**Table 2: Open Caveats**

Caveat	Description
<a href="#">CSCvz67366</a>	connector is unable to establish a Cisco Network Mobility Services Protocol (NMSP) connection with Cisco Catalyst 9800 Series Wireless Controllers release 17.5.1 running in the Federal Information Processing Standards (FIPS) mode. However, the connector is able to establish an NMSP connection with Cisco Catalyst 9800 Series Wireless Controllers releases 16.12.x, 17.3.x and 17.6.x running in FIPS mode.

## What's New in Docker Release v2.0.555

- Fast-packet drops occurring because of out-of-sync sequence numbers is now fixed.
- You can now observe more detailed error messages if a failure occurs during the download of a Cisco IOx application bundle.
- The IoT Devices Scanning feature has improved because of fixes in the performance of the Cisco IoX application.
- You can now collect information about the **switchport** user.

## What's New in Docker Release v2.0.539

- connector can now establish Network Mobility Service Protocol (NMSP) connection with each wireless controller in parallel. This reduces the startup time required after a docker is restarted or upgraded.
- Earlier, controllers that were periodically polling associated clients could cause load hikes and data drops. Now, this polling is evenly distributed in time per controller.
