About This Guide

This section describes the objectives, audience, organization, and conventions of this hardware installation guide.

Use this document with the documents listed in the “Related Documentation” section on page xv.

This section contains the following:

- Document Revision History, page vii
- Objectives, page viii
- Audience, page viii
- Organization, page viii
- Conventions, page ix
- Safety Warnings, page x
- Related Documentation, page xv
- Obtaining Documentation, Obtaining Support, and Security Guidelines, page xv

Document Revision History

The Document Revision History table below records technical changes to this guide. The table shows the document revision number for the change, the date of the change, and a brief summary of the change. Not all Cisco documents use a Document Revision History table.
About This Guide

Objectives

This guide explains how to install, maintain, and troubleshoot your router hardware.

This guide provides minimum software configuration information, not comprehensive information. For detailed software configuration information, see the Cisco IOS configuration guide and command reference publications (see the “Obtaining Documentation, Obtaining Support, and Security Guidelines” section on page xv for more information.)

Warranty, service, and support information is in the Cisco Information Packet that shipped with your router.

Audience

This guide is designed for personnel who install, configure, and maintain the router. These persons should be familiar with electronic circuitry and wiring practices and be experienced electronic or electromechanical technicians. This guide identifies certain procedures that should be performed only by trained and qualified personnel.

Organization

This hardware installation guide contains:

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1</td>
<td>Introduction</td>
<td>Describes the hardware features and specifications of the routers.</td>

**Note**

Means **reader take note**.

**Tip**

Means **the following information will help you solve a problem**.

**Caution**

Means **reader be careful**. In this situation, you might perform an action that could result in equipment damage or loss of data.
Safety Warnings

Safety warnings appear throughout this publication in procedures that, if performed incorrectly, might harm you. A warning symbol precedes each warning statement. The safety warnings provide safety guidelines that you should follow when working with any equipment that connects to electrical power or telephone wiring. Warnings are translated into several languages. (For information about compliance guidelines and translated safety warnings, refer to the Cisco Regulatory Compliance and Safety Information for the Cisco MWR 2941 Mobile Wireless Edge Router.)

**Warning** IMPORTANT SAFETY INSTRUCTIONS

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device. Statement 1071

Related Documentation

For additional information about the Cisco MWR 2941 router, refer to the following documents:

- Cisco Regulatory Compliance and Safety Information for the Cisco MWR 2941 Mobile Wireless Edge Router
- Cisco MWR 2941 Mobile Wireless Edge Router Software Configuration Guide
- Release Notes for Cisco MWR 2941 Mobile Wireless Edge Router

Obtaining Documentation, Obtaining Support, and Security Guidelines

For information on obtaining documentation, obtaining support, providing documentation feedback, security guidelines, and also recommended aliases and general Cisco documents, see the monthly What’s New in Cisco Product Documentation, which also lists all new and revised Cisco technical documentation, at:

Introduction

The Cisco MWR 2941 Mobile Wireless Router is a cell-site access platform specifically designed to aggregate and transport mixed-generation radio access network (RAN) traffic. The router is used at the cell site edge as a part of a 2G, 3G, or 4G radio access network (RAN). The Cisco MWR 2941 includes the following models:

- Cisco MWR 2941-DC
- Cisco MWR 2941-DC-A

This chapter includes the following sections:

- Hardware Description, page 1-1
- Compact Flash Memory, page 1-6
- Power Supply, page 1-6
- Environmental Monitoring Temperature Sensor, page 1-8
- System Specifications, page 1-8
- Cisco MWR 2941 Router Interface Numbering, page 1-8
- Regulatory Compliance, page 1-10

Hardware Description

Contained in a standard shelf-rack enclosure, the Cisco MWR 2941 router weighs approximately 12 pounds (5.44 kg). It measures 1.72 inches high x 17.5 inches wide x 12.5 inches deep (4.37 cm or 1 RU x 44.45 cm x 31.75 cm). These dimensions do not include the rack-mount brackets.

The Cisco MWR 2941 router is mounted in a standard (EIA-310D) 19-inch (48.3 cm) equipment rack (using the rack-mount brackets provided).

The Cisco MWR 2941 router includes the following features:

- 16 fixed T1/E1 ports

  **Note**  
  A mix of T1s and E1s is not supported. All ports must be configured as either T1s or E1s.

- DS0 Time Slot Interchange available to all T1/E1 ports including HWIC slots (24 ports maximum)
- Support for structured and unstructured T1/E1s
- 4 ports of 100/1000 Copper Ethernet (RJ45 connectors)
• 2 ports of 1000 Ethernet with pluggable 802.3- and 802.3U-compliant SFP slots (SFP Transceivers)
• 2 HWIC interface card slots
• 2 miniature coaxial connectors for 10Mhz and 1PPS timing. You can use these interfaces with an external GPS device to send or receive clocking from the router.

Note

10Mhz and 1PPS timing connectors are only included on the Cisco MWR 2941-DC-A router.

• 1 Console/Auxiliary port (RJ45)
• 1 BITS clock input port (RJ45) or BITS/ToD port (RJ48)

Note

The BITS/ToD port is only included on the Cisco MWR 2941-DC-A router.

• Support for Timing over Packet (ToP) features, including Active Clock Recovery, Precision Time Protocol (PTP), and synchronous Ethernet
• Distributed Processing: Dedicated communications processor to provide feature processing for features such as IP packet generation, L2 encapsulation, ATM, and MLPPP.
• Line protection; T1 ports compliant to IEC60950-1; design to meet GR-1089 and GR-63 core requirements
• Chassis: 1RU, 12.5 inch depth
• Dual feed supply with additional redundant DC inputs plus redundant power supply (RPS) input
• Operating temperature range is -4 to 140°F (-20°C to 60°C). If HWICs are installed, the operating temperature range is 14 to 131°F (-10C to 55C).
• Front to back airflow
• Two LEDs for each T1/E1 port
  • C—indicates out of service or not configured, carrier condition, and loop condition
  • AL—no alarm, or alarm condition
• Two LEDs for each Ethernet port
  • L—indicates activity, lack of activity, or no link
  • S—indicates speed (100 or 1000) or off
• One compact flash LED—indicates activity or lack of activity
• One link activity LED for each SFP port—indicates whether link is active or not enabled
• Four chassis LEDs:
  • Power—indicates whether power supply is operational
  • Status—indicates whether software is up and running
  • Activity—indicates whether interrupts or packet transfers are running
  • BITS Activity—indicates whether BITS is in service and working properly
• Mounting brackets—The Cisco MWR 2941-DC router is shipped with mounting rack-mount brackets already installed and the Cisco MWR 2941-DC-A includes the rack-mount brackets in the accessory kit.
Cisco MWR 2941 Router Front View

Figure 1-1 shows a front view of the Cisco MWR 2941-DC router without HWICs; Figure 1-2 shows a front view of the Cisco MWR 2941-DC-A router with HWICs installed.

**Note**

HWICs are not included with the Cisco MWR 2941-DC-A router; you must order them separately.

The front panel of the Cisco MWR 2941 router has the following components:

- 16 T1/E1 ports, labeled T1/E1 (positions 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 15)
- 4 RJ-45 jacks for copper Ethernet ports, labeled “100/1000” Ethernet (positions 2, 3, 4, and 5)
- 2 HWIC slots, labeled “HWIC0” and “HWIC1”
- 1 compact FLASH Type-II connector, labeled “Compact Flash”
- 2 SFP connectors for optical GE ports, labeled “GE0” and “GE1”
- 2 miniature coaxial connectors for 10MHZ and 1PPS timing

**Note**

Timing connectors are only included on the Cisco MWR 2941-DC-A.

- 1 RJ-45 connector for Console/Auxiliary, labeled “CON/AUX”
- 1 BITS port:
  - 1 RJ-45 jack for the BITS interface, labeled “BITS” (Cisco MWR 2941-DC)
  - 1 RJ-48 jack for the BITS/ToD interface, labeled “BITS/SYNC” (Cisco MWR 2941-DC-A)
- The following LEDs
  - T1/E1 ports
  - Ethernet ports
  - Compact flash
  - SFP ports
  - Chassis: Power, Operating status, and Activity
  - BITS activity

**Note**

For a more detailed description of the LEDs, see the “Reading the LEDs” section on page A-5.
Figure 1-1  
Cisco MWR 2941-DC Router—Front View

- 16 T1/E1 ports
- 4 GE ports (RJ45 100/1000 Ethernet)

- 4 GE ports (RJ45 100/1000 Ethernet)
- Compact flash slot
- Link Activity LEDs
- Console/Auxiliary port
- 2 GE ports (SFP 1000BT)
- Compact flash LED
- 2 Mini-coax connectors (10MHZ and 1PPS)
- BITS/SYNC port
- Chassis LEDs
- Power Status Activity
- BITS Activity

Note  
The HWICs shown in Figure 1-2 are not included with the Cisco MWR 2941-DC-A router; you must order them separately.
Cisco MWR 2941 Rear View

Figure 1-3 shows the rear panel of the Cisco MWR 2941 router, including the orientation of the following components:

- Four exhaust fans
- Mounting point for 2-hole lug. For more information, see the “Connecting the Chassis Ground and Power” section on page 3-6.
- Cisco MWR 2941 router power connector. For more information, see the “Wiring the DC-Input Power Source” section on page 3-9.

Hardware Configuration Options

The Cisco MWR 2941 router supports has the following hardware configuration options:

- HWIC Cards
- SFP Modules

HWIC Cards

Two HWIC slots allow you to configure the chassis with any two supported HWIC interface cards. HWIC support varies according to the software version installed on the router. The HWIC slots are labeled HWIC0 and HWIC1 on the faceplate of the Cisco MWR 2941 router. The HWIC slots can accommodate 2 T1/E1 HWICs, expanding the number of T1/E1 ports from 16 to 24 ports. You can configure HWIC T1/E1 ports for use as a GSM short-haul connection or an IP RAN backhaul connection.

Note

The Cisco MWR 2941 does not support online insertion and removal (OIR) of HWIC interface cards. Attempts to perform OIR on a card in a powered-on router might cause damage to the card.

SFP Modules

Two SFP ports allow you to configure the Ethernet ports according to the needs of your network. SFP support varies according to the software version installed on the router. To see the SFPs supported for a given software version, see the MWR 2941 Release Notes at http://www.cisco.com/en/US/products/ps9395/prod_release_notes_list.html.

Compact Flash Memory

The Cisco MWR 2941 router supports one compact flash slot on the front panel. The slot is intended to house a memory card using the compact flash standard file system. The most common usage is for storage of the system image or core dumps for diagnostic purposes. The Cisco IOS image and troubleshooting logs reside on the flash memory.

This compact flash device is not field upgradeable, it is only installed at the factory.

The front panel connector supports both Type I and Type II 3.3V Compact Flash devices. The compact flash controller has the following features:

- Operating mode: PCMCIA-compatible PC card in memory mode
- Auto power removal on removal of compact flash from the slot
- Write protection
- Support Cisco qualified 128MB compact flash devices

Note

The interface supports any size compact flash device. The size limit is a statement on test coverage and qualification time limits.

Please refer to the industry standard for compact flash for details on internal registers. All compact flash follow the ATA standard for internal register access.

Power Supply

The Cisco MWR -DC router is equipped with an Internal +27/-48 volts Direct Current (VDC) (±20 to 60 VDC supply tolerance).

Safety Precautions

Observe the following general safety precautions and recommendations in planning the source power requirements for the Cisco MWR 2941 router (for additional safety information, see the “Safety Guidelines” section on page 2-1):

- Check the power at your site before router installation (and periodically after installation) to ensure clean power (free of spikes and noise) is being received.
Always disconnect the power source and unplug the power cable before working on the router.

Install proper grounding for the site to avoid damage from lightning and power surges.

**Warning**

To avoid electric shock, do not connect safety extra-low voltage (SELV) circuits to telephone-network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports both use RJ-45 connectors. Use caution when connecting cables. Statement 1021

Table 1-1 lists DC power supply specifications for the Cisco MWR 2941 router.

<table>
<thead>
<tr>
<th>Specification</th>
<th>+27/-48 VDC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input voltage, DC power supply</td>
<td>±20 to 60 VDC</td>
</tr>
<tr>
<td>Maximum input current</td>
<td>3.5 A (current rating = 4 A)</td>
</tr>
<tr>
<td><strong>Note</strong></td>
<td>If the input voltage drops below 18.5 VDC, the router goes into shut down mode.</td>
</tr>
<tr>
<td>Wire gauge for DC input power connections</td>
<td>18-AWG</td>
</tr>
<tr>
<td>Power dissipation</td>
<td>65 W (maximum), 45 W (typical)</td>
</tr>
</tbody>
</table>

The Cisco MWR 2941 router uses a 4-pin terminal block (part number 27-2030-01) for input to the power supply. The terminal block is part of the accessory kit (part number 53-3085-01 for the MWR-2941-DC, part number 53-3295-01 for the MWR-2941-DC-A), which ships with the Cisco MWR 2941 router.

Note that the ground wire connects to a 2-hole lug, which connects to the corresponding mounting point.

With the connector installed in the chassis, the pins are for two separate input power sources named A and B. From left to right, the pins are for rail A+, rail A-, rail B-, and rail B+.

Table 1-2 and Table 1-3 list the pinout configurations for the connector, based on the power source.

<table>
<thead>
<tr>

<td>+27 VDC B</td>
</tr>
</tbody>
</table>
Environmental Monitoring Temperature Sensor

The Cisco MWR 2941 router has a temperature sensor to detect overtemperature conditions inside the chassis. The overtemperature detection trips at 70°C +/- 5%. This condition is reported to the processor as an interrupt, where software takes action to generate the appropriate alarms.

System Specifications

Table 1-4 lists the system specifications for Cisco MWR 2941 router.

### Cisco MWR 2941 Router Interface Numbering

Each network interface on a Cisco MWR 2941 router is identified by a slot number and a port number. Following is an explanation of the slot/port numbering:
Logical slot numbers are 0 for all built-in interfaces. The numbering format is **Interface type Slot number/Interface number**. Interface (port) numbers begin at logical 0 for each interface type.

Logical interface numbering for the built-in T1/E1 ports runs from 0/0 through 0/15. Interfaces are hard-wired; therefore, port 0 is always logical interface 0/0, port 1 is always logical interface 0/1, and so on. Built-in T1/E1 ports are numbered bottom to top, left to right (bottom row numbered 0-2-4-6-8-10-12-14, top row numbered 1-3-5-7-9-11-13-15).

When the 2 HWIC slots are used to expand the T1/E1 port density to 20 or 24 ports, logical interface numbering continues from 1/0 through 1/3 and 2/0 through 2/3. Logical interfaces for HWIC0 are always 1/0 through 1/3 and logical interfaces for HWIC1 are always 2/0 through 2/3. Because the interfaces are hard-wired, HWIC0 port 0 is always logical interface 1/0, HWIC0 port 1 is always logical interface 1/1, HWIC1 port 0 is always logical interface 2/0, HWIC1 port 1 is always logical interface 2/1, and so on. Ports are numbered left to right for each HWIC.

Logical interface numbering for the built-in Ethernet ports runs from 0/0 through 0/5. Because the interfaces are hard-wired, port 0 is always logical interface 0/0, port 1 is always logical interface 0/1, and so on. SFP ports are numbered left to right, 0 and 1; 100/1000 Ethernet ports are numbered left to right, 2 through 5.

Figure 1-4 shows the interface numbering for a Cisco MWR 2941-DC router; Figure 1-5 shows the interface numbering for a Cisco MWR 2941-DC-A router.

**Note**
The HWICs shown are not included with the router; you must order them separately.
Regulatory Compliance

For regulatory compliance and safety information, see the *Regulatory Compliance and Safety Information for the Cisco MWR 2941 Mobile Wireless Edge Router* document.
Preparing to Install the Router

This chapter describes site requirements and equipment used to install your Cisco MWR 2941 router. It includes the following sections:

- Safety Guidelines, page 2-1
- Prerequisites, page 2-3
- Site Planning, page 2-4
- Console/Auxiliary Port Considerations, page 2-8

Safety Guidelines

Before you begin the installation of the Cisco MWR 2941 router, review the safety guidelines in this chapter, the “Safety Precautions” section on page 1-6, and the “Rack-Mounting Configuration Guidelines” section on page 3-2 to avoid injuring yourself or damaging the equipment.

In addition, before replacing, configuring, or maintaining the Cisco MWR 2941 router, review the safety warnings listed in the document Cisco Regulatory Compliance and Safety Information for the Cisco MWR 2941 Mobile Wireless Edge Router.

Safety with Equipment

The following guidelines help ensure your safety and protect the equipment. This list is not all-inclusive of all potentially hazardous situations, so be alert.

⚠️ Warning

Before connecting the system to the power source, read the installation instructions. Statement 1004

- Before moving the system, always disconnect all power cords and interface cables.
- Never assume that power is disconnected from a circuit; always check.
- Before and after installation, keep the chassis area clear and dust-free.
- Keep tools and assembly components away from walk areas where you or others could fall over them.
- Do not work alone if potentially hazardous conditions exist.
- Do not perform any action that creates a potential hazard to people or makes the equipment unsafe.
- Do not wear loose clothing that may get caught in the chassis.
• When working under conditions that may be hazardous to your eyes, wear safety glasses.

Safety with Electricity

Warning Before performing any of the following procedures, ensure that power is removed from the DC circuit.
Statement 1003

Warning This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security.
Statement 1017

Warning To avoid electric shock, do not connect safety extra-low voltage (SELV) circuits to telephone-network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports both use RJ-45 connectors.
Statement 1021

Warning Before working on equipment that is connected to power lines, remove jewelry (including rings, necklaces, and watches).Metal objects will heat up when connected to power and ground and can cause serious burns or weld the metal object to the terminals.
Statement 43

Warning Before working on a chassis or working near power supplies, unplug the power cord on AC units; disconnect the power at the circuit breaker on DC units.
Statement 12

Warning During periods of lightning activity, do not work on the system or connect or disconnect cables.
Statement 1001

When working on equipment powered by electricity, follow these guidelines:
• Locate the room’s emergency power-off switch. Then, if an electrical accident occurs, you can quickly turn off the power.
• Before working on the system, turn off the DC main circuit breaker and disconnect the power terminal block cable.
• Before doing the following, disconnect all power:
  – Working on or near power supplies
  – Installing or removing a router chassis or network processor module
  – Performing most hardware upgrades
• Never install equipment that appears damaged.
• Carefully examine your work area for possible hazards, such as moist floors, ungrounded power extension cables, and missing safety grounds.
• Never assume that power is disconnected from a circuit; always check.
• Never perform any action that creates a potential hazard to people or makes the equipment unsafe.
Prerequisites

Before installing the Cisco MWR 2941 router, it is important to prepare for installation by:

- Preparing the site (site planning) and reviewing the installation plans or method of procedures (MOPs)
- Unpacking and inspecting the Cisco MWR 2941 router
- Gathering tools and test equipment required to properly install the Cisco MWR 2941 router
Site Planning

Typically, you should have prepared the installation site beforehand. As part of your preparation, obtain a floor plan of the site and the equipment rack where the Cisco MWR 2941 router will be housed. Determine the location of any existing routers and their interconnections, including communications and power. Following the air flow guidelines (see the “Air Flow Guidelines” section on page 2-4) ensures that adequate cooling air is provided to the Cisco MWR 2941 router.

All personnel involved in the installation of the Cisco MWR 2941 router including installers, engineers, and supervisors should participate in the preparation of a MOP for approval by the customer.

Power Supply Considerations

Check the power at your site to ensure that you are receiving clean power (free of spikes and noise). Install a power conditioner if necessary (see the “Power Supply” section on page 1-6 for power requirements).

Warning This equipment is designed for connection to TN and IT power systems. Statement 16

Site Environment

Install the Cisco MWR 2941 router in an equipment rack. The location of your router and the layout of your equipment rack or wiring room are extremely important considerations for proper operation. Cramped equipment, inadequate ventilation, and inaccessible panels can cause malfunctions and shutdowns, and can make maintenance difficult. Plan for access to front and rear panels of the router.

The following precautions will help you plan an acceptable operating environment for your router and will help you avoid environmentally caused equipment failures:

- Ensure that the room where your router operates has adequate circulation. Electrical equipment generates heat. Without adequate circulation, ambient air temperature may not cool equipment to acceptable operating temperatures (see the next section, “Air Flow Guidelines”).
- Always follow ESD-prevention procedures described in the “Preventing Electrostatic Discharge Damage” section on page 2-3 to avoid damage to equipment. Damage from static discharge can cause immediate or intermittent equipment failure.

Air Flow Guidelines

To ensure adequate air flow through the equipment rack, it is recommended that you maintain a clearance of at least 6 inches (15.24 cm) in the front and the rear of the rack at all times.

If airflow through the equipment rack and the routers that occupy it is blocked or restricted, or if the ambient air being drawn into the rack is too warm, an overtemperature condition within the rack and the routers that occupy it can occur.

The site should also be as dust-free as possible. Dust tends to clog the router fans, reducing the flow of cooling air through the equipment rack and the routers that occupy it. Thus, increasing the risk of an overtemperature condition.

Additionally, the following guidelines will help you plan your equipment rack configuration:
Chapter 2      Preparing to Install the Router

Site Planning

- Mount the Cisco MWR 2941 router in a 19-inch rack (with a 17.5-inch or 17.75-inch opening).
- Beside air flow, you must allow clearance around the rack for maintenance.
- Enclosed racks must have adequate ventilation. Ensure that the rack is not congested, because each router generates heat. An enclosed rack should have louvered sides and a fan to provide cooling air. Heat that is generated by equipment near the bottom of the rack can be drawn upward into the intake ports of the equipment above.
- When mounting a chassis in an open rack, ensure that the rack frame does not block the front intakes or the rear exhaust fans.
- When rack-installed equipment fails, especially equipment in an enclosed rack, try operating the equipment by itself, if possible. Power off other equipment in the rack (and in adjacent racks) to give the router a maximum of cooling air and clean power.

Method of Procedure

Part of site preparation includes reviewing installation plans or MOPs. An example of a MOP (pre-installation checklist of tasks and considerations to address and agree upon before proceeding with the installation) is as follows:

1. Assign personnel.
2. Determine protection requirements for personnel, equipment, and tools.
3. Evaluate potential hazards that may affect service.
4. Schedule time for installation.
5. Determine space requirements.
6. Determine power requirements.
7. Identify required procedures or tests.
8. On an equipment plan, make a preliminary decision that locates each Cisco MWR 2941 router that you plan to install.
9. Read this hardware installation guide.
10. Verify the list of replaceable parts for installation (screws, bolts, washers, and so on) so that the parts are identified.
11. Check the required tools list to make sure the necessary tools and test equipment are available (see the "Required Tools and Equipment" section on page 2-6).
12. Perform the installation.

Unpacking and Checking the Contents of your Shipment

The shipping package for the Cisco MWR 2941 router is designed to reduce the possibility of product damage associated with routine handling experienced during shipment. To reduce the potential damage to the product, transport the Cisco MWR 2941 router in its Cisco specified packaging. Failure to do so may result in damage to the Cisco MWR 2941 router. Also do not remove the Cisco MWR 2941 router from its shipping container until you are ready to install it.

Note

Do not discard the packaging materials used in shipping your Cisco MWR 2941 router. You will need the packaging materials in the future if you move or ship your Cisco MWR 2941 router.
The Cisco MWR 2941 router, cables, and any optional equipment you ordered may be shipped in more than one container. When you unpack the containers, check the packing list to ensure that you receive all of the following items:

- Router
- Accessory kit (part number 53-3085-01 for the MWR-2941-DC, part number 53-3295-01 for the MWR-2941-DC-A), containing
  - Terminal block (part number 27-2030-01)
  - 2-hole lug, 6-AWG ground wire, #10 blue stud (part number 32-0629-01)
  - 2 pan-head Phillips screws used to attach the lug to the router, M5.0x10mm (part number 48-0426-01)
  - 2 cable guides (part number 700-01663-01)
  - 2 pan-head Phillips screws used to attach the cable guides, M4.0x20mm (part number 48-0654-01)

Note: There is no AC power option.

- The documentation DVD, if specified in your order
- Cisco Information Packet publication

Inspect all items for shipping damage. If an item appears to be damaged, or if you encounter problems installing or configuring your router, contact customer service. The Cisco Information Packet provides warranty, service, and support information.

### Required Tools and Equipment

You need the following tools and equipment to install and upgrade the router and its components:

- ESD-preventive cord and wrist strap.
- Number 2 Phillips screwdriver.
- Flat-blade screwdrivers: small, 3/16-inch (0.476 cm) and medium, 1/4-inch (0.625 cm).
  - To install or remove modules
  - To remove the cover, if you are upgrading memory or other components
- #12-24 pan-head screws to secure the router to the equipment rack.
- Cables for connection to the WAN and LAN ports (depending on the configuration).

Note: For more information on cable specifications, see Appendix B, “Cable Specifications.”

- Ethernet hub or PC with a network interface card for connection to the Ethernet (LAN) ports.
- Console terminal (an ASCII terminal or a PC running terminal emulation software) that is configured for 9600 baud, 8 data bits, no parity, and 2 stop bits.
• Console cable for connection to the console port.
• Modem for connection to the auxiliary port for remote administrative access (optional).
• Auxiliary cable for connection to the auxiliary port. You can supply this cable or order one from Cisco Systems, Inc.
• Ratcheting torque screwdriver with a Phillips head that exerts up to 15 pound-force inches (lbf-in) of pressure.
• Crimping tool as specified by the ground lug manufacturer.
• 18-AWG copper wire for the power cord.
• Wire-stripping tools for stripping both 6- and 18-AWG wire.
• Serial interfaces may require a data service unit (DSU) or channel service unit/data service unit (CSU/DSU).

### Installation Checklist

To assist you with your installation and to provide a historical record of completed tasks and users, use the following Installation Checklist. Make a copy of this checklist and mark the entries as you complete each task. When the checklist is completed, include a copy of the checklist for each router in your Site Log along with other records for your new router. See Appendix C, “Site Log” for information on the Site Log, including a sample Site Log.

Installation Checklist for Site:

Creating a Site Log

The Site Log provides a record of all actions related to installing and maintaining the router. Keep it in an accessible place near the chassis so that anyone who performs tasks has access to it.

Create the Site Log prior to installation. (See Appendix C, “Site Log” for more detailed information on the Site Log as well as a sample Site Log that can be used to make copies.)

Console/Auxiliary Port Considerations

The Cisco MWR 2941 router provides a single console/auxiliary port (labeled CON/AUX). A single RJ-45 cable is used for either a console or auxiliary connection.

This section describes important cabling information to consider before connecting a console terminal—either an ASCII terminal or a PC running terminal emulation software—or a modem to the console/auxiliary port. The console/auxiliary port provides access to the router either locally (using a console terminal), or remotely (using a modem).

The main difference between a console connection and an auxiliary connection is that the auxiliary connection supports hardware flow control and the console connection does not. Flow control paces the transmission of data between a sending device and a receiving device. Flow control ensures that the receiving device can process all the data sent to it before the sending device sends more data. When the buffers on the receiving device are full, a message is sent to the sending device to suspend transmission until the data in the buffers has been processed. Because the auxiliary connection supports flow control, it is suited for use with the high-speed transmissions of a modem. Console connections transmit at slower speeds than modems; therefore, the console connection is suited for use with console terminals.

Note

Console and rollover cables are not included with the Cisco MWR 2941 router. You can order the console cable from Cisco Systems, Inc. (part number ACS-1900ASYN=). You must supply your own rollover cable.

To change the console port into an auxiliary port, use the `modem enable [autodetect]` command in line configuration mode. To return the auxiliary port to a console port, use the `no modem enable`.

This command is not configured by default and is applicable only on the console line. The console port must be changed to act as a virtual auxiliary port using the `modem enable [autodetect]` command before the dial backup and remote management capabilities can be enabled.

Use the `show line autodetect` EXEC command to determine when a modem or a console has been detected. The command displays messages to indicate the type or state of connection on the console line.

Console Port Connections

The router provides an EIA/TIA-232 asynchronous serial console port (RJ-45). Depending on the cable and the adapter used, this port appears as a data terminal equipment (DTE) or data communications equipment (DCE) device at the end of the cable.

To connect an ASCII terminal to the console/auxiliary port, use the RJ-45 rollover cable with the female RJ-45-to-DB-25 adapter (labeled TERMINAL). To connect a PC running terminal emulation software to the console/auxiliary port, use the RJ-45 rollover cable with the female RJ-45-to-DB-9 adapter.
Console/Auxiliary Port Considerations

(labeled TERMINAL). The default parameters for the port are 9600 baud, 8 data bits, no parity, and 2 stop bits. As a console port, hardware flow control is not supported. For instructions on installing a console terminal, see the “Connecting the Console/Auxiliary Port” section on page 3-10.

For cable and port pinouts, see the online document *Cisco Modular Access Router Cable Specifications*. This document is provided on the documentation DVD that accompanied your router (if ordered), and is also available online at Cisco.com.

**Auxiliary Port Connections**

The router includes an EIA/TIA-232 asynchronous serial auxiliary port (RJ-45) that supports flow control. Depending on the cable and the adapter used, this port appears as either a DTE or DCE device at the end of the cable.

To connect a modem to the console/auxiliary port, use an RJ-45 rollover cable with the male RJ-45-to-DB-25 adapter (labeled MODEM). For instructions on connecting devices to the console/auxiliary port, see the “Connecting the Console/Auxiliary Port” section on page 3-10.

For cable and port pinouts, see the online document *Cisco Modular Access Router Cable Specifications*. This document is provided on the documentation DVD that accompanied your router (if ordered), and is also available online at Cisco.com.
Installing the Cisco MWR 2941 Router

This chapter describes how to install your Cisco MWR 2941 router and how to connect it to networks and external devices. This chapter contains the following sections:

- Interface Cards, page 3-1
- Mounting the Cisco MWR 2941 Router, page 3-2
- Connecting the Chassis Ground and Power, page 3-6
- Connecting Cables, page 3-10
- Powering On the Router, page 3-14

Warning
Only trained and qualified personnel should be allowed to install, replace, or service this equipment. Statement 1030

Warning
This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. Statement 1017

Interface Cards

The HWIC interface cards are a configurable option. If ordered, they are shipped already installed. If you need to remove or install the card, refer to the applicable documents online.

Note
If the HWIC interface card must be removed or installed, we recommend that you perform the installation or removal before you install the chassis.

If the HWIC interface cards are already installed, proceed to the next section “Mounting the Cisco MWR 2941 Router.”
Mounting the Cisco MWR 2941 Router

Each Cisco MWR 2941 router includes rack-mounting brackets. The Cisco MWR 2941-DC includes factory-installed mounting brackets, while the Cisco MWR 2941-DC-A includes the mounting brackets in the accessory kit.

Using the rack-mounting brackets, you can front-mount or center-mount the Cisco MWR 2941 router in a 19-inch (48.3-cm) equipment rack that conforms to the EIA-310-D specification (the inside width of the rack should be 17.72 to 17.80 inches [45 to 45.21 cm]).

Using the two rack-mounting brackets for recessed mounting (part number 700-24513-01), you can recess Cisco MWR 2941 router in the equipment rack. This arrangement provides extra space in front of the router for the cables and allows you to close the doors of racks equipped with front-close doors.

If you need to attach or replace the rack-mounting brackets, see the “Attaching the Rack-Mounting Brackets” section on page 3-3.

The rack-mounting brackets are slotted to allow the router to be mounted in racks with EIA 1.25-inch (3.81-cm) or WECO 1.0-inch (2.54-cm) hole spacing. When installed in the rack, the Cisco MWR 2941 router requires one EIA 1.75-inch (4.4-cm) vertical mounting space (or 1 rack unit [RU]) for mounting (see the “Mounting the Cisco MWR 2941 Router in a Rack” section on page 3-4).

Caution
Allow clearance in the front and rear of the Cisco MWR 2941 router for cooling air to be drawn in through the front and circulated through the chassis and out the four fan exhaust ports mounted on the rear of the chassis.

Rack-Mounting Configuration Guidelines

Use the following information to help you plan your equipment rack configuration:

- When mounting the router to an equipment rack, ensure that the rack is bolted to the floor.
- Because you may install more than one router into the rack, ensure that the weight of all of the routers installed does not make the rack unstable.

Caution
Some equipment racks are also secured to ceiling brackets, if necessary, due to the weight of the equipment in the rack. Make sure that the rack you are using to install the routers is secured to the building structure.

- As mentioned in the “Air Flow Guidelines” section on page 2-4, maintain a 6-inch (15.2-cm) clearance at the front and rear of the router to ensure adequate air intake and exhaust.
- Avoid installing the routers in an overly congested rack. Air flowing to or from other routers in the rack might interfere with the normal flow of cooling air through the routers, increasing the potential for overtemperature conditions within the routers.
- Allow at least 19 inches (48.7 cm) of clearance at the front and rear of the rack for router maintenance.
- Follow your local practices for cable management. Ensure that cables to and from the routers do not impede access to perform equipment maintenance or upgrades.
Attaching the Rack-Mounting Brackets

Perform the following procedure to install, replace, or rearrange the rack-mounting brackets so you can then mount the Cisco MWR 2941 router in a 19-inch (48.3-cm) equipment rack. There are three options for mounting the router in the equipment rack:

- Front-mount
- Center-mount
- Recess-mount

**Note**
You can use the same rack-mounting brackets to front-mount or center-mount the Cisco MWR 2941 router in the equipment rack.

If you want to recess Cisco MWR 2941 router in the equipment rack, you can use two rack-mounting brackets recessed mounting (part number 700-24513-01). Replace the factory-installed rack-mounting brackets with the rack-mounting brackets for recessed mounting. Be sure that the flange for attaching the router to the rack extends beyond the front of the router. If you have front doors on your equipment rack, recessing the router allows you to close the doors even with the cables protruding from the front of the router.

**Step 1**
Locate the mounting holes of the Cisco MWR 2941 router for the mounting.

**Note**
Rack-mount the Cisco MWR 2941 router with the front of the chassis facing forward.

**Step 2**
Align the rack-mounting bracket with the Cisco MWR 2941 router and position with the three #8-32 x 0.37-inch screws (provided) (see Figure 3-1 for front-mounting, Figure 3-2 for center-mounting or Figure 3-3 for recess-mounting).

**Step 3**
Insert the screws (3 places) and tighten using a Number 2 Phillips screwdriver.

**Step 4**
Repeat Steps 2 and 3 for the other rack-mounting bracket.

![Figure 3-1 Attaching the Bracket for Front-Mounting](image-url)
Proceed to the next section, “Mounting the Cisco MWR 2941 Router in a Rack” to continue the installation.

Mounting the Cisco MWR 2941 Router in a Rack

Typically, the Cisco MWR 2941 router mounts to a 19-inch (48.3-cm) 2-post equipment rack with rack-mounting brackets that attach toward the front of the router sides. The inside width between the two posts or mounting strips (left and right) must be at least 17.5 inches (44.45 cm). For information about the equipment rack, see “Hardware Description” section on page 1-1.

No vertical clearance is necessary above or below the router when it is mounted in the rack.

To secure the Cisco MWR 2941 router to the equipment rack, you must use the three mounting screws (provided) for each side or follow your local practices for installing the router into your equipment rack. Ensure that the rack-mount brackets are securely fastened. For more information, see the “Attaching the Rack-Mounting Brackets” section on page 3-3.

To mount the Cisco MWR 2941 router into the equipment rack, perform the following procedure.
Chapter 3      Installing the Cisco MWR 2941 Router

Mounting the Cisco MWR 2941 Router

To prevent injury, review the “Safety Guidelines” section on page 2-1 and the “Rack-Mounting Configuration Guidelines” section on page 3-2 before installing the Cisco MWR 2941 router in the equipment rack.

Step 1 Locate the equipment rack position where you plan to install the Cisco MWR 2941 router.
Step 2 Verify that there are no obstructions and ensure that the equipment rack is stabilized.
Step 3 Position the Cisco MWR 2941 router in the equipment rack lining up the bracket holes on the router with the holes on the rack and secure with four #12-24 x 0.37-inch mounting screws (two on each side).

Note The vertical spacing for EIA equipment racks is 1.75 inches (4.44 cm), with mounting holes spaced 1.5 inches (3.81 cm) apart. Vertical spacing for WECO racks is 2.0 inches (5.08 cm), with mounting holes spaced 1.0 inch (2.54 cm) apart.

Step 4 Tighten the screws using a 1/4-inch flat-blade screwdriver (each side).

If your router is front-mounted, proceed to the section “Attaching the Cable Guides.” If your router is center-mounted or recess-mounted, proceed to section, “Connecting the Chassis Ground and Power.”

Attaching the Cable Guides

Perform the following procedure to attach the two cable guides to the front of the mounting brackets. This procedure is optional.

Note The cable guides are practical only if your router is front-mounted. Do not attach the cable guides if your router is center-mounted or recess-mounted.

Use the cable guides to dress the cables that you will attach to the front of the Cisco MWR 2941 router. The cable guides allow you to gather the cables and direct them to the left and right sides of the router. This helps to keep the cables from obscuring the fronts of lower routers in the same rack.

Step 1 In the accessory kit, locate the two cable guides (part number 700-01663-01) and two M4.0x20mm Phillips screws used to attach the cable guides (part number 48-0654-01).
Step 2 Position the cable guide over the threaded hole in the front flange of either the left or right mounting bracket. The threaded hole is located midway between the two slotted holes used to mount the unit to the rack (Figure 3-4).
Connecting the Chassis Ground and Power

Before you connect power or turn on power to the Cisco MWR 2941 router, you must provide an adequate chassis ground (earth) connection to your router.

Grounding the Cisco MWR 2941 Router

The Cisco MWR 2941 router provides a grounding point on the rear of the unit for a 2-hole lug. The grounding point is marked on the rear panel of the Cisco MWR 2941 router for ease of installation (Figure 3-5).

To ensure the chassis ground connection that you provide is adequate, you need the following parts and tools:

- Ratcheting torque screwdriver with Phillips head that exerts up to 15 pound-force inches (lbf-in) of pressure for attaching the ground wire to the router.
- Crimping tool as specified by the ground lug manufacturer
- 18-AWG copper wire for the power cord
- Wire-stripping tools appropriate to the wire you are using
Caution

Before making connections to the Cisco MWR 2941 router, ensure that you disconnect the power at the circuit breaker. Otherwise severe injury or damage to the router may result.

Warning

This equipment must be grounded. Never defeat the ground conductor or operate the equipment in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available. Statement 1024

Warning

Use copper conductors only. Statement 1025

Warning

When installing the unit, the ground connection must always be made first and disconnected last. Statement 42

Figure 3-5 Cisco MWR 2941-DC Router Rear View

This unit is to be installed in a restrictive access location and must be permanently grounded to minimum 6-AWG copper ground wire.

Perform the following procedure to ground the Cisco MWR 2941 router using a 2-hole lug and the corresponding mounting point. Most carriers require a 6-AWG ground connection. Verify your carrier’s requirements for the ground connection.

Step 1

In the accessory kit (part number 53-3085-01 for the MWR-2941-DC, part number 53-3295-01 for the MWR-2941-DC-A), locate the 2-hole lug, 2 pan-head Phillips head screws used to attach the lug to the router, and 6-AWG ground wire. (Lug, screws, and wire are part number 32-0629-01.)

Step 2

Set the parts aside.

Step 3

If your ground wire is insulated, use a wire-stripping tool to strip the ground wire to 0.5 inch ± 0.02 inch (12.7 mm ±0.5 mm) for the ring terminal (Figure 3-6).
Step 4 Slide the open end of your ground lug over the exposed area of the ground wire.

Step 5 Using a crimping tool (as specified by the ground lug manufacturer), crimp the ground lug to the ground wire (Figure 3-7).

Step 6 Use a Phillips head screwdriver to attach the ground lug and wire assembly to the rear of the router with the 2 screws from the accessory kit.

Step 7 Connect the other end of the ground wire to a suitable grounding point at your site.

To continue the installation, go to the next section, “Power Connection Compliance.”

**Power Connection Compliance**

**Warning** Before performing any of the following procedures, ensure that power is removed from the DC circuit. Statement 1003

**Warning** Use copper conductors only. Statement 1025

**Note** The installation must comply with the 2002 National Electric Code (NEC) and other applicable codes.
Connecting the Chassis Ground and Power

Wiring the DC-Input Power Source

**Warning**  
This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than 10 A minimum, 60 VDC. Statement 1005

**Note**  
With the connector installed in the chassis, the pins are for two separate input power sources named A and B. From left to right, the pins are for rail A+, rail A-, rail B-, and rail B+.

To connect the DC power supply to the Cisco MWR 2941 router, do the following:

**Step 1**  
Turn off the DC power source at the circuit breaker, and tape the circuit breaker in the Off position.

**Step 2**  
Locate the 4-pin terminal block (part number 27-2030-01) (Figure 3-8). The terminal block is located in the accessory kit (part number 53-3085-01 for the MWR-2941-DC, part number 53-3295-01 for the MWR-2941-DC-A), which is shipped with the router.

**Figure 3-8  4-Pin Terminal Block**

**Step 3**  
Plug the 4-pin terminal block into the power connector located on the rear left-hand side of the router (looking at the router from the rear) (Figure 3-5 on page 3-7).

**Step 4**  
Connect one end of the customer-supplied power cord (18-AWG copper wire) to the site DC power source.

**Step 5**  
Plug the connector on the power supply cord into the 4-pin terminal block that you plugged into the rear of the router in Step 3.

**Warning**  
An exposed wire lead from a DC-input power source can conduct harmful levels of electricity. Be sure that no exposed portion of the DC-input power source wire extends from the terminal block plug. Statement 122

**Warning**  
When installing this unit, secure all power cabling to avoid disturbing field-wiring connections. Statement 38
Connecting Cables

This section describes how to connect your Cisco MWR 2941 router to external devices and networks. It includes the following sections:

- Connecting the Console/Auxiliary Port, page 3-10
- Connecting the Network Cables, page 3-11
- Connecting GPS Cables, page 3-13
- Dressing Router Cables, page 3-14

Connecting the Console/Auxiliary Port

Warning Do not work on the system or connect or disconnect cables during periods of lightning activity.

Statement 1001

Your Cisco MWR 2941 router has a single console/auxiliary port that can function in either DTE or DCE mode:

- DTE-mode console (terminal) port for connecting a console terminal
- DCE-mode auxiliary (modem) port for connecting a modem or other DCE device (such as, a CSU/DSU or other router) to your router

Note Both the console and auxiliary port functions are asynchronous serial ports; any devices connected to the console/auxiliary port must be cabled for asynchronous transmission. (Asynchronous is the most common type of serial device; for example, most modems are asynchronous devices.)

The Cisco MWR 2941 router uses RJ-45 ports for both the auxiliary port and console port function. Cisco provides the following cables and adapters for connecting your Cisco MWR 2941 router to a console terminal, PC, or modem:

- One console adapter cable (RJ-45-to-DB-9, blue)
- One modem adapter cable (RJ-45-to-DB-25, black)

Types of RJ-45 Cables

Cisco products use the following three types of RJ-45 cables:

- Straight-through
- Crossover
- Rolled (or Rollover)
Your Cisco MWR 2941 router ships with and uses the rollover cable. For instructions on how to identify a rollover cable, see Identifying a Rollover Cable, page B-5.

### Console Port

To connect a terminal or a PC running terminal emulation software to the console/auxiliary port on the router:

**Step 1**
Connect the terminal using an RJ-45 rollover cable and an RJ-45-to-DB-25 or RJ-45-to-DB-9 adapter (labeled TERMINAL) to the console/auxiliary port. For cable pinouts, see the “Console Port Signals and Pinouts” section on page B-3.

**Note**
The RJ-45-to-DB-25 adapter (Cisco part number 29-0810-01) can be purchased from Cisco Systems.

**Step 2**
Configure your terminal or terminal emulation software for 9600 baud, 8 data bits, no parity, and 2 stop bits.

**Note**
Because hardware flow control is not possible on the console port, we recommend changing the console/auxiliary port from console port to auxiliary port before connecting modems to the console/auxiliary port.

### Auxiliary Port

To connect a modem to the console/auxiliary port on the router, follow these steps:

**Step 1**
If necessary, change the console port to an auxiliary port using the `modem enable [autodetect]` command.

**Step 2**
Connect a modem to the console/auxiliary port using an RJ-45 rollover cable with an RJ-45-to-DB-25 adapter. The provided adapter is labeled MODEM. For cable pinouts, see the “Auxiliary Port Signals and Pinouts” section on page B-4 of this guide or the online publication Cisco Modular Access Router Cable Specifications available on the documentation DVD and online at Cisco.com.

**Step 3**
Make sure that your modem and the router auxiliary port are configured for the same transmission speed (a speed of up to 115200 bps is supported) and hardware flow control with Data Carrier Detect (DCD) and Data Terminal Ready (DTR) operation.

### Connecting the Network Cables

This section describes how to connect the following router interfaces:

- Connecting Fixed Gigabit Ethernet Interface Cables, page 3-12
- Connecting T1 and E1 Interface Cables, page 3-12
Connecting Cables

Connecting Cables for Switchport Stacking, page 3-12
Connecting Cables to the BITS Interface, page 3-13

Connecting Fixed Gigabit Ethernet Interface Cables

The RJ-45 port supports standard straight-through and crossover Category 5 unshielded twisted-pair (UTP) cables. Cisco Systems does not supply Category 5 UTP cables; these cables are available commercially.

Follow these steps to connect the cable to the router Gigabit Ethernet port:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Confirm that the router is powered off.</td>
</tr>
<tr>
<td>2</td>
<td>Connect one end of the cable to the GE port on the router.</td>
</tr>
<tr>
<td>3</td>
<td>Connect the other end to the BTS patch or demarcation panel at your site.</td>
</tr>
</tbody>
</table>

For more information about Gigabit Ethernet connectors including pinouts, see Gigabit Ethernet Connector Pinouts, page B-1.

Connecting T1 and E1 Interface Cables

Follow these steps to connect the cable to a router T1/E1 port:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Confirm that the router is powered off.</td>
</tr>
<tr>
<td>2</td>
<td>Connect one end of the cable to the T1 or E1 (RJ-48C) port. Use a straight-through, shielded RJ-48C-to-RJ-48C cable.</td>
</tr>
<tr>
<td>3</td>
<td>Connect the other end to the BTS patch or demarcation panel at your site.</td>
</tr>
<tr>
<td>4</td>
<td>Turn on power to the router (see “Powering On the Router” section on page 3-14 for more details).</td>
</tr>
</tbody>
</table>

For more information about T1/E1 connectors including pinouts, see T1/E1 Port Pinouts, page B-2.

Connecting Cables for Switchport Stacking

The HWIC-9ESW card supports stacking, which allows two switch modules to behave as a single switch. Follow these steps to connect cables for switchport stacking.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Connect a crossover cable to port 8 of the HWIC-9ESW card.</td>
</tr>
<tr>
<td>2</td>
<td>Connect the other end of the crossover cable to the GigabitEthernet switch port that you want to use as a stacking partner.</td>
</tr>
</tbody>
</table>
Connecting Cables to the BITS Interface

Follow these steps to connect the cable to the router BITS port:

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Confirm that the router is powered off.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Connect one end of the cable to the BITS port using a straight-through, shielded RJ-48C-to-RJ-48C cable.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Connect the other end to the BTS patch or demarcation panel at your site.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Turn on power to the router (see “Powering On the Router” section on page 3-14 for more details).</td>
</tr>
</tbody>
</table>

For more information about T1/E1 connectors including pinouts, see BITS Pinouts, page B-6.

Connecting GPS Cables

The following sections describe how to connect cables from the Cisco MWR 2941 to a GPS unit for input or output timing or frequency.

- Connecting Cables to the 10Mhz or 1PPS Interface
- Connecting Cables to the BITS/ToD Interface

**Note**

This section does not apply to the Cisco MWR 2941-DC as it does not include the 10Mhz and 1PPS timing ports.

Connecting Cables to the 10Mhz or 1PPS Interface

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Connect one end of a mini-coax cable to the GPS unit.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Connect the other end of the mini-coax cable to the 10Mhz or 1PPS port on the Cisco MWR 2941-DC-A.</td>
</tr>
</tbody>
</table>

For instructions on how to configure clocking, see the *Cisco MWR 2941 Mobile Wireless Edge Router Software Configuration Guide*.

Connect the GPS unit to the 10Mhz, 1PPS, or BITS/ToD port on the Cisco MWR 2941-DC-A.

Connecting Cables to the BITS/ToD Interface

Follow these steps to connect cables to the BITS/ToD interface for GPS timing.

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Connect one end of a straight-through Ethernet cable to the GPS unit.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Connect the other end of the cable to the BITS/ToD port on the Cisco MWR 2941-DC-A.</td>
</tr>
</tbody>
</table>
For instructions on how to configure clocking, see the *Cisco MWR 2941 Mobile Wireless Edge Router Software Configuration Guide*.

**Note**  
For more information about GPS port pinouts, see *GPS Port Pinouts, page B-6*.  

### Dressing Router Cables

Ensure all Cisco router cables are properly dressed so as not to interfere with each other or other pieces of equipment. Use local practices to ensure that the cables attached to your router are properly dressed.

**Note**  
If your Cisco MWR 2941 router is front-mounted, you can use the cable guide (found in the accessory kit) to dress the cables.

To continue the installation, proceed to the next section, “Powering On the Router.”

### Powering On the Router

**Warning**  
Do not touch the power supply when the power cord is connected. For systems with a power switch, line voltages are present within the power supply even when the power switch is off and the power cord is connected. For systems without a power switch, line voltages are present within the power supply when the power cord is connected. Statement 4

**Warning**  
This equipment is intended to be grounded. Ensure that the host is connected to earth ground during normal use. Statement 39

### Checklist for Power Up

You are ready to power on the Cisco MWR 2941 router if the following steps are complete:

- Router is securely mounted.
- Power, network, and interface cables are properly connected.

### Interpreting Front-Panel LEDs

The Cisco MWR 2941 router provides a number of LEDs on the front panel to monitor conditions and to aid in troubleshooting problems. For a description of the LEDs, see the “Reading the LEDs” section on page A-5.
### Power-On Procedure

To power on the Cisco MWR 2941 router and verify its initialization and self-test, follow this procedure. When the procedure is finished, the Cisco MWR 2941 router is ready to configure.

1. **Step 1**  Remove the tape from the circuit breaker switch handle.
2. **Step 2**  Reinstate power by moving the handle of the circuit breaker to the On position. The LED (labeled POWER) on the front panel should go on and the fans operate. Depending on your installation, other front-panel LEDs should also come on.

**Note**  If you encounter problems when you power on the router, see Appendix A, “Troubleshooting.”

### Formatting Procedures for Flash Memory Cards

For the Cisco MWR 2941 router, we recommend that you format/erase the flash memory card to initialize them with a Class C flash file system. This ensures proper formatting and enables the ROM monitor to recognize and boot the flash.

The Class C flash file system is similar to the standard DOS file system; however, a flash memory card formatted with the standard DOS file system does not support booting from the ROM monitor.

### Formatting Flash Memory Card as a DOS File System

To format a built-in flash memory card, or to remove the files from a flash memory card, enter the `format flash:` command.

The following example shows output for formatting a flash memory card formatted with a Class C flash file system:

```
Router# format flash:
Format operation may take a while. Continue? [confirm]
Format operation will destroy all data in "flash:". Continue? [confirm]
Enter volume ID (up to 64 chars)[default flash]:
Current Low End File System flash card in flash will be formatted into DOS File System flash card! Continue? [confirm]
Format:Drive communication & 1st Sector Write OK...
Writing Monlib sectors ............................................................
Monlib write complete

Format:All system sectors written. OK...

Format:Total sectors in formatted partition:250592
Format:Total bytes in formatted partition:128303104
Format:Operation completed successfully.

Format of flash complete
```
File and Directory Procedures

The following sections describe file and directory procedures for flash memory cards formatted with a Class C flash file system.

Copying Files

The following example shows output for copying a Cisco IOS file from an external flash memory card to a TFTP server:

```
Router# copy flash:mwr2941-ipran-mz.tmp tftp:
Destination filename [mwr2941-ipran-mz.tmp]?
6458584 bytes copied in 202.940 secs (31973 bytes/sec)
```

Displaying the Contents of a Flash Card

To display the contents (directories and files) of a flash memory card formatted with a Class C flash file system, use the `dir flash:` command.

The following example shows output for displaying the contents of a flash memory card with a Class C flash file system:

```
Router# dir flash:
Directory of flash:/

 3  -rw-   6455048 Mar 01 2001 00:04:06 mwr2941-ipran-mz
1579 -rw-   6458584 Mar 01 2001 00:24:38 mwr2941-ipran-mz.new

15912960 bytes total (2998272 bytes free)
```

Displaying Geometry and Format Information

To display the geometry and format information of a flash memory card formatted with a Class C flash file system, use the `show flash:` command.
The following example shows output for displaying the geometry and format information of a flash memory card formatted with a Class C flash file system:

Router# show flash:

******** ATA Flash Card Geometry/Format Info ********

ATA CARD GEOMETRY
  Number of Heads: 2
  Number of Cylinders 490
  Sectors per Cylinder 32
  Sector Size 512
  Total Sectors 31360

ATA CARD FORMAT
  Number of FAT Sectors 12
  Sectors Per Cluster 8
  Number of Clusters 3885
  Number of Data Sectors 31264
  Base Root Sector 152
  Base FAT Sector 128
  Base Data Sector 184

Please use "dir" command to display the contents of the card.

Deleting Files from a Flash Memory Card

To delete a file from a flash memory card, use the delete flash: filename command.

The following example shows output for deleting a Cisco IOS software file from a flash card:

Router# delete flash:mwr2941-ipran-mz.tmp

Delete filename [mwr2941-ipran-mz.tmp]?
Delete flash:mwr2941-ipran-mz.tmp? [confirm]
Router# dir flash:
Directory of flash:/

No files in directory

128094208 bytes total (128094208 bytes free)

Renaming a File in a Flash Memory Card

To rename a file in a flash memory card, use the rename flash: original-filename flash: new-filename command.

The following example shows output for renaming a Cisco IOS software file in a flash card:

Router# rename flash:mwr2941-ipran-mz.tmp flash:mwr2941-ipran-mz

Destination filename [mwr2941-ipran-mz].?
Router# dir flash:
Directory of flash:/

  1580  -rw-     6462268   Mar 06 1993 06:14:02  mwr2941-ipran-mz.2941ata
  3     -rw-     6458388   Mar 01 1993 00:01:24  mwr2941-ipran-mz

63930368 bytes total (51007488 bytes free)
Displaying File Content

To display the content of a file in a flash memory card, use the `more flash: filename` command.

The following example shows output from the `more flash` command on a flash card:

```
Router# more flash:mwr2941-ipran-mz.tmp
00000000: 7F454C46 01020100 00000000 00000000 ....ELF.... .... .... ....
00000010: 00200001 00000001 80000000 00000000 ..a .... .... .T .... .4 ...(t
```

Creating a New Directory

To create a directory in flash memory, use the `mkdir flash: directory-name` command.

The following example shows output for displaying the contents of a flash card, and then creating a `config` directory, followed by a `test-config` subdirectory:

```
Router# dir flash:
Directory of flash:/
3  -rw-  6458208  Mar 01 1993  00:04:08  mwr2941-ipran-mz.tmp
128094208 bytes total (121614816 bytes free)
Router# mkdir flash:/config
Create directory filename [config]?
Created dir flash:/config
Router# mkdir flash:/config/test-config
Create directory filename [/config/test-config]?
Created dir flash:/config/test-config
Router# dir flash:
Directory of flash:/
3  -rw-  6458208  Mar 01 1993  00:04:08  mwr2941-ipran-mz.tmp
1580  drw-  0  Mar 01 1993 23:48:36  config
128094208 bytes total (121626624 bytes free)
```
Router# cd flash:/config

Router# dir flash:
Directory of flash:/config/
  1581  drw-           0   Mar 01 1993 23:50:08  test-config

128094208 bytes total (121626624 bytes free)

Removing a Directory

To remove a directory from flash memory, use the `rmdir flash:/directory-name` command. Before removing a directory, remove all files and subdirectories from the directory.

The following example shows output for displaying the contents of a flash card, and then removing the `test-config` directory:

Router# dir flash:
Directory of flash:/config/
  1581  drw-           0   Mar 01 1993 23:50:08  test-config

128094208 bytes total (121626624 bytes free)
Router# rmdir flash:/config/test-config

Remove directory filename [/config/test-config]?  
Delete flash:/config/test-config? [confirm] 
Removed dir flash:/config/test-config
Router# dir flash:
Directory of flash:/config/
No files in directory

128094208 bytes total (121630720 bytes free)

Enter a Directory and Determine the Current Directory

To enter a directory in flash memory, use the `cd flash:/directory-name` command. To determine which directory you are in, use the `pwd` command.

The following example shows output for the following actions:
- Entering the home directory of a flash memory card in an external slot (flash:/)
- Verifying that you are in the flash:/ directory

Router# cd flash:

Router# pwd

flash:/
What to Do After Installing the Hardware

After you have installed the router hardware, refer to the *Cisco MWR 2941 Mobile Wireless Edge Software Configuration Guide* for initial software configuration information.
Troubleshooting

The Cisco MWR 2941 router undergoes extensive testing before it leaves the factory. If you encounter problems, use the information in this appendix to help isolate problems or to eliminate the router as the source of the problem.

This appendix contains the following sections:

- Problem Solving, page A-1
- Reading the LEDs, page A-5

If you cannot locate the source of the problem, contact a customer service representative for information on how to proceed. For technical support information, see the Cisco Information Packet publication that shipped with your router. Before you call, have the following information ready:

- Chassis type and serial number
- Maintenance agreement or warranty information
- Type of software and version number
- Date you received the new chassis
- Brief description of the problem
- Brief explanation of the steps you have taken to isolate the problem

Note: Ensure you provide the customer service representative with any upgrade or maintenance information that was performed on the Cisco MWR 2941 router after your initial installation (see Appendix C, “Site Log” for Site Log information.)

Problem Solving

To problem solve, isolate the problem to a specific subsystem by comparing current router activity to expected router activity.

The LEDs on the front panel of the router enable you to determine router performance and operation. For a description of these LEDs, see “Reading the LEDs” section on page A-5.

When problem solving, check the following router subsystems:

- Power and cooling systems—External power source, power cable, router power supply and circuit breaker, and router fans. Also check for inadequate ventilation or air circulation.
- Modules—Checking the LEDs on the modules can help you to identify a failure.
• Cables—Ensure that the external cables connecting the router to the network are all secure.

Troubleshooting the Power and Cooling Systems

Both the power LED and the fans can help you troubleshoot a power problem. See Table A-1 for information to help you isolate the problem.

Table A-1  Troubleshooting the Power and Cooling Systems

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power (labeled POWER) LED on the front panel is not on.</td>
<td>The power source is not connected properly.</td>
<td>Check the DC input. Check the DC source.</td>
</tr>
<tr>
<td>The router shut down after being on for only a short time.</td>
<td>The cause is environmental.</td>
<td>Check for an environmentally induced shutdown. (See “Environmental Reporting Features” section on page A-2).</td>
</tr>
<tr>
<td>The fans are not working; the router overheats and shuts down.</td>
<td></td>
<td>Check the fans.</td>
</tr>
<tr>
<td>The chassis intake and exhaust vents are obstructed.</td>
<td></td>
<td>Check the chassis intake and exhaust vents for obstructions. Clear any obstructions.</td>
</tr>
<tr>
<td>Installation does not meet environmental site requirements.</td>
<td></td>
<td>Check the environmental site requirements in the “System Specifications” section on page 1-8.</td>
</tr>
<tr>
<td>The router partially boots, but the LEDs do not light.</td>
<td>There is a possible power supply failure.</td>
<td>Check the power LED on the front panel of the router. If the LED is on, the power supply is functional. If the LED is off, refer to the Cisco Information Packet for warranty information or contact customer service.</td>
</tr>
</tbody>
</table>

Environmental Reporting Features

The Cisco MWR 2941 router has a temperature sensor to detect over-temperature conditions inside the chassis. The over-temperature detection trips at 70°C +/- 5%. This condition is reported to the processor as an interrupt; software acts on this interrupt, generating the appropriate alarm. If the router reaches a temperature of 90°C, the power supply will cycle to prevent the router from exceeding that temperature in a powered-up state. See Table A-2 for help in interpreting environmental reporting features.
Table A-2  Interpreting Environmental Reporting Features

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The router is operating at an abnormally high temperature. The following message appears on the console screen: %SYS-1-OVERTEMP: System detected OVERTEMPERATURE condition. Please resolve cooling problem immediately!</td>
<td>There is a fan failure. There is an air conditioner failure in the room. The air flow to cooling vents is blocked.</td>
<td>Take steps to correct the problem. For information about environmental operating conditions, see the “System Specifications” section on page 1-8).</td>
</tr>
</tbody>
</table>

Troubleshooting Modules, Cables, and Connections

Network problems can be caused by a module, cable or cable connection, or external device such as a modem, transceiver, hub, wall jack, WAN interface, or terminal. See Table A-3 for information to help you isolate the problem.

Table A-3  Troubleshooting Modules, Cables, and Connections

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The router is experiencing network problems.</td>
<td>The router does not recognize the module.</td>
<td>Make sure that the module is firmly seated in its slot.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Check the LEDs on the module. Each module has its own set of LEDs. For information on these LEDs (see the “Reading the LEDs” section on page A-5).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Make sure you have a version of Cisco IOS software that supports the module.</td>
</tr>
<tr>
<td>The router recognizes the module but the interface ports do not initialize.</td>

<tr>
<td>The router powers on and boots only when a particular module is removed.</td>
<td>Check the module. For warranty information, refer to the <em>Cisco Information Packet</em> publication that shipped with your order or contact customer service.</td>
<td></td>
</tr>
<tr>
<td>The router powers on and boots only when a particular cable is disconnected.</td>
<td>There may be a problem with the module or cable. For warranty information, refer to the <em>Cisco Information Packet</em> publication that shipped with your order or contact customer service.</td>
<td></td>
</tr>
</tbody>
</table>
Reading the LEDs

Tables A-4, A-5, A-6, A-7, and A-8 describe the Cisco MWR 2941 LEDs located on the front panel.

T1/E1 Port LEDs

Table A-4 explains how to interpret the T1/E1 port LEDs for onboard T1/E1 ports and those within HWICs. Each connection has 2 dedicated LEDs, one tracking carrier activity and the other tracking alarms.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description (two LEDs for each T1/E1 port)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active (labeled C)</td>
<td>Green</td>
<td>Carrier condition—operating without problem</td>
</tr>
<tr>
<td></td>
<td>Amber</td>
<td>Loop condition</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Out of service or not configured</td>
</tr>
<tr>
<td>Alarm (labeled AL)</td>
<td>Amber</td>
<td>Alarm condition</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>No alarm</td>
</tr>
</tbody>
</table>

100/1000 Ethernet Port LEDs

Each Ethernet interface has 2 dedicated LEDs to track link activity and RJ-45 speed. Table A-5 explains how to interpret the Ethernet port LEDs.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description (two LEDs for each 100/1000 Ethernet port)</th>
</tr>
</thead>
<tbody>
<tr>
<td>100/1000 RJ-45 link (labeled L)</td>
<td>Solid Green</td>
<td>Link with no activity</td>
</tr>
<tr>
<td></td>
<td>Flash Green</td>
<td>Link with activity</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>No link detected</td>
</tr>
<tr>
<td>100/1000 RJ-45 speed (labeled S)</td>
<td>Green</td>
<td>Speed 1000</td>
</tr>
<tr>
<td></td>
<td>Amber</td>
<td>Speed 100</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Off</td>
</tr>
</tbody>
</table>
Compact Flash LED

The compact flash slot has a single dedicated LED associated with it to track activity. Table A-6 explains how to interpret the compact flash LED.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compact flash (labeled ACT FLASH MEMORY)</td>
<td>Flash Green</td>
<td>Indicates activity</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>No activity</td>
</tr>
</tbody>
</table>

SFP LEDs

Each SFP link has a single dedicated LED associated with it to indicate whether or not the link is active. Table A-7 explains how to interpret the SFP LEDs.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SFP0 Link/Active (labeled LINK ACT)</td>
<td>Green</td>
<td>Link and active indicator</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Link not enabled</td>
</tr>
<tr>
<td>SFP1 Link/Active (labeled LINK ACT)</td>
<td>Green</td>
<td>Link and active indicator</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Link not enabled</td>
</tr>
</tbody>
</table>

Chassis LEDs

Table A-8 explains how to interpret the chassis LEDs.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power (labeled POWER)</td>
<td>Green</td>
<td>All power rails are within spec</td>
</tr>
<tr>
<td></td>
<td>Red</td>
<td>Internal power module failure The reserve power supply (RPS) is providing power.</td>
</tr>
<tr>
<td>Operating status (labeled STATUS)</td>
<td>Green</td>
<td>All OK System is operational</td>
</tr>
<tr>
<td></td>
<td>Amber</td>
<td>An over or under temperature condition</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Default state is at Power On Reset (POR) The router is not yet booted, or an error condition is detected in the boot process.</td>
</tr>
</tbody>
</table>
### Table A-8  Chassis LEDs

<table>
<thead>
<tr>
<th>LED</th>
<th>Color/State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity (labeled ACTIVITY)</td>
<td>Green</td>
<td>IOS has booted and packets are being transferred</td>
</tr>
<tr>
<td></td>
<td>Amber</td>
<td>BootRom has successfully loaded</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Default state is at POR</td>
</tr>
<tr>
<td></td>
<td></td>
<td>No activity occurring</td>
</tr>
<tr>
<td>BITS I/F (labeled BITS ACT)</td>
<td>Green</td>
<td>Port is up and working properly</td>
</tr>
<tr>
<td></td>
<td>Amber</td>
<td>Port is disabled, not connected, or not in use</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>Port is faulty or out of service</td>
</tr>
</tbody>
</table>
Cable Specifications

If you prefer to build your own cables, this appendix provides cable specifications for the Cisco MWR 2941 router.

This appendix includes the following sections:

- Gigabit Ethernet Connector Pinouts, page B-1
- T1/E1 Port Pinouts, page B-2
- Console and Auxiliary Port Signals and Pinouts, page B-3
- BITS Pinouts, page B-6
- GPS Port Pinouts, page B-6
- SFP Modules and Cable Specifications, page B-7
- HWICs and Cable Specifications, page B-7

Note: Pins not listed in the tables in this appendix are not connected.

Gigabit Ethernet Connector Pinouts

This section illustrates the Gigabit Ethernet RJ-45 connector and lists its pinout and signal descriptions. Note that the RJ-45 ports are capable of operating in both 100BaseT and 1000BaseT modes.

Figure B-1 shows the RJ-45 connector and port, and Table B-1 lists the connector pinouts and signals.
Table B-1  RJ-45 Connector Pinouts

**T1/E1 Port Pinouts**

Figure B-2 shows the RJ-48C connector used by the T1/E1 ports.

![Figure B-2 RJ-48C Connector](image)

Figure B-3 shows the RJ-48C connector wiring for the T1/E1 cable for the Cisco MWR 2941.

![Figure B-3 RJ-48-to-RJ-48 T1/E1 Cable Wiring](image)

**Note**

We recommend using a shielded cable for your RJ-48C connectors.

Table B-2 shows the pinout configuration for the RJ-48C connectors on the Cisco MWR 2941-DC and Cisco MWR 2941-DC-A for T1/E1 ports.
You can order a console cable kit for the Cisco MWR 2941 router, which contains the cable and adapters to connect a console terminal (an ASCII terminal or PC running terminal emulation software). The console cable kit includes the following items:

- RJ-45-to-RJ-45 rollover cable
- RJ-45-to-DB-9 female DTE adapter (labeled TERMINAL)
- RJ-45-to-DB-25 female DTE adapter (labeled TERMINAL)

To connect a modem, you need to order an auxiliary cable.

---

**Note**
The console cable kit is not included with the router.

For console connections, see the “Console Port Signals and Pinouts” section on page B-3; for modem connections, see the “Auxiliary Port Signals and Pinouts” section on page B-4.

---

### Console and Auxiliary Port Signals and Pinouts

#### Console Port Signals and Pinouts

Use the thin, flat, RJ-45-to-RJ-45 rollover cable and the RJ-45-to-DB-9 female DTE adapter (labeled TERMINAL) to connect the console port to a PC running terminal emulation software. **Figure B-4** shows how to connect the console port to a PC. **Table B-3** lists the pinouts for the asynchronous serial console port, the RJ-45-to-RJ-45 rollover cable, and the RJ-45-to-DB-9 female DTE adapter (labeled TERMINAL).

</tr>
</tbody>
</table>

1. You can use the same cabling to connect a console to the auxiliary port.
2. Pin 1 is connected internally to pin 8.

**Auxiliary Port Signals and Pinouts**

**Table B-5** lists the pinouts for the asynchronous serial auxiliary port, the RJ-45-to-RJ-45 rollover cable, and the RJ-45-to-DB-25 male DCE adapter (labeled MODEM).
**Identifying a Rollover Cable**

To identify a rollover cable, compare the modular plugs at the two ends of the cable. When you hold the plugs side by side, with the tab at the back, the wire connected to the pin on the outside of the left plug should be the same color as the wire connected to the pin on the outside of the right plug (Figure B-5). If you purchased your cable from Cisco Systems, pin 1 is white on one connector, and pin 8 is white on the other (a rollover cable connects pins 1 and 8, 2 and 7, 3 and 6, and 4 and 5).

**Figure B-5  Identifying a Rollover Cable**

GPS Port Pinouts

The Cisco MWR 2941-DC-A has a 10Mhz and a 1PPS GPS port that allow you to configure input or output clocking with a GPS device. Table B-8 summarizes the pinouts for the 10Mhz and 1PPS interfaces.

Note
For pinouts related to ToD and 1PPS using the BITS interface, see Console and Auxiliary Port Signals and Pinouts.

</tbody>
</table>

Note

The 1PPS interface type is Series 1.0/2.3, 50 ohms.

For instructions on how to configure the 10 Mhz and 1PPSs ports, see the Cisco MWR 2941 Mobile Wireless Edge Router Software Configuration Guide.

SFP Modules and Cable Specifications

For information about SFP modules supported by the Cisco MWR 2941, including pinouts, see the Cisco Interfaces and Modules support section on Cisco.com.

HWICs and Cable Specifications

For information about HWICs supported by the Cisco MWR 2941, including pinouts, see http://www.cisco.com/en/US/products/hw/modules/ps2641/prod_installation_guides_list.html.
Site Log

Use the Site Log to provide a record of actions related to installing and maintaining the router. Keep it in an accessible place near the chassis so that those who perform tasks have access to it. Use the Installation Checklist (see the “Installation Checklist” section on page 2-7) to verify the steps in the installation and maintenance of your router. Site Log entries might include the following:

- Installation progress—Make a copy of the Cisco MWR 2941 router Installation Checklist, and insert it into the Site Log. Make entries as you complete each task.
- Upgrade, removal, and maintenance procedures—Use the Site Log as a record of ongoing router maintenance and expansion history. Each time a task is performed on the Cisco MWR 2941 router, update the Site Log to reflect the following:
  - Removal or replacement of HWIC interface cards
  - Configuration changes
  - Maintenance schedules and requirements
  - Maintenance procedures performed
  - Intermittent problems
  - Comments and notes

Table C-1 on page C-2 shows a sample site log. Make copies of the sample or design your own site log to meet the needs of your site and equipment.
