(Cisco Controller) >show ap summary
Number of APs..... 2
Global AP username..... user
Global AP Dot1x username..... Not Configured
Number of APs..... 2
Global AP username..... user
Global AP Dot1x username..... Not Configured
```

AP Name	Slots	AP Model	Ethernet MAC	Location
Country	IP Address	Clients		
AP1140	2	AIR-LAP1142N-A-K9	f0:f7:55:75:f3:29	default
location	US	192.168.0.0	0	

Access Points using IPv6 transport:

AP Name	Slots	AP Model	Ethernet MAC	Location	Country	IPv6
Address		Clients				
AP1040	2	AIR-LAP1042N-A-K9	00:40:96:b9:4b:89	default location	US	
2001:DB8:0:1::1		0				

show ap tcp-mss-adjust

To display the Basic Service Set Identifier (BSSID) value for each WLAN defined on an access point, use the **show ap tcp-mss-adjust** command.

show ap tcp-mss-adjust { *cisco_ap* | **all** }

Syntax Description		
	<i>cisco_ap</i>	Specified lightweight access point name.
	all	Specifies all access points.

Note If an AP itself is configured with the keyword **all**, the all access points case takes precedence over the AP that is with the keyword **all**.

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display Transmission Control Protocol (TCP) maximum segment size (MSS) information of all access points:

```
(Cisco Controller) >show ap tcp-mss-adjust all
AP Name          TCP State MSS Size
-----
AP-1140          enabled  536
AP-1240          disabled -
AP-1130          disabled -
```

show ap wlan

To display the Basic Service Set Identifier (BSSID) value for each WLAN defined on an access point, use the **show ap wlan** command.

show ap wlan 802.11 { **a** | **b** } *cisco_ap*

Syntax Description	802.11a	Specifies the 802.11a network.
	802.11b	Specifies the 802.11b/g network.
	<i>ap_name</i>	Lightweight access point name.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display BSSIDs of an access point for the 802.11b network:

```
(Cisco Controller) >show ap wlan 802.11b AP01
Site Name..... MY_AP_GROUP1
Site Description..... MY_AP_GROUP1
WLAN ID      Interface      BSSID
-----
1            management    00:1c:0f:81:fc:20
2            dynamic      00:1c:0f:81:fc:21
```

show assisted-roaming

To display assisted roaming and 802.11k configurations, use the **show assisted-roaming** command.

show assisted-roaming

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None.
------------------------	-------

This example shows how to display assisted roaming and 802.11k configurations:

```
(Cisco Controller) >show assisted-roaming
Assisted Roaming and 80211k Information:
Floor RSSI Bias..... 15 dBm
Maximum Denial..... 2 counts
Minimum Optimized Neighbor Assigned..... 2 neighbors

Assisted Roaming Performance Chart:
Matching Assigned Neighbor..... [0] = 0
Matching Assigned Neighbor..... [1] = 0
Matching Assigned Neighbor..... [2] = 0
Matching Assigned Neighbor..... [3] = 0
Matching Assigned Neighbor..... [4] = 0
Matching Assigned Neighbor..... [5] = 0
Matching Assigned Neighbor..... [6] = 0
Matching Assigned Neighbor..... [7] = 0
No Matching Neighbor..... [8] = 0
No Neighbor Assigned..... [9] = 0
```

Related Commands	config assisted-roaming config wlan assisted-roaming debug 11k
-------------------------	---

show atf config

To monitor Cisco Airtime Fairness configuration, use the **show atf config** command.

show atf config { **all** | { **ap-name** *ap-name* } | { **802.11** { **a** | **b** } } | **policy** | **wlan** }

Syntax Description

all	Shows Cisco ATF configuration of all radios
ap-name	Shows Cisco ATF configuration of an AP
<i>ap-name</i>	AP name that you must specify
802.11a	Shows Cisco ATF configuration of all 5-GHz radios
802.11b	Shows Cisco ATF configuration of all 2.4-GHz radios
policy	Shows configuration of all airtime policies
wlan	Shows Cisco ATF configuration of all WLANs

Command Default

None

Command History

Release	Modification
8.1	This command was introduced

This example shows how to monitor Cisco Airtime Fairness configuration:

```
(Cisco Controller) >show atf config all
```

show atf statistics ap

To monitor Cisco Airtime Fairness statistics, use the **show atf statistics** command.

show atf statistics ap *ap-name* **802.11**{**a** | **b**} {**summary** | *wlan-id* | *policy-id*}

Syntax Description	802.11a	Shows detailed statistics on all 5-GHz radios.
	802.11b	Shows detailed statistics on all 2.4-GHz radios.
	summary	Shows summary statistics for the AP.
	wlan <i>wlan-id</i>	Shows detailed ATF statistics for the specified WLAN.
	policy <i>policy-name</i>	Shows detailed ATF statistics for the specified policy name.

Command Default	None
-----------------	------

Command History	Release	Modification
	8.1	This command was introduced.

This example shows how to monitor Cisco Airtime Fairness statistics:

```
(Cisco Controller) >show atf statistics ap Ap01323 802.11a summary
```

show auth-list

To display the access point authorization list, use the **show auth-list** command.

show auth-list

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the access point authorization list:

```
(Cisco Controller) >show auth-list
Authorize APs against AAA..... disabled
Allow APs with Self-signed Certificate (SSC)... disabled
Mac Addr          Cert Type      Key Hash
-----
xx:xx:xx:xx:xx:xx  MIC
```

show avc applications

To display all the supported Application Visibility and Control (AVC) applications, use the **show avc applications** command.

show avc applications

Syntax Description This command has no arguments or keywords.

Command Default None

Command History

Release	Modification
7.4	This command was introduced.

Usage Guidelines AVC uses the Network-Based Application Recognition (NBAR) deep packet inspection technology to classify applications based on the protocol they use. Using AVC, the controller can detect more than 1500 Layer 4 to Layer 7 protocols.

The following is a sample output of the **show avc applications** command:

(Cisco Controller) > **show avc applications**

Application-Name	App-ID	Engine-ID	Selector-ID	Application-Group-Name
3com-amp3	538	3	629	other
3com-tsmux	977	3	106	obsolete
3pc	788	1	34	layer3-over-ip
914c/g	1109	3	211	net-admin
9pfs	479	3	564	net-admin

active-directory	1194	13	473	other
activesync	1419	13	490	business-and-productivity-tools
adobe-connect	1441	13	505	other
aed-512	963	3	149	obsolete
afpovertcp	1327	3	548	business-and-productivity-tools
agentx	609	3	705	net-admin
alpes	377	3	463	net-admin
aminet	558	3	2639	file-sharing
an	861	1	107	layer3-over-ip

show avc engine

To display information about the Network-Based Application Recognition 2 (NBAR2) engine, use the **show avc engine** command.

show avc engine version

Syntax Description	version Displays the version of the NBAR2 engine.				
Command Default	None				
Command History	<table><tr><th>Release</th><th>Modification</th></tr><tr><td>7.5</td><td>This command was introduced.</td></tr></table>	Release	Modification	7.5	This command was introduced.
Release	Modification				
7.5	This command was introduced.				
Usage Guidelines	The Application Visibility and Control (AVC) protocol pack is not supported in the Cisco 2500 Series Wireless Controllers.				

The following is a sample output of the **show avc engine** command:

```
(Cisco Controller) > show avc engine version
```

```
AVC Engine Version: 13
```

show avc profile

To display Application Visibility and Control (AVC) profiles, use the **show avc profile** command.

show avc profile { **summary** | **detailed** *profile_name* }

Syntax Description	summary	Displays a summary of AVC profiles.
	detailed	Displays the details of an AVC profile.
	<i>profile_name</i>	Name of the AVC profile. The profile name can be up to 32 case-sensitive, alphanumeric characters.
Command Default	None	
Command History	Release	Modification
	7.4	This command was introduced.

The following is a sample output of the **show avc profile summary** command.

```
(Cisco Controller) > show avc profile summary
```

```

Profile-Name                               Number of Rules
=====
profile 1                                   3
avc_profile2                               1

```

The following is a sample output of the **show avc profile detailed** command.

```
(Cisco Controller) > show avc profile detailed
```

```

Application-Name      Application-Group-Name      Action  DSCP
=====
ftp                   file-sharing               Drop    -
flash-video           browsing                   Mark    10
facebook              browsing                   Mark    10

Associated WLAN IDs    :
Associated Remote LAN IDs :
Associated Guest LAN IDs :

```

show avc protocol-pack

To display information about the Application Visibility and Control (AVC) protocol pack in the Cisco Wireless LAN Controller (WLC), use the **show avc protocol-pack** command.

show avc protocol-pack version

Syntax Description	version Displays the version of the AVC protocol pack.				
Command Default	None				
Command History	<table><tr><th>Release</th><th>Modification</th></tr><tr><td>7.5</td><td>This command was introduced.</td></tr></table>	Release	Modification	7.5	This command was introduced.
Release	Modification				
7.5	This command was introduced.				
Usage Guidelines	<p>The AVC protocol pack is not supported in the Cisco 2500 Series Wireless Controllers.</p> <p>The following is a sample output of the show avc protocol-pack command:</p> <pre>(Cisco Controller) > show avc protocol-pack version AVC Protocol Pack Name: Advanced Protocol Pack AVC Protocol Pack Version: 1.0</pre>				

show avc statistics application

To display the statistics of an application, use the **show avc statistics application** command.

show avc statistics application *application_name* **top-users** [**downstream wlan** | **upstream wlan** | **wlan**] [*wlan_id*] }

Syntax Description	
<i>application_name</i>	Name of the application. The application name can be up to 32 case-sensitive, alphanumeric characters.
top-users	Displays AVC statistics for top application users.
downstream	(Optional) Displays statistics of top downstream applications.
wlan	(Optional) Displays AVC statistics of a WLAN.
<i>wlan_id</i>	WLAN identifier from 1 to 512.
upstream	(Optional) Displays statistics of top upstream applications.

Command Default None

Command History	Release	Modification
	7.4	This command was introduced.

The following is a sample output of the **show avc statistics application** command:

(Cisco Controller) > **show avc statistics application ftp top-users downstream wlan 1**

show avc statistics client

To display the client Application Visibility and Control (AVC) statistics, use the **show avc statistics client** command.

show avc statistics client *client_MAC* { **application** *application_name* | **top-apps** [**upstream** | **downstream**] }

Syntax Description	<i>client_MAC</i>	MAC address of the client.
	application	Displays AVC statistics for an application.
	<i>application_name</i>	Name of the application. The application name can be up to 32 case-sensitive, alphanumeric characters.
	top-apps	Displays AVC statistics for top applications.
	upstream	(Optional) Displays statistics of top upstream applications.
	downstream	(Optional) Displays statistics of top downstream applications.
Command Default	None	
Command History	Release	Modification
	7.4	This command was introduced.

The following is a sample output of the **show avc statistics client** command:

```
(Cisco Controller) > show avc statistics client 00:0a:ab:15:00:01 application http
```

Description	Upstream	Downstream

show avc statistics guest-lan

To display the Application Visibility and Control (AVC) statistics of a guest LAN, use the **show avc statistics guest-lan** command.

show avc statistics guest-lan *guest-lan_id* { **application** *application_name* | **top-app-groups** [**upstream** | **downstream**] | **top-apps** [**upstream** | **downstream**] }

Syntax Description	<i>guest-lan_id</i>	Guest LAN identifier from 1 to 5.
	application	Displays AVC statistics for an application.
	<i>application_name</i>	Name of the application. The application name can be up to 32 case-sensitive, alphanumeric characters.
	top-app-groups	Displays AVC statistics for top application groups.
	upstream	(Optional) Displays statistics of top upstream applications.
	downstream	(Optional) Displays statistics of top downstream applications.
	top-apps	Displays AVC statistics for top applications.
Command Default	None	
Command History	Release	Modification
	7.4	This command was introduced.

The following is a sample output of the **show avc statistics** command.

```
(Cisco Controller) > show avc statistics guest-lan 1
```

show avc statistics remote-lan

To display the Application Visibility and Control (AVC) statistics of a remote LAN, use the **show avc statistics remote-lan** command.

show avc statistics remote-lan *remote-lan_id* { **application** *application_name* | **top-app-groups** [**upstream** | **downstream**] | **top-apps** [**upstream** | **downstream**] }

Syntax Description	<i>remote-lan_id</i>	Remote LAN identifier from 1 to 512.
	application	Displays AVC statistics for an application.
	<i>application_name</i>	Name of the application. The application name can be up to 32 case-sensitive, alphanumeric characters.
	top-app-groups	Displays AVC statistics for top application groups.
	upstream	(Optional) Displays statistics of top upstream applications.
	downstream	(Optional) Displays statistics of top downstream applications.
	top-apps	Displays AVC statistics for top applications.
Command Default	None	
Command History	Release	Modification
	7.4	This command was introduced.

show avc statistics top-apps

To display the Application Visibility and Control (AVC) statistics for the most used applications, use the **show avc statistics top-apps** command.

show avc statistics top-apps [**upstream** | **downstream**]

Syntax Description	upstream	(Optional) Displays statistics of the most used upstream applications.
	downstream	(Optional) Displays statistics of the most used downstream applications.
Command Default	None	
Command History	Release	Modification
	7.4	This command was introduced.

The following is a sample output of the **show avc statistics top-apps** command:

(Cisco Controller) > **show avc statistics top-apps**

show boot

To display the primary and backup software build numbers with an indication of which is active, use the **show boot** command.

show boot

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines	Each Cisco wireless LAN controller retains one primary and one backup operating system software load in nonvolatile RAM to allow controllers to boot off the primary load (default) or revert to the backup load when desired.
-------------------------	--

The following is a sample output of the **show boot** command:

```
(Cisco Controller) > show boot
Primary Boot Image..... 3.2.13.0 (active)
Backup Boot Image..... 3.2.15.0
```

Related Commands	config boot
-------------------------	--------------------

show band-select

To display band selection information, use the **show band-select** command.

show band-select

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show band-select** command:

```
(Cisco Controller) > show band-select
Band Select Probe Response..... per WLAN enabling
  Cycle Count..... 3 cycles
  Cycle Threshold..... 200 milliseconds
  Age Out Suppression..... 20 seconds
  Age Out Dual Band..... 60 seconds
  Client RSSI..... -80 dBm
```

Related Commands	config band-select
	config wlan band-select

show buffers

To display buffer information of the controller, use the **show buffers** command.

show buffers

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	<table border="1"> <tr> <th>Release</th> <th>Modification</th> </tr> <tr> <td>7.6</td> <td>This command was introduced in a release earlier than Release 7.6.</td> </tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.

show call-control ap

Note The **show call-control ap** command is applicable only for SIP based calls.

To see the metrics for successful calls or the traps generated for failed calls, use the **show call-control ap** command.

show call-control ap {**802.11a** | **802.11b**} *cisco_ap* {**metrics** | **traps**}

Syntax Description

802.11a	Specifies the 802.11a network
802.11b	Specifies the 802.11b/g network.
<i>cisco_ap</i>	Cisco access point name.
metrics	Specifies the call metrics information.
traps	Specifies the trap information for call control.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

To aid in troubleshooting, the output of this command shows an error code for any failed calls. This table explains the possible error codes for failed calls.

Table 1: Error Codes for Failed VoIP Calls

Error Code	Integer	Description
1	unknown	Unknown error.
400	badRequest	The request could not be understood because of malformed syntax.
401	unauthorized	The request requires user authentication.
402	paymentRequired	Reserved for future use.
403	forbidden	The server understood the request but refuses to fulfill it.
404	notFound	The server has information that the user does not exist at the domain specified in the Request-URI.
405	methodNotAllowed	The method specified in the Request-Line is understood but not allowed for the address identified by the Request-URI.

Error Code	Integer	Description
406	notAcceptable	The resource identified by the request is only capable of generating response entities with content characteristics that are not acceptable according to the Accept header field sent in the request.
407	proxyAuthenticationRequired	The client must first authenticate with the proxy.
408	requestTimeout	The server could not produce a response within a suitable amount of time.
409	conflict	The request could not be completed due to a conflict with the current state of the resource.
410	gone	The requested resource is no longer available at the server, and no forwarding address is known.
411	lengthRequired	The server is refusing to process a request because the request entity-body is larger than the server is willing or able to process.
413	requestEntityTooLarge	The server is refusing to process a request because the request entity-body is larger than the server is willing or able to process.
414	requestURITooLarge	The server is refusing to service the request because the Request-URI is longer than the server is willing to interpret.
415	unsupportedMediaType	The server is refusing to service the request because the message body of the request is in a format not supported by the server for the requested method.
420	badExtension	The server did not understand the protocol extension specified in a Proxy-Require or Require header field.
480	temporarilyNotAvailable	The callee's end system was contacted successfully, but the callee is currently unavailable.
481	callLegDoesNotExist	The UAS received a request that does not match any existing dialog or transaction.
482	loopDetected	The server has detected a loop.
483	tooManyHops	The server received a request that contains a Max-Forwards header field with the value zero.
484	addressIncomplete	The server received a request with a Request-URI that was incomplete.
485	ambiguous	The Request-URI was ambiguous.
486	busy	The callee's end system was contacted successfully, but the callee is currently not willing or able to take additional calls at this end system.

Error Code	Integer	Description
500	internalServerError	The server encountered an unexpected condition that prevented it from fulfilling the request.
501	notImplemented	The server does not support the functionality required to fulfill the request.
502	badGateway	The server, while acting as a gateway or proxy, received an invalid response from the downstream server it accessed in attempting to fulfill the request.
503	serviceUnavailable	The server is temporarily unable to process the request because of a temporary overloading or maintenance of the server.
504	serverTimeout	The server did not receive a timely response from an external server it accessed in attempting to process the request.
505	versionNotSupported	The server does not support or refuses to support the SIP protocol version that was used in the request.
600	busyEverywhere	The callee's end system was contacted successfully, but the callee is busy or does not want to take the call at this time.
603	decline	The callee's machine was contacted successfully, but the user does not want to or cannot participate.
604	doesNotExistAnywhere	The server has information that the user indicated in the Request-URI does not exist anywhere.
606	notAcceptable	The user's agent was contacted successfully, but some aspects of the session description (such as the requested media, bandwidth, or addressing style) were not acceptable.

The following is a sample output of the **show call-control ap** command that displays successful calls generated for an access point:

```
(Cisco Controller) >show call-control ap 802.11a Cisco_AP metrics
Total Call Duration in Seconds..... 120
Number of Calls..... 10
Number of calls for given client is..... 1
```

The following is a sample output of the **show call-control ap** command that displays metrics of traps generated for an AP.

```
(Cisco Controller) >show call-control ap 802.11a Cisco_AP traps
Number of traps sent in one min..... 2
Last SIP error code..... 404
Last sent trap timestamp..... Jun 20 10:05:06
```

show call-control client

To see call information for a call-aware client when Voice-over-IP (VoIP) snooping is enabled and the call is active, use the **show call-control client** command

show call-control client callInfo *client_MAC_address*

Syntax Description	callInfo	Specifies the call-control information.
	<i>client_MAC_address</i>	Client MAC address.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example is a sample output of the **show call-controller client** command:

```
(Cisco Controller) > show call-control client callInfo 10.10.10.10.10
Uplink IP/port..... 0.0.0.0 / 0
Downlink IP/port..... 9.47.96.107 / 5006
UP..... 6
Calling Party..... sip:1021
Called Party..... sip:1000
Call ID..... 38423970c3fca477
Call on hold: ..... FALSE
Number of calls for given client is..... 1
```

show capwap reap association

To display the list of clients associated with an access point and their SSIDs, use the **show capwap reap association** command.

show capwap reap association

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display clients associated to an access point and their SSIDs:

```
(Cisco Controller) >show capwap reap association
```

show capwap reap status

To display the status of the FlexConnect access point (connected or standalone), use the **show capwap reap status** command.

show capwap reap status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

The command shows only the VLAN when configured as AP-specific.

The following example shows how to display the status of the FlexConnect access point:

```
(Cisco Controller) >show capwap reap status
```

show cdp

To display the status and details of the Cisco Discovery Protocol (CDP), use the **show cdp** command.

show cdp { **neighbors** [**detail**] | **entry all** | **traffic** }

Syntax Description

neighbors	Displays a list of all CDP neighbors on all interfaces.
detail	(Optional) Displays detailed information of the controller's CDP neighbors. This command shows only the CDP neighbors of the controller; it does not show the CDP neighbors of the controller's associated access points.
entry all	Displays all CDP entries in the database.
traffic	Displays CDP traffic information.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show cdp** command:

```
(Cisco Controller) > show cdp
CDP counters :
Total packets output: 0, Input: 0
Chksum error: 0
No memory: 0, Invalid packet: 0,
```

Related Commands

config cdp
config ap cdp
show ap cdp

show certificate compatibility

To display whether or not certificates are verified as compatible in the Cisco wireless LAN controller, use the **show certificate compatibility** command.

show certificate compatibility

Syntax Description

This command has no arguments or keywords.
--

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show certificate compatibility** command:

```
(Cisco Controller) > show certificate compatibility
Certificate compatibility mode:..... off
```

show certificate lsc

To verify that the controller has generated a Locally Significant Certificate (LSC), use the **show certificate lsc summary** command.

show certificate lsc {**summary** | **ap-provision**}

Syntax Description	summary	Displays a summary of LSC certificate settings and certificates.
	ap-provision	Displays details about the access points that are provisioned using the LSC.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show certificate lsc summary** command:

```
(Cisco Controller) > show certificate lsc summary
LSC Enabled..... Yes
LSC CA-Server..... http://10.0.0.1:8080/caserver
LSC AP-Provisioning..... Yes
Provision-List..... Not Configured
LSC Revert Count in AP reboots..... 3
LSC Params:
Country..... 4
State..... ca
City..... ss
Orgn..... org
Dept..... dep
Email..... dep@co.com
KeySize..... 390
LSC Certs:
CA Cert..... Not Configured
RA Cert..... Not Configured
```

This example shows how to display the details about the access points that are provisioned using the LSC:

```
(Cisco Controller) > show certificate lsc ap-provision
LSC AP-Provisioning..... Yes
Provision-List..... Present
Idx Mac Address
---
1 00:18:74:c7:c0:90
```

show certificate ssc

To view the Self Signed Device Certificate (SSC) and hash key of the virtual controller, use the **show certificate ssc** command.

show certificate ssc

Syntax Description
This command has no arguments or keywords.

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show certificate ssc** command :

```
(Cisco Controller) > show certificate ssc
SSC Hash validation..... Enabled.

SSC Device Certificate details:

    Subject Name :
        C=US, ST=California, L=San Jose, O=Cisco Virtual Wireless LAN Controller,
        CN=DEVICE-vWLC-AIR-CTVM-K9-000C297F2CF7, MAILTO=support@vwlc.com

    Validity :
        Start : 2012 Jul 23rd, 15:47:53 GMT
        End   : 2022 Jun 1st, 15:47:53 GMT

    Hash key : 5870ffabb15de2a617132bafcd73
```

show certificate summary

To verify that the controller has generated a certificate, use the **show certificate summary** command.

show certificate summary

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show certificate summary** command:

```
(Cisco Controller) > show certificate summary
Web Administration Certificate..... Locally Generated
Web Authentication Certificate..... Locally Generated
Certificate compatibility mode:..... off
```

show client ap

To display the clients on a Cisco lightweight access point, use the **show client ap** command.

show client ap 802.11 { **a** | **b** } *cisco_ap*

Syntax Description	802.11a	Specifies the 802.11a network.
	802.11b	Specifies the 802.11b/g network.
	<i>cisco_ap</i>	Cisco lightweight access point name.

Command Default	None
-----------------	------

Usage Guidelines	The show client ap command may list the status of automatically disabled clients. Use the show exclusionlist command to view clients on the exclusion list.
------------------	---

This example shows how to display client information on an access point:

```
(Cisco Controller) >show client ap 802.11b AP1
MAC Address      AP Id   Status      WLAN Id   Authenticated
-----
xx:xx:xx:xx:xx:xx    1   Associated    1         No
```

show client calls

To display the total number of active or rejected calls on the controller, use the **show client calls** command.

show client calls { **active** | **rejected** } { **802.11a** | **802.11bg** | **all** }

Syntax Description	active	Specifies active calls.
	rejected	Specifies rejected calls.
	802.11a	Specifies the 802.11a network.
	802.11bg	Specifies the 802.11b/g network.
	all	Specifies both the 802.11a and 802.11b/g network.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client calls active 802.11a** command :

```
(Cisco Controller) > show client calls active 802.11a
Client MAC          Username          Total Call
                   Duration (sec)
-----
00:09: ef: 02:65:70    abc              45
00:13: ce: cc: 51:39    xyz              45
00:40:96: af: 15:15     def              45
00:40:96:b2:69: df      def              45
AP Name              Radio Type
-----
VJ-1240C-ed45cc      802.11a
AP1130-a416           802.11a
AP1130-a416           802.11a
AP1130-a416           802.11a
Number of Active Calls ----- 4
```

show client ccx client-capability

To display the client's capability information, use the **show client ccx client-capability** command.

show client ccx client-capability *client_mac_address*

Syntax Description	<i>client_mac_address</i> MAC address of the client.				
Command Default	None				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				
Usage Guidelines	This command displays the client's available capabilities, not the current settings for the capabilities.				

The following is a sample output of the **show client ccx client-capability** command:

```
(Cisco Controller) >show client ccx client-capability 00:40:96:a8:f7:98
Service Capability..... Voice, Streaming(uni-directional)
Video, Interactive(bi-directional) Video
Radio Type..... DSSS OFDM(802.11a) HRDSSS(802.11b)

Are you sure you want to start? (y/N)y Are you sure you want to start? (y/N)
```

show client ccx frame-data

To display the data frames sent from the client for the last test, use the **show client ccx frame-data** command.

show client ccx frame-data *client_mac_address*

Syntax Description	<i>client_mac_address</i>	MAC address of the client.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client ccx frame-data** command:

```
(Cisco Controller) >show client ccx frame-data
xx:xx:xx:xx:xx:xx
```

show client ccx last-response-status

To display the status of the last test response, use the **show client ccx last-response-status** command.

show client ccx last-response-status *client_mac_address*

Syntax Description	<i>client_mac_address</i> MAC address of the client.				
Command Default	None				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

The following is a sample output of the **show client ccx last-response-status** command:

```
(Cisco Controller) >show client ccx last-response-status
Test Status ..... Success
Response Dialog Token..... 87
Response Status..... Successful
Response Test Type..... 802.1x Authentication Test
Response Time..... 3476 seconds since system boot
```

show client ccx last-test-status

To display the status of the last test, use the **show client ccx last-test-status** command.

show client ccx last-test-status *client_mac_address*

Syntax Description	<i>client_mac_address</i> MAC address of the client.				
Command Default	None				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

The following is a sample output of the **show client ccx last-test-status** command:

```
(Cisco Controller) >show client ccx last-test-status
```

```
Test Type ..... Gateway Ping Test
Test Status ..... Pending/Success/Timeout
Dialog Token ..... 15
Timeout ..... 15000 ms
Request Time ..... 1329 seconds since system boot
```

show client ccx log-response

To display a log response, use the **show client ccx log-response** command.

show client ccx log-response {roam | rsna | syslog} *client_mac_address*

Syntax Description	roam	(Optional) Displays the CCX client roaming log response.
	rsna	(Optional) Displays the CCX client RSNA log response.
	syslog	(Optional) Displays the CCX client system log response.
	<i>client_mac_address</i>	Inventory for the specified access point.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client ccx log-response syslog** command:

```
(Cisco Controller) >show client ccx log-response syslog 00:40:96:a8:f7:98
Tue Jun 26 18:07:48 2007      Syslog Response LogID=131: Status=Successful
    Event Timestamp=0d 00h 19m 42s 278987us
    Client SysLog = '<11> Jun 19 11:49:47 unraval13777 Mandatory elements missing in the
OID response'
    Event Timestamp=0d 00h 19m 42s 278990us
    Client SysLog = '<11> Jun 19 11:49:47 unraval13777 Mandatory elements missing in the
OID response'
Tue Jun 26 18:07:48 2007      Syslog Response LogID=131: Status=Successful
    Event Timestamp=0d 00h 19m 42s 278987us
    Client SysLog = '<11> Jun 19 11:49:47 unraval13777 Mandatory elements missing in the
OID response'
    Event Timestamp=0d 00h 19m 42s 278990us
    Client SysLog = '<11> Jun 19 11:49:47 unraval13777 Mandatory elements missing in the
OID response'
```

The following example shows how to display the client roaming log response:

```
(Cisco Controller) >show client ccx log-response roam 00:40:96:a8:f7:98
Thu Jun 22 11:55:14 2007      Roaming Response LogID=20: Status=Successful
Event Timestamp=0d 00h 00m 13s 322396us      Source BSSID=00:40:96:a8:f7:98
Target BSSID=00:0b:85:23:26:70,      Transition Time=100(ms)
Transition Reason: Normal roam, poor link      Transition Result: Success
Thu Jun 22 11:55:14 2007      Roaming Response LogID=133: Status=Successful
Event Timestamp=0d 00h 00m 16s 599006us      Source BSSID=00:0b:85:81:06:c2
Target BSSID=00:0b:85:81:06:c2,      Transition Time=3235(ms)
Transition Reason: Normal roam, poor link      Transition Result: Success
Thu Jun 22 18:28:48 2007      Roaming Response LogID=133: Status=Successful
Event Timestamp=0d 00h 00m 08s 815477us      Source BSSID=00:0b:85:81:06:c2
Target BSSID=00:0b:85:81:06:d2,      Transition Time=3281(ms)
Transition Reason: First association to WLAN      Transition Result: Success
```

show client ccx manufacturer-info

To display the client manufacturing information, use the **show client ccx manufacturer-info** command.

show client ccx manufacturer-info *client_mac_address*

Syntax Description	<i>client_mac_address</i>	MAC address of the client.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client ccx manufacturer-info** command:

```
(Cisco Controller) >show client ccx manufacturer-info 00:40:96:a8:f7:98
Manufacturer OUI ..... 00:40:96

```

show client ccx operating-parameters

To display the client operating-parameters, use the **show client ccx operating-parameters** command.

```
show client ccx operating-parameters client_mac_address
```

Syntax Description	<i>client_mac_address</i>	MAC address of the client.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client ccx operating-parameters** command:

```
(Cisco Controller) >show client ccx operating-parameters 00:40:96:b2:8d:5e
```

dot1x Status..... 255
```

show client ccx rm

To display Cisco Client eXtension (CCX) client radio management report information, use the **show client ccx rm** command.

show client ccx rm *client_MAC* {**status** | {**report** {**chan-load** | **noise-hist** | **frame** | **beacon** | **pathloss** } } }

Syntax Description	<p><i>client_MAC</i> Client MAC address.</p> <p>status Displays the client CCX radio management status information.</p> <p>report Displays the client CCX radio management report.</p> <p>chan-load Displays radio management channel load reports.</p> <p>noise-hist Displays radio management noise histogram reports.</p> <p>beacon Displays radio management beacon load reports.</p> <p>frame Displays radio management frame reports.</p> <p>pathloss Displays radio management path loss reports.</p>	
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the client radio management status information:

```
(Cisco Controller) >show client ccx rm 00:40:96:15:21:ac status

Client Mac Address..... 00:40:96:15:21:ac
Channel Load Request..... Enabled
Noise Histogram Request..... Enabled
Beacon Request..... Enabled
Frame Request..... Enabled
Interval..... 30
Iteration..... 10
```

The following example shows how to display the client radio management load reports:

```
(Cisco Controller) >show client ccx rm 00:40:96:15:21:ac report chan-load

Channel Load Report
Client Mac Address..... 00:40:96:ae:53:bc
Timestamp..... 788751121
Incapable Flag..... On
Refused Flag..... On
Chan CCA Busy Fraction
-----

Refused Flag..... Off
Chan RPI0 RPI1 RPI2 RPI3 RPI4 RPI5 RPI6 RPI7
```

show client ccx stats-report

To display the Cisco Client eXtensions (CCX) statistics report from a specified client device, use the **show client ccx stats-report** command.

show client ccx stats-report *client_mac_address*

Syntax Description	<i>client_mac_address</i>	Client MAC address.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client ccx stats-report** command:

```
(Cisco Controller) > show client ccx stats-report 00:0c:41:07:33:a6
Measurement duration = 1
dot11TransmittedFragmentCount      = 1
dot11MulticastTransmittedFrameCount = 2
dot11FailedCount                    = 3
dot11RetryCount                     = 4
dot11MultipleRetryCount              = 5
dot11FrameDuplicateCount             = 6
dot11RTSSuccessCount                 = 7
dot11RTSFailureCount                 = 8

show client location-calibration summary

To display client location calibration summary information, use the **show client location-calibration summary** command.

show client location-calibration summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the location calibration summary information:

```
(Cisco Controller) >show client location-calibration summary
MAC Address Interval
-----
10:10:10:10:10:10 60
21:21:21:21:21:21 45
```

show client probing

To display the number of probing clients, use the **show client probing** command.

show client probing

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the number of probing clients:

```
(Cisco Controller) >show client probing
Number of Probing Clients..... 0
```

show client roam-history

To display the roaming history of a specified client, use the **show client roam-history** command.

show client roam-history *mac_address*

Syntax Description

mac_address Client MAC address.

Command Default

None

Command History

Release

Modification

7.6

This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

This command provides the following information:

- The time when the report was received
- The MAC address of the access point to which the client is currently associated
- The MAC address of the access point to which the client was previously associated
- The channel of the access point to which the client was previously associated
- The SSID of the access point to which the client was previously associated
- The time when the client disassociated from the previous access point
- The reason for the client roam

Note

For non-CCXv4 clients, the Layer 2 roam reason is not displayed in the command output. For more information, see [CSCvv85022](#).

Examples

The following is a sample output of the **show client roam-history** command:

```
(Cisco Controller) > show client roam-history 00:14:6c:0a:57:77
```

show client summary

To display a summary of clients associated with a Cisco lightweight access point, use the **show client summary** command.

show client summary [*ssid / ip / username / devicetype*]

Syntax Description

This command has no arguments or keywords up to Release 7.4.

Syntax Description

ssid / ip / username / devicetype

(Optional) Displays active clients selective details on any of the following parameters or all the parameters in any order:

- SSID
- IP addresss
- Username
- Device type (such as Samsung-Device or WindowsXP-Workstation)

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

Use **show client ap** command to list the status of automatically disabled clients. Use the **show exclusionlist** command to display clients on the exclusion list.

The following example shows how to display a summary of the active clients:

```
(Cisco Controller) > show client summary
Number of Clients..... 24
Number of PMIPv6 Clients..... 200
MAC Address      AP Name      Status      WLAN/GLAN/RLAN Auth Protocol      Port
Wired  PMIPv6
-----
00:00:15:01:00:01 NMSP-TalwarSIM1-2 Associated    1              Yes  802.11a      13
No          Yes
00:00:15:01:00:02 NMSP-TalwarSIM1-2 Associated    1              Yes  802.11a      13
No          No
00:00:15:01:00:03 NMSP-TalwarSIM1-2 Associated    1              Yes  802.11a      13
No          Yes
00:00:15:01:00:04 NMSP-TalwarSIM1-2 Associated    1              Yes  802.11a      13
No          No
```

The following example shows how to display all clients that are WindowsXP-Workstation device type:

```
(Cisco Controller) >show client summary WindowsXP-Workstation
Number of Clients in WLAN..... 0
```

show client summary

MAC Address	AP Name	Status	Auth Protocol	Port	Wired	Mobility	Role
-----	-----	-----	-----	-----	-----	-----	-----
Number of Clients with requested device type..... 0							

show client summary guest-lan

To display the active wired guest LAN clients, use the **show client summary guest-lan** command.

show client summary guest-lan

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client summary guest-lan** command:

```
(Cisco Controller) > show client summary guest-lan
Number of Clients..... 1
MAC Address          AP Name      Status      WLAN  Auth  Protocol  Port  Wired
-----
00:16:36:40:ac:58   N/A         Associated   1     No    802.3     1     Yes
```

Related Commands	show client summary
-------------------------	---------------------

show client tsm

To display the client traffic stream metrics (TSM) statistics, use the **show client tsm** command.

show client tsm 802.11{a | b} client_mac {ap_mac | all}

Syntax Description	802.11a	Specifies the 802.11a network.
	802.11b	Specifies the 802.11 b/g network.
	<i>client_mac</i>	MAC address of the client.
	<i>ap_mac</i>	MAC address of the tsm access point.
	all	Specifies the list of all access points to which the client has associations.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client tsm 802.11a** command:

```
(Cisco Controller) > show client tsm 802.11a xx:xx:xx:xx:xx:xx all
AP Interface MAC: 00:0b:85:01:02:03

show client summary

show client username

To display the client data by the username, use the **show client username** command.

show client username *username*

Syntax Description	<i>username</i>	Client's username. You can view a list of the first eight clients that are in RUN state associated to controller's access points.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client username** command:

```
(Cisco Controller) > show client username local
```

MAC Address Device Type	AP Name	Status	WLAN	Auth	Protocol	Port
-----	-----	-----	----	----	-----	----

show client voice-diag

To display voice diagnostics statistics, use the **show client voice-diag** command.

show client voice-diag { **quos-map** | **roam-history** | **rss**i | **status** | **tspec** }

Syntax Description	quos-map	Displays information about the QoS/DSCP mapping and packet statistics in each of the four queues: VO, VI, BE, BK. The different DSCP values are also displayed.
	roam-history	Displays information about history of the last three roamings. The output contains the timestamp, access point associated with the roaming, the roaming reason, and if there is a roaming failure, the reason for the roaming failure.
	rss i	Displays the client's RSSI values in the last 5 seconds when voice diagnostics are enabled.
	status	Displays the status of voice diagnostics for clients.
	tspec	Displays TSPEC for the voice diagnostic for clients.

Command Default	None
-----------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show client voice-diag status** command:

```
(Cisco Controller) > show client voice-diag status
Voice Diagnostics Status: FALSE
```

Related Commands	show client ap show client detail show client summary debug voice-diag
------------------	---

show client wlan

To display the summary of clients associated with a WLAN, use the **show client wlan** command.

show client wlan *wlan_id* [**devicetype** *device*]

Syntax Description	<i>wlan_id</i>	Wireless LAN identifier from 1 to 512.
	devicetype	(Optional) Displays all clients with the specified device type.
	<i>device</i>	Device type. For example, Samsung-Device or WindowsXP-Workstation.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following are sample outputs of the **show client wlan** command:

```
(Cisco Controller) > show client wlan 1
```

```
Number of Clients in WLAN..... 0
```

```
(Cisco Controller) > show client devicetype WindowsXP-Workstation
```

```
Number of Clients in WLAN..... 0
```

```

```
Number of Clients with requested device type..... 0
```

show cloud-services cmx summary

To view the cmx cloud services summary, use the **show cloud-services cmx summary** command.

show cloud-services cmx summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	8.3	This command was introduced.

This example shows the CMX Cloud Services summary:

```
(Cisco Controller) >show cloud-services cmx summary
```

show cloud-services cmx statistics

To view the cmx cloud services statistics, use the **show cloud-services cmx statistics** command.

show cloud-services cmx statistics

This command has no arguments or keywords.

Command Default	None
------------------------	------

Command History	<table><tr><th>Release</th><th>Modification</th></tr><tr><td>8.3</td><td>This command was introduced.</td></tr></table>	Release	Modification	8.3	This command was introduced.
Release	Modification				
8.3	This command was introduced.				

This example shows the CMX Cloud Services statistics:

```
(Cisco Controller) >show cloud-services cmx statistics
```

show coredump summary

To display a summary of the controller's core dump file, use the **show coredump summary** command.

show coredump summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show coredump summary** command:

```
(Cisco Controller) > show coredump summary
Core Dump is enabled
FTP Server IP..... 10.10.10.17
FTP Filename..... file1
FTP Username..... ftpuser

show country

To display the configured country and the radio types that are supported, use the **show country** command.

show country

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the configured countries and supported radio types:

```
(Cisco Controller) >show country
Configured Country..... United States
Configured Country Codes
US - United States..... 802.11a / 802.11b / 802.11g
```

show country supported

To display a list of the supported country options, use the **show country supported** command.

show country supported

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>7.6</td> <td>This command was introduced in a release earlier than Release 7.6.</td> </tr> </tbody> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				

The following example shows how to display a list of all the supported countries:

```
(Cisco Controller) >show country supported
Configured Country..... United States
Supported Country Codes
AR - Argentina..... 802.11a / 802.11b / 802.11g

```

show cpu

To display current WLAN controller CPU usage information, use the **show cpu** command.

show cpu

Syntax Description

This command has no arguments or keywords.

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show cpu** command:

```
(Cisco Controller) > show cpu  
Current CPU load: 2.50%
```

show custom-web

To display all the web authentication customization information, use the `show custom-web` command.

Syntax	Description
all	Display all Web-Auth customization information.
remote-lan	Display per WLAN Web-Auth customization information.
guest-lan	Display per Guest LAN Web-Auth customization information.
sleep-client	Display all Web-Auth Sleeping Client entries summary.
webauth-bundle	Display the content of Web-Auth Bundle.
wlan	Display per WLAN Web-Auth customization information.

Command History	Release	Modification
	7.6	This command was introduced in the release earlier than 7.6.
	8.2	This command was modified and the all, remote-lan, guest-lan, sleep-client, webauth-bundle, and wlan keywords are added.

The following is a sample output of the command:

```
(Cisco Controller) > show custom-web all
Radius Authentication Method..... PAP
Cisco Logo..... Enabled
CustomLogo..... None
Custom Title..... None
Custom Message..... None
Custom Redirect URL..... None
Web Authentication Type..... Internal Default
Logout-popup..... Enabled
External Web Authentication URL..... None
```

show database summary

To display the maximum number of entries in the database, use the **show database summary** command.

show database summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

The following is a sample output of the **show database summary** command:

```
(Cisco Controller) > show database summary
Maximum Database Entries..... 2048
Maximum Database Entries On Next Reboot..... 2048
Database Contents
  MAC Filter Entries..... 2
  Exclusion List Entries..... 0
  AP Authorization List Entries..... 1
  Management Users..... 1
  Local Network Users..... 1
    Local Users..... 1
    Guest Users..... 0
  Total..... 5
```

Related Commands	config database size
-------------------------	----------------------

show dhcp

To display the internal Dynamic Host Configuration Protocol (DHCP) server configuration, use the **show dhcp** command.

show dhcp {leases | summary | scope}

Syntax Description	leases	Displays allocated DHCP leases.
	summary	Displays DHCP summary information.
	scope	Name of a scope to display the DHCP information for that scope.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the allocated DHCP leases:

```
(Cisco Controller) >show dhcp leases
No leases allocated.
```

The following example shows how to display the DHCP summary information:

```
(Cisco Controller) >show dhcp summary
Scope Name      Enabled      Address Range
003             No          0.0.0.0 -> 0.0.0.0
```

The following example shows how to display the DHCP information for the scope 003:

```
(Cisco Controller) >show dhcp 003
Enabled..... No
Lease Time..... 0
Pool Start..... 0.0.0.0
Pool End..... 0.0.0.0
Network..... 0.0.0.0
Netmask..... 0.0.0.0
Default Routers..... 0.0.0.0 0.0.0.0 0.0.0.0
DNS Domain.....
DNS..... 0.0.0.0 0.0.0.0 0.0.0.0
Netbios Name Servers..... 0.0.0.0 0.0.0.0 0.0.0.0
```

show dhcp proxy

To display the status of DHCP proxy handling, use the **show dhcp proxy** command.

show dhcp proxy

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the status of DHCP proxy information:

```
(Cisco Controller) >show dhcp proxy
```

```
DHCP Proxy Behavior: enabled
```

show dhcp timeout

To display the DHCP timeout value, use the **show dhcp timeout** command.

show dhcp timeout

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the DHCP timeout value:

```
(Cisco Controller) >show dhcp timeout
DHCP Timeout (seconds)..... 10
```

show dtls connections

To display the Datagram Transport Layer Security (DTLS) server status, use the **show dtls connections** command.

show dtls connections

Syntax Description This command has no arguments or keywords.

Command Default None

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show dtls connections** command.

Device > **show dtls connections**

AP Name	Local Port	Peer IP	Peer Port	Ciphersuite
1130	Capwap_Ctrl	1.100.163.210	23678	TLS_RSA_WITH_AES_128_CBC_SHA
1130	Capwap_Data	1.100.163.210	23678	TLS_RSA_WITH_AES_128_CBC_SHA
1240	Capwap_Ctrl	1.100.163.209	59674	TLS_RSA_WITH_AES_128_CBC_SHA

show exclusionlist

To display a summary of all clients on the manual exclusion list from associating with the controller, use the **show exclusionlist** command.

show exclusionlist

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines	This command displays all manually excluded MAC addresses.
-------------------------	--

The following example shows how to display the exclusion list:

```
(Cisco Controller) > show exclusionlist
No manually disabled clients.
Dynamically Disabled Clients
-----
      MAC Address      Exclusion Reason      Time Remaining (in secs)
      -----
00:40:96:b4:82:55    802.1X Failure        51
```

Related Commands	config exclusionlist
-------------------------	-----------------------------

show flexconnect acl detailed

To display a detailed summary of FlexConnect access control lists, use the **show flexconnect acl detailed** command.

show flexconnect acl detailed *acl-name*

Syntax Description	<i>acl-name</i>	Name of the access control list.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the FlexConnect detailed ACLs:

```
(Cisco Controller) >show flexconnect acl detailed acl-2
```

show flexconnect acl summary

To display a summary of all access control lists on FlexConnect access points, use the **show flexconnect acl summary** command.

show flexconnect acl summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the FlexConnect ACL summary:

```
(Cisco Controller) >show flexconnect acl summary
ACL Name                               Status
-----
acl1                                    Modified
acl10                                   Modified
acl100                                  Modified
acl101                                  Modified
acl102                                  Modified
acl103                                  Modified
acl104                                  Modified
acl105                                  Modified
acl106                                  Modified
```

show flexconnect group detail

To display details of a FlexConnect group, use the **show flexconnect group detail** command.

show flexconnect group detail *group_name* [**module-vlan** | **aps**]

Syntax Description	<i>group_name</i>	Name of the FlexConnect group.
	module-vlan	Displays status of the FlexConnect local switching and VLAN ID in the group
	aps	Displays list of APs that are part of the FlexConnect group
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.1	The module-vlan and aps parameters were added.

The following example shows how to display the detailed information for a specific FlexConnect group:

```
(Cisco Controller) >show flexconnect group detail myflexgroup
Number of Ap's in Group: 1
00:0a:b8:3b:0b:c2    AP1200    Joined
Group Radius Auth Servers:
  Primary Server Index ..... Disabled
  Secondary Server Index ..... Disabled
```

show flexconnect group summary

To display the current list of FlexConnect groups, use the **show flexconnect group summary** command.

show flexconnect group summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the current list of FlexConnect groups:

```
(Cisco Controller) >show flexconnect group summary
flexconnect Group Summary:  Count 1
Group Name                  # Aps
Group 1                      1
```

show flexconnect office-extend

To view information about OfficeExtend access points that in FlexConnect mode, use the **show flexconnect office-extend** command.

show flexconnect office-extend {summary | latency}

Syntax Description	summary	Displays a list of all OfficeExtend access points.
	latency	Displays the link delay for OfficeExtend access points.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display information about the list of FlexConnect OfficeExtend access points:

```
(Cisco Controller) >show flexconnect office-extend summary
Summary of OfficeExtend AP
AP Name           Ethernet MAC      Encryption  Join-Mode  Join-Time
-----
AP1130            00:22:90:e3:37:70  Enabled    Latency    Sun Jan 4 21:46:07 2009
AP1140            01:40:91:b5:31:70  Enabled    Latency    Sat Jan 3 19:30:25 2009
```

The following example shows how to display the FlexConnect OfficeExtend access point's link delay:

```
(Cisco Controller) >show flexconnect office-extend latency
Summary of OfficeExtend AP link latency
AP Name           Status  Current  Maximum  Minimum
-----
AP1130            Enabled 15 ms    45 ms    12 ms
AP1140            Enabled 14 ms    179 ms   12 ms
```

show flow exporter

To display the details or the statistics of the flow exporter, use the **show flow exporter** command.

show flow exporter {**summary** | **statistics**}

Syntax Description

summary	Displays a summary of the flow exporter.
statistics	Displays the statistics of flow exporters such as the number of records sent, or the time when the last record was sent.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

The following is a sample output of the **show flow exporter summary** command:

```
(Cisco Controller) > show flow exporter summary
Exporter-Name      Exporter-IP      Port
=====
exp01              9.9.120.115     800
```

show flow monitor summary

To display the details of the NetFlow monitor, use the **show flow monitor summary** command.

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines	Netflow record monitoring and export are used for integration with an NMS or any Netflow analysis tool.
-------------------------	---

The following is a sample output of the **show flow monitor summary**:

```
(Cisco Controller) > show flow monitor summary
Monitor-Name      Exporter-Name      Exporter-IP      Port  Record Name
=====
mon1              expol              9.9.120.115      800
ipv4_client_app_flow_record
```

show guest-lan

To display the configuration of a specific wired guest LAN, use the **show guest-lan** command.

show guest-lan *guest_lan_id*

Syntax Description	<i>guest_lan_id</i>	ID of the selected wired guest LAN.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
Usage Guidelines	To display all wired guest LANs configured on the controller, use the show guest-lan summary command.	

The following is a sample output of the **show guest-lan** *guest_lan_id* command:

```
(Cisco Controller) >show guest-lan 2
Guest LAN Identifier..... 1
Profile Name..... guestlan
Network Name (SSID)..... guestlan
Status..... Enabled
AAA Policy Override..... Disabled
Number of Active Clients..... 1
Exclusionlist Timeout..... 60 seconds
Session Timeout..... Infinity
Interface..... wired
Ingress Interface..... wired-guest
WLAN ACL..... unconfigured
DHCP Server..... 10.20.236.90
DHCP Address Assignment Required..... Disabled
Quality of Service..... Silver (best effort)
Security
  Web Based Authentication..... Enabled
  ACL..... Unconfigured
  Web-Passthrough..... Disabled
  Conditional Web Redirect..... Disabled
  Auto Anchor..... Disabled
Mobility Anchor List
GLAN ID IP Address Status
```

show ike

To display active Internet Key Exchange (IKE) security associations (SAs), use the **show ike** command.

show ike { **brief** | **detailed** } *IP_or_MAC_address*

Syntax Description	brief	Displays a brief summary of all active IKE SAs.
	detailed	Displays a detailed summary of all active IKE SAs.
	<i>IP_or_MAC_address</i>	IP or MAC address of active IKE SA.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the active Internet Key Exchange security associations:

```
(Cisco Controller) > show ike brief 209.165.200.254
```

show interface summary

To display summary details of the system interfaces, use the **show interface summary** command.

show interface summary

Syntax Description This command has no arguments or keywords.

Command Default None

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.0	This command was updated and displays IPv6 related details

The following example displays the summary of the local IPv4 interfaces:

```
(Cisco Controller) > show interface summary
Number of Interfaces..... 6
```

Interface Name	Port	Vlan Id	IP Address	Type	Ap Mgr	Guest
dyn59	LAG	59	9.10.59.66	Dynamic	No	No
management	LAG	56	9.10.56.60	Static	Yes	No
redundancy-management	LAG	56	0.0.0.0	Static	No	No
redundancy-port	-	untagged	0.0.0.0	Static	No	No
service-port	N/A	N/A	2.2.2.2	Static	No	No
virtual	N/A	N/A	1.2.3.4	Static	No	No

The following example displays the summary of the local IPv6 interfaces:

```
show ipv6 interface summary
Number of Interfaces..... 2
```

Interface Name	Port	Vlan Id	IPv6 Address/Prefix Length
management	LAG	56	fe80::224:97ff:fe69:69af/64
	LAG	56	2001:9:10:56::60/64
service-port	N/A	N/A	fe80::224:97ff:fe69:69a1/64
	N/A	N/A	::/128

show interface detailed

To display details of the system interfaces, use the **show interface** command.

show interface**detailed** { *interface_name* | **management** | **redundancy-management** | **redundancy-port** | **service-port** | **virtual** }

Syntax Description	detailed	Displays detailed interface information.
	<i>interface_name</i>	Interface name for detailed display.
	management	Displays detailed management interface information.
	redundancy-management	Displays detailed redundancy management interface information.
	redundancy-port	Displays detailed redundancy port information.
	service-port	Displays detailed service port information.
	virtual	Displays detailed virtual gateway interface information.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.0	This command was updated in Release 8.0 and displays IPv6 related details

The following example shows how to display the detailed interface information:

```
(Cisco Controller) > show interface detailed management
```

```
Interface Name..... management
MAC Address..... 00:24:97:69:69:af
IP Address..... 9.10.56.60
IP Netmask..... 255.255.255.0
IP Gateway..... 9.10.56.1
External NAT IP State..... Disabled
External NAT IP Address..... 0.0.0.0
Link Local IPv6 Address..... fe80::224:97ff:fe69:69af/64
STATE ..... REACHABLE
Primary IPv6 Address..... 2001:9:10:56::60/64
STATE ..... REACHABLE
Primary IPv6 Gateway..... fe80::aea0:16ff:fe4f:2242
Primary IPv6 Gateway Mac Address..... ac:a0:16:4f:22:42
STATE ..... REACHABLE
VLAN..... 56
Quarantine-vlan..... 0
NAS-Identifier..... Building1
```

```

Active Physical Port..... LAG (13)
Primary Physical Port..... LAG (13)
Backup Physical Port..... Unconfigured
DHCP Proxy Mode..... Global
Primary DHCP Server..... 9.1.0.100
Secondary DHCP Server..... Unconfigured
DHCP Option 82..... Disabled
DHCP Option 82 bridge mode insertion..... Disabled
IPv4 ACL..... Unconfigured
IPv6 ACL..... Unconfigured
mDNS Profile Name..... Unconfigured
AP Manager..... Yes
Guest Interface..... No
L2 Multicast..... Enabled

```

Note Some WLAN controllers may have only one physical port listed because they have only one physical port.

The following example shows how to display the detailed redundancy management interface information:

```

(Cisco Controller) > show interface detailed redundancy-management
Interface Name..... redundancy-management
MAC Address..... 88:43:e1:7e:0b:20
IP Address..... 209.165.201.2

```

The following example shows how to display the detailed redundancy port information:

```

(Cisco Controller) > show interface detailed redundancy-port
Interface Name..... redundancy-port
MAC Address..... 88:43:e1:7e:0b:22
IP Address..... 169.254.120.5

```

The following example shows how to display the detailed service port information:

```

(Cisco Controller) > show interface detailed service-port
Interface Name..... redundancy-port
MAC Address..... 88:43:e1:7e:0b:22
IP Address..... 169.254.120.5

```

The following example shows how to display the detailed virtual gateway interface information:

```

(Cisco Controller) > show interface detailed virtual
Interface Name..... virtual
MAC Address..... 88:43:e1:7e:0b:20
IP Address..... 192.0.2.1
Virtual DNS Host Name..... Disabled
AP Manager..... No
Guest Interface..... No

```

show interface group

To display details of system interface groups, use the **show interface group** command.

show interface group {**summary** | **detailed** *interface_group_name*}

Syntax Description	summary	Displays a summary of the local interface groups.
	detailed	Displays detailed interface group information.
	<i>interface_group_name</i>	Interface group name for a detailed display.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display a summary of local interface groups:

```
(Cisco Controller) > show interface group summary
Interface Group Name      Total Interfaces  Total WLANs      Total AP
Groups      Quarantine
-----
mygroup1          1              0              0              No
mygroup2          1              0              0              No
mygroup3          5              1              0              No
```

The following example shows how to display the detailed interface group information:

```
(Cisco Controller) > show interface group detailed mygroup1
Interface Group Name..... mygroup1
Quarantine ..... No
Number of Wlans using the Interface Group..... 0
Number of AP Groups using the Interface Group.... 0
Number of Interfaces Contained..... 1
mDNS Profile Name..... NCS12Prof
Interface Group Description..... My Interface Group
Next interface for allocation to client..... testabc
Interfaces Contained in this group ..... testabc
Interface marked with * indicates DHCP dirty interface
Interface list sorted based on vlan:
```

```
Index  Vlan      Interface Name
-----
```

0	42	testabc
---	----	---------

show invalid-config

To see any ignored commands or invalid configuration values in an edited configuration file, use the **show invalid-config** command.

show invalid-config

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines

You can enter this command only before the **clear config** or **save config** command.

The following is a sample output of the **show invalid-config** command:

```
(Cisco Controller) > show invalid-config
config wlan peer-blocking drop 3
config wlan dhcp_server 3 192.168.0.44 required
```

show inventory

To display a physical inventory of the Cisco wireless LAN controller, use the **show inventory** command.

show inventory

Syntax Description	This command has no arguments or keywords.				
Command Default	None				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>7.6</td><td>This command was introduced in a release earlier than Release 7.6.</td></tr> </table>	Release	Modification	7.6	This command was introduced in a release earlier than Release 7.6.
Release	Modification				
7.6	This command was introduced in a release earlier than Release 7.6.				
Usage Guidelines	Some wireless LAN controllers may have no crypto accelerator (VPN termination module) or power supplies listed because they have no provisions for VPN termination modules or power supplies.				

The following is a sample output of the **show inventory** command:

```
(Cisco Controller) > show inventory
Burned-in MAC Address..... 50:3D:E5:1A:31:A0
Power Supply 1..... Present, OK
Power Supply 2..... Absent
Maximum number of APs supported..... 500
NAME: "Chassis" , DESCR: "Cisco 5500 Series Wireless LAN Controller"
PID: AIR-CT5508-K9, VID: V01, SN: XXXXXXXXXXXX
```

show IPsec

To display active Internet Protocol Security (IPsec) security associations (SAs), use the **show IPsec** command.

show IPsec { **brief** | **detailed** } *IP_or_MAC_address*

Syntax Description	brief	Displays a brief summary of active IPsec SAs.
	detailed	Displays a detailed summary of active IPsec SAs.
	<i>IP_or_MAC_address</i>	IP address or MAC address of a device.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display brief information about the active Internet Protocol Security (IPsec) security associations (SAs):

```
(Cisco Controller) > show IPsec brief 209.165.200.254
```

Related Commands	config radius acct ipsec authentication
	config radius acct ipsec disable
	config radius acct ipsec enable
	config radius acct ipsec encryption
	config radius auth IPsec encryption
	config radius auth IPsec authentication
	config radius auth IPsec disable
	config radius auth IPsec encryption
	config radius auth IPsec ike

config wlan security IPsec ike dh-group
config wlan security IPsec ike lifetime
config wlan security IPsec ike phase1
config wlan security IPsec ike contivity
```

show ipv6 acl

To display the IPv6 access control lists (ACLs) that are configured on the controller, use the **show ipv6 acl** command.

show ipv6 acl detailed { *acl_name* | **summary** }

Syntax Description	<i>acl_name</i>	IPv6 ACL name. The name can be up to 32 alphanumeric characters.
	detailed	Displays detailed information about a specific ACL.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the detailed information of the access control lists:

```
(Cisco Controller) >show ipv6 acl detailed acl6
Rule Index..... 1
Direction..... Any
IPv6 source prefix..... ::/0
IPv6 destination prefix..... ::/0
Protocol..... Any
Source Port Range..... 0-65535
Destination Port Range..... 0-65535
DSCP..... Any
Flow label..... 0
Action..... Permit
Counter..... 0
Deny Counter..... 0
```

show ipv6 summary

To display the IPv6 configuration settings, use the **show ipv6 summary** command.

show ipv6 summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example displays the output of the **show ipv6 summary** command:

```
(Cisco Controller) >show ipv6 summary
Global Config..... Enabled
Reachable-lifetime value..... 30
Stale-lifetime value..... 300
Down-lifetime value..... 300
RA Throttling..... Disabled
RA Throttling allow at-least..... 1
RA Throttling allow at-most..... no-limit
RA Throttling max-through..... 5
RA Throttling throttle-period..... 600
RA Throttling interval-option..... ignore
NS Multicast CacheMiss Forwarding..... Enabled
NA Multicast Forwarding..... Enabled
IPv6 Capwap UDP Lite..... Enabled
Operating System IPv6 state ..... Enabled
```

show guest-lan

To display the configuration of a specific wired guest LAN, use the **show guest-lan** command.

show guest-lan *guest_lan_id*

Syntax Description	<i>guest_lan_id</i>	ID of the selected wired guest LAN.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
Usage Guidelines	To display all wired guest LANs configured on the controller, use the show guest-lan summary command.	

The following is a sample output of the **show guest-lan** *guest_lan_id* command:

```
(Cisco Controller) >show guest-lan 2
Guest LAN Identifier..... 1
Profile Name..... guestlan
Network Name (SSID)..... guestlan
Status..... Enabled
AAA Policy Override..... Disabled
Number of Active Clients..... 1
Exclusionlist Timeout..... 60 seconds
Session Timeout..... Infinity
Interface..... wired
Ingress Interface..... wired-guest
WLAN ACL..... unconfigured
DHCP Server..... 10.20.236.90
DHCP Address Assignment Required..... Disabled
Quality of Service..... Silver (best effort)
Security
  Web Based Authentication..... Enabled
  ACL..... Unconfigured
  Web-Passthrough..... Disabled
  Conditional Web Redirect..... Disabled
  Auto Anchor..... Disabled
Mobility Anchor List
GLAN ID IP Address Status
```

show ipv6 acl

To display the IPv6 access control lists (ACLs) that are configured on the controller, use the **show ipv6 acl** command.

show ipv6 acl detailed {*acl_name* | **summary**}

Syntax Description	<i>acl_name</i>	IPv6 ACL name. The name can be up to 32 alphanumeric characters.
	detailed	Displays detailed information about a specific ACL.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display the detailed information of the access control lists:

```
(Cisco Controller) >show ipv6 acl detailed acl6
Rule Index..... 1
Direction..... Any
IPv6 source prefix..... ::/0
IPv6 destination prefix..... ::/0
Protocol..... Any
Source Port Range..... 0-65535
Destination Port Range..... 0-65535
DSCP..... Any
Flow label..... 0
Action..... Permit
Counter..... 0
Deny Counter..... 0
```

show ipv6 acl cpu

To display the IPv6 ACL CPU details, use the **show ipv6 acl cpu** command.

show ipv6 acl cpu

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.0	This command supports IPv6 address format.

The following is a sample output of the **show ipv6 acl cpu** command:

```
(Cisco Controller) > show ipv6 acl cpu
```

```
CPU Acl Name..... NOT CONFIGURED
Wireless Traffic..... Disabled
Wired Traffic..... Disabled
```

show ipv6 acl detailed

To display the IPv6 ACL details, use the **show ipv6 acl detailed** command.

show ipv6 acl detailed

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.
	8.0	This command supports IPv6 address format.

The following is a sample output of the **show ipv6 acl detailed TestACL** command:

```
(Cisco Controller) > show ipv6 acl detailed ddd

Rule Index..... 1
Direction..... Any
IPv6 source prefix..... 2001:9:5:90::115/128
IPv6 destination prefix..... ::/0
Protocol..... 6
Source Port Range..... 0-65535
Destination Port Range..... 0-65535
DSCP..... Any
Action..... Permit
Counter..... 0

Rule Index..... 2
Direction..... Any
IPv6 source prefix..... ::/0
IPv6 destination prefix..... 2001:9:5:90::115/128
Protocol..... 6
Source Port Range..... 0-65535
Destination Port Range..... 0-65535
DSCP..... Any
Action..... Permit
Counter..... 0
```

show ipv6 neighbor-binding

To display the IPv6 neighbor binding data that are configured on the controller, use the **show ipv6 neighbor-binding** command.

show ipv6 neighbor-binding {**capture-policy** | **counters** | **detailed** {**mac** *mac_address* | **port** *port_number* | **vlan** *vlan_id*} | **features** | **policies** | **ra-throttle** {**statistics** *vlan_id* | **routers** *vlan_id*} | **summary**}

Syntax Description		
capture-policy		Displays IPv6 next-hop message capture policies.
counters		Displays IPv6 next-hop counters (Bridging mode only).
detailed		Displays the IPv6 neighbor binding table.
mac		Displays the IPv6 binding table entries for a specific MAC address.
<i>mac_address</i>		Displays the IPv6 binding table entries for a specific MAC address.
port		Displays the IPv6 binding table entries for a specific port.
<i>port_number</i>		Port Number. You can enter ap for an access point or LAG for a LAG port.
vlan		Displays the IPv6 neighbor binding table entries for a specific VLAN.
<i>vlan_id</i>		VLAN identifier.
features		Displays IPv6 next-hop registered features.
policies		Displays IPv6 next-hop policies.
ra-throttle		Displays RA throttle information.
statistics		Displays RA throttle statistics.
routers		Displays RA throttle routers.
summary		Displays the IPv6 neighbor binding table.

Command Default None

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

Usage Guidelines DHCPv6 counters are applicable only for IPv6 bridging mode.

The following is the output of the **show ipv6 neighbor-binding summary** command:

```
(Cisco Controller) >show ipv6 neighbor-binding summary
Binding Table has 6 entries, 5 dynamic
Codes: L - Local, S - Static, ND - Neighbor Discovery, DH - DDCP
```

```

show ipv6 ra-guard

To display the RA guard statistics, use the **show ipv6 ra-guard** command.

show ipv6 ra-guard {ap | wlc} summary

Syntax Description	ap	Displays Cisco access point details.
	wlc	Displays Cisco controller details.
	summary	Displays RA guard statistics.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example show the output of the **show ipv6 ra-guard ap summary** command:

```
(Cisco Controller) >show ipv6 ra-guard ap summary
IPv6 RA Guard on AP..... Enabled
RA Dropped per client:
MAC Address          AP Name              WLAN/GLAN            Number of RA Dropped
-----
00:40:96:b9:4b:89  Bhavik_1130_1_p13  2                    19
-----
Total RA Dropped on AP..... 19
```

The following example shows how to display the RA guard statistics for a controller:

```
(Cisco Controller) >show ipv6 ra-guard wlc summary
IPv6 RA Guard on WLC..... Enabled
```

show ipv6 route summary

To display configuration information for IPv6 route, use the **show ipv6 route summary** command.

show ipv6 route summary

This command has no arguments or keywords.

Command Default

None

Command History

Release	Modification
8.0	This command was introduced in a Release 8.0.

The following is a sample output of the **show ipv6 route summary** command:

```
(Cisco Controller) > show ipv6 route summary
Number of Routes..... 1

Destination Network PrefixLength Gateway
-----
2001:9:5:90::115 /128 2001:9:5:91::1
```

show ipv6 summary

To display the IPv6 configuration settings, use the **show ipv6 summary** command.

show ipv6 summary

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	None
------------------------	------

Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example displays the output of the **show ipv6 summary** command:

```
(Cisco Controller) >show ipv6 summary
Global Config..... Enabled
Reachable-lifetime value..... 30
Stale-lifetime value..... 300
Down-lifetime value..... 300
RA Throttling..... Disabled
RA Throttling allow at-least..... 1
RA Throttling allow at-most..... no-limit
RA Throttling max-through..... 5
RA Throttling throttle-period..... 600
RA Throttling interval-option..... ignore
NS Multicast CacheMiss Forwarding..... Enabled
NA Multicast Forwarding..... Enabled
IPv6 Capwap UDP Lite..... Enabled
Operating System IPv6 state ..... Enabled
```

show known ap

To display known Cisco lightweight access point information, use the **show known ap** command.

show known ap {**summary** | **detailed** *MAC*}

Syntax Description	summary	Displays a list of all known access points.
	detailed	Provides detailed information for all known access points.
	<i>MAC</i>	MAC address of the known AP.
Command Default	None	
Command History	Release	Modification
	7.6	This command was introduced in a release earlier than Release 7.6.

The following example shows how to display a summary of all known access points:

```
(Cisco Controller) >show known ap summary
MAC Address      State      # APs  # Clients  Last Heard
-----
```

 show known ap
