Post Installation Process

- [Change SSH Keys, on page 1](#)

Change SSH Keys

Before you begin

Before changing SSH keys, make sure diagnostics is clean and there is no alarm/warning.

Note It's important to change SSH keys at least once.

Step 1 To generate new keys execute the following command on installer VM (Cluster Manager).

`/var/qps/install/current/scripts/bin/support/manage_sshkey.sh --create`

Step 2 Update keys on CPS VMs and installer VM (Cluster Manager).

`/var/qps/install/current/scripts/bin/support/manage_sshkey.sh --update`
