Work with Space Utilization App

The Cisco Spaces: Space Utilization App offers historical insights into how your physical spaces are used, aiding in space optimization. These insights are gathered from data collected via sensors embedded within your space's networking and collaboration infrastructure.

This app allows you to view the occupancy and utilization for any physical space within a campus, building, or floor. This information includes data such as people count, peak utilization metrics, room utilization metrics and time spent by people in that physical space.

For Cisco Spaces accounts in the Workspace and Education verticals, both Floor Occupancy and Room Occupancy metrics are displayed. By default, for accounts in all other verticals, only Room Occupancy metrics are displayed.

Use **Room Occupancy Reports** feature to generate an occupancy report with the data including the number of people present in the room that is aggregated in a window of every 15 minutes. This feature provides the flexibility to download and categorize the people count data based on their preferred reporting time intervals, such as 15, 30, or 60 minutes.

For more information, see [Cisco Spaces: Space Utilization App Guide](#).

Note The **Space Utilization** app is available to users with **Cisco Spaces ACT** and **Cisco Spaces Unlimited** licenses.
