Information About Wired Guest Access

The Wired Guest Access feature enables guest users of an enterprise network that supports both wired and wireless access to connect to the guest access network. The wired guest clients can connect from the designated and configured wired Ethernet ports for the guest access after they complete the configured authentication methods. Wired session guests are directed to a wireless guest controller in a demilitarized zone (DMZ) through a Control And Provisioning of Wireless Access Points (CAPWAP) tunnel.

Wired guest access can be configured in a dual-controller configuration that uses both an anchor controller and a foreign controller. A dual-controller configuration isolates wired guest access traffic from the enterprise user traffic.

The wired session guests are provided open or web-authenticated access from the wireless controller.

Figure 1: Guest Access Architecture

IPv6 Router Advertisement Forwarding for a Wired Guest

Wired clients get the IPv6 based connectivity when they receive the IPv6 Router Advertisement (RA) message. The IPv6 router sends these RA messages and it contains information such as IPv6 prefix and router link-local address.

These RA messages are sent as Unicast or Multicast messages. The Unicast RA messages are routed as same as the client directed traffic. The Multicast RA messages are forwarded to all the clients present in the intended VLAN. RA message forwarding is enabled by default and requires no specific configuration.

Guest Anchor Controller: Guest anchor controller forwards the RA packets, from the receiving VLAN, to all the foreign controllers using the mobility data tunnel. The RA packets are tagged with the anchor VLAN to ensure the message is forwarded to the correct clients using the foreign controller data path.

Guest Foreign Controller: Guest foreign controller forwards the received RAs from the guest anchor to the wired ports on which the wired guest clients are connected. To forward the RAs to the intended clients, the guest foreign controller keeps a track of the wired guest clients—per interface, access VLANs, and anchor VLANs.

Supported Features

- Cisco Catalyst 9800 Series Wireless Controllers-Anchor
- Cisco AireOS Wireless Controllers-Anchor
- Cisco Catalyst 9800 Series Wireless Controllers-Foreign
- Cisco AireOS Wireless Controllers-Foreign
- Dual controller solution (foreign + anchor) and access switch
- Trunk Ports
- Open Authentication
- Local Web Authentication

To configure Web Authentication, see [Web-based Authentication](#) section of the Cisco Catalyst 9800 Series Wireless Controller Software Configuration Guide.

- Local Web Authentication (web consent).

Note In AireOS, this is referred to as **web pass-through**.

- Local Web Authentication + ISE (External Web Authentication).
- LWA (local web authentication), with a username and a password.
- Web consent (LWA + consent), that is with a username, a password and the check box of acceptance.

- Scale max 2k clients and 5 guest-LANs (5 VLANs max)
- Client IPv6 support
- Idle Timeout and Session Timeout
- Accounting on Foreign

Note Statistics computation not supported.

- Manageability (SNMP/Yang/WebUI)
- QoS Rate-Limiting and MQC Policies (Upstream at foreign, Upstream, and Downstream at the anchor)

Note QoS rate-limiting supports bps rate-limiting, pps rate-limiting is not supported.

- QoS support with AireOS Anchor setup
- Stateful Switch Over (SSO)
- Port Channel support on Anchor and Foreign with no restrictions to the controller's role.
- Access Port on Foreign
- Cisco Umbrella (not supported in AireOS Anchor)
- ACL support at anchor
- Fully Qualified Domain Name (FQDN) URL filtering is supported at Anchor controller.
- IP theft detection
- Sleeping Client

Restrictions for Wired Guest Access

- A maximum of five guest LANs are supported on the foreign controller.
- A maximum of 2000 clients per foreign are supported.
- No Multicast or Broadcast support.
- You can map only one wired VLAN to a guest LAN.
- You can map only one guest LAN to one policy profile.
- Every guest LAN has a unique name and this name cannot be shared with RLAN or WLAN.
- Ensure that the Anchor VLAN ID and the wired VLAN ID configured on the Foreign controller is not the same.
- QoS is not supported on VLAN and on physical interfaces of the controller.

Configuring Access Switch for Wired Guest Client

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 2	vlan <i>vlan-id</i> Example: Device(config)# <code>vlan 200</code>	Creates the VLAN ID.
Step 3	exit Example: Device(config)# <code>exit</code>	Returns to configuration mode.
Step 4	interface GigabitEthernet<i>interface number</i> Example: Device(config)# <code>interface GigabitEthernet1/0/1</code>	Enters the interface to be added to the VLAN.
Step 5	switchport access vlan <i>vlan-id</i> Example: Device(config-if)# <code>switchport access vlan 200</code>	Assigns the port to a VLAN. The valid VLAN IDs range is between 1 and 4094.

	Command or Action	Purpose
Step 6	switchport mode access Example: Device(config-if)#switchport mode access	Defines the VLAN membership mode for the port.
Step 7	no cdp enable Example: Device(config-if)#no cdp enable	Disables CDP on the interface.
Step 8	end Example: Device(config-if)#end	Saves the configuration and exits configuration mode and returns to privileged EXEC mode.

Configuring Access Switch for Foreign Controller

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	vlan <i>vlan-id</i> Example: Device(config)#vlan 200	Creates the VLAN ID.
Step 3	exit Example: Device(config)#exit	Returns to configuration mode.
Step 4	interface GigabitEthernet<i>interface number</i> Example: Device(config)#interface GigabitEthernet1/0/2	Enters the interface to be added to the VLAN.
Step 5	switchport trunk allowed vlan <i>vlan-id</i> Example: Device(config-if)#switchport trunk allowed vlan 200	Assigns the allowed VLAN ID to the port when it is in trunking mode.
Step 6	switchport mode trunk Example: Device(config-if)#switchport mode trunk	Sets the trunking mode to trunk unconditionally.

	Command or Action	Purpose
Step 7	end Example: Device(config-if)#end	Saves the configuration and exits configuration mode and returns to privileged EXEC mode.

Configuring Foreign Controller with Open Authentication (GUI)

Procedure

-
- Step 1** Choose **Configuration > Tags & Profiles > Policy**.
 - Step 2** Click on a **Policy Name**.
 - Step 3** Go to the **Mobility** tab.
 - Step 4** In the **Mobility Anchors** section, check the **Export Anchor** check box.
 - Step 5** Click **Apply to Device**.
 - Step 6** Choose **Configuration > Wireless > Guest LAN > Guest LAN Configuration**
 - Step 7** Click **Add**.
 - Step 8** In the **General** tab, enter the **Profile Name**, **Guest LAN ID**, **Client Association Limit**.
 - Step 9** Choose the desired mode from the **mDNS Mode** drop-down list.
 - Step 10** Enable or disable the **Status** and **Wired VLAN Status** toggle button.
 - Step 11** In the **Security** tab, disable the **Web Auth** toggle button.
 - Step 12** Click **Apply to Device**.
 - Step 13** Choose **Configuration > Wireless > Guest LAN > Guest LAN Map Configuration**
 - Step 14** Click **Add Map**.
 - Step 15** In the Add Guest LAN Map window, enter the **Guest LAN Map**.
 - Step 16** Click **Apply to Device**.
 - Step 17** Click **Add**.
 - Step 18** Choose the values from the **Profile Name** and **Policy Name** drop-down lists.
 - Step 19** Click **Save**.
-

Configuring Foreign Controller with Open Authentication

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.

	Command or Action	Purpose
Step 2	wireless profile policy <i>wlan-policy-profile-name</i> Example: <pre>Device(config)#wireless profile policy testpro-1</pre>	Configures the WLAN policy profile.
Step 3	mobility anchor <i>non-local-mobility-ctrlr-ip</i> priority <i>priority</i> Example: <pre>Device(config-wireless-policy)#mobility anchor 192.168.201.111 priority 1</pre>	Configures the mobility anchor and sets its priority.
Step 4	no shutdown Example: <pre>Device(config-wireless-policy)#no shutdown</pre>	Enables the configuration.
Step 5	exit Example: <pre>Device(config-wireless-policy)#exit</pre>	Returns to configuration mode.
Step 6	guest-lan profile-name <i>guest-profile-name</i> <i>guest-lan-id</i> wired-vlan <i>wired-vlan-id</i> Example: <pre>Device(config)#guest-lan profile-name gstpro-1 1 wired-vlan 25</pre>	Configures guest LAN profile with a wired VLAN. Note Configure the wired VLAN only for the Guest Foreign controller.
Step 7	no security web-auth Example: <pre>Device(config-guest-lan)#no security web-auth</pre>	Disables web-authentication.
Step 8	no shutdown Example: <pre>Device(config-guest-lan)#no shutdown</pre>	Enables the guest LAN.
Step 9	exit Example: <pre>Device(config-guest-lan)#exit</pre>	Returns to configuration mode.
Step 10	wireless guest LAN map <i>gst-map-name</i> Example: <pre>Device(config)#wireless guest LAN map gstmap-1</pre>	Configures a guest LAN map.

	Command or Action	Purpose
Step 11	guest-lan <i>guest-profile-name</i> policy <i>wlan-policy-profile-name</i> Example: Device (config-guest-lan-map) #guest-lan gstpro-1 policy testpro-1	Attaches a guest LAN map to the policy profile.
Step 12	exit Example: Device (config-guest-lan-map) #exit	Returns to configuration mode.

Configuring Foreign Controller with Local Web Authentication (GUI)

Procedure

-
- Step 1** Choose **Configuration > Tags & Profiles > Policy**.
 - Step 2** Select a **Policy Name**.
 - Step 3** Go to the **Mobility** tab.
 - Step 4** In the **Mobility Anchors** section, check the **Export Anchor** check box.
 - Step 5** Click **Update & Apply to Device**.
 - Step 6** Choose **Configuration > Wireless > Guest LAN > Guest LAN Configuration**
 - Step 7** Click **Add**.
 - Step 8** In the **General** tab, enter the **Profile Name**, **Guest LAN ID**, **Client Association Limit**.
 - Step 9** Choose the desired mode from the **mDNS Mode** drop-down list.
 - Step 10** Enable or disable the **Status** and **Wired VLAN Status** using toggle button.
 - Step 11** Go to the **Security** tab.
 - Step 12** Enable the **Web Auth** using toggle button.
 - Step 13** Choose the values from the **Web Auth Parameter Map**, **Authentication List** and **Authorization List** drop-down lists.
 - Step 14** Click **Apply to Device**.
 - Step 15** Choose **Configuration > Wireless > Guest LAN > Guest LAN Map Configuration**
 - Step 16** Click **Add Map**.
 - Step 17** In the Add Guest LAN Map window, enter the **Guest LAN Map**.
 - Step 18** Click **Apply to Device**.
 - Step 19** Click **Add**.
 - Step 20** Choose the values from the **Profile Name** and **Policy Name** drop-down lists.
 - Step 21** Click **Save**.
-

Configuring Foreign Controller with Local WEB Authentication

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	wireless profile policy <i>wlan-policy-profile-name</i> Example: Device(config)#wireless profile policy testpro-1	Configures the WLAN policy profile.
Step 3	mobility anchor <i>non-local-mobility-cntlr-ip</i> priority <i>priority</i> Example: Device(config-wireless-policy)#mobility anchor 192.168.201.111 priority 1	Configures the mobility anchor and sets its priority.
Step 4	no shutdown Example: Device(config-wireless-policy)#no shutdown	Enables the configuration.
Step 5	exit Example: Device(config-wireless-policy)#exit	Returns to configuration mode.
Step 6	guest-lan profile-name <i>guest-profile-name</i> <i>guest-lan-id</i> wired-vlan <i>wired-vlan-id</i> Example: Device(config)#guest-lan profile-name gstpro-2 3 wired-vlan 26	Configures guest LAN profile with a wired VLAN.
Step 7	security web-auth Example: Device(config-guest-lan)#security web-auth	Enables web-authentication.
Step 8	security web-auth authentication-list <i>auth-list-name</i> Example: Device(config-guest-lan)#security web-auth authentication-list default	Configures the authentication list for a IEEE 802.1x network.

	Command or Action	Purpose
Step 9	security web-auth parameter-map <i>parameter-map-name</i> Example: Device (config-guest-lan) #security web-auth parameter-map global	Configures the security web-auth parameter map.
Step 10	no shutdown Example: Device (config-guest-lan) #no shutdown	Enables the guest LAN.
Step 11	exit Example: Device (config-guest-lan) #exit	Returns to configuration mode.
Step 12	wireless guest-lan map <i>gst-map-name</i> Example: Device (config) #wireless guest-lan map gstmap-2	Configures a guest LAN map.
Step 13	guest-lan <i>guest-lan-profile-name</i> policy <i>policy-profile-name</i> Example: Device (config-guest-lan-map) #guest-lan gstpro-2 policy testpro-1	Attaches a guest LAN map to the policy profile.
Step 14	exit Example: Device (config-guest-lan-map) #exit	Returns to configuration mode.

What to do next

For more information about Local Web Authentication, see https://www.cisco.com/c/en/us/td/docs/wireless/controller/9800/config-guide/b_wl_16_10_cg/wireless-web-authentication.html

Configuring Anchor Controller with Open Authentication (GUI)

Procedure

-
- Step 1** Choose **Configuration > Tags & Profiles > Policy**.
 - Step 2** Click **Add**.
 - Step 3** In the **General** tab, enter the **Name**.
 - Step 4** Go to the **Access Policies** tab.
 - Step 5** Under the **VLAN** settings, choose the vlans from the **VLAN/VLAN Group** drop-down list.

- Step 6** Go to the **Mobility** tab.
- Step 7** Under the **Mobility Anchors** settings, check the **Export Anchor** check box.
- Step 8** Click **Apply to Device**.
- Step 9** Choose **Configuration > Wireless > Guest LAN**.
- Step 10** Click **Add**.
- Step 11** In the **General** tab, enter the **Profile Name**, the **Guest LAN ID** and the **Client Association Limit**.
- Step 12** In the **Security** tab, under the **Layer3** settings, disable the **Web Auth** toggle button.
- Step 13** Click **Apply to Device**.

Configuring Anchor Controller with Open Authentication

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	wireless profile policy <i>wlan-policy-profile-name</i> Example: Device(config)#wireless profile policy testpro-2	Configures the WLAN policy profile.
Step 3	mobility anchor Example: Device(config-wireless-policy)#mobility anchor	Configures the mobility anchor.
Step 4	vlan <i>vlan-id</i> Example: Device(config-wireless-policy)#vlan 29	Configure a VLAN name or a VLAN ID.
Step 5	no shutdown Example: Device(config-wireless-policy)#no shutdown	Enables the configuration.
Step 6	exit Example: Device(config-wireless-policy)#exit	Returns to configuration mode.

	Command or Action	Purpose
Step 7	guest-lan profile-name <i>guest-profile-name</i> <i>guest-lan-id</i> Example: Device (config) #guest-lan profile-name testpro-2 1	Configures the guest LAN profile with a wired VLAN.
Step 8	client association limit <i>guest-lan-client-limit</i> Example: Device (config-guest-lan) #client association limit	Configures the maximum client connections per guest LAN. The valid range is between 1 and 2000.
Step 9	no security web-auth Example: Device (config-guest-lan) #no security web-auth	Disables web authentication.
Step 10	no shutdown Example: Device (config-guest-lan) #no shutdown	Enables the guest LAN.
Step 11	exit Example: Device (config-guest-lan) #exit	Returns to configuration mode.

Configuring Anchor Controller with Local Web Authentication (GUI)

Procedure

-
- Step 1** Choose **Configuration > Tags & Profiles > Policy**.
 - Step 2** Click **Add**.
 - Step 3** In the **General** tab, enter the **Name**.
 - Step 4** Go to the **Access Policies** tab.
 - Step 5** Under the **VLAN** settings, choose the vlans from the **VLAN/VLAN Group** drop-down list.
 - Step 6** Go to the **Mobility** tab.
 - Step 7** Under the **Mobility Anchors** settings, check the **Export Anchor** check box.
 - Step 8** Click **Apply to Device**.
 - Step 9** Choose **Configuration > Wireless > Guest LAN**.
 - Step 10** Click **Add**.
 - Step 11** In the **General** tab, enter the **Profile Name**, the **Guest LAN ID** and the **Client Association Limit**.

- Step 12** In the **Security** tab, under the **Layer3** settings, enable the **Web Auth** toggle button. Choose the Parameter map from the **Web Auth Parameter Map** drop-down list and the authentication list from the **Authentication List** drop-down list.
- Step 13** Click **Apply to Device**.

Configuring Anchor Controller with Local Web Authentication

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	wireless profile policy <i>wlan-policy-profile-name</i> Example: Device(config)#wireless profile policy testpro-2	Configures the WLAN policy profile.
Step 3	mobility anchor Example: Device(config-wireless-policy)#mobility anchor	Configures the mobility anchor.
Step 4	vlan <i>vlan-id</i> Example: Device(config-wireless-policy)#vlan 30	Configure a VLAN name or a VLAN ID.
Step 5	no shutdown Example: Device(config-wireless-policy)#no shutdown	Enables the configuration.
Step 6	exit Example: Device(config-wireless-policy)#exit	Returns to configuration mode.
Step 7	guest-lan profile-name <i>guest-profile-name</i> <i>guest-lan-id</i> Example: Device(config)#guest-lan profile-name testpro-2 1	Configure a guest LAN profile with a wired VLAN.

	Command or Action	Purpose
Step 8	client association limit <i>guest-lan-client-limit</i> Example: Device (config-guest-lan) #client association limit	Configures the maximum client connections per guest LAN. The valid range is between 1 and 2000.
Step 9	security web-auth Example: Device (config-guest-lan) #security web-auth	Configures web authentication.
Step 10	security web-auth parameter-map <i>parameter-map-name</i> Example: Device (config-guest-lan) #security web-auth parameter-map testmap-1	Configures the security web-auth parameter map.
Step 11	security web-auth authentication-list <i>authentication-list-name</i> Example: Device (config-guest-lan) #security web-auth authentication-list testlwa-1	Configures the authentication list for the IEEE 802.1x network.
Step 12	no shutdown Example: Device (config-guest-lan) #no shutdown	Enables the guest-LAN.
Step 13	exit Example: Device (config-guest-lan) #exit	Returns to configuration mode.

Configuring Session Timeout for a Profile Policy

Session Timeout for a wired guest is set to infinite by default. Perform the following procedure to configure the timeout values to the wired guest.

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	wireless profile policy <i>wlan-policy-profile-name</i>	Configures the WLAN policy profile.

	Command or Action	Purpose
	Example: Device(config)#wireless profile policy testpol-1	
Step 3	guest-lan enable-session-timeout Example: Device(config-wireless-policy)#guest-lan enable-session-timeout	Enables the client session timeout on the guest LAN.
Step 4	session-timeout timeout-duration Example: Device(config-wireless-policy)#session-timeout 1000	Configures the client session timeout in seconds. The valid range is between 0 and 86400 seconds.

Global Configuration (GUI)

Procedure

-
- Step 1** Choose **Administration > User Administration**.
 - Step 2** Click **Add**.
 - Step 3** Enter the **Username**, **Password** and **Confirm Password**.
 - Step 4** Choose the desired value from the **Policy** and **Privilege** drop-down lists.
 - Step 5** Click **Apply to Device**.
 - Step 6** Choose **Administration > Management > HTTP/HTTPS/Netconf**.
 - Step 7** In the **HTTP/HTTPS Access Configuration** settings, enable or disable the **HTTP Access**, **HTTPS Access** and **Personal Identity Verification** toggle buttons.
 - Step 8** Enter the **HTTP Port** and **HTTPS Port**.
 - Step 9** Click **Apply**.
-

Verifying Wired Guest Configurations

To validate the wireless configuration, use the following command:

```
Device# wireless config validate
```

```
Wireless Management Trustpoint Name: 'WLC-29c_WLC_TP'  
Trustpoint certificate type is WLC-SSC  
Wireless management trustpoint config is valid
```

```
Jan 22 07:49:15.371: %CONFIG_VALIDATOR_MESSAGE-5-EWLC_GEN_ERR: Chassis 1 R0/0: wncmgrd:  
Error in No record found for VLAN 9, needed by Guest-LAN open-wired
```

To display the summary of all Guest-LANs, use the following command:

Device# **show guest-lan summary**

Number of Guest LANs: 1

GLAN	GLAN Profile Name	Status
1	wired_guest_open	UP

To view the detailed output of all Guest-LANs, use the following command:

Device# **show guest-lan all**

```

Guest-LAN Profile Name      : open
=====
Guest-LAN ID                : 1
Wired-Vlan                  : 200
Status                      : Enabled
Number of Active Clients    : 1
Max Associated Clients      : 2000
Security
  WebAuth                   : Enabled
  Webauth Parameter Map    : global
  Webauth Authentication List : LWA-AUTHENTICATION
  Webauth Authorization List : LWA-AUTHENTICATION

```

To view the guest-LAN configuration by ID, use the following command:

Device# **show guest-lan id 1**

```

Guest-LAN Profile Name      : open
=====
Guest-LAN ID                : 1
Wired-Vlan                  : 200
Status                      : Enabled
Number of Active Clients    : 1
Max Associated Clients      : 2000
Security
  WebAuth                   : Enabled
  Webauth Parameter Map    : global
  Webauth Authentication List : LWA-AUTHENTICATION
  Webauth Authorization List : LWA-AUTHENTICATION

```

To view the guest-LAN configuration by profile name, use the following command:

Device# **show guest-lan name open**

```

Guest-LAN Profile Name      : open
=====
Guest-LAN ID                : 1
Wired-Vlan                  : 200
Status                      : Enabled
Number of Active Clients    : 1
Max Associated Clients      : 2000
Security
  WebAuth                   : Enabled
  Webauth Parameter Map    : global
  Webauth Authentication List : LWA-AUTHENTICATION
  Webauth Authorization List : LWA-AUTHENTICATION

```

To view the guest-LAN map summary, use the following command:

Device# **show wireless guest-lan-map summary**

Number of Guest-Lan Maps: 2

WLAN Profile Name	Policy Name
open_wired_guest	open_wired_guest
lwa_wired_guest	lwa_wired_guest

To view the active clients, use the following command:

Device# **show wireless client summary**

Number of Local Clients: 1

MAC Address	AP Name	Type	ID	State
Protocol Method	Role			
000a.bd15.0001	N/A	GLAN	1	Run
802.3	Web Auth	Export		Foreign

To view the detailed information about a client by MAC address, use the following command:

Device# **show wireless client mac-address 3383.0000.0001 detail**

```
Client MAC Address : 3383.0000.0001

Wired Guest Access—Use Cases

This feature while performing as a guest access feature can be used to meet different requirements. Some of the possibilities are shared here.

Scenario One—Equipment Software Update

This feature can be configured to allow the wired port to connect to the manufacture or vendor website for equipment maintenance, software, or firmware updates.

Scenario Two—Video Streaming

This feature can be configured to allow devices that are connected to a wired port to stream video to visitor information screens.
