Feature Description

Policy Builder is enhanced to display **Policies** tab for read-only users.

`pb.readOnly.showPolicies` parameter must be configured in `qns.conf` file to display the **Policies** tab.

When the admin user selects the checkbox under **Tools > Preferences** in Policy Builder and value of flag (`pb.readOnly.showPolicies`) is set to true, **Policies** tab appears in readonly mode.

When the admin user selects the checkbox under **Tools > Preferences** in Policy Builder and value of flag (`pb.readonly.showPolicies`) is set to false, **Policies** tab does not appear in readonly mode.
