Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

First Published: 2022-11-30

Americas Headquarters

Cisco Systems, Inc. 170 West Tasman Drive San Jose, CA 95134-1706 USA http://www.cisco.com Tel: 408 526-4000 800 553-NETS (6387) Fax: 408 527-0883 THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

All printed copies and duplicate soft copies of this document are considered uncontrolled. See the current online version for the latest version.

Cisco has more than 200 offices worldwide. Addresses and phone numbers are listed on the Cisco website at www.cisco.com/go/offices.

The documentation set for this product strives to use bias-free language. For purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on standards documentation, or language that is used by a referenced third-party product.

Cisco and the Cisco logo are trademarks or registered trademarks of Cisco and/or its affiliates in the U.S. and other countries. To view a list of Cisco trademarks, go to this URL: https://www.cisco.com/c/en/us/about/legal/trademarks.html. Third-party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Cisco and any other company. (1721R)

Document Conventions

This document uses the following conventions:

Convention	Description
^ or Ctrl	Both the ^ symbol and Ctrl represent the Control (Ctrl) key on a keyboard. For example, the key combination ^D or Ctrl-D means that you hold down the Control key while you press the D key. (Keys are indicated in capital letters but are not case sensitive.)
bold font	Commands and keywords and user-entered text appear in bold font.
Italic font	Document titles, new or emphasized terms, and arguments for which you supply values are in <i>italic</i> font.
Courier font	Terminal sessions and information the system displays appear in courier font.
Bold Courier font	Bold Courier font indicates text that the user must enter.
[x]	Elements in square brackets are optional.
	An ellipsis (three consecutive nonbolded periods without spaces) after a syntax element indicates that the element can be repeated.
	A vertical line, called a pipe, indicates a choice within a set of keywords or arguments.
[x y]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
$\{x \mid y\}$	Required alternative keywords are grouped in braces and separated by vertical bars.

Convention	Description
$[x \{y z\}]$	Nested set of square brackets or braces indicate optional or required choices within optional or required elements. Braces and a vertical bar within square brackets indicate a required choice within an optional element.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.
<>	Nonprinting characters such as passwords are in angle brackets.
[]	Default responses to system prompts are in square brackets.
!,#	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

Reader Alert Conventions

This document may use the following conventions for reader alerts:

Note Means reader take note. Notes contain helpful suggestions or references to material not covered in the manual.

\mathcal{P}

Tip Means the following information will help you solve a problem.

Â

Caution

Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

()

Timesaver

Means the described action saves time. You can save time by performing the action described in the paragraph.

A

Warning IMPORTANT SAFETY INSTRUCTIONS

Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Read the installation instructions before using, installing, or connecting the system to the power source. Use the statement number provided at the end of each warning statement to locate its translation in the translated safety warnings for this device. Statement 1071

SAVE THESE INSTRUCTIONS

Related Documentation

Note

Before installing or upgrading the deviceCiscoEmbedded Wireless Controller, refer to the release notes.

Note

The documentation set for this product strives to use bias-free language. For purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on RFP documentation, or language that is used by a referenced third-party product.

Communications, Services, and Additional Information

- To receive timely, relevant information from Cisco, sign up at Cisco Profile Manager.
- To get the business impact you're looking for with the technologies that matter, visit Cisco Services.
- To submit a service request, visit Cisco Support.
- To discover and browse secure, validated enterprise-class apps, products, solutions, and services, visit Cisco DevNet.
- To obtain general networking, training, and certification titles, visit Cisco Press.
- To find warranty information for a specific product or product family, access Cisco Warranty Finder.

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a gateway to the Cisco bug-tracking system, which maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. The BST provides you with detailed defect information about your products and software.

Documentation Feedback

To provide feedback about Cisco technical documentation, use the feedback form available in the right pane of every online document.

Using the Command-Line Interface

• Information About Using the Command-Line Interface, on page 2

Information About Using the Command-Line Interface

Note Search options on the GUI and CLI are case sensitive.

Command Modes

The Cisco IOS user interface is divided into many different modes. The commands available to you depend on which mode you are currently in. Enter a question mark (?) at the system prompt to obtain a list of commands available for each command mode.

You can start a CLI session through a console connection, through Telnet, an SSH, or by using the browser.

When you start a session, you begin in user mode, often called user EXEC mode. Only a limited subset of the commands are available in user EXEC mode. For example, most of the user EXEC commands are one-time commands, such as **show** commands, which show the current configuration status, and **clear** commands, which clear counters or interfaces. The user EXEC commands are not saved when the device reboots.

To have access to all commands, you must enter privileged EXEC mode. Normally, you must enter a password to enter privileged EXEC mode. From this mode, you can enter any privileged EXEC command or enter global configuration mode.

Using the configuration modes (global, interface, and line), you can make changes to the running configuration. If you save the configuration, these commands are stored and used when the device reboots. To access the various configuration modes, you must start at global configuration mode. From global configuration mode, you can enter interface configuration mode and line configuration mode .

This table describes the main command modes, how to access each one, the prompt you see in that mode, and how to exit the mode.

Mode	Access Method	Prompt	Exit Method	About This Mode
User EXEC	Begin a session using Telnet, SSH, or console.	Device>	Enter logout or quit .	Use this mode to Change terminal settings. Perform basic tests. Display system information.

Table 1: Command Mode Summary

I

Mode	Access Method	Prompt	Exit Method	About This Mode
Privileged EXEC	While in user EXEC mode, enter the enable command.	Device#	Enter disable to exit.	Use this mode to verify commands that you have entered. Use a password to protect access to this mode.
Global configuration	While in privileged EXEC mode, enter the configure command.	Device(config)#	To exit to privileged EXEC mode, enter exit or end , or press Ctrl-Z .	Use this mode to configure parameters that apply to the entire device.
VLAN configuration	While in global configuration mode, enter the vlan <i>vlan-id</i> command.	Device(config-vlan)#	To exit to global configuration mode, enter the exit command. To return to privileged EXEC mode, press Ctrl-Z or enter end .	Use this mode to configure VLAN parameters. When VTP mode is transparent, you can create extended-range VLANs (VLAN IDs greater than 1005) and save configurations in the device startup configuration file.
Interface configuration	While in global configuration mode, enter the interface command (with a specific interface).	Device (config-if) #	To exit to global configuration mode, enter exit . To return to privileged EXEC mode, press Ctrl-Z or enter end .	Use this mode to configure parameters for the Ethernet ports.
Line configuration	While in global configuration mode, specify a line with the line vty or line console command.	Device(config-line)#	To exit to global configuration mode, enter exit . To return to privileged EXEC mode, press Ctrl-Z or enter end .	Use this mode to configure parameters for the terminal line.

Understanding Abbreviated Commands

You need to enter only enough characters for the device to recognize the command as unique.

This example shows how to enter the **show configuration** privileged EXEC command in an abbreviated form:

Device# show conf

No and Default Forms of Commands

Almost every configuration command also has a **no** form. In general, use the **no** form to disable a feature or function or reverse the action of a command. For example, the **no shutdown** interface configuration command reverses the shutdown of an interface. Use the command without the keyword **no** to reenable a disabled feature or to enable a feature that is disabled by default.

Configuration commands can also have a **default** form. The **default** form of a command returns the command setting to its default. Most commands are disabled by default, so the **default** form is the same as the **no** form. However, some commands are enabled by default and have variables set to certain default values. In these cases, the **default** command enables the command and sets variables to their default values.

CLI Error Messages

This table lists some error messages that you might encounter while using the CLI to configure your device.

Error Message	Meaning	How to Get Help
<pre>% Ambiguous command: "show con"</pre>	You did not enter enough characters for your device to recognize the command.	Reenter the command followed by a question mark (?) without any space between the command and the question mark.
		The possible keywords that you can enter with the command appear.
<pre>% Incomplete command.</pre>	You did not enter all of the keywords or values required by this command.	Reenter the command followed by a question mark (?) with a space between the command and the question mark.
		The possible keywords that you can enter with the command appear.
<pre>% Invalid input detected at `^' marker.</pre>	You entered the command incorrectly. The caret (^) marks	Enter a question mark (?) to display all of the commands that are available in this command mode.
	the point of the error.	The possible keywords that you can enter with the command appear.

Table 2: Common CLI Error Messages

Configuration Logging

You can log and view changes to the device configuration. You can use the Configuration Change Logging and Notification feature to track changes on a per-session and per-user basis. The logger tracks each configuration command that is applied, the user who entered the command, the time that the command was entered, and the parser return code for the command. This feature includes a mechanism for asynchronous notification to registered applications whenever the configuration changes. You can choose to have the notifications sent to the syslog.

Note

Only CLI or HTTP changes are logged.

Using the Help System

You can enter a question mark (?) at the system prompt to display a list of commands available for each command mode. You can also obtain a list of associated keywords and arguments for any command.

SUMMARY STEPS

- 1. help
- **2.** *abbreviated-command-entry* **?**
- **3.** *abbreviated-command-entry* <Tab>
- 4. ?
- **5.** command ?
- **6.** command keyword ?

DETAILED STEPS

	Command or Action	Purpose
Step 1	help	Obtains a brief description of the help system in any
	Example:	command mode.
	Device# help	
Step 2	abbreviated-command-entry?	Obtains a list of commands that begin with a particular
	Example:	character string.
	Device# di ?	
	dir disable disconnect	
Step 3	abbreviated-command-entry <tab></tab>	Completes a partial command name.
	Example:	
	Device# sh conf <tab></tab>	
	Device# show configuration	
Step 4	?	Lists all commands available for a particular command
	Example:	mode.

I

	Command or Action	Purpose
	Device> ?	
Step 5	command ?	Lists the associated keywords for a command.
	Example:	
	Device> show ?	
Step 6	command keyword ?	Lists the associated arguments for a keyword.
	Example:	
	Device(config)# wireless management ? certificate Configure certificate details interface Select an interface to configure transfer Active transfer profiles trustpoint Select a trustpoint to configure

aaa accounting identity

To enable authentication, authorization, and accounting (AAA) for IEEE 802.1x, MAC authentication bypass (MAB), and web authentication sessions, use the **aaa accounting identity** command in global configuration mode. To disable IEEE 802.1x accounting, use the **no** form of this command.

aaa accounting identity {name | default } start-stop { broadcast group {name | radius | tacacs+}
[group {name | radius | tacacs+} ...] | group {name | radius | tacacs+} [group
{name | radius | tacacs+}...] }
no aaa accounting identity {name | default }

Syntax Description	name	Name of a server group. This is optional when keywords.	n you enter it after the broadcast group and group			
	default	Uses the accounting methods that follow as the default list for accounting services.				
	start-stop	• Sends a start accounting notice at the beginning of a process and a stop accounting notice at the end of a process. The start accounting record is sent in the background. The requested-user process begins regardless of whether or not the start accounting notice was received by the accounting server.				
	broadcast	cast Enables accounting records to be sent to multiple AAA servers and send accounting records to the first server in each group. If the first server is unavailable, the uses the list of backup server to identify the first server.				
	group	p Specifies the server group to be used for accounting services. These are valid server group names:				
	• <i>name</i> — Name of a server group.					
		• radius — Lists of all RADIUS hosts.				
		• tacacs + — Lists of all TACACS+ hosts	3.			
		The group keyword is optional when you enter You can enter more than optional group key	er it after the broadcast group and group keywords. word.			
	radius (Optional) Enables RADIUS authorization.					
	tacacs+	(Optional) Enables TACACS+ accounting.				
Command Default	AAA accounting is disabled.					
	Global configuration					
Command History	Release		Modification			
	Cisco IOS	XE Gibraltar 16.12.1	This command was introduced.			
Usage Guidelines		AA accounting identity, you need to enable point in the point of the p				

This example shows how to configure IEEE 802.1x accounting identity:

Device# authentication display new-style

Please note that while you can revert to legacy style configuration at any time unless you have explicitly entered new-style configuration, the following caveats should be carefully read and understood.

- (1) If you save the config in this mode, it will be written to NVRAM in NEW-style config, and if you subsequently reload the router without reverting to legacy config and saving that, you will no longer be able to revert.
- (2) In this and legacy mode, Webauth is not IPv6-capable. It will only become IPv6-capable once you have entered newstyle config manually, or have reloaded with config saved in 'authentication display new' mode.

Device# configure terminal Device(config)# aaa accounting identity default start-stop group radius

aaa accounting update periodic interval-in-minutes

To configure accounting update records intervals, use the **aaa accounting update periodic** command.

aaa accounting update periodic interval-in-minutes [jitter maximum jitter-max-value]

Syntax Description	periodic Send accounting update records at regular intervals.		
	<1-71582>	Periodic intervals to send accounting	update records(in minutes)
	jitter	Set jitter parameters for periodic inter-	val
	maximum	Set maximum jitter value for periodic	interval (in seconds)
	<0-2147483>	Maximum jitter value for periodic inter	rval(in seconds). Default is 300 seconds.
Command Default	None		
Command Modes	Global config	uration (config)	
Command History	Release	Modification	-
	Cisco IOS X 16.12.1	E This command was introduced.	-

Examples

The following example shows how to configure the interval to five minutes at which the accounting records are updated:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# aaa accounting update periodic 5
```

aaa authentication dot1x

To specify the authentication, authorization, and accounting (AAA) method to use on ports complying with the IEEE 802.1x authentication, use the **aaa authentication dot1x** command in global configuration mode . To disable authentication, use the **no** form of this command.

aaa authentication dot1x {default} method1
no aaa authentication dot1x {default} method1

Syntax Description default The default method when a user logs in. Use the listed authentication method that follows this argument. method1 Specifies the server authentication. Enter the **group radius** keywords to use the list of all RADIUS servers for authentication. Note Though other keywords are visible in the command-line help strings, only the default and group radius keywords are supported. **Command Default** No authentication is performed. Global configuration **Command Modes Command History** Release Modification Cisco IOS XE Gibraltar 16.12.1 This command was introduced. The **method** argument identifies the method that the authentication algorithm tries in the specified sequence **Usage Guidelines** to validate the password provided by the client. The only method that is IEEE 802.1x-compliant is the group radius method, in which the client data is validated against a RADIUS authentication server. If you specify group radius, you must configure the RADIUS server by entering the radius-server host global configuration command. Use the **show running-config** privileged EXEC command to display the configured lists of authentication methods. This example shows how to enable AAA and how to create an IEEE 802.1x-compliant authentication list. This authentication first tries to contact a RADIUS server. If this action returns an error, the user is not allowed access to the network. Device (config) # aaa new-model Device (config) # aaa authentication dot1x default group radius

aaa authentication login

To set authentication, authorization, and accounting (AAA) at login, use the **aaa authentication login** command in global configuration mode.

aaa authentication login *authentication-list-name* {**group** }*group-name*

Syntax Description	authentication-list-name	Character string used to name the list of authentication methods activated when a user logs in.	
	<i>group</i> Uses a subset of RADIUS servers for authentication as defined by the server group group-name .		
	group-name	Server group name.	
ommand Default	None		
ommand Modes	Global Configuration		
ommand History	Release	Modification	
	Cisco IOS XE Gibraltar 1	6.12.2s Cisco IOS XE Gibraltar 16.12.1 This command was introduced.	
Examples	The following example sho group type named local in	ows how to set an authentication method list named local_webauth to the local web authentication:	
	Device(config)# aaa authentication login local_webauth local		
	The following example showed authentication:	ows how to set an authentication method to RADIUS server group in local	
	Device(config)# aaa au	thentication login webauth_radius group ISE_group	

aaa authorization

To set the parameters that restrict user access to a network, use the **aaa authorization** command in global configuration mode. To remove the parameters, use the **no** form of this command.

aaa authorization { auth-proxy | cache | commands level | config-commands | configuration
| console | credential-download | exec | multicast | network | onep | policy-if | prepaid
| radius-proxy | reverse-access | subscriber-service | template} { default | list_name }
[method1 [method2 ...]]

Syntax Description	auth-proxy	Runs authorization for authentication proxy services.
	cache	Configures the authentication, authorization, and accounting (AAA) server.
	commands	Runs authorization for all commands at the specified privilege level.
	level	Specific command level that should be authorized. Valid entries are 0 through 15.
	config-commands	Runs authorization to determine whether commands entered in configuration mode are authorized.
	configuration	Downloads the configuration from the AAA server.
	console	Enables the console authorization for the AAA server.
	credential-download	Downloads EAP credential from Local/RADIUS/LDAP.
	exec	Enables the console authorization for the AAA server.
	multicast	Downloads the multicast configuration from the AAA server.
	network	Runs authorization for all network-related service requests, including Serial Line Internet Protocol (SLIP), PPP, PPP Network Control Programs (NCPs), and AppleTalk Remote Access (ARA).
	onep	Runs authorization for the ONEP service.
	reverse-access	Runs authorization for reverse access connections, such as reverse Telnet.
	template	Enables template authorization for the AAA server.
	default	Uses the listed authorization methods that follow this keyword as the default list of methods for authorization.
	list_name	Character string used to name the list of authorization methods.
	method1 [method2]	(Optional) An authorization method or multiple authorization methods to be used for authorization. A method may be any one of the keywords listed in the table below.

Command Default

Authorization is disabled for all actions (equivalent to the method keyword **none**).

Global configuration **Command Modes Command History** Modification Release Cisco IOS XE Gibraltar 16.12.1 This command was introduced. Use the **aaa authorization** command to enable authorization and to create named methods lists, which define **Usage Guidelines** authorization methods that can be used when a user accesses the specified function. Method lists for authorization define the ways in which authorization will be performed and the sequence in which these methods will be performed. A method list is a named list that describes the authorization methods (such as RADIUS or TACACS+) that must be used in sequence. Method lists enable you to designate one or more security protocols to be used for authorization, which ensures a backup system in case the initial method fails. Cisco IOS software uses the first method listed to authorize users for specific network services; if that method fails to respond, the Cisco IOS software selects the next method listed in the method list. This process continues until there is successful communication with a listed authorization method, or until all the defined methods are exhausted. Note The Cisco IOS software attempts authorization with the next listed method only when there is no response from the previous method. If authorization fails at any point in this cycle--meaning that the security server or the local username database responds by denying the user services--the authorization process stops and no other authorization methods are attempted.

If the **aaa authorization** command for a particular authorization type is issued without a specified named method list, the default method list is automatically applied to all interfaces or lines (where this authorization type applies) except those that have a named method list explicitly defined. (A defined method list overrides the default method list.) If no default method list is defined, then no authorization takes place. The default authorization method list must be used to perform outbound authorization, such as authorizing the download of IP pools from the RADIUS server.

Use the **aaa authorization** command to create a list by entering the values for the *list-name* and the *method* arguments, where *list-name* is any character string used to name this list (excluding all method names) and *method* identifies the list of authorization methods tried in the given sequence.

Note In the table that follows, the group *group-name*, group ldap, group radius, and group tacacs+ methods refer to a set of previously defined RADIUS or TACACS+ servers. Use the radius server and tacacs server commands to configure the host servers. Use the aaa group server radius, aaa group server ldap, and aaa group server tacacs+ commands to create a named group of servers.

This table describes the method keywords.

Table 3: aaa authorization Methods

Keyword	Description
cache group-name	Uses a cache server group for authorization.

Keyword	Description
group group-name	Uses a subset of RADIUS or TACACS+ servers for accounting as defined by the server group <i>group-name</i> command.
group ldap	Uses the list of all Lightweight Directory Access Protocol (LDAP) servers for authentication.
group radius	Uses the list of all RADIUS servers for authentication as defined by the aaa group server radius command.
grouptacacs+	Uses the list of all TACACS+ servers for authentication as defined by the aaa group server tacacs + command.
if-authenticated	Allows the user to access the requested function if the user is authenticated.
	Note The if-authenticated method is a terminating method. Therefore, if it is listed as a method, any methods listed after it will never be evaluated.
local	Uses the local database for authorization.
none Indicates that no authorization is perform	

Cisco IOS software supports the following methods for authorization:

- Cache Server Groups—The router consults its cache server groups to authorize specific rights for users.
- If-Authenticated—The user is allowed to access the requested function provided the user has been authenticated successfully.
- Local—The router or access server consults its local database, as defined by the **username** command, to authorize specific rights for users. Only a limited set of functions can be controlled through the local database.
- None—The network access server does not request authorization information; authorization is not performed over this line or interface.
- RADIUS—The network access server requests authorization information from the RADIUS security server group. RADIUS authorization defines specific rights for users by associating attributes, which are stored in a database on the RADIUS server, with the appropriate user.
- TACACS+—The network access server exchanges authorization information with the TACACS+ security daemon. TACACS+ authorization defines specific rights for users by associating attribute-value (AV) pairs, which are stored in a database on the TACACS+ security server, with the appropriate user.

Method lists are specific to the type of authorization being requested. AAA supports five different types of authorization:

- Commands—Applies to the EXEC mode commands a user issues. Command authorization attempts authorization for all EXEC mode commands, including global configuration commands, associated with a specific privilege level.
- EXEC-Applies to the attributes associated with a user EXEC terminal session.
- Network—Applies to network connections. The network connections can include a PPP, SLIP, or ARA connection.

- **Note** You must configure the **aaa authorization config-commands** command to authorize global configuration commands, including EXEC commands prepended by the **do** command.
 - Reverse Access—Applies to reverse Telnet sessions.
 - Configuration-Applies to the configuration downloaded from the AAA server.

When you create a named method list, you are defining a particular list of authorization methods for the indicated authorization type.

Once defined, the method lists must be applied to specific lines or interfaces before any of the defined methods are performed.

The authorization command causes a request packet containing a series of AV pairs to be sent to the RADIUS or TACACS daemon as part of the authorization process. The daemon can do one of the following:

- Accept the request as is.
- Make changes to the request.
- Refuse the request and authorization.

For a list of supported RADIUS attributes, see the module RADIUS Attributes. For a list of supported TACACS+ AV pairs, see the module TACACS+ Attribute-Value Pairs.

Note

Five commands are associated with privilege level 0: **disable**, **enable**, **exit**, **help**, and **logout**. If you configure AAA authorization for a privilege level greater than 0, these five commands will not be included in the privilege level command set.

The following example shows how to define the network authorization method list named mygroup, which specifies that RADIUS authorization will be used on serial lines using PPP. If the RADIUS server fails to respond, local network authorization will be performed.

Device(config)# aaa authorization network mygroup group radius local

aaa authorization credential download default

To set an authorization method list to use local credentials, use the **aaa authorization credential download default** command in global configuration mode.

 aaa authorization credential download default
 group-name

 Syntax Description
 group-name
 Server group name.

 Command Default
 None

The following example shows how to set an authorization method list to use local credentials: Device(config) # aaa authorization credential-download default local

aaa group server Idap

To configure a AAA server group, use the aaa group server ldap command.

aaa group server ldap group-name

Command Default None

Command Modes Global configuration (config)

Command History

ReleaseModificationCisco IOS XE Gibraltar 16.12.1This command was
introduced.

This example shows how to configure a AAA server group:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# aaa new-model Device(config)# aaa group server ldap name1 Device(config-ldap-sg)# server server1 Device(config-ldap-sg)# exit

I

aaa group server radius

To group different RADIUS server hosts into distinct lists and distinct methods, use the aaa group server radius command in global configuration mode.

aaa group server radius group-name

Syntax Description	group-name Character string used to name the group of servers.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release Modification	
	Cisco IOS XE 16.12.1 This command was introduced.	
Usage Guidelines	The authentication, authorization, and accounting (AAA) server-group feature introduces a way to grout existing server hosts. The feature enables you to select a subset of the configured server hosts and use the for a particular service.	-
	A group server is a list of server hosts of a particular type. Currently supported server host types are RADIUS server hosts. A group server is used in conjunction with a global server host list. The group server lists the IP addresses of the selected server hosts.	
	The following example shows how to configure an AAA group server named ISE_Group that comprises three member servers:	
	Device (config) # and energy and inc TOP Group	

Device(config) # aaa group server radius ISE_Group

aaa local authentication default authorization

To configure local authentication method list, use the **aaa local authentication default authorization** command.

	aaa local authentication def	fault authorization [method-list-name default]
Syntax Description	<i>method-list-name</i> Name of the n list.	method
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure local authentication method list to the default list:

```
Device# configure terminal
```

Enter configuration commands, one per line. End with CNTL/Z. Device(config)# aaa local authentication default authorization default

aaa new-model

To enable the authentication, authorization, and accounting (AAA) access control model, issue the **aaa new-model** command in global configuration mode. To disable the AAA access control model, use the **no** form of this command.

aaa new-model no aaa new-model

Syntax Description This command has no arguments or keywords.

Command Default AAA is not enabled.

Command Modes Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Usage Guidelines

This command enables the AAA access control system.

If the **login local** command is configured for a virtual terminal line (VTY), and the **aaa new-model** command is removed, you must reload the to get the default configuration or the **login** command. If the is not reloaded, the defaults to the **login local** command under the VTY.

Ś

Note We do not recommend removing the aaa new-model command.

The following example shows this restriction:

```
Device(config)# aaa new-model
Device(config)# line vty 0 15
Device(config-line)# login local
Device(config)# no aaa new-model
Device(config)# no aaa new-model
Device(config)# exit
Device# show running-config | b line vty
line vty 0 4
login local !<=== Login local instead of "login"
line vty 5 15
login local
!</pre>
```

Examples

The following example initializes AAA:

Device(config)# aaa new-model
Device(config)#

Related Commands

I

Command	Description
aaa accounting	Enables AAA accounting of requested services for billing or security purposes.
aaa authentication arap	Enables an AAA authentication method for ARAP using TACACS+.
aaa authentication enable default	Enables AAA authentication to determine if a user can access the privileged command level.
aaa authentication login	Sets AAA authentication at login.
aaa authentication ppp	Specifies one or more AAA authentication method for use on serial interfaces running PPP.
aaa authorization	Sets parameters that restrict user access to a network.

aaa server radius dynamic-author

To configure a device as an authentication, authorization, and accounting (AAA) server to facilitate interaction with an external policy server, use the **aaa server radius dynamic-author**command in global configuration mode. To remove this configuration, use the **no** form of this command.

aaa server radius dynamic-author no aaa server radius dynamic-author

Syntax Description This command has no arguments or keywords.

Command Default The device will not function as a server when interacting with external policy servers.

Command Modes Global configuration

Command History	Release	Modification
	12.2(28)SB	This command was introduced.
	12.4	This command was integrated into Cisco IOS Release 12.4.
	Cisco IOS XE Release 2.6	This command was integrated into Cisco IOS XE Release 2.6.
	12.2(5)SXI	This command was integrated into Cisco IOS Release 12.2(5)SXI.
	15.2(2)T	This command was integrated into Cisco IOS Release 15.2(2)T.
	Cisco IOS XE 16.12.1	This command was introduced.

Usage Guidelines

s Dynamic authorization allows an external policy server to dynamically send updates to a device. Once the **aaa server radius dynamic-author** command is configured, dynamic authorization local server configuration mode is entered. Once in this mode, the RADIUS application commands can be configured.

Dynamic Authorization for the Intelligent Services Gateway (ISG)

ISG works with external devices, referred to as policy servers, that store per-subscriber and per-service information. ISG supports two models of interaction between the ISG device and external policy servers: initial authorization and dynamic authorization.

The dynamic authorization model allows an external policy server to dynamically send policies to the ISG. These operations can be initiated in-band by subscribers (through service selection) or through the actions of an administrator, or applications can change policies on the basis of an algorithm (for example, change session quality of service (QoS) at a certain time of day). This model is facilitated by the Change of Authorization (CoA) RADIUS extension. CoA introduced peer-to-peer capability to RADIUS, enabling ISG and the external policy server each to act as a RADIUS client and server.

Examples

The following example configures the ISG to act as a AAA server when interacting with the client at IP address 10.12.12.12:

aaa server radius dynamic-author

client 10.12.12.12 key cisco message-authenticator ignore

Related Commands

I

Command	Description
auth-type (ISG)	Specifies the server authorization type.
client	Specifies a RADIUS client from which a device will accept CoA and disconnect requests.
default	Sets a RADIUS application command to its default.
domain	Specifies username domain options.
ignore	Overrides a behavior to ignore certain paremeters.
port	Specifies a port on which local RADIUS server listens.
server-key	Specifies the encryption key shared with RADIUS clients.

aaa session-id

To specify whether the same session ID will be used for each authentication, authorization, and accounting (AAA) accounting service type within a call or whether a different session ID will be assigned to each accounting service type, use the **aaa session-id** command in global configuration mode. To restore the default behavior after the **unique** keyword is enabled, use the **no** form of this command.

aaa session-id [{common|unique}] no aaa session-id [unique]

Syntax Description common unique		(Optional) Ensures that all session identification (ID) information that is sent out for a given call will be made identical. The default behavior is common .
		(Optional) Ensures that only the corresponding service access-requests and accounting-requests will maintain a common session ID. Accounting-requests for each service will have a different session ID.

Command Default The **common**keyword is enabled.

Command Modes

Global configuration

Command History	Release	Modification
	12.2(4)B	This command was introduced.
	12.2(8)T	This command was integrated into Cisco IOS Release 12.2(8)T.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
	Cisco IOS XE 16.12.1	This command was integrated in Cisco IOS XE 16.12.1.

Usage Guidelines

The **common**keywordbehaviorallows the first session ID request of the call to be stored in a common database; all proceeding session ID requests will retrieve the value of the first session ID. Because a common session ID is the default behavior, this functionality is written to the system configuration after the **aaa new-model**command is configured.

Note Th

The router configuration will always have either the **aaa session-id common** or the **aaa session-id unique** command enabled; it is not possible to have neither of the two enabled. Thus, the **no aaa session-id unique** command will revert to the default functionality, but the **no aaa session-id common** command will not have any effect because it is the default functionality.

The **unique** keyword behavior assigns a different session ID for each accounting type (Auth-Proxy, Exec, Network, Command, System, Connection, and Resource) during a call. To specify this behavior, the unique keyword must be specified. The session ID may be included in RADIUS access requests by configuring the **radius-server attribute 44 include-in-access-req**command. The session ID in the access-request will be the same as the session ID in the accounting request for the same service; all other services will provide unique session IDs for the same call.

Examples

The following example shows how to configure unique session IDs:

```
aaa new-model
aaa authentication ppp default group radius
radius-server host 10.100.1.34
radius-server attribute 44 include-in-access-req
aaa session-id unique
```

Related Commands	Command	Description
	aaa new model	Enables AAA.
	radius-server attribute 44 include-in-access-req	Sends RADIUS attribute 44 (Accounting Session ID) in access request packets before user authentication (including requests for preauthentication).

aaa-override

To enable AAA override, use the **aaa-override** command. To disable AAA override, use the **no** form of this command.

aaa-override

no aaa-override

Syntax Description This command has no keywords or arguments.

Command Default AAA is disabled by default.

Command Modes Wireless policy configuration

Command History	Release	Modification	
Cisco IOS XE Gibraltar 16.10.1		This command was introduced.	

This example shows how to enable AAA:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile policy policy-test Device(config-wireless-policy)# aaa-override

aaa-policy

To map a AAA policy in a WLAN policy profile, use the aaa-policy command.

aaa-policy aaa-policy-name

Syntax Description	<i>aaa-policy-name</i> Name of the <i>A</i> policy.	AAA
Command Default	None	
Command Modes	config-wireless-policy	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to map a AAA policy in a WLAN policy profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy policy-name
Device(config-wireless-policy)# aaa-policy aaa-policy-name
```

aaa-realm enable

To enable AAA RADUIS selection by realm, use the aaa-realm enable command.

	aaa-realm enable				
Command Default	IIt None				
Command Modes	config-aaa-policy	config-aaa-policy			
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.			

Examples

The following example shows how to enable AAA RADIUS section by realm:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless aaa policy aaa-profile-name
Device (config-aaa-policy)# aaa-realm enable
```

absolute-timer

To enable an absolute timeout for subscriber sessions, use the **absolute-timer** command in service template configuration mode. To disable the timer, use the **no** form of this command.

absolute-timer *minutes* no absolute-timer

Syntax Description	<i>minutes</i> Maximum session duration, in minutes. Range: 1 to 65535. Default: 0, which disables the timer.				
Command Default	Disabled (the absol	Disabled (the absolute timeout is 0).			
Command Modes	Service template co	nfiguration (config-service-templat	e)		
Command History	Release	Modification			
	Cisco IOS XE Rele	ase 3.2SE This command was intro	duced.		
Usage Guidelines			of minutes that a subscriber session can remain active. ess of establishing its connection as if it were a new		
Examples	The following exan named SVC_3:	nple shows how to set the absolute t	imeout to 15 minutes in the service template

	event absolute-tin	neout	Specifies the type of event that triggers actions in a control policy if conditions are met.		
	inactivity-timer		Enables an inactivity timeout for subscriber sessions.		
	show service-temp	plate	Displays configuration information for service templates.		

access-list

To add an access list entry, use the **access-list** command.

```
access-list {1-99 100-199 1300-1999 2000-2699 } [sequence-number] { deny | permit } { hostname-or-ip-addr [{wildcard-bits | log}] | any [log] | host hostname-or-ip-addr log} | { remark [line] }
```

Syntax Description	<i>1-99</i> Configures IP standard access list.				
	100-199 Configures IP extended access list.				
	1300-1999	Configures IP standard access list (expanded range). Configures IP extended access list (expanded range). Sequence number of the ACL entry. Valid range is 1 to 2147483647. Configures packets to be rejected. Configures packets to be forwarded.			
	2000-2699				
	sequence-number				
	deny				
	permit				
	hostname-or-ip-addrHostname or the IP address to match.wildcard-bitsWildcard bits to match the IP address.				
				log	Configures log matches against this entry. Any source host. A single host address. Configures ACL entry comment.
		any			
	host				
	remark				
	<i>line</i> The ACL entry comment.				
Command Default	None				
Command Modes	Global Config				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XI Gibraltar 16.10.1.				

Examples

The following example shows how to add an access list entry:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# access-list 1 permit any

access-list acl-ace-limit

To set the maximum configurable ace limit for all ACLs, use the access-list acl-ace-limit command.

access-list acl-ace-limit max-ace-limit

Syntax Description	<i>max-ace-limit</i> Maximum number of ace limit for all ACLs. Valid range is 1 to 4294967295				
Command Default	None				
Command Modes	Global configuration (config)				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.			

Examples

The following example shows how to set the maximum configurable ace limit for all ACLs to 100:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# access-list acl-ace-limit 100
```

accounting-list

To configure RADIUS accounting servers on , use the **accounting-list** command. To disable RADIUS server accounting, use the **no** form of this command.

accounting-list radius-server-acct no accounting-list

Syntax Description	radius-server-acct	Accounting RADIUS server name.	-
Command Default	RADIUS server accou	unting is disabled by default.	
Command Modes	-		
Command History	Release	Modification	
	Cisco IOS XE 16.12.1	1 This command was introduced.	
Usage Guidelines	You must disable the W on how to disable a W	-	See Related Commands section for more information
	This example shows h	now to configure RADIUS server a	accounting on :
	Device# configure Enter configuration Device(config)# Device accounting-1 Device	n commands, one per line. Er	nd with CNTL/Z.
	This example shows h	now to disable RADIUS server acc	counting on :
	Device# configure Enter configuration Device(config)# Device no accountin e Device	n commands, one per line. En	nd with CNTL/Z.

acl-policy

To configure an access control list (ACL) policy, use the acl-policy command.

acl-policy acl-policy-name

Syntax Descriptionacl-policy-nameName of the ACL
policy.

Command Default None

Command Modes config-wireless-flex-profile

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE	
		Gibraltar 16.10.1.	

Examples

The following example shows how to configure an ACL policy name:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile flex default-flex-profile Device(config-wireless-flex-profile)# acl-policy my-acl-policy

active-query timer

To configure mDNS global active query, use the **active-query timer** command. To disable the command use the **no** form of this command.

active-query timer 15 - 120

no active-query timer 15 - 120

Syntax Description	active-query timer Configures the mDNS global active query timer.		
	15 - 120	Specifies the active query periodicity in mi	nutes. The default is 30 minutes.
Command Default	None		
Command Modes	Global configuration		
Command History	Release	Modification	
	Cisco IOS XE Amsterd	lam 17.3.1 This command was introduced.	
Usage Guidelines	None		

Example

The following example shows how to configure mDNS global active query:

Device(config-mdns-sd)# active-query timer 60

address

To specify the IP address of the Rivest, Shamir, and Adelman (RSA) public key of the remote peer that you will manually configure in the keyring, use the **address** command inrsa-pubkey configuration mode. To remove the IP address, use the **no** form of this command.

address *ip-address* no address *ip-address*

Syntax Description	ip-address	IP address of the remote peer.

Command Default No default behavior or values

Command Modes

Command

Rsa-pubkey configuration

l History	Release	Modification
	11.3 T	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.28X	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
	Cisco IOS XE Release 2.6	This command was integrated into Cisco IOS XE Release 2.6.
	Cisco IOS XE 16.12.1	This command was integrated into Cisco ISO XE 16.12.1

Usage Guidelines Before you can use this command, you must enter the rsa-pubkey command in the crypto keyring mode.

Examples

The following example specifies the RSA public key of an IP Security (IPSec) peer:

```
Router (config) # crypto keyring vpnkeyring
Router (conf-keyring) # rsa-pubkey name host.vpn.com
Router (config-pubkey-key) # address 10.5.5.1
Router (config-pubkey) # key-string
Router (config-pubkey) # 00302017 4A7D385B 1234EF29 335FC973
Router (config-pubkey) # 2DD50A37 C4F4B0FD 9DADE748 429618D5
Router (config-pubkey) # 18242BA3 2EDFBDD3 4296142A DDF7D3D8
Router (config-pubkey) # 18242BA3 2EDFBDD3 4296142A DDF7D3D8
Router (config-pubkey) # 08407685 2F2190A0 0B43F1BD 9A8A26DB
Router (config-pubkey) # 07953829 791FCDE9 A98420F0 6A82045B
Router (config-pubkey) # 90288A26 DBC64468 7789F76E EE21
Router (config-pubkey) # quit
Router (config-pubkey-key) # exit
Router (config-pubkey-key) # exit
```

Related Commands	Command	Description
	crypto keyring	Defines a crypto keyring to be used during IKE authentication.
	key-string	Specifies the RSA public key of a remote peer.
	rsa-pubkey	Defines the RSA manual key to be used for encryption or signatures during IKE authentication.

address prefix

To specify an address prefix for address assignment, use the **address prefix** command in interface configuration mode. To remove the address prefix, use the **no** form of this command.

address prefix ipv6-prefix [lifetime {valid-lifetime preferred-lifetime | infinite}] no address prefix

Syntax Description	ipv6-prefix		IPv6 address prefix.			
	lifetime {valid-lifetime preferred-lifetime infinite}]		(Optional) Specifies a time interval (in seconds) that an IPv6 address prefix remains in the valid state. If the infinite keyword is specified, the time interval does not expire.			
Command Default	No IPv6 address	IPv6 address prefix is assigned.				
Command Modes	DHCP pool configuration (config-dhcpv6)					
Command History	Release Mod	ification				
	12.4(24)T This	command was introc	luced.			
Usage Guidelines	You can use the address prefix command to configure one or several address prefixes in an IPv6 DHCP pool configuration. Each time the IPv6 DHCP address pool is used, an address will be allocated from each of the address prefixes associated with the IPv6 DHCP pool.					
Examples	The following example shows how to configure a pool called engineering with an IPv6 address prefix:					
	Router(config)# ipv6 dhcp pool engineering Router(config-dhcpv6)# address prefix 2001:1000::0/64 lifetime infinite					
Related Commands	Command	Description				
	ipv6 dhcp pool		Configures a DHCPv6 server configuration information pool and enters DHCPv6 pool configuration mode.			

allow at-least min-number at-most max-number

To limit the number of multicast RAs per device per throttle period in an RA throttler policy, use the **allow at-least** *min-number* **at-most** *max-number* command.

allow at-least *min-number* at-most {*max-number* | no-limit}

Syntax Description	at-least min-number	Enter the minimum guaranteed number of multicast RAs per router before throttling can be enforced. Valid range is 0 to 32.
	at-most max-number	Enter the maximum number of multicast RAs from router by which throttling is enforced. Valid range is 0 to 256.
	at-most no-limit	No upper bound at the router level.
Command Default	None	
Command Modes	config-nd-ra-throttle	
Command History	Release	Modification
	Cisco IOS XE Gibral	tar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to limit the number of multicast RAs per device per throttle period in an RA throttler policy:

```
Device# configure terminal
```

```
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ipv6 nd ra-throttler policy ra-throttler-policy-name
Device(config-nd-ra-throttle)# allow at-least 5 at-most 10
```

ap

To configure cisco APs, use the **ap** command.

ap mac-address

Syntax Description	mac-address Ethernet MAG	C address of the AP.
Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE Everest 16.6.1	This command was introduced.
Usage Guidelines	none.	

Example

The following example shows how to configure a Cisco AP: Device (config) # ap F866.F267.7DFB

ap auth-list

	e	authorization list, use the ap auth-list command in the global configuration mode. To prization list, use the no form of this command.
	ap auth-list {autho	orize-mac authorize-serialNum method-list method-list-name }
	no ap auth-list {au	uthorize-mac authorize-serialNum method-list method-list-name }
Syntax Description	authorize-mac	Configures the AP authorization policy with MAC.
	auhorize-serialNum	m Configures the AP authorization policy with the serial number.
	method-list	Configures the AP authorization method list.
	method-list-name	Indicates the method list name.
Command Default	None	
Command Modes	Global configuration	n (config)
Command History	Release	Modification
	Cisco IOS XE Gibral	altar 16.11.1 This command was introduced.

Example

I

The following example shows how to configure the AP authorization policy with serial number:

Device(config) #ap auth-list authorize-serialNum

ap auth-list ap-cert-policy allow-mic-ap

To enable the AP certificate policy during CAPWAP-DTLS handshake, use the **ap auth-list ap-cert-policy allow-mic-ap** command, in the global configuration mode. To disable the AP certificate policy during CAPWAP-DTLS handshake, use the **no** form of this command.

ap auth-list ap-cert-policy allow-mic-ap

no ap auth-list ap-cert-policy allow-mic-ap

This command has no arguments or keywords.

Command Modes Global configuration (config)

Syntax Description

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to configure AP certificate policy during CAPWAP-DTLS handshake:

Device# configure terminal Device(config)# ap auth-list ap-cert-policy Device(config)# ap auth-list ap-cert-policy allow-mic-ap

ap auth-list ap-cert-policy allow-mic-ap trustpoint

To configure the trustpoint name for the controller certificate chain, use the **ap auth-list ap-cert-policy allow-mic-ap trustpoint** command, in the global configuration mode. To disable the feature, use the **no** form of the command.

ap auth-list ap-cert-policy allow-mic-ap trustpoint

no ap auth-list ap-cert-policy allow-mic-ap trustpoint

Syntax Description	trustpoint-name Specifies the	trustpoint name for the wireless controller certificate chain.
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to the trustpoint name for the controller certificate chain:

```
Device# configure terminal
Device(config)# ap auth-list ap-cert-policy
Device(config)# ap auth-list ap-cert-policy allow-mic-ap trustpoint trustpoint-name
```

ap auth-list ap-cert-policy mac-address MAC-address | serial-number AP-serial-number policy-type mic

To configure the AP certificate policy based on the Ethernet MAC address or based on the assembly serial number of the AP, use the **ap auth-list ap-cert-policy** {**mac-address** H.H.H | **serial-number** AP-serial-number} **policy-type mic** command. Use the **no** form of this command to disable the feature.

ap auth-list ap-cert-policy { mac-address *H.H.H* | serial-number *AP-serial-number* } policy-type mic

no ap auth-list ap-cert-policy { **mac-address** *H.H.H* | **serial-number** *AP-serial-number* } **policy-type mic**

	· · · · · · · · · · · · · · · · · · ·	
Syntax Description	ap auth-list	Configure the authorization list of the Access Point.
	ap-cert-policy	Specifies the AP Certificate Policy during CAPWAP DTLS.
	mac-address MAC-address	Configures AP cert policy based on Ethernet MAC.
	serial-number AP-serial-number	Configure AP cert policy based on Serial Number.
	policy-type	Configures AP certificate policy type.
	mic	Selects MIC AP policy.
Command Madaa	Global configuration (config)	

Command Modes Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to configure the AP certificate policy based on the Ethernet MAC address or based on the assembly serial number of the AP:

```
Device# configure terminal
Device(config)# ap auth-list ap-cert-policy mac-address 10.1.1 policy-type mic
Device(config)# ap auth-list ap-cert-policy serial-number ap-serial-number policy-type mic
```

ap auth-list ap-policy

To configure authorization policy for all Cisco lightweight access points joined to the device, use the **ap auth-list ap-policy** command. To disable authorization policy for all Cisco lightweight access points joined to the device, use the **no** form of this command.

ap auth-list ap-policy {authorize-ap | lsc | mic | ssc} no ap auth-list ap-policy {authorize-ap | lsc | mic | ssc}

Syntax Description	authorize-ap	Enables the authorization policy.	
	lsc	Enables access points with locally signif	cant certificates to connect.
	mic	Enables access points with manufacture-i	nstalled certificates to connect.
	SSC	Enables access points with self signed ce	rtificates to connect.
Command Default	None		
Command Modes	Global configu	ration	
Command History	Release		Modification
	Cisco IOS XE	16.12.1	This command was introduced
	-	hows how to enable the access point autho () # ap auth-list ap-policy authorize	
	This example s	hows how to enable access points with loc	ally significant certificates to connect:

This example shows how to enable access points with manufacture-installed certificates to connect: Device(config) # ap auth-list ap-policy mic

This example shows how to enable access points with self-signed certificates to connect: Device(config) # ap auth-list ap-policy ssc

ap capwap retransmit

To configure Control and Provisioning of Wireless Access Points (CAPWAP) control packet retransmit count and control packet retransmit interval under the AP profile, use the **ap capwap retransmit** command.

ap profile default-ap-profile

ap capwap retransmit {count retransmit-count | interval retransmit-interval}

Syntax Description	count <i>retransmit-count</i> Specifies the access point CAPWAP control packet retransmit c		es the access point CAPWAP control packet retransmit count.	
		Note	The count is from 3 to 8 seconds.	
	interval retransmit-interval	Specifi	es the access point CAPWAP control packet retransmit interval.	
		Note	The interval is from 2 to 5 seconds.	
Command Default	None			
Command Modes	AP profile configuration (conf	fig-ap-pr	ofile)	
Command History	Release		Modification	
	Cisco IOS XE Gibraltar 16.12	2.1	This command was introduced	
	This example shows how to configure the CAPWAP control packet retransmit count for an access point:			
	Device(config)# ap profile default-ap-profile			
	This example shows how to configure the CAPWAP control packet retransmit interval for an access point:			
			p retransmit count 3	

ap capwap timers

To configure advanced timer settings under the AP profile mode, use the ap capwap timers command.

ap profile default-ap-profile

ap capwap timers {discovery-timeout seconds | fast-heartbeat-timeout local seconds | heartbeat-timeout seconds | primary-discovery-timeout seconds | primed-join-timeout seconds}

Syntax Description	discovery-timeout	Specifies the Cisco lightweight access point discovery timeout.			
		Note	The Cisco lightweight access point discovery timeout is how long a Cisco device waits for an unresponsive access point to answer before considering that the access point failed to respond.		
	seconds	Cisco lightweight access point discovery timeout from 1 to 10 seconds.			
		Note	The default is 10 seconds.		
	fast-heartbeat-timeout local		Enables the fast heartbeat timer that reduces the amount of time it takes to detec a device failure for local or all access points.		
	seconds		neartbeat interval (from 1 to 10 seconds) that reduces the amount of time to detect a device failure.		
		Note	The fast heartbeat time-out interval is disabled by default.		
	heartbeat-timeout	Specifies the Cisco lightweight access point heartbeat timeout.			
		Note	The Cisco lightweight access point heartbeat timeout controls how often the Cisco lightweight access point sends a heartbeat keep-alive signal to the Cisco device.		
			This value should be at least three times larger than the fast heartbeat timer.		
	seconds	Cisco li	ightweight access point heartbeat timeout value from 1 to 30 seconds.		
		Note	The default is 30 seconds.		
	primary-discovery-timeout	the amo	es the access point primary discovery request timer. The timer determines bunt of time taken by an access point to discovery the configured primary, ary, or tertiary device.		
	seconds	Access	point primary discovery request timer from 30 to 3600 seconds.		
		Note	The default is 120 seconds.		

l

	primed-join-timeout	Specifies the authentication timeout. Determines the time taken by an access point to determine that the primary device has become unresponsive. The access point makes no further attempts to join the device until the connection to the device is restored.			
	seconds	Authentication response timeout from 120 to 43200 seconds.			
		Note The default is 120 seconds.			
Command Default	None				
Command Modes	AP profile mode (config-a	ap-profile)			
Command History	Release	Modification			
	Cisco IOS XE Gibraltar	16.12.1This command was introduced.

ap country

To configure one or more country codes for a device, use the **ap country** command.

	ap country country-code	
Syntax Description	<i>country-code</i> Two-letter or three-letter country cod	de or several country codes separated by a comma.
Command Default	US (country code of the United States of America).	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.1	This command has been deprecated.
		NoteFrom Cisco IOS XE Amsterdam 17.3.1 onwards, the command ap country is deprecated and renamed as wireless country <1 country code>, where you can enter country codes for more than 20 countries. Although the existing command ap country is still functional, it is recommended that you use the wireless country <1 country code> command.

Usage Guidelines

The Cisco device must be installed by a network administrator or qualified IT professional and the installer must select the proper country code. Following installation, access to the unit should be password protected by the installer to maintain compliance with regulatory requirements and to ensure proper unit functionality. See the related product guide for the most recent country codes and regulatory domains.

This example shows how to configure country codes on the device to IN (India) and FR (France):

Device(config) # ap country IN, FR

ap dot11

To configure Spectrum Intelligence (SI) on Qualcomm based 2.4 GHz or 5 GHz radios, use the **ap dot11 SI** command.

ap dot11 {24ghz | 5ghz } SI

Syntax Description	24ghz 2.4 GHz radio	
	5ghz 5 GHz radio	
	SI Enable Spectrum Intellig SI.	ence (SI). [no] in the command disasbles
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable SI on 5GHz radio:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 5ghz SI
```

L

ap dot11 24ghz | 5ghz | 6ghz rrm channel-update mesh

To initiate update of the 802.11a, 802.11b, and 802.11 6GHz channel selection for every mesh Cisco AP, use the **ap dot11** {**24ghz** | **5ghz** | **6ghz**} **rrm channel-update mesh**

AP

ap dot11 { 24ghz | 5ghz | 6ghz } rrm channel-update mesh

Syntax Description This command has no keywords or arguments.

Command Default None

Command History

Command Modes Privileged EXEC(#)

ReleaseModificationCisco IOS XE Cupertino 17.9.1This command was
introduced.

Example

The example shows how to initiate update of the 802.11a, 802.11b, and 802.11 6GHz channel selection for every mesh Cisco AP:

Device# ap dot11 5ghz rrm channel-update mesh

ap dot11 24ghz | 5ghz | 6ghz rrm channel-update mesh bridge-group

To initiate the update of the 802.11, 802.11a, or 802.11b channel selection for mesh AP in the bridge group, use the **ap dot11 {24ghz | 5ghz | 6ghz} channel-update mesh bridge-group**

ap dot11 { 24ghz | 5ghz | 6ghz } rrm channel-update mesh channel-update mesh bridge-group bridge-group-name

Syntax Description	bridge-group-name Specific	es the name of the bridge group.
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification

Example

This example shows how to initiate the update of the 802.11, 802.11a, or 802.11b channel selection for mesh AP in the bridge group:

Device# ap dot11 5ghz rrm channel-update mesh bridge-group cisco-bridge-group

ap dot11 24ghz | 5ghz rrm ndp-mode

To configure the operating mode for 802.11a neighbor discovery, use the **ap dot11** {**24ghz** | **5ghz**} **rrm ndp-mode** command.

	ap dot11 {	24ghz 5ghz }	rrm ndp-mode	{ auto	off-channel }
Syntax Description	auto	Enables the auto m	node.		
	off-channel	Enables NDP pack	ets on RF ASIC ra	dio.	
Command Modes	Global confi	guration (config)			
Command History	Release		Modification		
	Cisco IOS X	E Bengaluru 17.5.1	This command w introduced.	vas	

Example

The following example shows how to configure the operating mode for 802.11a neighbor discovery:

Device# configure terminal Device(config)# ap dot11 24ghz or 5ghz rrm ndp-mode auto

ap dot11 24ghz cleanair

To enable CleanAir for detecting 2.4-GHz devices, use the **ap dot11 24ghz cleanair** command in global configuration mode. To disable CleanAir for detecting 2.4-GHz devices, use the **no** form of this command.

ap dot11 24ghz cleanair

Syntax Description	This command has no arguments or keywords.	
Command Default	Disabled.	
Command Modes	Global configuration (config).	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Usage Guidelines	You must enable this CleanAir command before yo	u configure other CleanAir commands.
	This example shows how to enable CleanAir for 2.4	4-GHz devices:
	Device(config)# ap dot11 24ghz cleanair	

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap dot11 24ghz dot11g

To enable the Cisco wireless LAN solution 802.11g network, use the **ap dot11 24ghz dot11g** command. To disable the Cisco wireless LAN solution 802.11g network, use the **no** form of this command.

ap dot11 24ghz dot11g no ap dot11 24ghz dot11g

Syntax Description	This command has no keywords and arguments.	
Command Default	Enabled	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.
Usage Guidelines	Before you enter the ap dot11 24ghz dot11g command 24ghz shutdown command.	, disable the 802.11 Cisco radio with the ap dot11
	After you configure the support for the 802.11g networl enable the 802.11 2.4 Ghz radio.	c, use the no ap dot11 24ghz shutdown command to
	This example shows how to enable the 802.11g network	k:
	Device(config)# ap dot11 24ghz dot11g	

ap dot11 24ghz rate

To configure 802.11b operational rates, use the **ap dot11 24ghz rate** command.

ap dot11 24ghz rate {RATE_11M | RATE_12M | RATE_18M | RATE_1M | RATE_24M | RATE_2M | RATE_36M | RATE_48M | RATE_54M | RATE_5_5M | RATE_6M | RATE_9M} {disable | mandatory | supported}

	_		
Syntax Description	RATE_11M	Configures the da	ata to be transmitted at the rate of 11 Mbps
	RATE_12M	Configures the da	ata to be transmitted at the rate of 12 Mbps
	RATE_18M	Configures the da	ata to be transmitted at the rate of 18 Mbps
	RATE_1M	Configures the da	ata to be transmitted at the rate of 1 Mbps
	RATE_24M	Configures the da	ata to be transmitted at the rate of 24 Mbps
	RATE_2M	Configures the da	ata to be transmitted at the rate of 2 Mbps
	RATE_36M	Configures the da	ata to be transmitted at the rate of 36 Mbps
	RATE_48M	Configures the da	ata to be transmitted at the rate of 48 Mbps
	RATE_54M	Configures the da	ata to be transmitted at the rate of 54 Mbps
	RATE_5_5M	Configures the da	ata to be transmitted at the rate of 5.5 Mbps
	RATE_6M	Configures the da	ata to be transmitted at the rate of 6 Mbps
	RATE_9M	Configures the da	ata to be transmitted at the rate of 9 Mbps
	disable	Disables the data for communication	rate that you specify. Also defines that the clients specify the data rates used on.
	mandatory	Defines that the o	clients support this data rate in order to associate with an AP.
	supported		lients support this data rate can communicate with the AP using this rate. ents are not required to use this rate to associate with the AP.
Command Default	None		
Command Modes	Global config	uration (config)	
Command History	Release		Modification
	Cisco IOS XE	E Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure 802.11b operational rate to 9 Mbps and make it mandatory:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap dot11 24ghz rate RATE_9M mandatory

ap dot11 rrm channel cleanair-event

To configure CleanAir event-driven Radio Resource Management (RRM) parameters for all 802.11 Cisco lightweight access points, use the **ap dot11 rrm channel cleanair-event** command. When this parameter is configured, CleanAir access points can change their channel when a source of interference degrades the operations, even if the RRM interval has not expired yet.

ap dot11 {24ghz | 5ghz} rrm channel {cleanair-event sensitivity value}

Syntax Description	24ghz	Specifies the 2.4 GHz band.				
	5ghz	Specifies the 5 GHz band.				
	sensitivity	ensitivity Sets the sensitivity for CleanAir event-driven RRM.				
	value	Sensitivity value. You can specify any one of the following three optional sensitivity value				
		• low—Specifies low sensitivity.				
		• medium—Specifies medium sensitivity.				
		• high—Specifies high sensitivity.				
Command Default	None					
Command Modes	Global confi	iguration				
Command History	Release	Modification				
	Cisco IOS 2	XE 16.12.1 This command was introduced	l.			

This example shows how to set the high sensitivity for CleanAir event-driven RRM:

Device (config) # ap dot11 24ghz rrm channel cleanair-event sensitivity high

default ap dot11 24ghz cleanair device

To configure the default state of report generation for 2.4-GHz interference devices, use the **default ap dot11 24ghz cleanair device** command in global configuration mode.

Syntax Description	canopy	Configures the alarm for canopy interference devices.
	cont-tx	Configures the alarm for continuous transmitters.
	dect-like	Configures the alarm for Digital Enhanced Cordless Communication (DECT)-like phones.
	inv	Configures the alarm for devices using spectrally inverted Wi-Fi signals.
	jammer	Configures the alarm for jammer interference devices.
	nonstd	Configures the alarm for devices using nonstandard Wi-Fi channels
	superag	Configures the alarm for 802.11 SuperAG interference devices.
	tdd-tx	Configures the alarm for Time Division Duplex (TDD) transmitters.
	video	Configures the alarm for video cameras.
	wimax-fixed	Configures the alarm for WiMax fixed interference devices.
	wimax-mobile	Configures the alarm for WiMax mobile interference devices.
	report	Displays the device alarm report.
	si_fhss	Specifies the QCA SI FHSS.
Command Default	The alarm for Wi-Fi inverted devices is enabled. The alarm	n for all other devices is disabled.
Command Modes	Global configuration (config).	

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	You must enable CleanAir using the ap dot11 24ghz cleanair command before you configure this command.		
-	This example shows how to enable CleanAir to report	t when a video camera interferes:	
	Device(config)# default ap dotl1 24ghz cleana	air device video	

ap dot11 24ghz rrm channel cleanair-event

To enable Event-Driven RRM (EDRRM) and the sensitivity for 2.4-GHz devices, use the **ap dot11 24ghz rrm channel cleanair-event** command in global configuration mode. To disable EDRRM, use the **no** form of this command.

ap dot11 24ghz rrm channel cleanair-event sensitivity {high | low | medium} no ap dot11 24ghz rrm channel cleanair-event [sensitivity{high | low | medium}]

Syntax Description	sensitivity	(Optional) Configures the EDRRM sensitivity of the CleanAir event.
	high	(Optional) Specifies the highest sensitivity to non-Wi–Fi interference as indicated by the air quality (AQ) value.
	low	(Optional) Specifies the least sensitivity to non-Wi–Fi interference as indicated by the AQ value.
	medium	(Optional) Specifies medium sensitivity to non-Wi–Fi interference as indicated by the AQ value.
Command Default	EDRRM is disabled a	and the sensitivity is low.
Command Modes	Global configuration	(config).
Command History	Release	Modification
	Cisco IOS XE 16.12	This command was introduced.
Usage Guidelines	You must enable EDI configure the sensitiv	RRM using the ap dot11 24ghz rrm channel cleanair-event command before you <i>v</i> ity.
	This example shows	how to enable EDRRM and set the EDRRM sensitivity to low:
	· · · ·	o dotl1 24ghz rrm channel cleanair-event o dotl1 24ghz rrm channel cleanair-event sensitivity low

ap dot11 24ghz rrm channel device

To configure persistent non-Wi-Fi device avoidance in the 802.11b channel, use the **ap dot11 24ghz rrm channel device** command in global configuration mode. To disable persistent device avoidance, use the **no** form of this command.

ap dot11 24ghz rrm channel device no ap dot11 24ghz rrm channel device

Syntax Description This command has no arguments or keywords.

Command Default Persistent device avoidance is disabled.

Command Modes Global configuration (config).

 Command History
 Release
 Modification

 Cisco IOS XE 16.12.1
 This command was introduced.

Usage Guidelines CleanAir-capable monitor mode access points collect information about persistent devices on all configured channels and stores the information in the device. Local and bridge mode access points detect interference devices on the serving channels only.

This example shows how to enable persistent device avoidance:

Device (config) # ap dot11 24ghz rrm channel device

ap dot11 24ghz rrm optimized-roam

To configure optimized roaming for 802.11b network, use the **ap dot11 24ghz rrm optimized-roam** command.

ap dot 11 24ghz rrm optimized-roam [data-rate-threshold {11M | 12M | 18M | 1M | 24M | 2M | 36M | 48M | 54M | 5_5M | 6M | 9M | disable}]

Syntax Description	data-rate-threshold	Configures the data rate threshold for 802.11b optimized roaming.
	11M	Sets the data rate threshold for 802.11b optimized roaming to 11 Mbps
	12M	Sets the data rate threshold for 802.11b optimized roaming to of 12 Mbps
	18M	Sets the data rate threshold for 802.11b optimized roaming to of 18 Mbps
	1M	Sets the data rate threshold for 802.11b optimized roaming to of 1 Mbps
	24M	Sets the data rate threshold for 802.11b optimized roaming to of 24 Mbps
	2M	Sets the data rate threshold for 802.11b optimized roaming to of 2 Mbps
	36M	Sets the data rate threshold for 802.11b optimized roaming to of 36 Mbps
	48M	Sets the data rate threshold for 802.11b optimized roaming to of 48 Mbps
	54M	Sets the data rate threshold for 802.11b optimized roaming to of 54 Mbps
	5_5M	Sets the data rate threshold for 802.11b optimized roaming to of 5.5 Mbps
	6M	Sets the data rate threshold for 802.11b optimized roaming to of 6 Mbps
	9M	Sets the data rate threshold for 802.11b optimized roaming to of 9 Mbps
	disable	Disables the data rate threshold.
Command Default	None	
command Modes	Global configuration	(config)
Command History	Release	Modification
	Cisco IOS XE Gibra	tar 16.10.1 This command was introduced in a release earlier than Cisco IC Gibraltar 16.10.1.

Examples

The following example shows how to configure optimized roaming for 802.11b network:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 24ghz rrm optimized-roam
```

ap dot11 24ghz rx-sop threshold

To configure 802.11b radio receiver start-of-packet (RxSOP), use the **ap dot11 24ghz rx-sop threshold** command.

ap dot11 24ghz rx-sop threshold {auto | high | low | medium | custom rxsop-value}

high	Sets the RxSOP value to high threshold (-79 dBm).
medium	Sets the RxSOP value to medium threshold (-82 dBm).
low	Sets the RxSOP value to low threshold (-85 dBm).
custom rxsop-value	Sets the RxSOP value to custom threshold (-85 dBm to -60 dBm)
None	
Global configura	tion (config)
Release	Modification
Cisco IOS XE G	ibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	medium low custom rxsop-value None Global configura

Usage Guidelines RxSOP determines the Wi-Fi signal level in dBm at which an access point's radio demodulates and decodes a packet. Higher the level, less sensitive the radio is and smaller the receiver cell size. The table below shows the RxSOP threshold values for high, medium, low, and custom levels for 2.4-GHz band.

Table 4: RxSOP Thresholds for 2.4-GHz Band

High	Medium	Low	Custom Threshold
Threshold	Threshold	Threshold	
-79 dBm	-82 dBm	-85 dBm	–85 dBm to –60 dBm

Examples

The following example shows how to configure 802.11b radio receiver start-of-packet (RxSOP) value to auto:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 24ghz rx-sop threshold auto
```

ap dot11 24ghz shutdown

To disable 802.11a network, use the ap dot11 24ghz shutdown command.

ap dot11 24ghz shutdown

Command Default None

Command Modes Global configuration (config)

Command History

 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to disable the 802.11a network:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap dot11 24ghz shutdown

ap dot11 5ghz channelswitch quiet

To configure the 802.11h channel switch quiet mode, use the **ap dot11 5ghz channelswitch quiet** command.

ap dot11 5ghz channelswitch quiet

 Command Default
 None

 Command Modes
 Global configuration (config)

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the 802.11h channel switch quiet mode:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap dot11 5ghz channelswitch quiet

ap dot11 5ghz cleanair

To enable CleanAir for detecting 5-GHz devices, use the **ap dot11 5ghz cleanair** command in global configuration mode.

	ap dot11 5ghz cleanair		
Command Default	Disabled.		
Command Modes	Global configuration.		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	You must enable this CleanAir command before you configure other CleanAir commands. This example shows how to enable CleanAir for 5-GHz devices:		
	Device(config)# ap dot11 5ghz cleanair		

I

default ap dot11 5ghz cleanair device

To configure the default state of the alarm for 5-GHz interference devices, use the **default ap dot11 5ghz cleanair device** command in global configuration mode.

default ap dot11 5ghz cleanair device {canopy | cont-tx | dect-like | inv | jammer | nonstd | radar | report | superag | tdd-tx | video | wimax-fixed | wimax-mobile}

Syntax Description	canopy	Configures the alarm for canopy interference devices.				
	cont-tx	Configures the alarm for continuous transmitters.				
	dect-like	Configures the alarm for Digital Enhanced Cordless Communication (DECT)-like phones				
	inv	Configures the alarm for devices using spectrally inverted Wi-Fi signals.				
	jammer	Configures the alarm for jammer interference devices.				
	nonstd	Configures the alarm for devices using nonstandard Wi-Fi channels.				
	radar	Configures the alarm for radars.				
	report	Enables interference device reports.				
	superag	Configures the alarm for 802.11 SuperAG interference devices.				
	tdd-tx	Configures the alarm for Time Division Duplex (TDD) transmitters.				
	video	Configures the alarm for video cameras.				
	wimax-fixed	Configures the alarm for WiMax fixed interference devices.				
	wimax-mobile	Configures the alarm for WiMax mol	bile interference devices.			
Command Default	The alarm for W	i-Fi inverted devices is enabled. The al	arm for all other interference devices is disabled.			
Command Modes	Global configura	tion (config).				
Command History	Release		Modification			
	Cisco IOS XE Gibraltar 16.12.1		This command was introduced.			
Usage Guidelines	You must enable	CleanAir using the ap dot11 5ghz cle	anair command before you configure this command.			
	This example sh	ows how to enable CleanAir to report v	vhen a video camera interferes:			
	Device(config)	# default ap dot11 5ghz cleanair	device video			

ap dot11 5ghz power-constraint

To configure the 802.11h power constraint value, use the **ap dot11 5ghz power-constraint** command. To remove the 802.11h power constraint value, use the **no** form of this command.

ap dot11 5ghz power-constraint value no ap dot11 5ghz power-constraint

Syntax Description	<i>value</i> 802.11h power constraint value.		
	Note	The range is from 0 to 30 dBm.	
Command Default	None		
Command Modes	Global configu	ration	
Command History	Release		Modification
	Cisco IOS XE	Gibraltar 16.12.1	This command was introduced

Device(config) # ap dot11 5ghz power-constraint 5

ap dot11 5ghz rate

	To configure 802.11a operational rates, use the ap dot11 5ghz rate command.			
	. 0	z rate {RATE_12M RATE_18M RATE_6M RATE_9M} {disable	RATE_24M RATE_36M RATE_48M mandatory supported}	
Syntax Description	RATE_12M Co	onfigures the data to be transmitted at	the rate of 12 Mbps	
	RATE_18M Co	onfigures the data to be transmitted at	the rate of 18 Mbps	
	RATE_24M Co	onfigures the data to be transmitted at	the rate of 24 Mbps	
	RATE_36M Co	onfigures the data to be transmitted at	the rate of 36 Mbps	
	RATE_48M Co	onfigures the data to be transmitted at	the rate of 48 Mbps	
	RATE_54M Co	onfigures the data to be transmitted at	the rate of 54 Mbps	
	RATE_6M Co	onfigures the data to be transmitted at	the rate of 6 Mbps	
	RATE_9M Co	onfigures the data to be transmitted at	the rate of 9 Mbps	
		sables the data rate that you specify.	Also defines that the clients specify the data rates used	
	mandatory De	efines that the clients support this data	a rate in order to associate with an AP.	
		upported Any associated clients support this data rate can communicate with the AP using this n However, the clients are not required to use this rate to associate with the AP.		
Command Default	None			
Command Modes	Global configura	ation (config)		
Command History	Release	Modification	-	
	Cisco IOS XE 16.12.1	This command was introduced.	-	

Examples

The following example shows how to configure 802.11a operational rate to 24 Mbps and make it supported:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 5ghz rate RATE_24M supported
```

ap dot11 5ghz rrm channel cleanair-event

To enable Event-Driven RRM (EDRRM) and configure the sensitivity for 5-GHz devices, use the **ap dot11 5ghz rrm channel cleanair-event** command in global configuration mode. To disable EDRRM, use the **no** form of the command.

ap dot11 5ghz rrm channel cleanair-event [sensitivity {high | low | medium}] no ap dot11 5ghz rrm channel cleanair-event [sensitivity {high | low | medium}]

Syntax Description	sensitivity	(Optional) Configures the EDRRM sensitivity of the CleanAir event.		
	high	(Optional) Specifies the highest sensitivity to non-Wi–Fi interference as indicated by the air quality (AQ) value.		
	low (Optional) Specifies the least sensitivity to non-Wi–Fi interference as indicat by the AQ value.			
	medium	(Optional) Specifies medium sensitivity to non-Wi–Fi interference as indicated by the AQ value.		
Command Default	EDRRM is disabled	and the EDRRM sensitivity is low.		
Command Modes	Global configuration	(config).		
Command History	Release	Modification		
	Cisco IOS XE 16.12	2.1 This command was introduced.		
Usage Guidelines	You must enable EDRRM using the ap dot11 5ghz rrm channel cleanair-event command before you configure the sensitivity.			
	This example shows how to enable EDRRM and set the EDRRM sensitivity to high:			
		o dotl1 5ghz rrm channel cleanair-event o dotl1 5ghz rrm channel cleanair-event sensitivity high		

ap dot11 5ghz rrm channel device

To configure persistent non-Wi-Fi device avoidance in the 802.11a channel, use the **ap dot11 5ghz rrm channel device** command in global configuration mode. To disable persistent device avoidance, use the **no** form of this command.

ap dot11 5ghz rrm channel device no ap dot11 5ghz rrm channel device

Syntax Description This command has no arguments or keywords.

Command Default The CleanAir persistent device state is disabled.

Command Modes Global configuration (config)

 Command History
 Release
 Modification

 Cisco IOS XE 16.12.1
 This command was introduced.

Usage Guidelines CleanAir-capable monitor mode access points collect information about persistent devices on all configured channels and stores the information in the device. Local and bridge mode access points detect interference devices on the serving channels only.

This example shows how to enable persistent device avoidance on 802.11a devices:

Device(config)# ap dot11 5ghz rrm channel device

ap dot11 5ghz rrm channel zero-wait-dfs

	To enable thes Zero Wait Dynamic Frequency Selection feature globally on 5-GHz devices, use the ap dot11 5ghz rrm channel zero-wait-dfs command. To disable the feature, use the no form of this command.			
	ap dot11 5ghz rrm channel zero-wait-dfs			
	no ap dot11 5ghz rrm channel zero-wait-dfs			
Syntax Description	This command has no arguments or keywords.			
Command Default	The Zero Wait Dynamic Frequency Selection feature is not enabled.			
Command Modes	Global configuration (config)			
Command History	Release	Modification		
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.		
Usage Guidelines	This command is applicable only on 5-GHz devices.			
Examples	The following example shows how to enable the Zero Wait Dynamic Frequency Selection feature on 5-GHz devices:			
	Device# configure terminal Device(config)# ap dot11 5ghz rrm channel zero-wait-dfs			

ap dot11 5ghz rx-sop threshold

To configure 802.11a radio receiver start-of-packet (RxSOP), use the **ap dot11 5ghz rx-sop threshold** command.

ap dot11 5ghz rx-sop threshold {auto | high | low | medium | custom rxsop-value}

Syntax Description	auto	Reverts RxSOP value to the default value.	
	high	Sets the RxSOP value to high threshold (-76 dBm).	
	medium	Sets the RxSOP value to medium threshold (-78 dBm).	
	low	Sets the RxSOP value to low threshold (-80 dBm).	
	custom <i>rxsop-value</i>	Sets the RxSOP value to custom threshold (-85 dBm to -60 dBm)	
Command Default	None		
Command Modes	config		
Command History	Release	Modification	
	Cisco IOS XE 16.12.1	This command was introduced.	

Usage Guidelines RxSOP determines the Wi-Fi signal level in dBm at which an access point's radio demodulates and decodes a packet. Higher the level, less sensitive the radio is and smaller the receiver cell size. The table below shows the RxSOP threshold values for high, medium, low, and custom levels for 5-GHz band.

Table 5: RxSOP Thresholds for 5-GHz Band

High	Medium	Low	Custom Threshold
Threshold	Threshold	Threshold	
-76 dBm	–78 dBm	-80 dBm	–85 dBm to –60 dBm

Examples

The following example shows how to configure 802.11b radio receiver start-of-packet (RxSOP) value to a custom value of -70 dBm:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 24ghz rx-sop threshold custom -70
```

ap dot11 5ghz shutdown

To disable 802.11a network, use the ap dot11 5ghz shutdown command.

ap dot11 5ghz shutdown

 Command Default
 None

 Command Modes
 Global configuration (config)

 Command History

 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to disable the 802.11a network:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap dot11 5ghz shutdown

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap dot11 5ghz smart-dfs

To configure to use nonoccupancy time for radar interference channel, use the **ap dot11 5ghz smart-dfs** command.

ap dot11 5ghz smart-dfs

Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to configure to use nonoccupancy time for radar interference channel:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap dot11 5ghz smart-dfs
```

ap dot11 beaconperiod

To change the beacon period globally for 2.4 GHz or 5 GHz bands, use the ap dot11 beaconperiod command.

-	Note Disable the	e 802.11 network before using this command. See the	e "Usage Guidelines" section.	
	ap dot11 {24g	ghz 5ghz} beaconperiod time		
Syntax Description	24ghz	Specifies the settings for 2.4 GHz band.		
	5ghz	Specifies the settings for 5 GHz band.		
	beaconperiod	Specifies the beacon for a network globally.		
	time	Beacon interval in time units (TU). One TU is 1024 to 1000.	4 microseconds. The range is from 20	
Command Default	None			
Command Modes	Global configuration			
Command History	Release		Modification	
	Cisco IOS XE	16.12.1	This command was introduced.	
Usage Guidelines	In Cisco wireless LAN 802.11 networks, all Cisco lightw at regular intervals. This beacon notifies clients that the synchronize with the lightweight access point.			
	dot11 {24ghz	nge the beacon period, make sure that you have disab 5ghz } shutdown command. After changing the beaco dot11 { 24ghz 5ghz } shutdown command.		
	This example sh	nows how to configure the 5 GHZ band for a beacon	period of 120 time units:	
	Device(config)	Device(config)# ap dot11 5ghz beaconperiod 120		

ap dot11 cac media-stream

To configure media stream Call Admission Control (CAC) voice and video quality parameters for 2.4 GHz and 5 GHz bands, use the **ap dot11 cac media-stream** command.

ap dot11 {24ghz | 5ghz} cac media-stream multicast-direct {max-retry-percent retryPercent | min-client-rate{eighteen | eleven | fiftyFour | fivePointFive | fortyEight | nine | oneFifty | oneFortyFourPointFour | oneThirty | oneThirtyFive | seventyTwoPointTwo | six | sixtyFive | thirtySix | threeHundred | twelve | twentyFour | two | twoSeventy}}

Syntax Description	24ghz	Specifies the 2.4 GHz band.
	5ghz	Specifies the 5 GHz band.
	multicast-direct	Specifies CAC parameters for multicast-direct media streams.
	max-retry-percent	Specifies the percentage of maximum retries that are allowed for multicast-direct media streams.
	retryPercent	Percentage of maximum retries that are allowed for multicast-direct media streams.
		Note The range is from 0 to 100.
	min-client-rate	Specifies the minimum transmission data rate to the client for multicast-direct media streams (rate at which the client must transmit in order to receive multicast-direct unicast streams).
		If the transmission rate is below this rate, either the video will not start or the client may be classified as a bad client. The bad client video can be demoted for better effort QoS or subject to denial.

min-client-rate	You can choose the following rates:
	• eighteen
	• eleven
	• fiftyFour
	• fivePointFive
	• fortyEight
	• nine
	• one
	• oneFifty
	• oneFortyFourPointFour
	• oneThirty
	• oneThirtyFive
	• seventyTwoPointTwo
	• six
	• sixtyFive
	• thirtySix
	• threeHundred
	• twelve
	• twentyFour
	• two
	• twoSeventy
	for the maximum retry percent is 80. If it exceeds 80, either the video will not start or the ssified as a bad client. The bad client video will be demoted for better effort QoS or is
Global configuration	on
	The default value f client might be clas subject to denial.

Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.
Usage Guidelines	CAC commands require that the WLAN you are plannin (WMM) protocol.	ng to modify is configured for the Wi-Fi Multimedia
	Defere you can configure CAC peremeters on a network	you must complete the following propaguisites:

Before you can configure CAC parameters on a network, you must complete the following prerequisites:

• Disable all WLANs with WMM enabled by entering the wlan wlan_name shutdown command.

- Disable the radio network you want to configure by entering the **ap dot11** {**24ghz** | **5ghz**} **shutdown** command.
- Save the new configuration.
- Enable voice or video CAC for the network you want to configure by entering the **ap dot11** {**24ghz** | **5ghz**} **cac voice acm** or **ap dot11** {**24ghz** | **5ghz**} **cac video acm** commands.

This example shows how to configure the maximum retry percent for multicast-direct media streams as 90 on a 802.11a network:

Device (config) # ap dot11 5ghz cac media-stream multicast max-retry-percent 90

ap dot11 cac multimedia

To configure multimedia Call Admission Control (CAC) voice and video quality parameters for 2.4 GHz and 5 GHz bands, use the **ap dot11 cac multimedia** command.

ap dot11 {24ghz | 5ghz} cac multimedia max-bandwidth bandwidth

Syntax Description	24ghz	Specifies the 2.4 GHz band.	
	5ghz	Specifies the 5 GHz band.	
	max-bandwidth	Specifies the percentage of maximum b clients for voice and video applications	pandwidth allocated to Wi-Fi Multimedia (WMM) as on the 2.4 GHz or 5 GHz band.
	<i>bandwidth</i> Percentage of the maximum bandwidth allocated to WMM clients for voice and vide applications on the 802.11a or 802.11b/g network. Once the client reaches the specific value, the access point rejects new multimedia flows this radio band. The range is from 5 to 85%.		b/g network. Once the client reaches the specified
Command Default	The default value i	is 75%.	
Command Modes	Global configuration	on	
Command History	Release		Modification
	Cisco IOS XE 16.	12.1	This command was introduced.
Usage Guidelines	CAC commands require that the WLAN you are planning to modify is configured for the Wi-Fi Multimedia (WMM) protocol.		
	Before you can configure CAC parameters on a network, you must complete the following prerequisites:		
	• Disable all WLANs with WMM enabled by entering the wlan wlan_name shutdown command.		
	• Disable the radio network you want to configure by entering the ap dot11 { 24ghz 5ghz } shutdown command.		
	• Save the new configuration.		
	• Enable voice or video CAC for the network you want to configure by entering the ap dot11 { 24ghz 5ghz } cac voice acm or ap dot11 { 24ghz 5ghz } cac video acm commands.		
		ice acm or ap dot11 {24ghz 5ghz} cac	c video acm commands.
	5ghz} cac voi This example show		maximum bandwidth allocated to WMM

ap dot11 cac voice

To configure Call Admission Control (CAC) parameters for the voice category, use the **ap dot11 cac voice** command.

ap dot11 {24ghz|5ghz} cac voice{acm | load-based | max-bandwidth value | roam-bandwidth value | sip [bandwidth bw] sample-interval value | stream-size x max-streams y | tspec-inactivity-timeout{enable | ignore}}

Syntax Description	24ghz	Specifies the 2.4 GHz band.
	5ghz	Specifies the 5 GHz band.
	acm	Enables bandwidth-based voice CAC for the 2.4 GHz or 5 GHz band.
		Note To disable bandwidth-based voice CAC for the 2.4 GHz or 5 GHz band, use the no ap dot11 {24ghz 5ghz} cac voice acm command.
	load-based	Enable load-based CAC on voice access category.
		NoteTo disable load-based CAC on voice access category for the 2.4 GHz or 5 GHz band, use the no ap dot11 {24ghz 5ghz} cac voice load-based command.
	max-bandwidth	Sets the percentage of the maximum bandwidth allocated to clients for voice applications on the 2.4 GHz or 5 GHz band.
	value	Bandwidth percentage value from 5 to 85%.
	roam-bandwidth	Sets the percentage of the CAC maximum allocated bandwidth reserved for roaming voice clients on the 2.4 GHz or 5 GHz band.
	value	Bandwidth percentage value from 0 to 85%.
	sip	Specifies the CAC codec name and sample interval as parameters and calculates the required bandwidth per call for the 802.11 networks.

bw	Bandwidth in kbps. The following bandwidth values specify parameters for the SIP codecs:	
	• 64kbps—Specifies CAC parameters for the SIP G711 codec.	
	• 8kbps—Specifies CAC parameters for the SIP G729 codec.	
	Note The default value is 64 Kbps.	
sample-interval	Specifies the packetization interval for SIP codec.	
value	Packetization interval in msecs. The sample interval for SIP codec value is 20 seconds.	
stream-size	Specifies the number of aggregated voice Wi-Fi Multimedia (WMM) traffic specification (TSPEC) streams at a specified data rate for the 2.4 GHz or 5 GHz band.	
x	Stream size. The range of the stream size is from 8400 to 92100.	
max-streams	Specifies the maximum number of streams per TSPE	
у	Number (1 to 5) of voice streams.	
	Note The default number of streams is 2 and the mean data rate of a stream is 84 kbps.	
tspec-inactivity-timeout	Specifies TSPEC inactivity timeout processing mode	
	Note Use this keyword to process or ignore the Wi-Fi Multimedia (WMM) traffic specifications (TSPEC) inactivity timeout received from an access point. When the inactivity timeout is ignored, a client TSPEC is not deleted even if the access point reports an inactivity timeout for that client.	
enable	Processes the TSPEC inactivity timeout messages.	
ignore	Ignores the TSPEC inactivity timeout messages.	
	Note The default is ignore (disabled).

ap dot11 cleanair

To configure CleanAir on 802.11 networks, use the **ap dot11 cleanair** command. To disable CleanAir on 802.11 networks, use the **no** form of this command.

ap dot11 {24ghz | 5ghz} cleanair no ap dot11 {24ghz | 5ghz} cleanair

Syntax Description	24ghz Spe	ecifies the 2.4 GHz band.	
	5ghz Spe	ecifies the 5 GHz band.	
	cleanair Spe	ecifies CleanAir on the 2.4 GHz or 5 GHz band.	
Command Default Disabled			
Command Modes	Global configuration		
Command History	Release		Modification
	Cisco IOS XE	16.12.1	This command was introduced.

This example shows how to enable the CleanAir settings on the 2.4 GHz band:

Device(config) # ap dot11 24ghz cleanair

ap dot11 cleanair device

To configure CleanAir interference device types, use the **ap dot11 cleanair device** command.

ap dot11 24ghz cleanair device [{canopy|cont-tx|dect-like|inv|jammer|nonstd|report|si_fhss |superag|tdd-tx|video|wimax-fixed|wimax-mobile}]

Syntax Description	canopy	Specifies the Canopy devices.	
	cont-tx	Specifies the continuous transmitter.	
	dect-like	Specifies a Digital Enhanced Cordless Communication (DECT)-like phone.	
	inv	Specifies the devices using spectrally inverted Wi-Fi signals.	
	jammer	Specifies the jammer.	
	nonstd	Specifies the devices using nonstandard Wi-Fi channels.	
	superag Specifies 802.11 SuperAG devices.		
	tdd-tx	Specifies the TDD transmitter.	
	video	Specifies video cameras.	
	wimax-fixed	Specifies a WiMax fixed device.	
	wimax-mobile	Specifies a WiMax mobile device.	
	report	Displays the device alarm report.	
	si_fhss	Specifies the QCA SI FHSS.	
Command Default	None		
Command Modes	Global configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	

Device(config) # ap dot11 24ghz cleanair device report

ap dot11 dot11n

To configure settings for an 802.11n network, use the ap dot11 dot11n command.

 $\begin{array}{l} \textbf{ap dot11} \quad \{\textbf{24ghz} \mid \textbf{5ghz}\} \quad \textbf{dot11n} \quad \{\textbf{a-mpdu tx priority} \mid \textit{priority_value all} \} \mid \textbf{scheduler timeout rt} \\ scheduler_value\} \mid \textbf{a-msdu tx priority} \quad \{\textit{priority_value} \mid \textbf{all}\} \mid \textbf{guard-interval} \quad \{\textbf{any} \mid \textbf{long}\} \mid \textbf{mcs tx} \quad \textit{rate} \mid \textbf{rifs rx}\} \end{array}$

Syntax Description	24ghz	Specifies the 2.4-GHz band.
	5ghz	Specifies the 5-GHz band.
	dot11n	Enables 802.11n support.
	a-mpdu tx priority	Specifies the traffic that is associated with the priority level that uses Aggregated MAC Protocol Data Unit (A-MPDU) transmission.
	priority_value	Aggregated MAC protocol data unit priority level from 0 to 7.
	all	Specifies all of the priority levels at once.
	a-msdu tx priority	Specifies the traffic that is associated with the priority level that uses Aggregated MAC Service Data Unit (A-MSDU) transmission.
	priority_value	Aggregated MAC protocol data unit priority level from 0 to 7.
	all	Specifies all of the priority levels at once.
	scheduler_value	The 802.11n A-MPDU transmit aggregation scheduler timeout value from 1 to 10000 milliseconds.
	guard-interval	Specifies the guard interval.
	any	Enables either a short or a long guard interval.
	long	Enables only a long guard interval.
	mcs tx rate	Specifies the modulation and coding scheme (MCS) rates at which data can be transmitted between the access point and the client.
	rate	Specifies the modulation and coding scheme data rates.
		Note The range is from 0 to 23.
	rifs rx	Specifies the Reduced Interframe Space (RIFS) between data frames.

Command Default	By default, priority 0 is enabled.				
Command Modes	Global configuration				
Command History	Release	Modification			
	Cisco IOS XE 16.12.1	This command was introduced.			
Usage Guidelines	Aggregation is the process of grouping pact The two aggregation methods available are	ket data frames together rather than transmitting them separately.			
	 A-MPDU—This aggregation is performed in the software. A-MSDU—This aggregation is performed in the hardware 				
	Aggregated MAC Protocol Data Unit priority levels assigned per traffic type are as follows:				
	• 0—Best effort				
	• 1—Background

	Device(config)# ap dot11 24ghz dot11n				
	This example shows how to configure all the priority levels at once so that the traffic that is associated with the priority level uses A-MSDU transmission:				
	Device(config)# ap dot11 24ghz dot11n a-msdu tx priority all				
	This example shows how to enable only long guard intervals:				
	Device(config)# ap dot11 24ghz dot11	n guard-interval long			

This example shows how to specify MCS rates:

Device(config) # ap dot11 24ghz dot11n mcs tx 5

This example shows how to enable RIFS:

Device(config)# ap dot11 24ghz dot11n rifs rx

ap dot11 dtpc

To configure Dynamic Transmit Power Control (DTPC) settings, Cisco Client eXtension (CCX) version 5 expedited bandwidth request feature, and the fragmentation threshold on an 802.11 network, use the ap dot11 dtpc command.

ap dot11	$\{24ghz \mid 5ghz\}$	$\{ dtpc \mid exp\text{-}bwreq \mid fragmentation$	threshold}

Syntax Description	24ghz	Specifi	es the 2.4 GHz band.	
	5ghz	Specifies the 5 GHz band.		
	dtpc	Specifi	es Dynamic Transport Power Control (DTPC) settings.	
		Note	This option is enabled by default.	
	exp-bwreq	Specifi feature	es Cisco Client eXtension (CCX) version 5 expedited bandwidth request	
		Note	The expedited bandwidth request feature is disabled by default.	
	fragmentation <i>threshold</i> Specifies the fragmentation threshold.		es the fragmentation threshold.	
		Note	This option can only used be when the network is disabled using the ap dot11 {24ghz 5ghz} shutdown command.	
	threshold Threshold. The range is from 256 to 2346 bytes (inclusive).			
Command Default	None			
Command Modes	Global configuration			
Command History	Release		Modification	
	Cisco IOS XE 16.12.1		This command was introduced.	
Usage Guidelines	When the CCX version 5 e access points for this feature		bandwidth request feature is enabled, the device configures all joining	
	This example shows how to enable DTPC for the 5 GHz band:

Device(config)# ap dot11 5ghz fragmentation 1500

ap dot11 edca-parameters

To enable a specific enhanced distributed channel access (EDCA) profile on the 2.4 GHz or 5 GHz bands, use the **ap dot11 edca-parameters** command. To disable an EDCA profile on the 2.4 GHz or 5 GHz bands, use the **no** form of this command.

ap dot11 { 24ghz | 5ghz } edca-parameters { client-load-based | custom-voice | optimized-video-voice | optimized-voice | svp-voice | wmm-default } no ap dot11 { 24ghz | 5ghz } edca-parameters { client-load-based | custom-voice | fastlane | optimized-video-voice | optimized-voice | svp-voice | wmm-default }

Syntax Description	24ghz	Specifies the 2.4 GHz band.				
	5ghz	Specifies the 5 GHz band. Specifies a specific enhanced distributed channel access (EDCA) profile on the 802.11 networks.				
	edca-parameters					
	fastlane	Enables Fastlane parameters for 24GHz.				
	client-load-based	Enables client load-based EDCA configuration for 802.11 radios.				
	custom-voice Enables custom voice EDCA parameters.					
	optimized-video-voice	Enables EDCA voice- and video-optimized profile parameters. Choose this option when both voice and video services are deployed on your network.				
	optimized-voice	biceEnables EDCA voice-optimized profile parameters. Choose this option when voice services other than SpectraLink are deployed on your network.Enables SpectraLink voice priority parameters. Choose this option if SpectraLink phones are deployed on your network to improve the quality of calls.				
	svp-voice					
	wmm-default	Enables the Wi-Fi Multimedia (WMM) default parameters. Choose this option when voice or video services are not deployed on your network.				
Command Default	wmm-default					
Command Modes	Global configuration					
Command History	Release	Modification				
	Cisco IOS XE 16.12.1	This command was introduced.				
	10.3	The custom-voice keyword was removed for Cisco 5700 Series WLC.				
	Cisco IOS XE Bengalur	The client-load-based keyword was added.				

This example shows how to enable SpectraLink voice priority parameters:

Device(config) # ap dot11 24ghz edca-parameters svp-voice

ap dot11 load-balancing denial

To configure the load balancing denial count, use the **ap dot11 load-balancingdenial** command. To disable load balancing denial count, use the **no** form of the command.

ap dot11 {24ghz | 5ghz } load-balancingdenial count

None		
Global configuration (config)		
Release	Modification	
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
	Global configuration (config) Release	

Example

The following example shows how to configure the load balancing denial count:

Device# configure terminal Device(config)# ap dot11 5ghz load-balancing denial 10

ap dot11 load-balancing window

To configure the number of clients for the aggressive load balancing client window, use the **ap dot11 load-balancingwindow**command. To disable the client count, use the **no** form of the command.

ap dot11 {24ghz | 5ghz } load-balancingwindow clients

Syntax Description	<i>clients</i> Number of clients. Valid range is from 0 to 20.		
Command Default	None		
Command Modes	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	

Example

The following example shows how to configure the number of clients for the aggressive load balancing client window:

Device# configure terminal Device(config)# ap dot11 5ghz load-balancing window 10

ap dot11 rf-profile

To configure an RF-Profile for a selected band, use the **ap dot11 rf-profile** command. To delete an RF-Profile, use the **no** form of this command.

ap dot11 { 24ghz | 5ghz } rf-profile profile name

Syntax Description	24ghz	Displays the 2.4-GHz band	
	5ghz	Displays the 5-GHz band	
	profile name	Name of the RF profile	
Command Default	None		
Command Modes	Global configuration	(config)	
Command History	Release	Modification	
	Cisco IOS XE Denal	i 16.3.1 This command was introduced.	
Usage Guidelines	None		
	This example shows how to configure an RF profile for a selected band.		
	Device# ap dot11 24	GHz rf-profile doctest	

ap dot11 rrm

To configure basic and advanced radio resource management settings for 802.11 devices, use the **ap dot11 rrm** command.

ap dot11 {24ghz|5ghz} rrm {ccx location-measurement sec | channel {cleanair-event | dca | device | foreign | load | noise | outdoor-ap-dca} | coverage {data fail-percentage pct | data packet-count count | data rssi-threshold threshold} | exception global percentage | level global number | voice {fail-percentage percentage | packet-count number | rssi-threshold threshold}}

Syntax Description	ссх	Configures Advanced (RRM)
		802.11 CCX options.
	location-measurement	Specifies 802.11 CCX Client Location Measurements in seconds. The range is between 10 and 32400 seconds.
	channel	Configure advanced 802.11-channel assignment parameters.
	cleanair-event	Configures cleanair event-driven RRM parameters.
	dca	Configures 802.11-dynamic channel assignment algorithm parameters.
	device	Configures persistent non-WiFi device avoidance in the 802.11-channel assignment.
	foreign	Enables foreign AP 802.11-interference avoidance in the channel assignment.
	load	Enables Cisco AP 802.11-load avoidance in the channel assignment.
	noise	Enables non-802.11-noise avoidance in the channel assignment.
	outdoor-ap-dca	Configures 802.11 DCA list option for outdoor AP.
	coverage	Configures 802.11 coverage Hole-Detection.

data fail-percentage <i>pct</i>	Configures 802.11 coverage failure-rate threshold for uplink data packets. The range is betweer 1 and 100
data packet-count count	Configures 802.11 coverage minimum-failure-count threshold for uplinkdata packets.
data rssi-threshold threshold	Configures 802.11 minimum-receive-coverage level for voice packets.
exception global percentage	Configures 802.11 Cisco APs coverage-exception level. The range is between 0 and 100 percent
level global number	Configures 802.11 Cisco AP client-minimum-exception level between 1 and 75 clients.
voice	Configures 802.11 coverage Hole-Detection for voice packets.
fail-percentage percentage	Configures 802.11 coverage failure rate threshold for uplink voice packets.
packet-count number	Configures 802.11 coverage minimum-uplink-failure count threshold for voice packets.
rssi-threshold threshold	Configures 802.11 minimum receive coverage level for voice packets.
Disabled	
Interface configuration	
Release Modification	_

Usage Guidelines This command applies for both 802.11a and 802.11b bands. But the appropriate commands must be chosen for configuring the parameter.

This example shows how to configure various RRM settings.

Cisco IOS XE 16.12.1 This command was introduced.

Device#configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)#ap dot11 5ghz rrm ?

Command Default

Command Modes

Command History

CCX	Configure Advanced(RRM) 802.11a CCX options
channel	Configure advanced 802.11a channel assignment parameters
coverage	802.11a Coverage Hole Detection
group-member	Configure members in 802.11a static RF group
group-mode	802.11a RF group selection mode
logging	802.11a event logging
monitor	802.11a statistics monitoring
ndp-type	Neighbor discovery type Protected/Transparent
profile	802.11a performance profile
tpc-threshold	Configures the Tx Power Control Threshold used by RRM for auto
	power assignment
txpower	Configures the 802.11a Tx Power Level

ap dot11 rrm channel

To enable radio resource management channel for 2.4 GHz and 5GHz devices, use the **ap dot11 rrm channel** command. To disable the radio resource mangement for 2.4 GHz and 5 GHz devices, use the **no** form of the command.

ap dot11 {24ghz | 5ghz} rrm channel {cleanair-event | dca | device | foreign | load | noise} no ap dot11 {24ghz | 5ghz} rrm channel {cleanair-event | dca | device | foreign | load | noise}

Syntax Description	cleanair-event	Specifies the cleanair event-driven RRM parameters			
	dca	dca Specifies the 802.11 dynamic channel assignment algorithm parameters			
	device	Specifies the persistent non-WiFi device avoidance in the 802.11-channel assignment.			
	foreign	Enables foreign AP 802.11-interference avoidance in the channel assignment			
	load	Enables Cisco AP 802.11-load avoidance in the channel assignment.			
	noise Enables non-802.11-noise avoidance in the channel assignment.

		assignment			

ap dot11 rrm channel dca

To configure Dynamic Channel Assignment (DCA) algorithm parameters on 802.11 networks, use the **ap dot11 rrm channel dca** command.

ap dot11 {24ghz | 5ghz} rrm channel dca{add value <1-14> | anchor-time value | global{auto | once} | interval value | min-metric value | remove value <1-14> | sensitivity{high | low | medium}}

Syntax Description	24ghz	Specifies the 2.4 GHz band.	
	5ghz	Specifies the 5 GHz band.	
	add	Adds the 802.11b DCA channels to RRM allowed channel list	
	anchor-time	Specifies the anchor time for DCA.	
	value	Hour of time between 0 and 23. These values represent the hour from 12:00 a.m. to 11:00 p.m.	
	global	Specifies the global DCA mode for the access points in the 802.11 networks.	
	auto	Enables auto-RF.	
	once	Enables one-time auto-RF.	
	interval	Specifies how often the DCA is allowed to run.	
	value	Interval between the times when DCA is allowed to run. Valid values are 0, 1, 2, 3, 4, 6, 8, 12, or 24 hours. 0 is 10 minutes (600 seconds). Default value is 0 (10 minutes).	
	min-metric	Specifies the DCA minimum RSSI energy metric.	
	value	Minimum RSSI energy metric value from -100 to -60.	
	remove	Removes the 802.11b DCA channels from RRM allowed channel list.	
	sensitivity	Specifies how sensitive the DCA algorithm is to environmental changes (for example, signal, load, noise, and interference) when determining whether or not to change channels.	
	high	Specifies that the DCA algorithm is not particularly sensitive to environmental changes. See the "Usage Guidelines" section for more information.	
	low	Specifies that the DCA algorithm is moderately sensitive to environmental changes. See the "Usage Guidelines" section for more information.	
	medium	Specifies that the DCA algorithm is highly sensitive to environmental changes. See the "Usage Guidelines" section for more information.	
Command Default	None		
Command Modes	Global configu	uration	

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	[–] The DCA sensitivity thresholds vary by radio band a	s shown in the table below.	

To aid in troubleshooting, the output of this command shows an error code for any failed calls. The table below explains the possible error codes for failed calls.

Table 6: DCA Sensitivity Threshold

Sensitivity	2.4 Ghz DCA Sensitivity Threshold	5 Ghz DCA Sensitivity Threshold
High	5 dB	5 dB
Medium	15 dB	20 dB
Low	30 dB	35 dB

This example shows how to configure the device to start running DCA at 5 pm for the 2.4 GHz band:

Device(config) # ap dot11 24ghz rrm channel dca anchor-time 17

This example shows how to set the DCA algorithm to run every 10 minutes for the 2.4 GHz band:

Device(config) # ap dot11 24ghz rrm channel dca interval 0

This example shows how to configure the value of DCA algorithm's sensitivity to low on the 2.4 GHz band:

Device(config) # ap dot11 24ghz rrm channel dca sensitivity low

ap dot11 rrm coverage

To enable 802.11 coverage hole detection, use the ap dot11 rrm coverage command.

ap dot11 {24ghz | 5ghz} rrm coverage [{data {fail-percentage percentage | packet-count count | rssi-threshold threshold} | exceptional global value | level global value | voice {fail-percentage percentage | packet-count packet-count | rssi-threshold threshold}}]

data	Specifies 802.11 coverage hole-detection data packets.	
fail-percentage percentage	Specifies 802.11 coverage failure-rate threshold for uplink data packets. The range is between 1 and 100	
packet-count count	Specifies 802.11 coverage minimum-failure-count threshold for uplink data packets.	
rssi-threshold threshold	Specifies 802.11 minimum-receive-coverage level for voice packets.Specifies 802.11 Cisco APs coverage-exception level. The range is between 0 and 100 percent.Specifies 802.11 Cisco AP client-minimum-exception level between 1 and 75 clients.Specifies 802.11 coverage Hole-Detection for voice packets.

	min powerLevel	Configures minimum auto-RF tx power. The range is between -10 to -30.			
	once	Enables one-time auto-RF.			
Command Default	None.				
Command Modes	Interface configuration.				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.12.1 This command was introduced.				
Usage Guidelines	None.				
	This example shows how to enables auto-RF once.				
	-	e terminal tion commands, one per line. End with CNTL/Z. ap dot11 5ghz rrm txpower once			

ap filter

To configure the AP filter and set the priority, use the **ap filter** command.

ap filter { { **name** *filter-name* } **type** { **tag** } | { **priority** *priority-number* | **filter-name** *filter-name* } }

Syntax Description	Parameter	Description			
	priority	Set the priority for a named filter.			
	priority-number	The valid AP filter priority range is 0 to 127.			
	filter-name	Enter the name for the ap filter.			
	type	Type of filter.			
	tagFilter to assign AP Tags. Tag filter may be persistent based on tag persistence on the global configuration.				
Command Default	None				
Command Modes	Global configur	Global configuration (config)			
Command History Release		Modification			
	Cisco IOS XE 16.12.1	This command was introduced.			

Examples

The following example shows how to create a ap filter and set the priority to this filter:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap filter name test-filter
Device(config)# ap filter name test-filter type priming
Device(config)# ap filter priority 12 filter-name test-filter
```

ap fra

To configure flexible radio assignment (FRA) and its parameters, use the **ap fra** command.

ap fra[{interval *no-of-hours* | sensitivity {high | low | medium } | sensor-threshold {balanced | client-preferred | client-priority | sensor-preferred | sensor-priority } | service-priority {coverage | service-assurance}}]

Syntax Description	interval no-of-hor	urs	Enter the number of hours for the FRA interval. Valid range is 1 to 24 hours.		
	sensitivity {high low medium}		Configures the FRA coverage overlap sensitivity as high low, or medium.		
		{balanced client-preferred sensor-preferred	Configures FRA sensor threshold to one of the available options.		
	service-priority {	coverage service-assurance}	Configures FRA service priority to Coverage or Service Assurance.		
Command Default	None				
Command Modes	config				
Command History	Release	Modification			
	Cisco IOS XE 16.12.1	This command was introduced.			
Usage Guidelines		group leader for 802.11b/g and eader has FRA enabled.	d 802.11a bands are same across RF domain and make sure		
	Examples				
	The following example show how to configure the FRA interval to 8 hours:				
	Device# configur	re terminal			

Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap fra interval 8

ap fra 5-6ghz interval

To configure the Flexible Radio Assignment (FRA) 5/6-GHz interval in hours, use the **ap fra 5-6ghz interval** command.

ap fra 5-6ghz interval number-of-hours

Syntax Description	number-of-hours Specifies th	e FRA 5/6-GHz interval in hour	rs. The value range is between 1 to 24 hours.
Command Default	None		
Command Modes	Global Configuration		
Command History	Release	Modification	-
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.	-

Example

This example shows how to configure the Flexible Radio Assignment (FRA) 5/6-GHz interval in hours:

Device(config) # ap fra 5-6ghz interval 12

ap image predownload

To instruct all APs to start image predownload, use the ap image predownload command.

	ap image pre	download {abort	site-tag site-tag-name start	
Syntax Description	abort Instructs all the APs to abort image predownload			
	site-tag	Initiates image predownload parameters.		
	site-tag-name	e Specifies the site-tag name.		
	start	Starts image predownload.		
Command Default	None			
Command Modes	Privileged EX	EC (#)		
Command History	Release		Modification	
	Cisco IOS XI	E Amsterdam 17.1.1s	This command was introduced.	

Example

This example shows how the APs are instructed to start image predownload:

Device#ap image download site-tag *site-tag-name* start

I

ap name antenna band mode

To configure the antenna mode, use the **ap name***ap- name* **antenna-band-mode**{ **single** | **dual** } command.

ap nameap-name antenna-band-mode{single | dual}

Syntax Description	ap- name	Name of the Cisco lightweight access point.	
	antenna-band-mode	Instructs the access point to enable the band mode of antenna.	

Command Default None

Example

This example shows how to configure the antenna band mode of access point.

Deviceap name <ap-name> antenna-band-mode single

ap name ble

To enable the able ltx state on the AP, use the ap name ap name ble command.

ap name *ap_name* antena-band-mode {admin | ibeacon | interval | no-advertisement | sync | vibeacon}

Syntax Description	ap name	AP Name		
	admin	Enables the ble ltx admin state.		
	ibeacon	Enables the BLE LTX iBeacon configuration.		
	interval	Enables the BLE LTX scan configuration interval.mentEnables the BLE LTX No Advertisement.		
	no-advertisement			
	Sync	Sync Enables the BLE LTX synchronize.		
	vibeacon	Enables the BLE LTX viBeacon configuration.		
Command Default	Disabled			
Command Modes	Privileged EXEC (#)	¥)		
Command History	Release	Modification		
	Cisco IOS XE Gibra	altar 16.10.1 This command was introduced.		
Examples	The following exam	nple shows how to enable ble on the AP:		
	Device# ap name t	<i>test</i> ble		

I

ap name clear-personal-ssid

To clear the personal SSID from a Cisco OfficeExtend Access Point (OEAP), use the **ap name clear-personal-ssid** command.

ap name ap-name clear-personal-ssid

<i>ap-name</i> AP name.	
None	
Privileged EXEC	
Release	Modification
Cisco IOS XE 16.12.1	This command was introduced.
	name. None Privileged EXEC Release Cisco IOS XE

Examples

The following example shows how to clear the personal SSID from a Cisco OEAP:

Device# ap name my-oeap clear-personal-ssid

ap name controller

To configure the controller on the AP, use the **ap name** ap name controller command.

ap name *ap_name* controller {primary | secondary | tertiary} *name* {*A.B.C.D | X:X:X::XX*}

Syntax Description	ap name	AP Name					
	controller	Configures the co	Configures the controller.				
	primary	Configures the pr	imary controller.				
	secondary	ary Configures the secondary controller.					
	tertiary						
	name						
	A.B.C.D Specifies theIPv4 address of the primary controller, secondary controller, or tertiary controller.						
	X:X:X::XX	Specifies theIPv6	address of the primary co	ontroller, secondary controller, or tertiary controller.			
Command Default	Disabled						
Command Modes	Privileged E	XEC (#)					
Command History	Release		Modification				
	Cisco IOS X	E Gibraltar 16.10.1	This command was introduced.				
Examples	The followin	g example shows h	now to configure the cont	roller on the AP:			
	Device# ap	name cisco-ap co	ontroller primary <i>cis</i>	co-primary-controller 10.1.1.1			

I

ap name country

To configure the country of operation for a Cisco lightweight access point, use the **ap name country** command.

ap name ap-name country country-code

Syntax Description	ap-name	Name of the Cisco lightweight access point.	
	country-code	Two-letter or three-letter country code.	
Command Default	None		
Command History	Release		Modification
			This command was introduced.
Usage Guidelines	select the prop installer to mai related product domains are de code if the new	must be installed by a network administrator or q er country code. Following installation, access to intain compliance with regulatory requirements a t guide for the most recent country codes and regu- efined during the access point manufacturing pro- v country code matches a country that is valid wit ountry that is not valid to the access point regula	the unit should be password protected by the and to ensure proper unit functionality. See the alatory domains. Also, access point regulatory cess. You can change the access point country hin the access point regulatory domain. If you
	This example s	shows how to configure the Cisco lightweight ac	ccess point's country code to DE:

Device# ap name AP2 country JP

ap name crash-file

To manage crash data and radio core files for the Cisco access point, use the **ap name crash-file** command.

ap name *ap-name* crash-file {get-crash-data | get-radio-core-dump {slot 0 | slot 1}}

Syntax Description	ap-name	Name of the Cisco lightweight access point.			
	get-crash-data	Collects the latest crash data for a Cisco lightweight ad	ccess point.		
	get-radio-core-dump	ore-dump Gets a Cisco lightweight access point's radio core dump			
	slot	Slot ID for Cisco access point.			
	0	Specifies Slot 0.			
	1	Specifies Slot 1.			
Command Default	None				
Command History	Release	Modif	ication		
	Cisco IOS XE 16.12.1	This c	ommand was introduced		
	This example shows how	w to collect the latest crash data for access point AP3:			

This example shows how to collect the radio core dump for access point APO2 and slot 0: Device# ap name APO2 crash-file get-radio-core-dump slot 0

ap name dot11 24ghz | 5ghz | 6ghz rrm channel update mesh

To trigger the RRM DCA for a specific AP, use the **ap name** *cisco-ap-name* **dot11** {**24ghz** | **5ghz** | **6ghz**} rrm channel update mesh

	ap name cisco-ap-name d	ot11 { 24ghz	5ghz	6ghz	z } rrm channel upda	ate mes
Syntax Description	This command has no keywor	ds or arguments.				
Command Default	None					
Command Modes	Privileged EXEC(#)					
Command History	Release	Modification				
	Cisco IOS XE Cupertino 17.9	1 This command introduced.	was			

Example

This example shows how to trigger the RRM DCA for a specific AP:

Device# ap name Cisco-ap-name dot11 5ghz rrm channel update mesh

ap name dot11 24ghz slot 0 SI

To enable Spectrum Intelligence (SI) for the dedicated 2.4-GHz radio hosted on slot 0 for a specific access point, use the **ap name dot11 24ghz slot 0 SI** command.

ap name ap-namedot11 { 24ghz | 5ghz | dual-band | rx-dual-band } slotslot IDSI

<i>ap_name</i> Nar	me of the Cisco Access Point.		
slot 0 Enables Spectrum Intelligence (SI) for the dedicated 2.4-GHz radio hosted on slot 0 for a specific access point.			
Her	Here, 0 refers to the Slot ID.		
None			
Privileged EXEC (#)			
Release	Modification		
Cisco IOS XE 16.12.1	This command was introduced.		
-	slot 0 Ena acc Her None Privileged EXE Release Cisco IOS XE		

Example

The following example shows how to configure Spectrum Intelligence of an AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 SI

ap name dot11 24ghz slot antenna

To configure the 802.11b antenna hosted on slot 0, use the **ap name dot11 24ghz slot antenna** command.

ap name *ap-name*dot1124ghzslot 0antenna { ext-ant-gain *antenna-gain-value* | selection [internal | external }

Syntax Description	ap-name	Name of the AP.				
	24ghz	Configures 802.11b parameters.				
	slot	Sets the slot ID for the Cisco Access Point.				
	antenna	Configures the 802.11b Antenna.				
	ext-ant-gain	Configures the 802.11b External Antenna Gain. The value range is 0 - 4294967295.				
		Enter External Antenna Gain value in multiple of .5 dBi units (i.e. An integer value 4 means $4 \ge 0.5 = 2$ dBi of gain)				
	selection Configure the 802.11b Antenna selection (internal/external)					
Command Default	None					
Command Modes	Privileged EXE	Privileged EXEC (#)				
Command History	Release	Modification				
	Cisco IOS XE 16.12.1	This command was introduced.				
	_					

Example

The following example shows how to configure the channel width of an AP.

Device# ap name ax1 dot11 24ghz slot 0 antenna selection external

Usage Guidelines

ap name dot11 24ghz slot beamforming

To configures beamforming for the 2.4-GHz radio hosted on slot 0 for a specific access point, use the **ap name dot11 24ghz slot beamforming** command.

ap name ap-namedot1124ghzslot 0beamforming

Syntax Description	beamforming	Enable 802.11b tx beamforming - 5 GHz
Command Default	None	
Command Modes	Privileged EXE	C (#)
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Usage Guidelines

Example

The following example shows how to configure beamforming of an AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 beamforming

ap name dot11 24ghz slot channel

To configure advanced 802.11 channel assignment parameters for Cisco AP, use the **ap name dot11 24ghz slot channel** command.

ap name ap-name dot11 24ghz slot 0 channel { channel_number | auto }

Syntax Description	channel_number	Advanced 802.11 channel assignment parameters for Cisco AP. Enter a channel number from 1 - 14.
	auto	Enables auto RF.
Command Default	None	
Command Modes	Privileged EXEC (#)
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.
Usage Guidelines	-	

Example

The following example shows how to configure the channel of an AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 channel auto

ap name dot11 24ghz slot cleanair

To enable CleanAir for 802.11b radio hosted on slot 0 for a specific access point, use the **ap name dot11 24ghz slot cleanair** command.

	ap name ap-nam	ne dot11 24ghz slot 0 cleanair
Syntax Description	cleanair Enable	s 802.11b cleanair management
Command Default	None	
Command Modes	Privileged EXEC ((#)
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Example

The following example shows how to configure the cleanair of an AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 cleanair

ap name dot11 24ghz slot dot11n antenna

To configure 802.11n antenna for 2.4-GHz radio hosted on slot 0 for a specific access point, use the **ap name dot11 24ghz slot dot11n antenna** command.

	ap name ap-nam	ne dot11 24ghz slot 0 dot11n a	antenna { A B C D }
Syntax Description	dot11n Configu	res 802.11n antenna for 2.4-GHz ra	adio hosted on slot 0 for a specific access point.
	antenna Configu	tres the 802.11n - 2.4 GHz antenna	selection from antenna ports A, B, C, and D.
Command Default	None		
Command Modes	Privileged EXEC ((#)	
Command History	Release	Modification	-
	Cisco IOS XE 16.12.1	This command was introduced.	

Example

The following example shows how to configure the channel width of an AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 dot11n antenna A

ap name dot11 24ghz slot dot11ax bss-color

To set the BSS color on the 2.4 GHz, 5 GHz, or dual-band radio, for a specific access point, use the **ap name dot11 24ghz slot dot11ax bss-color** command.

	ap name ap-name	dot11 24ghz slot 0 dot11ax	bss-color	<1-63>
Syntax Description	bss-color Configur	res 802.11ax-2.4GHz BSS color		
Command Default	None			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification	-	
	Cisco IOS XE 16.12.1	This command was introduced.	-	

Example

The following example shows how to disable 802.11b radio on Cisco AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 dot11ax bss-color 3

ap name dot11 24ghz slot shutdown

To disable 802.11b radio hosted on slot 0 for a specific access point, use the **ap name dot11 24ghz slot shutdown** command.

ap name ap-name dot11 24ghz slot 0 shutdown

Syntax Description	shutdown D	isables 802.11b radio on Cisco AP
Command Default	None	
Command Modes	Privileged EXE	EC (#)
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Example

The following example shows how to disable 802.11b radio on Cisco AP.

Device# ap name AP-SIDD-A06 dot11 24ghz slot 0 shutdown

ap name dot11 dual-band cleanair

To configure CleanAir for a dual band radio, use the ap name dot11 dual-band cleanair command.

	ap name ap-name dot11 dua ap name ap-name no dot11 d	
Syntax Description	<i>ap-name</i> Name of the Cisco	AP.
	cleanair Specifies the Clean	Air feature.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to enable CleanAir for a dual band radio of the access point AP01:

Device# ap name AP01 dot11 dual-band cleanair

I

ap name dot11 dual-band shutdown

To disable dual band radio on a Cisco AP, use the ap name dot11 dual-band shutdown command.

	-	•		-band shutdown ual-band shutdown
Syntax Description	ap-name	Name	of the Cisco	AP.
	shutdown	Disabl	les the dual b	and radio on the Cisco AP.
Command Default	None			
Command Modes	Privileged H	EXEC		
Command History	Release			Modification
	Cisco IOS 2	XE Gibr	altar 16.12.1	This command was introduced.

This example shows how to disable dual band radio on the Cisco access point AP01:

Device# ap name AP01 dot11 dual-band shutdown

ap name dot11 rrm profile

To configure Radio Resource Management (RRM) performance profile settings for a Cisco lightweight access point, use the **ap name dot11 rrm profile** command.

ap name *ap-name* **dot11** {**24ghz** | **5ghz**} **rrm profile** {**clients** *value* | **customize** | **foreign** *value* | **noise** *value* | **throughput** *value* | **utilization** *value*}

yntax Description	ap-name	Name of the Cisco lightweight access point.
	24ghz	Specifies the 2.4 GHz band.
	5ghz	Specifies the 5 GHz band.
	clients	Sets the access point client threshold.
	value	Access point client threshold from 1 to 75 clients.
		Note The default client threshold is 12.
	customize	Turns on performance profile customization for an access point.
		Note Performance profile customization is off by default.
	foreign	Sets the foreign 802.11 transmitter interference threshold.
	value	Foreign 802.11 transmitter interference threshold from 0 to 100 percent.
		Note The default is 10 percent.
	noise	Sets the 802.11 foreign noise threshold.
	value	802.11 foreign noise threshold between –127 and 0 dBm.
		Note The default is -70 dBm.
	throughput	Sets the data-rate throughput threshold.
	value	802.11 throughput threshold from 1000 to 10000000 bytes per second.
		Note The default is 1,000,000 bytes per second.
	utilization	Sets the RF utilization threshold.
		Note The operating system generates a trap when this threshold is exceeded.
	value	802.11 RF utilization threshold from 0 to 100 percent.
		Note The default is 80 percent.

l

Command Default	None

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap name ipsla

I

To configure ipsla on the AP, use the ap name ap name ipsla command.

Syntax Description	ap name	AP Name	
	ipsla	Enables the ipsla on	the access point.
Command Default	None		
Command Modes	Privileged	EXEC (#)	
Command History	Release		Modification
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced.
Examples	The follow	ing example shows h	low to configure ipsla

ap name keepalive

To enable the keepalive option on the AP, use the ap name ap name keepalive command.

	ap name <i>ap_name</i> keepalive		
Syntax Description	This command has no argument	s or keywords.	
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 17.03.1	This command was introduced.	
Examples	The following example shows h	low to enable the keepalive	e option on the AF

Device# ap name test keepalive

ap name lan

To configure LAN port configurations for APs, use the **ap name lan** command. To remove LAN port configurations for APs, use the**ap name no lan** command.

ap name ap-name [no]lan port-id {shutdown | vlan-access}

Syntax Description		Removes LAN port configurations.
	port-id	Configures the port.
	port-id	The ID of the port. The range is 1-4
	shotdown	Disables the Port.
	vlan-access	Enables VLAN access to Port.
Command Default	None	
Command Modes	Privileged EXEC(#)	
	This example shows how to enable VLAN access to port:	

Device# ap name AP1 lan port-id 1 vlan-access

ap name led

To enable the LED state for an access point, use the **ap name led** command. To disable the LED state for an access point, use the **no** form of this command.

ap name ap-name led no ap name ap-name [led] led **Syntax Description** Name of the Cisco lightweight access point. ap-name led Enables the access point's LED state. **Command Default** None **Command History** Modification Release This command was introduced. ap name mesh backhaul rate dot11abg

To set the mesh backhaul dot11abg rate, use the ap name ap-name mesh backhaul rate dot11abg command.

	RATE_1M RATE_24N	ckhaul rate dot11abg { RATE_11N M RATE_2M RATE_36M 'E_6M RATE_9M }	
Syntax Description	RATE_11M RATE_12M RATE_24M RATE_2M RATE_54M RATE_5DOT	RATE_18M RATE_1M RATE_36M RATE_48M '5M RATE_6M RATE_9M	Sets the mesh backhaul rates.
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.	
Usage Guidelines	None		

Example

The following example shows you how to configure the AP mesh backhaul dot11abg rate:

Device# ap name cisco-ap mesh backhaul rate dot11abg RATE_11M

ap name mdsn-ap

To configure mdsn-ap on the AP, use the ap name ap name mdsn-ap command.

ap name *ap_name* **mdsn-ap** {**disable** | **enable** | **vlan**} *add delete*

Syntax Description

Syntax Description	ap name	AP Name
	disable	Disables the mDNS access point.
	enable	Enables the mDNS access point.
	vlan	Adds or deletes the VLAN from mDNS access point.
	add	Adds vlan to mDNS AP.
	add	Deletes vlan from the mDNS AP.
Command Default	None	
	_	

Privileged EXEC (#) **Command Modes**

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Examples The following example shows how to enable mdns on the AP:

Device# Device# ap name test mdns enable

ap name mesh backhaul rate dot11ac

To set the mesh backhaul dot11ac rate, use the **ap name** *ap-name* **mesh backhaul rate dot11ac** command.

	ap name	ap-name	mesh ba	ckhaul rate dot11ac mcs 0-9 s			
Syntax Description	mcs 0-9	Sets the me	sh backha	ul 11ac MCS rate.			
	0-9	Indicates the mesh backhaul rate 11ac mcs index .					
	SS	Sets the mesh backhaul 11ac spatial stream.					
	1-4	Indicates th	e mesh bao	ckhaul 11ac spatial stream value.			
Command Default	None						
Command Modes	Privilegeo	I EXEC					
Command History	Release			Modification			
	Cisco IO	S XE Bengal	uru 17.6.1	This command was introduced.			
Usage Guidelines	None						

Example

The following example shows you how to configure the AP mesh backhaul dot11ac rate:

Device# ap name *cisco-ap* mesh backhaul rate dot11ac mcs 5 ss 3

I

ap name name mesh backhaul rate dot11ax

To set the mesh backhaul dot11ax rate, use the ap name *ap-name* mesh backhaul rate dot11ax command.

	ap name ap-nan	<i>ne</i> mesh backhaul rate dot11ax mcs	0-11 ss 1-8		
Syntax Description	mcs Sets the me	esh backhaul 11ax MCS rate.			
	0-11 Indicates th	0-11 Indicates the mesh backhaul 11ax MCS index.			
	ss Sets the me	esh backhaul 11ax spatial stream.			
		he mesh backhaul 11ax spatial stream va 1 - 8 indicates the range for 5-Ghz backh	lue. Range 1-4 indicates the range for 2.4-Ghz, aul.		
Command Default	None				
Command Modes	Privileged EXEC ((#)			
Command History	Release	Modification			
	Cisco IOS XE Ben	ngaluru 17.6.1 This command was introduced.			
Usage Guidelines	None				
	Example				

The following example shows you how to configure the AP mesh backhaul dot11ax rate:

Device# ap name cisco-ap mesh backhaul rate dot11ax mcs 6 ss 5

ap name name new-ap-name

To configure the new Cisco AP name, use the ap name ap name name new-ap-name command.

ap name *ap_name* name *new-ap-name*

Syntax Description	ap name	AP Name		
	name	Specifies the new C	sco AP name.	
Command Default	None			
Command Modes	Privileged	EXEC (#)		
Command History	Release		Modification	
	Cisco IOS	XE Gibraltar 16.10.1	This command introduced.	d was
Examples	The follow	ing example shows h	low to configure	e the new Cisco AP

Device# ap name test name test2

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap name no

To negate a command or set its defaults on the AP, use the **no** command.

	ap name ap_name no			
Syntax Description	ap name AP Name			
	no Negate a command	or set its defaults.		
Command Default	None			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		_
	Cisco IOS XE Gibraltar 16.10.1	This command w introduced.	/as	_
Examples	The following example shows h	now to negate a co	mmand or set	et its defaults on the .
	Device# ap name <i>test</i> no			

ap name mesh backhaul rate

To configure the AP mesh backhaul rate, use the ap name ap-name mesh backhaul rate command.

	ap name ap-name mesh ba	ckhaul rate { auto d	ot11abg	dot11ac	dot11a	x ∣ d
Syntax Description	auto Configures the me	esh backhaul rate as auto.				
	dot11abg Configures the me	sh backhaul dot11abg rate.				
	dot11ac Configures the me	esh backhaul dot11ac rate.				
	dot11ax Configures the me	esh backhaul dot11ax rate.				
	dot11n Configures the me	esh backhaul dot11n rate.				
Command Default	None					
Command Modes	Privileged EXEC (#)					
Command History	Release	Modification				
	Cisco IOS XE Bengaluru 17.	6.1 This command was introduced.				
Usage Guidelines	None					
	Example					
	The following example show	s you how to configure the	AP mesh ba	ackhaul rate	as auto:	

Device# ap name *cisco-ap* mesh backhaul rate auto

I

ap name mesh backhaul rate dot11n

To set the mesh backhaul dot11n rate, use the **ap name** *ap-name* **mesh backhaul rate dot11n** command.

	ap name	ap-name	mesh bao	ckhaul rate dot11n mcs 0-3
Syntax Description	mcs 0-31	Sets the n	nesh backha	aul 11n MCS rate.
	0-31	Indicates	the mesh ba	ckhaul rate dot11n mcs index.
Command Default	None			
Command Modes	Privileged	EXEC (#)		
Command History	Release			Modification
	Cisco IOS	XE Benga	luru 17.6.1	This command was introduced.
Usage Guidelines	None			
	Example

Device# ap name cisco-ap mesh backhaul rate dot11n mcs 20

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap name mesh block-child

To set mesh block-child state for a mesh AP, use the ap name mesh block-child command.

ap name ap-name mesh block-child

Syntax Description *ap-name* Name of the mesh AP.

None

Command Modes Privileged EXEC

Command Default

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the mesh block-child state for a mesh AP:

Device# ap name mymeshap mesh block-child

ap name mesh daisy-chaining

To configure daisy-chain mode for a mesh AP, use the **ap name** *ap-name* **mesh daisy-chaining** command.

 ap name *ap-name* **mesh daisy-chaining** [{strict-rap}]

 Syntax Description
 ap-name Name of the mesh AP.

strict-rap Configures to allow only the Ethernet interface as mesh uplink.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure daisy-chaining mode for a mesh AP:

Device# ap name mymeshap mesh daisy-chaining

ap name mesh ethernet mode access

To configure the mode of Ethernet interface as access for a mesh AP, use the **ap name** *ap-name* **mesh ethernet** *port-no* **mode access** command.

Syntax Description	ap-name Name of the mesh AP	2			
	<i>port-no</i> Port number of the AI 4.	P. Valid options are 1, 2, 3, and			
	<i>vlan-id</i> VLAN ID. Valid range is from 0 to 4095.				
Command Default	None				
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.			

Examples

The following example shows how to configure the mode of Ethernet interface as access for a mesh AP:

Device# ap name mymeshap mesh ethernet 0 mode access 10

I

ap name mesh ethernet mode trunk

To configure the mode of Ethernet interface as trunk for a mesh AP, use the **ap name** *ap-name* **mesh ethernet** *port-no* **mode trunk** command.

ap name ap-name mesh ethernet port-no mode trunk vlan {allowed | native} vlan-id

Syntax Description	ap-name Name of the mesh AP. port-no Port number of the AP. Valid options are 1, 2, 3, and 4.					
	allowed Configures allowed VLANs for the trunk port.					
	native Configures native VLAN for the trunk port.					
	<i>vlan-id</i> VLAN ID. Valid range for allowed VLANs is from 0 to 4095. Valid range for native VLANs is 1 to 4095.					
Command Default	None					
Command Modes	Privileged EXEC					
Command History	Release	Modification				
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.				
		Gibraltar 16.10.1.				

Examples

The following example shows how to configure the mode of Ethernet interface as trunk for a mesh AP and also configure allowed VLANs for the trunk port:

Device# ap name mymeshap mesh ethernet 0 mode trunk vlan allowed 10

ap name mesh linktest

To perform a link test with a mesh AP, use the **ap name** *ap-name***mesh linktest** command.

ap name ap-name mesh linktest dest-ap-mac data-rate pkts-per-sec pkt-size test-duration

Syntax Description	ap-name	Name of the mesh	AP.				
	dest-ap-mac	dest-ap-macMAC address of the destination mesh AP.data-rateData rate in Mbps (1, 2, 5.5, 6, 9, 11, 12, 24, 36, 48, 53, m0-m15)					
	data-rate						
	pkts-per-sec	pkts-per-sec Packets to be sent per second. Valid range is from 1 to 25000.					
	<i>pkt-size</i> Packet size. Valid range is from 1 to 1500.						
	test-duration Test duration. Valid range is from 10 to 300 seconds.						
Command Default	None						
Command Modes	Privileged E	XEC (#)					
Command History	Release		Modification				
	Cisco IOS X		This command was introduced in a release ear Gibraltar 16.10.1.	lier than Cisco IOS XE			

Examples

The following example shows how to configure a link test for a mesh AP:

Device# ap name mymeshap mesh linktest 00c0.00a0.03fa.0000.0000 9 100 10 180

ap name mesh parent preferred

To configure preferred parent for a mesh AP, use the **ap name mesh parent preferred** command.

 ap name ap-name mesh parent preferred mac-address

 Syntax Description
 ap-name

 Name of the mesh AP.
 mac-address

 mac-address
 Radio MAC address of the parent AP.

 Command Default
 None

 Privileged EXEC (#)
 Privileged EXEC (#)

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to preferred parent for a mesh AP:

Device # ap name mymeshap mesh parent preferred dc:5f:be:f5:fd:84

ap name mesh security psk provisioning delete

To delete PSK-provisioned key from a mesh AP, use the **ap name mesh security psk provisioning delete** command.

ap name ap-name me	sh security psk provisioning delete
--------------------	-------------------------------------

Syntax Description	<i>ap-name</i> Name of the mesh AP.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to delete PSK-provisioned key from a mesh AP:

Device# ap name mymeshap mesh security psk provisioning delete

ap name mesh vlan-trunking native

To configure native VLAN for mesh AP, use the ap name mesh vlan-trunking native command.

ap name name-of-rap vlan-trunking native vlan-id

Syntax Description	name-of-rap	Name of the roc point.	ot access
	vlan-id	VLAN ID.	
Command Default	None		
Command Modes	Privileged EX	EC	
Command History	Release		Modification
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to configure native VLAN for mesh AP: Device # ap name mesh vlan-trunking native 12

ap name monitor-mode dot11b

To configures 802.11b scanning channels for a monitor-mode access point, use the **ap name monitor-mode dot11b** command.

ap name ap-name monitor-mode dot11b fast-channel channel1 [channel2] [channel3] [channel4]

Syntax Description	ap-name	Name of the access point.	
	fast-channel	Specifies the 2.4 GHz band scanning channel	(or channels) for a monitor-mode access point
	channel1	Scanning channel1.	
	channel2	(Optional) Scanning channel2.	
	<i>channel3</i> (Optional) Scanning channel3.		
	channel4	(Optional) Scanning channel4.	
Command Default	None		
Command History	Release		Modification
	Cisco IOS XE	2 16.12.1	This command was introduced.

1, 6, and 11:

Device# ap name AP01 monitor-mode dot11b fast-channel 1 6 11

I

ap name name

To modify the name of a Cisco lightweight access point, use the ap name name command.

	ap name ap-name name new-name		
Syntax Description	<i>ap-name</i> Current Cisco lightweight access point name.		
	new-name Desired Cisco lightweight access point name.		
Command Default	- None		
Command History	Release	Modification	
		This command was introduced.	

This example shows how to modify the name of access point AP1 to AP2:

Device# ap name AP1 name AP2

ap name network-diagnostics

To trigger network diagnostics on an OfficeExtend AP, use the ap name network-diagnostics command.

ap name *ap-name* network-diagnostics

Syntax Description	<i>ap-name</i> Name of the access point.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

This following example shows how to trigger network diagnostics on an OfficeExtend AP.

Device# ap name ap18 network-diagnostic

I

ap name priority

To configure the priority of an access point, use the **ap name priority** command.

ap name ap-name priority priority-value

Syntax Description		Priority value for the AP. Valid range is 1 to 4.
Command Default	None	
Command Modes	Privileged EXE	EC
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to configure the priority for an access point:

Device# ap name my-ap priority 1

ap name reset

I

To reset a specific Cisco lightweight access point, use the **ap name reset** command.

	ap name ap-name reset		
Syntax Description	<i>ap-name</i> Name of the Cisco lightweight access point.		
Command Default	None		
Command History	Release Modification		
	This command was introduced.		

This example shows how to reset a Cisco lightweight access point named AP2:

Device# ap name AP2 reset

I

ap name reset-button

To configure the Reset button for an access point, use the ap name reset-button command.

	ap name ap-name reset-button	
Syntax Description	<i>ap-name</i> Name of the Cisco lightweight access point.	
Command Default	None	
Command History	Release Modification	
	This command was introduced.	

This example shows how to enable the Reset button for access point AP03:

Device# ap name AP03 reset-button

ap name role

To configure the role of operation for an AP, use the **ap name role** command.

	ap name ap-nam	e role {mesh-ap root-ap}
Syntax Description	ap-name Name of	the AP.
	mesh-ap Configur	es mesh AP role for the AP.
	root-ap Configur	es root AP role for the AP.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to configure the role of operation as mesh AP for an AP:

Device# ap name mymeshap role mesh-ap

ap name slot

To configure various slot parameters, use the **ap name slot** command. To disable a slot on a Cisco lightweight access point, use the no form of this command.

ap name ap-name slot slot-number {channel {global | number channel-number | width channel-width} | rtsthreshold value | shutdown | txpower {globalchannel-level}} ap name *ap-name* no slot $\{0 \mid 1 \mid 2 \mid 3\}$ shutdown

Syntax Description	ap-name	Name of the Cisco access point.
	slot-number	Slot downlink radio to which the channel is assigned. You can specify the following slo numbers:
		• 0—Enables slot number 0 on a Cisco lightweight access point.
		• 1—Enables slot number 1 on a Cisco lightweight access point.
		• 2—Enables slot number 2 on a Cisco lightweight access point.
		• 3 —Enables slot number 3 on a Cisco lightweight access point.
	channel	Specifies the channel for the slot.
	global	Specifies channel global properties for the slot.
	number	Specifies the channel number for the slot.
	channel-number	Channel number from 1 to 169.
	width	Specifies the channel width for the slot.
	channel-width	Channel width from 20 to 40.
	rtsthreshold	Specifies the RTS/CTS threshold for an access point.
	value	RTS/CTS threshold value from 0 to 65535.
	shutdown	Shuts down the slot.
	txpower	Specifies Tx power for the slot.
	global	Specifies auto-RF for the slot.
	channel-level	Transmit power level for the slot from 1 to 7.

Command History

Release Modification

This command was introduced.

This example shows how to enable slot 3 for the access point abc:

Device# ap name abc slot 3

This example shows how to configure RTS for the access point abc:

Device# ap name abc slot 3 rtsthreshold 54

ap name static-ip

ap name *Cisco-ap-name***static-ipip-address** { **A.B.C.Dnetmask***netmask* | **X:X:X::Xprefix***prefix-length* } **gateway***gateway*

Syntax Description	ap name	Name of the Cisco access point.
	static-ip	Sets the Cisco AP static IP address configuration.
	ip-address	Adds the Cisco AP static IP address.
	A.B.C.D	Indicates the IPv4 address.
	X:X:X:X:X	Indicates the IPv6 address.
	netmasknetmask	Specifies the Cisco AP static-IP netmask.
	prefixprefix-length	Specifies the Cisco AP static-IP prefix length.
	gatewaygateway	Specifies the Cisco AP static-IP gateway.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

The following example shows how to enable or disable static-ip for an access point:

Device#ap name cisco-ap-name static-ip ip-address 9.9.9.2 netmask 255.0.0.0 gateway 9.9.9.2

ap name static-ip

To configure lightweight access point static IP settings, use the **ap name static-ip** command. To disable the Cisco lightweight access point static IP address, use the **no** form of this command.

ap name ap-name static-ip {domain domain-name | ip-address ip-address netmask netmask gateway gateway | nameserver ip-address} ap name ap-name no static-ip

Syntax Description	ap-name	Name of the access point.	
	domain	Specifies the Cisco access point domain name.	
	domain-name	Domain to which a specific access point belongs.	
	ip-address	Specifies the Cisco access point static IP address.	
	ip-address	Cisco access point static IP address.	
	netmask	Specifies the Cisco access point static IP netmask.	
	netmask	Cisco access point static IP netmask.	
	gateway	Specifies the Cisco access point gateway.	
	gateway	IP address of the Cisco access point gateway.	
	nameserver	Specifies a DNS server so that a specific access point can discover the device using DNS resolution.	
	ip-address	IP address of the DNS server.	
Command Default	None		
Command History	ry Release Modification		
	This command was introduced.		
	An access point	t cannot discover the device using Domain Name System (DNS) resolution if a static IP address	
Usage Guidelines	1	or the access point unless you specify a DNS server and the domain to which the access point	
	This example s	hows how to configure an access point static IP address:	
	Device# ap name AP2 static-ip ip-address 192.0.2.54 netmask 255.255.255.0 gateway		

ap name shutdown

To disable a Cisco lightweight access point, use the **ap name shutdown** command. To enable a Cisco lightweight access point, use the **no** form of this command.

ap name *ap-name* shutdown ap name *ap-name* no shutdown

Command Default None		
Command Default None		
Command History Rele	356	Modification
Cisc	OIOS XE 16.12.1	This command was introduced.

This example how to disable a specific Cisco lightweight access point:

Device# ap name AP2 shutdown

ap name usb-module

To enable the USB port on the access point (AP), use the **ap name** *ap-name* **usb-module**. To disable the feature, use the **no** form of this command.

ap name ap-name usb-module

no ap name *ap-name* usb-module

Syntax Description	usb-module	Enables the USB port on the AP.

Command Modes Privileged EXEC mode

None

Release	Modification
Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

Usage Guidelines

Command Default

Command History

None

Example

This example shows you how to enable the USB port on the AP:

Device# ap name ap-name usb-module

I

ap name usb-module override

To enable access point (AP) USB override, use the **ap name** *ap-name* **usb-module override** command. To disable the feature, use the **no** form of this command.

ap name ap-name usb-module override

no ap name ap-name usb-module override

Syntax Description	usb-module override	Overrides USB status of the AP prof	ile and considers the local AP configuration.
		You can configure the USB status fo it.	r an AP only if you enable USB override for
Command Default	None		
Command Modes	Privileged EXEC mode		
Command History	Release	Modification	_
	Cisco IOS XE Bengalur	u 17.4.1 This command was introduced.	_
Usage Guidelines	None		
	Example		

This example shows you how to override USB status of the AP:

Device# ap name ap-name usb-module override

ap name vlan-tag

To configure VLAN tagging for a nonbridge AP, use the ap name vlan-tag command.

	ap name	ap-name	vlan-tag	vlan-id
Syntax Description	ap-name	Access j name.	point	
	vlan-id	VLAN i	dentifier.	
Command Default	VLAN tag	ging is not	t enabled.	
Command Modes	Privileged	EXEC		
Command History	Release		Modifica	ation
	Cisco IOS 16.12.1	S XE	This con introduce	nmand was ed.

Example

The following example shows how to configure VLAN tagging for a nonbridge AP:

Device# ap name AP1 vlan-tag 12

ap name write tag-config

To write the existing configuration to an AP, use the **ap name write tag-config** command in privileged EXEC mode

ap name *ap-namewrite* tag-config

Syntax Description	<i>ap-name</i> Name point.	of the access	
Command Default	None		
Command History	Release	Modification	
	Cisco IOS XE 16.12.1	This command was introduced.	
Usage Guidelines	Use this command	to write the existing configura	ation to an AP

Example

This example shows how to write the existing configuration to an AP: Device# ap name AP40CE.2485.D594 write tag-config

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

ap name-regex

To configure filter based on AP name regular expression to match with, use the **ap name-regex** command.

ap name-regex regular-expression

Syntax Description	regular-expression	Enter the filter string.
Command Default	None	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to configure filter based on AP name regular expression match with:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap filter name filter--name
Device(config-ap-filter)# ap name-regex regular-expression-string
```

ap profile

To configure access point profile, use the ap profile command.

	ap profile profile-name			
Syntax Description				
Command Default				
Command Modes	Global configuration (config)			
Command History	Release	Modification		
	Cisco IOS XE 16.12.1	This command was introduced.		

Examples

The following example shows how to configure AP profile name:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap profile *my-ap-profile*

ap remote-lan profile-name

To configure remote LAN profile, use the ap remote-lan profile-name command.

ap remote-lan profile-name remote-lan-profile-name rlan-id

Syntax Description	remote-lan-profile-name Is the remote LAN profile name. Range is from 1 to 32 alphanumeric character		
	rlan-id Is the remote LAN identifier. Range is from 1 to 128.		
		Note	You can create a maximum of 128 RLANs. You cannot use the <i>rlan-id</i> of an existing RLAN while creating another RLAN.
			Both RLAN and WLAN profile cannot have the same names. Similarly, RLAN and WLAN policy profile cannot have the same names.
Command Default	None		
Command Modes	Global configuration	on (config)	
Command History	Release	Modificati	on
	Cisco IOS XE 16.12.1	This comm introduced	
	This example show		gure remote LAN profile:

Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap remote-lan profile-name rlan_profile_name 3

ap remote-lan shutdown

To enable or disable all RLANs, use the **ap remote-lan shutdown** command.

ap remote-lan shutdown

Command Default	None			
Command Modes	Global configuration (config)			
Command History	Release	Modification		

Example

This example shows how to enable or disable all RLANs:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# [no] ap remote-lan shutdown
Device(config)# end
```

ap remote-lan-policy policy-name

To configure RLAN policy profile, use the **ap remote-lan-policy policy-name** command.

ap remote-lan-policy policy-name profile-name

 Command Default
 None

 Command Modes
 Global configuration (config)

 Command History
 Release
 Modification

 Cisco IOS XE
 This command was

 16.12.1
 introduced.

Example

This example shows how to configure RLAN policy profile:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap remote-lan-policy policy-name rlan_policy_prof_name

ap tag persistency enable

To configure AP tag persistency settings, use the **ap tag persistency enable** command, in the global configuration mode. To disable the AP tag persistency settings, use the **no** form of this command.

ap tag persistency enable

no ap tag persistency enable

Syntax Description	This command has no arguments or keywords.		
Command Default	None		
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.	
Usage Guidelines	None		
	Example		
	The following example shows h	low to enable tag persistency for an AP:	

Device(config)# ap tag persistency enable

ap upgrade staggered iteration timeout

To configure the maximum time allowed per iteration during an access point (AP) upgrade, use the **ap upgrade** staggered iteration timeout command.

ap upgrade staggered	l iteration timeout	timeout-duration
----------------------	---------------------	------------------

Syntax Description	timeout-duration	Time allowed per iteration, in minutes.	
		Valid values range from 9 to 60.	
Command Default	Iteration timeout is	not configured.	
Command Modes	Global configuration	on (config)	
Command History	Release	Modification	
	Cisco IOS XE Cup	ertino 17.9.1 This command was introduced.	
Usage Guidelines	10	eration is not completed during the specif ered iteration error command is taken.	ied duration, the error action that is set using the
Examples	The following example and the following exam	mple shows how to configure the maximu	m time allowed per iteration:
	Device# configur	e terminal	

Enter configuration commands, one per line. End with CNTL/Z. Device(config) # ap upgrade staggered iteration timeout 40

ap tag-source-priority

To configure ap tag source priority, use the **ap tag-source-priority** command.

	ap tag-source	e-priority source-priority source { filter ap }
Syntax Description	source-priority	Enter the ap tag source priority. Valid range is 2 to 3.
	source	Specifiy the source for which priority is been set.
	filter	AP filter as tag source.
	ар	AP as tag source.
Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to set AP as a tag source:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap tag-source-priority priority-value source ap

ap tag-sources revalidate

To revalidate the access point tag sources, use the ap tag-sources revalidate command.

ap tag-sources rev	validate
tag-sources Tag S	ources.
revalidate Reval	idate access point tag sources.
None	
Privileged EXEC	
Release	Modification
Cisco IOS XE 16.12.1	This command was introduced.
	tag-sources Tag S revalidate Reval None Privileged Privileged EXEC Release Cisco IOS XE

Examples

The following example shows how to revalidate the access point tag sources:

Device# ap tag-sources revalidate

I

ap vlan-tag

To configure VLAN tagging for all nonbridge APs, use the ap vlan-tag command.

	ap vlan-tag vlan	-id
Syntax Description	vlan-id VLAN identifie	r.
Command Default	VLAN tagging is r	not enabled for nonbridge APs.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Example

The following example shows how to configure VLAN tagging for all non-bridge APs:

Device# ap vlan-tag 1000

assisted-roaming

To configure assisted roaming using 802.11k on a WLAN, use the **assisted-roaming** command. To disable assisted roaming, use the **no** form of this command.

assisted-roaming {dual-list | neighbor-list | prediction}

no assisted-roaming {dual-list | neighbor-list | prediction}

Syntax Description	dual-list	Configures a dual band 802.11k neighbor list for a WLAN. The default is the band that the client is currently associated with.
	neighbor-list	Configures an 802.11k neighbor list for a WLAN.
	prediction	Configures assisted roaming optimization prediction for a WLAN.

Command Default Neighbor list and dual band support are enabled by default. The default is the band that the client is currently associated with.

Command Modes WLAN configuration

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines

When you enable the assisted roaming prediction list, a warning appears and load balancing is disabled for the WLAN if load balancing is already enabled on the WLAN. To make changes to the WLAN, the WLAN must be in disabled state.

Example

The following example shows how to configure a 802.11k neighbor list on a WLAN:

Device(config-wlan)#assisted-roaming neighbor-list

The following example shows the warning message when load balancing is enabled on a WLAN. Load balancing must be disabled if it is already enabled when configuring assisted roaming:

```
Device(config)#wlan test-prediction 2 test-prediction
Device(config-wlan)#client vlan 43
Device(config-wlan)#no security wpa
Device(config-wlan)#load-balance
Device(config-wlan)#assisted-roaming prediction
WARNING: Enabling neighbor list prediction optimization may slow association and impact
VOICE client perform.
Are you sure you want to continue? (y/n)[y]: y
% Request aborted - Must first disable Load Balancing before enabling Assisted Roaming
Prediction Optimization on this WLAN.
```

avg-packet-size packetsize

To configure the wireless media-stream's average packet size, use the **avg-packet-size** command.

avg-packet-size packetsize-value

Syntax Description	packetsize-value	Average Packet Size. Valid range is 100 to 1500.
Command Default	None	
Command Modes	media-stream	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to configure wireless media-stream's average packet size:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group doc-grp 224.0.0.0 224.0.0.223
Device(config-media-stream)# avg-packet-size500
```

band-select client

To configure the client threshold minimum dB for the selected band, use the **band-select client** command. To reset the client threshold minimum dB for the selected band, use the **no** form of this command.

band-select client { **mid-rssi** | **rssi** } *dBm value*

Syntax Description	mid-rssi	Minimum dBm of a client RSSI start to respond to probe
	rssi	Minimum dBm of a client RSSI to respond to probe
	dBm value	Minimum dBm of a client RSSI to respond to probe. Valid range is between –90 and –20 dBm.
Command Default	None	
Command Modes	config-rf-profile	
Command History	Release	Modification
	Cisco IOS XE Denali 16.3.1	This command was introduced.
Usage Guidelines	This command is enabled on	ly for 2.4-GHz band.
	-	set the client threshold to minimum dB for a selected band. e) #band-select client rssi -50

band-select cycle

To configure the band cycle parameters, use the **band-select cycle** command. To reset the threshold value, use the **no** form of this command.

band-select cycle { count | threshold } value

Syntax Description	count	Sets the Band Select probe cycle count.
	value	Maximum number of cycles not responding. The range is between 1 and 10.
	threshold	Sets the time threshold for a new scanning cycle.
	value	Set the threshold value in milliseconds. The valid is between 1 and 1000.
Command Default	None	
Command Modes	config-rf-profile	
Command History	Release	Modification
	Cisco IOS XE Denali 16.3.1	This command was introduced.
Usage Guidelines	None	
	This example shows how to	configure the probe cycle count in an RF profile for a selected band.

Device(config-rf-profile) **#band-select cycle count 5**

band-select expire

To configure the expiry time for the RF profile for the selected band, use the **band-select expire** command. To reset the value, use the **no** form of this command.

band-select expire { dual-band | suppression } value
no band-select expire { dual-band | suppression }

Syntax Description	dual-band	Configures the RF Profile Band Select Expire Dual Band.
	value	Setting the time to expire for pruning previously known dual-band clients. The range is between 10 and 300.
	suppression	Configures the RF Profile Band Select Expire Suppression.
	value	Setting the time to expire for pruning previously known 802.11b/g clients. The range is between 10 and 200.
Command Default	- None	
Command Modes	config-rf-profile	
Command History	Release	Modification
	Cisco IOS XE Denali 16.3.1	This command was introduced.
Usage Guidelines	None	
	This example shows how to band.	configure the time to expire for a dual-band of an RF profile in a selected
	Device(config-rf-profile	e)#band-select expire dual-band 15

band-select probe-response

To configure the probe responses to the clients for a selected band, use the **band-select probe-response** command. To disable the probe-response, use the **no** form of this command.

band-select probe-response

Syntax Description	probe-response	Probe responses to clients.
Command Default	None	
Command Modes	config-rf-profile	
Command History	Release	Modification
	Cisco IOS XE Denali	16.3.1 This command was introduced.
Usage Guidelines	None	
	This example shows h	ow to enable probe response to the clie
	Device(config-rf-p	rofile)#band-select probe-respons

bss-transition

To configure BSS transition per WLAN, use the bss-transition command.

bss-transition [disassociation-imminent]

Syntax Description	disassociation-imn	ninent BSS transition disassociation	on Imminent per WLAN.
Command Default	None		
Command Modes	config-wlan		
Command History	Release	Modification	
	Cisco IOS XE 16.12.1	This command was introduced.	

Example

The following example shows how to configure BSS transition per WLAN:

Device(config-wlan)# bss-transition

call-snoop

call-snoop no call-snoop **Syntax Description** This command has no keywords or arguments. VoIP snooping is disabled by default. **Command Default** WLAN configuration **Command Modes Command History** Release Modification Cisco IOS XE Gibraltar 16.12.1 This command was introduced. You must disable the WLAN before using this command. The WLAN on which call snooping is configured **Usage Guidelines** must be configured with Platinum QoS. You must disable quality of service before using this command.

Example

This example shows how to enable VoIP on a WLAN:

```
Device# configure terminal
Device(config)# wireless profile policy policy-name
Device(config-wireless-policy)#service-policy input platinum-up
Device(config-wireless-policy)#service-policy output platinum
Device(config-wireless-policy)#call-snoop
Device(config-wireless-policy)#no shutdown
Device(config-wireless-policy)#end
```

captive-bypass-portal

To configure captive bypassing, use the captive-bypass-portal command.

captive-bypass-portal

 Command Default
 None

 Command Modes
 Global configuration (config)

 Command History
 Release
 Modification

 Cisco IOS XE
 This command was

 16.12.1
 introduced.

Example

This example shows how to configure captive bypassing for WLAN in LWA and CWA:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# parameter-map type webauth WLAN1_MAP
Device(config)# captive-bypass-portal
Device(config)# wlan WLAN1_NAME 4 WLAN1_NAME
Device(config-wlan)# security web-auth
Device(config-wlan)# security web-auth parameter-map WLAN1_MAP
Device(config-wlan)# end
```

capwap-discovery

To set CAPWAP discovery response method as to whether a capwap-discovery response contains the public or private IP of the controller, use the **capwap-discovery** command.

capwap-discovery { private | public } **Syntax Description** private Includes private IP in CAPWAP discovery response. public Includes public IP in CAPWAP discovery response. None **Command Default** Management Interface Configuration(config-mgmt-interface) **Command Modes Command History** Release Modification Cisco IOS XE Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Usage Guidelines

Example

The following example shows how to configure a CAPWAP discovery response method:

Device# configure terminal Device(config)# wireless management interface Vlan1 Device(config-mgmt-interface)# capwap-discovery public

capwap backup

To configure a primary or secondary backup device for all access points that are joined to a specific device, use the **capwap backup** command.

capwap backup {**primary** *primary-controller-name primary-controller-ip-address* | **secondary** *secondary-controller-name secondary-controller-ip-address*}

Syntax Description	primary		Specifies the primary backup device.
	primary-controller-	name	Primary backup device name.
	primary-controller-ip-address Primary backup device IP address.		Primary backup device IP address.
	secondary		Specifies the secondary backup device.
	secondary-controller-name Sec		Secondary backup device name.
	secondary-controlle	secondary-controller-ip-address Secondary backup device IP address.	
Command Default	None		
Command Modes	AP profile configura	tion (config-ap-profile)	
Command History	Release	Modification	
	Cisco IOS XE 16.12	.1 This command was introduced.	
	This example shows how to configure a primary backup device for all access points that are joined to a specific device:		
		p profile default-ap profile) # capwap bac	o-profile Skup primary controller1 192.0.2.51
	This example shows how to configure a secondary backup device for all access points that are joined to a specific device:		
		p profile default-ap profile) # capwap bac	o-profile ckup secondary controller1 192.0.2.52

cco-password (image-download-mode cco)

To configure the CCO server password for image dowload, use the **cco-password** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

cco-password {0| 8}<Enter password> <Re-enter password>

no cco-password {0 | 8}<Enter password> <Re-enter password>

Syntax Description	0	Specifies that	an unencrypted password will for	ollow.
	8	Specifies that	an AES encrypted password wil	ll follow.
	password	Specifies the	CCO server password.	
	re-enter password	Indicates that	the user must re-enter the CCO se	erver password.
Command Default	None			
Command Modes	Wireless image dov	vnload profile	CCO configuration	
Command History	Release		Modification	
	Cisco IOS XE Ams	terdam 17.1.1s	This command was introduced.	

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode cco Device(config-wireless-image-download-profile-cco)# cco-password 0 xxxxxxx

cco-username (image-download-mode cco)

To configure the CCO username for image download, use the **cco-username**command. Use the **no** form of this command to negate the configuration or to set the command to its default.

cco-username Username

no cco-username Username

Syntax Description	username	Specifies the CCO username.	
Command Default	None		

Command Modes Wireless image download profile CCO configuration

Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode cco Device(config-wireless-image-download-profile-cco)# cco-username cco-server-username

cco-version (image-download-mode cco)

To configure and download the latest or the suggested version of the software image from CCO, use the **cco-version** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

cco-version {latest| suggested}

no cco-version {latest | suggested}

 Syntax Description
 Iatest
 Configures and downloads the latest version of software image from CCO.

 suggested
 Configures and downloads the suggested version of software image from CCO. By default suggested version is selected.

 Command Default
 None

 Command Modes
 Wireless image download profile CCO configuration

 Release
 Modification

 Cisco IOS XE Amsterdam 17.1.1s
 This command was

introduced.

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode cco Device(config-wireless-image-download-profile-cco)# cco-version suggested

cco-auto-check (image-download-mode cco)

To enable automatic check of the new software version on CCO, use the **cco-auto-check** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

cco-auto-check

no cco-auto-check

Syntax Description			version at CCO every 30 days. This is y. By default the command is enabled.
Command Default	None		
Command Modes	Wireless image download profile	CCO configuration	
	C 1	e	
Command History	Release	Modification	

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode cco Device(config-wireless-image-download-profile-cco)# cco-auto-check

I

ccx aironet-iesupport

To configure the support of Aironet IE CCX option, use the following command:

ccx aironet-iesupport

Syntax Description	ccx	Configures the Cisco Client Extension options
	aironet-iesupport	Sets the support of Aironet IE on WLAN.
Command Default	None	
Command Modes	WLAN configuratio	n
Command History	Release	Modification
	Cisco IOS XE Amst	erdam 17.2.1 This command was introduced.

Example

This example shows how to configure Aironet IE support: Device(config-wlan)#ccx aironet-iesupport

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

cdp

To enable the Cisco Discovery Protocol (CDP) on a Cisco lightweight access point under the AP profile, use the **cdp** command. To disable the Cisco Discovery Protocol (CDP) on a Cisco lightweight access point, use the **no** form of this command.

ap profile default-ap-profile cdp no cdp Command Default Disabled on all access points. AP profile mode (config-ap-profile)

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.12.1
 This command was introduced.

Usage Guidelines The no cdp command disables CDP on all access points that are joined to the device and all access points that join in the future. CDP remains disabled on both current and future access points even after the device or access point reboots. To enable CDP, enter the cdp command.

Note CDP over Ethernet/radio interfaces is available only when CDP is enabled. After you enable CDP on all access points joined to the device, you can disable and then reenable CDP on individual access points using the **ap name** *Cisco-AP* **cdp** command. After you disable CDP on all access points joined to the device, you can enable and then disable CDP on individual access points.

This example shows how to enable CDP on all access points:

Device(config)# ap profile default-ap-profile

Device(config-ap-profile) # cdp

I

central association

To enable central association for locally switched clients, use the central association command.

central association

Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	config-wireless-po	licy	
Command History	Release	Modification	
	Cisco IOS XE 16.12.1	This command was introduced.	

Example

The following example shows how to enable enable central association for locally switched clients:

Device(config-wireless-policy)# central association

central authentication

To enable or disable central authentication, use the central authentication command.

central authentication		
This command has no keywords or arguments.		
- None		
config-wireless-policy		
Release	Modification	
Cisco IOS XE 16.12.1	This command was introduced.	
	This command has This command has None config-wireless-po Release Cisco IOS XE	

Example

The following example shows how to enable central authentication:

Device(config-wireless-policy)# central authentication

I

central dhcp

To enable central dhcp for locally switched clients, use the central dhcp command.

central dhcp)
--------------	---

Syntax Description	This command has no keywords or arguments.			
Command Default				
Command Modes	odes config-wireless-policy			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.		

Example

The following example shows how to enable central dhcp for locally switched clients:

Device(config-wireless-policy)# central dhcp

central-webauth

To configure central-webauth for an ACL, use the central-webauth command.

	nmand Default None		
Syntax Description			
Command Default			
Command Modes			
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

Example

The following example shows how to configure central-webauth for an ACL:

Device(config-wireless-policy) # central-webauth

channel zero-wait-dfs

To enable the Zero Wait Dynamic Frequency Selection feature on the 802.11a radio frequency (RF) profile of 5-GHz devices, use the **channel zero-wait-dfs** command. To disable Zero Wait DFS feature, use the **no** form of this command.

channel zero-wait-dfs

no channel zero-wait-dfs

Syntax Description	This command has no arguments	or keywords.
--------------------	-------------------------------	--------------

Command Default The Zero Wait Dynamic Frequency Selection feature is not enabled.

Command Modes RF profile configuration (config-rf-profile)

Command History	Release	Modification
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.

Usage Guidelines This command is applicable only on 5-GHz devices.

Examples The following example shows how to enable the Zero Wait Dynamic Frequency Selection feature for the 802.11a RF profile of 5-GHz devices:

Device# configure terminal Device(config)# ap dot11 5ghz rf-profile test-dfs Device(config-rf-profile)# channel zero-wait-dfs

chassis redundancy keep-alive

To configure peer keep-alive retries and time interval before claiming peer is down, use the **chassis redundancy keep-alive** command.

	chassis redundancy keep-alive	{ retries retries timer timer }	
Syntax Description	retries Chassis peer keep-alive	retries before claiming peer is down.	
	Valid values range from 5 to 10, enter 5 for default. <i>timer</i> Chassis peer keep-alive time interval in multiple of 100 ms.		
	Valid values range from 1 to 10, enter 1 for default.		
Command Default	None		
Command Modes	Privileged EXEC(#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure peer keep-alive retries and time interval:

```
Device# chassis redundancy keep-alive retries 6
Device# chassis redundancy keep-alive timer 6
```

215

I

chassis renumber

To renumber the local chassis id assignment, use the chassis renumber command.

chassis chassis-num renumber renumber-id

Syntax Description	chassis-num Chassis number.	
	<i>renumber-id</i> Local chassis id.	
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to renumber the local chassis id assignment:

Device# chassis 1 renumber 1

chassis transport

To enable or disable chassis transport, use the chassis transport command.

chassis chassis-num transport { enable | disable }

Syntax Description chassis-num Chassis number.

Command Default None

Command Modes Privileged EXEC(#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable chassis transport:

Device# chassis 1 transport enable

l

class

	To define a traffic classification match criteria for the specified class-map name, use the class command in policy-map configuration mode. Use the no form of this command to delete an existing class map. class { <i>class-map-name</i> class-default } no class { <i>class-map-name</i> class-default }			
Syntax Description	class-map-name The class map name.			
	class-default Refers to a system defaul	t class that matches unclassified packets.		
Command Default	No policy map class-maps are defined.			
Command Modes	Policy-map configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.		
Usage Guidelines	Before using the class command, you must use the policy-map global configuration command to identify the policy map and enter policy-map configuration mode. After specifying a policy map, you can configure a policy for new classes or modify a policy for any existing classes in that policy map. You attach the policy map to a port by using the service-policy interface configuration command.			
	After entering the class command, you enter the policy-map class configuration mode. Thes commands are available:			
	• exit—Exits the policy-map class conf	iguration mode and returns to policy-map configuration mode.		
	• no —Returns a command to its default setting.			
	• police —Defines a policer or aggregate policer for the classified traffic. The policer specifies the bandwidth limitations and the action to take when the limits are exceeded. For more information about this command, see <i>Cisco IOS Quality of Service Solutions Command Reference</i> available on Cisco.com.			
	• set—Specifies a value to be assigned to the classified traffic. For more information, see set, of			
	To return to policy-map configuration mode, use the exit command. To return to privileged EXEC mode, use the end command.			
	The class command performs the same function as the class-map global configuration command. Use the class command when a new classification, which is not shared with any other ports, is needed. Use the class-map command when the map is shared among many ports.			
		the class class-default policy-map configuration command. eet the match criteria specified in the traffic classes) is treated as		
	You can verify your settings by entering the show policy-map privileged EXEC command.			

Examples

This example shows how to create a policy map called policy1. When attached to the ingress direction, it matches all the incoming traffic defined in class1, sets the IP Differentiated Services Code Point (DSCP) to 10, and polices the traffic at an average rate of 1 Mb/s and bursts at 20 KB. Traffic exceeding the profile is marked down to a DSCP value gotten from the policed-DSCP map and then sent.

```
Device(config) # policy-map policy1
Device(config-pmap) # class class1
Device(config-pmap-c) # set dscp 10
Device(config-pmap-c) # police 1000000 20000 conform-action
Device(config-pmap-c) # police 1000000 20000 exceed-action
Device(config-pmap-c) # exit
```

This example shows how to configure a default traffic class to a policy map. It also shows how the default traffic class is automatically placed at the end of policy-map pm3 even though **class-default** was configured first:

```
Device# configure terminal
Device (config) # class-map cm-3
Device(config-cmap) # match ip dscp 30
Device(config-cmap)# exit
Device(config) # class-map cm-4
Device(config-cmap) # match ip dscp 40
Device(config-cmap)# exit
Device(config) # policy-map pm3
Device(config-pmap)# class class-default
Device(config-pmap-c)# set dscp 10
Device(config-pmap-c)# exit
Device(config-pmap) # class cm-3
Device(config-pmap-c)# set dscp 4
Device(config-pmap-c)# exit
Device(config-pmap) # class cm-4
Device(config-pmap-c)# set precedence 5
Device(config-pmap-c)# exit
Device(config-pmap)# exit
Device# show policy-map pm3
Policy Map pm3
  Class cm-3
```

set dscp 4 Class cm-4 set precedence 5 Class class-default set dscp af11

classify

To classify a rule for rogue devices, use the **classify** command.

	classify {friendly maliciou	us delete}
Syntax Description	friendly Classifies devices n	natching this rule as friendly.
	malicious Classifies devices m	atching this rule as malicious.
	delete Devices matching this rule are ignored.	
Command Default	None	
Command Modes	config-rule	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XI Gibraltar 16.10.1.

Examples

The following example shows how to classify rogue devices as friendly:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless wps rogue rule my-rogue-rule priority 3
Device(config-rule)# classify friendly
```

class-map

To create a class map to be used for matching packets to the class whose name you specify and to enter class-map configuration mode, use the **class-map** command in global configuration mode. Use the **no** form of this command to delete an existing class map and to return to global or policy map configuration mode.

class-map [{match-anytype}]][{match-alltype}] class-map-name no class-map [{match-anytype}]][{match-alltype}] class-map-name

Syntax Description	match-any	atch-any (Optional) Performs a logical-OR of the matching statements under this class map. One more criteria must be matched.		
	match-all	(Optional) Performs a log	gical-AND all matching statements under this classmap.	
	type	(Optional) Configures the	e CPL class map.	
	class-map-nar	<i>ne</i> The class map name.		
Command Default	No class maps	are defined.		
Command Modes	Global configu	uration		
	Policy map configuration			
Command History	Release		Modification	
	Cisco IOS XI	E Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	Use this command to specify the name of the class for which you want to create or modify class-map match criteria and to enter class-map configuration mode.			
	-		nds are used to define packet classification, marking, and aggregate e policy applied on a per-port basis.	
	After you are i available:	in quality of service (QoS) cla	ass-map configuration mode, these configuration commands are	
	• description —Describes the class map (up to 200 characters). The show class-map privileged EXEC command displays the description and the name of the class map.			
	• exit—Exits from QoS class-map configuration mode.			
	• match—Configures classification criteria.			
	• no —Removes a match statement from a class map.			
	If you enter the match-any keyword, you can only use it to specify an extended named access control list (ACL) with the match access-group class-map configuration command.			
	To define pack	et classification on a physical	l-port basis, only one match command per class map is supported.	
	The ACL can have multiple access control entries (ACEs).			

Examples

This example shows how to configure the class map called class1 with one match criterion, which is an access list called 103:

```
Device(config)# access-list 103 permit ip any any dscp 10
Device(config)# class-map class1
Device(config-cmap)# match access-group 103
Device(config-cmap)# exit
```

This example shows how to delete the class map class1:

Device(config) # no class-map class1

You can verify your settings by entering the show class-map privileged EXEC command.

clear chassis redundancy

To clear high-availability (HA) configuration, use the clear chassis redundancy command.

	clear chassis redundancy		
Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Privileged EXEC(#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to clear HA configuration:

Device# clear chassis redundancy

clear mdns-sd cache

To clear mDNS cache details, use the clear mdns-sd cache command.

clear mdns-sd cache { ap-mac mac-address (H.H.H) | client-mac client-mac-address (H.H.H) | detail | glan-id <1-5> | location-group <0-4096> | mdns-ap mac address (H.H.H) | | rlan-id <1-128> | udn { <1-4294967295> | shared } | wired | wlan-id <0-4096> }

Syntax Description	ap-macmac-address (H.H.H)	Clears the AP Ethernet MAC address.
	client-macclient-mac-address (H.H.H)	Clears the client MAC address.
	detail	Clears the cache details.
	glan-id <1 - 5>	Clears the GLAN ID. The value range is from 1 to 5.
	location-group <0 - 4096>	Clears the location group. The value range is from 0 to 4096
	mdns-ap mdns-ap mac address (H.H.H	I) Clears cached services from mDNS AP.
	rlan-id <1 - 128>	Clears the RLAN ID. The value range is from 1 - 128.
	udn <1 - 4294967295>	Clears the UDN ID. The value range is from 1 to 4294967295
	shared	Clears the UDN shared services.
	wired	Clears the mDNS services from wired clients.
	wlan-id <0 - 4096>	Clears the WLAN ID. The value range is from 1 to 4096.
Command Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release Modi	fication
		command was duced.
Usage Guidelines	- None	
	Example	

The following example shows how to clear the mDNS cache details:

Device# clear mdns-sd cache

clear mdns-sd statistics

To clear mDNS statistics, use the clear mdns-sd statistics command.

clear mdns-sd statistics { debug | glan-id <1 - 5> | rlan-id <1 - 128> wired | wlan-id <1 - 4096> }

Syntax Description	debug	Clears the mDNS debug statistics.	
	glan-id <1 - 5>	Clears the GLAN ID. The value range is from	n 1 to 5.
	rlan-id <1 - 128>	Clears the RLAN ID. The value range is from	n 1 to 128.
	wired	Clears the mDNS wired statistics.	
	wlan-id<1 - 4096>	Clears the WLAN ID. The value range is from	1 to 4096
Command Default	None		
Command Modes	Privileged EXEC me	ode	
Command History	Release	Modification	
	Cisco IOS XE Amst	erdam 17.3.1 This command was introduced.	
Usage Guidelines	None		
	Example		
	The following exam	ple shows how to clear the mDNS statistics:	
	Device# clear mdn	s-sd statistics	

clear platform condition all

To clear all conditional debug and packet-trace configuration and data, use the **clear platform condition all** command.

clear platform condition all

Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to clear all conditional debug and packet-trace configuration and data:

Device# clear platform condition all

clear wireless wps rogue ap

To clear all rogue APs or rogue APs with specific MAC addresses, use the **clear wireless wps rogue ap** command.

clear wireless wps rogue ap { all | mac-address </br>

Syntax Description	all Clears all the rogue APs.		
	mac-address <mac address=""></mac>	Clears the rogue APs with specific MAC addresses.	
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.	
Usage Guidelines	None		
	Example		
	The following example shows you addresses:	how to clear all rogue APs or rogue APs with specific MA	

Device# clear wireless wps rogue ap all Device# clear wireless wps rogue ap mac-address 10.10.1

clear wireless wps rogue client

To clear all rogue clients or client with specific MAC addresses, use the **clear wireless wps rogue client** command.

clear wireless wps rogue client { all | mac-address </br>

Syntax Description	all	Clears all the rogue clients.
	mac-address Address	Clears the rogue clients with specific MAC addresses.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.
Usage Guidelines	None

client association limit

To configure the maximum number of client connections on a WLAN, use the **client association limit** command. To disable clients association limit on the WLAN, use the **no** form of this command.

client association limit {association-limit} no client association limit {association-limit}

```
Syntax Description
                                                                                       Number of client connections to be
                      association-limit
                                                                                       accepted. The range is from 0 to.
                                                                                       A value of zero (0) indicates no set
                                                                                       limit.
                     The maximum number of client connections is set to 0 (no limit).
Command Default
Command Modes
                     WLAN configuration
Command History
                                                    Modification
                      Release
                      Cisco IOS XE Gibraltar 16.12.1 This command was introduced.
                     You must disable the WLAN before using this command. See Related Commands section for more information
Usage Guidelines
                     on how to disable a WLAN.
                     This example shows how to configure a client association limit on a WLAN and configure the client
                     limit to 200:
                     Device# configure terminal
                     Enter configuration commands, one per line. End with CNTL/Z.
                     Device(config) # wlan wlan1
                     Device(config-wlan) # shutdown
                     Device (config-wlan) # client association limit 200
                     Device (config-wlan) # no shutdown
                     Device(config-wlan) # end
                     This example shows how to disable a client association limit on a WLAN:
                     Device# configure terminal
                     Enter configuration commands, one per line. End with CNTL/Z.
                     Device(config) # wlan wlan1
                     Device (config-wlan) # shutdown
                     Device (config-wlan) # no client association limit
                     Device (config-wlan) # no shutdown
                     Device(config-wlan) # end
                     This example shows how to configure a client association limit per radio on a WLAN and configure
                     the client limit to 200:
                     Device# configure terminal
                     Enter configuration commands, one per line. End with CNTL/Z.
                     Device(config) # wlan wlan1
                     Device (config-wlan) # client association limit radio 200
                     Device (config-wlan) # no shutdown
                     Device(config-wlan) # end
```

This example shows how to configure a client association limit per AP on a WLAN and configure the client limit to 300::

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wlan wlan1 Device(config-wlan)# client association limit ap 300 Device(config-wlan)# no shutdown Device(config-wlan)# end

I

channel foreign

To configure the RF Profile DCA foreign AP contribution, use the **channel foreign** command. To disable the DCA Foreign AP Contribution, use the **no** form of this command.

channel foreign

Syntax Description	foreignConfigures the RF Profile DCA foreign AP contribution.		foreign AP contribution.
Command Default	None		
Command Modes	config-rf-profile		
Command History	Release	Modification	
	Cisco IOS XE Denali 16.2	3.1 This command was introduced.	
Usage Guidelines	None		
	This example shows how	to configure the RF profile DCA for	preign AP contribution.
	Device(config-rf-prof	ile)# channel foreign	

client-l2-vnid

To configure the client 12-vnid on a wireless fabric profile, use the client-12-vnid command.

 Client-12-vnid vnid

 Syntax Description
 vnid Configures client 12-vnid. Valid range is 0 to 16777215.

 Command Default
 None

 Command Modes
 config-wireless-fabric

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the client l2-vnid value on a wireless fabirc profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile fabric fabric-profile-name
Device(config-wireless-fabric)# client-12-vnid 10
```

convergence

To configure mesh convergence method, use the convergence command.

Syntax Description	fast	Configures fast convergence method.
	noise-tolerant-fast	Configures noise-tolerant fast convergence method method to handle unstable RF environment.
	standard	Configures standard convergence method.
	very-fast	Configures very fast convergence method.
Command Default	Standard	
Communic Bonadit		
Command Modes	config-wireless-me	sh-profile
	config-wireless-me	sh-profile Modification

Examples

The following example shows how to configure the fast convergence method for a mesh AP profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile mesh mesh-profile
Device(config-wireless-mesh-profile)# convergence fast
```

copy configuration download

To download a workgroup bridge (WGB) configuration file from the SFTP or TFTP server, use the **copy configuration download** command.

	copy configuration download { sftp: tftp: } ip-address [directory] [file-name		
Syntax Description	sftp:	Selects SFTP server.	_
	tftp:	Selects TFTP server.	_
	ip-address	IP address of the SFTP or TFTP server that you want to use	
	directory	(Optional) Directory name to use in the SFTP or TFTP server	— r.
	file-name	(Optional) WGB configuration file name.	_
Command Default	None		—
Command Modes	Privileged E	XEC (#)	
Command History	Release	Modification	
	Cisco IOS 2	XE Cupertino 17.8.1 This command was introduced.	
Usage Guidelines	You can ente	er this command on the AP console only if the AP is in the W	GB mode.
Examples	The following	ng example shows how to select a WGB configuration file fro	om the SFTP server:
	Device# co	py configuration download sftp: 10.10.10.1 C:sample	.txt

I

copy configuration upload

To create a workgroup bridge (WGB) configuration file and upload it to the SFTP or TFTP server, use the **copy configuration upload** command.

	copy config	guration upload { sftp: tftp: } ip-address [directory] [file-name
Syntax Description	sftp:	Selects SFTP server.
	tftp:	Selects TFTP server.
	ip-address	IP address of the SFTP or TFTP server that you want to use.
	directory	(Optional) Directory name to use in the SFTP or TFTP server.
	file-name	(Optional) WGB configuration file name.
Command Default	None	
Command Modes	Privileged E	EXEC (#)
Command History	Release	Modification
	Cisco IOS 2	XE Cupertino 17.8.1 This command was introduced.
Usage Guidelines	You can ente	ter this command on the AP console only if the AP is in the WGB mode.
Examples	The followin server:	ing example shows how to create a WGB configuration file and upload it to the S
	Device# co	opy configuration upload sftp: 10.10.10.1 C:sample.txt

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

coverage

To configure the voice and data coverage, use the **coverage** command. To reset the minimum RSSI value use the **no** form of this command.

coverage {data | voice} rssi threshold value

Syntax Description	data	a Configure Coverage Hole Detection for data packets.	
	voice	Configure Coverage Hole Detection for voice packets.	
	value	Minimum RSSI value for the packets received by the access point. The val rage is between –90 and –60 dBm.	
Command Default	- None		
Command Modes	config-rf-profile		
Command History	Release	Modification	
	Cisco IOS XE Denali 16.3.1	This command was introduced.	
Usage Guidelines	None		
	This example shows how to	configure the coverage hole detection for data packets.	
	Device(config-rf-profile	e)#coverage data rssi threshold -85	

crypto key generate rsa

To generate Rivest, Shamir, and Adelman (RSA) key pairs, use the **crypto key generate rsa** commandinglobal configuration mode.

crypto key generate rsa [{general-keys | usage-keys | signature | encryption}] [label key-label] [exportable] [modulus modulus-size] [storage devicename :] [redundancy] [on devicename :]

Syntax Description	general-keys	(Optional) Specifies that a general-purpose key pair will be generated, which is the default.
	usage-keys	(Optional) Specifies that two RSA special-usage key pairs, one encryption pair and one signature pair, will be generated.
	signature	(Optional) Specifies that the RSA public key generated will be a signature special usage key.
	encryption	(Optional) Specifies that the RSA public key generated will be an encryption special usage key.
	label key-label	(Optional) Specifies the name that is used for an RSA key pair when they are being exported.
		If a key label is not specified, the fully qualified domain name (FQDN) of the router is used.
	exportable	(Optional) Specifies that the RSA key pair can be exported to another Cisco device, such as a router.
	modulus modulus-size	(Optional) Specifies the IP size of the key modulus.
		By default, the modulus of a certification authority (CA) key is 1024 bits. The recommended modulus for a CA key is 2048 bits. The range of a CA key modulus is from 350 to 4096 bits.
		Note Effective with Cisco IOS XE Release 2.4 and Cisco IOS Release 15.1(1)T, the maximum key size was expanded to 4096 bits for private key operations. The maximum for private key operations prior to these releases was 2048 bits.
	storage devicename :	(Optional) Specifies the key storage location. The name of the storage device is followed by a colon (:).
	redundancy	(Optional) Specifies that the key should be synchronized to the standby CA.
	on devicename :	(Optional) Specifies that the RSA key pair will be created on the specified device, including a Universal Serial Bus (USB) token, local disk, or NVRAM. The name of the device is followed by a colon (:).
		Keys created on a USB token must be 2048 bits or less.

Command Default RSA key pairs do not exist.

Command Modes

Global configuration

Command History

Release	Modification
11.3	This command was introduced.
12.2(8)T	The key-label argumentwas added.
12.2(15)T	The exportable keyword was added.
12.2(18)SXD	This command was integrated into Cisco IOS Release 12.2(18)SXD.
12.4(4)T	The storage keyword and <i>devicename</i> : argument were added.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.4(11)T	The storage keyword and <i>devicename</i> : argument were implemented on the Cisco 7200VXR NPE-G2 platform.
	The signature , encryption and on keywords and <i>devicename</i> : argument were added.
12.4(24)T	Support for IPv6 Secure Neighbor Discovery (SeND) was added.
XE 2.4	The maximum RSA key size was expanded from 2048 to 4096 bits for private key operations.
15.0(1)M	This command was modified. The redundancy keyword was introduced.
15.1(1)T	This command was modified. The range value for the modulus keyword value is extended from 360 to 2048 bits to 360 to 4096 bits.
15.2(2)SA2	This command was implemented on the Cisco ME 2600X Series Ethernet Access Switches.

Usage Guidelines

Note

Security threats, as well as the cryptographic technologies to help protect against them, are constantly changing. For more information about the latest Cisco cryptographic recommendations, see the Next Generation Encryption (NGE) white paper.

Use this command to generate RSA key pairs for your Cisco device (such as a router).

RSA keys are generated in pairs--one public RSA key and one private RSA key.

If your router already has RSA keys when you issue this command, you will be warned and prompted to replace the existing keys with new keys.

Note Before issuing this command, ensure that your router has a hostname and IP domain name configured (with the **hostname** and **ip domain-name** commands). You will be unable to complete the **crypto key generate rsa** command without a hostname and IP domain name. (This situation is not true when you generate only a named key pair.)

Note

Secure Shell (SSH) may generate an additional RSA key pair if you generate a key pair on a router having no RSA keys. The additional key pair is used only by SSH and will have a name such as {*router_FQDN* }.server. For example, if a router name is "router1.cisco.com," the key name is "router1.cisco.com.server."

This command is not saved in the router configuration; however, the RSA keys generated by this command are saved in the private configuration in NVRAM (which is never displayed to the user or backed up to another device) the next time the configuration is written to NVRAM.

Note

If the configuration is not saved to NVRAM, the generated keys are lost on the next reload of the router.

There are two mutually exclusive types of RSA key pairs: special-usage keys and general-purpose keys. When you generate RSA key pairs, you will be prompted to select either special-usage keys or general-purpose keys.

Special-Usage Keys

If you generate special-usage keys, two pairs of RSA keys will be generated. One pair will be used with any Internet Key Exchange (IKE) policy that specifies RSA signatures as the authentication method, and the other pair will be used with any IKE policy that specifies RSA encrypted keys as the authentication method.

A CA is used only with IKE policies specifying RSA signatures, not with IKE policies specifying RSA-encrypted nonces. (However, you could specify more than one IKE policy and have RSA signatures specified in one policy and RSA-encrypted nonces in another policy.)

If you plan to have both types of RSA authentication methods in your IKE policies, you may prefer to generate special-usage keys. With special-usage keys, each key is not unnecessarily exposed. (Without special-usage keys, one key is used for both authentication methods, increasing the exposure of that key.)

General-Purpose Keys

If you generate general-purpose keys, only one pair of RSA keys will be generated. This pair will be used with IKE policies specifying either RSA signatures or RSA encrypted keys. Therefore, a general-purpose key pair might get used more frequently than a special-usage key pair.

Named Key Pairs

If you generate a named key pair using the *key-label*argument, you must also specify the **usage-keys** keyword or the **general-keys** keyword. Named key pairs allow you to have multiple RSA key pairs, enabling the Cisco IOS software to maintain a different key pair for each identity certificate.

Modulus Length

When you generate RSA keys, you will be prompted to enter a modulus length. The longer the modulus, the stronger the security. However a longer modules takes longer to generate (see the table below for sample times) and takes longer to use.

Router	360 bits	512 bits	1024 bits	2048 bits (maximum)
Cisco 2500	11 seconds	20 seconds	4 minutes, 38 seconds	More than 1 hour
Cisco 4700	Less than 1 second	1 second	4 seconds	50 seconds

Table 7: Sample Times by Modulus Length to Generate RSA Keys

Cisco IOS software does not support a modulus greater than 4096 bits. A length of less than 512 bits is normally not recommended. In certain situations, the shorter modulus may not function properly with IKE, so we recommend using a minimum modulus of 2048 bits.

Note

As of Cisco IOS Release 12.4(11)T, peer *public* RSA key modulus values up to 4096 bits are automatically supported. The largest private RSA key modulus is 4096 bits. Therefore, the largest RSA private key a router may generate or import is 4096 bits. However, RFC 2409 restricts the private key size to 2048 bits or less for RSA encryption. The recommended modulus for a CA is 2048 bits; the recommended modulus for a client is 2048 bits.

Additional limitations may apply when RSA keys are generated by cryptographic hardware. For example, when RSA keys are generated by the Cisco VPN Services Port Adapter (VSPA), the RSA key modulus must be a minimum of 384 bits and must be a multiple of 64.

Specifying a Storage Location for RSA Keys

When you issue the **crypto key generate rsa** command with the **storage** *devicename* : keyword and argument, the RSA keys will be stored on the specified device. This location will supersede any **crypto key storage** command settings.

Specifying a Device for RSA Key Generation

As of Cisco IOS Release 12.4(11)T and later releases, you may specify the device where RSA keys are generated. Devices supported include NVRAM, local disks, and USB tokens. If your router has a USB token configured and available, the USB token can be used as cryptographic device in addition to a storage device. Using a USB token as a cryptographic device allows RSA operations such as key generation, signing, and authentication of credentials to be performed on the token. The private key never leaves the USB token and is not exportable.

RSA keys may be generated on a configured and available USB token, by the use of the **on** *devicename* : keyword and argument. Keys that reside on a USB token are saved to persistent token storage when they are generated. The number of keys that can be generated on a USB token is limited by the space available. If you attempt to generate keys on a USB token and it is full you will receive the following message:

% Error in generating keys:no available resources

Key deletion will remove the keys stored on the token from persistent storage immediately. (Keys that do not reside on a token are saved to or deleted from nontoken storage locations when the **copy**or similar command is issued.)

For information on configuring a USB token, see "Storing PKI Credentials" chapter in the Cisco IOS Security Configuration Guide, Release 12.4T. For information on using on-token RSA credentials, see the "Configuring and Managing a Cisco IOS Certificate Server for PKI Deployment" chapter in the Cisco IOS Security Configuration Guide, Release 12.4T.

Specifying RSA Key Redundancy Generation on a Device

You can specify redundancy for existing keys only if they are exportable.

Examples The following example generates a general-usage 1024-bit RSA key pair on a USB token with the label "ms2" with crypto engine debugging messages shown:

Router(config)# crypto key generate rsa label ms2 modulus 2048 on usbtoken0:

The name for the keys will be: ms2 % The key modulus size is 2048 bits % Generating 1024 bit RSA keys, keys will be on-token, non-exportable... Jan 7 02:41:40.895: crypto_engine: Generate public/private keypair [OK] Jan 7 02:44:09.623: crypto_engine: Create signature Jan 7 02:44:10.467: crypto_engine: Verify signature Jan 7 02:44:10.467: CryptoEngine0: CRYPTO_ISA_RSA_CREATE_PUBKEY(hw)(ipsec) Jan 7 02:44:10.467: CryptoEngine0: CRYPTO ISA RSA PUB DECRYPT(hw)(ipsec)

Now, the on-token keys labeled "ms2" may be used for enrollment.

The following example generates special-usage RSA keys:

```
Router(config)# crypto key generate rsa usage-keys
The name for the keys will be: myrouter.example.com
Choose the size of the key modulus in the range of 360 to 2048 for your Signature Keys.
Choosing a key modulus greater than 512 may take a few minutes.
How many bits in the modulus[512]? <return>
Generating RSA keys... [OK].
Choose the size of the key modulus in the range of 360 to 2048 for your Encryption Keys.
Choosing a key modulus greater than 512 may take a few minutes.
How many bits in the modulus[512]? <return>
Generating RSA keys.... [OK].
How many bits in the modulus[512]? <return>
Generating RSA keys.... [OK].
```

The following example generates general-purpose RSA keys:

Note

You cannot generate both special-usage and general-purpose keys; you can generate only one or the other.

```
Router(config)# crypto key generate rsa general-keys
The name for the keys will be: myrouter.example.com
Choose the size of the key modulus in the range of 360 to 2048 for your General Purpose
Keys. Choosing a key modulus greater than 512 may take a few minutes.
How many bits in the modulus[512]? <return>
Generating RSA keys.... [OK].
```

The following example generates the general-purpose RSA key pair "exampleCAkeys":

```
crypto key generate rsa general-keys label exampleCAkeys
crypto ca trustpoint exampleCAkeys
enroll url
http://exampleCAkeys/certsrv/mscep/mscep.dll
rsakeypair exampleCAkeys 1024 1024
```

The following example specifies the RSA key storage location of "usbtoken0:" for "tokenkey1":

crypto key generate rsa general-keys label tokenkey1 storage usbtoken0:

The following example specifies the **redundancy** keyword:

Router(config) # crypto key generate rsa label MYKEYS redundancy

The name for the keys will be: MYKEYS

Choose the size of the key modulus in the range of 360 to 2048 for your

General Purpose Keys. Choosing a key modulus greater than 512 may take

a few minutes.

How many bits in the modulus [512]:

% Generating 512 bit RSA keys, keys will be non-exportable with redundancy...[OK]

Related	Commands
---------	----------

I

Command	Description	
сору	Copies any file from a source to a destination, use the copy command in privileged EXEC mode.	
crypto key storage	Sets the default storage location for RSA key pairs.	
debug crypto engine	Displays debug messages about crypto engines.	
hostname	Specifies or modifies the hostname for the network server.	
ip domain-name	Defines a default domain name to complete unqualified hostnames (names without a dotted-decimal domain name).	
show crypto key mypubkey rsa	Displays the RSA public keys of your router.	
show crypto pki certificates	Displays information about your PKI certificate, certification authority, and any registration authority certificates.	

crypto pki trustpoint

To create a new TrustPoint dedicated for a single CA certificate, use the crypto pki trustpoint command.

crypto pki trustpoint

Syntax Description	n This command has no keywords or arguments.			
Command Default	None			
Command Modes	Global Configuration			
Command History	Release	Modification		
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.		

Usage Guidelines

This example shows how to create a new TrustPoint dedicated for a single CA certificate:

Device# configure terminal
Device(config)# crypto pki trustpoint <tp_name>
Device(ca-trustpoint)# enrollment terminal
Device(ca-trustpoint)# exit
Device(config)# crypto pki authenticate <tp_name>
<<< PASTE CA-CERT in PEM format followed by quit >>>

crypto pki trust pool import terminal

To import the root certificate by pasting the CA certificate from the **digicert.com**, use the **crypto pki trust pool import terminal** command.

crypto pki trust pool import terminal

Syntax Description	s or arguments.		
Command Default	None		
Command Modes	Global Configuration		
Command History	Release	Modification	
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.	

Usage Guidelines

This example shows how to import the root certificate by pasting the CA certificate from the **digicert.com**:

```
Device# configure terminal
Device(config)# crypto pki trust pool import terminal
Device(config)# end
```

I

crypto pki trustpool clean

To erase the downloaded CA certificate bundles, use the crypto pki trustpool clean command.

Release	Modification
Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
	Release

Usage Guidelines

This example shows how to erase the downloaded CA certificate bundles:

Device# configure terminal Device(config)# crypto pki trustpool clean Device(config)# end

cts inline-tagging

To configure Cisco TrustSec (CTS) inline tagging, use the cts inline-tagging command.

cts inline-tagging

Syntax Description This command has no keywords or arguments.				
Command Default	Inline tagging is not configured.			
Command Modes	wireless policy configuration (config-wireless-policy)			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.		

Example

This example shows how to configure CTS inline tagging.

Device(config-wireless-policy) # cts inline-tagging

I

cts role-based enforcement

To configure Cisco TrustSec (CTS) SGACL enforcement, use the cts role-based enforcement command.

cts role-based enforcement

Syntax Description	This command has no keywords or arguments. SGACL is not enforced. wireless policy configuration (config-wireless-policy)		
Command Default			
Command Modes			
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

Example

This example shows how to configure CTS SGACL enforcement.

Device(config-wireless-policy)# cts role-based enforcement

To set the Cisco TrustSec (CTS) default security group tag (SGT), use the cts sgt command.

	cts sgt sgt-	-value			
Syntax Description	sgt-value	Security group tag value.			
Command Default	SGT tag is r	SGT tag is not set.			
Command Modes	wireless pol	icy configuration (co	onfig-wireless-policy)		
Command History	Release		Modification		
	Cisco IOS 2	XE Gibraltar 16.10.1	This command was introduced.		

Example

This example shows how to set the default SGT. Device(config-wireless-policy) # cts sgt 100

cts sgt

custom-page login device

To configure a customized login page, use the custom-page login device command.

custom-page login device html-filename

Syntax Description	<i>html-filename</i> Enter the HTML filename of the login page.		
Command Default	None		
Command Modes	config-params-parameter-map		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure a customized login page:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# parameter-map type webauth parameter-map-name Device(config-params-parameter-map)# custom-page login device bootflash:login.html

default

To set the parameters to their default values, use the **default** command.

default {aaa-override | accounting-list | band-select | broadcast-ssid | call-snoop | ccx | channel-scan | parameters | chd | client | datalink | diag-channel | dtim | exclusionlist | ip | ipv6 | load-balance | local-auth | mac-filtering | media-stream | mfp | mobility | nac | passive-client | peer-blocking | radio | roamed-voice-client | security | service-policy | session-timeout | shutdown | sip-cac | static-ip | uapsd | wgb | wmm}

Syntax Description	aaa-override	Sets the AAA override parameter to its default value.	
	accounting-list	Sets the accounting parameter and its attributes to their default values.	
	band-select	Sets the band selection parameter to its default values.	
	broadcast-ssid	Sets the broadcast Service Set Identifier (SSID) parameter to its default value.	
	call-snoop	Sets the call snoop parameter to its default value.	
	ссх	Sets the Cisco client extension (Cisco Aironet IE) parameters and attributes to their default values.	
	channel-scan	Sets the channel scan parameters and attributes to their default values.	
	chd	Sets the coverage hold detection parameter to its default value.	
	client	Sets the client parameters and attributes to their default values.	
	datalink	Sets the datalink parameters and attributes to their default values.	
	diag-channel	Sets the diagnostic channel parameters and attributes to their default values.	
	dtim	Sets the Delivery Traffic Indicator Message (DTIM) parameter to its default value.	
	exclusionlist	Sets the client exclusion timeout parameter to its default value.	
	ip	Sets the IP parameters to their default values.	
	ipv6	Sets the IPv6 parameters and attributes to their default values.	
	load-balance	Sets the load-balancing parameter to its default value.	
	local-auth	Sets the Extensible Authentication Protocol (EAP) profile parameters and attributes to their default values.	
	mac-filtering	Sets the MAC filtering parameters and attributes to their default values.	
	media-stream	Sets the media stream parameters and attributes to their default values.	

	mfp	Sets the Management Frame to their default values.	e Protection (MPF) parameters and attributes	
	mobility	Sets the mobility parameter	rs and attributes to their default values.	
	nac	Sets the RADIUS Network default value.	Admission Control (NAC) parameter to its	
	passive-client	Sets the passive client para	meter to its default value.	
	peer-blocking	Sets the peer to peer blocki values.	ng parameters and attributes to their default	
	radio	Sets the radio policy param	eters and attributes to their default values.	
	roamed-voice-client	Sets the roamed voice clien values.	t parameters and attributes to their default	
	security	Sets the security policy para	ameters and attributes to their default values.	
	service-policy	Sets the WLAN quality of service (QoS) policy parameters and attributes to their default values.		
	session-timeout Sets the client session timeout parameter to its default value.			
	shutdown	Sets the shutdown parameter to its default value. Sets the Session Initiation Protocol (SIP) Call Admission Control (CAC) parameters and attributes to their default values. Sets the static IP client tunneling parameters and their attributes to their default values. Sets the wi-Fi Multimedia (WMM) Unscheduled Automatic Power Save Delivery (UAPSD) parameters and attributes to their default values.		
	sip-cac			
	static-ip			
	uapsd			
	wgb	Sets the Workgroup Bridge	s (WGB) parameter to its default value.	
	wmm	Sets the WMM parameters	and attributes to their default values.	
Command Default	None.			
Command Modes	WLAN configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.		
Usage Guidelines	You must disable the WLAN before on how to disable a WLAN.	ore using this command. See Rela	ated Commands section for more information	
	This example shows how to set	the Cisco Client Extension para	meter to its default value:	

Device(config-wlan) # default ccx aironet-iesupport

I

description

To configure a description for a flow monitor, flow exporter, or flow record, use the **description** command in the appropriate configuration mode. To remove a description, use the **no** form of this command.

description *description* **no description** *description*

Syntax Description	description Text string that describes the flow monitor, flow exporter, or flow record.
Command Default	The default description for a flow sampler, flow monitor, flow exporter, or flow record is "User defined."
Command Modes	The following command modes are supported:
	Flow exporter configuration
	Flow monitor configuration
	Flow record configuration
Command History	Release Modification
	Cisco IOS XE Gibraltar 16.12.1 This command was introduced.
Usage Guidelines	To return this command to its default setting, use the no description or default description command in th appropriate configuration mode.
	The following example configures a description for a flow monitor:
	Device(config)# flow monitor FLOW-MONITOR-1 Device(config-flow-monitor)# description Monitors traffic to 172.16.0.1 255.255.0.0

destination

To configure an export destination for a flow exporter, use the **destination** command in flow exporter configuration mode. To remove an export destination for a flow exporter, use the **no** form of this command.

destination {*hostnameip-address*} **no destination** {*hostnameip-address*}

Syntax Description	hostname	Hostname of the device to which you want to send the NetFlow information.	
	ip-address	IPv4 address of the workstation to which you want to send the NetFlow information.	
Command Default	An export de	estination is not configured.	
Command Modes	Flow exporte	er configuration	
Command History	Release	Modification	
	Cisco IOS X	XE Gibraltar 16.12.1 This command was introduced.	
Usage Guidelines	Each flow exporter can have only one destination address or hostname.		
	When you configure a hostname instead of the IP address for the device, the hostname is resolved immediately and the IPv4 address is stored in the running configuration. If the hostname-to-IP-address mapping that was used for the original Domain Name System (DNS) name resolution changes dynamically on the DNS server, the device does not detect this, and the exported data continues to be sent to the original IP address, resulting in a loss of data.		
	To return this command to its default setting, use the no destination or default destination command in flow exporter configuration mode.		
	The followin a destination	ng example shows how to configure the networking device to export the cache entry to system:	
	Device(cont	fig)# flow exporter FLOW-EXPORTER-1	

I

destination stealthwatch-cloud

To configure the export destination as Cisco Stealthwatch Cloud, use the **destination stealthwatch-cloud** command. To disable the command, use the **no** form of this command.

destination stealthwatch-cloud

no destination stealthwatch-cloud

Syntax Description	destination	Configures the export destination.
	stealthwatch-cloud	Configures export to Cisco Stealthwatch Cloud.
Command Default	None	
Command Modes	Flow Exporter Configu	iration
Command History	Release	Modification
	Cisco IOS XE Bengal	uru 17.4.1 This command was introduced.
Usage Guidelines	None	

Example

This example shows how to configure the export destination as Cisco Stealthwatch Cloud:

Device(config-flow-exporter)# destination stealthwatch-cloud

device-tracking binding vlan

To configure IPv4 or IPv6 static entry, use the **device-tracking binding vlan** command.

device-tracking binding vlan *vlan-id* {*ipv4-addr ipv6-addr* }**interface gigabitEthernet** *ge-intf-num hardware-or-mac-address*

Syntax Description	vlan-id	VLAN ID. Valid range is 1 to 4096.
	ipv4-addr	IPv4 address of the device.
	interface gigabitEthernet	GigabitEthernet IEEE 802.3z.
	ge-intf-num	GigabitEthernet interface number. Valid range is 1 to 32.
	hardware-or-mac-address	The 48-bit hardware address or the MAC address of the device.
Command Default	None	
Command Modes	Global configuration (conf	fig)
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16	5.10.1 This command was introduced in a release earlier than Cisco IOS X Gibraltar 16.10.1.

Examples

The following example shows how to configure IPv4 static entry:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# device-tracking binding vlan 20 20.20.20.5 interface gigabitEthernet 1
0000.1111.2222
```

dhcp-tlv-caching

To configure DHCP TLV caching on a WLAN, use the **dhcp-tlv-caching** command.

dhcp-tlv-caching

Command Default None

Command Modes config-wireless-policy

Command History

 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced.

Example

This example shows how to configure DHCP TLV caching on a WLAN:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy rr-xyz-policy-1
Device(config-wireless-policy)# dhcp-tlv-caching
Device(config-wireless-policy)# radius-profiling
Device(config-wireless-policy)# end
```

dnscrypt

To enable or disable DNScrypt, use the **dnscrypt** command.

	dnscrypt	
Command Default	None	
Command Modes	config-profile	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Usage Guidelines	By default, the DNScrypt option	n is enabled.
	This example shows how to ena	ble or disable DNScrypt:
	Device(config)# parameter-	en 57CC80106C087FB1B2A7BAB4F2F4373C00247166 cal-domain dns_wl dnscrypt

domain-name (DHCP)

To specify the domain n ame for a Dynamic Host Configuration Protocol (DHCP) client, use the **domain-name** command in DHCP pool configuration mode. To remove the domain name, use the no form of this command.

domain-name *domain* no domain-name

Syntax Description domain	Specifies the domain name string of the client.
---------------------------	---

Command Default No default behavior or values.

Command Modes DHCP pool configuration

Command History	Release	Modification
	12.0(1)T	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.28X	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

Examples

The following example specifies cisco.com as the domain name of the client:

domain-name cisco.com

Related Commands

Command	Description
dns-server	Specifies the DNS IP servers available to a DHCP client.
ip dhcp pool	Configures a DHCP address pool on a Cisco IOS DHCP server and enters DHCP pool configuration mode.

dot11ax twt-broadcast-support

To configure TWT broadcast support on WLAN, use the **dot11ax twt-broadcast-support** command. To disable the feature, use the **no** command of the command.

dot11ax twt-broadcast-support

[no] dot11ax twt-broadcast-support

Syntax Description	dot11ax twt-broadcast-support	Configures the TWT broadcast support on WLAN
Command Default	None	
Command Modes	WLAN configuration	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.

Example

This example shows how to configure target wakeup time on WLAN:

Device(config-wlan) # dotllax twt-broadcast-support

dot11 5ghz reporting-interval

To configure the client report interval sent from AP for clients on 802.11a radio, use the **dot11 5ghz** reporting-interval command.

dot11 5ghz reporting-interval reporting-interval

Syntax Description	reporting-interval Interval at which client report needs to be sent in seconds.	
Command Default	None	
Command Modes	config-ap-profile	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to set the client report interval in seconds:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ap profile profile-name Device(config-ap-profile)# dot11 5ghz reporting-interval 8

dot11 reporting-interval

To set the volume metering interval, use the dot11 reporting-interval command.

dot11 { 24ghz | 5ghz } reporting-interval

Syntax Description	reporting-interval Interval to s	send client accounting statistics.
Command Default	Interval is configured at the def	ault level of 90 seconds.
Command Modes	config-ap-profile	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Though the CLI allows you to configure range from 5 to 90 seconds, we recommend that you use 60 to 90 seconds range for Volume Metering.

This CLI can also be used to configure the interval when smart roam is enabled, which has a range of 5 to 90 seconds.

Though you can set two different values for volume metering and smart roam, only one value takes effect based on the order of execution. So, we recommend that you use the same reporting interval for both.

Example

The following example shows how to configure volume metering:

Device(config-ap-profile) # dot11 24ghz 60

dot1x system-auth-control

To globally enable 802.1X SystemAuthControl (port-based authentication), use the **dot1x** system-auth-controlcommand in global configuration mode. To disable SystemAuthControl, use the **no** form of this command.

dot1x system-auth-control no dot1x system-auth-control

Syntax Description This command has no arguments or keywords.

Command Default System authentication is disabled by default. If this command is disabled, all ports behave as if they are force authorized.

Command Modes

Global configuration (config)

Command HistoryReleaseModification12.3(2)XAThis command was introduced.12.2(14)SXThis command was implemented on the Supervisor Engine 720.12.3(4)TThis command was integrated into Cisco IOS Release 12.3(4)T.12.2(17d)SXBSupport for this command on the Supervisor Engine 2 was extended to 12.2(17d)SXB.12.2(33)SRAThis command was integrated into Cisco IOS Release 12.2(33)SRA.12.2(33)SXHThis command was integrated into Cisco IOS Release 12.2(33)SXH.

Usage Guidelines

The IEEE 802.1x standard defines a client-server-based access control and authentication protocol that restricts unauthorized devices from connecting to a LAN through publicly accessible ports. 802.1x controls network access by creating two distinct virtual access points at each port. One access point is an uncontrolled port; the other is a controlled port. All traffic through the single port is available to both access points. 802.1x authenticates each user device that is connected to a switch port and assigns the port to a VLAN before making available any services that are offered by the switch or the LAN. Until the device is authenticated, 802.1x access control allows only Extensible Authentication Protocol (EAP) over LAN (EAPOL) traffic through the port to which the device is connected. After authentication is successful, normal traffic can pass through the port.

The **no** form of the command removes any 802.1X-related configurations.

You must enable Authentication, Authorization, and Accounting (AAA) and specify the authentication method list before enabling 802.1X. A method list describes the sequence and authentication methods to be queried to authenticate a user.

Examples The following example shows how to enable SystemAuthControl:

Router(config) # dot1x system-auth-control

Related Commands

Command	Description	
aaa authentication dot1x	Specifies one or more AAA methods for use on interfaces running IEEE 802.1X.	
aaa new-model	Enables the AAA access-control model.	
debug dot1x	Displays 802.1X debugging information.	
description	Specifies a description for an 802.1X profile.	
device	Statically authorizes or rejects individual devices.	
dot1x initialize	Initializes 802.1X state machines on all 802.1X-enabled interfaces.	
dot1x max-req	Sets the maximum number of times that a router or Ethernet switch network module can send an EAP request/identity frame to a client (assuming that a response is not received) before restarting the authentication process.	
dot1x port-control	Enables manual control of the authorized state of a controlled port.	
dot1x re-authenticate	Manually initiates a reauthentication of the specified 802.1X-enabled ports.	
dot1x reauthentication	Globally enables periodic reauthentication of the client PCs on the 802.1X interface.	
dot1x timeout	Sets retry timeouts.	
identity profile	Creates an identity profile and enters identity profile configuration mode.	
show dot1x	Displays details and statistics for an identity profile.	
template	Specifies a virtual template from which commands may be cloned.	

dot11-tlv-accounting

To configure client 802.11 type, length, value (TLV) accounting, use the **dot11-tly-accounting** command. To disable client 802.11 TLV accounting, use the **no** form of this command.

dot11-tlv-accounting

Syntax Description	This command has no keywords or arguments.		
Command Default	Client 802.11 TLV accounting	is not configured.	
Command Modes	Wireless policy configuration (config-wireless-policy)#		
Command History	Release	Modification	
	Cisco IOS XE Dublin 17.10.1	This command was introduced.	
		ind out out	

Device# configure terminal

Device(config) # wireless profile policy default-policy-profile Device(config-wireless-policy) # dot11-tlv-accounting

eap profile

To configure an EAP profile, use the eap profile command.

eap profile profile-name

Syntax Description	profile-name Name of the EAP profile. Maximum number of allowed characters is 63.		
Command Default	None		
Command Modes	Global configuration (config)		
Command History	Release Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure an EAP profile name:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# eap profile eap-profile-name
```

exclusionlist

To configure an exclusion list, use the **exclusionlist** command. To disable an exclusion list, use the **no** form of this command.

exclusionlist [timeout seconds] no exclusionlist [timeout]

Syntax Descriptiontimeout seconds(Optional) Specifies an exclusion list timeout in seconds. The range is from 0 to
2147483647. A value of zero (0) specifies no timeout.

Command Default The exclusion list is set to 60 seconds.

Command Modes Wireless policy configuration

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to configure a client exclusion list:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy default-policy-profile
Device(config-wireless-policy)# exclusionlist timeout 5
```

exporter default-flow-exporter

To add an exporter to use to export records, use the **exporter default-flow-exporter** command. Use the **no** form of this command to disable the feature.

exporter default-flow-exporter

	[no] exporter default-flow-exporter		
Syntax Description	Ax Description There are no arguments to this command.		
Command Default	None		
Command Modes	Flow monitor configuration		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.	

Example

This example shows how to add an exporter to use to export records:

Device(config-flow-monitor)#exporter default-flow-exporter

fast-teardown

To enable fast teardown for a mesh access point (AP) profile and configure the feature's parameters, use the **fast-teardown** command.

Note Fast Teardown for Mesh APs is not supported on Cisco Industrial Wireless (IW) 3702 Access Points.

fast-teardown {enabled | interval duration **latency-exceeded-threshold | latency-threshold | uplink-recovery-interval** duration | **retries** retry limit

Syntax Description	enabled	Enables the fast teardown feature.	
	interval	(optional) Configures the retry interval, in setween 1 and 10 seconds.	seconds. The valid values range
	latency-exceeded-threshold	(optional) Specifies the latency interval in w in less than threshold time. The valid values	1 0
	latency-threshold	(optional) Speficies the latency threshold. T and 500 milliseconds.	The valid values range between 1
	uplink-recovery-interval	(Optional) Specifies the time during which stable to accept child connections. The valid seconds.	1 1
	retries	(optional) Specifies the maximum retries until the gateway is considered unreachable. The range is from 0 to 10.	
Command Default	None		
Command Modes	Fast Teardown configuration		
Command History	Release		Modification
	Cisco IOS XE Cupertino 17.	7.1	This command was introduced.
Examples	The following example show configure its parameters:	s how to enable the fast teardown feature for	r a mesh AP profile and
	Device(config-wireless-me	al mesh profile mesh-profile-name esh-profile)# fast-teardown esh-profile-fast-teardown)# interval	1

fallback-radio-shut

To configure shutdown of the radio interface, use the fallback-radio-shut command.

	fallback-radio-shut	
Command Default	None	
Command Modes	config-wireless-flex-profile	
Command History	Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure shutdown of the radio interface:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile flex flex-profile-name
Device(config-wireless-flex-profile)# fallback-radio-shut
```

flex

To configure flex related parameters, use the flex command.

flex {nat-pat | split-mac-acl split-mac-acl-name | vlan-central-switching }

Syntax Description	nat-pat	Enables NAT-PAT.
	split-mac-acl	Configures split-mac-acl name.
	split-mac-acl-name	Name of split MAC ACL.
	vlan-central-switching	VLAN based central switching.
Command Default	None	
Command Modes	config-wireless-policy	

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure flex related VLAN central-switching:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy profile-name
Device(config-wireless-policy)# flex vlan-central-switching
```

flow exporter

To create a flow exporter, or to modify an existing flow exporter, and enter flow exporter configuration mode, use the **flow exporter** command in global configuration mode. To remove a flow exporter, use the **no** form of this command.

flow exporter exporter-name no flow exporter exporter-name

Syntax Description	<i>exporter-name</i> Name of the flow exporter that is being created or modified.		
Command Default	flow exporters a	re not present in the configuration.	
Command Modes	Global configura	ation	
Command History	Release	Modification	-
	Cisco IOS XE C	bibraltar 16.12.1 This command was introduced.	-
Usage Guidelines	collector, for ana exporters are ass several flow exp	xport the data in the flow monitor cache to a remailysis and storage. Flow exporters are created as igned to flow monitors to provide data export cap orters and assign them to one or more flow more ne flow exporter and apply it to several flow more	separate entities in the configuration. Flow pability for the flow monitors. You can create nitors to provide several export destinations.
Examples	The following ex	ample creates a flow exporter named FLOW-EXI	PORTER-1 and enters flow exporter

The following example creates a flow exporter named FLOW-EXPORTER-1 and enters flow exporter configuration mode:

Device(config) # flow exporter FLOW-EXPORTER-1
Device(config-flow-exporter) #

flow monitor

To create a flow monitor, or to modify an existing flow monitor, and enter flow monitor configuration mode, use the **flow monitor** command in global configuration mode. To remove a flow monitor, use the **no** form of this command.

flow monitor monitor-name no flow monitor monitor-name

Syntax Description	<i>monitor-name</i> Name of the flow monitor that is being created or modified.		
Command Default	flow monitors a	are not present in the configuration.	
Command Modes	Global configu	ration	
Command History	Release	Modification	_
	Cisco IOS XE	Gibraltar 16.12.1 This command was introduce	d.
Usage Guidelines	Flow monitors are the component that is applied to interfaces to perform network traffic monitoring. Flow monitors consist of a flow record and a cache. You add the record to the flow monitor after you create the flow monitor. The flow monitor cache is automatically created at the time the flow monitor is applied to the first interface. Flow data is collected from the network traffic during the monitoring process based on the key and nonkey fields in the flow monitor's record and stored in the flow monitor cache.		

Examples

The following example creates a flow monitor named FLOW-MONITOR-1 and enters flow monitor configuration mode:

Device(config)# flow monitor FLOW-MONITOR-1
Device(config-flow-monitor)#

flow record

To create a flow record, or to modify an existing flow record, and enter flow record configuration mode, use the **flow record** command in global configuration mode. To remove a record, use the **no** form of this command.

flow record record-name no flow record record-name

Syntax Description	record-name Name	<i>record-name</i> Name of the flow record that is being created or modified.		
Command Default	A flow record is not co	onfigured.		
Command Modes	Global configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibralta	r 16.12.1 This command was introduc	ed.	
Usage Guidelines	gathers for the flow. Ye	ou can define a flow record with any c eys. A flow record also defines the typ	a the flow, as well as other fields of interest that ombination of keys and fields of interest. The es of counters gathered per flow. You can	
Examples	The following example	e creates a flow record named FLOW-	RECORD-1, and enters flow record	

The following example creates a flow record named FLOW-RECORD-1, and enters flow record configuration mode:

Device(config)# flow record FLOW-RECORD-1
Device(config-flow-record)#

ftp-path

To configure the path at the FTP server for trace log export, use the **ftp-path** command. Use the **no** form of the command to negate the command or to set the command to its default.

ftp-path*ftp-path*

no ftp-pathftp-path

Syntax Description	<i>ftp-path</i> Specifies the path at the FTP server.		
Command Default	None		
Command Modes	Wireless trace export profile FTP	configuration	
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.	

Example

Device(config)# wireless profile transfer trace-export trace_export_name Device(config-wireless-trace-export-profile)# log-export-mode ftp Device(config-wireless-trace-export-profile-ftp)# ftp-path ip-address/download/object/stream/images/ap-images

ftp-password

To configure the FTP server password for trace export, use the **ftp-password** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

ftp-password > < Re-enter password >< Re-enter password >

no ftp-password<*Enter password*> *<Re-enter password*>

Syntax Description	password	Specifies the FTP server password.
	re-enter password	Indicates that the user must re-enter the FTP server password.
Command Default	None	
Command Modes	Wireless trace expo	rt profile FTP configuration
Command History	Release	Modification
	Cisco IOS XE Gibra	raltar 16.12.2s This command was introduced.

Example

Device(config)# wireless profile transfer trace-export trace_export_name
Device(config-wireless-trace-export-profile)# log-export-mode ftp
Device(config-wireless-trace-export-profile-ftp)# ftp-password xxxxxxx xxxxxxx

ftp-server

To configure the FTP server address for trace export, use the **ftp-server** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

ftp-server {A.B.C.D | X:X:X:X:X}}

no ftp-server {*A.B.C.D* | *X:X:X:X:X*}

Syntax Description	A.B.C.D Specifies the FTP IP	v4 server address.
	X:X:X:X:X Specifies the FTP IP	v6 server address.
Command Default	None	
Command Modes	Wireless trace export profile FTP	configuration
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

Device(config)# wireless profile transfer trace-export trace_export_name Device(config-wireless-trace-export-profile)# log-export-mode ftp Device(config-wireless-trace-export-profile-ftp)# ftp-server 10.1.1.1 L

ftp-username

To configure the FTP server username for trace export, use the **ftp-username**command. Use the **no** form of this command to negate the configuration or to set the command to its default.

ftp-username Username

no ftp-username Username

Syntax Description	username	Specifies the FTP server username.
Command Default	None	

Command Modes Wireless trace export profile FTP configuration

Command History

 Release
 Modification

 Cisco IOS XE Gibraltar 16.12.2s
 This command was introduced.

Example

Device(config)# wireless profile transfer trace-export trace_export_name
Device(config-wireless-trace-export-profile)# log-export-mode ftp
Device(config-wireless-trace-export-profile-ftp)# ftp-username ftp-server-username

icap subscription client exclude telemetry-data wlan

To enable iCAP filtering in an AP, use the icap subscription client exclude telemetry-data wlan command.

icap subscription client exclude telemetry-data wlan wlan-profile-name

Syntax Description	wlan-profile-name Specifies the name of the WLAN profile.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Dublin 17.10.1	This command was introduced.

This example shows how to enable iCAP filtering in an AP:

```
Device# configure terminal
Device(config)# ap profile xyz-ap-profile
Device(config-ap-profile)# description "xyz ap profile"
Device(config-ap-profile)# icap subscription client exclude telemetry-data wlan wlan-name
```

idle-timeout

To configure the idle-timeout value in seconds for a wireless profile policy, use the idle-timeout command.

 idle-timeout value

 Syntax Description
 value

 value
 Sets the idle-timeout value. Valid range is 15 to 100000 seconds.

 Command Default
 None

 Command Modes
 config-wireless-policy

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to set the idle-timeout in a wireless profile policy:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy policy-profile-name
Device(config-wireless-policy)# idle-timeout 100
```

image-download-mode

To configure image download using the HTTP, SFTP, TFTP, or CCO modes, use the **image-download-mode** command.

image-download-mode { http | sftp | tftp | cco }

	http Configures image download using the HTTP mode.					
	sftp Configures image download using the SFTP mode.					
	tftp Configures image download using the TFTP mode.					
	cco Configures image downloa	d using the CCO mode.				
Command Default	None					
Command Modes	Wireless image download profile	configuration mode				
Command History	Release	Modification				
	Cisco IOS XE Gibraltar 16.12.2	s This command was introduced.				
	Cisco IOS XE Amsterdam 17.1.1	s The image-download-mode cco was introduced.				

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode http

inactive-timeout

To enable in-active timer, use the inactive-timeout command.

inactive-timeout timeout-in-seconds

 Syntax Description
 timeout-in-seconds
 Specifies the inactive flow timeout value. The range is from 1 to 604800.

 Command Default
 None

 Command Modes
 ET-Analytics configuration

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.12.1
 This command was introduced.

This example shows how to enable in-active timer in the ET-Analytics configuration mode:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# et-analytics
Device(config-et-analytics)# inactive-timeout 15
Device(config-et-analytics)# end
```

install add file tftp

To install a package file to the system, use the install add file tftp command.

install add file tftp: *tftp file path*

Syntax Description	install add file tftp:	The install add command copies the file directory on the embedded wireless cor	from the external server to the backup_image ntroller.
Command Default	None		
Command Modes	Privileged EXEC mode	e	
Command History	Release	Modification	
	Cisco IOS XE Amstero	dam 17.1.1s This command was introduced.	

Example

This example shows how to install a package file to the system: Device#install add file tftp://<server-ip>/<path>/<smu-filename>

install add profile default

To download the embedded wireless controller image from the external server, use the **install add profile default** command.

install add profile *profile_name*activatecommitprompt-level none

Syntax Description	add	Installs a package file to the system.			
	profile	Selects a profile.			
	profile_name	Adds a profile name with a maximum of 15 charabehaviour.	acters. Specify default to trigger the default		
	activate	Activates the installed profile.			
	commit	Commits the changes to the loadpath.			
	prompt-level	Sets the prompt-level to none.			
Command Default	None				
Command Modes	Privileged EXI	EC (#)			
Command History	Release	Modification	-		
	Cisco IOS XE	Gibraltar 16.12.2s This command was introduced.	-		
Usage Guidelines	contents of the	u have the <i>image-download-profile</i> configured on image bundle (.zip archive) to an external TFTP of mage and various compatible AP images (apXgY	or HTTP(S) server. The .zip archive contains		
	Example				
	The following example shows how to download the embedded wireless controller image:				
	Device#insta	ll add profile default			
	install_add: START Thu Jan 24 20:08:01 UTC 2019 Jan 24 20:08:03.389: %INSTALL-5-INSTALL_START_INFO: R0/0: install_engine: Started install add				
	add install_add: SUCCESS: ins Jan 24 20:08 install add	:03.389 %INSTALL-5-INSTALL_START_INFO: R0, Default profile addition successful tall_add Thu Jan 24 20:08:03 UTC 2019 :04.358: %INSTALL-5-INSTALL_COMPLETED_INFO	- O: R0/0: install_engine: Completed		
	install add WLC#	:04.358 %INSTALL-5-INSTALL_COMPLETED_INFO 3:03.350: %INSTALL-5-INSTALL_START_INFO: CP	_		

*Jan 24 20:08:04.335: %INSTALL-5-INSTALL_COMPLETED_INFO: Chassis 1 R0/0: install_engine: Completed install add

Note

The log completed install add means that the command is successful and the download will start soon.

The following example verifies the the image download status:

Device#sh wireless ewc-ap predownload status

install activate

To activate an installed package, use the **install activate** command.

install activate {auto-abort-timer | file | profile | prompt-level }

Syntax Description

x Description	auto-abort-timer	Sets the cancel timer. The time range is between 30 and 1200 minutes.
	file	Specifies the package to be activated.
	profile	Specifies the profile to be activated.
	prompt-level	Sets the prompt level.

Command Default	None
-----------------	------

Privileged EXEC (#) **Command Modes**

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

The following example shows how to activate the installed package:

```
Device# install activate profile default
install activate: START Thu Nov 24 20:14:53 UTC 2019
System configuration has been modified.
Press Yes(y) to save the configuration and proceed.
Press No(n) for proceeding without saving the configuration.
Press Quit(q) to exit, you may save configuration and re-enter the command. [y/n/q] y
Building configuration...
[OK]Modified configuration has been saved
Jan 24 20:15:02.745: %INSTALL-5-INSTALL START INFO: R0/0: install engine: Started install
activate
Jan 24 20:15:02.745 %INSTALL-5-INSTALL_START_INFO: R0/0: install_engine: Started install
activate
install activate: Activating PACKAGE
```

install activate auto-abort-timer

To set the abort timer, use the install activate auto-abort-timer command.

install activate auto-abort-timer <30-1200> prompt-level none

Syntax Description	auto-abort-timer	ort-timer Sets the cancel timer. The time range is between 30 and 1200 minutes		
	<30-1200>	Specifies the cancel timer time in minutes.		
	prompt-level	Specifies the prompt level.		
	none	Specifies no prompting.		
Command Default	None			
Command Modes	Privileged EXEC (#	<i>‡</i>)		
Task ID	Task ID	Operation		
	Cisco IOS XE Gibr	raltar 16.12.2s This command was introduced.		

Example

The following example shows how to activate the cancel timer:

Device#install activate auto-abort-timer 30 prompt-level none

I

install activate file

To activate an installed package, use the install activate file command.

install activate file file-name

Syntax Description	<i>file-name</i> Specifies the packa	ge name. Options are: bootflash:, flash:, and webui:.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.

Example

The following example shows how to use an auto cancel timer while activating an install package on a standby location:

Device# install activate file vwlc_apsp_16.11.1.0_74.bin

install auto-abort-timer stop

To stop the auto abort timer, use the install auto-abort-timer stop command.

install auto-abort-timer stop

Syntax Description	auto-abort-timer stop	Stops the auto-abort-timer
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdar	m 17.1.1s This command was introduced.

Example

This example shows how to stop the auto abort timer:

Device#install auto-abort-timer stop

I

install commit

To commit the changes to the loadpath, use the install commit command.

install commit

Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.	

Example

The following example shows how to commit the changes to the loadpath:

Device# install commit

install remove file backup_image

To remove installed packages, use the install remove file backup_image command.

install remove file backup_image filename

Syntax Description	<i>filename</i> Specifes the file that nee	eds to be removed.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how a file is removed from the package: Device#install remove file backup_image: file_name

install remove profile default

To specify an install package that is to be removed, use the install remove profile default command.

	install re	move profile default	
Syntax Description	remove	Removes the install	package.
	profile	Specifies the profile t	o be removed.
Command Default	None		
Command Modes	Privileged	EXEC (#)	
Command History	Release		Modification
	Cisco IO	S XE Gibraltar 16.11.1	This command was introduced.

Example

The following example shows how to remove a default profile: Device# install remove profile default

install deactivate

To specify an install package that is to be deactivated, use the install deactivate file command.

install deactivate file file-name

Syntax Description	<i>file-name</i> Specifies the packa	ge name. Options are: bootflash:, flash:, and webui:.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.

Example

The following example shows how to deactivate an install package:

Device# install deactivate file vwlc_apsp_16.11.1.0_74.bin

I

install rollback

To roll back to a particular installation point, use the install rollback command.

install rollback to {base | committed | id id | label label} [prompt-level none]

Syntax Description	base	Rolls back to the base image.
	prompt-level none	Sets the prompt level as none.
	committed	Rolls back to the last committed installation point.
	id	Rolls back to a specific install point ID.
	label Rolls back to a specific install point label.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibralt	ar 16.11.1 This command was introduced.

Example

The following example shows how to specify the ID of the install point to roll back to: Device# install rollback to id 1

interface vlan

To create or access a dynamic switch virtual interface (SVI) and to enter interface configuration mode, use the **interface vlan** command in global configuration mode. To delete an SVI, use the **no** form of this command.

interface vlan vlan-id no interface vlan vlan-id

Syntax Description	vlan-id	VLAN number. The range is 1 to 4094.				
Command Default	The default VLAN	The default VLAN interface is VLAN 1.				
Command Modes	Global configuration	n				
Command History	Release	Modification				
	Cisco IOS XE Gibi	raltar 16.12.1 This command was introduced.				
Usage Guidelines	vlan-id corresponds	e first time you enter the interface vlan <i>vlan-id</i> command for a particular VLAN. The s to the VLAN-tag associated with data frames on an IEEE 802.1Q encapsulated trunk or figured for an access port.				
	Note When you crea	ate an SVI, it does not become active until it is associated with a physical port.				
	-	I using the no interface vlan <i>vlan-id</i> command, it is no longer visible in the output from s privileged EXEC command.				
	Note You cannot delete the VLAN 1 interface.					
	You can reinstate a deleted SVI by entering the interface vlan <i>vlan-id</i> command for the deleted interface. The interface comes back up, but the previous configuration is gone.					
	The interrelationship between the number of SVIs configured on a and the number of other features being configured might have an impact on CPU utilization due to hardware limitations. You can use the sdm prefer global configuration command to reallocate system hardware resources based on templates and feature tables.					
	You can verify your setting by entering the show interfaces and show interfaces vlan <i>vlan-id</i> privileged EXEC commands.					
	This example shows how to create a new SVI with VLAN ID 23 and enter interface configuration mode:					
	Device(config)# Device(config-if	interface vlan 23)#				

ip access-group

To configure WLAN access control group (ACL), use the **ip access-group** command. To remove a WLAN ACL group, use the **no** form of the command.

ip access-group [web] acl-name
no ip access-group [web]

Syntax Description	web	(Optional) Configures the IPv4 web ACL.	
	acl-name	Specify the preauth ACL used for the WLAN with the	he security type value as webauth.
Command Default	None		
Command Modes	WLAN cor	nfiguration	
Usage Guidelines	You must disable the WLAN before using this command. See Related Commands section for more information on how to disable a WLAN.		
Command History	Release	Modification	
	Cisco IOS	XE Gibraltar 16.12.1 This command was introduced.	
	This examp	ble shows how to configure a WLAN ACL:	
	Enter con: Device(con	nfigure terminal figuration commands, one per line. End with nfig)#wlan wlan1 nfig-wlan)#ip access-group test-acl	CNTL/Z.
	This examp	ble shows how to configure an IPv4 WLAN web ACI	L:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wlan wlan1
Device(config-wlan)# ip access-group web test
Device(config-wlan)#
```

ip access-list extended

	To configure extended access li	st, use the ip access-list extended command.
	ip access-list extended {<100-	199> <2000-2699> access-list-name}
Syntax Description	<100-199> Extended IP acce	ess-list number.
	<2000-2699> Extended IP acces	ss-list number (expanded range).
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure extended access list:

1. .

1

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ip access-list extended access-list-name
```

ip address

To set a primary or secondary IP address for an interface, use the **ip address** command in interface configuration mode. To remove an IP address or disable IP processing, use the noform of this command.

ip address ip-address mask [secondary [vrf vrf-name]]
no ip address ip-address mask [secondary [vrf vrf-name]]

Syntax Description	ip-address	IP address.			
	mask Mask for the associated IP subnet.				
	secondary	 (Optional) Specifies that the configured address is a secondary IP address. If this keyword is omitted, the configured address is the primary IP address. Note If the secondary address is used for a VRF table configuration with the vrf keyword, the vrf keyword must be specified also. 			
	vrf			e argument specifies the VRF name of the	
Command Default	No IP addres	is defined for the	interface.		
Command Modes	Interface configuration (config-if)				
Command History	Release		Modification	7	
	Cisco IOS X	E Gibraltar 16.12.1	This command was introduced.	-	
Usage Guidelines	An interface can have one primary IP address and multiple secondary IP addresses. Packets generated by th Cisco IOS software always use the primary IP address. Therefore, all devices and access servers on a segmer should share the same primary network number.				
	Hosts can determine subnet masks using the Internet Control Message Protocol (ICMP) mask request mess Devices respond to this request with an ICMP mask reply message.You can disable IP processing on a particular interface by removing its IP address with the no ip addres command. If the software detects another host using one of its IP addresses, it will print an error message the console.				
				-	
	addresses are updates with	e treated like primar secondary source a	y addresses, except the system	ted number of secondary addresses. Secondar never generates datagrams other than routin dress Resolution Protocol (ARP) requests ar	
	Secondam, ID		. I in a seriet of Criterian The	e following are the most common applications	

• There may not be enough host addresses for a particular network segment. For example, your subnetting allows up to 254 hosts per logical subnet, but on one physical subnet you need 300 host addresses. Using

secondary IP addresses on the devices or access servers allows you to have two logical subnets using one physical subnet.

- Many older networks were built using Level 2 bridges. The judicious use of secondary addresses can aid in the transition to a subnetted, device-based network. Devices on an older, bridged segment can be easily made aware that many subnets are on that segment.
- Two subnets of a single network might otherwise be separated by another network. This situation is not permitted when subnets are in use. In these instances, the first network is *extended*, or layered on top of the second network using secondary addresses.

Note

- If any device on a network segment uses a secondary address, all other devices on that same segment
 must also use a secondary address from the same network or subnet. Inconsistent use of secondary
 addresses on a network segment can very quickly cause routing loops.
- When you are routing using the Open Shortest Path First (OSPF) algorithm, ensure that all secondary
 addresses of an interface fall into the same OSPF area as the primary addresses.
- If you configure a secondary IP address, you must disable sending ICMP redirect messages by entering the **no ip redirects** command, to avoid high CPU utilization.

Examples

In the following example, 192.108.1.27 is the primary address and 192.31.7.17 is the secondary address for GigabitEthernet interface 1/0/1:

```
Device# enable
Device# configure terminal
Device(config)# interface GigabitEthernet 1/0/1
Device(config-if)# ip address 192.108.1.27 255.255.255.0
Device(config-if)# ip address 192.31.7.17 255.255.255.0 secondary
```

Related Commands	Command	Description
	match ip route-source	Specifies a source IP address to match to required route maps that have been set up based on VRF connected routes.
	route-map	Defines the conditions for redistributing routes from one routing protocol into another, or to enable policy routing.
	set vrf	Enables VPN VRF selection within a route map for policy-based routing VRF selection.
	show ip arp	Displays the ARP cache, in which SLIP addresses appear as permanent ARP table entries.
	show ip interface	Displays the usability status of interfaces configured for IP.
	show route-map	Displays static and dynamic route maps.

ip dhcp pool

To configure a Dynamic Host Configuration Protocol (DHCP) address pool on a DHCP server and enter DHCP pool configuration mode, use the **ip dhcp pool** command in global configuration mode. To remove the address pool, use the no form of this command.

ip dhcp pool name no ip dhcp pool name

Syntax Description	name	Name of the pool. Can either be a symbolic string (such as engineering) or an integer (such as 0).

Command Default	DHCP address pools are	not configured.
-----------------	------------------------	-----------------

Command Modes Global configuration

Command History	Release	Modification
	12.0(1)T	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.28X	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

Usage Guidelines During execution of this command, the configuration mode changes to DHCP pool configuration mode, which is identified by the (config-dhcp)# prompt. In this mode, the administrator can configure pool parameters, like the IP subnet number and default router list.

Examples The following example configures pool1 as the DHCP address pool:

ip dhcp pool pool1

Related Commands	Command	Description
	host	Specifies the IP address and network mask for a manual binding to a DHCP client.
	ip dhcp excluded-address	Specifies IP addresses that a Cisco IOS DHCP server should not assign to DHCP clients.
	network (DHCP)	Configures the subnet number and mask for a DHCP address pool on a Cisco IOS DHCP server.

ip dhcp-relay information option server-override

To enable the system to globally insert the server ID override and link selection suboptions into the DHCP relay agent information option in forwarded BOOTREQUEST messages to a Dynamic Host Configuration Protocol (DHCP) server, use the **ip dhcp-relay information option server-override** command in global configuration mode. To disable inserting the server ID override and link selection suboptions into the DHCP relay agent information option, use the **no** form of this command.

ip dhcp-relay information option server-override no ip dhcp-relay information option server-override

Syntax Description This command has no arguments or keywords.

Command Default The server ID override and link selection suboptions are not inserted into the DHCP relay agent information option.

Command Modes Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Release 2.1	This command was introduced on Cisco ASR 1000 Series Aggregation Services Routers.
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.
	15.1(1)SY	This command was integrated into Cisco IOS Release 15.1(1)SY.

Usage Guidelines The **ip dhcp-relay information option server-override** command adds the following suboptions into the relay agent information option when DHCP broadcasts are forwarded by the relay agent from clients to a DHCP server:

- Server ID override suboption
- Link selection suboption

When this command is configured, the gateway address (giaddr) will be set to the IP address of the outgoing interface, which is the interface that is reachable by the DHCP server.

If the **ip dhcp relay information option server-id-override** command is configured on an interface, it overrides the global configuration on that interface only.

Examples In the following example, the DHCP relay will insert the server ID override and link selection suboptions into the relay information option of the DHCP packet. The loopback interface IP address is configured to be the source IP address for the relayed messages.

Device(config)# ip dhcp-relay information option server-override
Device(config)# ip dhcp-relay source-interface loopback 0
Device(config)# interface Loopback 0
Device(config-if)# ip address 10.2.2.1 255.255.255.0

l

Related Commands	Command	Description
	ip dhcp relay information option server-id-override	Enables the system to insert the server ID override and link selection suboptions on a specific interface into the DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.

ip dhcp-relay source-interface

To globally configure the source interface for the relay agent to use as the source IP address for relayed messages, use the **ip dhcp-relay source-interface** command in global configuration mode. To remove the source interface configuration, use the **no** form of this command.

ip dhcp-relay source-interface type number **no ip dhcp-relay source-interface** type number

Syntax Description	on <i>type</i> Interface type. For more information, use the question mark (?) online help function.					
	<i>number</i> Interface or subinterface number. For more information about the numbering system for networking device, use the question mark (?) online help function.					
Command Default	The source interface is not configured.					
Command Modes	Global co	onfiguration (confi	g)			
Command History	Release		Modi	fication		
	Cisco IO	S XE Release 2.1	This c Route	command was introduced on Cisco ASR 1000 Series Aggregation Services ers.		
	12.2(33)	SRE	This o	This command was integrated into Cisco IOS Release 12.2(33)SRE.		
	15.1(1)SY			This command was integrated into Cisco IOS Release 15.1(1)SY.		
Usage Guidelines	The ip dhcp-relay source-interface command allows the network administrator to specify a stable, hardware-independent IP address (such as a loopback interface) for the relay agent to use as a source IP address for relayed messages.					
	If the ip dhcp-relay source-interface global configuration command is configured and the ip dhcp relay source-interface command is also configured, the ip dhcp relay source-interface command takes preceden over the global configuration command. However, the global configuration is applied to interfaces without the interface configuration.					
Examples	In the following example, the loopback interface IP address is configured to be the source IP address for the relayed messages:					
	Device(config)# ip dhcp-relay source-interface loopback 0 Device(config)# interface loopback 0 Device(config-if)# ip address 10.2.2.1 255.255.255.0

 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a host domain in a device:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# ip domain-name domain-name

ip flow-export destination

To configure ETA flow export destination, use the ip flow-export destination command.

	ip flow-export destination ip	p_address port_number	
Syntax Description	<i>port_number</i> Port number. The	range is from 1 to 65535.	
Command Default	None		
Command Modes	ET-Analytics configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
	This example shows how to conf mode:	igure ETA flow export des	tination in the ET-Analytics configuration

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# et-analytics
Device(config-et-analytics)# ip flow-export
destination 120.0.0.1 2055
Device(config-et-analytics)# end
```

ip helper-address

To enable forwarding of User Datagram Protocol (UDP) broadcasts, including Bootstrap Protocol (BOOTP), received on an interface, use the **ip helper-address** command in interface configuration mode. To disable forwarding of broadcast packets to specific addresses, use the**no** form of this command.

ip helper-address[{vrf name | global}] address {[redundancy vrg-name]}
no ip helper-address [{vrf name | global}] address {[redundancy vrg-name]}

Syntax Description	vrf name		(Optional) Enables the VPN routing and forwarding (VRF) instance and the VRF name.		
	global		(Optional) Configures a global routing table.		
	address		Destination broadcast or host address to be used when forwarding UDP broadcasts. There can be more than one helper address per interface.		
	redundancy	vrg-name	(Optional) Defines the Virtual Router Group (VRG) name.		
Command Default	UDP broadcas	ts are not fo	rwarded.		
Command Modes	Interface confi	guration (co	onfig-if)		
Command History	Release	Modification			
	10.0	This command was introduced.			
	12.2(4)B	This command was modified. The vrf <i>name</i> keyword and argument pair and the global keyword were added.			
	12.2(15)T	This comm added.	hand was modified. The redundancy <i>vrg-name</i> keyword and argument pair was		
	12.2(28)SB	This comm	hand was integrated into Cisco IOS Release 12.2(28)SB.		
12.2(33)8		This command was integrated into Cisco IOS Release 12.2(33)SRA.			
	12.28X		hand is supported in the Cisco IOS Release 12.2SX train. Support in a specific ease of this train depends on your feature set, platform, and platform hardware.		

Usage Guidelines

The **ip forward-protocol** command along with the **ip helper-address** command allows you to control broadcast packets and protocols that are forwarded.

One common application that requires helper addresses is DHCP, which is defined in RFC 1531. To enable BOOTP or DHCP broadcast forwarding for a set of clients, configure a helper address on the router interface connected to the client. The helper address must specify the address of the BOOTP or DHCP server. If you have multiple servers, configure one helper address for each server.

The following conditions must be met for a UDP or IP packet to be able to use the **ip helper-address** command:

• The MAC address of the received frame must be all-ones broadcast address (ffff.ffff.ffff).

- The IP destination address must be one of the following: all-ones broadcast (255.255.255.255), subnet broadcast for the receiving interface, or major-net broadcast for the receiving interface if the **no ip classless** command is also configured.
- The IP time-to-live (TTL) value must be at least 2.
- The IP protocol must be UDP (17).
- The UDP destination port must be for TFTP, Domain Name System (DNS), Time, NetBIOS, ND, BOOTP or DHCP packet, or a UDP port specified by the **ip forward-protocol udp** command in global configuration mode.

If the DHCP server resides in a VPN or global space that is different from the interface VPN, then the **vrf** *name* or the **global** option allows you to specify the name of the VRF or global space in which the DHCP server resides.

The **ip helper-addressvrf***name address* option uses the address associated with the VRF name regardless of the VRF of the incoming interface. If the **ip helper-addressvrf***name address* command is configured and later the VRF is deleted from the configuration, then all IP helper addresses associated with that VRF name will be removed from the interface configuration.

If the **ip helper-address** *address* command is already configured on an interface with no VRF name configured, and later the interface is configured with the **ip helper-address vrf** *name address* command, then the previously configured **ip helper-address** *address* command is considered to be global.

Note The **ip helper-address**command does not work on an X.25 interface on a destination router because the router cannot determine if the packet was intended as a physical broadcast.

The **service dhcp** command must be configured on the router to enable IP helper statements to work with DHCP. If the command is not configured, the DHCP packets will not be relayed through the IP helper statements. The **service dhcp** command is configured by default.

Examples

The following example shows how to define an address that acts as a helper address:

```
Router(config)# interface ethernet 1
Router(config-if)# ip helper-address 10.24.43.2
```

The following example shows how to define an address that acts as a helper address and is associated with a VRF named host1:

```
Router(config)# interface ethernet 1/0
Router(config-if)# ip helper-address vrf host1 10.25.44.2
```

The following example shows how to define an address that acts as a helper address and is associated with a VRG named group1:

```
Router(config)# interface ethernet 1/0
Router(config-if)# ip helper-address 10.25.45.2 redundancy group1
```

Usage Guidelines	This command is used to restrict the list of CipherSuites (encryption algorithms) that should be used for encryption over the HTTPS connection. For example, you may want to allow only the most secure CipherSuites to be used.				
	Unless you have a reason to specify the CipherSuites that should be used, or you are unfamiliar with the do of these CipherSuites, you should leave this command unconfigured and let the server and client negoti the CipherSuite that they both support (this is the default).				
			y by Cisco IOS software image. For example, "IP Sec56" ("k8") images IH_DES_CBC_SHA CipherSuite in Cisco IOS Release 12.2(15)T.		
			d (speed), the following list ranks the CipherSuites from fastest to slowest s required for the more secure and more complex CipherSuites):		
	1. SSL_RSA_WIT	TH_DES_CE	BC_SHA		
	2. SSL_RSA_WITH_RC4_128_MD5				
	2. SSL_RSA_WIT	TH_RC4_128	8_MD5		

4. SSL_RSA_WITH_3DES_EDE_CBC_SHA

Additional information about these CipherSuites can be found online from sources that document the Secure Sockets Layer (SSL) 3.0 protocol.

Examples The following exampleshows how to restricts the CipherSuites offered to a connecting secure web client:

Router(config) # ip http secure-ciphersuite rc4-128-sha rc4-128-md5

ip http secure-server

To enable a secure HTTP (HTTPS) server, enter the **ip http secure-server** command in global configuration mode. To disable the HTTPS server, use the **no** form of this command..

ip http secure-server no ip http secure-server

Syntax Description This command has no arguments or keywords.

Command Default The HTTPS server is disabled.

Command Modes Global configuration (config)

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	

Usage Guidelines

The HTTPS server uses the Secure Sockets Layer (SSL) version 3.0 protocol.

```
Caution
```

/!\

When enabling an HTTPS server, you should always disable the standard HTTP server to prevent unsecured connections to the same services. Disable the standard HTTP server using the **no ip http server** command in global configuration mode (this step is precautionary; typically, the HTTP server is disabled by default).

If a certificate authority (CA) is used for certification, you should declare the CA trustpoint on the routing device before enabling the HTTPS server.

To close HTTP/TCP port 8090, you must disable both the HTTP and HTTPS servers. Enter the **no http server** and the **no http secure-server** commands, respectively.

Examples

In the following example the HTTPS server is enabled, and the (previously configured) CA trustpoint CA-trust-local is specified:

```
Device#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)#ip http secure-server
Device(config)#ip http secure-trustpoint CA-trust-local
Device(config)#end
Device#show ip http server secure status
HTTP secure server status: Enabled
HTTP secure server port: 443
HTTP secure server ciphersuite: 3des-ede-cbc-sha des-cbc-sha rc4-128-md5 rc4-12a
```

HTTP secure server client authentication: Disabled HTTP secure server trustpoint: CA-trust-local

Command	Description
ip http secure-server	Enables the HTTPS server.

ip ssh

To configure Secure Shell (SSH) control parameters on your router, use the **ip ssh** command in global configuration mode. To restore the default value, use the **no** form of this command.

ip ssh [{timeout seconds | authentication-retries integer}]
no ip ssh [{timeout seconds | authentication-retries integer}]

Syntax Description	timeout		(Optional) The time interval that the router waits for the SSH client to respond.
			This setting applies to the SSH negotiation phase. Once the EXEC session starts, the standard timeouts configured for the vty apply. By default, there are 5 vtys defined (0-4), therefore 5 terminal sessions are possible. After the SSH executes a shell, the vty timeout starts. The vty timeout defaults to 10 minutes.
	seconds		(Optional) The number of seconds until timeout disconnects, with a maximum of 120 seconds. The default is 120 seconds.
	authentication- retries		(Optional) The number of attempts after which the interface is reset.
	integer		(Optional) The number of retries, with a maximum of 5 authentication retries. The default is 3.
Command Default	SSH control parameters are	e set to default router value	s.
Command Modes	Global configuration (conf	ig)

	12.1(1)T	This command was integr	rated into Cisco IOS Release 12.1(1) T.
	12.2(17a)SX	This command was integr	rated into Cisco IOS Release 12.2(17a)SX.
	12.2(33)SRA	This command was integr	rated into Cisco IOS release 12.(33)SRA.
	Cisco IOS XE Release 2.4	This command was imple	mented on the Cisco ASR 1000 series routers.
Usage Guidelines	Before you configure SSH rsa command.	on your router, you must e	nable the SSH server using the crypto key generate
Examples	The following examples co	onfigure SSH control param	neters on your router:

ip ssh timeout 120
ip ssh authentication-retries 3

ip ssh version

To specify the version of Secure Shell (SSH) to be run on a router, use the **ip ssh version**command in global configuration mode. To disable the version of SSH that was configured and to return to compatibility mode, use the **no** form of this command.

```
ip ssh version [\{1 \mid 2\}]
no ip ssh version [\{1 \mid 2\}]
```

Syntax Description	1 (Optional) Router runs only SSH Version 1.			
	2 (Optional) Router runs only SSH Version 2.			
Command Default	If this command is not configured, SSH operates in compatibility mode, that is, Version 1 and Version 2 are both supported.			
Command Modes	Global configuration			
Command History	Release Modification			
	12.3(4)T This command was introduced.			
	12.3(2)XE This command was integrated into Cisco IOS Release 12.3(2)XE.			
	12.2(25)S This command was integrated into Cisco IOS Release 12.2(25)S.			
	12.3(7)JA This command was integrated into Cisco IOS Release 12.3(7)JA.			
	12.0(32)SY This command was integrated into Cisco IOS Release 12.0(32)SY.			
	12.4(20)T This command was integrated into Cisco IOS Release 12.4(20)T.			
	15.2(2)SA2 This command was implemented on the Cisco ME 2600X Series Ethernet Access Switches.			
Usage Guidelines	You can use this command with the 2 keyword to ensure that your router will not inadvertently establish a weaker SSH Version 1 connection.			
Examples	The following example shows that only SSH Version 1 support is configured:			
	Router (config)# ip ssh version 1			
	The following example shows that only SSH Version 2 is configured:			
	Router (config)# ip ssh version 2			
	The following example shows that SSH Versions 1 and 2 are configured:			
	Router (config)# no ip ssh version			

Related Commands

Command	Description
debug ip ssh	Displays debug messages for SSH.
disconnect ssh	Terminates a SSH connection on your router.
ip ssh	Configures SSH control parameters on your router.
ip ssh rsa keypair-name	Specifies which RSA key pair to use for a SSH connection.
show ip ssh	Displays the SSH connections of your router.

ip tftp blocksize

To specify TFTP client blocksize, use the **ip tftp blocksize** command.

Syntax Description	<i>blocksize-value</i> Blocksize value. Valid range is from 512-8192 Kbps.	
Command Default	TFTP client blocksize is not co	nfigured.
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Usage Guidelines	Use this command to change th	ne default blocksize to decrease the image download time.

Example

The following example shows how to specify TFTP client blocksize:

Device(config)# ip tftp blocksize 512

ip verify source

To enable IP source guard on an interface, use the **ip verify source** command in interface configuration mode. To disable IP source guard, use the **no** form of this command.

ip verify source no ip verify source

	no ip verny source	
Command Default	IP source guard is disabled.	
Command Modes	Interface configuration	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Usage Guidelines	To enable IP source guard with source IP address filte command.	ering, use the ip verify source interface configuration
Examples	This example shows how to enable IP source guard w	vith source IP address filtering on an interface:
	Device(config)# interface gigabitethernet1/0, Device(config-if)# ip verify source	/1
	You can verify your settings by entering the show ip	verify source privileged EXEC command.

ipv4 acl

To create ACL configuration for wireless IPv4, use the **ipv4 acl** command. configuration.

ipv4 acl ipv4-acl-name

Syntax Description	ipv4 acl	Creates ACL configuration for wireless IPv4.
	ipv4-acl-name	Specifies the IPv4 ACL name.
Command Default	None	
Command Modes	Wireless policy	confirguration mode
Command History	Release	Modification
	Cisco IOS XE A	Amsterdam 17.1.1s This command was introduced.

Example

This example shows how to create an ACL configuration for wireless IPv4:

Device (config-wireless-policy) #ipv4 acl ipv4-acl-name

ipv4 dhcp

To configure the DHCP parameters for a WLAN, use the **ipv4 dhcp** command.

ipv4 dhcp {opt82 | {ascii | rid | format | {ap_ethmac | ap_location | apmac | apname | policy_tag | ssid | vlan_id }} | required | server *dhcp-ip-addr*}

Cuntary Description		
Syntax Description	opt82	Sets DHCP option 82 for wireless clients on this WLAN
	required	Specifies whether DHCP address assignment is required
	server	Configures the WLAN's IPv4 DHCP Server
	ascii	Supports ASCII for DHCP option 82
	rid	Supports adding Cisco 2 byte RID for DHCP option 82
	format	Sets RemoteID format
	ap_ethmac	Enables DHCP AP Ethernet MAC address
	ap_location	Enables AP location
	apmac	Enables AP MAC address
	apname	Enables AP name
	site_tag (Policy tag)	Enables Site tag
	ssid	Enables SSID
	vlan_id	Enables VLAN ID
	dhcp-ip-addr	Enter the override DHCP server's IP Address.
Command Default	None	
Command Modes	config-wireless-polic	у
Command History	Release	Modification
	Cisco IOS XE Gibral	tar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE

Examples

The following example shows how to configure DHCP address assignment as a requirement:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy demo-profile-name
Device(config-wireless-policy)# ipv4 dhcp required
```

ipv4 flow monitor

To configure the IPv4 traffic ingress flow monitor for a WLAN profile policy, use the **ipv4 flow monitor input** command.

ipv4 flow monitor monitor-name input

Syntax Description	monitor-name Flow monitor name.		me.
	input	Enables flow more	nitor on ingress traffic.
Command Default	None		
Command Modes	config-wir	eless-policy	
Command History	Release		Modification
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the IPv4 traffic ingress flow monitor for a WLAN profile policy:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy policy-profile-name
Device(config-wireless-policy)# ipv4 flow monitor flow-monitor-name input
```

ipv4 flow monitor output

To configure the IPv4 traffic egress flow monitor for a WLAN profile policy, use the **ipv4 flow monitor output** command.

ipv4 flow monitor monitor-name output

Syntax Description	monitor-name Flow monitor	name.
	output Enables flow n	nonitor on egress traffic.
Command Default	None	
command Modes	config-wireless-policy	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.	2.1 This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.2.1.

Examples

The following example shows how to configure the IPv4 traffic egress flow monitor for a WLAN profile policy:

Device(config-wireless-policy) #ipv4 flow monitor flow-monitor-name output

ipv6 flow monitor input

To configure the IPv6 traffic ingress flow monitor for a WLAN profile policy, use the **ipv6 flow monitor input** command.

ipv6 flow monitor monitor-name input

Syntax Description	monitor-name Flow monitor name.		ne.
	input	Enables flow moni	tor on ingress traffic.
Command Default	None		
Command Modes	config-wireless-policy		
Command History	ry Release Modification		Modification
	Cisco IOS 2	XE Amsterdam 17.2.1	This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.2.1.

Examples

The following example shows how to configure the IPv6 traffic ingress flow monitor for a WLAN profile policy:

Device(config-wireless-policy)#ipv6 flow monitor flow-monitor-name input

ipv6 flow monitor output

To configure the IPv6 traffic egress flow monitor for a WLAN profile policy, use the **ipv6 flow monitor output** command.

ipv6 flow monitor monitor-name output

Syntax Description	monitor-name Flow monitor	name.
	output Enables flow n	nonitor on egress traffic.
Command Default	None	
command Modes	config-wireless-policy	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.	2.1 This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.2.1.

Examples

The following example shows how to configure the IPv6 traffic egress flow monitor for a WLAN profile policy:

Device(config-wireless-policy) #ipv6 flow monitor flow-monitor-name output

ipv6 access-list

To define an IPv6 access list and to place the device in IPv6 access list configuration mode, use the **ipv6 access-list** command in global configuration mode. To remove the access list, use the **no** form of this command.

ipv6 access-list *access-list-name* | **match-local-traffic** | **log-update threshold** *threshold-in-msgs* | **role-based** *list-name* **noipv6 access-list** *access-list-name* | **client** *permit-control-packets* | **log-update** *threshold* | **role-based** *list-name*

Syntax Description	ipv6 access-list-name	Creates a named IPv6 ACL (up to 64 characters in length) and enters IPv6 ACL configuration mode. <i>access-list-name</i> - Name of the IPv6 access list. Names cannot contain a space or quotation mark, or begin with a numeric.
	match-local-traffic	Enables matching for locally-generated traffic.
	log-update threshold threshold-in-msgs	Determines how syslog messages are generated after the initial packet match. <i>threshold-in-msgs</i> - Number of packets generated.
	role-based list-name	Creates a role-based IPv6 ACL.

Command Default No IPv6 access list is defined.

Command Modes

Global configuration

- Command History Release Modification
- Usage Guidelines IPv6 ACLs are defined by using the **ipv6 access-list**command in global configuration mode and their permit and deny conditions are set by using the **deny** and **permit**commands in IPv6 access list configuration mode. Configuring the **ipv6 access-list**command places the device in IPv6 access list configuration mode--the device prompt changes to Device(config-ipv6-acl)#. From IPv6 access list configuration mode, permit and deny conditions can be set for the defined IPv6 ACL.

Note

IPv6 ACLs are defined by a unique name (IPv6 does not support numbered ACLs). An IPv4 ACL and an IPv6 ACL cannot share the same name.

IPv6 is automatically configured as the protocol type in **permit any any** and **deny any any** statements that are translated from global configuration mode to IPv6 access list configuration mode.

Every IPv6 ACL has implicit **permit icmp any any nd-na**, **permit icmp any any nd-ns**, and **deny ipv6 any any** statements as its last match conditions. (The former two match conditions allow for ICMPv6 neighbor discovery.) An IPv6 ACL must contain at least one entry for the implicit **deny ipv6 any any** statement to take effect. The IPv6 neighbor discovery process makes use of the IPv6 network layer service; therefore, by default,

IPv6 ACLs implicitly allow IPv6 neighbor discovery packets to be sent and received on an interface. In IPv4, the Address Resolution Protocol (ARP), which is equivalent to the IPv6 neighbor discovery process, makes use of a separate data link layer protocol; therefore, by default, IPv4 ACLs implicitly allow ARP packets to be sent and received on an interface.

Use the **ipv6 traffic-filter** interface configuration command with the *access-list-name* argument to apply an IPv6 ACL to an IPv6 interface. Use the **ipv6 access-class** line configuration command with the *access-list-name* argument to apply an IPv6 ACL to incoming and outgoing IPv6 virtual terminal connections to and from the device.

An IPv6 ACL applied to an interface with the **ipv6 traffic-filter** command filters traffic that is forwarded, not originated, by the device.

Examples

The example configures the IPv6 ACL list named list1 and places the device in IPv6 access list configuration mode.

Device(config)# ipv6 access-list list1
Device(config-ipv6-acl)#

The following example configures the IPv6 ACL named list2 and applies the ACL to outbound traffic on Ethernet interface 0. Specifically, the first ACL entry keeps all packets from the network FEC0:0:0:2::/64 (packets that have the site-local prefix FEC0:0:0:2 as the first 64 bits of their source IPv6 address) from exiting out of Ethernet interface 0. The second entry in the ACL permits all other traffic to exit out of Ethernet interface 0. The second entry is necessary because an implicit deny all condition is at the end of each IPv6 ACL.

```
Device(config)# ipv6 access-list list2 deny FEC0:0:0:2::/64 any
Device(config)# ipv6 access-list list2 permit any any
Device(config)# interface ethernet 0
Device(config-if)# ipv6 traffic-filter list2 out
```

ipv6 acl

To create ACL configuration for wireless IPv6, use the **ipv6 acl** command. configuration.

ipv6 acl ipv6-acl-name

Syntax Description	ipv6 acl	Creates ACL configuration for wireless IPv6.
	ipv6-acl-name	Specifies the IPv6 ACL name.
Command Default	None	
Command Modes	Wireless policy	confirguration mode
Command History	Release	Modification
	Cisco IOS XE A	Amsterdam 17.1.1s This command was introduced.

Example

This example shows how to create an ACL configuration for wireless IPv6:

Device (config-wireless-policy) #ipv6 acl ipv6-acl-name

ipv6-address-type

To configure the 802.11u IPv6 address type, use the **ipv6-address-type** command. To remove the address type, use the **no** form of the command.

ipv6-address-type { available | not-available | not-known }

Syntax Description	available	Sets IPv6 address type as available.
	not-available	Sets IPv6 address type as not available.
	not-known	Sets IPv6 address type availability as not known.
Command Default	None	
Command Default Command Modes	_	P Server Configuration (config-wireless-anqp-server)
	_	P Server Configuration (config-wireless-anqp-server) Modification

Example

The following example shows how to configure a 802.11u IPv6 address type:

Device(config)# wireless hotspot angp-server my-server Device(config-wireless-angp-server)# ipv4-address-type available

ipv6 address

To configure an IPv6 address based on an IPv6 general prefix and enable IPv6 processing on an interface, use the **ipv6 address** command in interface configuration mode. To remove the address from the interface, use the **no** form of this command.

ipv6 address {*ipv6-prefix/prefix-length* | *prefix-name sub-bits/prefix-length*} **no ipv6 address** {*ipv6-address/prefix-length* | *prefix-name sub-bits/prefix-length*}

Syntax Description	ipv6-address	The IPv6 address to be used.
contiguous bits		The length of the IPv6 prefix. A decimal value that indicates how many of the high-order contiguous bits of the address comprise the prefix (the network portion of the address). A slash mark must precede the decimal value.
	prefix-name	A general prefix, which specifies the leading bits of the network to be configured on the interface.
	sub-bits	The subprefix bits and host bits of the address to be concatenated with the prefixes provided by the general prefix specified with the <i>prefix-name</i> argument.
		The <i>sub-bits</i> argument must be in the form documented in RFC 2373 where the address is specified in hexadecimal using 16-bit values between colons.

Command Default No IPv6 addresses are defined for any interface.

Command Modes

Interface configuration

Command History	Release	Modification
	12.2(2)T	This command was introduced.
	12.2(28)SB	This command was integrated into Cisco IOS Release 12.2(28)SB.
	12.2(25)SG	This command was integrated into Cisco IOS Release 12.2(25)SG.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
	Cisco IOS XE Release 2.1	This command was integrated into Cisco ASR 1000 Series devices.
	15.2(4)S	This command was integrated into Cisco IOS Release 15.2(4)S.
	15.2(2)SNG	This command was implemented on the Cisco ASR 901 Series Aggregation Services devices.
	Cisco IOS XE Release 3.2SE	This command was integrated into Cisco IOS XE Release 3.2SE.

I

Usage Guidelines	The ipv6 address command allows multiple IPv6 addresses to be configured on an interface in various different ways, with varying options. The most common way is to specify the IPv6 address with the prefix length.
	Addresses may also be defined using the general prefix mechanism, which separates the aggregated IPv6 prefix bits from the subprefix and host bits. In this case, the leading bits of the address are defined in a general prefix, which is globally configured or learned (for example, through use of Dynamic Host Configuration Protocol-Prefix Delegation (DHCP-PD)), and then applied using the <i>prefix-name</i> argument. The subprefix bits and host bits are defined using the <i>sub-bits</i> argument.
	Using the no ipv6 address autoconfig command without arguments removes all IPv6 addresses from an interface.
	IPv6 link-local addresses must be configured and IPv6 processing must be enabled on an interface by using the ipv6 address link-local command.
Examples	The following example shows how to enable IPv6 processing on the interface and configure an address based on the general prefix called my-prefix and the directly specified bits:
	Device(config-if) ipv6 address my-prefix 0:0:0:7272::72/64
	Assuming the general prefix named my-prefix has the value of 2001:DB8:2222::/48, then the interface would be configured with the global address 2001:DB8:2222:7272::72/64.

Related Commands	Command	Description
	ipv6 address anycast	Configures an IPv6 anycast address and enables IPv6 processing on an interface.
	ipv6 address eui-64	Configures an IPv6 address and enables IPv6 processing on an interface using an EUI-64 interface ID in the low-order 64 bits of the address.
	ipv6 address link-local	Configures an IPv6 link-local address for an interface and enables IPv6 processing on the interface.
	ipv6 unnumbered	Enables IPv6 processing on an interface without assigning an explicit IPv6 address to the interface.
	no ipv6 address autoconfig	Removes all IPv6 addresses from an interface.
	show ipv6 interface	Displays the usability status of interfaces configured for IPv6.

ipv6 dhcp pool

To configure a Dynamic Host Configuration Protocol (DHCP) for IPv6 server configuration information pool and enter DHCP for IPv6 pool configuration mode, use the **ipv6 dhcp pool** command in global configuration mode. To delete a DHCP for IPv6 pool, use the **no** form of this command.

ipv6 dhcp pool poolname no ipv6 dhcp pool poolname

Syntax Description	poolname	User-defined name for the local prefix pool. The pool name can be a symbolic string (such as "Engineering") or an integer (such as 0).

Command Default DHCP for IPv6 pools are not configured.

Command Modes

Global configuration

Command History	Release	Modification
	12.3(4)T	This command was introduced.
	12.2(18)SXE	This command was integrated into Cisco IOS Release 12.2(18)SXE.
	12.4(24)T	This command was integrated into Cisco IOS Release 12.4(24)T.
	Cisco IOS XE Release 2.1	This command was integrated into Cisco IOS XE Release 2.1.
	12.2(33)SRE	This command was modified. It was integrated into Cisco IOS Release 12.2(33)SRE.
	12.2(33)XNE	This command was modified. It was integrated into Cisco IOS Release 12.2(33)XNE.

Usage Guidelines

Use the **ipv6 dhcp pool**command to create a DHCP for IPv6 server configuration information pool. When the **ipv6 dhcp pool** command is enabled, the configuration mode changes to DHCP for IPv6 pool configuration mode. In this mode, the administrator can configure pool parameters, such as prefixes to be delegated and Domain Name System (DNS) servers, using the following commands:

- address prefix *IPv6-prefix* [lifetime {*valid-lifetime preferred-lifetime* | infinite}]sets an address prefix for address assignment. This address must be in hexadecimal, using 16-bit values between colons.
- **link-address** *IPv6-prefix* sets a link-address IPv6 prefix. When an address on the incoming interface or a link-address in the packet matches the specified IPv6-prefix, the server uses the configuration information pool. This address must be in hexadecimal, using 16-bit values between colons.
- **vendor-specific** *vendor-id* enables DHCPv6 vendor-specific configuration mode. Specify a vendor identification number. This number is the vendor IANA Private Enterprise Number. The range is 1 to 4294967295. The following configuration command is available:
 - **suboption** *number* sets vendor-specific suboption number. The range is 1 to 65535. You can enter an IPv6 address, ASCII text, or a hex string as defined by the suboption parameters.

I

	Note The hex value used under the suboption keyword allows users to enter only hex digits (0-f). Entering an invalid hex value does not delete the previous configuration.
	Once the DHCP for IPv6 configuration information pool has been created, use the ipv6 dhcp server command to associate the pool with a server on an interface. If you do not configure an information pool, you need to use the ipv6 dhcp server interface configuration command to enable the DHCPv6 server function on an interface.
	When you associate a DHCPv6 pool with an interface, only that pool services requests on the associated interface. The pool also services other interfaces. If you do not associate a DHCPv6 pool with an interface, it can service requests on any interface.
	Not using any IPv6 address prefix means that the pool returns only configured options.
	The link-address command allows matching a link-address without necessarily allocating an address. You can match the pool from multiple relays by using multiple link-address configuration commands inside a pool.
	Since a longest match is performed on either the address pool information or the link information, you can configure one pool to allocate addresses and another pool on a subprefix that returns only configured options.
Examples	The following example specifies a DHCP for IPv6 configuration information pool named cisco1 and places the router in DHCP for IPv6 pool configuration mode:
	Router(config)# ipv6 dhcp pool cisco1 Router(config-dhcpv6)#
	The following example shows how to configure an IPv6 address prefix for the IPv6 configuration pool cisco1:
	Router(config-dhcpv6)# address prefix 2001:1000::0/64 Router(config-dhcpv6)# end
	The following example shows how to configure a pool named engineering with three link-address prefixes and an IPv6 address prefix:
	<pre>Router# configure terminal Router(config)# ipv6 dhcp pool engineering Router(config-dhcpv6)# link-address 2001:1001::0/64 Router(config-dhcpv6)# link-address 2001:1002::0/64 Router(config-dhcpv6)# link-address 2001:2000::0/48 Router(config-dhcpv6)# address prefix 2001:1003::0/64 Router(config-dhcpv6)# end</pre>
	The following example shows how to configure a pool named 350 with vendor-specific options:
	Router# configure terminal Router(config)# ipv6 dhcp pool 350 Router(config-dhcpv6)# vendor-specific 9 Router(config-dhcpv6-vs)# suboption 1 address 1000:235D::1 Pouter(config-dhcpv6-vs)# suboption 2 ascii "IP-Phone"
	Router(config-dhcpv6-vs)# suboption 2 ascii "IP-Phone" Router(config-dhcpv6-vs)# end

Related Commands

ıds	Command	Description
	ipv6 dhcp server	Enables DHCP for IPv6 service on an interface.
	show ipv6 dhcp pool	Displays DHCP for IPv6 configuration pool information.

L

ipv6 enable

To enable IPv6 processing on an interface that has not been configured with an explicit IPv6 address, use the **ipv6 enable**command in interface configuration mode. To disable IPv6 processing on an interface that has not been configured with an explicit IPv6 address, use the **no** form of this command.

ipv6 enable no ipv6 enable

- Syntax Description This command has no arguments or keywords.
- **Command Default** IPv6 is disabled.

Command Modes

Interface configuration (config-if)

Usage Guidelines	also enabling the interface for	utomatically configures an IPv6 link-local unicast address on the interface while r IPv6 processing. The no ipv6 enable command does not disable IPv6 processing gured with an explicit IPv6 address.	

Examples The following example enables IPv6 processing on Ethernet interface 0/0:

Device(config)# interface ethernet 0/0
Device(config-if)# ipv6 enable

Related Commands

Command	Description
ipv6 address link-local	Configures an IPv6 link-local address for an interface and enables IPv6 processing on the interface.
ipv6 address eui-64	Configures an IPv6 address and enables IPv6 processing on an interface using an EUI-64 interface ID in the low-order 64 bits of the address.
ipv6 unnumbered	Enables IPv6 processing on an interface without assigning an explicit IPv6 address to the interface.
show ipv6 interface	Displays the usability status of interfaces configured for IPv6.

ipv6 mld snooping

To enable Multicast Listener Discovery version 2 (MLDv2) protocol snooping globally, use the **ipv6 mld snooping** command in global configuration mode. To disable the MLDv2 snooping globally, use the **no** form of this command.

ipv6 mld snooping no ipv6 mld snooping

Syntax Description This command has no arguments or keywords.

Command Default This command is enabled.

Command Modes

Global configuration

show ipv6 mld snooping

Command History	Release	Modification
	12.2(18)SXE	This command was introduced on the Supervisor Engine 720.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	15.4(2)S	This command was implemented on the Cisco ASR 901 Series Aggregation Services Router.
Usage Guidelines	MLDv2 snoop (PFC3).	ing is supported on the Supervisor Engine 720 with all versions of the Policy Feature Card 3
		2 snooping, configure a Layer 3 interface in the subnet for IPv6 multicast routing or enable the ing querier in the subnet.
Examples	This example	shows how to enable MLDv2 snooping globally:
	Router(confi	g)# ipv6 mld snooping
Related Commands	Command	Description

Displays MLDv2 snooping information.

ipv6 nd managed-config-flag

To set the managed address configuration flag in IPv6 router advertisements, use the **ipv6 nd managed-config-flag** command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the **no** form of this command.

ipv6 nd managed-config-flag no ipv6 nd managed-config-flag

Syntax Description	This command has no keywords	This command has no keywords or arguments.		
Command Default	The managed address configurat	tion flag is not set in IPv6 router advertisements.		
Command Modes	Interface configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.		
Usage Guidelines	whether they should use stateful	afiguration flag in IPv6 router advertisements indicates to attached hosts autoconfiguration to obtain addresses. If the flag is set, the attached hosts ation to obtain addresses. If the flag is not set, the attached hosts should not obtain addresses.		
	Hosts may use stateful and state	less address autoconfiguration simultaneously.		
Examples	This example shows how to conadvertisements:	figure the managed address configuration flag in IPv6 router		
	Device(config)# interface Device(config-if)# ipv6 nd :	managed-config-flag		

ipv6 nd other-config-flag

To set the other stateful configuration flag in IPv6 router advertisements, use the **ipv6 nd other-config-flag** command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the **no** form of this command.

ipv6 nd other-config-flag

Syntax Description	This command has n	to keywords or arguments.
Command Default	The other stateful cor	nfiguration flag is not set in IPv6 router advertisements.
Command Modes	Interface configuration	on
	Dynamic template co	onfiguration
Command History	Release	Modification
	Cisco IOS XE Gibral	Itar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Usage Guidelines	how they can obtain a	her stateful configuration flag in IPv6 router advertisements indicates to attached hosts autoconfiguration information other than addresses. If the flag is set, the attached hosts attoconfiguration to obtain the other (nonaddress) information.
	an attached host	ddress configuration flag is set using the ipv6 nd managed-config-flag command, then can use stateful autoconfiguration to obtain the other (nonaddress) information regardless the other stateful configuration flag.
Examples	This example (not ap router advertisements	plicable for BNG) configures the "other stateful configuration" flag in IPv6 s:
	Device(config)# ir Device(config-if)#	nterface # ipv6 nd other-config-flag

ipv6 nd ra throttler attach-policy

To configure a IPv6 policy for feature RA throttler, use the **ipv6 nd ra-throttler attach-policy** command.

ipv6 nd ra-throttler attach-policy policy-name

ipv6 I	Pv6 root chain.	
ra-throttler (Configure RA thr	rottler on the VLAN.
attach-policy A	Apply a policy for	r feature RA throttler.
policy-name I	Policy name for f	feature RA throttler
None		
config-vlan		
Release		Modification
Cisco IOS XE	Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	ra-throttler attach-policy attach-policy attach-policy policy-name attach-policy None attach-policy Release attach-policy	ra-throttler Configure RA th attach-policy Apply a policy fo policy-name Policy name for the None config-vlan Release Release

Examples

The following example shows how to configure configure a IPv6 policy for feature RA throttler:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# vlan configuration vlan-id
Device(config-vlan-config)# ipv6 nd ra-throttler attach-policy
```

ipv6 nd raguard policy

To define the router advertisement (RA) guard policy name and enter RA guard policy configuration mode, use the **ipv6 nd raguard policy** command in global configuration mode.

ipv6 nd raguardpolicy policy-name

Syntax Description	policy-name	IPv6 RA guard policy name.
--------------------	-------------	----------------------------

Command Default An RA guard policy is not configured.

Command Modes

Global configuration (config)#

Command History	Release	Modification
	12.2(50)SY	This command was introduced.
	15.2(4)S	This command was integrated into Cisco IOS Release 15.2(4)S.
	15.0(2)SE	This command was integrated into Cisco IOS Release 15.0(2)SE.
	Cisco IOS XE Release 3.2SE	This command was integrated into Cisco IOS XE Release 3.2SE.

Usage Guidelines

Use the **ipv6 nd raguard policy** command to configure RA guard globally on a router. Once the device is in ND inspection policy configuration mode, you can use any of the following commands:

- device-role
- drop-unsecure
- limit address-count
- sec-level minimum
- trusted-port
- validate source-mac

After IPv6 RA guard is configured globally, you can use the **ipv6 nd raguard attach-policy** command to enable IPv6 RA guard on a specific interface.

Examples The following example shows how to define the RA guard policy name as policy1 and place the device in policy configuration mode:

Device(config)# ipv6 nd raguard policy policy1
Device(config-ra-guard)#

Related Commands

Table 8:

Command	Description
device-role	Specifies the role of the device attached to the port.
drop-unsecure	Drops messages with no or invalid options or an invalid signature.
ipv6 nd raguard attach-policy	Applies the IPv6 RA guard feature on a specified interface.
limit address-count	Limits the number of IPv6 addresses allowed to be used on the port.
sec-level minimum	Specifies the minimum security level parameter value when CGA options are used.
trusted-port	Configures a port to become a trusted port.
validate source-mac	Checks the source MAC address against the link layer address.

I

	Note All existing IPv6 Snooping commands (prior to) now have corresponding SISF-based device-tracking commands that allow you to apply your configuration to both IPv4 and IPv6 address families.
	To configure an IPv6 snooping policy and enter IPv6 snooping configuration mode, use the ipv6 snooping policy command in global configuration mode. To delete an IPv6 snooping policy, use the no form of this command.
	ipv6 snooping policy snooping-policy no ipv6 snooping policy snooping-policy
Syntax Description	<i>snooping-policy</i> User-defined name of the snooping policy. The policy name can be a symbolic string (such as Engineering) or an integer (such as 0).
Command Default	An IPv6 snooping policy is not configured.
Command Modes	Global configuration
Command History	Release Modification
	This command was introduced.
Usage Guidelines	Use the ipv6 snooping policy command to create an IPv6 snooping policy. When the ipv6 snooping polic command is enabled, the configuration mode changes to IPv6 snooping configuration mode. In this mode, the administrator can configure the following IPv6 first-hop security commands:
	• The device-role command specifies the role of the device attached to the port.
	• The limit address-count <i>maximum</i> command limits the number of IPv6 addresses allowed to be use on the port.
	• The protocol command specifies that addresses should be gleaned with Dynamic Host Configuration Protocol (DHCP) or Neighbor Discovery Protocol (NDP).
	• The security-level command specifies the level of security enforced.
	• The tracking command overrides the default tracking policy on a port.
	• The trusted-port command configures a port to become a trusted port; that is, limited or no verification is performed when messages are received.
	This example shows how to configure an IPv6 snooping policy:
	Device(config)# ipv6 snooping policy policy1 Device(config-ipv6-snooping)#

ipv6 traffic-filter

This command enables IPv6 traffic filter.

To enable the filtering of IPv6 traffic on an interface, use the **ipv6 traffic-filter** command. To disable the filtering of IPv6 traffic on an interface, use the **no** form of the command.

Use the **ipv6 traffic-filter** interface configuration command on the switch stack or on a standalone switch to filter IPv6 traffic on an interface. The type and direction of traffic that you can filter depends on the feature set running on the switch stack. Use the **no** form of this command to disable the filtering of IPv6 traffic on an interface.

ipv6 traffic-filter [web] acl-name
no ipv6 traffic-filter [web]

Syntax Description	web (Optional) Specifies an IPv6 access name for the WLAN Web ACL.		
	acl-name Specifies an IPv6 access name.		
Command Default	Filtering of IPv6 traffic on an interface is not configured.		
Command Modes	wlan		
Command History	Release Modification		
	This command was introduced.		
Usage Guidelines	To configure the dual IPv4 and IPv6 template, enter the sdm prefer dual-ipv4-and-ipv6 {default vlan} global configuration command and reload the switch.		
	You can use the ipv6 traffic-filter command on physical interfaces (Layer 2 or Layer 3 ports), Layer 3 port channels, or switch virtual interfaces (SVIs).		
	You can apply an ACL to outbound or inbound traffic on Layer 3 interfaces (port ACLs), or to inbound traffic on Layer 2 interfaces (router ACLs).		
	If any port ACL (IPv4, IPv6, or MAC) is applied to an interface, that port ACL is used to filter packets, and any router ACLs attached to the SVI of the port VLAN are ignored.		
	This example shows how to filter IPv6 traffic on an interface:		
	Device(config-wlan)# ipv6 traffic-filter TestDocTrafficFilter		

key chain

To create or modify a keychain, use the **key chain** command. To disable this feature, use the **no** form of this command.

key chainkey-chain name { macsec | tcp }
no key chainkey-chain name { macsec | tcp }

Syntax Description	key-chain name	Specifies the name of the key chain.
	macsec	Specifies a MacSEC key chain.
	tcp	Specifies the tcp key chain.

Command Default No default.

Command Modes Global configuration mode.

Examples The following example shows how to specify a key chain to identify authentication on a key-chain:

Device(config) # key chain key-chain-name macsec

Related Commands	Command	Description	
	key config-key	Sets a private configuration key for general use.	
	show key chain	Displays authentication key information.	

key config-key

To set a private configuration key for private use, use the **key config-key** command. To disable this feature, use the **no** form of this command.

key config-key { 1 LINE | newpass config-key | password-encrypt LINE } no key config-key { 1 LINE | newpass config-key | password-encrypt LINE }

Syntax Description	1 Sets a private configuration key for private use. newpass Specifies a new password without space or tabs.			
	config-key	<i>config-key</i> Specifies the config key, with a minimum of 8 characters, and not beginning with the IOS special characters - !, #, and ;.		
	password-encrypt Sets a private configuration key for password encryption.			
Command Default	None			
Command Modes	Global configuration mode.			
Examples	The following example shows how to specify a config-key:			

Device(config) # key config-key password-encrypt config-key

key config-key password-encrypt

To set a private configuration key for password encryption, use the **key config-key password-encrypt** command. To disable this feature, use the **no** form of this command.

key config-key password-encrypt <config-key>

Syntax Description	config-key Enter a value with minimum 8 characters.		
	Ν	lote The va	lue must not begin with the following specia ters:
	!, #, and ;		
Command Default	None		
Command Modes	Global confi	iguration mode	
Command Modes Command History	Global confi	iguration mode	Modification

Examples

The following example shows how to set a username and password for AP management:

```
Device# enable
Device# configure terminal
Device(config)# key config-key password-encryption 12345678
Device(config-ap-profile)# password encryption aes
Device(config-ap-profile)# end
```

I

license air level

To configure AIR licenses on a wireless controller, enter the **license air level** command in global configuration mode. To revert to the default setting, use the **no** form of this command.

no license air level

Syntax Description	air-network-advantage	Configures the AIR Network Advantage license level.			
	addon air-dna-advantage (Optional) Configures the add-on AIR DNA Advantage license level.				
		This add-on option is available with the AIR Network Advantage license.			
	air-network-essentials Configures the AIR Network Essentials license level.				
	addon air-dna-essentials	(Optional) Configures the add-on AIR DNA Essentials license level.			
		This add-on option is available with the AIR Network Essential license.			
Command Default	For all Cisco Catalyst 9800 Wireless controllers the default license is AIR DNA Advantage.				
	For EWC-APs:				
	• Prior to Cisco IOS XE	Bengaluru 17.4.1, the default license is AIR DNA Essentials.			
	• Starting with Cisco IOS XE Bengaluru 17.4.1, the default license is AIR Network Essentials				
Command Modes	Global configuration (config	;)			
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.	10.1 This command was introduced.			
	Cisco IOS XE Amsterdam 17	7.3.2a This command continues to be available and applicable with the introduction of Smart Licensing Using Policy.			
	Cisco IOS XE Bengaluru 17	7.4.1 Only for EWC-APs, the default license was changed from AIR DNA Essentials to AIR Network Essentials.			
Usage Guidelines	In the Smart Licensing Using Policy environment, you can use the license air level commar license level being used on the product instance, or to additionally configure an add-on licens instance. The change is effective after a reload.				
	The licenses that can be configured are:				
	• AIR Network Essential				
	AIR Network Advantage				
	• AIR DNA Essential	·			
	• AIK DNA Essential				

• AIR DNA Advantage

You can configure AIR DNA Essential or AIR DNA Advantage license level and on term expiry, you can move to the Network Advantage or Network Essentials license level, if you do not want to renew the DNA license.

Every connecting AP requires a Cisco DNA Center License to leverage the unique value properties of the controller.

Specifics for EWC-APs

Starting with Cisco IOS XE Bengaluru 17.4.1, *only for EWC-APs*, you can opt-out of purchasing an AIR DNA license. The option to opt-out of AIR DNA licenses is available only through the Cisco Commerce portal. When you opt-out, Smart Licensing Using Policy functionality is disabled.

Condition	Required Action	Outcome or Result
You opt-out of AIR DNA licenses	None.	Use only AIR Network Essentials. Smart Licensing Using Policy functionality is disabled on the product instance and for your Smart Account and Virtual Account in CSSM. License usage is not recorded, and no reporting requirements apply.
You purchase AIR DNA licenses	Enter the license air level command in global configuration mode and configure the corresponding AIR DNA license. Reload to use the corresponding license. Implement one of the supported topologies and fulfill reporting requirements. For information about implementing a topology, For information about implementing a topology, see the Supported Topologies section in the software configuration guide of the required release.	Use the purchased AIR DNA and AIR Network license. Smart Licensing Using Policy functionality is enabled on the product instance and for your Smart Account and Virtual Account in CSSM.

For a new product instance, this means:

For an existing product instance, this means:

Condition	Required Action	Outcome or Result
You are using an AIR	None.	No change.
DNA license		You are already in the Smart Licensing Using Policy environment.

Condition	Required Action	Outcome or Result
You do not want to renew the DNA license on term expiry	On term expiry, enter the license air level command in global configuration mode and configure AIR Network Essentials or AIR Network Advantage. Reload to use the corresponding license.	If you had AIR DNA Essentials, you now use AIR Network Essentials. If you had AIR DNA Advantage, you now use AIR Network Advantage. Smart Licensing Using Policy functionality is disabled on the product instance and for your Smart Account and Virtual Account in CSSM. License usage is not recorded, and no reporting requirements apply.

Examples

The following example show how to configure the AIR DNA Essential license level:

```
Device# configure terminal
Device(config)# license air level network-essentials addon air-dna-essentials
```

The following example shows how the AIR DNA Advantage license level is configured to begin with and then changed to AIR DNA Essentials:

Current configuration as AIR DNA Advantage:

```
Device# show version
Cisco IOS XE Software, Version 17.03.02
Cisco IOS Software [Amsterdam], C9800-CL Software (C9800-CL-K9_IOSXE), Version 17.3.2,
RELEASE SOFTWARE
<output truncated>
AIR License Level: AIR DNA Advantage
Next reload AIR license Level: AIR DNA Advantage
```

```
Smart Licensing Status: Registration Not Applicable/Not Applicable <output truncated>
```

Configuration of AIR DNA Essentials :

```
Device# configure terminal
Device(config)# license air level air-network-essentials addon air-dna-essentials
Device# exit
Device# show version
Cisco IOS XE Software, Version 17.03.02
Cisco IOS Software [Amsterdam], C9800-CL Software (C9800-CL-K9_IOSXE), Version 17.3.2,
RELEASE SOFTWARE
<output truncated>
AIR License Level: AIR DNA Advantage
```

Next reload AIR license Level: **AIR DNA Essentials** Smart Licensing Status: Registration Not Applicable/Not Applicable <output truncated>

Device# write memory Device# reload

After reload:

```
Device# show version
Cisco IOS XE Software, Version 17.03.02
```

Cisco IOS Software [Amsterdam], C9800-CL Software (C9800-CL-K9_IOSXE), Version 17.3.2, RELEASE SOFTWARE <output truncated> AIR License Level: AIR DNA Essentials Next reload AIR license Level: AIR DNA Essentials

Smart Licensing Status: Registration Not Applicable/Not Applicable <output truncated>

license smart (global config)

To configure licensing-related settings such as the mode of transport and the URL that the product instance uses to communicate with Cisco Smart Software Manager (CSSM), or Cisco Smart Licensing Utility (CSLU), or Smart Software Manager On-Prem (SSM On-Prem), to configure the usage reporting interval, to configure the information that must be exluded or included in a license usage report (RUM report), enter the **license smart** command in global configuration mode. Use the **no** form of the command to revert to default values.

license smart { custom_id ID | enable | privacy { all | hostname | version } | proxy { address address_hostname | port port } | reservation | server-identity-check | transport { automatic | callhome | cslu | off | smart } | url { url | cslu cslu_or_on-prem_url | default | smart smart_url | utility secondary_url } | usage { customer-tags { tag1 | tag2 | tag3 | tag4 } tag_value | interval_in_days } | utility [customer_info { city city | country country | postalcode postalcode | state state | street street }] }

no license smart { custom_id | enable | privacy { all | hostname | version } | proxy { address address_hostname | port port } | reservation | server-identity-check | transport | url { url | cslu cslu_or_on-prem_url | default | smart smart_url | utility secondary_url } | usage { customer-tags { tag1 | tag2 | tag3 | tag4 } tag_value | interval interval_in_days } | utility [customer_info { city city | country country | postalcode | state state | street street }] }

Syntax Description	custom_id ID	Although available on the CLI, this option is not supported.
	enable	Although visible on the CLI, configuring this keyword has no effect. Smart licensing is always enabled.

I

<pre>privacy { all hostname version }</pre>	Sets a privacy flag to prevent the sending of the specified data privacy related information.
	When the flag is disabled, the corresponding information is sent in a message or offline file created by the product instance.
	Depending on the topology this is sent to one or more components, including CSSM, CSLU, and SSM On-Prem.
	All data privacy settings are disabled by default. You must configure the option you want to exclude from all communication:
	• all: All data privacy related information is excluded from any communication.
	The no form of the command causes all data privacy related information to be sent in a message or offline file.
	Note The Product ID (PID) and serial number are <i>included in the RUM report</i> regardless of whether data privacy is enabled or not.
	• hostname : Excludes hostname information from any communication. When hostname privacy is enabled, the <i>UDI</i> of the product instance is displayed on the applicable user interfaces (CSSM, CSLU, and SSM On-Prem).
	The no form of the command causes hostname information to be sent in a message or offline file. The hostname is displayed on the applicable user interfaces (CSSM, CSLU, and SSM On-Prem).
	• version: Excludes the Cisco IOS-XE software version running on the product instance and the Smart Agent version from any communication.
	The no form of the command causes version information to be sent in a message or offline file.

<pre>proxy { address address_hostname port port }</pre>	CSLU or to config smart tr	es a proxy for license usage synchronization with CSSM. This means that you can use this option ure a proxy only if the transport mode is license ansport smart (CSSM), or license smart rt cslu (CSLU).
	synchron	, you cannot configure a proxy for license usage ization in an SSM On-Prem deployment, which license smart transport cslu as the transport
	Configur	e the following options:
	• add addi	ress <i>address_hostname</i> : Configures the proxy ress.
		<i>address_hostname</i> , enter the enter the IP address ostname of the proxy.
	• por	<i>tport</i> : Configures the proxy port.
	For	<i>port</i> , enter the proxy port number.
reservation	Enables	or disables a license reservation feature.
	Note	Although available on the CLI, this option is not applicable because license <i>reservation</i> is not applicable in the Smart Licensing Using Policy environment.
server-identity-check	Enables	or disables the HTTP secure server identity check.
<pre>transport { automatic callhome cslu off smart }</pre>	-	es the mode of transport the product instance uses unicate with CSSM. Choose from the following
	• auto	omatic: Sets the transport mode cslu.
	Note	The automatic keyword is not supported on Cisco Catalyst Wireless Controllers.
	• call	home: Enables Call Home as the transport mode.
		: Enables CSLU as the transport mode. This is the ult transport mode.
	On-	same keyword applies to both CSLU <i>and</i> SSM Prem, but the URLs are different. See <i>cslu_or_on-prem_url</i> in the following row.
		Disables all communication from the product ance.
	• sma	rt: Enables Smart transport.

url { url | cslu cslu_url | default | smart
smart_url | utility secondary_url }

Sets URL that is used for the configured transport mode. Choose from the following options:

• *url*: If you have configured the transport mode as **callhome**, configure this option. Enter the CSSM URL exactly as follows:

https://tools.cisco.com/its/service/oddce/services/DDCEService

The **no license smart url** *url* command reverts to the default URL.

- cslu *cslu_or_on-prem_url*: If you have configured the transport mode as cslu, configure this option, with the URL for CSLU or SSM On-Prem, as applicable:
 - If you are using CSLU, enter the URL as follows:

http://<cslu_ip_or_host>:8182/cslu/v1/pi

For <cslu_ip_or_host>, enter the hostname or the IP address of the windows host where you have installed CSLU. 8182 is the port number and it is the only port number that CSLU uses.

The no license smart url cslu

cslu_or_on-prem_url command reverts to http://cslu-local:8182/cslu/v1/pi

• If you are using SSM On-Prem, enter the URL as follows:

http://<ip>/cslu/v1/pi/<tenant ID>

For <ip>, enter the hostname or the IP address of the server where you have installed SSM On-Prem. The <tenantID> must be the default local virtual account ID.

Tip You can retrieve the entire URL from SSM On-Prem. In the software configuration guide (17.3.x and later), see Smart Licensing Using Policy > Task Library for Smart Licensing Using Policy > Retrieving the Transport URL (SSM On-Prem UI).

The **no license smart url cslu** *cslu_or_on-prem_url* command reverts to http://cslu-local:8182/cslu/v1/pi

 default: Depends on the configured transport mode. Only the smart and cslu transport modes are supported with this option.

If the transport mode is set to **cslu**, and you configure **license smart url default**, the CSLU URL is configured automatically L

(https://cslu-local:8182/cslu/v1/pi).

If the transport mode is set to **smart**, and you configure **license smart url default**, the Smart URL is configured automatically

(https://smartreceiver.cisco.com/licservice/license).

• **smart** *smart_url*: If you have configured the transport type as **smart**, configure this option. Enter the URL exactly as follows:

https://smartreceiver.cisco.com/licservice/license

When you configure this option, the system automatically creates a duplicate of the URL in **license smart url** *url*. You can ignore the duplicate entry, no further action is required.

- The **no license smart url smart***smart_url* command reverts to the default URL.
- utility smart_url: Although available on the CLI, this option is not supported.

		-tags { tag1 tag2 tag3 Configures usage reporting settings. You can set the interval_in_days } following options:	
		• customer-tags { tag1 tag2 tag3 tag4 } tag_value: Defines strings for inclusion in data models, for telemetry. Up to 4 strings (or tags) may be defined.	
		For <i>tag_value</i> , enter the string value for each tag that you define.	
		• interval <i>interval_in_days</i> : Sets the reporting interval in days. By default the RUM report is sent every 30 days. The valid value range is 1 to 3650.	
		If you set the value to zero, RUM reports are not sent, regardless of what the applied policy specifies - this applies to topologies where CSLU or CSSM may be on the receiving end.	
		If you set a value that is greater than zero and the transport type is set to off , then, between the <i>interval_in_days</i> and the policy value for Ongoing reporting frequency (days):, the lower of the two values is applied. For example, if <i>interval_in_days</i> is set to 100, and the value in the in the policy says Ongoing reporting frequency (days):90, RUM reports are sent every 90 days.	
		If you do not set an interval, and the default is effective, the reporting interval is determined entirely by the policy value. For example, if the default value is effective and only unenforced licenses are in use, if the policy states that reporting is not required, then RUM reports are not sent.	
	utility [customer_info { city <i>city</i> country Although visible on the CLI, this option is not supported. <i>country</i> postalcode <i>postalcode</i> state <i>state</i> street <i>street</i> }]		
Command Default	Cisco IOS XE Amsterdam 17.3.1 or earlier: Smart Licensing is enabled by default.		
	Cisco IOS XE Amsterdam 17.3.2a and later: Smart Licensing Using Policy is enabled by default.		
Command Modes	Global config (cor	ĩg)	
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

Release	Modification
Cisco IOS XE Amsterdam 17.3.2a	The following keywords and variables were introduced with Smart Licensing Using Policy:
	• Under the url keyword, these options were introduced:
	<pre>{ cslu_url smart smart_url }</pre>
	• Under the transport keyword, these options were introduced:
	{ cslu off }
	Further, the default transport type was changed from callhome, to cslu.
	<pre>• usage { customer-tags { tag1 tag2 tag3 tag4 } tag_value interval interval_in_days }</pre>
	The following keywords and variables under the license smart command are deprecated and no longer available on the CLI: enable and conversion automatic .
Cisco IOS XE Amsterdam 17.3.3	SSM On-Prem support was introduced. For product instance-initiated communication in an SSM On-Prem deployment, the existing [no]license smart url cslu <i>cslu_or_on-prem_url</i> command supports the configuration of a URL for SSM On-Prem as well. But the required URL format for SSM On-Prem is: http:// <ip>/cslu/v1/pi/<tenant id="">.</tenant></ip>
	The corresponding transport mode that must be configured is also an existing command (license smart transport cslu).
Cisco IOS XE Cupertino 17.9.1	• A new mechanism to send all data privacy related information was introduced. This information is no longer included in a RUM report.
	If data privacy is disabled (no license smart privacy { all hostname version } global configuration command), data privacy related information is sent in a separate sync message or offline file.
	• Support for sending hostname information was introduced.
	If the privacy setting for the hostname is disabled (no license smart privacy hostname global configuration command), hostname information is sent from the product instance, in a separate sync message, or offline file. Depending on the topology you have implemented, the hostname information is received by CSSM, CSLU, or SSM On-Prem. It is also displayed on the corresponding user interface.

Usage Guidelines Data Privacy Settings

When you disable a privacy setting, the topology you have implemented determines the recipient and how the information reaches its destination:

• The recipient of the information may be one or more of the following: CSSM, CSLU, and SSM On-Prem. The privacy setting has no effect on a controller (Cisco DNA Center).

In case of the **hostname** keyword, after the hostname information is received by CSSM, CSLU, or SSM On-Prem, it is also displayed on the corresponding UIs – as applicable. If you then *enable* privacy the corresponding UIs revert to displaying the UDI of the product instance.

- How the information is sent.
 - In case of a topology where the product instance initiates communication, the product instance initiates the sending of this information in a message, to CSSM, or CSLU, or SSM On-Prem.

The product instance sends the hostname sent every time one of the following events occur: the product instance boots up, the hostname changes, there is a switchover in a High Availability set-up.

• In case of a topology where CSLU or SSM On-Prem initiate communication, the corresponding component initiates the retrieval of privacy information from the product instance.

The hostname is retrieved at the frequency you configure in CSLU or SSM On-Prem, to retrieve information.

• In case of a topology where the product instance is in an air-gapped network, privacy information is included in the offline file that is generated when you enter the **license smart save usage** privileged EXEC command.

Note

For all topologies, data privacy related information is *not* included in the RUM report.

Data privacy related information it is not stored by the product instance *prior* to sending or saving. This ensures that if and when information is sent, it is consistent with the data privacy setting at the time of sending or saving.

Communication failures and reporting

The reporting interval that you configure (license smart usage interval interval_in_days command), determines the date and time at which the product instance sends out the RUM report. If the scheduled interval coincides with a communication failure, the product instance attempts to send out the RUM report for up to four hours after the scheduled time has expired. If it is still unable to send out the report (because the communication failure persists), the system resets the interval to 15 minutes. Once the communication failure is resolved, the system reverts the reporting interval to the value that you last configured.

The system message you may see in case of a communicatin failure is %SMART_LIC-3-COMM_FAILED. For information about resolving this error and restoring the reporting interval value, in the software configuration guide of the required release (17.3.x onwards), see *System Configuration* > *Smart Licensing Using Policy* > *Troubleshooting Smart Licensing Using Policy*.

Proxy server acceptance

When configuring the **license smart proxy** {**address** *address_hostname* | **port***port*} command, note the change in the criteria for the acceptance of proxy servers, starting with Cisco IOS XE Bengaluru 17.6.1: only the status code of the proxy server response is verified by the system and not the reason phrase. The RFC format is status-line = HTTP-version SP status-code SP reason-phrase CRLF, where the status code is a three-digit numeric code. For more information about the status line, see section 3.1.2 of RFC 7230.

Examples

• Examples for Data Privacy, on page 371

- Examples for Transport Type and URL, on page 371
- Examples for Usage Reporting Options, on page 372

Examples for Data Privacy

The following examples show how to configure data privacy related information using **license smart privacy** command in global configuration mode. The accompanying **show license status** output displays configured information.

Note The output of the **show** command only tells you if a particular option is enabled or disabled.

Here, no data privacy related information information is sent:

```
Device# configure terminal
Device(config)# license smart privacy all
Device(config)# exit
Device# show license status
<output truncated>
Data Privacy:
Sending Hostname: no
Callhome hostname privacy: ENABLED
Smart Licensing hostname privacy: ENABLED
Version privacy: ENABLED
Transport:
Type: Callhome
<output truncated>
```

Examples for Transport Type and URL

The following examples show how to configure some of the transport types using the **license smart transport** and the **license smart url** commands in global configuration mode. The accompanying **show license all** output displays configured information.

Transport cslu:

```
Device# configure terminal
Device(config)# license smart transport cslu
Device(config)# license smart url default
Device(config)# exit
Device# show license all
<output truncated>
Transport:
Type: cslu
Cslu address: http://192.168.0.1:8182/cslu/v1/pi
Proxy:
Not Configured
<output truncated>
```

Transport smart:

```
Device# configure terminal
Device(config)# license smart transport smart
Device(config)# license smart url smart https://smartreceiver.cisco.com/licservice/license
Device(config)# exit
```

```
Device# show license all
<output truncated>
Transport:
   Type: Smart
   URL: https://smartreceiver-stage.cisco.com/licservice/license
   Proxy:
    Not Configured
<output truncated>
```

Examples for Usage Reporting Options

The following examples show how to configure some of the usage reporting settings using the **license smart usage** command in global configuration mode. The accompanying **show running-config** output displays configured information.

Configuring the customer-tag option:

```
Device# configure terminal
Device(config)# license smart usage customer-tags tag1 SA/VA:01
Device(config)# exit
Device# show running-config | include tag1
license smart usage customer-tags tag1 SA/VA:01
```

Configuring a narrower reporting interval than the currently applied policy:

```
Device# show license status
<output truncated>
Usage Reporting:
Last ACK received: Sep 22 13:49:38 2020 PST
Next ACK deadline: Dec 21 12:02:21 2020 PST
Reporting push interval: 30 days
Next ACK push check: Sep 22 12:20:34 2020 PST
Next report push: Oct 22 12:05:43 2020 PST
Last report push: Sep 22 12:05:43 2020 PST
Last report file write: <none>
<output truncated>
```

```
Device# configure terminal
Device(config)# license smart usage interval 20
Device(config)# exit
Device# show license status
<output truncated>
```

Usage Reporting: Last ACK received: Sep 22 13:49:38 2020 PST Next ACK deadline: Nov 22 12:02:21 2020 PST Reporting push interval: 20 days Next ACK push check: Sep 22 12:20:34 2020 PST Next report push: Oct 12 12:05:43 2020 PST Last report push: Sep 22 12:05:43 2020 PST Last report file write: <none> <output truncated> L

license smart (privileged EXEC)

To configure licensing functions such as requesting or returning authorization codes, saving Resource Utilization Measurement reports (RUM reports), importing a file on to a product instance, establishing trust with Cisco Smart Software Manager (CSSM), synchronizing the product instance with CSSM, or Cisco Smart License Utility (CSLU), or Smart Software Manager On-Prem (SSM On-Prem), and removing licensing information from the product instance, enter the **license smart** command in privileged EXEC mode with the corresponding keyword or argument.

license smart { authorization { request { add | replace | save filepath_filename } feature_name { all | local } | return { all | local } { offline [filepath_filename] | online } } | clear eventlog | export return { all | local } feature_name | factory reset | import filepath_filename | save { trust-request filepath_filename | usage { all | days days | rum-id rum-ID | unreported } { file filepath_filename } } | sync { all | local } | trust idtoken id_token_value { local | all } [{ force }] }

Syntax Description	smart	Provides options for Smart Licensing.
	authorization	Provides the option to request for, or return, authorization codes.
		Authorization codes are required <i>only</i> if you use licenses with enforcement type: export-controlled or enfored.
	request	Requests an authorization code from CSSM, CSLU (CSLU in-turn fetches it from CSSM), or SSM On-Prem and installs it on the product instance.
	add	Adds the requested license to the existing authorization code. The new authorization code will contain all the licenses of the existing authorization code and the requested license.
	replace	Replaces the existing authorization code. The new authorization code will contain only the requested license. All licenses in the current authorization code are returned.
		When you enter this option, the product instance verifies if licenses that correspond to the authorization codes that will be removed, are in-use. If licenses are being used, an error message tells you to first disable the corresponding features.
	savefilepath_filename	Saves the authorization code request to a file.
		For <i>filepath_filename</i> , specify the absolute path to the file, including the filename.
	feature_name	Name of the license for which you are requesting an authorization code.
	all	Performs the action for all product instances in a High Availability configuration.
	local	Performs the action for the <i>active</i> product instance. This is the default option.
	return	Returns an authorization code back to the license pool in CSSM.

offline filepath_filename	Means the product instance is not connected to CSSM. The authorization code is returned offline. This option requires you to print the return code to a file.		
	Optionally, you can also specify a path to save the file. The file format can be any readable format, such as .txt		
	If you choose the offline option, you must complete the additional step of copying the return code from the CLI or the saved file and entering it in CSSM.		
online	Means that the product instance is in a connected mode. The authorization code is returned to CSLU or CSSM directly.		
clear eventlog	Clears all event log files from the product instance.		
export return	Returns the authorization key for an export-controlled license.		
factory reset	Clears all saved licensing information from the product instance.		
import filepath_filename	Imports a file on to the product instance. The file may be that of an authorization code, a trust code, or, or a policy.		
	For <i>filepath_filename</i> , specify the location, including the filename.		
save	Provides options to save RUM reports or trust code requests.		
trust-request	Saves the trust code request for the active product instance in the specified location.		
filepath_filename	For <i>filepath_filename</i> , specify the absolute path to the file, including the filename.		
usage { all days days rum-id rum-ID	Saves RUM reports (license usage information) in the specified location. You must specify one of these options:		
<pre>unreported } { file file_path }</pre>	• all: Saves all RUM reports.		
J	• days <i>days</i> : Saves RUM report for the last <i>n</i> number of days (excluding the current day). Enter a number. The valid range is 0 to 4294967295.		
	For example, if you enter 3, RUM reports of the last three days are saved.		
	• rum-Id <i>rum-ID</i> : Saves a specified RUM ID. The valid value range is 0 to 18446744073709551615.		
	• unreported: Saves all unreported RUM reports.		
	file <i>filepath_filename</i> : Saves the specified usage information to a file. Specify the absolute path to the file, including the filename.		

I

	<pre>sync { all local }</pre>	Synchronizes with CSSM or CSLU, or SSM On-Prem, to send and receive any pending data. This includes uploading pending RUM reports, downloading the ACK response, any pending authorization codes, trust codes, and policies for the product instance.	
		Specify the product instance by entering one of these options:	
		• all: Performs synchronization for all the product instances in a High Availability set-up. If you choose this option, the product instance also sends the list of all the UDIs in the synchronization request.	
		• local : Performs synchronization only for the active product instance sending the request, that is, its own UDI. This is the default option.	
	trust idtoken	Establishes a trusted connection with CSSM.	
	id_token_value	To use this option, you must first generate a token in the CSSM portal. Provide the generated token value for <i>id_token_value</i> .	
	force	Submits a trust code request even if a trust code already exists on the product instance.	
		A trust code is node-locked to the UDI of a product instance. If the UDI is already registered, CSSM does not allow a new registration for the same UDI. Entering the force keyword overrides this behavior.	
Command Default	Cisco IOS XE Amste	rdam 17.3.1 or earlier: Smart Licensing is enabled by default.	
	Cisco IOS XE Amste	rdam 17.3.2a and later: Smart Licensing Using Policy is enabled by default.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

I

Release	Modification		
Cisco IOS XE Amsterdam 17.3.2a	The following keywords and variables were introduced with Smart Licensing Using Policy:		
	 authorization { request { add replace } feature_name { all local } return { all local } { offline [path] online } } 		
	• import file_path		
	• save { trust-request <i>filepath_filename</i> usage { all days <i>days</i> rum-id <i>rum-ID</i> unreported } { file <i>file_path</i> } }		
	• sync { all local }		
	• trust idtoken <i>id_token_value</i> { local all } [force]		
	The following keywords and variables under the license smart command are deprecated and no longer available on the CLI:		
	• register idtoken token_id [force]		
	• renew id { ID auth }		
	• debug { error debug trace all }		
	 reservation { cancel [all local] install [file] key request { all local universal } return [all authorization { auth_code file filename } Local] key } 		
	• mfg reservation { request install install file cancel }		
	• conversion { start stop }		
Cisco IOS XE Amsterdam 17.3.3	Support for SSM On-Prem was introduced. You can perform licensing-related tasks such as saving Resource Utilization Measurement reports (RUM reports), importing a file on to a product instance, synchronizing the product instance, returning authorization codes, and removing licensing information from the product instance in an SSM On-Prem deployment.		
Cisco IOS XE	The following enhancements were introduced in this release:		
Cupertino 17.7.1	 The save <i>filepath_filename</i> keyword and variable was added to the license smart authorization request string. 		
	Although visible on the CLI, the new keywords are not applicable, because there are no export-controlled or enforced licenses on any of the Cisco Cataly Wireless Controllers.		
	• The existing license smart save usage command was enhanced to include a trust code request in applicable topologies.		

Usage Guidelines Overwriting a Trust Code

Use case for the **force** option when configuring the **license smart trust idtoken** command: You use same token for all the product instances that are part of one Virtual Account. If the product instance has moved

from one account to another (for instance, because it was added to a High Availability set-up, which is part of another Virtual Account), then there may be an existing trust code you have to overwrite.

Removing Licensing Information

Entering the **licence smart factory reset** command removes all licensing information (except the licenses in-use) from the product instance, including any authorization codes, RUM reports etc. Therefore, we recommend the use of this command only if the product instance is being returned (Return Material Authrization, or RMA), or being decommissioned permanently. We also recommend that you send a RUM report to CSSM, before you remove licensing information from the product instance - this is to ensure that CSSM has up-to-date usage information.

Authorization Codes and License Reservations:

Options relating to authorization codes and license reservations:

- Since there are no export-controlled or enforced licenses on any of the Cisco Catalyst Wireless Controllers, and the notion of reserved licenses is not applicable in the Smart Licensing Using Policy environment, the following commands are not applicable:
 - { { license smart authorization request { add | replace | save *path* } *feature_name* { all | local } *request_count* } }
 - license smart export return
- The following option is applicable and required for any SLR authorization codes you may want to return:

license smart authorization return { all | local } { offline [path] | online }

Examples

- Example for Saving Licensing Usage Information, on page 377
- Example for Installing a Trust Code, on page 378
- Example for Returning an SLR Authorization Code, on page 378

Example for Saving Licensing Usage Information

The following example shows how you can save license usage information on the product instance. You can use this option to fulfil reporting requirements in an air-gapped network. In the example, the file is first save to flash memory and then copied to a TFTP location:

```
Device> enable

Device# license smart save usage unreported file flash:RUM-unrep.txt

Device# dir

Directory of bootflash:/

33 -rw- 5994 Nov 2 2020 03:58:04 +05:00 RUM-unrep.txt

Device# copy flash:RUM-unrep.txt tftp://192.168.0.1//auto/tftp-user/user01/

Address or name of remote host [192.168.0.1]?

Destination filename [//auto/tftp-user/user01/RUM-unrep.txt]?

!!

15128 bytes copied in 0.161 secs (93963 bytes/sec)
```

After you save RUM reports to a file, you must upload it to CSSM (from a workstation that has connectivity to the internet, and Cisco).

Example for Installing a Trust Code

The following example shows how to install a trust code even if one is already installed on the product instance. This requires connectivity to CSSM. The accompanying **show license status** output shows sample output after successful installation:

Before you can install a trust code, you must generate a token and download the corresponding file from CSSM.

Use the show license status command (Trust Code Installed:) to verify results.

```
Device> enable
Device# license smart trust idtoken
NGMwMjk5mYtNZaxMS00NzMZmtgWm local force
Device# show license status
<output truncated>
Trust Code Installed:
   Active: PID:C9800-CL-K9,SN:93BBAH93MGS
   INSTALLED on Nov 02 05:19:05 2020 IST
   Standby: PID:C9800-CL-K9,SN:9XECPSUU4XN
   INSTALLED on Nov 02 05:19:05 2020 IST
<output truncated>
```

Example for Returning an SLR Authorization Code

The following example shows how to remove and return an SLR authorization code. Here the code is returned offline (no connectivity to CSSM). The accompanying **show license all** output shows sample output after successful return:

```
Device> enable
Device# show license all
<output truncated>
License Authorizations
_____
Overall status:
 Active: PID:C9800-CL-K9, SN:93BBAH93MGS
      Status: SPECIFIC INSTALLED on Nov 02 03:16:01 2020 IST
     Last Confirmation code: 102fc949
  Standby: PID:C9800-CL-K9, SN:9XECPSUU4XN
     Status: SPECIFIC INSTALLED on Nov 02 03:15:45 2020 IST
     Last Confirmation code: ad4382fe
<output truncated>
Device# license smart authorization return local offlline
Enter this return code in Cisco Smart Software Manager portal:
UDI: PID:C9800-CL-K9, SN:93BBAH93MGS
   Return code: CqaUPW-WSPYiq-ZNU2ci-SnWydS-hBCXHP-MuyPqy-PJ1GiG-tPTGQj-S2h
UDI: PID:C9800-CL-K9, SN:9XECPSUU4XN
    Return code: CNLwxR-eWiAEJ-XaTEQg-j4rrYW-dSRz9j-37VpcP-imjuLD-mNeA4k-TXA
Device# show license all
<output truncated>
License Authorizations
_____
```

```
Overall status:
```

```
Active: PID:C9800-CL-K9,SN:93BBAH93MGS
Status: NOT INSTALLED
Last return code: CqaUPW-WSPYiq-ZNU2ci-SnWydS-hBCXHP-MuyPqy-PJ1GiG-tPTGQj-S2h
Standby: PID:C9800-CL-K9,SN:9XECPSUU4XN
Status: NOT INSTALLED
Last return code: CNLwxR-eWiAEJ-XaTEQg-j4rrYW-dSRz9j-37VpcP-imjuLD-mNeA4k-TXA
<output truncated>
```

If you choose the **offline** option, you must complete the additional step of copying the return code from the CLI or the saved file and entering it in CSSM.

I

load

	To configure site tag-based	l load balancing, use the load con	nmand.
	load load		
Syntax Description	load Specifies the estimat	e of the relative load reserved for	the site.
	Values range between	n 0 to 1000. The default value 0 n	neans no load recommendation for the site.
Command Default	None		
Command Modes	Global configuration (conf	ig)	
Command History	Release	Modification	_
	Cisco IOS XE Dublin 17.10.1	This command was introduced.	_
			_

This example shows how to configure site tag-based load balancing:

```
Device# configure terminal
Device(config)# wireless tag site areal
Device(config-site-tag)# load 200
Device(config-site-tag)# end
```

local-admin-mac deny

To deny association of clients using Locally Administered Addresses, use the **local-admin-mac deny** command. Use the **no** form of this command to disable the feature.

local-admin-mac deny

no local-admin-mac deny

Syntax Description	local-admin-mac S	pecifies the locally administered MAC addresses.		
	deny D	Denies the association of clients using Locally Administered Addresses		
Command Default	None			
Command Modes	WLAN configuration	mode (config-wlan)		
Command History	Release Modification			
	Cisco IOS XE Bengal	uru 17.5.1 This command was introduced.		

Example

The following example shows how to deny association of clients using Locally Administered Addresses:

Device# configure terminal Device(config)# wlan wlan-test 3 ssid-test Device(config-wlan)# shutdownDevice(config-wlan)# [no] local-admin-mac deny Device(config-wlan)# no shutdown

local-auth ap eap-fast

To configure Flex policy local authentication using EAP Fast method, use the local-auth ap eap-fast command.

local-auth ap eap-fast profile-name

Syntax Description	profile-name Enter eap-fast pro name.	file
Command Default	None	
Command Modes	config-wireless-flex-profile	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure EAP Fast method authentication on a Flex policy:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile flex profile-name Device(config-wireless-flex-profile)# local-auth ap eap-fast eap-fast-profile-name

local-site

To configure the site as local site, use the local-site command.

	local-site	
Syntax Description	local-site Configure this site as site.	local
Command Default	None	
Command Modes	config-site-tag	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to set the current site as local site:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless tag site tag-name
Device(config-site-tag)# local-site
```

location expiry

To configure the location expiry duration, use the **location expiry** command in global configuration mode.

	location expiry {	calibrating-client client tags } timeout-duration
Syntax Description	calibrating-client	Timeout value for calibrating clients.
	client	Timeout value for clients.
	tags	Timeout value for RFID tags.
	timeout-duration	Timeout duration, in seconds.
Command Default	Timeout value is no	ot configured.
Command Modes	Global configuration	on (config)
Command History	Release	Modification
	Cisco IOS XE Gib	oraltar 16.10.1 This command was introduced.

Example

This example shows how to configure the location expiry duration:

Device(config) # location expiry tags 50

location notify-threshold

To configure the NMSP notification threshold for RSSI measurements, use the **location notify-threshold** command in global configuration mode. To remove the NMSP notification threshold for RSSI measurements, use the **no** form of this command.

location notify-threshold {client | rogue-aps | tags } db no location notify-threshold {client | rogue-aps | tags }

Syntax Description	client	Specifies the NMSP notification threshold (in dB) for clients and rogue clients.		
		The valid range for the threshold parameter is 0 to 10 dB, and the default value is 0 dB		
	rogue-aps	Specifies the NMSP notification threshold (in dB) for rogue access points.		
		The valid range for the threshold parameter is 0 to 10 dB, and the default value is 0 dB		
	tags	Specifies the NMSP notification threshold (in dB) for RFID tags.		
		The valid range for the threshold parameter is 0 to 10 dB, and the default value is 0 dB		
	db	The valid range for the threshold parameter is 0 to 10 dB, and the default value is 0 dB		
Command Default	No default b	behavior or values.		
Command Modes	Global configuration			
Command History	Release	Modification		
	Cisco IOS 2	XE Gibraltar 16.12.1 This command was introduced.		

This example shows how to configure the NMSP notification threshold to 10 dB for clients. A notification NMSP message is sent to MSE as soon as the client RSSI changes by 10 dB:

Device# configure terminal
Device(config)# location notify-threshold client 10
Device(config)# end

I

log-export-mode

To configure the log export using FTP, STP and TFTP, use the **log-export-mode** command. Use the **no** command to negate the command or to set the command to its default.

log-export-mode { ftp | stp | tftp }

no log-export-mode { ftp | stp | tftp }

Syntax Description	ftp Configures the log export using FTP.			
	stp Configures the log export u	using STP.		
	tftp Configures the log export us	sing TFTP.		
Command Default	None			
Command Modes	Wireless trace export profile cont	figuration		
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.		

Example

Device(config)# wireless profile transfer trace-export trace-export-name
Device(config-wireless-trace-export-profile)# log-export-mode tftp

mab request format attribute

To configure the delimiter while configuring MAC filtering on a WLAN, use the mab request format attribute command.

mab request format attribute username password nas-identifier]

Syntax Description	username	Username form	at used for MAB requests	
	password	Global Password	d used for all MAB requests	
	Nas-identifier	NAS-Identifier	attribute	
Command Default	Global Configu	iration		
Command Modes	MAC is sent w	ithout any delim	iter.	
Command History	Release		Modification	
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced Gibraltar 16.10.1.	uced in a release earlier than Cisco IOS XE

Example

The following example shows how to configure delimiter while configuring MAC filtering:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# mab request format attribute 1 groupsize 4

I

mac-filtering

To enable MAC filtering on a WLAN, use the mac-filtering command.

mac-filtering [mac-authorization-list]

Syntax Description	mac-authorization-list Na lis		
Command Default	None		
Command Modes	config-wlan		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16	5.10.1 This command was in Gibraltar 16.10.1.	ntroduced in a release earlier than Cisco IOS XE

Examples

The following example shows how to enable MAC filtering on a WLAN:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wlan wlan-name wlan-index SSID-name Device(config-wlan)# mac-filtering

match activated-service-template

To create a condition that evaluates true based on the service template activated on a session, use the **match** activated-service-template command in control class-map filter configuration mode. To create a condition that evaluates true if the service template activated on a session does not match the specified template, use the **no-match activated-service-template** command in control class-map filter configuration mode. To remove the condition, use the **no** form of this command.

match activated-service-template template-name
no-match activated-service-template template-name
no {match | no-match} activated-service-template template-name

Syntax Description	template-name Name of a co	onfigured service template as defined by the service-template command.		
Command Default	The control class does not contain a condition based on the service template. Control class-map filter configuration (config-filter-control-classmap)			
Command Modes				
Command History	Release	Modification		
	Cisco IOS XE Release 3.2SE	This command was introduced.		
Usage Guidelines	The match activated-service-template command configures a match condition in a control class based on the service template applied to a session. A control class can contain multiple conditions, each of which will evaluate as either true or false. The control class defines whether all, any, or none of the conditions must evaluate true for the actions of the control policy to be executed.			
	The no-match form of this command specifies a value that results in an unsuccessful match. All other values of the specified match criterion result in a successful match. For example, if you configure the no-match activated-service-template SVC_1 command, all template values except SVC_1 are accepted as a successful match.			
	The class command associates a control class with a control policy.			
Examples	The following example shows how to configure a control class that evaluates true if the service template named VLAN_1 is activated on the session:			
	class-map type control su match activated-service-	bscriber match-all CLASS_1 template VLAN_1		
Related Commands	Command	Description		
	activate (policy-map action)	Activates a control policy or service template on a subscriber session.		
	class	Associates a control class with one or more actions in a control policy.		
	match service-template	Creates a condition that evaluates true based on an event's service template.		

Command	Description
service-template	Defines a template that contains a set of service policy attributes to apply to subscriber sessions.

match any

To perform a match on any protocol that passes through the device, use the **match any** command.

	match any	
Command Default	None	
Command Modes	config-cmap	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to match any packet passing through the device:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# class-map cmap-name
Device(config-cmap)# match any
```

match message-type

To set a message type to match a service list, use the **match message-type** command.

Syntax Description	announcement	Allows only service advertisements or announ	cements for the Device.
	any	Allows any match type.	
	query	Allows only a query from the client for a certai	n Device in the network.
Command Default	None		
Command Modes	Service list config	guration.	
Command History	Release	Modification	
	Cisco IOS XE Gi	braltar 16.12.1 This command was introduced.	
Usage Guidelines	Multiple service maps of the same name with different sequence numbers can be created, and th of the filters will be ordered on the sequence number. Service lists are an ordered sequence of in statements, with each one having a permit or deny result. The evaluation of a service list consists in a predetermined order, and an evaluation of the criteria of each statement that matches. A list sca once the first statement match is found and a permit/deny action associated with the statement m performed. The default action after scanning through the entire list is to deny.		s are an ordered sequence of individual lation of a service list consists of a list s atement that matches. A list scan is stop ssociated with the statement match is

Example

The following example shows how to set the announcement message type to be matched:

query command. The match command can be used only for the permit or deny option.

Device(config-mdns-sd-sl)# match message-type announcement

match non-client-nrt

To match non-client NRT (non-real-time), use the **match non-client-nrt** command in class-map configuration mode. Use the **no** form of this command to return to the default setting.

match non-client-nrt no match non-client-nrt

Syntax Description	This command has no arguments or keywords.
Command Default	None

Class-map

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	

Usage Guidelines None

Command Modes

This example show how you can configure non-client NRT:

Device(config)# class-map test_1000
Device(config-cmap)# match non-client-nrt

match protocol

To configure the match criterion for a class map on the basis of a specified protocol, use the **match protocol** command in class-map configuration or policy inline configuration mode. To remove the protocol-based match criterion from the class map, use the **no** form of this command. For more information about the **match protocol** command, refer to the *Cisco IOS Quality of Service Solutions Command Reference*.

match protocol {*protocol-name* | **attribute category** *category-name* | **attribute sub-category** *sub-category-name* | **attribute application-group** *application-group-name* }

protocol-name	Name of the protocol (for example,	bgp) used as a matching criterion.	
category-name	Name of the application category us	ed as a matching criterion.	
sub-category-name	Name of the application subcategory	y used as a matching criterion.	
application-group-name	•••••	matching criterion. When the application configured as the match criterion instead of	
No match criterion is conf	figured.		
Class-map configuration			
Release	Modification	-	
Cisco IOS XE Gibraltar 1	6.12.1 This command was introduced.	-	
Device# configure term Device(config)# class- Device(config-cmap)# m	ninal -map cat-browsing match protocol attribute category	y browsing	
Device(config)# class- Device(config-cmap)# m	-map cat-fileshare match protocol attribute category	y file-sharing	
Device# configure terminal Device(config)# class-map match-any subcat-terminal Device(config-cmap)# match protocol attribute sub-category terminal Device(config-cmap)# end			
	la la		
	sub-category-name application-group-name No match criterion is cont Class-map configuration Release Cisco IOS XE Gibraltar 1 This example shows how to category, and sub category Device# configure terr Device (config)# class- Device (config-cmap)# r Device (config-cmap) # r	sub-category-name Name of the application subcategory application-group-name Name of the application group as a mame is specified, the application is the application group. No match criterion is configured. Class-map configuration Release Modification Cisco IOS XE Gibraltar 16.12.1 This command was introduced. This example shows how to create class maps with apply match p category, and sub category: Device# configure terminal Device (config) # class-map cat-browsing Device (config-cmap) # match protocol attribute categor Device (config) # class-map cat-fileshare Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor Device (config-cmap) # match protocol attribute categor	

This example shows how to create policy maps and define existing class maps for upstream QoS:

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class cat-browsing
Device(config-pmap-c)# police 150000
Device(config-pmap-c)# set dscp 12
Device(config-pmap-c)#end
```

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class cat-fileshare
Device(config-pmap-c)# police 1000000
Device(config-pmap-c)# set dscp 20
Device(config-pmap-c)#end
```

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class subcat-terminal
Device(config-pmap-c)# police 120000
Device(config-pmap-c)# set dscp 15
Device(config-pmap-c)#end
```

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class webex-meeting
Device(config-pmap-c)# police 50000000
Device(config-pmap-c)# set dscp 21
Device(config-pmap-c)#end
```

This example shows how to create policy maps and define existing class maps for downstream QoS:

```
Device# configure terminal
Device(config)# policy-map test-avc-down
Device(config-pmap)# class cat-browsing
Device(config-pmap-c)# police 200000
Device(config-pmap-c)# set dscp 10
Device(config-pmap-c)#end
```

Device# configure terminal

```
Device(config) # policy-map test-avc-up
Device(config-pmap) # class cat-fileshare
Device(config-pmap-c) # police 300000
Device(config-pmap-c) # set wlan user-priority 2
Device(config-pmap-c) # set dscp 20
Device(config-pmap-c) # end
```

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class subcat-terminal
Device(config-pmap-c)# police 100000
Device(config-pmap-c)# set dscp 25
Device(config-pmap-c)#end
```

```
Device# configure terminal
Device(config)# policy-map test-avc-up
Device(config-pmap)# class webex-meeting
Device(config-pmap-c)# police 60000000
```

Device(config-pmap-c)# set dscp 41
Device(config-pmap-c)#end

This example shows how to apply defined QoS policy on a WLAN:

```
Device# configure terminal
Device(config)#wlan alpha
Device(config-wlan)#shut
Device(config-wlan)#end
Device(config-wlan)#service-policy client input test-avc-up
Device(config-wlan)#service-policy client output test-avc-down
Device(config-wlan)#no shut
Device(config-wlan)#end
```

match service-instance

To set a service instance to match a service list, use the match service-instance command.

	match service-insta	nce line
Syntax Description	<i>line</i> Regular expre	ession to match the service instance in packet
Command Default	None	
Command Modes	Service list configur	ation
Command History	Release	Modification
	Cisco IOS XE Gibra	ltar 16.12.1 This command was introduced.
Usage Guidelines	1	use the match command if you have used the match command can be used only for the

Example

The following example shows how to set the service instance to match:

Device(config-mdns-sd-sl)# match service-instance servInst 1

397

match service-type

To set the value of the mDNS service type string to match, use the **match service-type** command.

match service-type line

Syntax Description	<i>line</i> Regular expression to match the service type in p		
Command Default	None		
Command Modes	Service list configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	It is not possible to use the mate	h command if you have used th	

sage Guidelines It is not possible to use the **match** command if you have used the **service-list mdns-sd** *service-list-name* **query** command. The **match** command can be used only for the **permit** or **deny** option.

Example

The following example shows how to set the value of the mDNS service type string to match:

Device(config-mdns-sd-sl)# match service-type _ipp._tcp

match user-role

To configure the class-map attribute filter criteria, use the match user-role command.

match user-role user-role

Command Default None

Command Modes config-filter-control-classmap

Command History

Release Modification

Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a class-map attribute filter criteria:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# class-map type control subscriber match-any map-name
Device(config-filter-control-classmap)# match user-role user-role
```

match username

To create a condition that evaluates true based on an event's username, use the **match username** command in control class-map filter configuration mode. To create a condition that evaluates true if an event's username does not match the specified username, use the **no-match username** command in control class-map filter configuration mode. To remove the condition, use the **no** form of this command.

match username username
no-match username username
no {match | no-match} username username

Syntax Description	username Username.				
Command Default	The control class does not contain a condition based on the event's username.				
Command Modes	Control class-map filter configuration (config-filter-control-classmap)				
Command History	Release	Modific	ation		
	Cisco IOS XE Release 3.2SE	This cor	nmand was introduced.	-	
Usage Guidelines	The match username command configures a match condition in a control class based on the username. A control class can contain multiple conditions, each of which will evaluate as either true or false. The control class defines whether all, any, or none of the conditions must evaluate true to execute the actions of the control policy.				
	The no-match form of this command specifies a value that results in an unsuccessful match. All other values of the specified match criterion result in a successful match. For example, if you configure the no-match username josmithe command, the control class accepts any username value except josmithe as a successful match.				
	The class command associates a control class with a control policy.				
Examples	The following example shows how to configure a control class that evaluates true if the username is josmithe:				
	class-map type control subscriber match-all CLASS_1 match username josmithe				
Related Commands	Command		Description		

policy-map type control subscriber Defines a control policy for subscriber sessions

Associates a control class with one or more actions in a control policy.

class

match (access-map configuration)

To set the VLAN map to match packets against one or more access lists, use the **match** command in access-map configuration mode. Use the **no** form of this command to remove the match parameters.

{match ip address {namenumber} [{namenumber}] [{namenumber}]...|mac address name [name]
[name]...}
{no match ip address {namenumber} [{namenumber}] [{namenumber}]...|mac address name
[name] [name]...}

Syntax Description	ip address	Set the access map to match packets against an IP address access list.				
	mac address	Set the access map to match packets against a MAC address access list.				
	name	Name of the access list to match packets against.				
	number	Number of the access list to match packets against. This option is not valid for MAC access lists.				
Command Default	The default a	action is to have no match parameters applied to a VLAN map.				
Command Modes	Access-map	configuration				
Command History	ory Release Modification					
	Cisco IOS X	XE Gibraltar 16.12.1 This command was introduced.				
Usage Guidelines	You enter access-map configuration mode by using the vlan access-map global configuration command.					
J	You must enter one access list name or number; others are optional. You can match packets against one or more access lists. Matching any of the lists counts as a match of the entry.					
	In access-map configuration mode, use the match command to define the match conditions for a VLAN map applied to a VLAN. Use the action command to set the action that occurs when the packet matches the conditions.					
	Packets are matched only against access lists of the same protocol type; IP packets are matched against IP access lists, and all other packets are matched against MAC access lists.					
	Both IP and MAC addresses can be specified for the same map entry.					
Examples	This example shows how to define and apply a VLAN access map <i>vmap4</i> to VLANs 5 and 6 that will cause the interface to drop an IP packet if the packet matches the conditions defined in access list <i>al2</i> .					
	Device(config)# vlan access-map vmap4 Device(config-access-map)# match ip address al2 Device(config-access-map)# action drop Device(config-access-map)# exit					

Device(config) # vlan filter vmap4 vlan-list 5-6

You can verify your settings by entering the show vlan access-map privileged EXEC command.

match (class-map configuration)

To define the match criteria to classify traffic, use the **match** command in class-map configuration mode. Use the **no** form of this command to remove the match criteria.

Cisco IOS XE Everest 16.5.x and Earlier Releases

match {access-group {nameacl-name acl-index} | class-map class-map-name | cos cos-value | dscp *dscp-value* | [ip] *dscp dscp-list* | [ip] **precedence** *ip-precedence-list* | **precedence** precedence-value1...value4 | qos-group qos-group-value | vlan vlan-id} **no match** {access-group{nameacl-name acl-index} | class-map class-map-name | cos cos-value | dscp dscp-value | [ip] dscp dscp-list | [ip] precedence ip-precedence-list | precedence precedence-value1...value4 | qos-group qos-group-value | vlan vlan-id}

Cisco IOS XE Everest 16.6.x and Later Releases

match {access-group{name acl-name acl-index} | cos cos-value | dscp dscp-value | [ip] dscp dscp-list [ip] precedence *ip-precedence-list* | mpls *experimental-value* | non-client-nrt | precedence precedence-value1...value4 | protocol protocol-name | qos-group qos-group-value | vlan vlan-id | wlan wlan-id}

no match {access-group{name acl-name acl-index} | cos cos-value | dscp dscp-value | [ip] dscp dscp-list | [ip] precedence ip-precedence-list | mpls experimental-value | non-client-nrt | precedence precedence-value1...value4 | protocol protocol-name | qos-group qos-group-value | vlan vlan-id | wlan wlan-id}

n a 	access-group	Specifies an access group.
	name acl-name	Specifies the name of an IP standard or extended access control list (ACL) or MAC ACL.
	acl-index	Specifies the number of an IP standard or extended access control list (ACL) or MAC ACL. For an IP standard ACL, the ACL index range is 1 to 99 and 1300 to 1999. For an IP extended ACL, the ACL index range is 100 to 199 and 2000 to 2699.
	class-map class-map-name	Uses a traffic class as a classification policy and specifies a traffic class name to use as the match criterion.
	cos cos-value	Matches a packet on the basis of a Layer 2 class of service (CoS)/Inter-Switch Link (ISL) marking. The cos-value is from 0 to 7. You can specify up to four CoS values in one match cos statement, separated by a space.
	dscp dscp-value	Specifies the parameters for each DSCP value. You can specify a value in the range 0 to 63 specifying the differentiated services code point value.

	ip dscp dscp-list	Specifies a list of up to eight IP Differentiated Services Code Point (DSCP) values to match against incoming packets. Separate each value with a space. The range is 0 to 63. You also can enter a mnemonic name for a commonly used value.			
	ip precedence <i>ip-precedence-list</i>	Specifies a list of up to eight IP-precedence values to match against incoming packets. Separate each value with a space. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.			
	precedence precedence-value1value4	Assigns an IP precedence value to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.			
	qos-group qos-group-value	Identifies a specific QoS group value as a match criterion. The range is 0 to 31.			
	vlan vlan-id	Identifies a specific VLAN as a match criterion. The range is 1 to 4094.			
	mpls experimental-value	Specifies Multi Protocol Label Switching specific values.			
	non-client-nrt	Matches a non-client NRT (non-real-time).			
	protocol protocol-name	Specifies the type of protocol.			
	wlan wlan-id	Identifies 802.11 specific values.			
Command Default	No match criteria are defined.				
Command Modes	Class-map configuration				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.			
Usage Guidelines	The match command is used to specify which fields in the incoming packets are examined to classify the packets. Only the IP access group or the MAC access group matching to the Ether Type/Len are supported.				
	If you enter the class-map match-any <i>class-map-name</i> global configuration command, you can enter the following match commands:				
	match access-group name acl-name				
	Note The ACL must be an extended named ACL.				
	match ip dscp-list				
	match ip precedence ip-precedence-list	r			

The **match access-group** *acl-index* command is not supported. To define packet classification on a physical-port basis, only one **match** command per class map is supported. In this situation, the **match-any** keyword is equivalent. For the **match ip dscp** *dscp-list* or the **match ip precedence** *ip-precedence-list* command, you can enter a mnemonic name for a commonly used value. For example, you can enter the **match ip dscp af11** command, which is the same as entering the **match ip dscp 10** command. You can enter the **match ip precedence critical** command, which is the same as entering the match ip precedence 5 command. For a list of supported mnemonics, enter the **match ip dscp**? or the **match ip precedence**? command to see the command-line help strings. Use the **input-interface** *interface-id-list* keyword when you are configuring an interface-level class map in a hierarchical policy map. For the *interface-id-list*, you can specify up to six entries. **Examples** This example shows how to create a class map called class2, which matches all the incoming traffic with DSCP values of 10, 11, and 12: Device(config) # class-map class2 Device(config-cmap) # match ip dscp 10 11 12 Device(config-cmap)# exit This example shows how to create a class map called class3, which matches all the incoming traffic with IP-precedence values of 5, 6, and 7: Device(config) # class-map class3 Device(config-cmap) # match ip precedence 5 6 7 Device(config-cmap)# exit

This example shows how to delete the IP-precedence match criteria and to classify traffic using acl1:

```
Device(config)# class-map class2
Device(config-cmap)# match ip precedence 5 6 7
Device(config-cmap)# no match ip precedence
Device(config-cmap)# match access-group acl1
Device(config-cmap)# exit
```

This example shows how to specify a list of physical ports to which an interface-level class map in a hierarchical policy map applies:

```
Device(config)# class-map match-any class4
Device(config-cmap)# match cos 4
Device(config-cmap)# exit
```

This example shows how to specify a range of physical ports to which an interface-level class map in a hierarchical policy map applies:

```
Device(config)# class-map match-any class4
Device(config-cmap)# match cos 4
Device(config-cmap)# exit
```

You can verify your settings by entering the show class-map privileged EXEC command.

match wlan user-priority

	To match 802.11 specific values, use the match wlan user-priority command in class-map configuration mode. Use the no form of this command to return to the default setting.
	match wlan user-priority <i>wlan-value</i> [<i>wlan-value</i>] [<i>wlan-value</i>] [<i>wlan-value</i>] no match wlan user-priority <i>wlan-value</i> [<i>wlan-value</i>] [<i>wlan-value</i>] [<i>wlan-value</i>]
Syntax Description	<i>wlan-value</i> The 802.11-specific values. Enter the user priority 802.11 TID user priority (0-7). (Optional) Enter up to three user priority values separated by white-spaces.
Command Default	None
Command Modes	Class-map configuration (config-cmap)
Command History	Release Modification
	Cisco IOS XE Gibraltar 16.12.1 This command was introduced.
Usage Guidelines	None
	This example show how you can configure user-priority values:
	Device(config)# class-map test_1000 Device(config-cmap)# match wlan user-priority 7

max-bandwidth

To configure the wireless media-stream's maximum expected stream bandwidth in Kbps, use the **max-bandwidth** command.

max-bandwidth bandwidth

Syntax Description	bandwidth Maximum Expected Stream Bandwidth in Kbps. Valid range is 1 to 35000 Kbps.		
Command Default	None		
Command Modes	media-stream		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure wireless media-stream bandwidth in Kbps:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group doc-grp 224.0.0.0 224.0.0.223
Device(config-media-stream)# max-bandwidth 3500
```

max-through

To limit multicast router advertisements (RAs) per VLAN per throttle period, use the **max-through** command in IPv6 RA throttle policy configuration mode. To reset the command to its defaults, use the **no** form of this command.

max-through {*mt-value* | **inherit** | **no-limit**}

Syntax Description	mt-value	Number of mu through 256.	lticast RAs allowed on the VL	AN before throttling occurs. The range is from 0
	inherit	Merges the set	ting between target policies.	
	no-limit	Multicast RAs	are not limited on the VLAN.	
Command Default	- 10 RAs pe	er VLAN per 10	minutes	
Command Modes	IPv6 RA t	hrottle policy co	nfiguration (config-nd-ra-thro	ttle)
Command History	Release		Modification	
	Cisco IOS 3.2XE	S XE Release	This command was introduced.	
Usage Guidelines		-	nd limits the amount of multic and can be configured only or	ast RAs that are passed through to the VLAN per a VLAN.
	Example			

```
Device(config)# ipv6 nd ra-throttle policy policy1
Device(config-nd-ra-throttle)# max-through 25
```

mdns-sd

To configure the mDNS service discovery gateway, use the **mdns-sd** command. To disable the configuration, use the **no** form of this command.

mdns-sd { **gateway** | **service-definition** *service-definition-name* | **service-list** *service-list-name* { **IN** | **OUT** } | **service-policy** *service-policy-name* }

no mdns-sd { **gateway** | **service-definition** *service-definition-name* | **service-list** *service-list-name* { **IN** | **OUT** } | **service-policy** *service-policy-name* }

Syntax Description	mdns-sd	Configures the mDNS service discovery gateway.			
	gateway	Configures mDNS gateway.			
	service-definition	Configures mDNS service definition.			
	service-definition-name	Specifies the mDNS service definition name.			
	service-list	Configures mDNS service list.			
	service-list-name	Specifies the mDNS service definition name.Specifies the inbound filtering.Specifies the outbound filtering.Configures mDNS service policy.			
	IN				
	OUT				
	service-policy				
	service-policy-name	Specifies the mDNS service policy name.			
Command Default	None				
Command Modes	Global configuration				
Command History	Release	Modification			
	Cisco IOS XE Amsterda	im 17.3.1 This command was introduced.			
Usage Guidelines	None				
	Example				

The following example shows how to configure the mDNS service discovery gateway:

Device(config) # mdns-sd gateway

mdns-sd-interface

	To configure the mDNS service discovery per WLAN, use the mdns-sd-interface command. To disable the command, use the no form of this command. mdns-sd-interface { drop gateway }				
	no mdns-sd-interfa	no mdns-sd-interface { drop gateway }			
Syntax Description	mdns-sd-interface	Configures the mDNS service discovery p	er WLAN		
	drop	Disables mDNS gateway and bridging for	or WLAN.		
	gateway	Enables mDNS gateway for WLAN.			
Command Default	None				
Command Modes	WLAN configuration	n			
Command History	Release	Modification	_		
	Cisco IOS XE Amst	erdam 17.3.1 This command was introduced.	_		
Usage Guidelines	None				
	Example				
	The fellering energy	ing diagoname man W/LANI.			

The following example shows how to configure the mDNS service discovery per WLAN:

Device(config-wlan)# mdns-sd-interface gateway

mdns-sd flex-profile

To configure the mDNS service discovery flex profile, use the **mdns-sd flex-profile** command. To disable the command, use the **no** form of this command.

mdns-sd flex-profile flex-profile-name

no mdns-sd flex-profile flex-profile-name

Syntax Description	mdns-sd flex-profile	Configures the mDNS service discovery flex profile.
	flex-profile-name	Specifies the mDNS flex profile name.
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Amsterd	am 17.3.1 This command was introduced.
Usage Guidelines	None	

Example

The following example shows how to configure the mDNS service discovery flex profile:

Device(config)# mdns-sd flex-profile mdns-flex-profile

mdns-sd profile

To apply the mDNS flex profile to the wireless flex profile, use the **mdns-sd profile** command in the wireless flex profile mode. To disable the command, use the **no** form of this command.

	mdns-sd profile flex-profile-nd	me		
	no mdns-sd profile flex-profile	e-name		
Syntax Description	mdns-sd profile Configures the	he mDNS flex profile in the wireless flex profile.		
	<i>flex-profile-name</i> Specifies the	mDNS flex profile name.		
Command Default	None			
Command Modes	Wireless flex profile configuration			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.		
Usage Guidelines	None			

Example

The following example shows how to apply the mDNS flex profile to the wireless flex profile:

Device(config-wireless-flex-profile) # mdns-sd profile mdns-flex-profile

method fast

To configure EAP profile to support EAP-FAST method, use the method fast command.

method fast [**profile** *profile-name*]

Syntax Description	profile-name Specify the methor profile.	od
Command Default	None	
Command Modes	config-eap-profile	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable EAP Fast method on a EAP profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# eap profile profile-name
Device(config-eap-profile)# method fast
```

mgmtuser username

To set a username and password for AP management, use the **mgmtuser username** command. To disable this feature, use the **no** form of this command.

mgmtuser username	username	password {	0	8	}	password
ingintuser username	username	passionu	U	0	J	passwora

Syntax Description	username	Enter a username	for AP management.
	0	Specifies an UNE	NCRYPTED password.
	8	Specifies an AES	encrypted password.
	password	Configures the end	cryption password (key).
Command Default	None		
Command Modes	AP Profil	e Configuration (c	onfig-ap-profile)
Command History	Release		Modification
	Cisco IO	S XE Gibraltar	This command was
	17.6.1		introduced.

Examples

The following example shows how to set a username and password for AP management:

```
Device# enable
Device# configure terminal
Device(config)# ap profile default-ap-profile
Device(config-ap-profile)# mgmtuser username myusername password 0
Device(config-ap-profile)# end
```

mop sysid

To enable an interface to send out periodic Maintenance Operation Protocol (MOP) system identification messages, use the **mopsysid** command in interface configuration mode. To disable MOP message support on an interface, use the **no** form of this command.

mop sysid no mop sysid

Syntax Description This command has no arguments or keywords.

Command Default Enabled

Command Modes Interface configuration

Command History	Release	Modification
	10.0	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.28X	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

Usage Guidelines You can still run MOP without having the background system ID messages sent. This command lets you use the MOP remote console, but does not generate messages used by the configurator.

Examples The following example enables serial interface 0 to send MOP system identification messages:

Router(config)# interface serial 0
Router(config-if)# mop sysid

Related Commands	Command	Description
mop device-code Identifies the type of device sending MOP sysid messages and		Identifies the type of device sending MOP sysid messages and request program messages.
mop enabled		Enables an interface to support the MOP.

Command Default

multicast vlan

To configure multicast on a single VLAN, use the **multicast vlan** command. To remove the multicast, use the **no** form of the command.

multicastvlanvlan-idnomulticastvlanvlan-idSyntax Descriptionvlan-idSpecifies the VLAN ID.

 Command Modes
 Wireless policy configuration

Disabled.

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to configure multicast:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile policy policy-test Device(config-wireless-policy)# multicast vlan 12

nac

To enable RADIUS Network Admission Control (NAC) support, use the nac command. To disable NAC support, use the **no** form of this command. [ise | xwf] nac no nac **Syntax Description** ise Configures Radius NAC support (Identity Service Engine) xwf Configures Express Wi-Fi NAC support. NAC is disabled. **Command Default** Wireless policy configuration **Command Modes Command History Modification** Release Cisco IOS XE Gibraltar 16.10.1 This command was introduced. This example shows how to configure RADIUS NAC: Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z.

Device(config)# wireless profile policy default-policy-profile

Device(config-wireless-policy) # nac

nas-id option2

To configure option 2 parameters for a NAS-ID, use the **nas-id option2** command.

nas-id option2 {sys-ip | sys-name | sys-mac }

sys-ip System IP Address.	_
sys-name System Name.	_
sys-mac System MAC address.	_
None	
config-aaa-policy	
Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	sys-name System Name. sys-mac System MAC address. None config-aaa-policy Release

Examples

The following example shows how to configure the system IP address for the NAS-ID:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless aaa policy profile-name
Device(config-aaa-policy)# nas-id option2 sys-ip
```

network

	To configure the network nun	nber in decimal notation, use the network command.
	network network-number [{n	network-mask secondary }]
Syntax Description	<i>ipv4-address</i> Network numb	per in dotted-decimal notation.
	network-mask Network mask	x or prefix length.
	secondary Configure as s	econdary subnet.
Command Default	None	
Command Modes	dhcp-config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10	.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure network number and the mask address:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ip dhcp pool name
Device(dhcp-config)# network 209.165.200.224 255.255.255.0
```

nmsp cloud-services enable

To configure NMSP cloud services, use the nmsp cloud-services enable command.

	nmsp cloud-services enable	
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable NMSP cloud services:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# nmsp cloud-services enable

nmsp cloud-services http-proxy

To configure the proxy for NMSP cloud server, use the **nmsp cloud-services http-proxy** command.

nmsp cloud-services http-proxy proxy-server port

Syntax Description	proxy-server Enter the hostna	me or the IP address of the proxy server for NMSP cloud services.
	<i>port</i> Enter the proxy	server port number for NMSP cloud services.
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10	1.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the proxy for NMSP cloud server:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# nmsp cloud-services http-proxy host-name port-number

nmsp cloud-services server token

To configure the NMSP cloud services server parameters, use the **nmsp cloud-services server token** command.

nmsp cloud-services server token token

Syntax Description	token Authentication token for the	he NMSP cloud services.
Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the for the NMSP cloud services server parameters:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# nmsp cloud-services server token authentication-token

nmsp cloud-services server url

To configure NMSP cloud services server URL, use the nmsp cloud-services server url command.

nmsp cloud-services server url url

Syntax Description	ul URL of the NMSP cloud serv	vices server.
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a URL for NMSP cloud services server:

Device(config) # nmps cloud-services server url http://www.example.com

nmsp notification interval

To modify the Network Mobility Services Protocol (NMSP) notification interval value on the controller to address latency in the network, use the **nmsp notification interval** command in global configuration mode.

nmsp notification interval { attachment | location | rssi { clients | rfid | rogues { ap | client }
} }

Syntax Description	attachment		Specifies the ti	me used to aggregate attachment information.
	location		Specifies the t	time used to aggregate location information.
	rssi		Specifies the t	time used to aggregate RSSI information.
	clients		Specifies the t	time interval for clients.
	rfid		Specifies the t	time interval for rfid tags.
	rogues		Specifies the t	ime interval for rogue APs and rogue clients
	ар		Specifies the t	ime used to aggregate rogue APs.
	client		Specifies the t	time used to aggregate rogue clients.
Command Default	No default behavior or values.			
Command Modes	Global configuration			
Command History	Release	Modification		-
	Cisco IOS XE Gibraltar 16.12.1	This command introduced.	was	-
	This example shows how to set the	ne NMSP notifica	tion interval fo	- r the active RFID tags to 25 seconds:
	Device# configure terminal Device(config)# nmsp notifi Device(config)# end	cation-interva	l rfid 25	
	This example shows how to more to the network or disconnecting	•		s for device attachment (connecting conds:
	Device# configure terminal Device(config)# nmsp notifi	cation-interva	l attachment	: 10

This example shows how to configure NMSP notification intervals for location parameters (location change) every 20 seconds:

Device(config)# end

Device# configure terminal Device(config)# nmsp notification-interval location 20 Device(config)# end

nmsp strong-cipher

To enable the new ciphers, use the **nmsp strong-cipher** command in global configuration mode. To disable, use the **no** form of this command.

nmsp strong-cipher no nmsp strong-cipher

Syntax Description	This command has no arguments or keywords.
--------------------	--

Command Default The new ciphers are not enabled.

Command Modes

Global configuration (config)

Command History	Release	Modification
	15.2(2)E	This command was introduced.

Usage Guidelines The nmsp strong-cipher command enables strong ciphers for new Network Mobility Service Protocol (NMSP) connections.

Note

The existing NMSP connections will use the default cipher.

Examples The following example shows how to enable a strong-cipher for NMSP:

Device> enable Device> configure terminal Device(config)# nmsp strong-cipher

Related Commands	Command	Description
	show nmsp status	Displays the status of active NMSP connections.

ntp auth-key

To configure the Network Time Protocol (NTP) server authentication key information on an AP profile, use the **ntp auth-key** command. To remove the NTP server authentication key information from an AP profile, use the **no ntp auth-key** command.

ntp auth-key index key-index type { md5 | sha1 } format { ascii | hex } key { 0 | 8 } server-key

Syntax Description	key-index	Key index. Valid range is from 1 to 65535.
	md5	Specifies that a Message Digest 5 (MD5) authentication key will follow.
	sha1	Specifies that a Secure Hash Algorithm 1 (SHA1) authentication key will follow.
	format	Defines the key format—ASCII or HEX
	ascii	Specifies that an ASCII key will follow.
	hex	Specifies that a hex key will follow.
	key	Defines the NTP server key—unencrypted or encrypted.
	0	Specifies that an UNENCRYPTED password will follow.
	8	Specifies that an AES encrypted password will follow.
	server-key	NTP server key. For ASCII key, ensure that the length is less than 21 bytes. For HEX key, t length should be less than 41, using only numbers between 0-9 and characters from a-f.
Command Default	NTP server	authentication is not set.
Command Default Command Modes		
		authentication is not set.
Command Modes	AP profile c	authentication is not set. configuration (config-ap-profile)
Command Modes	AP profile c Release Cisco IOS 2	authentication is not set. configuration (config-ap-profile) Modification XE Bengaluru 17.6.1 This command was

option

To configure optional data parameters for a flow exporter for , use the **option** command in flow exporter configuration mode. To remove optional data parameters for a flow exporter, use the **no** form of this command.

option {exporter-stats | interface-table | sampler-table } [{timeout seconds}] no option {exporter-stats | interface-table | sampler-table }

Suntax Description		
Syntax Description	exporter-stats	Configures the exporter statistics option for flow exporters.
	interface-table	Configures the interface table option for flow exporters.
	sampler-table	Configures the export sampler table option for flow exporters.
	timeout seconds	(Optional) Configures the option resend time in seconds for flow exporters. The range is 1 to 86400. The default is 600.
Command Default	The timeout is 600 seconds	s. All other optional data parameters are not configured.
Command Modes	Flow exporter configuratio	n

parameter-map type subscriber attribute-to-service

To configure parameter map type and name, use the **parameter-map type subscriber attribute-to-service** command.

parameter-map type subscriber attribute-to-service parameter-map-name

Syntax Description	attribute-to-service Name the attribute to service.		
	<i>parameter-map-name</i> Name of the parameter map. The map name is limited to 33 characters.		
Command Default	None		
Command Modes	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure parameter map type and name:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# parameter-map type subscriber attribute-to-service parameter-map-name
```

pae

I

	To enable product telemetre the no form of this comma		nand. To disable product telemetry collection, use
	рае		
	no pae		
Command Default	Product telemetry is enabled.		
Command Modes	Global configuration (configuration)	fig)	
Command History	Release	Modification	
	Cisco IOS XE Dublin 17.10.1	This command was introduced.	
Examples	The following example she	ows how to disable product tel	emetry collection:
	Device# configure term	inal	

password encryption aes

To enable strong (AES) password encryption, use the **password encryption aes** command. To disable this feature, use the **no** form of this command.

password encryption aes

no password encryption aes

Syntax Description	password	Configures the en	cryption password (key).
-,	• 	-	
	encryption	Encrypts system p	basswords.
	aes	Enables stronger (A	AES) password encryption.
Command Default	None		
Command Modes	Global config	guration mode.	
Command History	Release		Modification
	Cisco IOS X	E Gibraltar 16.12.2s	This command was introduced.

Example

The following example shows how to enable AES password encryption :

Device(config) #password encryption aes

peer-blocking

To configure peer-to-peer blocking on a WLAN, use the **peer-blocking** command. To disable peer-to-peer blocking, use the **no** form of this command.

peer-blocking {drop | forward-upstream}
no peer-blocking

Syntax Description				
Syntax Description	drop	Specifies the device to discard the packets.		
	forward-upstream	Specifies the packets to be forwarded on the upstream VLAN. The device next in the hierarchy to the device decides what action to take regarding the packets.		
Command Default	Peer blocking is disab	bled.		
Command Modes	WLAN configuration	1		
Command History	Release Modification	1		
	This comma introduced.	nd was		
Usage Guidelines	You must disable the V on how to disable a W	WLAN before using this command. See Related Commands section for more information VLAN.		
	This example shows h	now to enable the drop and forward-upstream options for peer-to-peer blocking:		
	Device# configure Enter configuratio Device(config)# wl	on commands, one per line. End with CNTL/Z.		
	-	n)# peer-blocking drop n)# peer-blocking forward-upstream		
	This example shows h	now to disable the drop and forward-upstream options for peer-to-peer blocking:		
	Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wlan wlan1			

policy

To configure media stream admission policy, use the **policy** command.

	policy {admit deny}		
Syntax Description	admit Allows traffic for a media stream group.		
	deny Denies traffic for a media stream group.		
Command Default	None		
Command Modes	media-stream		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to allow traffic for a media stream group:

```
Device # configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config) # wireless media-stream group ms-group 224.0.0.0 224.0.0.223
Device(media-stream) # policy admit
```

To define a policer for classified traffic, use the **police** command in policy-map class configuration mode. Use the **no** form of this command to remove an existing policer.

police rate-bps burst-byte [conform-action transmit]
no police rate-bps burst-byte [conform-action transmit]

Syntax Description	rate-bps	Specify the avera 1000000000.	age traffic rate in bits per second (b/s). The range is 1000000 to			
	burst-byte	Specify the normal burst size in bytes. The range is 8000 to 1000000.				
	conform-action transmit	(Optional) When packet.	a less than the specified rate, specify that the switch transmits the			
Command Default	No policers are define	ed.				
Command Modes	Policy-map class configuration					
Command History	Release		Modification			
	Cisco IOS XE Gibral	ltar 16.12.1	This command was introduced.			
Usage Guidelines	A policer defines a maximum permissible rate of transmission, a maximum burst size for transmissions, and an action to take if either maximum is exceeded.					
	When configuring hierarchical policy maps, you can only use the police policy-map command in a secondary interface-level policy map.					
	The port ASIC device, which controls more than one physical port, supports 256 policers on the sy user-configurable policers plus 1 policer reserved for internal use). The maximum number of conf policers supported per port is 63. Policers are allocated on demand by the software and are constrain hardware and ASIC boundaries. You cannot reserve policers per port. There is no guarantee that a be assigned to any policer. To return to policy-map configuration mode, use the exit command. To return to privileged EXEC the end command.					
Examples	This example shows how to configure a policer that transmits packets if traffic is less than 1 Mb/s average rate with a burst size of 20 KB. There is no packet modification.					
	Device(config)# class-map class1 Device(config-cmap)# exit Device(config)# policy-map policy1 Device(config-pmap)# class class1 Device(config-pmap-c)# police 1000000 20000 conform-action transmit Device(config-pmap-c)# exit					

```
Device(config) # class-map class1
Device(config-cmap) # exit
Device(config) # policy-map policy1
Device(config-pmap) # class class1
Device(config-pmap-c) # police 1m 20000 conform-action transmit
Device(config-pmap-c) # exit
```

This example shows how to configure a policer, which marks down the DSCP values with the values defined in policed-DSCP map and sends the packet:

```
Device(config) # policy-map policy2
Device(config-pmap)# class class2
Device(config-pmap-c) # police 1000000 20000 exceed-action policed-dscp-transmit
Device(config-pmap-c) # exit
```

You can verify your settings by entering the show policy-map privileged EXEC command.

police cir

To set the policing of committed information rate, use the **police cir** command.

police cir <*target bit rate*>

Syntax Description	police cir	Polices committed information rate.	
	8000-10000000000	Sets the target bit rate at bits per second. The	e range is between 8000 and 1000000000.
Command Default	None		
Command Modes	Policy map class cont	figuration	
Command History	Release	Modification	-
	Cisco IOS XE Amste	rdam 17.2.1 This command was introduced.	-
			-

Example

This example shows how to set the committed information rate: Device(config-pmap-c)#police cir 8000

policy-map

To create or modify a policy map that can be attached to multiple physical ports or switch virtual interfaces (SVIs) and to enter policy-map configuration mode, use the **policy-map** command in global configuration mode. Use the **no** form of this command to delete an existing policy map and to return to global configuration mode.

policy-map policy-map-name
no policy-map policy-map-name

Syntax Description	<i>policy-map-name</i> Name of the policy map.		
Command Default	No policy maps are defined.		
Command Modes	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	After entering the policy-map command, you enter policy-map configuration mode, and these configuration commands are available:		
	• class—Defines the classification match crite	eria for the specified class map.	
	• description—Describes the policy map (up to 200 characters).		
	• exit—Exits policy-map configuration mode and returns you to global configuration mode.		
	• no—Removes a previously defined policy map.		
	• sequence-interval—Enables sequence number capability.		
	To return to global configuration mode, use the exit command. To return to privileged EXEC mode, use the end command.		
	Before configuring policies for classes whose match criteria are defined in a class map, use the policy-map command to specify the name of the policy map to be created, added to, or modified. Entering the policy-map command also enables the policy-map configuration mode in which you can configure or modify the class policies for that policy map.		
	You can configure class policies in a policy map only if the classes have match criteria defined for them. To configure the match criteria for a class, use the class-map global configuration and match class-map configuration commands. You define packet classification on a physical-port basis.		
	Only one policy map per ingress port is supported. You can apply the same policy map to multiple physical ports.		
	You can apply a nonhierarchical policy maps to p the port-based policy maps in the device.	physical ports. A nonhierarchical policy map is the same as	
	A hierarchical policy map has two levels in the f modified but the child policy (port-child policy)	ormat of a parent-child policy. The parent policy cannot be can be modified to suit the QoS configuration.	

In VLAN-based QoS, a service policy is applied to an SVI interface.

N

Note Not all MQC QoS combinations are supported for wired ports. For information about these restrictions, see chapters "Restrictions for QoS on Wired Targets" in the QoS configuration guide.

Examples

This example shows how to create a policy map called policy1. When attached to the ingress port, it matches all the incoming traffic defined in class1, sets the IP DSCP to 10, and polices the traffic at an average rate of 1 Mb/s and bursts at 20 KB. Traffic less than the profile is sent.

```
Device(config) # policy-map policy1
Device(config-pmap)# class class1
Device(config-pmap-c)# set dscp 10
Device(config-pmap-c)# police 1000000 20000 conform-action transmit
Device(config-pmap-c)# exit
```

This example show you how to configure hierarchical polices:

```
Device# configure terminal
Device(config)# class-map cl
Device(config-cmap)# exit
```

Device(config)# class-map c2
Device(config-cmap)# exit

```
Device(config) # policy-map child
Device(config-pmap)# class c1
Device(config-pmap-c) # priority level 1
Device(config-pmap-c) # police rate percent 20 conform-action transmit exceed action drop
Device(config-pmap-c-police) # exit
Device(config-pmap-c) # exit
```

```
Device(config-pmap)# class c2
Device(config-pmap-c)# bandwidth 20000
Device(config-pmap-c)# exit
```

```
Device(config-pmap)# class class-default
Device(config-pmap-c)# bandwidth 20000
Device(config-pmap-c)# exit
Device(config-pmap)# exit
```

```
Device(config)# policy-map parent
Device(config-pmap)# class class-default
Device(config-pmap-c)# shape average 1000000
Device(config-pmap-c)# service-policy child
Deviceconfig-pmap-c)# end
```

This example shows how to delete a policy map:

```
Device(config) # no policy-map policymap2
```

You can verify your settings by entering the show policy-map privileged EXEC command.

policy-map

To create or modify a policy map that can be attached to multiple physical ports or switch virtual interfaces (SVIs) and to enter policy-map configuration mode, use the **policy-map** command in global configuration mode. Use the **no** form of this command to delete an existing policy map and to return to global configuration mode.

policy-map policy-map-name
no policy-map policy-map-name

Syntax Description	<i>policy-map-name</i> Name of the policy map.		
Command Default	No policy maps are defined.		
Command Modes	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	After entering the policy-map command, you enter policy-map configuration mode, and these configuration commands are available:		
	• class—Defines the classification match criteria for the specified class map.		
	• description—Describes the policy map (up to 200 characters).		
	• exit—Exits policy-map configuration mode and returns you to global configuration mode.		
	• no —Removes a previously defined policy map.		
	• sequence-interval—Enables sequence number capability.		
	To return to global configuration mode, use the exit command. To return to privileged EXEC mode, use the end command.		
	Before configuring policies for classes whose match criteria are defined in a class map, use the policy-map command to specify the name of the policy map to be created, added to, or modified. Entering the policy-map command also enables the policy-map configuration mode in which you can configure or modify the class policies for that policy map.		
	You can configure class policies in a policy map only if the classes have match criteria defined for them. To configure the match criteria for a class, use the class-map global configuration and match class-map configuration commands. You define packet classification on a physical-port basis.		
	Only one policy map per ingress port is supported. You can apply the same policy map to multiple physical ports.		
	You can apply a nonhierarchical policy maps to the port-based policy maps in the device.	physical ports. A nonhierarchical policy map is the same as	
	A hierarchical policy map has two levels in the f modified but the child policy (port-child policy)	format of a parent-child policy. The parent policy cannot be can be modified to suit the QoS configuration.	

In VLAN-based QoS, a service policy is applied to an SVI interface.

N

Note Not all MQC QoS combinations are supported for wired ports. For information about these restrictions, see chapters "Restrictions for QoS on Wired Targets" in the QoS configuration guide.

Examples

This example shows how to create a policy map called policy1. When attached to the ingress port, it matches all the incoming traffic defined in class1, sets the IP DSCP to 10, and polices the traffic at an average rate of 1 Mb/s and bursts at 20 KB. Traffic less than the profile is sent.

```
Device(config) # policy-map policy1
Device(config-pmap)# class class1
Device(config-pmap-c)# set dscp 10
Device(config-pmap-c)# police 1000000 20000 conform-action transmit
Device(config-pmap-c)# exit
```

This example show you how to configure hierarchical polices:

```
Device# configure terminal
Device(config)# class-map cl
Device(config-cmap)# exit
```

Device(config)# class-map c2
Device(config-cmap)# exit

```
Device(config) # policy-map child
Device(config-pmap)# class c1
Device(config-pmap-c) # priority level 1
Device(config-pmap-c) # police rate percent 20 conform-action transmit exceed action drop
Device(config-pmap-c-police) # exit
Device(config-pmap-c) # exit
```

```
Device(config-pmap)# class c2
Device(config-pmap-c)# bandwidth 20000
Device(config-pmap-c)# exit
```

```
Device(config-pmap)# class class-default
Device(config-pmap-c)# bandwidth 20000
Device(config-pmap-c)# exit
Device(config-pmap)# exit
```

```
Device(config)# policy-map parent
Device(config-pmap)# class class-default
Device(config-pmap-c)# shape average 1000000
Device(config-pmap-c)# service-policy child
Deviceconfig-pmap-c)# end
```

This example shows how to delete a policy map:

```
Device(config) # no policy-map policymap2
```

You can verify your settings by entering the show policy-map privileged EXEC command.

port

To configure the port number to use when configuring the custom application, use the **port** command.

	port port-no	
Syntax Description	port-no Port number.	
Command Default	None	
Command Modes	config-custom	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the port number to use when configuring the custom application:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ip nbar custom custom-protocol http host host-string
Device(config-custom)# http host hostname
Device(config-custom)# port port-no
```

priority priority-value

To configure media stream priority, use the **priority** *priority-value* command.

priority priority-value

Syntax Description	<i>priority-value</i> Media stream priority value. Valid range is 1 to 8, with 1 being lowest priority and 8 being highest priority.	
Command Default	None	
Command Modes	config-media-stream	
Command History	Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to set the media stream priority value to the highest, that is 8:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group my-media-group 224.0.0.0 224.0.0.223
Device(config-media-stream)# priority 8
```

public-ip

To configure the NAT public IP address of the controller, use the public-ip command.

public-ip{*ipv4-address*| *ipv6-address*}

Syntax Description *ipv4-address* Sets IPv4 address.

None

ipv6-address Sets IPv6 address.

Command Modes Management Interface Configuration(config-mgmt-interface)

Command History Release		Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Usage Guidelines

Command Default

Example

The following example shows how to configure the NAT public IP address of the controller:

Device# configure terminal Device(config)# wireless management interface Vlan1 Device(config-mgmt-interface)# public-ip 192.168.172.100

qos video

To configure over-the-air QoS class to video only, use the **qos video** command.

	qos video	
Command Default	None	
Command Modes	config-media-stream	
Command History	y Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure over-the-air QoS class to video only:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group my-media-group 224.0.0.0 224.0.0.223
Device(config-media-stream)# qos video
```

radius server

To configure the RADIUS server, use the radius server command in global configuration mode.

	radius server server-name	
Syntax Description	server-name RADIUS server name.	
Command Default	None	
Command Modes	Global configuration	
Command History	nmand History Release Modification	
	Cisco IOS XE Gibraltar 16.12.1 This	command was introduced.
Usage Guidelines	None	
	The following example shows how to	configure a radius server:
	Device(config)# radius server IS	

L

radius-server attribute wireless accounting call-station-id

To configure call station identifier sent in the RADIUS accounting messages, use the **radius-server attribute** wireless accounting call-station-id command. To remove the call station identifier from the radius accounting messages, use the **no** form of the command.

radius-server attribute wireless authentication call-station-id { ap-ethmac-only | ap-ethmac-ssid | ap-ethmac-ssid-flexprofilename | ap-ethmac-ssid-policytagname | ap-ethmac-ssid-sitetagname | ap-group-name | ap-label-address | ap-label-address-ssid | ap-location | ap-macaddress | ap-macaddress-ssid | ap-macaddress-ssid-flexprofilename | ap-macaddress-ssid-policytagname | ap-macaddress-ssid-sitetagname | ap-name | ap-name-ssid | flex-profile-name | ipaddress | macaddress | ap-macaddress | ap-macaddress | ap-name | ap-name | ap-name | ipaddress | ap-macaddress | ap-mac

Syntax Description	ap-ethmac-only	Sets the call station identifier type to be AP's radio MAC address.
	ap-ethmac-ssid	Sets the call station identifier type AP's radio MAC address with SSID.
	ap-ethmac-ssid-flexprofilename	Sets the call station identifier type AP's radio MAC address with SSID and flex profile name.
	ap-ethmac-ssid-policytagname	Sets the call station identifier type AP's radio MAC address with SSID and policy tag name.
	ap-ethmac-ssid-sitetagname	Sets the call station identifier type AP's radio MAC address with SSID and site tag name.
	ap-group-name	Sets the call station identifier type to use the AP group name.
	ap-label-address	Sets the call station identifier type to the AP's radio MAC address that is printed on the AP label.
	ap-label-address-ssid	Sets the call station identifier type to the AP's radio MAC address and SSID that is printed on the AP label.
	ap-location	Sets the call station identifier type to the AP location.
	ap-macaddress	Sets the call station identifier type to the AP's radio MAC address
	ap-macaddress-ssid	Sets the call station identifier type to the AP's radio MAC address with SSID.
	ap-macaddress-ssid-flexprofilename	Sets the call station identifier type to the AP's radio MAC address with SSID and flex profile name.
	ap-macaddress-ssid-policytagname	Sets the call station identifier type to the AP's radio MAC address with SSID and policy tag name.
	ap-macaddress-ssid-sitetagname	Sets the call station identifier type to the AP's radio MAC address with SSID and site tag name.
	ap-name	Sets the call station identifier type to the AP name.

	ap-name-ssid	Sets the call station identifier type to the AP name with SSID.
	flex-profile-name	Sets the call station identifier type to the flex profile name.
	ipaddress	Sets the call station identifier type to the IP address of the system.
	macaddress	Sets the call station identifier type to the MAC address of the system
	policy-tag-name	Sets the call station identifier type to the policy tag name.
	site-tag-name	Sets the call station identifier type to the site tag name.
	vlan-id	Sets the call station identifier type to the system's VLAN ID.
Command Default	Call station identifier is not con	figured.
Command Modes	Global Configuration(config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
	Cisco IOS XE Bengaluru 17.4.1	This command was modified. The policy-tag-name , flex-profile-name ,

Usage Guidelines

Example

The following example shows how to configure a call station identifier sent in the RADIUS accounting messages:

Device (config) # radius-server attribute wireless accounting call-station-id site-tag-name

L

radius-server attribute wireless authentication call-station-id

To configure call station identifier sent in the RADIUS authentication messages, use the **radius-server attribute wireless authentication call-station-id** command. To remove the call station identifier from the radius accounting messages, use the **no** form of the command.

radius-server attribute wireless authentication call-station-id { ap-ethmac-only | ap-ethmac-ssid | ap-ethmac-ssid-flexprofilename | ap-ethmac-ssid-policytagname | ap-ethmac-ssid-sitetagname | ap-group-name | ap-label-address | ap-label-address-ssid | ap-location | ap-macaddress | ap-macaddress-ssid | ap-macaddress-ssid-flexprofilename | ap-macaddress-ssid-policytagname | ap-macaddress-ssid-sitetagname | ap-name | ap-name-ssid | flex-profile-name | ipaddress | macaddress | ap-macaddress | ap-macaddress | ap-name | ap-name | ap-name | ipaddress | ap-macaddress | ap-mac

Syntax Description	ap-ethmac-only	Sets the call station identifier type to be AP's radio MAC address.
	ap-ethmac-ssid	Sets the call station identifier type AP's radio MAC address with SSID.
	ap-ethmac-ssid-flexprofilename	Sets the call station identifier type AP's radio MAC address with SSID and flex profile name.
	ap-ethmac-ssid-policytagname	Sets the call station identifier type AP's radio MAC address with SSID and policy tag name.
	ap-ethmac-ssid-sitetagname	Sets the call station identifier type AP's radio MAC address with SSID and site tag name.
	ap-group-name	Sets the call station identifier type to use the AP group name.
	ap-label-address	Sets the call station identifier type to the AP's radio MAC address that is printed on the AP label.
	ap-label-address-ssid	Sets the call station identifier type to the AP's radio MAC address and SSID that is printed on the AP label.
	ap-location	Sets the call station identifier type to the AP location.
	ap-macaddress	Sets the call station identifier type to the AP's radio MAC address.
	ap-macaddress-ssid	Sets the call station identifier type to the AP's radio MAC address with SSID.
	ap-macaddress-ssid-flexprofilename	Sets the call station identifier type to the AP's radio MAC address with SSID and flex profile name.
	ap-macaddress-ssid-policytagname	Sets the call station identifier type to the AP's radio MAC address with SSID and policy tag name.
	ap-macaddress-ssid-sitetagname	Sets the call station identifier type to the AP's radio MAC address with SSID and site tag name.
	ap-name	Sets the call station identifier type to the AP name.

	Cisco IOS XE Bengaluru 17.4.1	This command was modified. The policy-tag-name , flex-profile-name , ap-macaddress-ssid-flexprofilename , ap-macaddress-ssid-policytagname , ap-macaddress-ssid-sitetagname , ap-ethmac-ssid-flexprofilename , ap-ethmac-ssid-policytagname , and ap-ethmac-ssid-sitetagname keywords were introduced.
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Command History	Release	Modification
Command Modes	Global Configuration(config)	
Command Default	Call station identifier is not con	figured.
	vlan-id	Sets the call station identifier type to the system's VLAN ID.
	site-tag-name	Sets the call station identifier type to the site tag name.
	policy-tag-name	Sets the call station identifier type to the policy tag name.
	macaddress	Sets the call station identifier type to the MAC address of the system.
	ipaddress	Sets the call station identifier type to the IP address of the system.
	flex-profile-name	Sets the call station identifier type to the flex profile name.
	ap-name-ssid	Sets the call station identifier type to the AP name with SSID.

Usage Guidelines

Example

The following example shows how to configure a call station identifier sent in the RADIUS authentication messages:

Device (config) # radius-server attribute wireless authentication call-station-id site-tag-name

range

To configure range from MAP to RAP bridge, use the range command.

range range-in-feet

Syntax Description	range-in-feet Configure the range value in terms of feet. Valid range is from 150 feet to 132000 feet.	
Command Default	1200	
Command Modes	config-wireless-mesh-profile	
Command History	y Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure range from MAP to RAP bridge for a mesh AP profile:

Device # configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device (config) # wireless profile mesh mesh-profile Device (config-wireless-mesh-profile) # range 300

record wireless avc basic

To apply the *wireless avc basic* AVC flow record to a flow monitor, use the **record wireless avc basic** command.

record wireless avc basic

Command Default	- None	
Command Modes	config-flow-monitor	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Usage Guidelines	1	sic wireless AVC template. When you are configuring AVC, you will need to record wireless avc basic command.
	Examples	
	The following example shows h named <i>test-flow</i> :	ow to apply the wireless avc basic AVC flow record to a flow monitor

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# flow monitor test-flow

Device(config-flow-monitor) # record wireless avc basic

redirect

To configure a redirect to an external portal, use the redirect command.

redirect {for-login | on-failure | on-success } redirect-url-name

Syntax Description	for-login	To login, redirect to this URL.
	on-failure	If login fails, redirect to this URL.
	on-success	If login is sucessful, redirect to this URL.
	redirect-url-name	Redirect URL name.
	None	

Command Default	None	
Command Modes	config-params-parameter-map	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16 10 1

Examples

The following example shows how to configure an redirect to an external IPv4 URL to login:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# parameter-map type webauth parameter-name
Device(config-params-parameter-map)# redirect for-login cisco.com
```

redirect portal

To configure external IPv4 or IPv6 portal, use the redirect portal command.

redirect portal {ipv4 | ipv6 }*ip-addr*

Syntax Description	ip4 IPv4 portal address	
	ipv6 IPv6 portal address	
Command Default	None	
Command Modes	config-params-parameter-map	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure an external IPv4 portal address:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# parameter-map type webauth parameter-name
Device(config-params-parameter-map)# redirect portal ipv4 192.168.1.100
```

remote-lan

To map an RLAN policy profile to an RLAN profile, use the remote-lan command.

remote-lan remote-lan-profile-name policy rlan-policy-profile-name port-id port-id

Syntax Description	remote-lan-profile-name	Remote LAN profile name.
	rlan-policy-profile-name	Remote LAN policy profile name
	port-id	Port ID.
Command Default	None	
Command Modes	Global configuration (confi	g)
Command Modes	Global configuration (confi	g) Modification

Example

This example shows how to map an RLAN policy profile to an RLAN profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless tag policy remote-lan-policy-tag
Device(config-policy-tag)# remote-lan rlan_profile_name policy rlan_policy_profile port-id
2
Device(config-policy-tag)# end
```

request platform software trace archive

To archive all the trace logs relevant to all the processes running on a system since the last reload on the and to save this in the specified location, use the **request platform software trace archive** command in privileged EXEC or user EXEC mode.

request platform software trace archive [last *number-of-days* [days [target *location*]] | target *location*]

Syntax Description	last number-of-days	Specifies the nur to be archived.	Specifies the number of days for which the trace files have to be archived.		
	target location	Specifies the loca	ation and name of the archive file.		
Command Modes	User EXEC (>)				
	Privileged EXEC (#)				
Command History	Release	Modification	-		
	Cisco IOS XE Gibraltar	16.12.1 This command was introduced.	-		
Usage Guidelines	This archive file can be c	copied from the system, using the tftp of	r scp commands.		
Examples	This example shows how 5 days:	v to archive all the trace logs of the proc	cesses running on the since the last		
	Device# request platf	form software trace archive last !	5 days target flash:test_archive		

rf tag

I

	To configure an RF tag to the AP, use the rf tag command.		
	rf tag rf-tag-name		
Syntax Description	<i>rf-tag-name</i> RF tag name.	; ;	
Command Default	None		
Command Modes	config-ap-tag		
Command History	Release	Modification	
	Cisco IOS XE Gibral	tar 16.10.1 This comman introduced.	ıd was
Usage Guidelines	The AP will disconne	ct and rejoin after runnin	g this command.
	Example		
	The following examp	le shows how to configur	e an RF tag:

Device(config-ap-tag) # rf-tag rftag1

rrc-evaluation

To configure Resource Reservation Control (RRC) reevaluation admission, use the rrc-evaluation command.

	rrc-evaluation {initial periodic}		
Syntax Description	initial Configures initial adm	ission evaluation.	
	periodic Configures periodic ad	mission evaluation.	
Command Default	None		
Command Modes	config-media-stream		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS Gibraltar 16.10.1.	

Examples

The following example shows how to configure the RRC reevaluation admission to initial admission evaluation.

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group my-media-group 224.0.0.0 224.0.0.223
Device(config-media-stream)# rrc-evaluation initial
```

security

To configure mesh security, use the security command.

<pre>security { eap psk }</pre>	
ep Configure mesh security EA	AP for Mesh AP.
pk Configure mesh security PS	SK for Mesh AP
EAP	
config-wireless-mesh-profile	
Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	ep Configure mesh security EA pk Configure mesh security PS EAP config-wireless-mesh-profile Release P

Examples

The following example shows how to configure mesh security with EAP protcol on an Mesh AP:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile mesh profile-name
Device(config-wireless-mesh-profile)# security eap
```

security dot1x authentication-list

To configure security authentication list for IEEE 802.1x, use the **security dot1x authentication-list** *auth-list-name* command.

security dot1x authentication-list auth-list-name

Syntax Description	Parameter	Description
	auth-list-name	Authentication list name.
Command Default	None	
Command Modes	config-wlan	
Command History	Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure security authentication list for IEEE 802.1x:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wlan wlan-name
Device(config-wlan)# security dot1x authentication-list auth-list-realm
```

security ft

To configure 802.11r fast transition parameters, use the **security ft** command. To configure fast transition **over the air**, use the **no security ft over-the-ds** command.

security ft [{over-the-ds | reassociation-timeout timeout-jn-seconds}]
no security ft [{over-the-ds | reassociation-timeout}]

Syntax Description	over-the-ds	(Optional) Specifies that the 802.11r fast transition occurs over a distributed system. The no form of the command with this parameter configures security ft over the air.			
	reassociation-timeout	(Optional) Configures the reassociation timeout interval.			
	timeout-in-seconds	(Optional) Specifies the reassociation timeout interval in seconds. The valid range is between 1 to 100. The default value is 20.			
Command Default	The feature is disabled.				
Command Modes	WLAN configuration				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar	16.12.1 This command was introduced.			
Usage Guidelines	None				
-	WLAN Security must be enabled.				
	Example				
	The following example configures security FT configuration for an open WLAN:				
	Device(config-wlan)# Device(config-wlan)# Device(config-wlan)#	no mobility anchor sticky no security wpa no security wpa akm dot1x no security wpa wpa2 no security wpa wpa2 ciphers aes security ft			
	The following example s	shows a sample security FT on a WPA-enabled WLAN:			
	Device(config-wlan)#	client vlan 0140 no security wpa akm dot1x security wpa akm ft psk security wpa akm psk set-key ascii 0 test-test			

Device(config-wlan)# security ft
Device(config-wlan)# no shutdown

security pmf

To configure 802.11w Management Frame Protection (PMF) on a WLAN, use the **security pmf** command. To disable management frame protection, use the **no** form of the command.

security pmf {association-comeback association-comeback-time-seconds | mandatory | optional |
saquery-retry-time saquery-retry-time-milliseconds}

no security pmf [{**association-comeback** *association-comeback-time-seconds* | **mandatory** | **optional** | **saquery-retry-time** *saquery-retry-time-milliseconds*}]

Syntax Description	association-comeback	Configures the 802	2.11w association comeback time.		
	association-comeback-time-sec	associated client n after it is denied w	Association comeback interval in seconds. Time interval that an associated client must wait before the association is tried again after it is denied with a status code 30. The status code 30 message is "Association request rejected temporarily; Try again later."		
		The range is from	1 through 20 seconds.		
	mandatory	Specifies that clien protection on the V	nts are required to negotiate 802.1w PMF WLAN.		
	optional	1	Specifies that the WLAN does not mandate 802.11w support on clients. Clients with no 802.11w capability can also join.Time interval identified before which the SA query response is expected. If the device does not get a response, another SA query is tried.		
	saquery-retry-time	expected. If the dev			
	<i>saquery-retry-time-milliseconds</i> The saquery retry time in milliseconds. T to 500 ms. The value must be specified in milliseconds.		time in milliseconds. The range is from 100 lue must be specified in multiples of 100		
Command Default	PMF is disabled.				
Command Modes	WLAN configuration				
Command History	Release	Modification	_		
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	_		
Usage Guidelines			thentication Key Management) configured to nation on configuring the security parameters.		
	robust management frames. IGT	K is a random value, assigned	that is used to protect broadcast or multicast by the authenticator station (device) used to m the source STA. The 802.11w IGTK key is		

derived using the four-way handshake and is used only on WLANs that are configured with WPA2 security at Layer 2.

This example shows how to enable the association comeback value at 15 seconds.

Device(config-wlan) # security pmf association-comeback 15

This example shows how to configure mandatory 802.11w MPF protection for clients on a WLAN:

Device(config-wlan) # security pmf mandatory

This example shows how to configure optional 802.11w MPF protection for clients on a WLAN:

Device(config-wlan) # security pmf optional

This example shows how to configure the saquery parameter:

Device(config-wlan) # security pmf saquery-retry-time 100

This example shows how to disable the PMF feature:

Device(config-wlan)# no security pmf

security static-wep-key

To configure static WEP keys on a WLAN, use the security static-wep-key command.

security static-wep-key {authentication {open | sharedkey } | encryption {104 | 40 } {ascii | hex | {0 | 8 }wep-key | wep-index }}

Syntax Description	open	Open system authen	ntication.
	sharedkey	Shared key authenti	ication.
	0	Specifies an UNENC	CRYPTED password is used.
	8	Specifies an AES er	ncrypted password is used.
	wep-key	Enter the name of the	he WEP key.
Command Default	None		
Command Modes	config-wla	n	
Command History	Release		Modification
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to authenticate 802.11 using shared key:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wlan profile-name wlan-id
Device(config-wlan)# security static-wep-key authentication sharedkey
```

security web-auth

To change the status of web authentication used on a WLAN, use the **security web-auth** command. To disable web authentication on a WLAN, use the **no** form of the command.

security web-auth [{authentication-list authentication-list-name | **on-macfilter-failure** | **parameter-map** parameter-map-name}]

no security web-auth [{authentication-list [authentication-list-name]|on-macfilter-failure| parameter-map [parameter-name]}]

Syntax Description	authentication-list authentication-list-name		Sets the authentication list for IEEE 802.1x.
	on-macfilter-failure		Enables web authentication on MAC failure.
	parameter-map parameter-ma	p-name	Configures the parameter map.
Command Default	Web authentication is disabled.		
Command Modes	WLAN configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command introduced.	l was

Examples

The following example shows how to configure the authentication-list web authentication on a WLAN:

Device(config-wlan)# security web-auth authentication-list test

security wpa akm

To configure authentication key management using Cisco Centralized Key Management (CCKM), use the **security wpa akm** command. To disable the authentication key management for Cisco Centralized Key Management, use the **no** form of the command.

security wpa [{ akm { cckm | dot1x | ft | pmf | psk } | wpa1 [ciphers { aes | tkip }] | wpa2
[ciphers { aes }] }]
no security wpa [{ akm { cckm | dot1x | ft | pmf | psk } | wpa1 [ciphers { aes | tkip }]
| wpa2 [ciphers { aes }] }]

Syntax Description	akm	Configures the Authentication Key Management (AKM) parameters.		
	aes	Configures AES (Advanced Encryption Standard) encryption support.		
	cckm	Configures Cisco Centralized Key Management support.		
	ciphers	Configures WPA ciphers.		
	dot1x	Configures 802.1x support. Configures fast transition using 802.11r.		
	ft			
	pmf	Configures 802.11w management frame protection.		
	psk	Configures 802.11r fast transition pre-shared key (PSK) support. Configures Temporal Key Integrity Protocol (TKIP) encryption support.		
	tkip			
	wpa2	Configures Wi-Fi Protected Access 2 (WPA2) support.		
Command Default	•	02.1x are enabled. WPA2, PSK, CCKM, FT dot1x, FT PSK, PMF led. The FT Reassociation timeout is set to 20 seconds, PMF SA Query		
Command Modes	WLAN Configuration (config-wlan)			
Command History	Release Modification	_		
	This command was introduced.	_		
		_		

Example

The following example shows how to configure CCKM on the WLAN.

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z.

Device(config)# wlan wlan1 Device(config-wlan)#**security wpa akm cckm**

security wpa akm owe

To enable Auth Key Management (AKM) Opportunistic Wireless Encryption (OWE), use the **security wpa akm owe** command. Use the **no** form of this command to disable the feature.

security wpa akm owe

no security wpa akm owe

Syntax Description	security	Configures the secur	rity policy for a WLAN.
	wpa	Configures WPA/W	PA2 Support for a WLAN.
	akm	Configures Auth Ke	y Management.
	owe	Configures OWE su	pport.
Command Default	None		
Command Modes	WLAN co	onfiguration mode (co	nfig-wlan)
Command History	Release		Modification
	Cisco IOS	XE Bengaluru 17.5.1	This command was introduced.

The following example shows how to enable Auth Key Management (AKM) Opportunistic Wireless Encryption (OWE):

Device# configure terminal Device(config)# wlan *wlan-test* 3 *ssid-test* Device(config-wlan)# security wpa akm owe

security wpa akm psk

To enable Auth Key Management (AKM) pre-shared key (PSK), use the **security wpa akm psk** command. Use the **no** form of this command to disable the feature.

security wpa akm psk

no security wpa akm psk

Syntax Description	• • • •	C. C	it and it and for a WALANT
Syntax Description	security	Configures the secu	rity policy for a WLAN.
	wpa	Configures WPA/W	PA2 Support for a WLAN.
	akm	Configures Auth Ke	y Management.
	psk	Configures PSK sup	port.
Command Default	None		
Command Modes	WLAN co	onfiguration mode (co	nfig-wlan)
Command History	Release		Modification
	Cisco IOS	S XE Bengaluru 17.5.1	This command was introduced.

The following example shows how to enable Auth Key Management (AKM) pre-shared key (PSK):

Device# configure terminal Device(config)# wlan *wlan-test* 3 *ssid-test* Device(config-wlan)# security wpa akm psk

security wpa akm sae

To enable Auth Key Management (AKM) Secure Agile Exchange (SAE), use the **security wpa akm sae** command. Use the **no** form of this command to disable the feature.

security wpa akm sae

no security wpa akm sae

Syntax Description	security	Configures the secur	rity policy for a WLAN.
	wpa	Configures WPA/W	PA2 Support for a WLAN.
	akm	Configures Auth Ke	ey Management.
	sae	Configures SAE sup	pport.
Command Default	None		
Command Modes	WLAN co	onfiguration mode (co	nfig-wlan)
Command History	Release		Modification
	Cisco IOS	S XE Bengaluru 17.5.1	This command was introduced.

The following example shows how to enable Auth Key Management (AKM) Secure Agile Exchange (SAE):

Device# configure terminal Device(config)# wlan *wlan-test* 3 *ssid-test* Device(config-wlan)# security wpa akm sae

sensor-name

To set the sensor name for Stealthwatch Cloud registration, use the **sensor-name** *swc-sensor-name* command. To disable the command, use the **no** form of this command.

sensor-name swc-sensor-name

no sensor-name swc-sensor-name

Syntax Description	sensor-name S	nsor-name Sets the sensor name for Stealthwatch Cloud registrati			
	swc-sensor-name S	pecifies the Stealthwatch service key.			
	T	he device serial number is the default value.			
Command Default	None				
Command Modes	Stealthwatch Cloud mo	onitor configuration mode			
Command History	Release	Modification			
	Cisco IOS XE Bengalu	ru 17.4.1 This command was introduced.			
Usage Guidelines	None				

Example

This example shows how to set the sensor name for Stealthwatch Cloud registration:

Device(config-stealthwatch-cloud-monitor) # sensor-name SwC-sensor-name

service-key

To set the Stealthwatch Cloud service key, use the **service-key** *swc-service-key*. To disable the command, use the **no** form of this command.

service-key swc-service-key

no service-key swc-service-key

Syntax Description	service-key	service-key Sets the Stealthwatch Cloud service key.		
		Service-key is provided by the Stealthwatch Cloud portal. The alternative to service-k is the authentication through the IP address allowed list.		
	swc-service-key	Specifies the	Stealthwatch service key.	
Command Default	None			
Command Modes	Stealthwatch Cloud monitor configuration mode			
Command History	Release		Modification	
	Cisco IOS XE Be	engaluru 17.4.1	This command was introduced.	
Usage Guidelines	None			
	Example			

This example shows how to set the Stealthwatch Cloud service key:

service-policy

To configure the quality of service (QoS) service policy, use the **service-policy** command. To disable a QoS policy, use the **no** form of this command.

	service-policy no { client	7 { client input input output	output } policy-name	ne
Syntax Description	client	Assigns a policy map t	o all clients in the WLAN.	
	input	Assigns an input polic	y map.	
	output	Assigns an output policy map.		
	policy-name	The policy map name.		
Command Default	None			
Command Modes	Wireless polic	ey configuration		
Command History	Release		Modification	
	Cisco IOS X	E Gibraltar 16.10.1	This command was i	ntroduced.
Examples	This example	shows how to configure	the input service policy:	
	Enter config	-	e per line. End with policy default-policy	

Device(config-wireless-policy)# service-policy input test1

service-policy qos

To configure a QoS service policy, use the service-policy qos command.

service-policy qos {input | output} policy-name

Syntax Description	input	Input QoS policy.	-
	output	Output QoS policy.	-
	policy-name	Policy name.	-
Command Default	None		
Command Modes	config-servi	ce-template	
Command History	Release		Modification
	Cisco IOS X	XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure an output QoS policy:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# service-template fabric-profile-name
Device(config-service-template)# service-policy qos output policy-name
```

service-template

To configure service template, use the service-template command.

service-template service-template-name {access-group acl_list | vlan vlan_id | absolute-timer seconds
| service-policy qos {input | output}}

service-template-name	Name of the service template.		
acl_list	Access list name to be applied.		
vlan_id	VLAN ID. The VLAN ID value ranges from 1 to 4094.		
seconds	Session timeout value for service template. The session timeout value ranges from 1 to 65535 seconds.		
service-policy qos { input output QoS policies for client.			
None			
Global configuration			
Release	Modification		
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.		
None			
The following example shows how to configure service template:			
Device#configure terminal Device(config)#service-template cisco-phone-template Device(config-service-template)#access-group foo-acl Device(config-service-template)#vlan 100 Device(config-service-template)#service-policy qos input foo-qos Device(config-service-template)#end			
	acl_list vlan_id seconds service-policy qos {input None Global configuration Release Cisco IOS XE Gibraltar 16.12.1 None The following example shows h Device#configure terminal Device (config)#service-temp Device (config-service-temp) Device (config-service-temp) Device (config-service-temp)		

service timestamps

To configure the system to time-stamp debugging or logging messages, use the**service timestamps** command in global configuration commands. Use the **no** form of this command to disable this service.

service timestamps debug log {datetime | **uptime***localtimemsecshow-timezoneyear*} **no service timestamps debuglog**

Syntax Description	debug	Debug as the timestamp message type.				
	log	Log as the timestamp message type.				
	datetime	datetime				
	uptime	(Optional) Time stamp with time since the system was rebooted.				
	localtime	(Optional) Time stamp relative to the local time zone.				
	msec	(Optional) Include milliseconds in the date and time stamp.				
	show-timezone	(Optional) Include the time zone name in the time stamp.				
	year	(Optional) Include year in timestamp.				
Command Default	No time-stamping.					
If service timestamps is specified with no arguments or keywords, default is service timestamp uptime .						
	The default for service timestamps debugdatetime is to format the time in UTC, with no milliseconds and no time zone name.					
	The command no service timestamps by itself disables time stamps for both debug and log messages.					
Command Modes	Global configuration					
Command History	Release	Modification				
	Cisco IOS XE Amsterdam 17.1.1s This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.1.1s.					
Usage Guidelines	e Guidelines Time stamps can be added to either debugging or logging messages independently. The uptime form command adds time stamps in the format HHHH:MM:SS, indicating the time since the system was not be the date form of the command adds time stamps in the format MMM DD HH:MM:SS, indicating the time according to the system clock. If the system clock has not been set, the date and time are by an asterisk (*) to indicate that the date and time are probably not correct.					
	Example					
	The following exa	ample enables time stamps on debugging messages, showing the time since reboot:				
	Device(config)	service timestamps debug uptime				

I

The following example enables time stamps on logging messages, showing the current time and date relative to the local time zone, with the time zone name included:

Device(config) # service timestamps log datetime localtime show-timezone

session-timeout

To configure session timeout for clients associated to a WLAN, use the **session-timeout** command. To disable a session timeout for clients that are associated to a WLAN, use the **no** form of this command.

session-timeout seconds no session-timeout

Syntax Description	<i>seconds</i> Timeout or session duration in seconds. The range is from 300 to 86400. Configuring 86400 is equivalent to max timeout. And value 0 is not recommended.			
Command Default	The client timeout is set to 1800 seconds for WLANs that are configured with dot1x security. The client timeout is set to 0 for open WLANs.			
Command Modes	WLAN configuration			
Command History	Release Modification			
	Cisco IOS XE Gibraltar 16.12.1 This command was introduced.			
	This example shows how to configure a session timeout to 300 seconds: Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wlan wlan1 Device(config-wlan)# session-timeout 300			
	This example shows how to disable a session timeout:			
	Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wlan wlan1			

Device(config-wlan)# no session-timeout

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

set

set

To classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet, use the **set** command in policy-map class configuration mode. Use the **no** form of this command to remove traffic classification.

set

cos | dscp | precedence | ip | qos-group | wlan
set cos
{cos-value } | {cos | dscp | precedence | qos-group | wlan} [{table table-map-name}]
set dscp
{dscp-value } | {cos | dscp | precedence | qos-group | wlan} [{table table-map-name}]
set ip {dscp | precedence}
set precedence {precedence-value } | {cos | dscp | precedence | qos-group} [{table table-map-name}]
set qos-group
{qos-group-value | dscp [{table table-map-name}] | precedence [{table table-map-name}]}

set wlan user-priority

user-priority-value | **costable** *table-map-name* | **dscptable** *table-map-name* | **qos-grouptable** *table-map-name* | **wlantable** *table-map-name*

Syntax Description cos

Sets the Layer 2 class of service (CoS) value or user priority of an outgoing packet. You can specify these values:

- *cos-value*—CoS value from 0 to 7. You also can enter a mnemonic name for a commonly used value.
- Specify a packet-marking category to set the CoS value of the packet. If you also configure a table map for mapping and converting packet-marking values, this establishes the "map from" packet-marking category. Packet-marking category keywords:
 - cos—Sets a value from the CoS value or user priority.
 - **dscp**—Sets a value from packet differentiated services code point (DSCP).
 - precedence—Sets a value from packet precedence.
 - **qos-group**—Sets a value from the QoS group.
 - wlan—Sets the WLAN user priority values.
- (Optional)**table** *table-map-name*—Indicates that the values set in a specified table map are used to set the CoS value. Enter the name of the table map used to specify the CoS value. The table map name can be a maximum of 64 alphanumeric characters.

If you specify a packet-marking category but do not specify the table map, the default action is to copy the value associated with the packet-marking category as the CoS value. For example, if you enter the **set cos precedence** command, the precedence

(packet-marking category) value is copied and used as the CoS value.

dscp

Sets the differentiated services code point (DSCP) value to mark IP(v4) and IPv6 packets. You can specify these values:

- *cos-value*—Number that sets the DSCP value. The range is from 0 to 63. You also can enter a mnemonic name for a commonly used value.
- Specify a packet-marking category to set the DSCP value of the packet. If you also configure a table map for mapping and converting packet-marking values, this establishes the "map from" packet-marking category. Packet-marking category keywords:
 - **cos**—Sets a value from the CoS value or user priority.
 - **dscp**—Sets a value from packet differentiated services code point (DSCP).
 - **precedence**—Sets a value from packet precedence.
 - **qos-group**—Sets a value from the QoS group.
 - wlan—Sets a value from WLAN.
- (Optional)**table** *table-map-name*—Indicates that the values set in a specified table map will be used to set the DSCP value. Enter the name of the table map used to specify the DSCP value. The table map name can be a maximum of 64 alphanumeric characters.

If you specify a packet-marking category but do not specify the table map, the default action is to copy the value associated with the packet-marking category as the DSCP value. For example, if you enter the **set dscp cos** command, the CoS value (packet-marking category) is copied and used as the DSCP value.

Sets IP values to the classified traffic. You can specify these values:

- dscp—Specify an IP DSCP value from 0 to 63 or a packet marking category.
- **precedence**—Specify a precedence-bit value in the IP header; valid values are from 0 to 7 or specify a packet marking category.

ip

I

precedence	Sets the precedence value in the packet header. You can specify these values:
	• <i>precedence-value</i> — Sets the precedence bit in the packet header; valid values are from 0 to 7. You also can enter a mnemonic name for a commonly used value.
	• Specify a packet marking category to set the precedence value of the packet.
	• cos—Sets a value from the CoS or user priority.
	• dscp —Sets a value from packet differentiated services code point (DSCP).
	• precedence —Sets a value from packet precedence.
	• qos-group —Sets a value from the QoS group.
	• (Optional) table <i>table-map-name</i> —Indicates that the values set in a specified table map will be used to set the precedence value. Enter the name of the table map used to specify the precedence value. The table map name can be a maximum of 64 alphanumeric characters.
	If you specify a packet-marking category but do not specify the table map, the default action is to copy the value associated with the packet-marking category as the precedence value. For example, if you enter the set precedence cos command, the CoS value (packet-marking category) is copied and used as the precedence value.

qos-group

- qos-group-value—Sets a QoS value to the classified traffic. The range is 0 to 31. You also can enter a mnemonic name for a commonly used value.
- dscp—Sets the original DSCP field value of the packet as the QoS group value.
- **precedence**—Sets the original precedence field value of the packet as the QoS group value.
- (Optional)**table** *table-map-name*—Indicates that the values set in a specified table map will be used to set the DSCP or precedence value. Enter the name of the table map used to specify the value. The table map name can be a maximum of 64 alphanumeric characters.

If you specify a packet-marking category (**dscp** or **precedence**) but do not specify the table map, the default action is to copy the value associated with the packet-marking category as the QoS group value. For example, if you enter the **set qos-group precedence** command, the precedence value (packet-marking category) is copied and used as the QoS group value.

I

wlan user-priority wlan-user-priority	Assigns a WLAN user-priority to the classified traffic. You can specify these values:
	• <i>wlan-user-priority</i> —Sets a WLAN user priority to the classified traffic. The range is 0 to 7.
	• cos —Sets the Layer 2 CoS field value as the WLAN user priority.
	 dscp—Sets the DSCP field value as the WLAN user priority.
	• precedence —Sets the precedence field value as the WLAN user priority.
	 wlan—Sets the WLAN user priority field value as the WLAN user priority.
	• (Optional) table <i>table-map-name</i> —Indicates that the values set in a specified table map will be used to set the WLAN user priority value. Enter the name of the table map used to specify the value. The table map name can be a maximum of 64 alphanumeric characters.
	If you specify a packet-marking category but do not specify the table map, the default action is to copy the value associated with the packet-marking category as the WLAN user priority. For example, if you enter the set wlan user-priority cos command, the cos
	value (packet-marking category) is copied and used as the WLAN user priority.

Command Default	No traffic classification is defined.		
Command Modes	Policy-map class configuration		
Command History	Release Modification		
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
Usage Guidelines	For the set dscp <i>dscp-value</i> command, the set cos <i>cos-value</i> command, and the set ip precedence <i>precedence-value</i> command, you can enter a mnemonic name for a commonly used value. For example, you can enter the set dscp af11 command, which is the same as entering the set dscp 10 command. You can enter the set ip precedence critical command, which is the same as entering the set ip precedence 5 command. For a list of supported mnemonics, enter the set dscp ? or the set ip precedence ? command to see the command-line help strings.		
	When you configure the set dscp cos command, note the following: The CoS value is a 3-bit field, and the DSCP value is a 6-bit field. Only the three bits of the CoS field are used.		
	When you configure the set dscp qos-group command, note the following:		

- The valid range for the DSCP value is a number from 0 to 63. The valid value range for the QoS group is a number from 0 to 99.
- If a QoS group value falls within both value ranges (for example, 44), the packet-marking value is copied and the packets is marked.
- If QoS group value exceeds the DSCP range (for example, 77), the packet-marking value is not be copied and the packet is not marked. No action is taken.

The **set qos-group** command cannot be applied until you create a service policy in policy-map configuration mode and then attach the service policy to an interface or ATM virtual circuit (VC).

To return to policy-map configuration mode, use the **exit** command. To return to privileged EXEC mode, use the **end** command.

Examples

This example shows how to assign DSCP 10 to all FTP traffic without any policers:

```
Device(config)# policy-map policy_ftp
Device(config-pmap)# class-map ftp_class
Device(config-cmap)# exit
Device(config)# policy policy_ftp
Device(config-pmap)# class ftp_class
Device(config-pmap-c)# set dscp 10
Device(config-pmap)# exit
```

You can verify your settings by entering the show policy-map privileged EXEC command.

sftp-image-path (image-download-mode sftp)

To configure the image path of the SFTP server for image download, use the **sftp-image-path** command. Use the **no** form of the command to negate the command or to set the command to its default.

sftp-image-pathsftp-image-path

no sftp-image-pathsftp-image-path

Syntax Description	sftp-image-path Specifies the im	age path of the SFTP server.	
Command Default	None		
Command Modes	Wireless image download profile SFTP configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.	

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode sftp Device(config-wireless-image-download-profile-sftp)# sftp-image-path /download/object/stream/images/ap-images

sftp-image-server (image-download-mode sftp)

To configure the SFTP server address for image download, use the **sftp-image-server** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

sftp-image-server {A.B.C.D | X:X:X:X:X}}

no sftp-image-server {A.B.C.D | X:X:X:X:X}}

Syntax Description	A.B.C.D Specifies the SFTP I	Pv4 server address.
	X:X:X:X:X Specifies the SFTP I	Pv6 server address.
Command Default	None	
Command Modes	Wireless image download profile	SFTP configuration mode.
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

Device(config) # wireless profile image-download default Device(config-wireless-image-download-profile) # image-download-mode sftp Device(config-wireless-image-download-profile-sftp) # sftp-image-server 10.1.1.1

sftp-password (image-download-mode sftp)

To configure the SFTP server password for image dowload, use the **sftp-password** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

sftp-password {0| 8}<Enter password> <Re-enter password>

no sftp-password {0 | 8}<Enter password> <Re-enter password>

Syntax Description	0	Specifies that an unencrypted password will follow.		
	8 Specifies that an AES encrypted password will follow.			
	password	Specifies the SFTP server password.		
	re-enter password	Indicates that the user must re-enter the SFTP server password.		
Command Default	None			
Command Modes	Wireless image dow	wnload profile SFTP configuration		
Command History	Release	Modification		
	Cisco IOS XE Gib	oraltar 16.12.2s This command was introduced.		

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode sftp Device(config-wireless-image-download-profile-sftp)# sftp-password 0 xxxxxxx

sftp-password (trace-export)

To configure the SFTP server password for trace export, use the **sftp-password** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

sftp-password<Enter password> <Re-enter password>

no sftp-password<*Enter password*> <*Re-enter password*>

Syntax Description	password Specif	ies the SFTP server password.
	re-enter password Indica	tes that the user must re-enter the SFTP server passwor
Command Default	None	
Command Modes	Wireless trace export profi	le SFTP configuration
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16	5.12.2s This command was introduced.

Example

Device(config)# wireless profile transfer trace-export trace_export_name
Device(config-wireless-trace-export-profile)# log-export-mode sftp
Device(config-wireless-trace-export-profile-sftp)# sftp-password xxxxxxx xxxxxxx

sftp-path

L

To configure the path at the SFTP server for trace log export, use the **sftp-path** command. Use the **no** form of the command to negate the command or to set the command to its default.

sftp-pathsftp-path

no sftp-pathsftp-path

Syntax Description sftp-path	a Specifies the path at the SFTP server.
------------------------------	--

None **Command Default**

Command History	Release	Modification	_
	Cisco IOS XE Bengaluru 17	7.5.1 This command was introduced.	_
Usage Guidelines	This example shows how to	o enable Auto-Upgrade feature:	
	Device# configure term Device(config)# softwa Device(config)# end		

statistics ap-system-monitoring alarm-enable

To enable alarms for AP real-time statistics (CPU and Memory), use the **statistics ap-system-monitoring alarm-enable** command. Use the **no** form of this command to disable the feature.

[no] statistics ap-system-monitoring alarm-enable

Syntax Description	statistics	Configures the AP statistics.
	ap-system-monitoring alarm-	enable Enables alarms for AP real-time statistics (CPU and Memory).
Command Default	None	
Command Modes	AP Profile Configuration (confi	g-ap-profile)
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to enable alarms for AP real-time statistics (CPU and Memory):

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring alarm-enable

statistics ap-system-monitoring alarm-hold-time

To define the hold time interval before triggering the alarm, use the **statistics ap-system-monitoring alarm-hold-time** command.

statistics ap-system-monitoring alarm-hold-time 0-3600

Syntax Description	statistics	Configures the AP statistics.
	ap-system-monitoring alarm-	hold-time Enables alarms for AP real-time statistics (CPU and Memory).
	0-3600	Specifies the alarm hold time interval in seconds.
Command Default	None	
Command Modes	AP Profile Configuration (config	g-ap-profile)
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to define the hold time interval before triggering the alarm:

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring alarm-hold-time 60

statistics ap-system-monitoring alarm-retransmit-time

To define the interval between retransmissions of the trap alarm, use the **statistics ap-system-monitoring alarm-retransmit-time**

statistics ap-system-monitoring alarm-retransmit-time 0-65535

statistics	Configures the AP statistics.
ap-system-monitoring alarm-retransmit-time	Define the interval between retransmissions of the trap alarm.
0-65535	Specifies the interval between retransmissions of the trap alarm, in seconds.
None	
AP Profile Configuration (config	g-ap-profile)
Release	Modification
Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
	ap-system-monitoring alarm-retransmit-time 0-65535 None AP Profile Configuration (config

Example

The following example shows how to define the interval between retransmissions of the trap alarm:

```
Device(config)# ap profile default-ap-profile
Device(config-ap-profile)# statistics ap-system-monitoring alarm-retransmit-time 60
```

statistics ap-system-monitoring cpu-threshold

To define the threshold precentage for CPU usage on the AP to trigger alarms, use the **statistics ap-system-monitoring cpu-threshold** command.

statistics ap-system-monitoring cpu-threshold 0-100

Syntax Description	statistics	Configures the AP stati	stics.
	ap-system-monitoring cpu-th	reshold Defines the threshold for	or CPU usage on AP to trigger alarms.
	0-100	Specifies the percentage alarms.	e of threshold for CPU usage on AP to trigger
Command Default	None		
Command Modes	AP Profile Configuration (config	g-ap-profile)	
Command History	Release	Modification	
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.	

Example

The following example shows how to define the threshold precentage for CPU usage on the AP to trigger alarms:

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring cpu-threshold 70

statistics ap-system-monitoring enable

To enable monitoring of AP real-time statistics (CPU and Memory), use the **statistics ap-system-monitoring enable** command. Use the **no** form of this command to disable the feature.

[no] statistics ap-system-monitoring enable

Syntax Description	statistics	Configures the AP statistics.	
	ap-system-monitoring enable	Enables monitoring of AP real-	-time statistics (CPU and Memory).
Command Default	- None		
Command Modes	AP Profile Configuration (config	g-ap-profile)	
Command History	Release	Modification	
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.	

Example

The following example shows how to enable monitoring of AP real-time statistics (CPU and Memory):

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring enable

statistics ap-system-monitoring mem-threshold

To define the threshold percentage for memory usage on the AP, to trigger alarms.

statistics ap-system-monitoring mem-threshold 0-100

Syntax Description	statistics	Configures the AP stati	istics.
	ap-system-monitoring mem-th	reshold Defines the threshold for	or memory usage on AP to trigger alarms.
	0-100	Specifies the percentag trigger alarms.	e of threshold for memory usage on AP to

			-

Example

The following example shows how to define the threshold precentage for memory usage on the AP to trigger alarms:

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring mem-threshold 60

statistics ap-system-monitoring sampling-interval

To define the sampling interval, use the statistics ap-system-monitoring sampling-interval

statistics ap-system-monitoring sampling-interval 2-900

Syntax Description	statistics	Configures the AP statistics.
	ap-system-monitoring sampling	ng-interval Defines the sampling interval.
	2-900	Specifies the sampling interval, in seconds.
Command Default	None	
Command Modes	AP Profile Configuration (config	g-ap-profile)
Command History	Release	Modification

Example

The following example shows how to define the sampling interval:

```
Device(config)# ap profile default-ap-profile
Device(config-ap-profile)# statistics ap-system-monitoring sampling-interval 100
```

statistics ap-system-monitoring stats-interval

To define the statistics interval, which gives more weight in the calculations to the statistics received in the last statistic interval seconds, use the **statistics ap-system-monitoring stats-interval**

statistics ap-system-monitoring stats-interval 120-900

Syntax Description	statistics	Configures the AP statistics.
	ap-system-monitoring stats-inte	erval Defines the statistics interval, which gives more weight in the calculations to the statistics received in the last statistic interval seconds.
	120-900	Specifies the statistics interval, in seconds.
Command Default	None	
Command Modes	AP Profile Configuration (config	;-ap-profile)
Command Modes Command History		Modification

Example

The following example shows how to define the statistics interval:

Device(config)# ap profile default-ap-profile Device(config-ap-profile)# statistics ap-system-monitoring stats-interval 120

I

stealthwatch-cloud-monitor

To configure Stealthwatch Cloud monitor and enter the Stealthwatch Cloud Monitor configuration mode, use the **stealthwatch-cloud-monitor** command. To disable the command, use the **no** form of this command.

stealthwatch-cloud-monitor

no stealthwatch-cloud-monitor

Command Default	None	
Command Modes	Global Configuration	
Syntax Description	stealthwatch-cloud-monitor	Configures Stealthwatch Cloud monitor.
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.
Usage Guidelines	None	
	Example	
	This example shows how to con-	figure Stealthwatch Cloud monitor:

Device(config)# stealthwatch-cloud-monitor

tag rf

To configure a policy tag for an AP filter, use the tag rf command.

	tag rf rf-tag	
Syntax Description	<i>rf-tag</i> RF tag name.	
Command Default	None	
Command Modes	config-ap-filter	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a policy tag for an AP filter:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap filter name ap-filter-name
Device(config-ap-filter)# rf tag rf-tag-name
```

tag site

To configure a site tag for an AP filter, use the tag site site-tag command.

	tag site site-tag				
Syntax Description	<i>site-tag</i> Name of the site tag.				
Command Default	None				
Command Modes	config-ap-filter				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.			

Examples

The following example shows how to configure a site tag for an AP filter:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# ap filter name ap-filter-name
Device(config-ap-filter)# site tag site-tag-name
```

tftp-image-path (image-download-mode tftp)

To configure the image path at the TFTP server for image download, use the **tftp-image-path** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

tftp-image-path tftp-image-path

no tftp-image-path tftp-image-path

Syntax Description	<i>tftp-image-path</i> Specifies the im	age path of the TFTP server.
Command Default	None	
Command Modes	Wireless image dowload profile 7	FTP configuration
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

Device(config)# wireless profile image-download default Device(config-wireless-image-download-profile)# image-download-mode tftp Device(config-wireless-image-download-profile-tftp)# tftp-image-path /download/object/stream/images/ap-images

tftp-image-server (image-download-mode tftp)

To configure the TFTP server address for image download, use the tftp-image-server command. Use the no form of this command to negate the configuration or to set the command to its default.

image-download-mode tftp

tftp-image-server {A.B.C.D | X:X:X:X:X}

no tftp-image-server {A.B.C.D | X:X:X:X:X}

Syntax Description A.B.C.DSpecifies the TFTP IPv4 server address. *X:X:X:X::X* Specifies the TFTP IPv6 server address.

None **Command Default**

Wireless image download profile TFTP configuration **Command Modes**

Command History

Modification Cisco IOS XE Gibraltar 16.12.2s This command was introduced.

Example

Release

Device(config) # wireless profile image-download default Device (config-wireless-image-download-profile) # image-download-mode tftp Device (config-wireless-image-download-profile-tftp) # tftp-image-server 10.1.1.1

tftp-path

L

To configure the path at the TFTP server for trace log export, use the **tftp-path** command. Use the **no** form of the command to negate the command or to set the command to its default.

tftp-pathtftp-path

no tftp-pathtftp-path

Syntax Description tftp-pa	th Speci	fies the path	at the TFT	P server.
----------------------------	----------	---------------	------------	-----------

None **Command Default**

Wireless trace export profile TFTP configuration **Command Modes**

Command History

Modification Cisco IOS XE Gibraltar 16.12.2s This command was

introduced.

Example

Release

Device (config) # wireless profile transfer trace-export trace export name Device(config-wireless-trace-export-profile)# log-export-mode tftp Device(config-wireless-trace-export-profile-tftp)# tftp-path /download/object/stream/images/ap-images

tftp-server

To configure the TFTP server address for trace export, use the **tftp-server** command. Use the **no** form of this command to negate the configuration or to set the command to its default.

tftp-server {A.B.C.D | X:X:X:X:X}}

no tftp-server {*A.B.C.D* | *X:X:X:X:X*}

Syntax Description	A.B.C.D Specifies the TFTP	IPv4 server address.
	X:X:X:X:X Specifies the TFTP	IPv6 server address.
Command Default	None	
Command Modes	Wireless trace export profile TFT	TP configuration
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

Device(config) # wireless profile transfer trace-export trace_export_name Device(config-wireless-trace-export-profile) # log-export-mode tftp Device(config-wireless-trace-export-profile-tftp) # tftp-server 10.1.1.1

timezone delta

To configure timezone offset for an AP, use the **timezone delta** command. To remove the timezone offset for an AP, use the **no timezone** command.

timezone delta hour offset-hour minute offset-minute

Syntax Description	hour offset-hour	Local hour difference from Coordinated Universal Time (UTC). Valid range is f -12 to 14.		
	minute offset-minute Local minute difference from UTC. Valid range is from 0 to 59.			
Command Default	AP timezone is not se	et.		
Command Modes	AP profile configurat	tion (config-ap-profile)		
Command History	Release	Modification	-	
	Cisco IOS XE Benga	luru 17.6.1 This command was introduced.	-	
Usage Guidelines	You can configure the AP timezone only for each AP profile. You cannot configure the AP timezone for each AP. To configure the timezone, either apply the current controller timezone or the time difference. By default, timezone is disabled.			
Examples	The following examp	ble shows how to configure timezone offse	et for AP:	
	Device# configure Device(config)# ar Device(config-ap-r		inute 2	

I

trapflags ap ap-stats

To enable or disable the transmission of AP related traps, which are to be sent when the statistics are past the threshold, use the **trapflags ap ap-stats**. Use the **no** form of this command to disable the feature.

[no] trapflags ap ap-stats

Syntax Description	trapflags	trapflags Enables or disables the transmission of AP related trapflags.		
	ap ap-stats Specifies the traps to be sent when the stats are past the threshold.			
Command Modes	Global configuration (config)			
Command History	Release		Modification	_
	Cisco IOS X	E Bengaluru 17.5.1	This command was introduced.	_

Example

The following example shows how to enable or disable the transmission of AP related traps:

Device# configure terminal Device(config)# trapflags ap ap-stats

udp-timeout

To configure timeout value for UDP sessions, use the udp-timeout command.

udp-timeout timeout_value

Syntax Description	<i>timeout_value</i> Is the timeout value for UDP sessions.			
	Т	The range is fro	om 1 to 30 seconds.	
	N	-	<i>public-key</i> and <i>resolver</i> parameter parameter parameters by a set of the default values. So, you not be a set of the se	meter-map options are automatically populated used not change them.
Command Default	None			
Command Modes	Profile configurat	tion		
Command History	Release		Modification	
	Cisco IOS XE Gil	braltar 16.10.1	This command was introduced.	
	Example			
	This example sho	ws how to con	nfigure timeout value for UI	DP sessions:

This example shows how to configure timeout value for UDP sessions:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# parameter-map type umbrella global
Device(config-profile)# token 57CC80106C087FB1B2A7BAB4F2F4373C00247166
Device(config-profile)# local-domain dns_wl
Device(config-profile)# udp-timeout 2
Device(config-profile)# end
```

umbrella-param-map

To configure the Umbrella OpenDNS feature for WLAN, use the **umbrella-param-map** command.

umbrella-param-map umbrella-name

Syntax Description	umbrella-name	
Command Default	None	
Command Modes	config-wireless-policy	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

This example shows how to configure the Umbrella OpenDNS feature for WLAN:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy default-policy-profile
Device(config-wireless-policy)# umbrella-param-map global
Device(config-wireless-policy)# end
```

update-timer

To configure the mDNS update timers for flex profile, use the **update-timer** command. To disable the command, use the **no** form of this command.

	update-timer { service-cache <1-100> statistics <1-100> }		
	update-timer { service-	cache $<1-100>$ statistics $<1-100>$ }	
Syntax Description	update-timer	Configures the mDNS update timers for flex profile.	
	service-cache <1-100>	Specifies the mDNS update service-cache timer for flex profile. The default value is one minute,	
	statistics <1-100>	Specifies the mDNS update statistics timer for flex profile. The default value is one minute,	
Command Default	None		
Command Modes	mDNS flex profile config	uration	
Command History	Release	Modification	
	Cisco IOS XE Amsterdan	n 17.3.1 This command was introduced.	
Examples	C 1	nows how to configure the mDNS update timers for flex profile: ex-prof)# update-timer service-cache 20	

I

url

To configure the Stealthwatch Cloud server URL, use the **url** *swc-server-url* command. To disable the command, use the **no** form of this command.

url swc-server-url

no url swc-server-url

Syntax Description	url	Sets the Stealth	nwatch Cloud server URL.
	swc-server-url	Stealthwatch (Cloud URL.
Command Default	None		
Command Modes	Stealthwatch Clo	oud Monitor Cor	nfiguration
Command History	Release		Modification
	Cisco IOS XE B	engaluru 17.4.1	This command was introduced.
Usage Guidelines	None		

Example

This example shows how to configure the Stealthwatch Cloud server URL:

Device(config-stealthwatch-cloud-monitor)# url https://sensors.eu-2.obsrvbl.com

url

urlfilter list

To configure Flex URL filtering commands for ACL binding, use the **urlfilter list** c in the wireless flex profile ACL mode. To disable the feature, use the **no** form of the ommand.

urlfilter list *urlfilter-list-name*

[no] urlfilter list urlfilter-list-name

Syntax Description	urlfilter list Configures the Flex URL filtering commands for ACL binding.				
	urlfilter-list-name	Specifies the URL filter list name.			
Command Default	None				
Command Modes	Wireless Flex Profil	ile ACL configuration			
Command History	Release	Modification			
	Cisco IOS XE Ams	sterdam 17.1.1 This command was introduced.			

Example

This example shows how the Flex URL filtering commands for ACL binding, is configured:

Device(config-wireless-flex-profile-acl)# urlfilter list urlfilter-list-name

I

usb-enable

To enable USB for Cisco access points (APs), use the **usb-enable** command. To disable the command, use the **no** form of this command.

	usb-enable	
	no usb-enable	
Syntax Description	usb-enable Enables USB for APs.	Cisco
Command Default	None	
Command Modes	AP profile configuration mode	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.
Usage Guidelines	None	

Example

This example shows how to enable USB for Cisco APs:

Device(config-ap-profile)# usb-enable

username

To add a user who can access the Cisco ISE-3315 using SSH, use the **username** command in configuration mode. If the user already exists, the password, the privilege level, or both change with this command. To delete the user from the system, use the **no** form of this command.

[no] username username password {hash | plain} password role {admin | user] [disabled [email email-address]] [email email-address]

For an existing user, use the following command option:

username username password role {admin | user} password

Syntax Description	username	You should enter only one word which can include hyphen (-), underscore (_) and period (.).
		Note Only alphanumeric characters are allowed at an initial setup.
	password	The command to use specify password and user role.
	password	Password character length up to 40 alphanumeric characters. You must specify the password for all new users.
	hash plain	Type of password. Up to 34 alphanumeric characters.
	role admin user	Sets the privilege level for the user.
	disabled	Disables the user according to the user's email address.
	email email-address	The user's email address. For example, user1@example.com.
	wlan-profile-name	Displays details of the WLAN profile.
Command Default	The initial user during setup.	
Command Modes	Configuration	
Usage Guidelines	The username command requires that th admin / user options.	e username and password keywords precede the hash / plain and the
	Example 1	
	ncs/admin(config)# username admin ncs/admin(config)#	password hash ####### role admin
	Example 2	
	ncs/admin(config) # username admin	password plain Secr3tp@swd role admin

ncs/admin(config)#

Example 3

ncs/admin(config)# username admin password plain Secr3tp@swd role admin email admin123@example.com ncs/admin(config)#

violation

To configure stream violation policy on periodic reevaluation, use the violation command.

	violation	{drop fallback}		
Syntax Description	Parameter	Description		
	drop Stream will be dropped on periodic reevaluation.			
	fallback	Stream will be demo	ted to BestEffort class on periodic reevaluation.	
Command Default	None			
Command Modes	config-me	dia-stream		
Command History	Release		Modification	
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced in a release earli Gibraltar 16.10.1.	er than Cisco IOS XE

Examples

The following example shows how to configure stream violation policy on periodic reevaluation:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless media-stream group my-media-group 224.0.0.0 224.0.0.223
Device(config-media-stream)# violation drop
```

wgb broadcast-tagging

To configure WGB broadcast tagging for a wireless policy profile, use the wgb broadcast-tagging command.

	wgb broadcast-tagging	
Command Default	None	
Command Modes	config-wireless-policy	
Command History	History Release Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable WGB broadcast tagging for a wireless policy profile:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy profile-policy-name
Device(config-wireless-policy)# wgb broadcast-tagging
```

wgb vlan

To configure WGB VLAN client support for a WLAN policy profile, use the wgb vlan command.

	wgb vlan	
Command Default	None	
Command Modes	config-wireless-policy	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to enable WGB VLAN client support for the WLAN policy profile named *wlan1-policy-profile*:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy wlan1-policy-profile
Device(config-wireless-policy)# wgb vlan
```

whitelist acl

	To configure the whitelist ACL, use the whitelist acl command.			
	<pre>whitelist acl {standard_acl_value extended_acl_value acl_name}</pre>			
Syntax Description	standard_acl_value	e Specifies the standard access list. Range	is from 1 to 199.	
	extended_acl_value	e Specifies the extended access list. Range	is from 1300 to 2699.	
	acl_name	Specifies the named access list.		
Command Default	None			
Command Modes	ET-Analytics configuration			
Command History	Release	Modification	_	
	Cisco IOS XE Gibra	altar 16.12.1 This command was introduced.	_	
	This example shows how to enable in-active timer in the ET-Analytics configuration mode: Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# et-analytics Device(config-et-analytics)# whitelist acl eta-whitelist Device((config-et-analytics)# ip access-list			
	extended eta-whit			

Device(config-ext-nacl) # permit udp any any eq tftp

Device(config-ext-nacl)# end

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

wired-vlan-range

To configure wired VLANs on which mDNS service discovery should take place, use the **wired-vlan-range** command. To disable the command, use the **no** form of this command.

	wired-vlan-range wire	ed-vlan-range-value	
Syntax Description	wired-vlan-range	Configures wired VLANs on which	mDNS service discovery should take place.
	wired-vlan-range-value	Specifies the wired VLAN range va	lue.
Command Default	None		
Command Modes	mDNS flex profile config	guration	
Command History	Release	Modification	_
	Cisco IOS XE Amsterdar	n 17.3.1 This command was introduced.	
Examples	The following example sl should take place:	hows how to configure wired VLANs	on which mDNS service discovery
	Device(config-mdns-fl	ex-prof)# wired-vlan-range <i>range</i>	e-value

I

config wlan assisted-roaming

To configure assisted roaming on a WLAN, use the config wlan assisted-roaming command.

	config wlan ass	sisted-roaming {neighbor-list dual-list prediction} {enable disable} wlan_id
Syntax Description	neighbor-list	Configures an 802.11k neighbor list for a WLAN.
	dual-list	Configures a dual band 802.11k neighbor list for a WLAN. The default is the band that the client is currently associated with.
	prediction	Configures an assisted roaming optimization prediction for a WLAN.
	enable	Enables the configuration on the WLAN.
	disable	Disables the configuration on the WLAN.
	wlan_id	Wireless LAN identifier between 1 and 512 (inclusive).
Command Default	The 802.11k ne	eighbor list is enabled for all WLANs.
	By default, dua	l band list is enabled if the neighbor list feature is enabled for the WLAN.
Command History	Release	Modification
	8.3	This command was introduced.
Usage Guidelines	•	ble the assisted roaming prediction list, a warning appears and load balancing is disabled for oad balancing is already enabled on the WLAN.
	The following of	example shows how to enable an 802.11k neighbor list for a WLAN:
	(Cisco Contro	oller) >config wlan assisted-roaming neighbor-list enable 1

wireless aaa policy

To configure a wireless AAA policy, use the wireless aaa policy command.

 wireless aaa policy aaa-policy

 Syntax Description
 aaa-policy Name of the wireless AAA policy.

 Command Default
 None

 Command Modes
 Global configuration (config)

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.10.1
 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a wireless AAA policy named *aaa-policy-test*

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless aaa policy aaa-policy-test

wireless aaa policy

To configure a new AAA policy, use the wireless aaa policy command.

wireless aaa policy aaa-policy-name

Syntax Description *aaa-policy-name* AAA policy name.

Command Default None

Command ModesGlobal configuration (config)

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE	
		Gibraltar 16.10.1.	

Examples

The following example shows how to configure a AAA policy name:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless aaa policy my-aaa-policy

wireless autoqos policy-profile

To enable the **autoqos** wireless policy with an executable command, use the autoqos command. Use the **disable** command to disable wireless AutoQos.

wireless autoqos policy-profilepolicy-profile-name default_policy_profile mode { clear |
enterprise-avc | fastlane | guest | voice }

wireless autoqos disable

Syntax Description	autoqos	Configures wireless	Auto QoS.	
	mode	Specifies the wirele	ss AutoQoS mode.	
	enterprise-avc	Enables AutoQos w	vireless enterprise AVC	policy.
	clear	Clears the configure	ed wireless policy.	
	fastlane	Enables the AutoQo 802.11 network.	s fastlane policy. This	will disable and enable the 2.4GHz or 5GHz
	guest	Enables AutoQos w	vireless guest policy.	
	voice	Enables AutoQos w 802.11 network.	rireless voice policy. Th	nis will disable and enable the 2.4GHz or 5GHz
Command Default	None			
Command Modes	Privilege EXEC	mode		
Command History	Release	Me	odification	
	Cisco IOS XE C	bibraltar 16.12.2s Th	is command was	

Example

This example shows how to enable AutoQoS wireless enterprise policy:

Device# wireless autoqos policy-profile default-policy-profile mode enterprise-avc

wireless broadcast vlan

To enable broadcast support on a VLAN, use the **wireless broadcast vlan** command in global configuration mode. To disable Ethernet broadcast support, use the **no** form of the command.

wireless broadcast vlan [vlan-id] no wireless broadcast vlan [vlan-id]

 Syntax Description
 vlan-id
 (Optional) Specifies the VLAN ID to enable broadcast support to that VLAN. The value ranges from 1 to 4095.

 Command Default
 None

 Command Modes
 Global configuration mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Usage Guidelines	Use this command in the global of	configuration mode only.

This example shows how to enable broadcasting on VLAN 20:

Device(config) # wireless broadcast vlan 20

wireless client

To configure client parameters, use the wireless client command in global configuration mode.

wireless client {association limit assoc-number interval interval | band-select {client-rssi rssi | cycle-count count | cycle-threshold threshold | expire dual-band timeout | expire suppression timeout} | max-user-login max-user-login | timers auth-timeout seconds | user-timeout user-timeout}

Syntax Description	association limit assoc-number interval interval	Enables association request limit per access point slot at a given interval and configures the association request limit interval.		
		You can configure number of association request per access point slot at a given interval from one through 100.		
		You can configure client association request limit interval from 100 through 10000 milliseconds.		
	band-select	Configures the band select options for the client.		
	client-rssi rssi	Sets the client received signal strength indicator (RSSI) threshold for band select.		
		The minimum dBm of a client RSSI to respond to probe is between -90 and -20.		
	cycle-count count	Sets the band select probe cycle count.		
		You can configure the cycle count from 1 to 10.		
	cycle-threshold threshold	Sets the time threshold for a new scanning cycle.		
		You can configure the cycle threshold from 1 to 1000 milliseconds.		
	expire dual-band timeout	Sets the timeout before stopping to try to push a given client to the 5-GHz band.		
		You can configure the timeout from 10 to 300 seconds, and the default value is 60 seconds.		
	expire suppression timeout	Sets the expiration time for pruning previously known dual-band clients.		
		You can configure the suppression from 10 to 200 seconds, and the default timeout value is 20 seconds.		
	max-user-login max-user-login	Configures the maximum number of login sessions for a user.		
	timers auth-timeout seconds	Configures the client timers.		
	user-timeout user-timeout	Configures the idle client timeout.		
Command Default	No default behavior or values.			
Command Modes	Global configuration			

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	
	This example shows how to set	the proble cycle count for band	select to 8:
	Device# configure terminal Device(config)# wireless c Device(config)# end	lient band-select cycle-cou	int 8
	This example shows how to set 700 milliseconds:	the time threshold for a new sca	anning cycle with threshold value of
	Device# configure terminal Device(config)# wireless c Device(config)# end	lient band-select cycle-thr	eshold 700

This example shows how to suppress dual-band clients from the dual-band database after 70 seconds:

```
Device# configure terminal
Device(config)# wireless client band-select expire suppression 70
Device(config)# end
```

wireless client mac-address

To configure the wireless client settings, use the **wireless client mac-address** command in global configuration mode.

wireless client mac-address *mac-addr* ccx {clear-reports | clear-results | default-gw-ping | dhcp-test | dns-ping | dns-resolve hostname *host-name* | get-client-capability | get-manufacturer-info | get-operating-parameters | get-profiles | log-request {roam | rsna | syslog} | send-message *message-id* | stats-request *measurement-duration* {dot11 | security} | test-abort | test-association *ssid bssid dot11 channel* | test-dot1x [*profile-id*] *bssid dot11 channel* | test-profile {anyprofile-id}}

Syntax Description	mac-addr	MAC address of the client.		
	ccx	Cisco client extension (CCX).		
	clear-reports	Clears the client reporting information.		
	clear-results	Clears the test results on the controller.		
	default-gw-ping	Sends a request to the client to perform the default gateway ping test.		
	dhcp-test	Sends a request to the client to perform the DHCP test.		
	dns-ping	Sends a request to the client to perform the Domain Name System (DNS) server IP address ping test.		
	dns-resolve hostname <i>host-name</i>	Sends a request to the client to perform the Domain Name System (DNS) resolution test to the specified hostname.		
	get-client-capability	Sends a request to the client to send its capability information.		
	get-manufacturer-info	Sends a request to the client to send the manufacturer's information.		
	get-operating-parameters	Sends a request to the client to send its current operating parameters.		
	get-profiles	Sends a request to the client to send its profiles.		
	log-request	Configures a CCX log request for a specified client device.		
	roam	(Optional) Specifies the request to specify the client CCX roaming log		
	rsna	(Optional) Specifies the request to specify the client CCX RSNA log.		
	syslog	(Optional) Specifies the request to specify the client CCX system log.		

send-message message-id

Sends a message to the client.

Message type that involves one of the following:

- 1—The SSID is invalid
- 2—The network settings are invalid.
- 3—There is a WLAN credibility mismatch.
- 4—The user credentials are incorrect.
- 5—Please call support.
- 6—The problem is resolved.
- 7—The problem has not been resolved.
- 8—Please try again later.
- 9—Please correct the indicated problem.
- 10—Troubleshooting is refused by the network.
- 11—Retrieving client reports.
- 12—Retrieving client logs.
- 13—Retrieval complete.
- 14—Beginning association test.
- 15—Beginning DHCP test.
- 16—Beginning network connectivity test.
- 17—Beginning DNS ping test.
- 18—Beginning name resolution test.
- 19—Beginning 802.1X authentication test.
- 20—Redirecting client to a specific profile.
- 21—Test complete.
- 22—Test passed.
- 23—Test failed.
- 24—Cancel diagnostic channel operation or select a WLAN profile to resume normal operation.
- 25—Log retrieval refused by the client.
- 26—Client report retrieval refused by the client.
- 27—Test request refused by the client.
- 28—Invalid network (IP) setting.
- 29—There is a known outage or problem with the network.

I

		• 31—The WLAN security method is not correct.		
		• 32—The WLAN encryption method is not correct.		
		• 33—The WLAN authentication method is not correct.		
	stats-request measurement-duration	Senda a request for statistics.		
	dot11	Optional) Specifies dot11 counters.		
	security	(Optional) Specifies security counters.		
	test-abort	Sends a request to the client to abort the current test.		
	test-association ssid bssidSends a request to the client to perform the association test.dot11 channel			
	test-dot1x Sends a request to the client to perform the 802.1x test.			
	profile-id	(Optional) Test profile name.		
	bssid	Basic SSID.		
	<i>dot11</i> Specifies the 802.11a, 802.11b, or 802.11g network.			
	channel	Channel number.		
	test-profile	Sends a request to the client to perform the profile redirect test.		
	any	Sends a request to the client to perform the profile redirect test.		
	profile-id	Test profile name.		
		Note The profile ID should be from one of the client profiles for which client reporting is enabled.		
Command Default	No default behavior or values.	 }.		
Command Modes	Global configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12	2.1 This command was introduced.		
Usage Guidelines	The default-gw-ping test does	es not require the client to use the diagnostic channel.		
	This example shows how to cl 00:1f:ca:cf:b6:60:	elear the reporting information of the client MAC address		

• 30—Scheduled maintenance period.

Device# configure terminal

I

Device(config) # wireless client mac-address 00:1f:ca:cf:b6:60 ccx clear-reports
Device(config) # end

wireless config validate

To validate whether the wireless configuration is complete and consistent (all the functional profiles and tags are defined, and all the associations are complete and consistent), use the **wireless config validate** command in privileged EXEC mode.

wireless config validate

Syntax Description	This command has no keywords	or arguments.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines In Cisco vEWLC, the wireless configuration is built using a collection of profiles, with each profile defining a functional block. These functional blocks are defined independently and is used to realize well-defined associations through intent based work-flows in building the wireless LAN. Such flexibility of modularizing the functional blocks requires the administrator to ensure that all associations are consistent and complete.

To ensure completeness and consistency of the wireless configuration, a configuration validation library is used to validate the configuration definitions across tables. The **wireless config validate** exec command is introduced from this release to validate the wireless configuration and report inconsistencies, if any, using contextual error message that is visible in btrace infra and on the console (if console logging is enabled). This command calls out any inconsistencies (unresolved associations) enabling you to realize a functional wireless LAN.

Use the following command to direct the output to a file: show logging | redirect bootflash: filename .

The following set of wireless configurations are validated:

RF tag	Site tag	Policy tag	Policy profile	Flex profile
site-tag	flex-profile	wlan profile	IPv4 ACL name	VLAN ACL
poliy-tag	ap-profile	policy profile	Fabric name	ACL-policy
rf-tag			service-policy input and output name	RF Policy (5GHz and 24GHz)
			service-policy input and client output name	

Example

The following is sample output from the wireless config validate command

Device# wireless config validate

Oct 10 18:21:59.576 IST: %CONFIG_VALIDATOR_MESSAGE-5-EWLC_GEN_ERR: Chassis 1 R0/0: wncmgrd: Error in AP: fc99.473e.0a90 Applied site-tag : mysite definitiondoes not exist Oct 10 18:21:59.576 IST: %CONFIG_VALIDATOR_MESSAGE-5-EWLC_GEN_ERR: Chassis 1 R0/0: wncmgrd: Error in AP: fc99.473e.0a90 Applied policy-tag : mypolicy definition does not exist Oct 10 18:21:59.576 IST: %CONFIG_VALIDATOR_MESSAGE-5-EWLC_GEN_ERR: Chassis 1 R0/0: wncmgrd: Error in AP: fc99.473e.0a90 Applied policy-tag : mypolicy definition does not exist Oct 10 18:21:59.576 IST: %CONFIG_VALIDATOR_MESSAGE-5-EWLC_GEN_ERR: Chassis 1 R0/0: wncmgrd: Error in AP: fc99.473e.0a90 Applied rf-tag : myrf definition does not exist

wireless country

To configure one or more country codes for a device, use the wireless country command.

	wireless country country-code	
Syntax Description	<i>country-code</i> Two-letter country code.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.
Usage Guidelines	select the proper country code. Following installat	trator or qualified IT professional and the installer must ion, access to the unit should be password protected by the quirements and to ensure proper unit functionality. See the codes and regulatory domains.
	This example shows how to configure country co	de on the device to IN (India):
	Device(config)# wireless country IN	

wireless exclusionlist mac address

To manually add clients to the exclusionlist, use the wireless exclusion list command. To remove the manual entry, use the no form of the command.

wireless exclusionlist mac_address description

Syntax Description	description <i>value</i> Configures the entry description.
Command Default	None
Command Modes	Global Configuration
Command History	Cisco IOS XE Gibraltar 16.10.1 Modification
	This command was introduced in this release.

Usage Guidelines If a client was added to the exclusion list dynamically, the command to remove it is wireless client mac-address xxxx.xxxx deauthenticate from enable mode.

Example

This example shows how to manage exclusion entries: Device(config) # wireless exclusion list xxxx.xxxx

wireless ipv6 ra wired

To enable the forwarding of Router Advertisement message to the wired clients, use the **wireless ipv6 ra wired** command.

wireless ipv6 ra wired { nd { na-forward | ns-forward } | ra-wired }

Syntax Description	nd	Configures wireless IPv6 ND parameters.				
	na-forward	Enables forwarding of Neighbor Advertisement to wireless clients.				
	ns-forward	<i>ns-forward</i> Enable forwarding of Neighbor Solicitation to wireless clients.				
	ra	<i>ra</i> Configures wireless IPv6 Router Advertisement parameters.				
	<i>wired</i> Enables forwarding of Router Advertisement message to the wired clients.					
Command Default	None					
Command Modes	Global Configuration (config)					
Command History	Release	Modification				
	Cisco IOS X	E Gibraltar 16.12.3 This command was introduced.				

Example

The following example shows how to enable the forwarding of Router Advertisement message to the wired clients:

Device(config) # wireless ipv6 ra wired

Warning The **wireless ipv6 ra wired** command must be enabled only for certification purpose and not during the deployment.

wireless load-balancing

To globally configure aggressive load balancing on the controller, use the **wireless load-balancing** command in global configuration mode.

wireless load-balancing {denial denial-count | window client-count}

Syntax Description	denial <i>denial-count</i> Specifies the number of association denials during load balancing.				
	Maximum number of association denials during load balancing is from 1 to 10 and the default value is 3.				
	window <i>client-count</i> Specifies the aggressive load balancing client window, with the number of clients needed to trigger aggressive load balancing on a given access point.				
	Aggressive load balancing client window with the number of clients is from 0 to 20 and the default value is 5.				
Command Default	Disabled.				
Command Modes	Global configuration				
Command History	Release	Modification			
	Cisco IOS XE Gibralta	ar 16.12.1 This command was introduced.			
Usage Guidelines	Load-balancing-enabled WLANs do not support time-sensitive applications like voice and video because or roaming delays.				
	When you use Cisco 7921 and 7920 Wireless IP Phones with controllers, make sure that aggressive load balancing is disabled on the voice WLANs for each controller. Otherwise, the initial roam attempt by the phone might fail, causing a disruption in the audio path.				
	This example shows how to configure association denials during load balancing:				

wireless macro-micro steering transition-threshold

To configure micro-macro transition thresholds, use the **wireless macro-micro steering transition-threshold** command.

wireless macro-micro steering transition-threshold {balancing-window | client count *number-clients* } {macro-to-micro | micro-to-macro *RSSI in dBm*}

Syntax Description	balancing-window	Active instance of the configuration in Route-processor slot 0.		
	client	Standby instance of the configuration in Route-processor slot 0.		
	number-clients	Valid range is 0 to 65535 clients.		
	macro-to-micro	Configures the macro to micro transition RSSI.		
	micro-to-macro	Configures micro-macro client load balancing window.		
	RSSI in dBm	RSSI in dBm. Valid range is –128 to 0.		
Command Default	None			
Command Modes	Global configuration	on (config)		

Command	History
Commanu	ΠΙSLOFY

ReleaseModificationCisco IOS XE Gibraltar 16.10.1This command was introduced in a release earlier than Cisco IOS XE
Gibraltar 16.10.1.

Examples

The following example shows how to configure balancing-window:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless macro-micro steering transition-threshold balancing-window number-of-clients

wireless macro-micro steering probe-suppression

To configure micro-macro probe suppressions, use the **wireless macro-micro steering probe-suppression** command.

wireless macro-micro steering probe-suppression {aggressiveness *number-of-cycles* | | hysteresis*RSSI in dBm* | probe-auth | probe-only}

Syntax Description	aggressiveness Configures probe cycles to be suppressed. The number of cycles range between 0 - 255				
	hysteresis Indicate show much greater the signal strength of a neighboring access point must be in ord for the client to roam to it. The RSSI decibel value ranges from -6 to -3.				
	probe-auth	Enables mode to suppress probes and single auth			
	probe-only	Enables mode to suppress only probes			
Command Default	None				
Command Modes	Global configu	ration (config)			
Command History					
	Examples				
	The following of	example shows how to configure balancing-window:			

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless macro-micro steering probe-suppression aggressiveness
number-of-cycles
```

wireless management certificate

To create a wireless management certificate details, use the wireless management certificate command.

wireless management certificate ssc { auth-token $\{0 | 8\}$ token | trust-hash hash-key }

Syntax Description	auth-token	Authentication tol	ken.
	token	Token name.	
	trust-hash	Trusted SSC hash	list.
	hash-key	SHA1 fingerprint.	
	0	Specifies an UNEN	NCRYPTED token.
	8 Specifies an AES encrypted token.		encrypted token.
Command Default	None		
Command Modes	Global Confi	iguration(config)	
Command History	Release		Modification
	Cisco IOS X	E Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Example

The following example shows how to configure a wireless management certificate:

Device# configure terminal Device(config)# wireless management certificate ssc trust-hash test

wireless management interface

To create a wireless management interface, use the wireless management interface command.

wireless management interface { GigabitEthernet | Loopback | Vlan } interface-number

Syntax Description	<i>interface-number</i> Interface number.	
Command Default	None	
Command Modes	Global Configuration(config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Example

The following example shows how to configure a wireless management interface:

Device# configure terminal Device(config)# wireless management interface vlan vlan1

wireless management trustpoint

To create a wireless management trustpoint, use the wireless management trustpoint command.

wireless management trustpoint trustpoint-name

Syntax Description	trustpoint-name	Trustpoint name.	
Command Default	None		
Command Modes	Global Configurat	tion(config)	
Command History	Release		Modification
	Cisco IOS XE Gil	braltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Usage Guidelines	Use this command only on the Cisco Catalyst 9800 Wireless Controller for Cloud platform and not on appliances as the appliances use the SUDI certificate by default without the need for this command.		
	Example		
	The following example shows how to configure a wireless management trustpoint:		

Device# configure terminal Device(config)# wireless management trustpoint test

wireless mesh alarm association count

To configure the mesh alarm association count, use the wireless mesh alarm association count command.

	wireless mesh alarm association count count			
Syntax Description	count Number of alarm associa	ations. The vlaid range is between 1 and 30.		
Command Default	None			
Command Modes	config			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.		

Examples

The following example shows how to configure the mesh alarm association count:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile policy wireless mesh alarm association count 10

wireless mesh alarm high-snr

To configure the mesh alarm high-snr value, use the wireless mesh alarm high-snr command.

wireless mesh alarm high-snr high-snr

Syntax Description	high-snr Set the high-snr value.	The valid range is between 31 and 100.
Command Default	None	
Command Modes	- config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the mesh high-snr:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless profile policy wireless mesh alarm high-snr 75
```

wireless mesh alarm low-snr

To configure the mesh alarm low-snr value, use the wireless mesh alarm low-snr command.

wireless mesh alarm low-snr low-snr

Syntax Description	<i>low-snr</i> Set the low-snr value. The valid range is between 1 and 30.		
Command Default	None		
Command Modes	- config		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure the mesh high-snr:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless profile policy wireless mesh alarm low-snr 5

wireless mesh alarm max-children map

To configure the mesh alarm max-children map value, use the **wireless mesh alarm max-children map** command.

wireless mesh alarm max-children map max-children

Syntax Description	max-children Set the mesh alar	m max-children map parameter. The valid range is between 1 and 50.
Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the mesh alarm max-children map value:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh alarm max-children map 35
```

wireless mesh alarm max-children rap

To configure the mesh alarm max-children rap value, use the **wireless mesh alarm max-children rap** command.

wireless mesh alarm max-children rap max-children

Syntax Description	<i>max-children</i> Set the mesh alarm max-children rap parameter. The valid range is between 1 and 50.		
Command Default	None		
Command Modes	config		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure the mesh alarm max-children rap value:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh alarm max-children rap 40
```

wireless mesh alarm max-hop

To configure the mesh alarm max-hop paramter, use the wireless mesh alarm max-hop command.

wireless mesh alarm max-hop max-hop

Syntax Description	<i>max-hop</i> Set the mesh alarm max-	ax-hop count. Valid range is between 1 and 16.
Command Default	None	
Command Modes	config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure the mesh alarm max-hop parameter:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh alarm max-hop 15
```

wireless mesh alarm parent-change count

To configure the max parent-change count value, use the **wireless mesh alarm parent-change count** command.

wireless mesh alarm parent-change count count

Syntax Description	count Set the max parent-change count value. Valid range is between 1 and 30.		
Command Default	None		
Command Modes	- config		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure the alarm parent change count value:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh alarm parent-change count 6
```

wireless mesh backhaul bdomain-channels

To configure and allow the Extended UNII B Domain channels for Outdoor mesh APs backhaul radio, use the **wireless mesh backhaul bdomain-channels** command.

wireless mesh backhaul bdomain-channels		
bdomain-channels	Allows the Extended UNII B Domain channels for Outdoor mesh APs backhaul radio.	
	The [no] form of the command disables the use of the Extended UNII B Domain channels by the mesh APs backhaul radio.	
None		
config		
Release	Modification	
Cisco IOS XE Gibra	altar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	
	bdomain-channels None config Release	

Examples

The following example shows how to disable the use of Extended UNII B Domain channels by the Outdoor mesh APs backhaul radio:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# no wireless mesh backhaul bdomain-channels

wireless mesh backhaul rrm

To configure the mesh backhaul, use the **wireless mesh backhaul** command.

Syntax Description	backhaul	Configures t	he Mesh Backhaul.
	bdomain-channels	Allows Exter	nded UNII B Domain channels for Outdoor mesh APs backhaul radio.
	rrm	Configures F	RRM for the mesh backhaul.
Command Default	None		
Command Modes	config		
Command History	Release		Modification
	Cisco IOS XE Gibr		This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure RRM for the mesh backhaul:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh backhaul rrm
```

wireless mesh cac

To configure the mesh CAC Mode, use the wireless mesh cac command.

	wireless mesh cac			
Syntax Description	ac Configures the mesh CAC Mode.			
Command Default	None			
Command Modes	config			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.		

Examples

The following example shows how to configure the mesh CAC mode:

Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config)# wireless mesh cac

wireless mesh ethernet-bridging allow-bdpu

To configure STP BPDUs for wired mesh uplink, use the **wireless mesh ethernet-bridging allow-bdpu** command.

wireless mesh ethernet-bridging allow-bdpu

Syntax Description	ethernet-bridging Configure ethernet bridging.		
	allow-bdpu	Configures STP BPDUs towards wired MESH uplink.	
Command Default	None		
Command Modes	config		
Command History	Release	Modification	
	Cisco IOS XE C	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure STP BPDUs towards wired MESH uplink:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh ethernet-bridging allow-bdpu
```

wireless mesh security psk provisioning

To provision the mesh security psk parameters, use the wireless mesh security psk provisioning command.

wireless mesh security psk provisioning {**default_psk** | **inuse** *psk-index* | **key** *psk-index*{**0** | **8**}*enter-psk-name psk-description*}

Syntax Description	provisioning	configuring mesh psk provisioning parameters.		
	default_psk	Set the mesh provisioning to the default-psk settings.		
	inuse	Configuring the psk inuse index		
	psk-index	Enter PSK key index. Valid range is between 1 and 5.		
	key	Configure a pre-shared-key		
	<i>psk-index</i> Enter PSK key index. Valid range is between 1 and 5.			
	0 Choose to enter an UNENCRYPTED password.			
	8	Choose to enter an AES encrypted password.		
	enter-psk-name Enter a name for the configured psk key.			
	psk-description Enter a description for this key.			
Command Default	None			
Command Modes	config			
Command History	Release	Modification		
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.		

Examples

The following example shows how to provision the default psk key for the mesh security:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh security psk provisioning default_psk
```

wireless mesh subset-channel-sync

To configure the subset channel sync for mobility group, use the **wireless mesh subset-channel-sync** command.

wireless mesh subset-channel-sync

Syntax Description	subset-channel-sync Configure	es the subset channel sync for mobility group
Command Default	None	
Command Modes	- config	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure subset channel sync for mobility group:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# wireless mesh subset-channel-sync
```

wireless ewc-ap ap ap-type

To convert a single AP to CAPWAP or to embedded wireless controller, use the **wireless ewc-ap ap ap-type** command.

wireless ewc-ap ap ap-type Cisco-AP-name { capwap | ewc }

Syntax Description	ewc-ap	ewc-ap Configures the embedded wireless controller p			
	ap-type	Configures the	e AP parameter.		
	Cisco-AP-name	Indicates the n	ame of the Cisco AP.		
	capwap	Changes to Ca	pwap ap-type.		
	ewc Changes to the embedded wireless controller ap-type.				
Command Default	None				
Command Modes	Privileged EXEC	Cmode			
Command History	Release		Modification		
	Cisco IOS XE G	ibraltar 16.12.1	This message was introduced.		

Example

The following example shows how to convert a single AP to a CAPWAP ap-type or a embedded wireless controller ap-type:

Device#wireless ewc-ap ap ap-type ap name {capwap | ewc}

wireless ewc-ap ap capwap

To specify the CAPWAP parameters for an AP, use the wireless ewc-ap ap capwap command.

wireless ewc-ap ap capwap Primary-Controller-Name { A.B.C.D | X:X:X:X }

Syntax Description	ewc-ap	Configures the embedded wireless controller parameters.
	сарwар	Configures the CAPWAP parameters.
	Primay-Controller-Na	<i>ume</i> Indicates the name of the controller.
	A.B.C.D	Indicates the IPv4 address of the primary controller.
	X:X:X:X:X	Indicates the IPv6 address of the primary controller.
Command Default	None	
Command Modes	Privileged EXEC mod	e
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This message was introduced.

Example

The following example shows how to specify the CAPWAP parameters for an AP:

Device#wireless ewc-ap ap capwap controller_name {10.1.1.1 | 9:0:0:0::1}

wireless ewc-ap ap reload

To reload the embedded wireless controller AP, use the wireless ewc-ap ap reload command.

	wireless	ewc-ap ap re	load	
Syntax Description	ewc-ap	Configures t	he embedded wireless controller	parameters.
	reload	Reloads the	embedded wireless controller A	.P.
Command Default	None			
Command Modes	Privilege	d EXEC mod	2	
Command History	Release		Modification	
	Cisco IO	S XE 16.12.1	This message was introduced.	

Example

The following example shows how to reload the embedded wireless controller AP:

Device#wireless ewc-ap ap reload

wireless ewc-ap ap shell

To access the AP parameters on the embedded wireless controller AP shell, use the **wireless ewc-ap ap shell** command.

wireless ewc-ap ap shell { chassis { chassis-number | active | standby } R0 | username }

Syntax Description	chassis	Specifies the ch	assis.
	chassis-number	Specifies the ch	assis number as either 1 or 2.
	active	Configures the a	active instance in route processor slot 0.
	standby	Configures the s 0.	standby instance in route processor slot
	R0	Specifies the ro	ute processor in slot 0.
	username Specifies the AP management username.		
Command Default	None		
Command Modes	Privileged EXEC	2	
Command History	Release		Modification
	Cisco IOS XE G	bibraltar 16.12.2s	This command was introduced.

Example

Device#wireless ewc-ap ap shell chassis 1 R0

565

wireless ewc-ap ap shell username

To configure the AP management username on the embedded wireless controller AP shell, use the **wireless** ewc-ap ap shell username command.

wireless ewc-ap ap shell username username chassis { chassis-number | active | standby } R0

Syntax Description	chassis	Specifies the chassis.
	chassis-number	Specifies the chassis number as either 1 or 2.
	active	Configures the active instance in route processor slot 0.
	standby	Configures the standby instance in route processor slot 0.
	R0	Specifies the route processor in slot 0.
	username	Specifies the AP management username.
Command Default	None	
Command Modes	Privileged EXEC	2
Command History	Release	Modification
	Cisco IOS XE G	Bibraltar 16.12.2s This command was introduced.

Example

Device#wireless ewc-ap ap shell username username1 chassis 1 R0

wireless ewc-ap preferred-master

To select the standby controller when the network is up and running, use the **wireless ewc-ap preferred-master** command.

wireless ewc-ap preferred-master AP-name

Syntax Description	ewc-ap	Configures the embedded wireless controller parameters.
	preferred-master	Configures the preferred primary AP.
	AP-name	Indicates the name of the preferred primary AP.
Command Default	None	
Command Modes	Global configuratio	n (config)
Command History	Release	Modification
	Cisco IOS XE Gibr	altar 16.12.1 This message was introduced.

Example

The following example shows how to set a preferred primary ap-type:

Device(config) #wireless ewc-ap preferred-master AP-name

wireless ewc-ap factory-reset

To perform factory reset on the embedded wireless controller and on all the access points connected to the controller, use the **wireless ewc-ap factory-reset** command.

wireless ewc-ap factory-reset

-			
Syntax Description	ewc-ap		Configures the embedded wireless controller parameters
	factory-reset		Resets Cisco AP configuration to factory default.
Command Default	None		
Command Modes	Privileged EXEC mod	e	
Command History	Release	Modification	_
	Cisco IOS XE 16.12.1	This command was introduced.	_

Example

The following example shows how to factory-reset the embedded wireless controller network:

Device#wireless ewc-ap factory-reset

wireless ewc-ap vrrp vrid

To configure the embedded wireless controller VRRP network identifier, use the **wireless ewc-ap vrrp vrid** command.

wireless ewc-ap vrrp vridvalue <1-255>

ewc-ap	Configures the embed	lded wireless controller par	ameters.
vrrp	Configires the preferr	ed primary APembedded wi	reless controller VRRP.
vrid	Indicates the VRRP V 1.	RID. Values are from 1-25	5. The default value is
value	Indicates the VRRP V	RID value.

Example

The following example shows how to configure the VRRP network identifier:

Device#wireless ewc-ap vrrp vrid 1

wireless profile flex

To configures a wireless flex profile and enter wireless flex profile configuration mode, use the **wireless profile flex** command. To disable the feature, use the **no** form of the command.

wireless profile flex custom-flex-profile

[no] wireless profile flex custom-flex-profile

Syntax Description	wireless profile flex	Configures a wireless flex profile and e	nter wireless flex profile configuration mode.
	custom-flex-profile	Specifies the flex profile name.	
Command Default	None		
Command Modes	Wireless flex profile m	node	
Command History	Release	Modification	
	Cisco IOS XE Amster	dam 17.1.1s This command was introduced.	

Example

This examples shows how the wireless flex profile is configured:

Device(config)#wireless profile flex custom-flex-profile

wireless profile image-download default

To configure the default image download profile for AP Join Download and Predownload, use the following command:

-	Note Default is the only profile name that you can enter.			
	wireless profil	e image-download default		
Syntax Description	wireless profil	e Configures the wireless profile parameters.		
	image-downlo	ad Configures the EWC-AP image download parameters.		
	default	Specifies the profile name - default. Default is the only profile name that you can enter		
Command Default	None			
Command Modes	Global configur	ation		
Command History	Release	Modification		
	Cisco IOS XE	Gibraltar 16.12.2s This command was introduced.		

Example

Device# wireless profile image-download default

wireless profile mesh

To configure the mesh profile on an access point (AP), use the wireless profile mesh profile-name command.

wireless profile mesh profile-name

Syntax Description	profile-name	Name of the profile.
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Cupertino 17.7.1	This command was introduced.
Examples	The following example shows how to configu	re the mesh profile on an AP:
	Device# configure terminal	

Device# configure terminal
(config)#wireless profile mesh test1

wireless profile policy

To configure WLAN policy profile, use the wireless profile policy command.

wireless profile policy policy-profile

Syntax Description *policy-profile* Name of the WLAN policy profile.

Command Default The default profile name is default-policy-profile.

Command Modes Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to configure a WLAN policy profile:

Device(config) # wireless profile policy mywlan-profile-policy

wireless profile transfer

To configure the export of trace logs on the embedded wireless controller, use the **wireless profile transfer** command. Use the **no** form of this command to negate the command or to set the command to its default.

[no] wireless profiletransfertrace-export trace-export-profile-name

Syntax Description	trace-export Configures the trace export parameter			
	trace-export-profile-name	Specifies the trace export profile name.		
Command Default	None			
Command Modes	Global configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.	12.2s This command was introduced.		

Example

Device# wireless profile transfer trace-export trace-export-profile-name

wireless rfid

To set the static radio-frequency identification (RFID) tag data timeout value, use the **wireless rfid** command in global configuration mode.

wireless rfid timeout timeout-value

Syntax Description	timeout Configures the static RFID tag data timeout value.			
	timeout-value	RFID tag data ti	meout value. Valid values range from	n 60-7200.
Command Default	None			
Command Modes	Global configu	ration (config)		
Command History	Release		Modification	
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced.	

Example

This example shows how to set the static RFID tag data timeout value.

Device(config) # wireless rfid timeout 70

wireless security dot1x

To configure IEEE 802.1x global configurations, use the wireless security dot1x command.

wireless security dot1x [{eapol-key {retries retries | timeout milliseconds} | group-key interval sec | identity-request {retries retries | timeout seconds} | radius [call-station-id] {ap-macaddress | ap-macaddress-ssid | ipaddress | macaddress} | request {retries retries | timeout seconds} | wep key {index 0 | index 3}}]

Syntax Description	eapol-key	Configures eapol-key related parameters.
	retries retries	(Optional) Specifies the maximum number of times (0 to 4 retries) that the controller retransmits an EAPOL (WPA) key message to a wireless client.
		The default value is 2.
	timeout milliseconds	(Optional) Specifies the amount of time (200 to 5000 milliseconds) that the controller waits before retransmitting an EAPOL (WPA) key message to a wireless client using EAP or WPA/WPA-2 PSK.
		The default value is 1000 milliseconds.
	group-key interval sec	Configures EAP-broadcast key renew interval time in seconds (120 to 86400 seconds).
	identity-request	Configures EAP ID request related parameters.
	retries retries	(Optional) Specifies the maximum number of times (0 to 4 retries) that the controller request the EAP ID.
		The default value is 2.
	timeout seconds	(Optional) Specifies the amount of time (1 to 120 seconds) that the controller waits before retransmitting an EAP Identity Request message to a wireless client.
		The default value is 30 seconds.
	radius	Configures radius messages.
	call-station-id	(Optional) Configures Call-Station Id sent in radius messages.
	ap-macaddress	Sets Call Station Id Type to the AP's MAC Address.
	ap-macaddress-ssid	Sets Call Station Id Type to 'AP MAC address':'SSID'.
	ipaddress	Sets Call Station Id Type to the system's IP Address.
	macaddress	Sets Call Station Id Type to the system's MAC Address.
	request	Configures EAP request related parameters.

	retries retries	(Optional) For EAP messages other than Identity Requests or EAPOL (WPA) key messages, specifies the maximum number of times (0 to 20 retries) that the controller retransmits the message to a wireless client.				
		The default value is 2.				
	timeout seconds	<i>conds</i> (Optional) For EAP messages other than Identity Requests or EAPOL (WPA) key messages, specifies the amount of time (1 to 120 seconds) that the controller waits before retransmitting the message to a wireless client.				
		The default value is 30 seconds.				
	wep key	Configures 802.1x WEP related paramters.				
	index 0	Specifies the WEP key index value as 0				
	index 3Specifies the WEP key index value as 3					
Command Default	Default for eapol-key-	timeout: 1 second.				
	Default for eapol-key-	retries: 2 retries.				
Command Modes	config					
Command History	Release	Modification				
	Cisco IOS XE Gibralta	ar 16.12.1 This command was introduced.				
Usage Guidelines	None.					
	This example lists all the commands under wireless security dot1x.					
	Device(config)# wire eapol-key group-key	erminal n commands, one per line. End with CNTL/Z. eless security dotlx ? Configure eapol-key related parameters Configures EAP-broadcast key renew interval time in seconds Configure EAP ID request related parameters Configure radius messages Configure EAP request related parameters				

wireless security dot1x radius accounting mac-delimiter

To configure a MAC delimiter for called-station-ID or a calling-station-ID, use the **wireless security dot1x** radius accounting mac-delimiter command.

To remove MAC delimiter for a called-station-ID or a calling-station-ID, use the no form of the command.

wireless security dot1x radius accounting mac-delimiter {colon | hyphen | none | single-hyphen }

colon	Sets the delimiter to colon.
hyphen	Sets the delimiter to hyphen.
none	Disables delimiters.
single-hyphen	Sets the delimiters to single hyphen.
None	
Global Configur	ation Mode
Release	Modification
Cisco IOS XE 3	.6.0 E This command was introduced
	hyphen none single-hyphen None Global Configura Release

This example shows how to configure a MAC delimiter for called-station-ID or a calling-station-ID to colon:

Device(config) # wireless security dot1x radius accounting mac-delimiter colon

wireless security dot1x radius accounting username-delimiter

To set the delimiter type, use **wireless security dot1x radius accounting username-delimiter** command, to remove the configuration, use the **no** form of this command.

wireless security dot1x radius accounting username-delimiter { colon | hyphen | none | single-hyphen }

Syntax Description	colon	Sets the delimiter to colon.
	hyphen	Sets the delimiter to hyphen.
	none	Disables delimiters.
	single-hyphen	Sets the delimiters to single hyphen.
Command Default	None	
Command Modes	Global Configur	ration Mode.
Command History	Release	Modification

Device (config) # wireless security dot1x radius acounting username-delimiter colon

wireless security dot1x radius callStationIdCase

To configure Call Station Id CASE send in RADIUS messages, use the **wireless security dot1x radius** callStationIdCase command.

To remove the Call Station Id CASE send in RADIUS messages, use the no form of the command.

wireless security dot1x radius callStationIdCase {lower|upper}

Syntax Description	lower Sends all Call Station Ids to RADIUS in lowercase			
	upper	Sends all Call Station Ids to RADIUS in uppercase		
Command Default	None			
Command Modes	Global G	Configuration Mode		
Command History	Release	e Modification		
	Cisco I	OS XE 3.6.0 E This command was introduced.		

This example shows how to configure Call Station Id CASE send in RADIUS messages in lowercase:

Device(config) # wireless security dot1x radius callstationIdCase lower

wireless security dot1x radius mac-authentication call-station-id

To configure call station ID type for mac-authentication, use the **wireless security dot1x radius mac-authentication call-station-id** command. To remove the configuration, use the **no** form of it.

wireless security dot1x radius mac-authentication call-station-id ap-ethmac-only | ap-ethmac-ssid | ap-group-name | ap-label-address | ap-label-address-ssid | ap-location | ap-macaddress | ap-macaddress - ssid | ap-name | ap-name-ssid | ipaddress | macaddress | vlan-id

Syntax Description	ap-ethmac-only	Sets call station ID type to the AP Ethernet MAC address.		
	ap-ethmac-ssid	Sets call station ID type to the format 'AP Ethernet MAC address':'SSID'.		
	ap-group-name	Sets call station ID type to the AP Group Name.		
	ap-label-address	Sets call station ID type to the AP MAC address on AP Label.		
	ap-label-address-ssie	d Sets call station ID type to the format 'AP Label MAC address': 'SSID'.		
	ap-location	Sets call station ID type to the AP Location.		
	ap-macaddress	Sets call station ID type to the AP Radio MAC Address.		
	ap-macaddress-ssid	Sets call station ID type to the 'AP radio MAC Address':'SSID'.Sets call station ID type to the AP name.Sets call station ID type to the format 'AP name':'SSID'.Sets call station ID type to the system IP Address.Sets call station ID type to the system MAC Address.		
	ap-name			
	ap-name-ssid			
	ipaddress			
	macaddress			
	vlan-id Sets call station ID type to the VLAN ID.			
Command Default	None			
Command Modes	Global Configuration	Mode		
Command History	Release	Modification		
	Cisco IOS XE 3.7.2 E	This command was introduced.		

Device(config) # wireless security dot1x radius mac-authentication call-station-id ap-ethmac-only

wireless security dot1x radius mac-authentication mac-delimiter

To configure MAC-Authentication attributes, use the **wireless security dot1x radius mac-authentication mac-delimiter** command.

To remove MAC-Authentication attributes, use the no form of the command.

wireless security dot1x radius mac-authentication mac-delimiter {colon | hyphen | none | single-hyphen }

Syntax Description	colon	Sets the delimiter to colon.
	hyphen	Sets the delimiter to hyphen.
	none	Disables delimiters.
	single-hyphen	Sets the delimiters to single hyphen.
Command Default	None	
Command Modes	Global Configur	ation Mode
Command History	Release	Modification
	Cisco IOS XE 3	6.6.0 E This command was introduced.

This example shows how to configure MAC-Authentication attributes to colon:

Device(config) # Scurity dot1x radius mac-authentication mac-delimiter colon

wireless security web-auth retries

To enable web authentication retry on a particular WLAN, use the **wireless wireless security web-auth retries** command. To disable, use the **no** form of the command.

wireless securityweb-authretries*retries* nowireless securityweb-authretries

Syntax Description	wireless security web-auth	Enables web authentication on	a particular WLAN.
	retries retries	Specifies maximum number of is from 0 through 30. The defa	web authentication request retries. The range ult value is 3.
Command Default	_		
Command Modes	config		
Command History	Release	Modification	_
	Cisco IOS XE Gibraltar 16.12.	1 This command was introduced.	
Usage Guidelines	None.		
	This example shows how to en	able web authentication retry of	n a particular WLAN.
	Device# configure terminal Device# wireless security	web-auth retries 10	

wireless tag policy

To configure wireless tag policy, use the wireless tag policy command.

	wireless tag policy policy-tag		
Syntax Description	policy-tag Name of the wireless tag policy.		
Command Default	The default policy tag is defaul	t-policy-tag.	
Command Modes	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to configure a wireless policy tag:

Device(config) # wireless tag policy guest-policy

wireless tag site

To configure a wireless site tag, use the wireless tag site *site-tag*command.

	wireless tag site site-tag	
Syntax Description	<i>site-tag</i> Name of the site tag.	
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to configure a site tag: Device(config) # wireless tag site test-site

wireless wps ap-authentication threshold

To configure the alarm trigger threshold for access point neighbor authentication, use the **wireless wps ap-authentication threshold** command. To remove the access point neighbor authentication, use the no form of the command.

	wireless wps ap-authentication threshold value		
	no wireless wps ap-authent	tication threshold value	
Syntax Description	-	t the WMM-enabled clients are or een 1 and 255. The default value	n the wireless LAN. The threshold value is 1.
Command Default	None		
Command Modes	Global Configuration mode		
Command History	Release	Modification	-
	Cisco IOS XE Amsterdam 16.12.	1 This command was introduced.	-
Usage Guidelines	None		-

Example

The following example shows you how to configure the alarm trigger threshold for access point neighbor authentication:

Device(config) # wireless wps ap-authentication threshold 1

wireless wps client-exclusion

To configure client exclusion policies, use the **wireless wps client-exclusion** command. To remove the client exclusion policies, use the **no** form of the command.

wireless wps client-exclusion {all | dot11-assoc | dot11-auth | dot1x-auth | ip-theft | web-auth} no wireless wps client-exclusion {all | dot11-assoc | dot11-auth | dot1x-auth | ip-theft | web-auth}

Syntax Description	dot11-assoc	Specifies that the controller excludes clients on the sixth 802.11 association attempt, after five consecutive failures.		
	dot11-auth	Specifies that the controller excludes clients on the five consecutive failures.	e sixth 802.11 authentication attempt, after	
	dot1x-auth	Specifies that the controller excludes clients on th after five consecutive failures.	e sixth 802.11X authentication attempt,	
	ip-theft	heft Specifies that the control excludes clients if the IP address is already assigned to another device.		
		For more information, see the Usage Guidelines s	ection.	
	web-auth	Specifies that the controller excludes clients on the three consecutive failures.	e fourth web authentication attempt, after	
	all	Specifies that the controller excludes clients for al	ll of the above reasons.	
Command Default	Enabled.			
Command Modes	config			
Command History	Release	Modification		
	Cisco IOS XE	E Gibraltar 16.12.1 This command was introduced.		
Usage Guidelines	In IP-theft sce Denali 16.x re	narios, there are differences between the older Cisc leases:	o IOS XE releases and the Cisco IOS XE	

I

Older Cisco IOS XE Releases	Cisco IOS XE Denali 16.x Releases
Priority wise, wired clients have higher priority over wireless clients, and DHCP IP has higher priority over static IP. The client security type is not checked; security of all client types are treated with same priority. If the existing binding is from a higher priority source, the new binding is ignored and an IP-theft is signaled. If the existing binding has the same source-priority as the new binding, the binding is ignored and an IP-theft is signaled. This ensures that the bindings are not toggled if two hosts send traffic using the same IP. Only the initial binding is retained in the software. If the new binding is from a higher priority source, the existing binding is replaced. This results in an IP-theft notification of existing binding and also a new binding notification.	5

This example shows how to disable clients on the 802.11 association attempt after five consecutive failures.

```
Device#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)#wireless wps client-exclusion dotll-assoc
```

wireless wps mfp ap-impersonation

To configure AP impersonation detection, use the **wireless wps mfp ap-impersonation** command. Use the **no** form of this command to disable the configuration.

wireless wps mfp ap-impersonation

no wireless wps mfp ap-impersonation

Syntax Description	ap-impersonation Configures	AP impersonation detection.
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows you how to configure AP impersonation detection:

Device(config)# wireless wps mfp ap-impersonation

wireless wps rogue network-assurance enable

To enable the rogue wireless service assurance (WSA) events, use the **wireless wps rogue network-assurance enable** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue network-assurance enable

no wireless wps rogue network-assurance enable

Syntax Description		ables rogue WSA ents.
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.

Usage Guidelines None

Example

The following example shows you how to enable the rogue wireless service assurance events:

Device(config) # wireless wps rogue network-assurance enable

wireless wps rogue ap aaa

To configure the use of AAA/local database to detect valid AP MAC addresses, use the **wireless wps rogue ap aaa** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap aaa

no wireless wps rogue ap aaa

Command Default None

Command Modes Global Configuration mode

Command History	Release	Modification	
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.	

Usage Guidelines None

Example

The following example shows you how to configure the use of AAA/local database to detect valid AP MAC addresses:

Device(config) # wireless wps rogue ap aaa

wireless wps rogue ap aaa polling-interval

To configures Rogue AP AAA validation interval, in seconds, use the **wireless wps rogue ap aaa polling-interval** command. To disable the configuration, use the no form of this command.

wireless wps rogue ap aaa polling-interval 60 - 86400

no wireless wps rogue ap aaa polling-interval 60 - 86400

Syntax Description	aaaSets the use of AAA or local database to detect valid AP MAC addresses.		
	polling-interval	al Configures the rogue AP AAA validation interval.	
	60 - 86400	D Specifies AP AAA validation interval, in seconds.	
Command Default	None		
Command Modes	Global configurati	on	
Command History	Release		Modification
	Cisco IOS XE Gi	braltar 16.12.1	This command was introduced.
Usage Guidelines	None		

Example

This example shows how to configures Rogue AP AAA validation interval, in seconds:

Device(config) # wireless wps rogue ap aaa polling-interval 120

wireless wps rogue ap init-timer

To configure the init timer for rogue APs, use the **wireless wps rogue ap init-timer** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap init-timer

no wireless wps rogue ap init-timer

Syntax Description	init-timer	Configures the init timer for rogue APs.
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification

Cisco IOS XE Amsterdam 16.12.1 This command was introduced.

Usage Guidelines N

None

Example

The following example shows you how to configure the init timer for rogue APs:

Device(config) # wireless wps rogue ap init-timer

wireless wps rogue ap mac-address rldp initiate

To initiate and configure Rogue Location Discovery Protocol on rogue APs, use the **wireless wps rogue ap mac-address rldp initiate** command.

	wireless wps rogue ap mac-addr	ess <i><mac address=""></mac></i> rldp initiate
Syntax Description	wps	Configures the WPS settings.
	rogue	Configures the global rogue devices.
	ap mac-address /</th <th>The MAC address of the APs.</th>	The MAC address of the APs.
	rldp initiate	Initiates RLDP on rogue APs.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.
Usage Guidelines	None	
	F	

Example

The following example shows you how to initiate and configure Rogue Location Discovery Protocol on rogue APs:

Device# wireless wps rogue ap mac-address 10.1.1 rldp initiate

wireless wps rogue ap notify-min-rssi

To configure the minimum RSSI notification threshold for rogue APs, use the **wireless wps rogue ap notify-min-rssi** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap notify-min-rssi

no wireless wps rogue ap notify-min-rssi

Syntax Description notify-min-rssi Configure the minimum RSSI notification threshold for rogue APs.

Command Default None

Command Modes Global Configuration mode

 Command History
 Release
 Modification

 Cisco IOS XE Amsterdam 16.12.1
 This command was

Usage Guidelines

None

Example

The following example shows you how to configure the minimum RSSI notification threshold for rogue APs:

introduced.

Device(config) # wireless wps rogue ap notify-min-rssi

wireless wps rogue ap notify-rssi-deviation

To configure the RSSI deviation notification threshold for rogue APs, use the **wireless wps rogue ap notify-rssi-deviation** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap notify-rssi-deviation

no wireless wps rogue ap notify-rssi-deviation

Syntax Description	notify-rssi-deviation Configure	es the RSSI deviation notification threshold for rogue APs.
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.
Usage Guidelines	None	
	Example	
	The following example shows you rogue APs:	how to configure the RSSI deviation notification threshold for

Device(config) # wireless wps rogue ap notify-rssi-deviation

wireless wps rogue ap rldp alarm-only

To set Rogue Location Discovery Protocol (RLDP) and alarm if rogue is detected, use the **wireless wps rogue ap rldp alarm-only** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap rldp alarm-only

no wireless wps rogue ap rldp alarm-only

Syntax Description	alarm-only Sets RLDP and alar	m if rogue is detected.
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.

Example

The following example shows you how to set RLDP and alarm if rogue is detected:

Device(config)# wireless wps rogue ap rldp alarm-only

wireless wps rogue ap rldp alarm-only monitor-ap-only

To perform RLDP only on monitor APs, use the **wireless wps rogue ap rldp alarm-only monitor-ap-only** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap rldp alarm-only monitor-ap-only

no wireless wps rogue ap rldp alarm-only monitor-ap-only

Syntax Description	monitor-ap-only Performs RLI	OP on monitor APs only.		
Command Default	- None			
Command Modes	Global Configuration mode			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.		
Usage Guidelines	None			
	Evenue			

Example

The following example shows you how to perform RLDP only on monitor APs,:

Device(config) # wireless wps rogue ap rldp alarm-only monitor-ap-only

wireless wps rogue ap rldp auto-contain

To configure RLDP, alarm and auto-contain if rogue is detected, use **wirelesswps rogueaprldp auto-contain** command. Use the **no** form of the command to disable the alarm.

[no] wireless wps rogue ap rldp auto-contain monitor-ap-only

Syntax Description	monitor-ap-only Perform RLDP only on monitor AP			
Command Default	None			
Command Modes	Global Configuration			
Command History	Release Modification			
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.		
	Cisco IOS XE 3.7.3E	The no form of the command was introduced.		

Example

This example shows how to configure an alarm for a detected rogue.

Devicewireless wps rogue ap rldp auto-contain

wireless wps rogue ap rldp retries

To configure RLDP retry times on rogue APs, use the **wireless wps rogue ap rldp retries** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap rldp retries

no wireless wps rogue ap rldp retries

Syntax Description	retries Configures RLDP retry times on rogue APs.			
Command Default	None			
Command Modes	Global Configuration mode			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.		
Usage Guidelines	None			

Example

The following example shows you how to configure RLDP retry times on rogue APs:

Device(config) # wireless wps rogue ap rldp retries

wireless wps rogue ap rldp schedule

To configure RLDP scheduling, use the **wireless wps rogue ap rldp schedule** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap rldp schedule

no wireless wps rogue ap rldp schedule

Syntax Description	schedule Configures RLDP scheduling.	
Command Default	None	
Command Modes	Global Configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows you how to configure RLDP scheduling:

Device(config) # wireless wps rogue ap rldp schedule

wireless wps rogue ap rldp schedule day

To configure the day when RLDP scheduling is to be done, use the **wireless wps rogue ap rldp schedule day** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap rldp schedule day { friday | monday | saturday | sunday | thursday | tuesday | wednesday } start [HH:MM:SS] end [HH:MM:SS]

no wireless wps rogue ap rldp schedule day { friday | monday | saturday | sunday | thursday | tuesday | wednesday } start [HH:MM:SS] end [HH:MM:SS]

Syntax Description	day {friday monday satur thursday tuesday wedne		Configures the day of the week when RLDP scheduling is to be done.
	start [HH:MM:SS]		Configures the start time for RLDP schedule for the day.
	end [HH:MM:SS]		Configures the end time for RLDP schedule for the day.
Command Default	- None		
Command Modes	Global Configuration mode		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 16.12.1	This comman introduced.	d was
Usage Guidelines	None		
	Example		

The following example shows you how to configure the day of the week, when RLDP scheduling is to be done:

Device(config) # wireless wps rogue ap rldp schedule day friday start 10:10:10 end 15:15:15

wireless wps rogue ap timeout

To configure the expiry time for rogue APs, in seconds, use the **wireless wps rogue ap timeout** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue ap timeout 240-3600

no wireless wps rogue ap timeout 240-3600

Syntax Description	rogue ap timeout Configures the expiry time for rogue APs, in seconds.			
	240-3600	Specifies the number of	f seconds before rogue entries are flushed.	
Command Default	None			
Command Modes	Global configuration			
Command History	Release Modification			
	Cisco IOS XE Gib	raltar 16.12.1	This command was introduced.	
Usage Guidelines	None			

Example

This example shows how to configure the expiry time for rogue APs, in seconds:

Device(config) # wireless wps rogue ap timeout 250

wireless wps rogue auto-contain

To configure the auto contain level and to configure auto containment for monitor AP mode, use the **wireless wps rogue auto-contain** command. To disable the configuration, use the **no** form of this command.

wireless wps rogue auto-contain { level 1 - 4 | monitor-ap-only }

no wireless wps rogue auto-contain { level 1 - 4 | monitor-ap-only }

Syntax Description	auto-contain	Configures auto contain for rogue devices.
	level	Configures auto contain levels.
	1 - 4	Specifies the auto containment levels.
	monitor-ap-only	Configures auto contain for monitor AP mode.
Command Default	None	
Command Modes	Global configurati	on

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines None

Example

This example shows how to configure the auto contain level and to configure auto containment for monitor AP mode:

Device(config)# wireless wps rogue auto-contain level 2
Device(config)# wireless wps rogue auto-contain monitor-ap-only

wireless wps rogue client aaa

	To configure the use of AAA or local database to detect valid MAC addresses of rogue clients, use the w wps rogue client aaa command. Use the no form of this command to disable the configuration.			
	wireless wps rogue client aaa			
	no wireless wps rogue client aaa			
Syntax Description	aaa Configures the use of AAA	or local database to detect v	valid MAC addresses of rogue clients.	
Command Default	None			
Command Modes	Global Configuration mode			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 16.12.1	This command was introduced.		
Usage Guidelines	None			
	Example			
	The following example shows you MAC addresses of rogue clients:	how to configure the use of	FAAA or local database to detect valid	

Device(config) # wireless wps rogue client aaa

wireless wps rogue client mse

To configure Mobility Services Engine (MSE) to detect valid MAC addresses of rogue clients, use the **wireless wps rogue client mse** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue client mse

no wireless wps rogue client mse

Syntax Description mse	e	Configures the MSE to detect valid MAC addresses of rogue clients.
------------------------	---	--

Command Default None

Command Modes Global Configuration mode

Command History	Release	Modification	
	Cisco IOS XE Amsterdam 16.12.1	This command was	
		introduced.	

Usage Guidelines No

None

Example

The following example shows you how to configure Mobility Services Engine (MSE) to detect valid MAC addresses of rogue clients:

Device(config) # wireless wps rogue client mse

wireless wps rogue client client-threshold

To configure rogue client per a rogue AP SNMP trap threshold, use the **wireless wps rogue client client-threshold** command. To disable the configuration, use the **no** form of this command.

wireless wps rogue client client-threshold 0 - 256

no wireless wps rogue client client-threshold 0 - 256

Syntax Description	rogue client Configures rogue clients.			
	client-threshold	shold Configures the rogue client per a rogue AP SNMP trap threshold.		
	0 - 256	Specifies the client threshold.		
Command Default	None			
Command Modes	Global configurati	on		
Command History	Release	I	Modification	
	Cisco IOS XE Gi	praltar 16.12.1	This command was introduced.	
Usage Guidelines	None			

Example

This example shows how to configure rogue client per a rogue AP SNMP trap threshold:

Device(config) # wireless wps rogue ap timeout 250

wireless wps rogue client notify-min-rssi

To configure the minimum RSSI notification threshold for rogue clients, use the **wireless wps rogue client notify-min-rssi** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue client notify-min-rssi -128 - -70

no wireless wps rogue client notify-min-rssi -128 - -70

Syntax Description	rogue clients	Configures rogue clients.
	notify-min-rssi	Configures the minimum RSSI notification threshold for rogue clients.
	-12870	Specifies the RSSI threshold in decibels.

Command Default None

Command Modes Global configuration

Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	

Usage Guidelines None

Example

This example shows how to configure the minimum RSSI notification threshold for rogue clients:

Device(config) # wireless wps rogue client notify-min-rssi -125

wireless wps rogue client notify-rssi-deviation

To configure the RSSI deviation notification threshold for rogue clients, use the **wireless wps rogue client notify-rssi-deviation** command. To disable the configuration, use the **no** form of this command.

wireless wps rogue client notify-rssi-deviation 0 - 10

no wireless wps rogue client notify-rssi-deviation 0 - 10

Syntax Description	notify-rssi-deviation Configures the RSSI deviation notification threshold for rogue clients.	
	0 - 10	Specifies the RSSI threshold in decibels.
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Gibralta	tar 16.12.1 This command was introduced.
Usage Guidelines	None	

Example

This example shows how to configure the RSSI deviation notification threshold for rogue clients:

Device(config)# wireless wps rogue client notify-rssi-deviation 6

wireless wps rogue notify-syslog

To enable syslog notification for rogue events, use the wireless wps rogue notify-syslog command.

wireless wps rogue notify-syslog

Syntax Description	This command has no keywords	or arguments.
Command Default	None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

This example shows how to enable syslog notification for rogue events:

Device# configure terminal Device(config)# wireless wps rogue notify-syslog

wireless wps rogue rule

To configure rogue classification rule, use the wireless wps rogue rule command.

Syntax Description	rule rule-name	Specifies a rule name.						
	priority priority	Changes the priority of a specific rule and shifts others in the list accordingly.						
	classify	Specifies the classification of a rule.						
	friendly	Classifies a rule as friendly.						
	malicious	Classifies a rule as malicious.						
	condition { client-count number duration encryption infrastructure rssi ssid}	Specifies the conditions for a rule that the rogue access point must meet.						
		Type of the condition to be configured. The condition types are listed below:						
		 client-count—Requires that a minimum number of clients be associated to a rogue access point. The valid range is 1 to 10 (inclusive). duration—Requires that a rogue access point be detected for a minimum period of time. The valid range is 0 to 3600 seconds (inclusive). encryption—Requires that the advertised WLAN does not have encryption enabled. infrastructure—Requires the SSID to be known to the controller rssi—Requires that a rogue access point have a minimum RSSI value. The range is from –95 to –50 dBm (inclusive). 						
							• ssid—Requires that a rogue access point have a specific SSID.	
						default	Sets the command to its default settings.	
						exit	Exits the sub-mode.	
	match {all any}	Configures matching criteria for a rule. Specifies whether a detected rogue access point must meet all or any of the conditions specified by the rule in order for the rule to be matched and the rogue access point to adopt the classification type of the rule.						
	no	Negates a command or set its defaults.						
	shutdown	Shuts down the system.						
Command Default	None.							
Command Modes	Global configuration							

I

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Usage Guidelines	None.	
	This example shows how to create a rule that can organize and	l display rogue access points as Friendly:
	Device# configure terminal	

wireless wps rogue security-level

To configure the wireless WPS rogue detection security levels, use the **wireless wps rogue security-level** command. Use the **no** form of this command to disable the configuration.

wireless wps rogue security-level { critical | custom | high | low }

no wireless wps rogue security-level { critical | custom | high | low }

Syntax Description	rogue security-level	Configures the rogue detection security level.		
	critical	Specifies the rogue detection setup for highly sen	sitive deployments.	
	custom	Specifies the customizable security level.		
	high	Specifies the rogue detection setup for medium-scale deployments.		
	low	Specifies the basic rogue detection setup for small-scale deployments.		
Command Default	None			
Command Modes	Global configuration			
Command History	Release	Modification		
	Cisco IOS XE Gibralt	ar 16.12.1 This command	was introduced.	
Usage Guidelines	None			

Example

This example shows how to configure the wireless WPS rogue detection security levels:

Device(config) # wireless wps rogue security-level critical

I

wireless-default radius server

To configure multiple radius servers, use the wireless-default radius server command.

wireless-default radius server IP key secret

Command Default	- None	
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Usage Guidelines	Using this utility, you can confi	gure a maximum of ten radius servers.
	Example	

This example shows how to configure multiple radius servers:

```
Device# configure terminal
Enter configuration commands, one per line. End with \ensuremath{\texttt{CNTL}/\texttt{Z}} .
Device (config) # wireless-default radius server 9.2.58.90 key cisco123
Device(config) # end
```

wlan policy

To map a policy profile to a WLAN profile, use the wlan policy command.

wlan wlan-name policy policy-name

Syntax Description	wlan-name Name of the WL	AN profile.
	policy Map a policy prot	file to the WLAN profile.
	policy-name Name of the policy profile.	
Command Default	None	
Command Modes	config-policy-tag	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

show aaa dead-criteria radius

To verify the dead-server-detection information for a RADIUS server, use the **show aaa dead-criteria radius** command.

show aaa dead-criteria radius ipaddr auth-port authport acct-port acctport

Syntax Description	ipaddr	IP address.			
	authport	Authentication port.			
	acctport	Accounting port.			
Command Default	None				
Command Modes	Privileged	EXEC (#)			
Command History	Release		Modification		
	Cisco IOS	S XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.		
Usage Guidelines		lt ports, use the show a	dius <i>ipaddr</i> command displays output only if default ports are used. For aaa dead-criteria radius <i>ipaddr</i> auth-port <i>authport</i> acct-port <i>acctport</i>		
	Example				
	The following example shows how to see the dead-server-detection information for a RADIUS server with non-default authorization and accounting ports:				
	Device# s	show aaa dead-crite	ria radius 4.4.4.4 auth-port 4444 acct-port 3333		
	RADIUS Se	No server group spe erver Dead Criteria			
	Server Details: Address : 4.4.4.4 Auth Port : 4444 Acct Port : 3333 Server Group : radius Dead Criteria Details: Configured Retransmits : 3 Configured Timeout : 5 Estimated Outstanding Access Transactions: 0 Estimated Outstanding Accounting Transactions: 0 Dead Detect Time : 10s				
	Statistic		ast Successful Transaction		
	Max Compu	uted Outstanding Tr uted Dead Detect Ti	ansactions: 0		

L

Max Computed Retransmits : 0

The following example shows how to see the dead-server-detection information for a RADIUS server using default ports:

Device# show aaa dead-criteria radius 9.3.13.37 RADIUS: No server group specified. Using radius RADIUS Server Dead Criteria: _____ Server Details: Address : 9.3.13.37 Auth Port : 1812 Acct Port : 1813 Server Group : radius Dead Criteria Details: Configured Retransmits : 3 Configured Timeout : 30 Estimated Outstanding Access Transactions: 1 Estimated Outstanding Accounting Transactions: 0 Dead Detect Time : 10s Computed Retransmit Tries: 10 Statistics Gathered Since Last Successful Transaction _____ Max Computed Outstanding Transactions: 4 Max Computed Dead Detect Time: 48s Max Computed Retransmits : 30

show access-list

To display access control lists (ACLs) configured on the device, use the **show access-lists** command in privileged EXEC mode.

show access-lists[{namenumber | hardware counters | ipc}]

Syntax Description	number (Optional) ACL number. The range is 1 to 2799.				
	name	name (Optional) Name of the ACL.			
	hardware counters	(Optional) Displays the access list hard	ware counters.		
	ірс	(Optional) Display Interprocess Communication (IPC) protocol access-list configuration download information			
Command Default	-				
Command Modes	Privileged EXEC				
Command History	Release	Modification	-		
	Cisco IOS XE Gibralt	ar 16.11.1 This command was introduced.	-		
Usage Guidelines	Though visible in the command-line help strings, the rate-limit keyword is not supported				
	The device supports only IP standard and extended access lists. Therefore, the allowed numbers are only 1 to 199 and 1300 to 2799.				
	This command also displays the MAC ACLs that are configured.				
	This is an example of output from the show access-lists command:				
	Device# show access-lists				
	Extended IP access list 103 10 permit ip any any dscp af11				
	Extended IP access list ssm-range 10 deny ip any 232.0.0.0 0.255.255.255				
	20 permit ip any any Extended MAC access list mac1				
	This is an example of	output from the show access-lists hardy	vare counters command:		
	This is an example of	super nom die biow access nous harav			

```

show ap auth-list

To see the access point authorization list, use the show ap auth-list command.

Syntax Description	chassis-number	r Chassis numbe	r as either 1 or 2.	
	active R0	Active instance	in Route-processor slot 0.	
	standby R0	Standby instand 0.	ce in Route-processor slot	
Command Default	None			
Command Modes	Privileged EX	EC		
Command History	Release		Modification	
	Cisco IOS XE	Gibraltar 16.10.1	This command was introd Gibraltar 16.10.1.	uced in a release earlier than Cisco IOS XE

Examples

The following example shows how to see the access point authorization list:

Device# show ap auth-list

show ap auth-list ap-cert-policy

To verify if the APs have been authorized by the AP certificate policy, use the show ap auth-list ap-cert-policy

show ap auth-list ap-cert-policy

Syntax Description This command has no arguments.

Command Default Privileged EXEC (#)

 Command History
 Release
 Modification

 Cisco IOS XE Bengaluru 17.5.1
 This command was introduced.

Example

The following example shows how to verify if the APs have been authorized by the AP certificate policy:

Device# show ap auth-list ap-cert-policy

show ap auto-rf

To display the auto-RF settings for a Cisco lightweight access point, use the show ap auto-rf command.

show ap auto-rf dot11{24ghz | 5ghz | dual-band} cisco_ap

Syntax Description	24ghz	Specifies the 802.11b AP.			
	5ghzSpecifies the 802.11a AP.				
	dual-band	Specifies dual bands.			
Command Default	None				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.12.1.			
Usage Guidelines	The show ap auto-rf command output will not display neighbor AP names. The following example shows how to display auto-RF information for an access point:				
	Device# show ap auto-rf dotl1 24ghz AP1

show ap config slots

To display configuration settings for all the slots, use the show ap config slots command.

	show ap config slots		
Syntax Description	This command has no argumen	ts or keywords.	
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Cupertino 17.9.1	This command was introduc	eed.
Examples	The following example displays controller: Device# show ap config slo		or all the slots in a Cisco wire
	Cisco AP Identifier Cisco AP Name AP Country Code	:	40ce.24bf.8ca0 APA023.9FD8.EA22 IN
	Zero Wait DFS Parameters Zero Wait DFS Capable CAC Domain	:	Yes

show ap crash-file

To display the list of both crash and radio core dump files generated by lightweight access points, use the **show ap crash-file** command.

show ap crash-filechassis chassis-number <1-2>active standby

Syntax Description	chassis	Displays the chassis details.	
	chassis-number	Specifies the chassis number, either 1 or 2.	
	active	Specifies an active instance.	
	standby Specifies a standby instance.		
Command Default None			
Command Modes	lodes Any command mode		
Command History	Release		Modification
	Cisco IOS XE	Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the crash file generated by the access point:

Device# show ap crash-file

show ap dot11

To view 802.11a or 802.11b configuration information, use the show ap dot11 command.

show ap dot11 { 24ghz | 5ghz } { channel | coverage | group | load-info | logging | media-stream
| monitor | network | profile | summary | txpower | }

Syntax Description	24ghz	Specifies the 2.4-GHz band.	
	5ghz	Specifies the 5-GHz band.	
	6ghz	Specifies the 6-GHz band.	
	channel	Displays the automatic channel assignment configuration and statistics.	
	coverage	Displays the configuration and statistics for coverage hole detection.	
	group	Displays 802.11a or 802.11b Cisco radio RF grouping.Displays channel utilization and client count information fo all Cisco APs.Displays 802.11a or 802.11b RF event and performance logging.Display 802.11a or 802.11b Media Resource Reservation Control configurations.	
	load-info		
	logging		
	media-stream		
	monitor	Displays the 802.11a or 802.11b default Cisco radio monitoring.	
	network	Displays the 802.11a or 802.11b network configuration.	
	profile	Displays the 802.11a or 802.11b lightweight access point performance profiles.	
	receiver	Displays the configuration and statistics of the 802.11a or 802.11b receiver.	
	summary	Displays the 802.11a or 802.11b Cisco lightweight access point name, channel, and transmit level summary.	
	txpower	Displays the 802.11a or 802.11b automatic transmit power assignment.	
Command Default	None

show ap dot11 cleanair summary

To view CleanAir configurations for all 802.11a Cisco APs, use the **show ap dot11 cleanair summary** command.

show ap dot11{24ghz | 5ghz} cleanair summary

Syntax Description	24ghz	Specifies the 2.4-GHz band	
	5ghz	Specifies the 5-GHz band	
	cleanair summary	Summary of CleanAir configurations for all 802.11a	a Cisco APs
Command Default	None		
Command Modes	Any command mod	le	
Command History	Release		Modification
	Cisco IOS XE Gib	raltar 16.12.1	This command was introduced.

show ap dot11 dual-band summary

To view a brief summary of access points with dual-band radios, use the **show ap dot11 dual-band summary** command.

show ap dot11 dual-band summary

Syntax Description	This command has no keywords or arguments.
Command Default	None
Command Modes	Privileged EXEC
Command History	- Example
	•
	The following example shows how to view brief summary of tag names:

Device# show ap dot11 dual-band summary

show ap environment

	To see the AP	environment information of all APs, use the show ap environment command.
	show ap env	rironment [chassis {chassis-number active standby} R0]
Syntax Description	chassis-number	<i>r</i> Enter the chassis number as either 1 or 2.
	active R0	Active instance of the AP filters in Route-processor slot 0.
	standby R0	Standby instance of the AP filters in Route-processor slot 0.
Command Default	None	
Command Modes	Privileged EX	EC
Command History	Release	Modification
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the AP environment information:

Device# show ap environment

show ap filters active

To see the details of active AP filters, use the show ap filters active command.

Syntax Description	chassis-number Chassis number as either 1 or 2.					
	active R0	Active instance of the active AP filters in Route-processor slot 0.				
	standby R0	Standby instance of the active AP filters in Route-processor slot 0.				
Command Default	None					
Command Modes	Privileged EXEC					
Command History	Release	Modification				
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisc Gibraltar 16.10.1.	o IOS XI			

Examples

The following example shows how to see the details of the active AP filters for the active instance: Device# show ap filters active chassis active R0

show ap filters all

	To see the deta	ils of all AP filters, use the show ap filters all command.			
	show ap filte	rs all [chassis {chassis-number active standby} R0]			
Syntax Description	chassis-number Enter the chassis number as either 1 or 2.				
	active R0	Active instance of the AP filters in Route-processor slot 0.			
	standby R0	Standby instance of the AP filters in Route-processor slot 0.			
Command Default	None				
Command Modes	Privileged EXI	EC			
Command History	Release	Modification			
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.			

Examples

The following example shows how to see the details of all the AP filters for the active instance: Device# show ap filters all chassis active R0

show ap fra

To see the flexible radio assignment (FRA) configurations in APs, use the show ap fra command.

Syntax Description	chassis-number	Chassis number	r as either 1 or 2.	-
	active R0	Active instance	in Route-processor slot 0.	-
	standby R0	Standby instand 0.	e in Route-processor slot	
Command Default	None			
Command Modes	Privileged EXE	C		
Command History	Release		Modification	
	Cisco IOS XE Gibraltar 16.10.1		This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to see the FRA configurations in APs:

Device# show ap fra

show ap gps location

	To see the GPS location of all APs, use the show ap gps location command.				
	show ap gps	location [cha	ssis {chassis-number active standby}	R0]	
Syntax Description	chassis-number	Enter the chass	is number as either 1 or 2.		
	active R0	Active instance	of the AP filters in Route-processor slot 0.		
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot		
Command Default	None				
Command Modes	Privileged EXE	EC			
Command History	Release		Modification		
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced in a release Gibraltar 16.10.1.	earlier than Cisco IOS XE	

Examples

The following example shows how to see the GPS location of all APs:

Device# show ap gps location

show history channel interface dot11Radio all

To check channel change or trigger reason and history, use the show history channel interface dot11Radio all command.

0 60 Manual 0 149 DFS

	show history channel interface of	dot11Radio all				
Syntax Description	This command has no keywords	This command has no keywords or arguments.				
Command Default	None					
Command Modes	Privileged EXEC (#)					
Command History	Release	Modification	-			
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.	-			
Examples	This example shows how to check	c channel change or trigger reas	on and history:			
	Device# show history channel	interface dot11Radio all

show ap link-encryption

To display the link encryption status, use the show ap link-encryption command.

	show ap link	x-encryption [{ chassis { <i>chassis-number</i>	active standby}	R0 }]
Syntax Description	chassis-number	Chassis number as either 1 or 2.		
	active R0	Active instance in Route-processor slot 0.		
	standby R0	Standby instance in Route-processor slot 0.	-	
Command Default	None			
Command Modes	Any command	mode		
Command History	Release	Modification		
	Cisco IOS XE	Gibraltar 16.12.2s This command was introd	duced.	
	This example s	show how to display the link-encryption state	 us:	

Device# show Cisco IOS XE Gibraltar 16.12.2s link-encryption

show ap IIdp neighbors detail

To view the details of the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch.

show ap lldp neighbors detail

Syntax Description	This command has no arguments	
Command Default	None	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
Usage Guidelines	None	
	Example	

The following example shows how to view the details of AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch:

```

show ap master list

To see the AP master list, use the show ap master list command.

	show ap mas	ster list[{chassis	{chassis-number activ	re standby}	R0 }]
Syntax Description	chassis-number	r Chassis numbe	r as either 1 or 2.		
	active R0	Active instance	e in Route-processor slot 0.		
	standby R0	Standby instand 0.	ce in Route-processor slot		
Command Default	None				
Command Modes	Privileged EXI	EC			
Command History	Release		Modification		
	Cisco IOS XE	Gibraltar 16.10.1	This command was introdu Gibraltar 16.10.1.	iced in a release	e earlier than Cisco IOS XE

Examples

The following example shows how to see the AP master list:

Device# show ap master list

show ap multicast mom (multicast over multicast)

To confirm if the APs receive multicast to multicast (mom) traffic sent by the controller, using CAPWAP multicast group, use the **show ap multicast mom** command.

Syntax Description	This command has no keyword	s and arguments.				
Command Default	None					
Command Modes	Previleged EXEC					
Command History	Release	Modification				
	Cisco IOS XE Amsterdam 17.2	This command was introduced.				

This example shows how to confirm if the APs receive multicast to multicast traffic sent by the controller using CAPWAP multicast group:

Device# show ap multicast mom

AP Name	MOM-IP	TYPE MOM- STATUS
SS-E-1	TPv4	
	IFV4	Up
SS-E-2	IPv4	Up
9130E-r3-sw2-g1012	IPv4	Up

L

show ap name ble detail

To display BLE management details, use the show ap name ble detail command.

show ap name ap-name ble detail **Syntax Description** Specifies the name of the ap-name AP. None **Command Default** Privileged EXEC (#) **Command Modes Command History** Release Modification Cisco IOS XE Amsterdam 17.3.1 This command was introduced. None **Usage Guidelines**

Example

The following example shows how to display the BLE management details: Device(config) # show ap name *ap-name* ble detail

show ap name cablemodem

To see cable modem information of an AP, use the show ap name ap-name cablemodem command.

show ap name *ap-name* cablemodem [chassis {*chassis-number* | active | standby} R0]

Syntax Description	ap-name	Name of the Al	P.	
	chassis-number	Enter the chass	is number as either 1 or 2.	
	active R0	Active instance	of the AP filters in Route-processor slot 0.	
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot	
Command Default	None			
Command Modes	Privileged EXE	C		
Command History	Release		Modification	
	Cisco IOS XE O	Gibraltar 16.10.1	This command was introduced in a release Gibraltar 16.10.1.	earlier than Cisco IOS XE

Examples

The following example shows how to see cable modem information of an AP:

Device# show ap name my-ap cablemodem

show ap name config

To display common information and Ethernet VLAN tagging information for a specific Cisco lightweight access point, use the **show ap name config** command.

show ap name *ap-name* config {ethernet | general} **Syntax Description** ap-name Name of the Cisco lightweight access point. ethernet Displays Ethernet tagging configuration information for an access point. general Displays common information for an access point. None **Command Default Command Modes** Any command mode **Command History** Release Modification Cisco IOS XE Gibraltar 16.12.1 This command was introduced.

This example shows how to display Ethernet tagging information for an access point:

Device# show ap name AP01 config ethernet

VLAN Tagging Information for AP01

This example shows how to display common information for an access point:

Device# show ap name AP01 config general

Cisco AP Name	: AP01
Cisco AP Identifier	: 5
Country Code	: US - United States
Regulatory Domain Allowed by Country	: 802.11bg:-A 802.11a:-A

show ap name config slot

To display the configuration of a Cisco AP and also display the common information for a slot, use the **show ap name config slot** command.

	show ap name	Cisco-ap-name slot 0-3
Syntax Description	Cisco-ap-name	Specifies the name of the Cisco AP.
	0-3	Specifies the slot ID.
Command Default	None	
Command Modes	Any command m	node
Command History	Release	Modification
	Cisco IOS XE G	ibraltar 16.12.1 This command was introduced.

Example

This example shows how to display common information for a slot in an access point:

Device# show ap name Cisco-ap-name config slot 3

show ap name config ethernet

To see Ethernet related configuration information of an AP, use the **show ap name** *ap-name* **config ethernet** command.

show ap name ap-name config ethernet [chassis {chassis-number | active | standby} R0]

Syntax Description	ap-name	Name of the Al	Р.	
	chassis-number	Enter the chass	is number as either 1 or 2.	
	active R0	Active instance	e of the AP filters in Route-processor slot 0.	
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot	
Command Default	None			
Command Modes	Privileged EXE	C		
Command History	Release		Modification	
	Cisco IOS XE O	Gibraltar 16.10.1	This command was introduced in a release Gibraltar 16.10.1.	earlier than Cisco IOS XE

Examples

The following example shows how to see Ethernet related configuration information of an AP:

Device# show ap name my-ap config ethernet

show ap name dot11

To display 802.11a or 802.11b configuration information that corresponds to specific Cisco lightweight access points, use the **show ap name dot11** command.

show ap name *ap-name* dot11 {24ghz | 5ghz } {SI | airtime-fairness | call-control | cleanair radio-reset | voice }

			_
Syntax Description	ap-name	Name of the Cisco lightweight access point.	
	24ghz	Displays the 2.4-GHz band.	
	5ghz	Displays the 5-GHz band.	
	SI	Displays the SI configurations.	
	airtime-fairness	Displays the stats of 24Ghz or 5Ghz airtime-fairness.	
	call-control	Displays the call control information.	
	radio-reset	Displays radio-reset.	
	slot	Displays slot information.	
	voice	Displays voice information.	-
Command Default	None		
Command Modes	Any command me	ode	
Command History	Release	Modification	
	Cisco IOS XE Gi	braltar 16.12.2s This command was introduced.	
	This example sho	ws how to display the cleanair air-quality that is assoc	ciated with the access point:

Device# show ap name test-ap dot11 24ghz cleanair air-quality chassis active r0

show ap name environment

To see the AP environment information of an AP, use the **show ap name** ap-name environment command.

show ap name *ap-name* environment [chassis {*chassis-number* | active | standby} R0]

Syntax Description	ap-name	Name of the Al	Р.	
	chassis-number	Enter the chass		
	active R0	Active instance	e of the AP filters in Route-processor slot 0.	
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot	
Command Default	None			
Command Modes	Privileged EXE	EC		
Command History	Release		Modification	
	Cisco IOS XE 0	Gibraltar 16.10.1	This command was introduced in a release of Gibraltar 16.10.1.	earlier than Cisco IOS XE

Examples

The following example shows how to see the AP environment information of an AP:

Device# show ap name my-ap environment

show ap name gps location

To see the GPS location of the AP, use the show ap name gps location command.

show ap name *ap-name* gps location [{*chassis-number* | active | standby}R0

Syntax Description	ap-name	Name of the A	ccess Point			
	gps	See the GPS information of a Cisco AP				
	location	Shows the Mes	h linktest data			
	chassis-number	Enter the chass	is number as either 1 or 2.			
	active R0	Active instance 0.	e of the active AP filters in Route-processor slot			
	standby R0	Standby instand	ce of the configuration in Route-processor slot 0.			
Command Default	None					
Command Modes	Privileged EXE	EC				
Command History	Release		Modification			
	Cisco IOS XE O	Gibraltar 16.10.1	This command was introduced in a release earlied Gibraltar 16.10.1.	er than Cisco IOS XE		

Examples

The following example shows how to see the GPS location of an AP:

Device# show ap name mesh-profile-name gps location

show ap name mesh backhaul

To see mesh backhaul statistics of an AP, use the show ap name ap-name mesh backhaul command.

show ap name ap-name mesh backhaul [chassis {chassis-number | active | standby} R0]

Syntax Description	chassis-number	Enter the chass	is number as either 1 or 2.	
	active R0	Active instance	e of the AP filters in Route-processor slot 0.	
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot	
Command Default	None			
Command Modes	Privileged EXE	C		
Command History	Release		Modification	
	Cisco IOS XE O	Gibraltar 16.10.1	This command was introduced in a release	earlier than Cisco IOS XE

Examples

The following example shows how to see mesh backhaul statistics of an AP:

Gibraltar 16.10.1.

Device# show ap name mymeshap mesh backhaul

show ap name mesh bhrate

To see mesh bachkhaul data rate for an AP, use the **show ap name** *ap-name* **mesh bhrate** command.

show ap name *ap-name* mesh bhrate [chassis {*chassis-number* | active | standby} R0]

ap-name	Name of the AP.
chassis-number	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see mesh bachkhaul data rate for an AP:

Device# show ap name mymeshap mesh bhrate

show ap name mesh linktest

To see the mesh linktest data, use the show ap name mesh linktest data command.

show ap name ap-name mesh linktest data dest-mac [chassis {chassis-number | active | standby}R0]

Syntax Description	ap-name	Name of the Access Point					
	linktest	Shows the Mesh linktest					
	data	Shows the Mesh linktest data					
	dest-mac	Enter the AP MAC address.					
	chassis-number	chassis-number Enter the chassis number as either 1 or 2.					
	active R0	Active instance of the configuration in Route-processor slot 0.					
	standby R0	Standby instance of the configuration in Route-processor slot 0.					
Command Default	None						
Command Modes	Privileged EXE	Privileged EXEC					
Command History	Release	Modification					
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.					

Examples

The following example shows how to see the mesh linktest data of an AP:

Device# show ap name mesh-profile-namemesh linktest data 83-88-15-0C-83-72

show ap name mesh path

	To see information about the mesh AP's path, use the show ap name ap-name mesh path command.					
	show ap nar	ne ap-name mesh path [chassis {chassis-number active standby} R0]				
Syntax Description	chassis-number	r Enter the chassis number as either 1 or 2.				
	active R0	Active instance of the AP filters in Route-processor slot 0.				
	standby R0	Standby instance of the AP filters in Route-processor slot 0.				
Command Default	None					
Command Modes	Privileged EXEC					
Command History	Release	Modification				
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.				

Examples

The following example shows how to see information about the mesh AP's path:

Device# show ap name mymeshap mesh path

show ap name mesh stats

To see mesh statistics, use the show ap name ap-name mesh stats command.

show ap name ap-name[{packet error | queue | security}]

Syntax Description	ap-name	Name of the AP.					
	packet error	Mesh packet error statistics.					
	queue	Mesh queue statistics.					
	security	Mesh security statistics.					
	chassis-number	Enter the chassis number as either 1 or 2.					
	active R0	Active instance of the AP filters in Route-processor slot 0.					
	standby R0	Standby instance of the AP filters in Route-processor slot 0.					
Command Default	None						
Command Modes	Privileged EXEC						
Command History	Release	Modification					
	Cisco IOS XE	Gibraltar 16.10.1 This command was introduced in a release of Gibraltar 16.10.1.	earlier than Cisco IOS XE				

Examples

The following example shows how to see mesh statistics:

Device# show ap name mymeshap mesh stats

show ap name wlan

To display the Basic Service Set Identifier (BSSID) value for each WLAN defined on an access point and to display WLAN statistics, use the **show ap name wlan** command.

show ap name *ap-name* wlan {dot11 {24ghz | 5ghz} | statistic} **Syntax Description** ap-name Name of the Cisco lightweight access point. dot11 Displays 802.11 parameters. 24ghz Displays 802.11b network settings. 5ghz Displays 802.11a network settings. statistic Displays WLAN statistics. None **Command Default** Any command mode **Command Modes Command History** Modification Release Cisco IOS XE Gibraltar 16.12.1 This command was introduced. This example shows how to display BSSID information of an access point in an 802.11b network: Device# show ap name AP01 wlan dot11 24ghz Site Name : default-group Site Description WLAN ID Interface BSSID -----default 00:00:20:00:02:00 1 12 default 00:00:20:00:02:0b This example shows how to display WLAN statistics for an access point: Device# show ap name AP01 wlan statistic WLAN ID : 1

WLAN Profile Name : maria-open EAP Id Request Msg Timeouts : 0 EAP Id Request Msg Timeouts Failures : 0 EAP Request Msg Timeouts Failures : 0 EAP Request Msg Timeouts Failures : 0 EAP Key Msg Timeouts Failures : 0 WLAN ID : 12 WLAN Profile Name : 24

EAP Id Request Msg Timeouts: 0EAP Id Request Msg Timeouts Failures: 0EAP Request Msg Timeouts: 0EAP Request Msg Timeouts Failures: 0EAP Key Msg Timeouts: 0EAP Key Msg Timeouts Failures: 0

show ap profile

To see overall status of Hyperlocation for an AP profile, use the show ap profile command.

show ap profile profile-name {detailed | hyperlocation {ble-beacon | detail | summary}} [chassis
{chassis-number | active | standby} R0]

Syntax Description	profile-name	AP profile nam					
	detailed	Shows the detailed parameters of the AP join profile.					
	hyperlocation	Shows Hyperlo	ocation information for the AP profile.				
	ble-beacon	Show the list of	Configured BLE beacons for the AP profile.				
	detail	Shows detailed	status of Hyperlocation for the AP profile.				
	summary	Shows overall s	status of Hyperlocation for the AP profile				
	chassis-number	Chassis numbe	r as either 1 or 2.				
	active R0	Active instance	e in Route-processor slot 0.				
	standby R0	Standby instand	ce in Route-processor slot 0.				
Command Default	None						
Command Modes	Privileged EXE	EC					
Command History	Release		Modification				
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced in a release Gibraltar 16.10.1.	earlier than Cisco IOS XE			
Examples	The following	example shows h	now to see the overall status of Hyperlocation	1 for an AP profile:			
	Device# show ap profile my-ap-profile detailed						

show ap rf-profile name

To display the selected ap RF-Profile details, use the show ap rf-profile name command.

show ap rf-profile name profile-name detail

Syntax Description		Name of the RF-Profile.
Syntax Description	profile-name	Name of the KF-Flome.
	detail	Show detail of selected RF Profile.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Dena	li 16.3.1 This command was introduced.
Usage Guidelines	None	
	This example shows	how to display the details of the selected RF-Profile.

show ap tag sources

To see AP tag sources with priorities, use the show ap tag sources command.

	show ap tag	sources [chass	sis {chassis-number active standby}	R0]			
Syntax Description	chassis-number Chassis number as either 1 or 2.						
	active R0	Active instance of the AP filters in Route-processor slot 0.					
	standby R0	Standby instand 0.	ce of the AP filters in Route-processor slot	-			
Command Default	None						
Command Modes	Privileged EXI	EC					
Command History	Release		Modification				
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced in a release Gibraltar 16.10.1.	e earlier than Cisco IOS XE			

Examples

The following example shows how to see the AP tag sources with priorities for the active instance: Device# show ap tag sources chassis active R0

show ap tag summary

To view brief summary of tag names, use the show ap tag summary command.

	show ap tag summary	
Syntax Description	This command has no keyword	ls or arguments.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to view brief summary of tag names:

Device# show ap tag summary

show ap timezone

To check the AP timezone information, use the show ap timezone command.

show	ap	timezone
------	----	----------

Syntax Description	This command has no keywords and arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	Release	Modification			
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.			
Examples	The following example shows h	ow to check the AP timezone inf			

Device# show ap timezone

AP	Name	Status	Offsets(h/m)
AP:	1	Disabled	0:0
AP2	2	Enabled	1:0

show ap upgrade

To see AP upgrade information, use the show ap upgrade command.

show ap upgrade [{name ap-upgrade-report-name | summary | chassis {chassis-number | active |
standby}}]

Syntax Description	name ap-upgrade-report-name	Enter the name of the AP upgrade report.
	summary	Shows a summary of AP upgrade information.
	chassis-number	Enter the chassis number as either 1 or 2.
	active R0	Active instance in Route-processor slot 0.
	standby R0	Standby instance in Route-processor slot 0.
Command Default	- None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see a summary of the AP upgrade information:

Device# show ap upgrade summary

show arp

To view the ARP table, use the show arp command.

	show arp	
Syntax Description	arp Shows ARP table	_
Command Modes	User EXEC (>)	
	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibralt	tar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	The following examp	ple shows a sample output of the command:
	Device# show arp	
	Address Age (min) 9.11.8.1 9.11.32.111	Hardware Addr 0 84:80:2D:A0:D2:E6 0 3C:77:E6:02:33:3F

show arp summary

To see the ARP table summary, use the show arp summary command.

	show arp summary	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the ARP table summary:

Device# show arp summary

show ap upgrade site

To view the upgrade site-related infromation, use the show ap upgrade site command.

show ap upgrade site [summary]

Syntax Description	summary (Option	nal) Displays a summary of access	point (AP) upgrade on individual sites.
Command Default	None		
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification	
	Cisco IOS XE Cupe	rtino 17.9.1 This command was introduced.	
Examples	The following exam	ple shows how to view the upgrad	de site-related infromation:
	Device# show ap u	pgrade site	
		upgrade report data	
	Source controller	oller: Controller2	
	AP image upgrade		
	Operation: N+1 mo		
	Site Tag	Sta	itus
	sitel		Progress
	AP upgrade report	s linked to these site-filte	ers
	Start time	Operation type	Report name
	01/30/2022 10:34:	 36 IST AP image upgrade/move	e CLI AP_upgrade_to_Controller2_3

L

show avc client

To display information about top number of applications, use the **show avc client** command in privileged EXEC mode.

 show avc client client-mac top n application [aggregate | upstream | downstream]

 Syntax Description
 client client-mac Specifies the client MAC address.

 top n application Specifies the number of top "N" applications for the given client.

 Command Default
 No default behavior or values.

 Privileged EXEC
 Modification

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.12.1
 This command was introduced.

The following is sample output from the show avc client command:

Device# sh avc client 0040.96ae.65ec top 10 application aggregate

Cumulative Stats:

No.	AppName	Packet-Count	Byte-Count	AvgPkt-Size	usage%

show avc wlan

To display information about top applications and users using the applications, use the **show avc wlan** command in privileged EXEC mode.

	show avc wl	an ssid top n application [aggregate upstream downstream]
Syntax Description	wlan ssid	Specifies the Service Set IDentifier (SSID) for WLAN.
	top n applica	ation Specifies the number of top "N" applications.
Command Default	No default beha	avior or values.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	Cisco IOS XE	Gibraltar 16.12.1 This command was introduced.

The following is sample output from the **show avc wlan** command:

 ${\tt Device} \#$ show avc wlan Lobby_WLAN top 10 application aggregate

show chassis

	show cha	ssis [{12 detail	mode neighbors ha-status {active local st	andby}}]
Syntax Description	{1 2}	Chassis number as 1	or 2 to see the information about the relevant chassis.	
	detail	Shows detailed infor	mation about the chassis.	
	mode	Shows information a	about the chassis mode.	
	neighbors	Shows information a	bout the chassis neighbors.	
	ha-status	Option to see inform	nation about the High Availability (HA) status.	
	active	Shows HA status on	the chassis that is in active state.	
	local	Shows HA status on	the local.	
	standby	Shows HA status on	the chassis that is in standby state.	
Command Default	None			
Command Modes	Privileged	EXEC		
Command History	Release		Modification	
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced in a release earlier th Gibraltar 16.10.1.	an Cisco IOS XE

Examples

I

The following example shows how to see the HA status on the active chassis:

Device# show chassis ha-status active

show checkpoint

To display information about the Checkpoint Facility (CF) subsystem, use the show checkpoint command.

show checkpoint { clients client-ID < 0-381 > | entities entity - ID < 1-7 > | statistics buffer-usage }

		This comman	d was introduced
Command History	Release	Modification	
Command Modes	Privileged EX	EC	
Command Default	None		
	buffer-usage	Displays the checkpoint statistics of clients using large number of buffer	S
	statistics	Displays detailed information about checkpoint statistics.	
	entities	Displays detailed information about checkpoint entities.	
Syntax Description	clients	Displays detailed information about checkpoint clients.	

This example shows how to display all the CF clients.

IP-SGT Active Bindings Summary

Total number of LOCAL bindings = 9 Total number of active bindings = 9

show cts role-based counters

To clear all role-based counters on the AP, use the show cts role-based counters command:

show cts role-based counters

Syntax Description	This	This command has no arguments or keywords.						
Command Default	None							
Command Modes	Privil	eged	EXEC (#)					
Command History	Rele	ase		Modificati	on			
	Cisco 17.1.		sterdam	This comn introduced				
Examples			ing example s			used counters of	n the AP:	
	From	To			SW-Permitt	HW-Permitt	SW-Monitor	HW-Monitor
	*	*	0	0	0	178837189	0	 0
	16	0	0	0	0	39250482	0	0
	16	16	0	52835	0	0	0	0
	17	16	0	0	0	0	0	0

show flexconnect office-extend diagnostics

To display the results of the network diagnostics for all flexconnect OfficeExtend AP, use the **show flexconnect office-extend diagnostics** command.

show flexconnect office-extend diagnostics

Syntax Description	This command has no keyword	ls or arguments.			
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	Release	Modification			
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.			
Usage Guidelines	To get periodic details for latence the ap profile, as given in the fo		m) ensure that you enable link-latency under		
	Device(config)# ap profile default-ap-profile Device(config-ap-profile)# link-latency				
	If the above configuration is not in place, you will only see the following output:				
	Summary of OfficeExtend AP Link Latency				
	CAPWAP Latency Heartbeat				
	Current: current latency (ms) Min: minimum latency (ms) Max: maximum latency (ms)				
	Link Test

	ap-18 Disabled 0		12/04/20 11:08:58 16 3		
Examples	This following example shows how to display the network diagnostics information for OfficeExtend AP.				
	Device# show flexconnect office-extend diagnostics				
	Summary of OfficeExtend AP Link Latency				
	CAPWAP Latency Heartbeat				
	Current: current latency (r	ns)			

Min: minimum latency (ms) Max: maximum latency (ms) Link Test Upload: DTLS Upload (Mbps) Latency: DTLS Link Latency (ms) Jitter: DTLS Link Jitter (ms) AP Name Last Latency Heartbeat from AP Current Max Min Last Link Test Run Upload Latency Jitter ap-18 1 minute 1 second 0 0 0 12/04/20 09:19:48 8 2 0

show flow exporter

To display flow exporter status and statistics, use the **show flow exporter** command in privileged EXEC mode.

show flow exporter [{export-ids netflow-v9|[name] exporter-name [{statistics|templates}]|statistics
| templates}]

Syntax Description			
Syntax Description	export-ids netflow-v9	(Optional) Displays the NetFlow Version 9 export fields that can be exported and their IDs.	
	name (Optional) Specifies the name of a flow exporter.		
	<i>exporter-name</i> (Optional) Name of a flow exporter that was previously configured.		
	statistics (Optional) Displays statistics for all flow exporters or for the specified flow exporter		
	templates	(Optional) Displays template information for all flow exporters or for the specifie flow exporter.	
Command Default	None		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar	16.12.1 This command was introduced.	
	The following example displays the status and statistics for all of the flow exporters configured on a device:		
		displays the status and statistics for all of the flow exporters configured on	

Table 9: show flow exporter Field Descriptions

Field	Description
Flow Exporter	The name of the flow exporter that you configured.

Field	Description
Description	The description that you configured for the exporter, or the default description User defined.
Transport Configuration	The transport configuration fields for this exporter.
Destination IP address	The IP address of the destination host.
Source IP address	The source IP address used by the exported packets.
Transport Protocol	The transport layer protocol used by the exported packets.
Destination Port	The destination UDP port to which the exported packets are sent.
Source Port	The source UDP port from which the exported packets are sent.
DSCP	The differentiated services code point (DSCP) value.
TTL	The time-to-live value.
Output Features	Specifies whether the output-features command, which causes the output features to be run on Flexible NetFlow export packets, has been used or not.

The following example displays the status and statistics for all of the flow exporters configured on a device:

```
Device# show flow exporter name FLOW-EXPORTER-1 statistics

Flow Exporter FLOW-EXPORTER-1:

Packet send statistics (last cleared 2w6d ago):

Successfully sent: 0 (0 bytes)
```

show flow interface

To display the configuration and status for an interface, use the **show flow interface** command in privileged EXEC mode.

show flow interface [type number]

Syntax Description	type	(Optional) The t information.	type of interface on which you want	to display accounting configuration	
	<i>number</i> (Optional) The number of the interface on which you want to display accounting configuration information.				
Command Modes	Privilege	d EXEC			
Command History	Release		Modification		
	Cisco IO	S XE Gibraltar 16	5.12.1 This command was introduce	d.	
Examples	The follo	wing example dis	plays the accounting configuration	on Ethernet interfaces 0/0 and 0/1:	
	Device#	show flow inter	rface gigabitethernet1/0/1		
	Device#		FLOW-MONITOR-1 Output on rface gigabitethernet1/0/2		
		ce Ethernet0/0 monitor: direction: traffic(ip):	FLOW-MONITOR-1 Input sampler SAMPLER-2#		

The table below describes the significant fields shown in the display.

Table 10: show flow interface Field Descriptions

Field	Description
Interface	The interface to which the information applies.
monitor	The name of the flow monitor that is configured on the interface.
direction:	The direction of traffic that is being monitored by the flow monitor.
	The possible values are:
	• Input—Traffic is being received by the interface.
	• Output—Traffic is being transmitted by the interface.

Field	Description
traffic(ip)	Indicates if the flow monitor is in normal mode or sampler mode.
	The possible values are:
	• on—The flow monitor is in normal mode.
	• sampler—The flow monitor is in sampler mode (the name of the sampler will be included in the display).

show flow monitor

To display the status and statistics for a flow monitor, use the **show flow monitor** command in privileged EXEC mode.

Syntax Description	name	(Optional) Specifies the name of a flow monitor.			
	monitor-name	(Optional) Name of a flow monitor that was previously configured.			
	cache	cache(Optional) Displays the contents of the cache for the flow monitor.format(Optional) Specifies the use of one of the format options for formatting the display output.			
	format				
	CSV	(Optional) Displays the flow monitor cache contents in comma-separated variables (CSV) format.			
	record (Optional) Displays the flow monitor cache contents in record format.				
	table (Optional) Displays the flow monitor cache contents in table format.				
	statistics	statistics (Optional) Displays the statistics for the flow monitor.			
Command Modes	Privileged EXE	С

This table describes the significant fields shown in the display.

L

Field	Description	
Flow Monitor	Name of the flow monitor that you configured.	
Description	Description that you configured or the monitor, or the default description User defined.	
Flow Record	Flow record assigned to the flow monitor.	
Flow Exporter	Exporters that are assigned to the flow monitor.	
Cache	Information about the cache for the flow monitor.	
Туре	Flow monitor cache type. The value is always normal, as it is the only supported cache type.	
Status	Status of the flow monitor cache.	
	The possible values are:	
	• allocated—The cache is allocated.	
	• being deleted—The cache is being deleted.	
	• not allocated—The cache is not allocated.	
Size	Current cache size.	
Inactive Timeout	Current value for the inactive timeout in seconds.	
Active Timeout	Current value for the active timeout in seconds.	

Table 11: show flow monitor monitor-name Field Descriptions

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1:

This table describes the significant fields shown in the display.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1 in a table format:

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-IPv6 (the cache contains IPv6 data) in record format:

The following example displays the status and statistics for a flow monitor:

show flow record

To display the status and statistics for a flow record, use the **show flow record** command in privileged EXEC mode.

show flow record [{[name] record-name}]

name (Optional) Specifies the name of a flow record.		
record-name (O	otional) Name of a user-defined flow record that was previously configured.	
None		
Privileged EXEC		
Release	Modification	
Cisco IOS XE G	oraltar 16.12.1 This command was introduced.

match transport source-port
collect interface input
```

show interfaces

To display the administrative and operational status of all interfaces or for a specified interface, use the **show interfaces** command in privileged EXEC mode.

show interfaces [{interface-id | vlan vlan-id}] [{accounting | capabilities [module number] | debounce
| description | etherchannel | flowcontrol | private-vlan mapping | pruning | stats | status [{err-disabled}]
| trunk}]

Syntax Description	interface-id	(Optional) ID of the interface. Valid interfaces include physical ports (including type, stack member , module, and port number) and port channels. The port channel range is 1 to 48.
	vlan vlan-id	(Optional) VLAN identification. The range is 1 to 4094.
	accounting	(Optional) Displays accounting information on the interface, including active protocols and input and output packets and octets.
		Note The display shows only packets processed in software; hardware-switched packets do not appear.
	capabilities	(Optional) Displays the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.
	module number	(Optional) Displays capabilities of all interfaces on the switch or specified stack member.
		This option is not available if you entered a specific interface ID.
	description	(Optional) Displays the administrative status and description set for an interface.
	etherchannel	(Optional) Displays interface EtherChannel information.
	flowcontrol	(Optional) Displays interface flow control information.
	private-vlan mapping	(Optional) Displays private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is not available if the switch is running the LAN base feature set.
	pruning	(Optional) Displays trunk VTP pruning information for the interface.
	stats	(Optional) Displays the input and output packets by switching the path for the interface.
	status	(Optional) Displays the status of the interface. A status of unsupported in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.

	own disablad	(Ontional) Diaplays interfaces in an array dischlad state			
	err-disabled	(Optional) Displays interfaces in an error-disabled state.(Optional) Displays interface trunk information. If you do not specify an interface, only information for active trunking ports appears.			
	trunk				
	Note Though visible in the comm	Though visible in the command-line help strings, the crb , fair-queue , irb , mac-accounting , precedence ,			
		t, and shape keywords are not supported.			
Command Default	None				
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.12.	1 This command was introduced.			
Usage Guidelines	The show interfaces capabilitie	es command with different keywords has these results:			
-	• Use the show interface capabilities module <i>number</i> command to display the capabilities of all interfaces on that in the stack. If there is no with that module number in the stack, there is no output.				
	• Use the show interfaces <i>interface-id</i> capabilities to display the capabilities of the specified interface.				
	• Use the show interfaces capabilities (with no module number or interface ID) to display the capabilities of all interfaces in the stack.				
	This is an example of output fro 3:	om the show interfaces command for an interface on stack member			
	Internet address is 20.61.1 MTU 1500 bytes, BW 1000000 reliability 255/255, txload Encapsulation ARPA, loopbad Keepalive set (10 sec) Unknown, Unknown, media typ output flow-control is unsu ARP type: ARPA, ARP Timeout Last input 03:06:36, output Last clearing of "show inter	<pre>he protocol is up ht port, address is 0000.5e00.0101 (bia 0000.0000.0000) 1.12/16 Kbit/sec, DLY 10 usec, d 1/255, rxload 1/255 ck not set pe is unknown media type apported, input flow-control is unsupported t 04:00:00 t 00:00:07, output hang never erface" counters never e/max/drops/flushes); Total output drops: 0 ax) /sec, 0 packets/sec s/sec, 0 packets/sec 0 no buffer P multicasts) tles rame, 0 overrun, 0 ignored</pre>			

0 output errors, 0 collisions, 1 interface resets 0 unknown protocol drops 0 babbles, 0 late collision, 0 deferred 0 lost carrier, 0 no carrier, 0 pause output 0 output buffer failures, 0 output buffers swapped out

This is an example of output from the **show interfaces** *interface* **description** command when the interface has been described as *Connects to Marketing* by using the **description** interface configuration command:

Device# show	interfaces	gigabitethernet1/0/2	description	on	
Interface		Status	Protocol	Descript	Lon
Gi1/0/2		up	down	Connects	to Marketing

This is an example of output from the **show interfaces** *interface-id* **pruning** command when pruning is enabled in the VTP domain:

```
Device# show interfaces gigabitethernet1/0/2 pruning

Port Vlans pruned for lack of request by neighbor

Gi1/0/2 3,4

Port Vlans traffic requested of neighbor

Gi1/0/2 1-3
```

This is an example of output from the show interfaces stats command for a specified VLAN interface:

Device# show interfaces vlan 1 stats						
Switching path	Pkts In	Chars In	Pkts Out	Chars Out		
Processor	1165354	136205310	570800	91731594		
Route cache	0	0	0	0		
Total	1165354	136205310	570800	91731594		

These are examples of output from the **show interfaces status** command for a specific interface when private VLANs are configured. Port 22 is configured as a private-VLAN host port. It is associated with primary VLAN 20 and secondary VLAN 25:

Device#	show interf	aces gigabite	thernet1	/0/22 status		
Port	Name	Status	Vlan	Duplex	Speed	Туре
Gi1/0/22	2	connected	20,25	a-full	a-100	10/100BaseTX

In this example, port 20 is configured as a private-VLAN promiscuous port. The display shows only the primary VLAN 20:

Device#	show interf	faces gigabite	thernet	1/0/20 status		
Port	Name	Status	Vlan	Duplex	Speed	Туре
Gi1/0/20)	connected	20	a-full	a-100	10/100BaseTX

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state:

Device#	show inte:	rfaces status er	r-disabled
Port	Name	Status	Reason
Gi1/0/2		err-disabled	gbic-invalid
Gi2/0/3		err-disabled	dtp-flap

This is an example of output from the **show interfaces** *interface-id* **pruning** command:

Device# **show interfaces gigabitethernet1/0/2 pruning** Port Vlans pruned for lack of request by neighbor

Device# sho Port Gi1/0/1	w interfaces giga Mode on	bitethernet1/0/ Encapsulation 802.1q	1 trunk Status other	Native vlan 10
Port Gi1/0/1	Vlans allowed on none	trunk		
Port Gi1/0/1	Vlans allowed an none	d active in man	agement domain	
Port Gil/0/1	Vlans in spannin none	g tree forwardi	ng state and n	ot pruned

show install package

To view the install package details, use the show install package command.

	show install package	
Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how to view the install package details:

Device#show install package

show install rollback

To view the package information for a rollback point, use the show install rollback command.

	show install rollback	
Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how to view the package information for a rollback point:

Device#show install rollback

show install summary

To view the install manager summary, use the show install summary command.

	show install summary		
Syntax Description	This command has no arguments.		
Command Default	None		
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.	

Example

This example shows how to view the install summary information:

Device#show install summary

show ip

To view the IP information, use the show ip command.

access-lists	Lists the IP access lists
interface	Displays the IP interface status and configuration
brief	Displays the brief summary of IP status and configuration
route	Displays the IP routing table
tunnel	Displays the IP tunnel information
eogre	Displays the EoGRE tunnel information
domain	Displays the EoGRE tunnel domain information
forwarding-table	Displays the EoGRE tunnel encapsulation and decapsulation information
gateway	Displays the EoGRE tunnel gateway information

show Idap server

To view the LDAP server state information and various other counters for the server, use the **show ldap** server command.

	show ldap server		
Syntax Description	This command has no arguments.		
Command Default	None		
Command Modes	Global configuration		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

This example shows how to view the LDAP server state information and various other counters for the server:

Device# show ldap server

show license air entities

To display information about active APs, new APs, and deleted APs in connection with a Cisco Catalyst Wireless Controller, enter the **show license air entities** command in privileged EXEC mode.

show license air entities { added | bulk | deleted | no-change | summary }

Syntax Description	addedDisplays the list of newly reported APs. A newly added AP is one that was not listed in the last RUM report that the product instance generated.			
	bulk Displays the list of all currently active APs for the product instance			
	deleted	1 5	eted APs. A delete AP is one that was listed as active APs in the last RUM instance generated but is now disconnected.	
	no-change	Displays the list of AP	s where there has been no change in the status since the last report.	
	summary	Displays the RUM report generation particulars and information about active APs, new APs, and deleted APs, and indicates by when an acknowledgement (ACK) must be installed on the product instance.		
Command Modes	Privileged E	EXEC		
Command History	Release		Modification	
	Cisco IOS	XE Gibraltar 16.10.1	This command was introduced.	
	Cisco IOS	XE Amsterdam 17.3.2a	Command output was updated to display information relating to Smart Licensing Using Policy.	
Usage Guidelines	Smart Licensing : If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.			
	Smart Licensing Using Policy : If the software version on the device is Cisco IOS XE Amsterdam 1 a later release, command output displays fields pertinent to Smart Licensing Using Policy.			
Examples	For information about fields shown in the display for the show license air entities summary command, see Table 12: show license air entities summary Field Descriptions, on page 734.			
	For sample output, see			
	 #unique_587 unique_587_Connect_42_section_gtj_hjm_frb 			
	• show license air entities summary on a Cisco Catalyst 9800-L Wireless Controller, on page 735			
	Table 12: show license air entities summary Field Descriptions			
	Field		Description	

When the last RUM report was generated, in the local time zone.

Last license report time

L

Field	Description
Upcoming license report time	When the next RUM report will be generated, in the local time zone.
No. of APs active at last report	Total number of APs listed as active APs in the last RUM report that was generated.
No. of APs newly added with last report	Number of new APs in the last RUM report that was generated. For example, if the number displayed here is 2, this means the <i>last but one</i> RUM report did not list these 2 APs, and are therefore newly added in the last RUM report that the product instance generated.
No. of APs deleted with last report	Total number of APs deleted as of the last RUM report that was generated.
	For example, if the number displayed here is 2, this means 2 APs were in the <i>last but one</i> RUM report, but were deleted in the <i>last</i> RUM report was generated.

show license air entities summary on a Cisco Catalyst 9800-L Wireless Controller

The following is sample output on a Cisco Catalyst 9800-L Wireless Controller. Note how the output on this device does not display the License Ack expected within field. Reporting requirements on all Cisco Catalyst Wireless Controllers (except Cisco Catalyst 9800-CL Wireless Controller) are as per the standard guidelines in the Smart Licensing Using Policy environment: Reporting is required if the policy (**show license status**) or system messages indicate that it is.

```
Device# show license air entities summary
```

show license all

To display all licensing information enter the **show license all** command in Privileged EXEC mode. This command displays status, authorization, UDI, and usage information, all combined.

show license all

usage, on page 786 command.

Syntax Description	This command has no keywords or arguments		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to display information relating to Smart Licensing Using Policy.	
		Command output no longer displays Smart Account and Virtual account information.	
	Cisco IOS XE Cupertino 17.7.1	The output of the command was enhanced to display the following information:	
		• RUM report statistics, in section Usage Report Summary.	
		• Smart Account and Virtual Account information, in section Account Information.	
Usage Guidelines	Smart Licensing : If the software version release, command output displays fields	on on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier s pertinent to Smart Licensing.	
	Smart Licensing Using Policy : If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2 or a later release, command output displays fields pertinent to Smart Licensing Using Policy.		
	This command concatenates the output of other show license commands, enabling you to display different kinds of licensing information together. For field descriptions, refer to the corresponding commands in the links provided below.		
	The Smart Licensing Status and Acc corresponds with the output of the show	ount Information sections of the show license all command v license status, on page 757 command.	
	The License Usage section of the show	license all command corresponds with the output of the show license	

The Product Information section of the show license all command corresponds with the output of the show license udi, on page 785 command.

The Agent Version section of the **show license all** command displays the Smart Agent version and is available only in this command.

The License Authorizations section of the show license all command corresponds with the output of the show license authorization, on page 742 command.

The Usage Report Summary section of the show license all command corresponds with the output in the show license tech, on page 770 command.

Examples

For sample output, see:

Device# show license all

Example: show license all (Cisco Catalyst 9800-CL Wireless Controllers, 17.7.1), on page 737

Example: show license all (Cisco Catalyst 9800-CL Wireless Controllers), on page 738

Example: show license all (Cisco Catalyst 9800-CL Wireless Controllers, 17.7.1)

The following is sample output of the **show license all** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1. Note the addition of the two new sections in this release: Account Information and Usage Report Summary:

show license authorization

To display authorization-related information for (export-controlled and enforced) licenses, enter the **show license authorization** command in privileged EXEC mode.

show license authorization

Syntax Description	This command has no keywords or arguments		
Command Modes	Privileged EXEC		
Command History	Release	Modification	_
	Cisco IOS XE Amsterdam 17.3.2a	This command was introduced.	_
Usage Guidelines	Only export-controlled or enforce	d licenses require authorization	n before use.
	While there are no export-controlle this command to display migrated		co Catalyst Wireless Controllers, you can use
	Examples		
	See Table 13: show license author in the display.	ization Field Descriptions, on J	page 743 for information about fields shown

See show license authorization Displaying Migrated Authorization Code, on page 745 for sample output.

Field		Description
Overall Status	I StatusHeader for UDI information for all product instances in the set-up, th authorization that is installed, and configuration errors, if any.In a High Availability set-up, all UDIs in the set-up are listed.	
	Active: Status:	The active product instance UDI, followed by the status of the authorization code installation for this UDI. If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.
	Standby: Status:	The standby product instance UDI, followed by the status of the authorization code installation for this UDI.If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.
	Member: Status:	The member product instance UDI, followed by the status of the authorization code installation for this UDI.If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.
	ERROR:	Configuration errors or discrepancies in the High Availability set-up, if any.

Table 13: show license authorization Field Descriptions

Field		Description
Authorizations	types, and validity d instance if its author	icense authorization information. All licenses, their enforcement urations are displayed. Errors are displayed for each product ization or mode does not match what is installed on the active. ayed only if the product instance is using a license with an
	0:	License name and a shortened form of the license name.
	Description	License description.
	Total available	Total count of licenses that are available to consume.
	count:	This includes licenses of all durations (perpetual and subscription), including expired subscription licenses, for all the product instances in a High Availability setup.
	Enforcement type	Enforcement type for the license. This may be one of the following:
		• Enforced
		Not enforced
		• Export-Controlled
	Term information:	

Field		Description	
		Header providing license duration information. The following fields maybe included under this header:	
		• Active: The active product instance UDI, followed by the status of the authorization code installation for this UDI.	
		• Authorization type: Type of authorization code installed and date of installation. The type can be: SLAC, UNIVERSAL, SPECIFIED, PAK, RTU.	
		• Start Date: Displays validity start date if the license is for a specific term or time period.	
		• Start Date: Displays validity end date if the license is for a specific term or time period.	
		• Term Count: License count.	
		• Subscription ID: Displays ID if the license is for a specific term or time period.	
		• License type: License duration. This can be: SUBSCRIPTION or PERPETUAL.	
		• Standby: The standby product instance UDI, followed by the status of the authorization code installation for this UDI.	
		• Member: The member product instance UDI, followed by the status of the authorization code installation for this UDI.	
		For more information about the duration or term of a license's validity, see k tbd>.	
Purchased Licenses	Header for license p	urchase information.	
	Active:	The active product instance and its the UDI.	
	Count:	License count.	
	Description:	License description.	
	License type:	License duration. This can be: SUBSCRIPTION or PERPETUAL.	
	Standby:	The standby product instance UDI.	
	Member:	The member product instance UDI.	

show license authorization Displaying Migrated Authorization Code

The following is sample output of the **show license authorization** command on a Cisco Catalyst 9800-CL Wireless Controller. The Last Confirmation code: shows that SLR authorization code is available after migration. Similar output is displayed on all supported Cisco Catalyst Wireless Controllers.

show license data conversion

To display license data conversion information, enter the **show license data** command in privileged EXEC mode.

	show license data conversion	
Syntax Description	This command has no keywords or arguments	
Command Modes	Privileged EXEC (Device#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.
Usage Guidelines	Although visible on the CLI, this	command is not applicable to Cisco Catalyst Wireless Controllers.

show license eventlog

To display event logs relating to Smart Licensing Using Policy, enter the **show license eventlog** command in privileged EXEC mode.

show license eventlog [*days*]

Syntax Description *days* Enter the number of days for which you want to display event logs. The valid value range is from 0 to 2147483647.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Additional events were added with the introduction of Smart Licensing Using Policy:
		• Installation and removal of a policy
		• Request, installation and removal of an authorization code.
		• Installation and removal of a trust code.
		• Addition of authorization source information for license usage.
Usage Guidelines	e e .	f the software version on the device (also referred to as a product instance .2a or a later release, command output displays fields pertinent to Smart

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

L

show license history message

To display communication history between the product instance and CSSM or CSLU (as the case may be), enter the **show license history message** command in privileged EXEC mode. The output of this command is used by the technical support team, for troubleshooting.

show license history message

Syntax Description	This command has no keywords or arguments.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 17.3.2a	This command was introduced.	
Usage Guidelines	When you encounter an error mess appears on the console or in the sy	0 2	, 0

Guidelines When you encounter an error message that you are not able to resolve, along with a copy of the message that appears on the console or in the system log, provide your Cisco technical support representative with sample output of these commands: show license tech support, show license history message, and the show platform software sl-infra privileged EXEC commands.

show license reservation

To display license reservation information, enter the **show license reservation** command in privileged EXEC mode.

show license reservation

Syntax Description	This command has no keywords or arguments Privileged EXEC	
Command Modes		
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.
Usage Guidelines	The command continues to be available on the CLI and corresponding output is displayed, but with the introduction of Smart Licensing Using Policy, the notion of reservation is not longer applicable. Use the show license all command in privileged EXEC mode, to display <i>migrated</i> SLR licenses instead (the SLR authorization code is migrated to Smart Licensing Using Policy).	

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

show license rum

To display information about Resource Utilization Measurement reports (RUM report) available on the product instance, including report IDs, the current processing state of a report, error information (if any), and to save the detailed or summarized view that is displayed, enter the **show license rum** command in privileged EXEC mode.

	<pre>show license rum { feature { license_r</pre>	name all } id { rum_id all } } [detail] [save path]
Syntax Description	feature { license_name all }	Displays RUM report information based on the license name.
		Specify a particular license name to display all RUM reports for that license, or use the all keyword to display all RUM reports available on the product instance.
	id { rum_id all }	Displays RUM report information based on the RUM report ID.
		Specify a report ID to display information for a single report, or use the all keyword to display all RUM reports available on the product instance.
	detail	Displays detailed RUM report information.
		You can use this to display detailed information by license name and detailed information by RUM report ID.
	save path	Saves the information that is displayed. This can be the simplified or detailed version and depends on the preceeding keywords you have entered.
		Information about 200 RUM reports can be displayed. If there are more 200 RUM reports on the product instance, you can view information about all the RUM reports by saving it to a text (.txt) file.
		Note This option saves the information <i>about</i> RUM reports and is not for reporting purposes. It does not save the RUM report, which is an XML file containing usage information.

Command Modes	Privileged EXEC (Device#)		
Command History	Release	Modification	-
	Cisco IOS XE Cupertino 17.7.1	This command was introduced.	-
Usage Guidelines	as specified by the policy. An a	cknowledgement (ACK) is a re	- suce generates, to fulfil reporting requirements sponse from CSSM and provides information available on the product instance, it indicates

that the corresponding RUM report is no longer required and can be deleted. You can use the **show license rum** command to:

- Display information about the available RUM reports on the product instance filtered by ID or license name.
- Display a short summary of the information or display a detailed view of the information.
- Track a RUM report throughout its lifecycle (from the time it is first generated until its acknowledgement from CSSM). By displaying the current processing state and condition of a report you can ascertain if and when there is a problem in the reporting workflow.
- Save the displayed information. The CLI displays information about up to 200 reports. If there are more than 200 reports on the product instance and you want to view information about all of them, save the displayed info in a .txt file and export to the desired location to view.

To display a statistical view of RUM report information (the total number of reports on the product instance, the number of reports that have a corresponding ACK, the number of reports waiting for an ACK etc.) refer to the Usage Report Summary: section of the show license all and show license tech privileged EXEC commands.

The **show license tech** command also provides RUM report related information that the Cisco technical support team can use to troubleshoot, if there are problems with RUM reporting.

Examples

For information about fields shown in the display, see #unique_599 unique_599_Connect_42_table_ytd_q4m_ hrb and #unique_599 unique_599_Connect_42_table_gtn_q4m_hrb

For sample output of the show license rum command, see:

- #unique_599 unique_599 Connect_42 example_ugm_lsd_4rb
- #unique_599 unique_599_Connect_42_example_stg_msd_4rb

Table 14: show license rum (simplified view) Field Descriptions

Field Name	Description
Report Id	A numeric field that identifies a RUM report. The product instance automatically assigns an ID to every RUM report it generates. An ID may be up to 20 characters long.

Field Name	Description				
State	This field displays the current processing state of a RUM report, and can be only one of the following:				
	• OPEN: This means new measurements are been added into this report.				
	• CLOSED: This means no new measurements can be added to this report, and the report is ready for communication to CSSM.				
	• PENDING: This is a transitional status that you may see if you display a report while it is being transmitted.				
	• UNACK: This means the report was transmitted and is waiting for confirmation from CSSM, that it is processed.				
	• ACK: This means the report was processed or acknowledged by CSSM and is eligible for deletion.				
Flag	Indicates the condition of the RUM report, and is displayed in the form of a character. Each character represents a specific condition, and can be only one of the following values:				
	• N: Normal; This means no errors have been detected and the report is going through normal operation.				
	• P: Purged; This means the report was removed due to system resource limitation, and can refer to a shortage of disk space or insufficient memory. If this flag is displayed, refer to the State Change Reason field in the detailed view for more information.				
	• E: Error; This means an error was detected in the RUM report. If this flag is displayed, refer to the detailed view for more information. Possible workflow issues include and are not limited to the following:				
	• RUM report was dropped by CSSM. If this is the issue, the state field displays value ACK, but the State Change Reason does not change to ACKED.				
	• RUM Report data is missing. If this is the issue, the Storage State field displays value MISSING.				
	• Tracking information is missing. If this is the case the state field displays value UNACK and the Transaction ID field has no information.				
	Note Occasional errors in RUM reports do not require any action from you and are not an indication of a problem. It is only if you see a large number of reports (greater than 10) with errors that you must contact the Cisco technical support team.				
Feature Name	The name of the license that the RUM report applies to.				

Field Name	Description	
Report Id	A numeric field that identifies a RUM report. The product instance automatica assigns an ID to every RUM report it generates. An ID may be up to 20 charact long.	
Metric Name:	Shows the type of data that is recorded.	
	For a RUM report, the only possible value is ENTITLEMENT, and refers to measurement of license usage.	
Feature Name:	The name of the license that the RUM report applies to.	
Metric Value	A unique identifier for the data that is recorded.	
	This is the same as the "Entitlement Tag" in the output of the show license tech commad and it displays information about the license being tracked.	
UDI	Composed of the Product ID (PID) and serial number of the product instance.	
Previous Report Id:	ID of the previous RUM report that the product instance generated for a license.	
Next Report Id:	The ID that the product instance will use for the next RUM report it generates for a llicense.	
State:	Displays the current processing state of a RUM report. The value displayed here is always the same as the value displayed in the simplified view.	
	For the list of possible values see #unique_599 unique_599_Connect_42_table_ ytd_q4m_hrbabove.	
State Change Reason:	Displays the reason for a RUM report state change. Not all state changes provide a reason.	
	 NONE: This means the RUM report is going through its normal lifecycle (for instance, from OPEN → CLOSED → ACK). This state change reason is usually accompanied by an N flag (meaning Normal) in the simplified view and requires no action from you. 	
	• ACKED: RUM report was processed normally by CSSM.	
	• REMOVED: RUM report was received and requested to be removed by CSSM.	
	• RELOAD: RUM report state was changed due to some type of device reload.	
Start Time:	Timestamps for measurement start and measurement end for a RUM report.	
End Time:	Together, the start time and end time provide the time duration that the measurements cover.	

Table 15: show license rum (detailed view) Field Descriptions

Field Name	Description	
Storage State:	Displays current storage state of the RUM report and can be one of the following values:	
	• EXIST: This means the data for the RUM report is located in storage.	
	• DELETED: This means the data was intentionally deleted. Refer to the Storage State Change Reason in the output of the show license tech command for more information about this storage state.	
	• PURGED: This means the data was deleted due to a system resource limitation. Refer to the Storage State Change Reason in the output of the show license tech command for more information about this storage state.	
	• MISSING: This means data is missing from storage. If reports are identified as missing, there is no recovery process.	
Transaction ID:	Contains tracking information for the RUM report. This information can be eith polling information or ACK import information.	
Transaction Message:	The Transaction Message contains the error message, if the product instance receives one when importing an ACK.	
	The information in these fields is used by the Cisco technical support team when troubleshooting problems with RUM reports.	

Example: show license rum feature: Simplified and Detailed View

The following is sample output of the **show license rum feature***license-name* and **show license rum feature***license-name***detail** commands on a Cisco Catalyst 9500 Series Switch. Similar output is displayed on all other Catalyst switches.

The output is filtered to display all RUM reports for the DNA Advantage license, followed by a detailed view of all RUM reports for the DNA Advantage license.

Device# show license rum feature air-dna-advantage

```

Example: Saving a RUM Report View

The following example shows you how to save the information that is displayed.

By using the **feature** and **all** keywords, the output is filtered to display all RUM reports for all licenses being used on the product instance. It is then transferred it to a TFTP location, from where it can opened, to view the information.

Device# show license rum feature all save bootflash:all-rum-stats.txt Device# copy tftp://10.8.0.6/bootflash:all-rum-stats.txt

show license status

To display information about licensing settings such as data privacy, policy, transport, usage reporting and trust codes, enter the **show license status** command in privileged EXEC mode.

show license status

Syntax Description This command has no keywords or arguments

Command Modes Privileged EXEC (Device#)

Release Modification Cisco IOS XE Gibraltar 16.10.1 This command was introduced. Cisco IOS XE Amsterdam 17.3.2a Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy. This includes Trust code installed:, Policy in use, Policy name: , reporting requirements as in the policy (Attributes:), and fields related to usage reporting. Command output no longer displays Smart Account and Virtual account information. Cisco IOS XE Cupertino 17.7.1

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

Account Information in the output

Starting with Cisco IOS XE Cupertino 17.7.1, every ACK includes the Smart Account and Virtual Account that was reported to, in CSSM. When it receives the ACK, the product instance securely stores only the latest version of this information - as determined by the timestamp in the ACK. The Smart Account and Virtual Account information that is displayed in the Account Information section of this command's output is therefore always as per the latest available ACK on the product instance.

If a product instance is moved from one Smart Account and Virtual Account to another, the next ACK after the move will have this updated information. The output of this command is updated once this ACK is available on the product instance.

The ACK may be received directly (where the product instance is connected to CSSM), or indirectly (where the product instance is connect to CSSM through CSLU, Cisco DNA Center, or SSM On-Prem), or by manually importing the ACK (where a product instance is in an air-gapped network).

Examples

For information about the fields shown in the display, see Table 16: show license status Field Descriptions for Smart Licensing Using Policy, on page 758.

For sample output, see:

- show license status with Account Information (Smart Licensing Using Policy), on page 763
- show license status with Cisco Default Policy (Smart Licensing Using Policy), on page 764
- show license status with Custom Policy (Smart Licensing Using Policy), on page 765

Field		Description
Utility	Header for utility settings that are configured on the product instance.	
	Status:	Status
	Utility report:	Last attempt:
	Customer	The following fields are displayed:
	Information:	• Id:
		• Name:
		• Street
		• City:
		• State:
		• Country:
		• Postal Code:
Smart Licensing	Header for policy settings on the product instance.	
Using Policy:	Status:	Indicates if Smart Licensing Using Policy is enabled.
		Smart Licensing Using Policy is supported starting from Cisco IOS XE Amsterdam 17.3.2 and is always enabled on supported software images.

Table 16: show license status Field Descriptions for Smart Licensing Using Policy

Field		Description	
Data Privacy:	Header for privacy settings that are configured on the product instance.		
	Sending Hostname:	A yes or no value which shows if the hostname is sent in usage reports.	
	Callhome hostname privacy:	Indicates if the Call Home feature is configured as the mode of transport for reporting. If configured, one of these values is displayed:	
		• ENABLED	
		• DISABLED	
	Smart Licensing hostname privacy:	One of these values is displayed:	
		• ENABLED	
		• DISABLED	
	Version privacy:	One of these values is displayed:	
		• ENABLED	
		• DISABLED	
Transport:	Header for transport	settings that are configured on the product instance.	
	Туре:	Mode of transport that is in use.	
		Additional fields are displayed for certain transport modes. For example, if transport type is set to CSLU, the CSLU address is also displayed.	

Field		Description		
Policy:	Header for policy inf	Header for policy information that is applicable to the product instance.		
	Policy in use:	Policy that is applied		
		This can be one of the following: Cisco default, Product default, Permanent License Reservation, Specific License Reservation, PAK license, Installed on <date>, Controller.</date>		
	Policy name:	Name of the policy		
	Reporting ACK required:	A yes or no value which specifies if the report for this product instance requires CSSM acknowledgement (ACK) or not. The default policy is always set to "yes".		
	Unenforced/Non-Export	Displays policy values for perpetual licenses.		
	Perpetual Attributes	• First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name.		
		• Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name.		
		• Report on change (days): he maximum amount of time available to send a report in case of a change in license usage, followed by policy name		
	Unenforced/Non-Export	Displays policy values for subscription licenses.		
	Subscription Attributes	• First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name.		
		• Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name.		
		• Report on change (days): he maximum amount of time available to send a report in case of a change in license usage, followed by policy name		
	Enforced (Perpetual/Subscription) License Attributes			

Field		Description
		Displays policy values for enforced licenses.
		• First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name.
		• Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name.
		• Report on change (days): The maximum amount of time available to send a report in case of a change in license usage, followed by policy name
	Export	Displays policy values for export-controlled licenses.
	(Perpetual/Subscription) License Attributes	• First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name.
		• Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name.
		• Report on change (days): The maximum amount of time available to send a report in case of a change in license usage, followed by policy name
Miscellaneous	Header for custom ID.	
	Custom Id:	ID

Field		Description	
Usage Reporting:	Header for usage reporting (RUM reports) information.		
	Last ACK received:	Date and time of last ACK received, in the local time zone.	
	Next ACK deadline:	Date and time for next ACK. If the policy states that an ACK is not requires then this field displays none.	
		Note If an ACK is required and is not received by this deadline, a syslog is displayed.	
	Reporting Interval:	Reporting interval in days	
		The value displayed here depends on what you configure in the license smart usage interval <i>interval_in_days</i> and the policy value. For more information, see the corresponding Syntax Description: license smart (global config), on page 362.	
	Next ACK push check:	Date and time when the product instance will submit the next polling request for an ACK. Date and time are in the local time zone.	
		This applies only to product instance- initiated communication to CSSM or CSLU. If the reporting interval is zero, or if no ACK polling is pending, then this field displays none.	
	Next report push:	Date and time when the product instance will send the next RUM report. Date and time are in the local time zone. If the reporting interval is zero, or if there are no pending RUM reports, then this field displays none.	
	Last report push:	Date and time for when the product instance sent the last RUM report. Date and time are in the local time zone.	
	Last report file write:	Date and time for when the product instance last saved an offline RUM report. Date and time are in the local time zone.	
	Last report pull:	Date and time for when usage reporting information was retrieved using data models. Date and time are in the local time zone.	

Field		Description	
Trust Code Installed:	Displays date a zone.	Header for trust code-related information. Displays date and time if trust code is installed. Date and time are in the local time zone. If a trust code is not installed, then this field displays none.	
	Active:	Active product instance. In a High Availability set-up, the the UDIs of all product instances in the set-up, along with corresponding trust code installation dates and times are displayed.	
	Standby:	Standby product instance.	
	Member:	Member product instance	

show license status with Account Information (Smart Licensing Using Policy)

The following is sample output of the **show license status** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1:

```
Device# show license status

show license summary

To display a brief summary of license usage, which includes information about licenses being used, the count, and status, enter the **show license summary** command in privileged EXEC mode.

show license summary

Syntax Description This command has no keywords or arguments

Command Modes Privileged EXEC

Command History

l History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect valid license status for Smart Licensing Using Policy. Valid license statuses include: IN USE, NOT IN USE, NOT AUTHORIZED.
		Command output was also updated to remove registration and authorization information.
		Command output no longer displays Smart Account and Virtual account information.
	Cisco IOS XE Cupertino 17.7.1	Command output was updated to display Smart Account and Virtual account information.

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

The licenses on Cisco Catalyst Wireless Controllers are never NOT AUTHORIZED, because none of the available licenses are export-controlled or enforced (Only these licenses require authorization before use).

Account Information in the output

Starting with Cisco IOS XE Cupertino 17.7.1, every ACK includes the Smart Account and Virtual Account that was reported to, in CSSM. When it receives the ACK, the product instance securely stores only the latest version of this information - as determined by the timestamp in the ACK. The Smart Account and Virtual Account information that is displayed in the Account Information section of this command's output is therefore always as per the latest available ACK on the product instance.

If a product instance is moved from one Smart Account and Virtual Account to another, the next ACK after the move will have this updated information. The output of this command is updated once this ACK is available on the product instance.

The ACK may be received directly (where the product instance is connected to CSSM), or indirectly (where the product instance is connect to CSSM through CSLU, Cisco DNA Center, or SSM On-Prem), or by manually importing the ACK (where a product instance is in an air-gapped network).

Examples

See Table 17: show license summary Field Descriptions, on page 768 for information about fields shown in the display.

show license summary: IN USE (Smart Licensing Using Policy), on page 768

show license summary: NOT IN USE (Smart Licensing Using Policy), on page 768

Table 17: show license summary Field Descriptions

Field	Description
Account Information: Smart Account: Virtual Account:	The Smart Account and Virtual Account that the product instance is part of. This information is always as per the latest available ACK on the product instance. This field is displayed only if the software version on the product instance is Cisco IOS XE Cupertino 17.7.1 or a later release.
License	Name of the licenses in use
Entitlement Tag	Short name for license
Count	License count
Status	 License status can be one of the following In-Use: Valid license, and in-use. Not In-Use Not Authorized: Means that the license requires installation of SLAC before use.

show license summary: IN USE (Smart Licensing Using Policy)

The following is sample output of the **show license summary** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1:

```
Devide# show license summary

Account Information:

Smart Account: Eg-SA

Virtual Account: Eg-VA

License Usage:

License Entitlement Tag Count Status

air-network-essentials (DNA_NWSTACK_E) 1 IN USE

air-dna-essentials (AIR-DNA-E) 1 IN USE
```

show license summary: NOT IN USE (Smart Licensing Using Policy)

The following is sample output of the **show license summary** command, where no APs have joined the controller. Current consumption (Count) is therefore zero, and the status field shows that the licenses are NOT IN USE:

Device# show license summary

Device#show license summary License Reservation is ENABLED

License Usage:

License	Entitlement Tag	Count Status
Aironet DNA Advantag AP Perpetual Network	. ,	0 NOT IN USE 0 NOT IN USE

show license tech

To display licensing information to help the technical support team to solve a problem, enter the **show license tech** command in privileged EXEC mode. The output for this command includes outputs of several other **show license** commands and more.

show license tech { data { conversion } | eventlog [{ days }] | reservation | support }

show license tech { message | rum { feature { license_name | all } | id { rum_id | all } } [detail] [
save path] | support }

Syntax Description	data { conversion }	Displays license data conversion information.
	<pre>eventlog [{ days }]</pre>	Displays event logs related to Smart Licensing Using Policy.
		For <i>days</i> , enter the number of days for which you want to display event logs. The valid value range is from 0 to 2147483647.
	reservation	Displays license reservation information.
	support	Displays licensing information that helps the technical support team to debug a problem.
Syntax Description	message	Displays messages concerning trust establishment, usage reporting, result polling, authorization code requests and returns, and trust synchronization.
		This is the same information as displayed in the output of the show license history message command.
	<pre>rum { feature { license_name all } rum_id all } } [de save path]</pre>	
		Note This option saves the information <i>about</i> RUM reports and is not for reporting purposes. It does not save the RUM report, which is an XML file containing usage information.
	support	Displays licensing information that helps the technical support team to debug a problem.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibra 16.10.1	Itar This command was introduced.
	Cisco IOS XE Amste 17.3.2a	erdam Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy.

	Release	Modification
	Cisco IOS XE Cupertino 17.7.1	The rum keyword and additional options under this keyword were added:
		<pre>{ feature { license_name all } id { rum_id all } }</pre>
		The output of the show license tech support command was enhanced to display the following information:
		• RUM report information, in section License Usage and Usage Report Summary.
		• Smart Account and Virtual account information, in section Account Information:.
		The data conversion , eventlog and reservation keywords were removed from this command. They continute to be available as separate show commands, that is, show license data , show license eventlog , and show license reservation respectively.
Usage Guidelines	release, command output di	ftware version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier splays fields pertinent to Smart Licensing (whether smart licensing is enabled, al ates, compliance status, and so on).
	0 0	licy : If the software version on the device (also referred to as a product instance) m 17.3.2 or a later release, command output displays fields pertinent to Smart te the following guidelines:
	appears on the console or in	or message that you are not able to resolve, along with a copy of the message that the system log, provide your Cisco technical support representative with sample show license tech support, show license history message, and the show platform eged EXEC commands.
	• Troubleshooting with a	a Support Representative
	that appears on the con sample output of these	n error message that you are not able to resolve, along with a copy of the message sole or in the system log, provide your Cisco technical support representative with commands: show license tech support , show license history message , and the are sl-infra all privileged EXEC commands.
	RUM Report Informat	ion in the output
	• The output of the to RUM reports:	show license tech support command displays the following sections pertaining
	Table 18: show lie	cense tech support: Field Descriptions for Header "License Usage", on page 772
	<output truncat<br="">License Usage</output>	ed>
	======================================	

Table 19: show license tech support: Field Descriptions for Header "Usage Report Summary", on page 773

<output truncated>

• The output of the **show license tech rum** command when used with the **detail** keyword, displays the following fields pertaining to RUM reports: Table 20: show license tech rum: Field Descriptions for Header "Smart Licensing Usage Report Detail", on page 773.

The options available under the **show license tech rum** keyword are the same as the options available with the **show license rum** privileged EXEC command. The sample output that is displayed in the *simplified view* is also the same. But if you use the **detail** keyword (for example if you enter **show license tech rum feature** *license_name* **detail**), the detailed view is displayed and this has a few *additional* fields when compared to **show license rum**.

```

```

Table 18: show license tech support: Field Descriptions for Header "License Usage"
--

Field Name	Description
Interval:	This is a fixed measurement duration and is always 15 minutes.
Current Value:	Information about the current license count.
Current Report:	ID of the currently OPEN report for the license.
Previous:	ID of the last OPEN report for the license. This report will have state CLOSED now.

Field Name	Description	
Total:	Total number of reports that the product instance has ever generated.	
	Note This total does not refer to the total number of reports <i>currently available</i> on and being tracked by the product instance. For this you must sum up the Total Acknowledged Received: and Available to Report fields.	
Purged:	The number of reports deleted due to a system resource limitation. This number includes RUM reports where the product instance no longer has tracking information.	
Total Acknowledged Received:	The number of RUM reports acknowledged on this product instance.	
Waiting for Ack:	The number of RUM reports waiting for an ACK. This is the total number of reports in an UNACK state, where the product instance still has tracking information.	
Available to Report:	The number of RUM reports that are available to send to CSSM. This is the total number of reports in an OPEN or CLOSED state, where the product instance still has tracking information.	
Collecting Data:	Number of reports where the product instance is currently collecting measurements.	
Maximum Display:	Number of reports available for display in a show command's output.	
In Storage:	Number of reports currently stored on the disk	
MIA:	The number of reports missing.	

Table 19: show license tech support: Field Descriptions for Header "Usage Report Summary"

Table 20: show license tech rum: Field Descriptions for Header "Smart Licensing Usage Report Detail"

Field Name	Description
Version:	Displays the format of the report during transmission.
	Starting with Cisco IOS XE Cupertino 17.7.1, RUM reports are stored in a new format that reduces processing time. This field indicates if the product instance is using the old format or the new format.

Field Name	Description
Storage State:	Indicates if a given report is currently in storage.
	In addition to the displaying the current storage state of the RUM report, with these possible values: EXIST, DELETED, PURGED, MISSING, if a "(1)" is displayed next to the label (Storage State (1)), this means the RUM report is in the older (pre-17.7.1 format) and will be processed accordingly. If the RUM report is in the new format, the field is displayed as Storage State - without any extra information.
Storage State Change Reason:	Displays the reason for the change in the storage state change. Not all state changes provide a reason.
	• NONE: This means no reason was recorded for the the storage state change.
	• PROCESSED: This means the RUM report was deleted after CISCO has processed the data.
	• LIMIT_STORAGE: This means the RUM report was deleted because the product instance reached it's storage limit.
	• LIMIT_TIME: This means the RUM report was deleted because the report reached the persisted time limit.
Transaction ID:	If the transaction ID displays a correlation ID and an error status is
Transaction Message:	displayed, the product instance displays the error code field in this section. If there are no errors, no data is displayed here.
Report Size	This field displays two numbers. The first number is the size of raw report for communication, in bytes. The second number is the disk space used for saving the report, also in bytes. The second number is displayed only if report is stored in the new format.

show license tech support on Cisco Catalyst 9800-CL Wireless Controller

The following is sample output from the **show license tech support** command on a Cisco Catalyst 98000-CL Wireless Controller running software version Cisco IOS XE Cupertino 17.7.1:

show license udi

To display Unique Device Identifier (UDI) information for a product instance, enter the **show license udi** command in privileged EXEC mode. In a High Availability set-up, the output displays UDI information for all connected product instances.

show license udi

Syntax Description	This command has no keywords or arguments		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	
	Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.	
Usage Guidelines	Smart Licensing Using Policy : If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.		
	Smart Licensing : If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.		
	Examples		
	show license udi with Standalone Product Instance, on page 785		
	show license udi with Active and Standby, on page 785		
	show license udi with Standalone Product Instance		
	The following is sample output from the show license udi command on a standalone product instance.		
	Device# show license udi		
	UDI: PID:C9800-L-F-K9,SN:FCW2	323W016	
	show license udi with Active and Standby		
	The following is sample output from the show license udi command in a High Availability set-up where an active and a standby product instances exist. UDI information is displayed for both.		
	Device# show license udi		
	UDI: PID:C9800-CL-K9,SN:93BBA	H93MGS	

```
HA UDI List:
Active:PID:C9800-CL-K9,SN:93BBAH93MGS
Standby:PID:C9800-CL-K9,SN:9XECPSUU4XN
```

show license usage

To display license usage information such as status, a count of licenses being used, and enforcement type, enter the **show license usage** command in privileged EXEC mode.

show license usage

Syntax Description	This command has no keywords or arguments	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.3.2	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy. This includes the Status, Enforcement type fields.
		Command output was also updated to remove reservation related information, authorization status information, and export status information.

Usage Guidelines Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Examples

See Table 21: show license usage Field Descriptions, on page 786 for information about fields shown in the display.

show license usage with unenforced licenses (Smart Licensing Using Policy), on page 787

show license usage with unenforced SLR licenses (Smart Licensing Using Policy), on page 788

Table 21: show license usage Field Descriptions

Field	Description
License Authorization:	Displays overall authorization status.
Status:	
0:	Name of the license as in CSSM.
	If this license is one that requires an authorization code, the name of the license comes from the code.

Field	Description
Description	Description of the license as in CSSM.
Count	License count. If the license is not in-use, the count is reflected as zero.
Version	Version.
Status	License status can be one of the following
	• In-Use: Valid license, and in-use.
	• Not In-Use
	• Not Authorized: Means that the license requires installation of SLAC before use. For more information, see
Export Status:	Indicates if this license is export-controlled or not. Accordingly, one of the following statuses is displayed:
	• RESTRICTED - ALLOWED
	RESTRICTED - NOT ALLOWED
	NOT RESTRICTED
Feature name	Name of the feature that uses this license.
Feature Description:	Description of the feature that uses this license.
Utility Subscription id:	ID
	Not applicable, because the corresponding confiuration option is not supported.
Enforcement type	Enforcement type status for the license. This may be one of the following:
	• ENFORCED
	NOT ENFORCED
	• EXPORT RESTRICTED - ALLOWED
	• EXPORT RESTRICTED - NOT ALLOWED
	For more information about enforcement types, see <link tbd=""/>

show license usage with unenforced licenses (Smart Licensing Using Policy)

The following is sample output of the show license usage command. Unenforced licenses are in-use here.

```
Device# show license usage
License Authorization:
  Status: Not Applicable
air-network-essentials (DNA NWSTACK E):
  Description: air-network-essentials
  Count: 1
 Version: 1.0
 Status: IN USE
 Export status: NOT RESTRICTED
  Feature Name: air-network-essentials
 Feature Description: air-network-essentials
 Enforcement type: NOT ENFORCED
 License type: Perpetual
air-dna-essentials (AIR-DNA-E):
  Description: air-dna-essentials
  Count: 1
 Version: 1.0
 Status: IN USE
 Export status: NOT RESTRICTED
  Feature Name: air-dna-essentials
 Feature Description: air-dna-essentials
 Enforcement type: NOT ENFORCED
 License type: Perpetual
```

show license usage with unenforced SLR licenses (Smart Licensing Using Policy)

The following is sample output of the **show license usage** command. Migrated SLR licenses are in-use here:

```
Device# show license usage
```

```
air-network-advantage (DNA NWStack):
 Description: air-network-advantage
 Count: 1
 Version: 1.0
 Status: IN USE
 Export status: NOT RESTRICTED
 Feature Name: air-network-advantage
 Feature Description: air-network-advantage
 Enforcement type: NOT ENFORCED
 License type: Perpetual
 Reservation:
   Reservation status: SPECIFIC INSTALLED
   Total reserved count: 20
air-dna-advantage (AIR-DNA-A):
 Description: air-dna-advantage
 Count: 1
 Version: 1.0
 Status: IN USE
 Export status: NOT RESTRICTED
 Feature Name: air-dna-advantage
 Feature Description: air-dna-advantage
 Enforcement type: NOT ENFORCED
 License type: Perpetual
 Reservation:
   Reservation status: SPECIFIC INSTALLED
   Total reserved count: 20
```

L

show platform software sl-infra

To display troubleshooting information and for debugging, enter the **show platform software sl-infra** command in privileged EXEC mode. The output of this command is used by the technical support team, for troubleshooting and debugging.

show logging profile wireless end timestamp

To specify log filtering end location timestamp for filtering, use the **show logging profile wireless end timestamp** command.

show logging profile wireless end timestamp time-stamp

Syntax Description *time-stamp* Time to end the filtering. For example, 2017/02/10 14:41:50.849.

Command Modes Privileged EXEC (#)

Command Default

None

Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.			

Usage Guidelines Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.

Example

The following example shows how to specify log filtering end location timestamp for filtering:

Device# show logging profile wireless end timestamp 2017/02/10 14:41:50.849

show logging profile wireless filter

To specify filter for logs, use the show logging profile wireless filter command.

	show logging profile wireless fil	lter {ipv4 mac string uuid }	
Syntax Description	ipv4 Selects logs with specific	c IP address app context.	
	mac Selects logs with specific	e MAC app context.	
	string Selects logs with specific	c string app context.	
	uuid Selects logs with specific	Universally Unique Identifier (U	JUID) app context.
Command Default	- None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	
Usage Guidelines	Ensure that you enable internal the trace output.	keyword using the show logging	profile wireless internal command to get
	Without the internal keyword, or	nly customer curated logs are dis	splayed.
	Example		

Example

The following example shows how to specify filter for logs: Device# show logging profile wireless filter ipv4 10.10.11.1

show logging profile wireless fru

To specify field-replaceable unit (FRU) specific commands, use the **show logging profile wireless fru** command.

show logging profile wireless fru {0 {reverse | to-file}| chassis} {0 {reverse | to-file} | chassis}

Syntax Description	0	SPA-Inter-Processor slot 0.
	reverse	Shows logs in reverse chronological order.
	to-file	Decodes files stored in disk and write output to file.
	chassis	Chassis name.
Command Default	None	
Command Modes	Privilegeo	d EXEC (#)
Command Modes Command History	Privileged	d EXEC (#) Modification

Usage Guidelines Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the internal keyword, only customer curated logs are displayed.

Example

The following example shows how to specify FRU specific commands:

Device# show logging profile wireless fru 0

L

show logging profile wireless internal

To select all the logs, use the show logging profile wireless internal command.

show logging profile wireless internal **Syntax Description** This command has no keywords or arguments. **Command Default** None Privileged EXEC (#) **Command Modes Command History** Release Modification Cisco IOS XE Gibraltar 16.10.1 This command was introduced. Ensure that you enable internal keyword using the show logging profile wireless internal command to get **Usage Guidelines** the trace output. Without the internal keyword, only customer curated logs are displayed. Example The following example shows how to display all the logs: Device# show logging profile wireless internal

show logging profile wireless level

To select logs above a specific level, use the show logging profile wireless level command.

show logging profile wireless level { debug | emergency | error | info | noise | notice | verbose | warning
}

Syntax Description	debug	Selects debug me	essages.			
	emergency	Selects emergenc	y possible messags.			
	error	Selects error mes	sages.			
	info	Selects informati	onal messages.			
	noise	Selects maximum	possible messages.			
	notice	Selects notice me	essages.			
	verbose	Selects verbose d	lebug messages.			
	warning	Selects warning	messages.			
Command Default	None					
Command Modes	Privileged EX	KEC (#)				
Command History	Release		Modification			
	Cisco IOS X	E Gibraltar 16.10.1	This command was introduced.	5		
Usage Guidelines	Ensure that yet the trace outp		keyword using the s	how loggin	g profile	,
	Without the i	nternal keyword, o	only customer curate	d logs are d	isplayed.	
	Example					
	The following	g example shows h	ow to select logs abo	ove a specifi	ic level:	
	Device# sho	w logging profil	e wireless level	info		

show logging profile wireless module

To select logs for specific modules, use the show logging profile wireless module command.

show logging profile wireless module module-name

Syntax Description	<i>module-name</i> A comma or spa	ace separated list of module na	mes. For example, dbal, tdllib or "dbal tdllib".
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	_
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	_
Usage Guidelines	Ensure that you enable internal the trace output.	keyword using the show logg	ing profile wireless internal command to get
	Without the internal keyword, o	only customer curated logs are	displayed.
	Example		
	The following example shows h	ow to select logs for specific r	nodules:
	Device# show logging profil	e wireless module dbal.	

show logging profile wireless reverse

To view logs in reverse chronological order, use the **show logging profile wireless reverse** command.

show logging profile wireless reverse Syntax Description This command has no keywords or arguments. None **Command Default** Privileged EXEC (#) **Command Modes Command History** Release Modification Cisco IOS XE Gibraltar 16.10.1 This command was introduced. Ensure that you enable internal keyword using the show logging profile wireless internal command to get **Usage Guidelines** the trace output. Without the internal keyword, only customer curated logs are displayed.

Example

The following example shows how to view logs in reverse chronological order:

Device# show logging profile wireless reverse

show logging profile wireless start

To specify log filtering start location, use the **show logging profile wireless start** command.

show logging profile wireless start {marker marker | timestamp }

Syntax Description	marker The marker to start filtering from. It must match with previously set marker.			
	timestamp	The timestamp for	r filtering. for example, "2017/)2/10 14:41:50.849".
Command Default	None			
Command Modes	Privileged EX	EC (#)		
Command History	Release		Modification	-
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced.	-
Usage Guidelines	Ensure that yo the trace output		keyword using the show logging	ng profile wireless internal command to get
	Without the in	iternal keyword, c	only customer curated logs are	lisplayed.

Example

The following example shows how to specify log filtering start location:

Device# show logging profile wireless start timestamp 2017/02/10 14:41:50.849

show logging profile wireless switch

To specify the switch to look for logs, use the **show logging profile wireless switch** command.

show logging profile wireless switch {switch-num | active | standby }

Syntax Description	active	Selects the active ins	stance.	
	standby	Selects the standby instance.		
Command Default	None			
Command Modes	Privileged	EXEC (#)		
Command History	Release		Modification	
	Cisco IOS	S XE Gibraltar 16.10.1	This command was introduced.	
Usage Guidelines	Ensure that	-	keyword using the show log	ging profile wireless internal command to get

Without the internal keyword, only customer curated logs are displayed.

Example

The following example shows how to specify the number to look for logs:

Device# show logging profile wireless switch active

show logging profile wireless to-file

To decode files stored in disk and write the output to a file, use the **show logging profile wireless to-file** command.

show logging profile wireless to-file output-file-name

Syntax Description	<i>output-file-name</i> Output file name. File with this name will be created in the flash memory.			
Command Default	None			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification	-	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	-	
Usage Guidelines	Ensure that you enable internal the trace output.	keyword using the show loggin	ag profile wireless internal con	
	Without the internal keyword, o	only customer curated logs are c	lisplayed.	
	Evennle			

Example

The following example shows how to decode files stored in disk and write the output to a file:

Device# show logging profile wireless to-file testfile

to get

show mdns-sd cache

To view mDNS cache details, use the show mdns-sd cache command.

	detail glan-id $<1 - 5>$ lo	ac-address (H.H.H) client-mac client-mac-address (H.H.H) cation-group <0 - 4096> mdns-ap mac address (H.H.H)
	rlan-id <1 - 128> statist { <1 - 4294967295> shared	tics type { A-AAAA PTR SRV TXT } udn } wired wlan-id <0 - 4096> }
Syntax Description	ap-mac mac-address (H.H.H)	Specifies the AP Ethernet MAC address.
	client-mac client-mac-address (H.	<i>H.H.</i> Specifies the client MAC address.
	detail	Specifes the cache in detail.
	location-group <0 - 4096>	Specifies the location group. The value range is from 0 to 4096.
	mdns-ap mdns-ap mac address (H	(<i>H.H.</i>) Specifies the cache learnt from a specific mDNS AP.
	rlan-id <1 - 128>	Specifies the remote LAN ID. The value range is from 1 - 128.
	statistics	Specifies the mDNS cache statistics.
	type	Specifies the mDNS record type. The record types are, A-AAAA, PTR, SRV, and TXT.
	udn <1 - 4294967295>	Specifies the UDN ID. The value range is from 1 to 4294967295.
	shared	Specifies the UDN shared services.
	wired	Specifies the mDNS services from wired clients.
	wlan-id <0 - 4096>	Specifies the WLAN ID. The value range is from 1 to 4096.
Command Default	- None	
Command Modes	Privileged EXEC mode	
Command History	Release	Nodification
	Cisco IOS XE Amsterdam 17.3.1 T	This command was ntroduced.
Usage Guidelines	None	
	Example	
	The following example shows how	to view the mDNS cache details:

Device# show mdns-sd cache

L

show mdns-sd cache detail

To view the multicast DNS (mDNS) cache details, use the show mdns-sd cache detail command.

 show mdns-sd cache detail

 Syntax Description
 This command has no keywords or arguments.

 Command Default
 None

 Command Modes
 Privileged EXEC (#)

 Command History
 Release
 Modification

 Cisco IOS XE Amsterdam 17.1.1s
 This command was introduced.

Example

The following is sample output from the show mdns-sd cache detail command:

```
Device# show mdns-sd cache detail
```

```
Name: _printer._tcp.local
Type: PTR
TTL: 4500
VLAN: 21
Client MAC: ace2.d3bc.047e
Remaining-Time: 4383
mDNS Service Policy: default-mdns-service-policy
Rdata: HP OfficeJet Pro 8720 [BC047E] (2)._printer._tcp.local
```

show mdns-sd cache upn shared

To view the multicast DNS (mDNS) cache user personal network shared services details, use the **show mdns-sd** cache upn shared command.

show mdns-sd cache upn shared

Syntax Description This command has no keywords or arguments.		
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

The following is sample output from the **show mdns-sd cache upn shared** command that displays the mDNS cache UPN shared services details:

Device# show mdns-sd cache upn shared

show mdns-sd cache upn detail

To view the multicast DNS (mDNS) cache user personal network identifier details, use the **show mdns-sd** cache upn detail command.

show mdns-sd cache upnupn-id detail

Syntax Description	<i>upn-id</i> User personal network ide	entifier.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

The following is sample output from the **show mdns-sd cache upn detail** command that displays the mDNS cache UPN identifier details:

Device# show mdns-sd cache upn 777 detail

```
Name: _services._dns-sd._udp.local
Type: PTR
TTL: 4500
WLAN: 2
WLAN Name: mdns-psk
VLAN: 16
Client MAC: f4f9.51e2.a6a6
AP Ethernet MAC: 002a.1087.d68a
Remaining-Time: 4486
Site-Tag: default-site-tag
mDNS Service Policy: madhu-mDNS-Policy
Overriding mDNS Service Policy: NO
UPN-ID: 7777
UPN-Status: Enabled
Rdata: _airplay._tcp.local
```

show mdns-sd flexconnect summary

To view the summary of the mDNS flexconnect sites, use the show mdns-sd flexconnect summary command.

	show mdns-sd flexconnect summ	nary		
Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	Privileged EXEC mode			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.		
Usage Guidelines	None			

Example

The following example shows how to view the summary of mDNS flexconnect sites:

Device# show mdns-sd flexconnect summary

show mdns-sd statistics

To view the mDNS statistics, use the show mdns-sd statistics command.

	<pre>show mdns-sd statis }</pre>	stics { debug	flexconnect rlan-	id <1 - 128> wired wlan	
Syntax Description	debug	Specifies the	e mDNS debug statistics.		
	flexconnect	Specifies the mDNS flexconnect statistics.			
	rlan-id <1 - 128>	Specifies the remote LAN (RLAN) ID. The value range is from 1 to 128.			
	wired	Specifies th	e mDNS wired statistics.		
	wlan-id<1 - 4096>	Specifies th	e WLAN ID. The value range	e is from 1 to 4096.	
Command Default	None				
Command Modes	Privileged EXEC mo	ode			
Command History	Release		Modification		
	Cisco IOS XE Amst	erdam 17.3.1	This command was introduced.		
Usage Guidelines	None				
	Example				
	The following exam	ple shows ho	w to view the mDNS statistic	s:	
	Device# show mdns	-sd statist	ics		

Cisco Embedded Wireless Controller on Catalyst Access Points Command Reference for Cisco IOS XE Dublin 17.10.x

show mdns-sd summary

To view the summary of mDNS service discovery configuration, use the show mdns-sd summary command.

	show mdns-sd summary			
Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	Privileged EXEC mode			
Command History	Release	Modification		
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.		
Usage Guidelines	None			

Example

The following example shows how to view the summary of mDNS service discovery configuration: Device# show mdns-sd summary

show mdns-sd sp-sdg statistics

To verify the Service-Peer SDG communication statistics, use the **show mdns-sd sp-sdg statistics** command.

 show mdns-sd sp-sdg statistics

 Syntax Description
 This command has no keywords or arguments.

 Command Default
 None

 Command Modes
 Privileged EXEC

 Command History
 Release
 Modification

 Cisco IOS XE Bengaluru 17.5.1
 This command was introduced.

The following example shows how to verify the Service-Peer SDG communication statistics:

```
Device# show mdns-sd sp-sdg statistics
                        One min, 5 mins, 1 hour
                           Ο,
Average Input rate (pps) :
                                 Ο,
                                            0
Average Output rate (pps) :
                            Ο,
                                      Ο,
                                            0

```

show nmsp

To display the Network Mobility Services Protocol (NMSP) configuration settings, use the **show nmsp** command.

show nmsp {attachment | {suppress interfaces} | capability | notification interval | statistics {connection | summary} | status | subscription detail [*ip-addr*] | summary}

Syntax Description	attachment suppress i	nterfaces	Displays attachment suppress interfaces.
	capability		Displays NMSP capabilities.
	notification interval		Displays the NMSP notification interval.
	statistics connection		Displays all connection-specific counters.
	statistics summary		Displays the NMSP counters.
	status		Displays status of active NMSP connections.
	subscription detail ip-	addr	The details are only for the NMSP services subscribed to by a specific IP address.
	subscription summary	7	Displays details for all of the NMSP services to which the controller is subscribed. The details are only for the NMSP services subscribed to by a specific IP address.
Command Default	No default behavior or v	values.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar	16.12.1 This comman	d was introduced.
	The following is sample Device# show nmsp n NMSP Notification In	otification interva	nmsp notification interval command:
	RSSI Interval: Client RFID Rogue AP Rogue Client Attachment Interval Location Interval	: 2 sec : 2 sec : 2 sec : 2 sec : 30 sec : 30 sec	

show nmsp cloud-services statistics

To see NMSP cloud-service statistics, use the show nmsp cloud-services statistics command.

	show nmsp	cloud-services s	tatistics [chassis {chassis-number active standby} R0]
Syntax Description	chassis-number	r Chassis number	r as either 1 or 2.
	active R0	Active instance	of the active NMSP cloud services in Route-processor slot 0.
	standby R0	Standby instance 0.	e of the active NMSP cloud services in Route-processor slot
Command Default	None		
Command Modes	Privileged EX	EC	
Command History	Release		Modification
	Cisco IOS XE	Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
	-		

Examples

This example shows how to see NMSP cloud-service statistics:

Device# show nmsp cloud-services statistics

show nmsp cloud-services summary

To see a summary of information about NMSP cloud-services, use the **show nmsp cloud-services summary** command.

	show nmsp	cloud-services su	Immary [chassis {chassis-number active standby} R0]
Syntax Description	chassis-number	· Chassis number	as either 1 or 2.
	active R0	Active instance	of the NMSP cloud services in Route-processor slot 0.
	standby R0	Standby instance 0.	e of the active NMSP cloud services in Route-processor slot
Command Default	None		
Command Modes	Privileged EX	EC	
Command History	Release		Modification
	Cisco IOS XE		This command was introduced in a release earlier than Cisco IOS X Gibraltar 16.10.1.

Examples

This example shows how to see NMSP cloud-service summary information:

Device# show nmsp cloud-services summary

show nmsp subscription group detail all

To display the mobility services group subscription details of all CMX connections, use the **show nmsp subscription group detail all** command.

show nmsp subscription group detail all

Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.		

Example

The following example shows how to display the mobility services group subscription details of all CMX connections:

Device# show nmsp subscription group detail all

show nmsp subscription group detail ap-list

To display the AP MAC list subscribed for a group by a CMX connection, use the **show nmsp subscription group detail ap-list** command.

show nmsp subscription group detail ap-list group-name cmx-IP-addrress

Syntax Description	group-name	CMX AP gr name.	oup	
	cmx-IP-addrress	CMX IP add	lress.	
Command Default	None			
Command Modes	Privileged EXEC (#)		
Command History	Release		Modificat	tion
	Cisco IOS XE Gib	raltar 16.10.1	This com introduce	

Example

The following example shows how to verify the AP MAC list subscribed for a group by a CMX connection.

Device# show nmsp subscription group detail ap-list Group1 127.0.0.1

```
CMX IP address: 127.0.0.1

CMX Group name: Group1

CMX Group AP MACs:

: 00:00:00:00:55:02 00:00:00:66:02 00:99:00:00:002 00:00:00:00:002

00:10:00:10:00:2 00:00:00:002 00:00:002 00:00:00:002

00:00:00:99:00:02 00:00:00:002 00:00:002 00:00:002

00:00:00:99:00:02 00:00:00:002 00:00:00:002 00:22:00:00

00:00:00:00:92 00:00:00:00:002 00:00:00:002 00:22:00:00:00:002

00:00:00:50:00:42 00:00:00:002 00:00:00:00:0032 00:00:00:002

00:00:00:88:00:02 20:00:00:00:002 10:00:00:00:00

00:00:00:00:00:02 00:00:00:001 00:00:00:002
```

show nmsp subscription group detail services

To display the services subscribed for a group by a CMX connection, use the **show nmsp subscription group detail services** command.

show nmsp subscription group detail services group-name cmx-IP-addrress

Syntax Description	group-name	CMX AP gr name.	oup
	cmx-IP-addrress	CMX IP add	lress.
Command Default	None		
Command Modes	Privileged EXEC	(#)	
Command History	Release		Modification
	Cisco IOS XE Gib	oraltar 16.10.1	This command was introduced.

Example

The following example shows how to verify the services subscribed for a group by a CMX connection.

Device# show nmsp subscription group detail services Group1 127.0.0.1

CMX IP address: 127.0.0.1 CMX Group name: Group1 CMX Group filtered services: Service Subservice ------RSSI Mobile Station, Spectrum Info Statistics

show nmsp subscription group summary

To display the mobility services group subscription summary of all CMX connections, use the **show nmsp subscription group summary** command.

show nmsp subscription group summary

Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.		

Example

The following example shows how to verify the mobility services group subscription summary of all CMX connections.

Device# show nmsp subscription group summary

```
CMX IP address: 127.0.0.1
Groups subscribed by this CMX server:
Group name: Group1
```

show ntp associations

To display the status of Network Time Protocol (NTP) associations, use the **show ntp associations** command in privileged EXEC mode.

show ntp associations

Syntax Description	This command has no keywords	or arguments.
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Example

The following example shows how to view NTP associations. :

```
Device# show ntp associations
address ref clock st when poll reach delay offset disp
*~10.1.1.99 72.163.32.44 2 918 1024 377 0.177 7.618 1.102
* sys.peer, # selected, + candidate, - outlyer, x falseticker, ~ configured
--
```

show platform conditions

To see information about conditional debugs, use the show platform conditions command.

show platform conditions

Command Default None

Command Modes Privileged EXEC

Command History

y	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see information about conditional debugs:

Device# show platform conditions

show platform software wlavc status cp-exporter

To view the wireless AVC information from the control place exporter, use the **show platform software wlavc status cp-exporter** command.

	show platfo	rm software wlavc s	tatus cp-exporter
Syntax Description	wlavc	Displays the wireless	s AVC information.
	status	Displays information	about the AVC status.
	cp-exporter	Collects information	from the Control Plane exporter.
Command Default	None		
Command Modes	Privileged E	EXEC (#) mode	
Command History	Release		Modification
	Cisco IOS X	XE Amsterdam 17.2.1	This command was introduced.

Example

This example shows how to display the wireless AVC information from the control place exporter:

show platform software wlavc status cp-exporter AVC FNF Exporter status IP: 10.10.1.1 connection statistics Sent bytes : 5672 Sent packets : 569 Received records : 564 Socket statistics New sockets : 3 Closed sockets : 0 Library statistics AVC cache errors : 0 Unexpected Flow Monitor ID : 0 Socket creation error : 0 Sent records : 240 Received packets : 800

show platform hardware slot R0 ha_port interface stats

To see the HA port interface setting status, use the **show platform hardware slot R0 ha_port interface stats** command.

show platform hardware slot R0 ha_port interface stats Syntax Description This command has no arguments or keywords. show platform software system all

To check status of the current virtual machine and look for performance issues due to inadequate resources (or other issues with the hosting environment), use the **set platform software system all** command in privileged EXEC mode.

show platform software system all

Syntax Description	This command has no keywords or arguments.			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification	-	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	-	
Examples	This example shows how to check status of the current virtual machine and its resources:			
	Device# show platform soft Processor Details	ware system all		
	Number of Processors : 6 Processor : 1 - 6 vendor_id : GenuineIntel cpu MHz : 2593.750 cache size : 35840 KB Crypto Supported : Yes model name : Intel(R) Xeon(R) CPU E5-2690 v4 @ 2.60GHz

	======================================			

show platform software trace filter-binary

To display the most recent trace information for a specific module, use the **show platform software trace filter-binary** command in privileged EXEC or user EXEC mode.

show platform software trace filter-binarymodules [context mac-address]

Syntax Description	contextmac-address	filte key	Represents the context used to filter. Additionally, you can filter based on module names and trace levels. The context keyword accepts either a MAC address or any other argument based on which a trace is tagged.	
Command Modes	User EXEC (>)			
	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Gibral	tar 16.12.1 This command wa	as introduced.	
Usage Guidelines	This command collates and sorts all the logs present in the /tmp// across all the processes relevant to the module. The trace logs of all the processes relevant to the specified module are printed to the console. This command also generates a file named collated_log_{system time} with the same content, in the /crashinfo/tracelogs directory.			
Examples	This example shows how to display the trace information for a wireless module:			
	Device# show platform software trace filter-binary wireless			

show platform software trace level

To view the trace levels for all the modules under a specific process, use the **show platform software trace level** command in privileged EXEC or user EXEC mode.

	<u> </u>	
Syntax Description	process	Process whose tracing level is being set. Options include:
		chassis-manager—The Chassis Manager process.
		cli-agent—The CLI Agent process.
		• cmm—The CMM process.
		• dbm—The Database Manager process.
		• emd—The Environmental Monitoring process.
		• fed —The Forwarding Engine Driver process.
		• forwarding-manager—The Forwarding Manager process.
		• geo—The Geo Manager process.
		host-manager—The Host Manager process.
		• interface-manager—The Interface Manager process.
		• iomd—The Input/Output Module daemon (IOMd) process.
		• ios—The IOS process.
		license-manager—The License Manager process.
		logger—The Logging Manager process.
		platform-mgr—The Platform Manager process.
		pluggable-services—The Pluggable Services process.
		• replication-mgr—The Replication Manager process.
		shell-manager—The Shell Manager process.
		• sif—The Stack Interface (SIF) Manager process.
		• smd—The Session Manager process.
		stack-mgr—The Stack Manager process.
		• table-manager—The Table Manager Server.
		• thread-test—The Multithread Manager process.
		• virt-manager—The Virtualization Manager process.
		• wireless—The wireless controller module process.

slot	Hardware slot where the process for which the trace level is set, is running. Options include:
	• <i>number</i> —Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2.
	• <i>SIP-slot / SPA-bay</i> —Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.
	• F0 —The Embedded Service Processor in slot 0.
	• F1 —The Embedded Service Processor in slot 1.
	• FP active—The active Embedded Service Processor.
	• R0 —The route processor in slot 0.
	• RP active —The active route processor.
	• switch <i><number></number></i> — The switch, with its number specified.
	• switch active—The active switch.
	• switch standby—The standby switch.
	• <i>number</i> —Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2.
	• <i>SIP-slot / SPA-bay</i> —Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.
	• F0 —The Embedded Service Processor in slot 0.
	• FP active—The active Embedded Service Processor.
	• R0 —The route processor in slot 0.
	• RP active —The active route processor.

Command Modes	User EXEC (>)		
	Privileged EXEC (#)

show platform software trace message

To display the trace messages for a process, use the **set platform software trace** command in privileged EXEC or user EXEC mode.

show platform software trace message *process* chassis $\{\langle l-2\rangle \mid active \mid standby\}$ R0 User EXEC (>) **Command Modes** Privileged EXEC (#) **Command History** Modification Release Cisco IOS XE Gibraltar 16.12.1 This command was introduced. **Examples** This example shows how to display the trace messages for the Stack Manager and the Forwarding Engine Driver processes: Device# show platform software trace message stack-mgr switch active R0 10/30 09:42:48.767 [btrace] [8974]: (note): Successfully registered module [97] [uiutil] 10/30 09:42:48.762 [btrace] [8974]: (note): Successfully registered module [98] [tdl cdlcore_message] 10/29 13:28:19.023 [stack mgr] [8974]: (note): Examining peer state 10/29 13:28:19.023 [stack mgr] [8974]: (note): no switch eligible for standby election presently 10/29 13:28:19.022 [stack mgr] [8974]: (note): Posting event stack fsm event wait standby elect timer expired, curstate stack fsm state active ready 10/29 13:28:19.022 [stack mgr] [8974]: (note): Timer HDL - STACK WAIT STANDBY ELECT TIMER expired 10/29 13:26:46.584 [btrace] [8974]: (note): Successfully registered module [99] [tdl ui message] 10/29 13:26:46.582 [bipc] [8974]: (note): Pending connection to server 10.129.1.0 10/29 13:26:36.582 [evutil] [8974]: (ERR): Connection attempt for sman-ui-serv (uipeer uplink to slot 1) failed, invoking disconnect 10/29 13:26:36.582 [evutil] [8974]: (ERR): Asynchronous connect failed for [uipeer uplink to slot 1] (fd == -1) 10/29 13:26:36.581 [bipc] [8974]: (note): Pending connection to server 10.129.1.0 10/29 13:26:26.581 [evutil] [8974]: (ERR): Connection attempt for sman-ui-serv (uipeer uplink to slot 1) failed, invoking disconnect

show platform software trace message license-manager chassis active R0

To display the trace message for license-manager process of active route processor, use the **show platform software trace message license-manager chassis active R0** command in privileged EXEC mode.

show platform software trace message license-managerchassis {chassis-number
| active | standby}R0reverse

This command has no arguments or keywords.

Command Modes	Modes Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	

Example

This example shows how to display the trace messages for the Forwarding Engine Driver processes:

Device# show platform software trace message license-manager chassis active R0

show policy-map

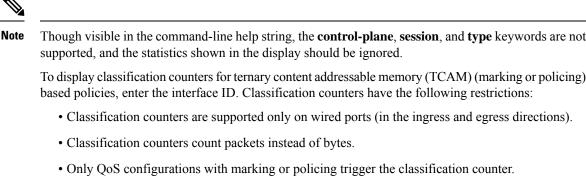

To display quality of service (QoS) policy maps, which define classification criteria for incoming traffic, use the **show policy-map** command in EXEC mode.

show policy-map [{*policy-map-name* | **interface** *interface-id*}]

show policy-map interface {Auto-template | Capwap | GigabitEthernet | GroupVI | InternalInterface | Loopback | Lspvif | Null | Port-channel | TenGigabitEthernet | Tunnel | Vlan | brief | class | input | output

show policy-map interface {ap name ap_name | client mac mac_address | radio type {24ghz |
5ghz} ap name ap_name | ssid name ssid_name {ap name ap_name | radio type {24ghz | 5ghz}
ap name ap_name }

Syntax Description	policy-map-name	(Optional) Name of the policy-map.
	interface interface-id	(Optional) Displays the statistics and the configurations of the input and output policies that are attached to the interface.
	ap name ap_name	Displays SSID policy configuration of an access point.
	client mac <i>mac_address</i>	Displays information about the policies for all the client targets.
	radio type { 24ghz 5ghz	Displays policy configuration of the access point in the specified radio type.
	ssid name ssid_name	Displays policy configuration of an SSID.
Command Modes	User EXEC	
	Privileged EXEC	
Command History	Release	Modification
		This command was introduced.
Usage Guidelines	Policy maps can include po exceeded.	licers that specify the bandwidth limitations and the action to take if the limits are

- As long as there is policing or marking action in the policy, the class-default will have classification counters.
- Classification counters are not port based. The counters are shared across targets sharing the same policy map. This means that the classification counter aggregates all packets belonging to the same class of the same policy which attach to different interfaces.

This is an example of output from the **show policy-map interface** command, where classification counters are displayed:

```
Device# show policy-map interface gigabitethernet1/0/1
 GigabitEthernet1/0/1

show rate-limit client

To configure the rate-limit for a client on the AP, use the **show rate-limit client** command.

show rate-limit client

Syntax Description This command has no arguments.

Command Modes Privileged EXEC (#)

 Command History
 Release
 Modification

 Cisco IOS XE Gibraltar 16.12.1
 This command was introduced.

The following example shows how to configure the rate-limit for a client on the AP:

```
Device# show rate-limit client
Config:
mac vap rt_rate_out rt_rate_in rt_burst_out rt_burst_in nrt_rate_out nrt_rate_in nrt_burst_out
nrt_burst_in
00:1C:F1:09:85:E7 0 8001 8002 8003 8004 8005 8006 8007 8008
Statistics:
name up down
Unshaped 0 0
Client RT pass 0 0
Client RT pass 0 0
Client RT drops 0 0
Client RT drops 0 0
Per client rate limit:
mac vap rate out rate in policy
```

show ssh

I

	To see the SSH connection star	tus, use the show ssh command.
	show ssh { connection-number	<pre>r {vty connection-number } }</pre>
Syntax Description	connection-number SSH connection	ection number. Valid range is 0 to 530.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.	1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the SSH connection status:

Device# show ssh connection-number

I

show stealthwatch-cloud connection

To view the connection details of Stealthwatch Cloud, use the **show stealthwatch-cloud connection** command.

	show stealthwatch-cloud conne	ection
Syntax Description	This command has no keywords	s or arguments.
Command Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command wa introduced.
Usage Guidelines	None	

Example

The following example shows how to view the connection details of Stealthwatch Cloud:

Device# show stealthwatch-cloud connection

show stealthwatch-cloud wireless-shim

To view the wireless-shim details of Stealthwatch Cloud, use the show stealthwatch-cloud wireless-shim command.

	show stealthwatch-cloud wirele	ess-shim
Syntax Description	This command has no keywords	s or arguments.
ommand Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command wa introduced.
Usage Guidelines	- None	

Usage Guidelines

Example

The following example shows how to view the wireless-shim details of Stealthwatch Cloud: Device# show stealthwatch-cloud wireless-shim

show tech-support wireless

To display Cisco wireless LAN controller variables frequently requested by Cisco Technical Assistance Center (TAC), use the **show tech-support wireless** command in privileged EXEC mode.

show tech-support wireless

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History Release Modification

Cisco IOS XE Gibraltar 16.12.1	This command was
	introduced.

The following is sample output from the **show tech-support wireless** command:

```
Device# show tech-support wireless
*** show ap capwap timers ***

show tunnel eogre global-configuration

To display the Ethernet over GRE (EoGRE) global configuration, use the **show tunnel eogre global-configuration** command.

show tunnel eogre global-configuration

Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	nd Modes Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.		

Example

This example shows how to display the EoGRE global configuration:

Device# show tunnel eogre global-configuration

Heartbeat interval : 60 Max Heartbeat skip count : 3 Source Interface : (none)

show tunnel eogre domain detailed

To display the detailed information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel eogre domain detailed** command.

show tunnel eogre domain detailed domain-name

Syntax Description	domain-name	EoGRE domainame.	n
Command Default	None		
Command Modes	Privileged EXE	C (#)	
Command History	Release		Modification
	Cisco IOS XE C	Gibraltar 16.11.1	This command was introduced.

Example

This example shows how to display the detailed information of the EoGRE tunnel domain:

Device# show tunnel eogre domain detailed eogre_domain

Domain Name : eogre_domain Primary GW : Tunnel1 Secondary GW : Tunnel2 Active GW : Tunnel1 Redundancy : Non-Revertive

show tunnel eogre domain summary

To display the summary information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel eogre domain summary** command.

show tunnel eogre domain summary

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	Release	Modification			
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.			

Example

This example shows how to display the summary information of the EoGRE tunnel domain:

Device# show tunnel eogre domain summary

Domain Name	Primary GW	Secondary GW	Active GW	Redundancy
domain1	Tunnell	Tunnel2	Tunnell	Non-Revertive
eogre_domain	Tunnell	Tunnel2	Tunnell	Non-Revertive

show tunnel eogre gateway summary

To display the summary information of the Ethernet over GRE (EoGRE) tunnel gateway, use the **show tunnel eogre gateway summary** command.

show tunnel eogre gateway summary

Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.	

Example

This example shows how to display the summary information of the EoGRE tunnel gateway:

Device# show tunnel eogre gateway summary

Name	Туре	Address	AdminState	State	Clients
Tunnell	IPv4	9.51.1.11	Up	Up	0
Tunnel2	IPv4	9.51.1.12	Up	Down	0
Tunnel10	IPv6	fd09:9:8:21::90	Down	Down	0
Tunnel11	IPv4	9.51.1.11	Up	Up	0
Tunnel12	IPv6	fd09:9:8:21::90	Up	Down	0
Tunnel100	IPv4	9.51.1.100	Up	Down	0

L

show tunnel eogre gateway detailed

To display the detailed information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel** eogre gateway detailed command.

show tunnel eogre gateway detailed gateway-name

Syntax Description	gateway-name	EoGRE gatew name.	/ay
Command Default	None		
Command Modes	Privileged EXEC	C (#)	
Command History	Release		Modification
	Cisco IOS XE G	bibraltar 16.11.1	This command was introduced.

Example

This example shows how to display the detailed information of the EoGRE tunnel gateway:

Device# show tunnel eogre domain detailed Tunnel1

```
Gateway : Tunnel1

show tunnel eogre manager stats global

To display the global tunnel manager statistics, use the show tunnel eogre manager stats global command.

show tunnel eogre manager stats global

Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.	

Example

This example shows how to display the global tunnel manager statistics:

Device# show tunnel eogre manager stats global

show wireless band-select

To display the status of the band-select configuration, use the **show wireless band-select** command in privileged EXEC mode.

show wireless band-select

Syntax Description	This command has no arguments or keywords.								
Command Default	No default behavior or values.								
Command Modes	Privileged EXEC								
Command History	Release	Modification							
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.							

The following is sample output from the show wireless band-select command:

Device# show wireless band-select Band Select Probe Response : per WLAN enabling Cycle Count : 2 Cycle Threshold (millisec) : 200 Age Out Suppression (sec) : 20 Age Out Dual Band (sec) : 60 Client RSSI (dBm) : 80

show wireless client

To see the summary of the classified devices, use the show wireless client command.

show wireless client device {cache | count | summary } + {steering}[{chassis{chassis-number | active
| standby }}]R0

Syntax Description	device	Shows classified devices.						
	steering Wireless client steering information							
	cache	Shows the cached classified device summary.						
	count	Shows the wireless device count.						
	summary Shows the active classified device summary.							
	chassis-number	Chassis number. Valid range is 1–2.						
	active	Active instance.						
	standby	Standby instance.						
	R0	Route-Processor slot 0.						
Command Default	None							
Command Modes	Privileged EXE	C						
Command History	Release	Modification						
	Cisco IOS XE C	Gibraltar 16.10.1 This command was introduce Gibraltar 16.10.1.	ed in a release earlier than Cisco IOS XE					

Examples

The following example shows how to see the summary of the classified devices:

Device# show wireless client device summary

show wireless client mac-address

To view detailed information of a client using its mac-address, use the **show wireless client mac-addressdetail** command.

show wireless client mac-address mac-address detail [chassis {chassis-number | active | standby} R0]

Syntax Description	mac-address	Client MAC address.
	chassis-number	Chassis number. Valid range is 1–2.
	active	Active instance.
	standby	Standby instance.
	R0	Route-Processor slot 0.
Command Default	None	
Command Modes	Privileged EXE	C (#)
Command History	Release	Modification
	Cisco IOS XE C	Bibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Usage Guidelines		Reports section in the output of the show wireless client mac-address detail is populated owing Apple devices:
	Any iPhone	e 7 and running iOS 11.0 or higher
	• Any iPad a	fter iPad Pro (1st gen, 12.9-inch, 2015) and running iOS 11.0 or higher
		ices, even if it supports 802.11k or is Wi-Fi Agile Multiband (MBO) certified, are not currently pulate the Client Scan Reports section.
	the client in Flex enabled. This is	own under show wireless client mac-address <i><mac address=""></mac></i> detail are ACLs applied on aconnect local authentication case with MAB+Web authentication WLAN with AAA override applicable only for Express Wi-Fi by Facebook Policy on Controller. For more information policy, see Express Wi-Fi by Facebook.
		XE Amsterdam 17.3.1 onwards, the controller retains client session for 10 seconds. This able for clients in the RUN state and is supported on central authentication with local and flex
	In idle state, 10 s	sec represents idle state timeout and 09 sec represent remaining time out of 10 sec. An example
	is given below:	

Examples

The following example shows how to see detailed client information using its MAC address:

Device# show wireless client mac-address 98-XX-7B-XX-EF-XX detail

show wireless client mac-address (Call Control)

To view call control information related to clients, use the **show wireless client mac-address** command in privileged EXEC mode.

 show wireless client mac-address mac-address call-control call-info

 Syntax Description
 mac-address

 mac-address
 The client MAC address.

 call-control call-info
 Displays the call control and IP-related information about a client.

 Command Default
 None

 Privileged EXEC
 Privileged EXEC

 Command History
 Release Modification

 This command was introduced.
 This command was introduced.

This example shows how to display call control and IP-related information about a client:

```
Device# show wireless client mac-address

L

show wireless client summary

To display a summary of active clients associated with the controller, use the **show wireless client summary** command in privileged EXEC mode.

show wireless client summary

Syntax DescriptionThis command has no arguments or keywords.Command DefaultNo default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines The following is sample output from the **show wireless client summary** command:

Use the show wireless exclusionlist command to display clients on the exclusion list.

Device# show wireless client summary

Number of Clients: 1

MAC Address	AP Name	Type ID	State	Protocol	Method	Role
6c40.0899.0466	9115i-r4-sw2-te1-0-37	WLAN 7	Run	11ac	None	Local

show wireless client timers

To display 802.11 system timers, use the **show wireless client timers** command in privileged EXEC mode.

	show wireless client timers							
Syntax Description	This command has no arguments	This command has no arguments or keywords.						
Command Default	No default behavior or values.							
Command Modes	Privileged EXEC							
Command History	Release	Modification						
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.						
	The following is sample output from the show wireless client timers command:							

Device# show wireless client timers

Authentication Response Timeout (seconds) : 10

show wireless country

To display the configured country and the radio types supported, use the **show wireless country** command in privileged EXEC mode.

show wireless country {channels | configured | supported [tx-power]}

Syntax Description	channels	Displays the list of possible channels for each band, and the list of channels allowed in the configured countries.
	configured	Display configured countries.
	supported tx-power	Displays the list of allowed Tx powers in each supported country.
Command Default	No default behavior or	values.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibralta	ar 16.12.1 This command was introduced.
	The following is sampl	le output from the show wireless country channels command:
	KEY: * = Chan A = Chan . = Chan C = Chan x = Chan (-,-) = (i)	<pre>y: US - United States mel is legal in this country and may be configured manually. mel is the Auto-RF default in this country. mel is not legal in this country. mel has been configured for use by Auto-RF. mel is available to be configured for use by Auto-RF. mdoor, outdoor) regulatory domain allowed by this country. -++++++++++++++++++++++++++++++++++++</pre>

show wireless detail

To display the details of the wireless parameters configured, use the **show wireless detail** command in privileged EXEC mode.

show wireless detail

Syntax Description	This command has no arguments or keywords.						
Command Default	No default behavior or values.						
Command Modes	Privileged EXEC						
Command History	Release	Modification					
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.					
Usage Guidelines	 The following parameters are displayed: The wireless user idle timeout The controller configured RF group name Fast SSID change 						
	The following is sample output f	rom the show wireless detail command:					

Device# **show wireless detail** User Timeout : 300

RF network

Fast SSID

: default

: Disabled

show wireless dhcp relay statistics

To configure the wireless DHCP relay on the AP, use the show wireless dhcp relay statistic command.

show wireless dhcp relay statistic

Syntax Description	A.B.C.D Indicates the target	IPv4 address.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 17.3.1	This command was introduced.

Examples

The following example shows how to configure the wireless DHCP relay on the AP:

Device# show wireless dhcp relay statistics ip-address 10.1.1.1

show wireless dot11h

To see 802.11h configuration details, use the show wireless dot11h command.

show wireless dot11h [chassis {chassis-number | active | standby} R0]

^			-	
S.	ntov.	lloc	orir	htinn.
3	yntax	DCO		າແບແ

on	chassis-number	Chassis number. Valid range is 1–2.
	active	Active instance.
	standby	Standby instance.
	R0	Route-Processor slot 0.

Command Default	None	
Command Modes	Privileged EXEC	
-		
Command History	Release	Modification

Examples

The following example shows how to see the 802.11h configuration details:

Device# show wireless dot11h

L

show wireless dtls connections

To display the Datagram Transport Layer Security (DTLS) server status, use the **show wireless dtls connections** command in privileged EXEC mode.

show wireless dtls connections

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History

Release Modification

Cisco IOS XE Gibraltar 16.12.1 This command was introduced.

The following is sample output from the show wireless dtls connections command:

Device# show	wireless dtls	connections		
AP Name	Local Port	Peer IP	Peer Port	Ciphersuite
AP-2	Capwap_Ctrl	10.0.0.16	52346	TLS_RSA_WITH_AES_128_CBC_SHA
AP-3	Capwap_Ctrl	10.0.0.17	52347	TLS_RSA_WITH_AES_128_CBC_SHA

show wireless exclusionlist

To see the wireless exclusion list, use the show wireless exclusionlist command.

show wireless exclusionlist [{client mac-address client-mac-addr detail }] [chassis {chassis-number |
active | standby} R0]

client-mac-addr	Client MAC addres	3.	
chassis-number	Enter the chassis nu	mber as either 1 or 2.	
active R0	Active instance of t	ne configuration in Route-processor slot 0.	
standby R0	Standby instance of 0.	the configuration in Route-processor slot	
None			
Privileged EXEC	2 (#)		
Release	Mod	ification	
Cisco IOS XE G		command was introduced in a release earlier than Cisco IOS altar 16.10.1.	XE
_	chassis-number active R0 standby R0 None Privileged EXEC Release	chassis-number Enter the chassis number active R0 Active instance of the standby R0 standby R0 Standby instance of 0. None Privileged EXEC (#) Release Mode Cisco IOS XE Gibraltar 16.10.1 This	standby R0 Standby instance of the configuration in Route-processor slot 0. 0. None Privileged EXEC (#) Release Modification Cisco IOS XE Gibraltar 16.10.1 This command was introduced in a release earlier than Cisco IOS

Examples

The following example shows how to see the wireless exclusion list:

Device# show wireless exclusionlist

Excluded Clients

MAC Address	Description	Exclusion Reas	on	Time Remaining
10da.4320.cce9		Client Policy	failure	59

show wireless load-balancing

To display the status of the load-balancing feature, use the **show wireless load-balancing** command in privileged EXEC mode.

show wireless load-balancing

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History

Release Modification

Cisco IOS XE Gibraltar 16.12.1 This command was introduced.

The following is sample output from the show wireless load-balancing command:

show wireless mesh rrm dca status

To display the status of the last DCA run per radio, use the show wireless mesh rrm dca status command.

show wireless mesh rrm dca status

Syntax Description	This command has no keywords	s or arguments.
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.

Example

This example shows how to display the status of the last DCA run per radio:

Device# show wireless mesh rrm dca status

show wireless ewc-ap ap summary

To view the embedded wireless controller AP summary, use the show wireless ewc-ap ap summary command.

show wireless ewc-ap ap summary [chassis { chassis_number | active | standby } {R0 }]

Syntax Description	ewc-ap	Configures the embedded wireless controller parameters.
	ap summary	Displays the embedded wireless controller AP, AP summary.
	chassis	Indicates the details of the chassis.
	chassis-number	Indicates the chassis number, which is either 1 or 2
	R0	Indicates Route Processor slot 0.
	Active	Indicates the active operational mode of the AP chassis.
	Standby	Indicates the standby operational mode of the AP chassis.
Command Default	None	
Command Modes	Privileged EXEC	2 mode
Command History	Release	Modification
	Cisco IOS XE G	Gibraltar 16.12.2s This command was introduced.

Example

The following example shows how to view the embedded wireless controller, AP summary:

Device#show wireless ewc-ap ap summary

show wireless ewc-ap ap config-sync

To view the embedded wireless controller AP configuration synchronization information or summary, use the **show wireless ewc-ap ap config-sync** command.

show wireless ewc-ap ap config-sync summary [chassis {chassis_number | active | standby} {R0}]

Syntax Description config-sync	Configures the embedded wireless controller parameters.
--------------------------------	---

	_
Command Modes	Privileged EXEC mode

None

Command History R

Command Default

ReleaseModificationCisco IOS XE Gibraltar 16.12.2sThis command was
introduced.

Example

The following example shows how to view the embedded wireless controller AP configuration synchronization information or summary:

Device#show wireless ewc-ap ap config-sync summary

show wireless ewc-ap ap image predownload status

To view the AP image predownload statistics, use the **show wireless ewc-ap ap image predownload status** command.

Syntax Description	This command has no keywords	or arguments.
Command Default	None	
Command Modes	Privileged EXEC mode	
command History	Release	Modification

Example

The following example shows how to view the AP image predownload statistics: Device#show wireless ewc-ap ap image predownload status

show wireless ewc-ap country-code

To view the default country codes and the supported country codes of the embedded wireless controller AP, use the **show wireless ewc-ap country-code** command.

show wireless ewc-ap country-code [chassis {chassis_number | active | standby} {R0}]

Syntax Description country-code Indicates the default country codes and the supported country codes.

Command Default	None Privileged EXEC mode			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.		

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

Device#show wireless ewc-ap country-codes

show wireless ewc-ap image-master

To view the image maser information, use the **show wireless ewc-ap image-master** command.

show wireless ewc-ap image-master [chassis {chassis_number | active | standby} {R0}]

Syntax Description	image-master Indicates the image master information.			
Command Default	None Privileged EXEC mode			
Command Modes				
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.		

Example

The following example shows how to view the image master information:

Device#show wireless ewc-ap image-master

show wireless ewc-ap invalid-image-master

To view the details of the invalid image master, use the **show wireless ewc-ap invalid-image-master** command.

show wireless ewc-ap invalid-image-master [chassis {chassis_number | active | standby} {R0}]

Syntax Description	invalid-image-master	Indicates the invalid image master information.
Command Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 1	6.12.2s This command was introduced.

Example

The following example shows how to view the invalid image master information:

Device#show wireless ewc-ap invalid-image-master

show wireless ewc-ap predownload

To view the image predownload information, use the show wireless ewc-ap predownload command.

show wireless ewc-ap predownload {count | status } [chassis {chassis_number | active | standby }
{R0}]

predownload	Indicates the image predownload information.			
count	Indicates the image predownload count.			
status	Indicates the image predownload status.			
None				
Privileged EXEC mode				
Release	Modification			
	<pre>count status None Privileged EXE</pre>			

Example

The following example shows how to view the image predownload count and status:

Device#show wireless ewc-ap predownload

show wireless ewc-ap redundancy summary

To view the HA redundancy summary, use the show wireless ewc-ap redundancy summary command.

show wireless ewc-ap redundancy summary [chassis {chassis_number | active | standby} {R0}]

Syntax Description	redundancy	redundancy Indicates the HA redundancy information.		
	summary	Indicates the summary of HA redundancy.		
Command Default	None			
Command Modes	Privileged EXEC mode			
Command History	Release		Modification	
	Cisco IOS XE	Gibraltar 16.12.1	This command was introduced.	

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

Device#show wireless ewc-ap redundancy summary

show wireless ewc-ap redundancy peers

To view the HA redundancy peers, use the **show wireless ewc-ap redundancy peers** command.

show wireless ewc-ap redundancy peers [chassis {chassis_number | active | standby} {R0}]

redundancy	Indicates the HA redundancy information.			
peers	Indicates the pee	ers of HA redundancy.		
None				
Privileged EX	EC mode			
Release		Modification		
Cisco IOS XE	Gibraltar 16.12.1	This command was introduced.		
	peers None Privileged EX Release	peers Indicates the peer None Privileged EXEC mode		

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

Device#show wireless ewc-ap redundancy peers

show wireless mesh ethernet daisy-chain summary

To verify the ethernet daisy chain summary, use the **show wireless mesh ethernet daisy-chain summary** command.

show wireless mesh ethernet daisy-chain summary

Syntax Description	This command has no keywords or arguments.
--------------------	--

Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

The following example shows how to verify the ethernet daisy chain summary:

Device# show wireless mesh ethernet daisy-chain summary

AP Name BVI MAC	BGN	Backhaul	Ethernet	STP Red	
RAP3 683b.78bf. RAP1 6c8b.d383.	1634 IOT 54d4 IOT	Ethernet0 Ethernet0	Up Up Dn Dn Up Up Dn Dn Up Up Dn Dn Up Up Dn Dn Up Up Up Dn	Enabled Enabled	

show wireless mesh ethernet daisy-chain bgn

To verify the ethernet daisy chain Bridge Group Name (BGN) details, use the **show wireless mesh ethernet daisy-chain bgn** command.

show wireless mesh ethernet daisy-chain bgn bridge-group-name

Syntax Description	<i>bridge-group-name</i> Enter the bridge group name.				
Command Default	None				
Command Modes	Privileged EXEC				
Command History	Release		Modification		
	Cisco IOS XE Bengal	uru 17.4.1	This command wa introduced.	as	

The following example shows how to verify the ethernet daisy chain Bridge Group Name (BGN) details:

```
Device# show wireless mesh ethernet daisy-chain bgn <IOT>
```

AP Name	BVI MAC	BGN	Backhaul	Ethernet	STP Red
RAP4 RAP3 RAP1	683b.78bf.15f0 683b.78bf.1634 6c8b.d383.b4d4	IOT	Ethernet0	Up Up Dn Dn	
RAP2	6c8b.d383.b4e8	IOT	Ethernet0	Up Up Up Dn	Enabled

911

I

show wireless pmk-cache

To display information about the pairwise master key (PMK) cache, use the **show wireless pmk-cache** command in privileged EXEC mode.

show wireless pmk-cache[mac-address mac-addr]

Syntax Description	mac-address mac-addr (Opti	onal) Information about a single entry in the PMK cache.
Command Default	No default behavior or values.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the show wireless pmk-cache mac-address command:

Device# show wireless pmk-cache mac-address H.H.H Number of PMK caches in total : 0

show wireless profile flex

To see the flex parameters of an wireless profile, use the **show wireless profile flex** command.

show wireless profile flex { detailed flex-profile-name chassis {chassis-number | active | standby }R0
} | summary chassis {chassis-number | active | standby}R0}

Syntax Description	detailed Shows the flex-profile		profile detailed parameters	
	summary	Show the flex-	profile summary.	
	chassis-numberChassis number. Valid range is 1–2.activeActive instance.		_	
	R0			
	Command Default	None		
Command Modes	Privileged EXE	C		
Command History	Release		Modification	
	Cisco IOS XE C	ibraltar 16.10.1	This command was introduced Gibraltar 16.10.1.	uced in a release earlier than Cisco IOS XE

Examples

The following example shows how to see the flex parameter's summary of the wireless profile:

Device# show wireless profile flex summary

show wireless profile policy detailed

To display the wireless policy profile details, use the show wireless profile policy detailed command.

show wireless profile policy detailed *policy-profile-name*

Syntax Description	This command has no keywords or arguments.						
Command Default	nmand Default None						
Command Modes	Privilege EXEC (#)						
Command History	Release	Modification					
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.					

Example

This example displays the wireless policy profile details:

Device#show wireless profile policy detailed policy-profile-name

show wireless rfid

To display RFID tag information, use the **show wireless rfid** command in privileged EXEC mode.

show wireless rfid {client | detail rfid-mac-address | stats | summary }

Syntax Description	client	Displays the summary of RFID tags that are clients.					
	detail	Displays information about a particular RFID tag.					
	stats	Displays RFID statistics.					
	summary	Displays summary information for all known RFID tags.					
	rfid-mac-address	s RFID MAC address.					
Command Default	None						
Command Modes	Privileged EXEC						
Command History	Release	Modification					
	Cisco IOS XE Gibi	raltar 16.10.1 This command was introduced.					

Example

This example shows how to view RFID information:

Device# show wireless rfid summary

```
Total RFID entries: : 16

Total Unique RFID entries : 16

RFID ID VENDOR Closet AP RSSI Time Since Last Heard

show wireless tag rf

	To displaye th	ne details of wirele	ess RF tag, use the sh	ow wireless tag rf command.
	show wireles	s tag rf{ summa	ry detailed <i>rf-tag</i>	2-name
Syntax Description	summary	Disaplys the sum	mary of all RF tags.	
	detailed	Disaplys details	of an RF tag.	
	rf-tag-name	RF tag name.		
Command Default	None			
Command Modes	Privileged EX	KEC		
Command History	Release		Modification	
	Cisco IOS XI	E Gibraltar 16.10.1	This command was introduced.	
	Example			
	The following	g example shows t	he sample output of	show wireless tag rf summary command:

Device# show wireless tag rf summary Number of RF Tags: 1 RF tag name Description _____ default-rf-tag default RF tag

show wireless urlfilter details

To view the details of a specified wireless URL filter, use the show wireless urlfilter details command.

show wireless urlfilter details list-name

Syntax Description This command has no arguments.

Release

Command Default None

Command Modes Global configuration

Command History

Modification

Cisco IOS XE Gibraltar 16.10.1 This command was introduced.

This example shows how to view the details of a specified wireless URL filter:

```
Device# show wireless urlfilter details urllist_flex_preauth
List Name...... : urllist_flex_preauth
Filter ID...... : 1
Filter Type...... : PRE-AUTH
Action...... : PERMIT
Redirect server ipv4..... : 8.8.8.8
Redirect server ipv6..... : 2001:0300:0008:0000:0000:0000:0000:0081
Configured List of URLs
    URL...... : urll.dns.com
```

L

show wireless urlfilter summary

To view the summary of all wireless URL filters, use the show wireless urlfilter summary command.

show wireless urlfilter summary Syntax Description This command has no arguments. None **Command Default** Global configuration **Command Modes Command History** Modification Release Cisco IOS XE Gibraltar 16.10.1 This command was introduced. This example shows how to view the summary of all wireless URL filters: Device# show wireless urlfilter summary Black-list - DENY White-list - PERMIT Filter-Type - Specific to Local Mode URL-List ID Filter-Type Action Redirect-ipv4 Redirect-ipv6 urllist_flex_preauth 1 PRE-AUTH PERMIT 8.8.8.8

show wireless vlan details

To see the VLAN details, use the show wireless vlan details command.

show wireless vlan details [chassis {chassis-number | active | standby} R0]

Command Default	None
Command Modes	Privileged EXEC
Command History	Release

History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the VLAN details:

Device# show wireless vlan details chassis active r0

show wireless wgb mac-address

To view all the clients of the wireless workgroup bridge (WGB) using its MAC address, use the **show wireless wgb mac-address** command.

show wireless wgb mac-address mac-address detail

Syntax Description	mac-address MAC address	ss of the WGB.
	detail View clients	of the wireless WGB.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16	5.10.1 This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the clients of the wireless WGB:

Device# show wireless wgb mac-address 98-C7-7B-09-EF-ED detail

show wireless wgb summary

To see the active workgroup bridges (WGB), use the show wireless wgb summary command.

	show wireless wgb summary		
Command Default	None		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.	

Examples

The following example shows how to see the active workgroup bridges (WGB):

Device# show wireless wgb summary

show wireless wps rogue ap summary

To display a list of all rogue access points detected by the device, use the **show wireless wps rogue ap summary** command.

show wireless wps rogue ap summary None. **Command Default** Privileged EXEC **Command Modes** Command History Release Modification Cisco IOS XE Gibraltar 16.12.1 This command was introduced. None. **Usage Guidelines** This example shows how to display a list of all rogue access points detected by the device: Device# show wireless wps roque ap summary
