

# CLI Commands

---

This chapter describes the Cisco Connected Mobile Experiences (Cisco CMX) CLI commands:

- [cmxctl Commands, page 1-1](#)
- [cmxctl config Commands, page 1-15](#)

Note

---

In the context of Cisco Connected Mobile Experiences (Cisco CMX), to access the CLI you use either console to the VM or appliance or SSH to the server when it has IP connectivity.

---

## cmxctl Commands

This section lists the **cmxctl** commands that you can use to perform debug, backup, and restore functionalities:

- [cmxctl checklogs, page 1-2](#)
- [cmxctl debug, page 1-3](#)
- [cmxctl disable, page 1-4](#)
- [cmxctl enable, page 1-5](#)
- [cmxctl jobs, page 1-6](#)
- [cmxctl node, page 1-7](#)
- [cmxctl restart, page 1-8](#)
- [cmxctl start, page 1-9](#)
- [cmxctl status, page 1-11](#)
- [cmxctl stop, page 1-13](#)
- [cmxctl version, page 1-14](#)

# cmxctl checklogs

To check logs and generate a report, use the **cmxctl checklogs** command.

## cmxctl checklogs

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** None

---

**Usage Guidelines** After a report is generated, the specific log that shows the error can be viewed for additional details. For example, /opt/cmx.var.log/cmxjobs.log.3 has 108 errors. You can use the command more /opt/cmx.var.log/cmxjobs.log.3 to view that file.

---

**Examples** The following example shows how to check logs and generate a report:

```
[root@server]# cmxctl checklogs

*****
Checking /opt/cmx/var/log/cmxjobs.log.3 for errors..
/opt/cmx/var/log/cmxjobs.log.3 has 108 errors
*****
Checking /opt/cmx/var/log/system-cron.log for errors..
/opt/cmx/var/log/system-cron.log has 0 errors
*****
Checking /opt/cmx/var/log/cmxjobs.log for errors..
/opt/cmx/var/log/cmxjobs.log has 81 errors
*****
Checking /opt/cmx/var/log/collectd.log for errors..
/opt/cmx/var/log/collectd.log has 0 errors
*****
Checking /opt/cmx/var/log/consul.log for errors..
/opt/cmx/var/log/consul.log has 0 errors
*****
Checking /opt/cmx/var/log/qless-py-worker.log for errors..
/opt/cmx/var/log/qless-py-worker.log has 0 errors
*****
Checking /opt/cmx/var/log/influxdb.log for errors..
/opt/cmx/var/log/influxdb.log has 0 errors
*****
Checking /opt/cmx/var/log/cmxjobs.log.4 for errors..
/opt/cmx/var/log/cmxjobs.log.4 has 108 errors
*****
```

# cmxctl debug

To create a debug tarball in the current directory, use the **cmxctl debug** command.

## cmxctl debug

<b>Syntax Description</b>	This command has no arguments or keywords.
<b>Command Default</b>	None
<b>Usage Guidelines</b>	The debug tarball that is created will be approximately 300 MB and takes at 90 seconds to complete.
<b>Examples</b>	The following example shows how to create a debug tarball in the current directory:

```
[root@server]# cmxctl debug

running locally
Dumping debug information...
[localhost] Executing task 'dump_config'
cp: cannot stat `/opt/cmx/share/upgrade.answers': No such file or directory
[localhost] Executing task 'dump_state'
running 'ps aux'
running 'ifconfig -a'
running 'cmxctl status'
running 'ulimit -a'
running 'ps -u root,postgres -o %cpu,%mem,cmd'
running 'netstat -o -n -a'
running 'df -h'
running 'ntpddate -d 172.19.28.250'
running 'consul members'
[localhost] Executing task 'dump_apis'
getting /api/config/v1/clusters
getting /api/config/v1/nodes
[localhost] Executing task 'dump_hosts'
pinging configuration.service.consul
pinging location.service.consul
pinging 6379.cache.service.consul
pinging 6380.cache.service.consul
pinging 6381.cache.service.consul
pinging database.service.consul
pinging analytics.service.consul
pinging halo.service.consul
Done.
```

# cmxctl disable

To disable a service, use the **cmxctl disable** command.

```
cmxctl disable { analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qllesspyworker }
```

## Syntax Description

<b>analytics</b>	Performs analytics on calculated location data.
<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
<b>cache_6379</b>	Caches the service used by location service.
<b>cache_6380</b>	Caches the service used by analytics service.
<b>cache_6381</b>	Caches the service used by analytics service.
<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
<b>configuration</b>	Configures nodes and clusters.
<b>confd</b>	Internal service.
<b>consul</b>	Internal service.
<b>database</b>	Enables the database service used by analytics and configuration services.
<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
<b>location</b>	Provides location service to compute location.
<b>matlabengine</b>	Provides access point heatmap for location service.
<b>metrics</b>	Collects system metrics.
<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
<b>influxdb</b>	Enables database services used for storing statistics from various services.
<b>iodocs</b>	Enables online document service for REST API offered by various services.
<b>qllesspyworker</b>	Internal service.

## Command Default

None

## Examples

The following example shows how to disable the cassandra database service:

```
[root@server]# cmxctl disable cassandra

Done
The nodeagent service is currently running with PID: 31776
Stopping cassandra process...
Done
Successfully shutdown cassandra Process.
```

# cmxctl enable

To enable a service, use the **cmxctl enable** command.

```
cmxctl enable { analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qlesspyworker }
```

Syntax Description		
	<b>analytics</b>	Performs analytics on calculated location data.
	<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
	<b>cache_6379</b>	Caches the service used by location service.
	<b>cache_6380</b>	Caches the service used by analytics service.
	<b>cache_6381</b>	Caches the service used by analytics service.
	<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
	<b>configuration</b>	Configures nodes and clusters.
	<b>confd</b>	Internal service.
	<b>consul</b>	Internal service.
	<b>database</b>	Enables the database service used by analytics and configuration services.
	<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
	<b>location</b>	Provides location service to compute location.
	<b>matlabengine</b>	Provides access point heatmap for location service.
	<b>metrics</b>	Collects system metrics.
	<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
	<b>influxdb</b>	Enables database services used for storing statistics from various services.
	<b>iodocs</b>	Enables online document service for REST API offered by various services.
	<b>qlesspyworker</b>	Internal service.

**Command Default** None

**Examples** The following example shows how to enable analytics service:

```
[root@server]# cmxctl enable analytics
```

```
The nodeagent service is not running.
Agent is not running, starting it now.
Starting nodeagent Process...
Retrying..
Done
Started nodeagent service with PID: 31027
```

## cmxctl jobs

To configure recurring background jobs, use the **cmxctl jobs** command.

```
cmxctl jobs {cancel jobname | list | run jobname | runnow jobname}
```

Syntax Description		
	<b>cancel</b>	Cancels a scheduled job.
	<i>jobname</i>	Name of the job.
	<b>list</b>	Lists all the scheduled jobs.
	<b>run</b>	Runs a job at a specified time.
	<b>runnow</b>	Triggers a one-time run of the job.

**Command Default** None

### Examples

The following example shows how to run a background job:

```
[root@server]# cmxctl jobs run LocationIndexCleanup
submitted the job, verify using cmxctl jobs list.
```

# cmxctl node

To manage node installation, use the **cmxctl node** command.

```
cmxctl node {addswap | configure / install | reinstall / sslmode {disable | enable} / uninstall |
upgrade | verify}
```

Syntax Description		
<b>addswap</b>		Adds a 10GB swap space to the node.
<b>configure</b>		Confirms node specifications.
<b>install</b>		Installs the Cisco Connected Mobile Experiences (Cisco CMX) for the first time.
<b>reinstall</b>		Reinstalls the existing installation.
<b>sslmode disable</b>		Disables Secure Sockets Layer (SSL).
<b>sslmode enable</b>		Enables SSL.
<b>uninstall</b>		Uninstalls the software.
<b>upgrade</b>		Upgrades the Cisco CMX from a URL or a file.
<b>verify</b>		Verifies node configuration.

**Command Default** None

## Examples

The following example shows how to manage node installation:

```
[root@server]# cmxctl node sslmode enable

enabling ssl
ssl enabled
```

# cmxctl restart

To restart a service, use the **cmxctl restart** command.

```
cmxctl restart { analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qllesspyworker }
```

Syntax Description		
	<b>analytics</b>	Performs analytics on calculated location data.
	<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
	<b>cache_6379</b>	Caches the service used by location service.
	<b>cache_6380</b>	Caches the service used by analytics service.
	<b>cache_6381</b>	Caches the service used by analytics service.
	<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
	<b>configuration</b>	Configures nodes and clusters.
	<b>confd</b>	Internal service.
	<b>consul</b>	Internal service.
	<b>database</b>	Enables the database service used by analytics and configuration services.
	<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
	<b>location</b>	Provides location service to compute location.
	<b>matlabengine</b>	Provides access point heatmap for location service.
	<b>metrics</b>	Collects system metrics.
	<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
	<b>influxdb</b>	Enables database services used for storing statistics from various services.
	<b>iodocs</b>	Enables online document service for REST API offered by various services.
	<b>qllesspyworker</b>	Internal service.

**Command Default** None

**Examples** The following example shows how to restart services:

```
[root@server bin]# cmxctl restart database

Done
The nodeagent service is currently running with PID: 16718
Stopping postgres Process...
Successfully shutdown postgres Process.
Starting postgres Process...
Done
Started postgres service with PID: 25702
Exception while notifying CE
```

# cmxctl start

To start a Cisco Connected Mobile Experiences (Cisco CMX) services, use the **cmxctl start** command.

```
cmxctl start { analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qlesspyworker }
```

Syntax Description		
	<b>analytics</b>	Performs analytics on calculated location data.
	<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
	<b>cache_6379</b>	Caches the service used by location service.
	<b>cache_6380</b>	Caches the service used by analytics service.
	<b>cache_6381</b>	Caches the service used by analytics service.
	<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
	<b>configuration</b>	Configures nodes and clusters.
	<b>confd</b>	Internal service.
	<b>consul</b>	Internal service.
	<b>database</b>	Enables the database service used by analytics and configuration services.
	<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
	<b>location</b>	Provides location service to compute location.
	<b>matlabengine</b>	Provides access point heatmap for location service.
	<b>metrics</b>	Collects system metrics.
	<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
	<b>influxdb</b>	Enables database services used for storing statistics from various services.
	<b>iodocs</b>	Enables online document service for REST API offered by various services.
	<b>qlesspyworker</b>	Internal service.

**Command Default** None

**Examples** The following example shows how to start CMX services:

```
[root@server]# cmxctl start consul

Done
The nodeagent service is currently running with PID: 16718
Done
The analytics service is already running with pid: 1099
Done
Exception while notifying CE
Done
The location service is already running with pid: 16005
Done
Exception while notifying CE
```

```
Done
The configuration service is already running with pid: 16165
Done
Exception while notifying CE
Done
The matlabengine service is already running with pid: 1251
Done
Exception while notifying CE
Done
The nmsplb service is already running with pid: 1377
Done
Exception while notifying CE
```

# cmxctl status

To view the status of one or all services, use the **cmxctl status** command.

```
cmxctl status [analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qllesspyworker]
```

Syntax Description		
	<b>analytics</b>	Performs analytics on calculated location data.
	<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
	<b>cache_6379</b>	Caches the service used by location service.
	<b>cache_6380</b>	Caches the service used by analytics service.
	<b>cache_6381</b>	Caches the service used by analytics service.
	<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
	<b>configuration</b>	Configures nodes and clusters.
	<b>confd</b>	Internal service.
	<b>consul</b>	Internal service.
	<b>database</b>	Enables the database service used by analytics and configuration services.
	<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
	<b>location</b>	Provides location service to compute location.
	<b>matlabengine</b>	Provides access point heatmap for location service.
	<b>metrics</b>	Collects system metrics.
	<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
	<b>influxdb</b>	Enables database services used for storing statistics from various services.
	<b>iodocs</b>	Enables online document service for REST API offered by various services.
	<b>qllesspyworker</b>	Internal service.

**Command Default** None

## Examples

The following example shows how to display the status for the consul service:

```
[root@server]# cmxctl status consul

Done
The nodeagent service is currently running with PID: 16718
+-----+-----+-----+-----+
| Host          | Service          | Status  | Uptime (HH:mm) |
+-----+-----+-----+-----+
| cmx-master-1 | Analytics        | Running | 0 days, 05:17  |
+-----+-----+-----+-----+
| cmx-master-1 | Cache_6379       | Running | 0 days, 05:17  |
+-----+-----+-----+-----+
| cmx-master-1 | Cache_6380       | Running | 0 days, 05:17  |
+-----+-----+-----+-----+
```

```

+-----+-----+-----+-----+
| cmx-master-1 | Cache_6381 | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Cassandra | Running | 0 days, 04:08 |
+-----+-----+-----+-----+
| cmx-master-1 | Confd | Running | 0 days, 03:40 |
+-----+-----+-----+-----+
| cmx-master-1 | Configuration | Running | 0 days, 03:43 |
+-----+-----+-----+-----+
| cmx-master-1 | Consul | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Database | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Haproxy | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Influxdb | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Iodocs | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Location | Running | 0 days, 03:43 |
+-----+-----+-----+-----+
| cmx-master-1 | Matlabengine | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Metrics | Running | 0 days, 05:17 |
+-----+-----+-----+-----+
| cmx-master-1 | Nmsplb | Running | 0 days, 05:16 |
+-----+-----+-----+-----+
| cmx-master-1 | Qlesspyworker | Running | 0 days, 05:23 |
+-----+-----+-----+-----+

```

# cmxctl stop

To shutdown a service, use the **cmxctl stop** command.

```
cmxctl stop { analytics | agent | cache_6379 | cache_6380 | cache_6381 | cassandra |
configuration | confd | consul | database | haproxy | location | matlabengine | metrics |
nmsplb | influxdb | iodocs | qlesspyworker }
```

Syntax Description		
	<b>analytics</b>	Performs analytics on calculated location data.
	<b>agent</b>	Manages CMX system lifecycle. starts, stops, and monitors all the services running in CMX.
	<b>cache_6379</b>	Caches the service used by location service.
	<b>cache_6380</b>	Caches the service used by analytics service.
	<b>cache_6381</b>	Caches the service used by analytics service.
	<b>cassandra</b>	Enables cassandra database service used by the location service for historical data.
	<b>configuration</b>	Configures nodes and clusters.
	<b>confd</b>	Internal service.
	<b>consul</b>	Internal service.
	<b>database</b>	Enables the database service used by analytics and configuration services.
	<b>haproxy</b>	Enables the TCP or HTTP load balancer gateway to all service APIs.
	<b>location</b>	Provides location service to compute location.
	<b>matlabengine</b>	Provides access point heatmap for location service.
	<b>metrics</b>	Collects system metrics.
	<b>nmsplb</b>	Enables load balancer service used for distributing Network Mobility Services Protocol (NMSP) messages to location services.
	<b>influxdb</b>	Enables database services used for storing statistics from various services.
	<b>iodocs</b>	Enables online document service for REST API offered by various services.
	<b>qlesspyworker</b>	Internal service.

**Command Default** The services are running.

**Examples** The following example shows how to stop the analytics service:

```
[root@server]# cmxctl stop analytics

Done
The nodeagent service is currently running with PID: 16987
Stopping analytics Process...
Service analytics with pid: 19095
Retrying..
Done
Successfully shutdown analytics Process.
```

# cmxctl version

To know the Cisco Connected Mobile Experiences (Cisco CMX) RC version, use the **cmxctl version** command.

## cmxctl version

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Examples** The following example shows how to display version information for Cisco CMX:

```
[root@server]# cmxctl version

Build Version   : 10.1.0-27
Build Time      : 2015-05-05 03:06:45.437430
-----
Name            : cmx-ng-container
Commit Count    : 17
Short Hash      : bf20ec1
-----
Name            : cmx-ng-location

# cmxctl config Commands

This section lists the **cmxctl config** commands:

- [cmxctl config backup, page 1-16](#)
- [cmxctl config controllers, page 1-17](#)
- [cmxctl config import, page 1-18](#)
- [cmxctl config maps, page 1-19](#)
- [cmxctl config reload, page 1-20](#)
- [cmxctl config restore, page 1-21](#)
- [cmxctl config verify, page 1-22](#)

# cmxctl config backup

To back up a node, use the **cmxctl config backup** command.

## cmxctl config backup

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Examples** The following example shows how to back up a node:

```
[root@server]# cmxctl config backup

Please enter the path for backup file [/tmp]:
[17:43:50] Preparing for backup...
[17:43:50] Backup Database...
[17:43:51] Backup Cache...
[17:43:51] Backup Cassandra...
[17:43:53] Backup InfluxDb...
[17:43:53] Backup Consul...
[17:43:53] Backup Floormaps...
[17:43:53] Backup node configuration...
[17:43:59] Creating tar file..
[17:43:59] Done Backup. Created backup file
/tmp/cmx_backup_cmx-vmdev117_2015_03_10_17_43.tar.gz
?[]0;root@cmx-vmdev117:~[root@cmx-vmdev117 ~]# cmxctl config restore
?[]1034hPlease enter the backup file path:
/tmp/cmx_backup_cmx-vmdev117_2015_03_10_17_43.tar.gz
[17:44:12] Preparing for restore...

[17:45:20] Restarting all services...
[17:45:23] Done
```

# cmxctl config controllers

To manage the Cisco Wireless Controllers (Cisco WLC), use the **cmxctl config controllers** command.

**cmxctl config controllers {add | delete | import | show}**

Syntax Description	add	Adds a Cisco WLC.
	<b>delete</b>	Deletes a Cisco WLC.
	<b>import</b>	Imports a Cisco WLC from PI by providing PI credentials or by placing an exported PI MAP file in the /opt directory of the CMX server and providing the path to exported map file.
	<b>show</b>	Shows information pertaining to a Cisco WLC.

**Command Default** None

**Usage Guidelines** After a controller is added, the message “controller added successfully” may be shown. Note that this refers only to the correct parsing of the command. You should issue a **cmxctl controllers show** command to ensure that the controller is not active.

**Examples** The following example shows how to display the Cisco WLC information:

```
[root@server]# cmxctl config controllers show

+-----+-----+-----+-----+-----+-----+
| IP Address | Type | Version | Device Version | SHA2 | Status |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.65 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.44 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.46 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.70 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.93 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.97 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.35 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.58 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.82 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.84 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
| 30.30.30.53 | WLC | 8.0.72.141 | - | No | ACTIVE |
+-----+-----+-----+-----+-----+-----+
```

# cmxctl config import

To imports maps and Cisco Wireless Controllers (Cisco WLC) from Cisco Prime Infrastructure, use the **cmxctl config import** command.

**cmxctl config import {prime | status}**

Syntax Description	prime	Imports maps from the Cisco Prime Infrastructure
	status	Shows import status.

**Command Default** None

**Examples** The following example shows how to import maps and Cisco WLC from Prime Infrastructure:

```
[root@server]# cmxctl config import prime
```

```
Please enter PI ip address: x.x.x.x
Please enter PI username [root]: root
Please enter PI password [Public123]:
```

```
Import successfully started from PI x.x.x.x. Check import status using cmxctl config
import status.
```

# cmxctl config maps

To import and manage maps, use the **cmxctl config maps** command.

**cmxctl config maps {address | delete | import}**

Syntax Description	address	Imports addresses for the maps.
	delete	Deletes the campus map.
	import	Imports map from the Cisco Prime Infrastructure.

**Command Default** None.

## Examples

The following example shows how to import and manage maps:

```
[root@server]# cmxctl config maps import
```

```
Please specify import type [PI / FILE] [FILE]: PI
Please enter PI ip address: x.x.x.x
Please enter PI username [root]: root
Please enter PI password [Public123]:
```

```
Import successfully started from PI 173.37.206.3. Check import status using cmxctl config
import status.
```

# cmxctl config reload

To force the generation of config files, use the **cmxctl config reload** command.

## cmxctl config reload

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** None

---

**Examples** The following example shows how to forcefully generate configuration files:

```
[root@server]# cmxctl config reload

# cmxctl config restore

To restore a node, use the **cmxctl config restore** command.

## **cmxctl config restore**

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** None.

---

**Examples** The following example shows how to restore a node:

```
[root@server]# cmxctl config restore

Please enter the backup file path: /tmp/cmx_backup_cmx-vmdev117_2015_03_10_17_43.tar.gz

# cmxctl config verify

To verify the Cisco CMX installation and configuration, use the **cmxctl config verify** command.

## cmxctl config verify

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Examples** The following example shows how to verify the Cisco CMX installation and configuration:

```
[root@server]# cmxctl config verify

Verifying node configuration...
NetworkManager: unrecognized service
Consul v0.4.1
Consul Protocol: 2 (Understands back to: 1)
confd 0.6.0
