Troubleshooting IoT Services: Access Point

How do I check the gRPC connection status on the access point?

Run the command: **show cloud connector connection detail**

This command returns information about the connection. ***Connection State*** should be READY. ***Connection Url*** should be the IP address of the Cisco Spaces: Connector on port 8000. ***Certificate Available*** should be true. ***Controller Ip*** should be the controller the AP is associated with.

```
AP# show cloud connector connection detail
Connection State           : READY
Connection Url             :  10.22.243.33:8000
Certificate Available      :  true
Controller Ip              :  10.22.243.31
Stream Setup Interval      :  30
Keepalive Interval         :  30
Last Keepalive Rcvd On     :  2020-04-01 00:32:47.891433113 +0000 UTC m=+345985.338898246
Number of Dials               :  2
Number of Tx Pkts             :  2788175
Number of Rx Pkts             :  11341
Number of Dropped Pkts        :  0
Number of Rx Keepalive        :  11341
Number of Tx Keepalive        :  11341
Number of Rx Cfg Request      :  0
Number of Tx AP Cfg Resp      :  0
Number of Tx APP Cfg Resp     :  0
Number of Tx APP state pkts   :  5
Number of Tx APP data pkts    :  2776829
```

How do I check the stream token on the access point?

Run the command: **show cloud connector key access**

This command returns information about the stream token. ***Token Valid*** should be Yes. The ***Last Success on*** time should be more recent than the ***Last Failure on*** time. If there are failures, the ***Last Failure reason*** field details the reason for the failure.

```
AP# show cloud connector key access
Token Valid : Yes
Token Stats :
        Number of Attempts  : 44
        Number of Failures  : 27
        Last Failure on     : 2020-03-28 02:02:15.649556818 +0000 UTC m=+5753.097022576
        Last Failure reason : curl: SSL connect error
        Last Success on     : 2020-04-01 00:48:37.313511596 +0000 UTC m=+346934.760976625
        Expiration time     : 2020-04-02 00:48:37 +0000 UTC
Connection Retry Interval : 30
```

Also run the command: **show cloud connector key authentication**.

This command returns the authentication token used initially to set up the connection. ***Token Valid*** should be Yes. ***Token Endpoint*** should be the IP address of the Cisco Spaces connector on port 8000. ***Token Content*** should be the token set on the wireless controller using this configuration command: **ap cisco-dna token 0** *token-content*.

```
AP# show cloud connector key authentication
Token Valid    : Yes
Token Endpoint : 10.22.243.33:8000
Token Content  :
----------------------------------------

30Q_ffRWWY6Ege3xyF_tgQOmVFBkG3k
----------------------------------------
```

How do I view the gRPC server logs on the access point?

Run the command: **show grpc server log**

```
AP# show grpc server log
time="2020-04-01T01:36:52Z" level=info msg="[DNAS] spaces conn url 10.22.243.33:8000"
