Location Compute

The UWB feature is designed to provide high-precision indoor positioning within a facility. The primary functions and benefits include:

- **Real-time Data:** Enables the sharing of precise indoor location data in real-time.
- **Navigation & Way-finding:** Supports seamless navigation and way-finding for users inside buildings.
- **Asset Tracking:** Allows for the monitoring and tracking of physical assets within the facility.
- **Operational Insights:** Provides valuable data on movement patterns to enhance user experiences and location-based services.
