CHAPTER 1

Overview

- [Cisco Spaces: Space Utilization App, on page 1](#)
- [Overview, on page 2](#)
- [Licensing Requirements, on page 3](#)
- [Prerequisites, on page 3](#)
- [Space Utilization App Features, on page 4](#)

Cisco Spaces: Space Utilization App

The Cisco Spaces: Space Utilization App provides historical insights into the usage of your physical spaces and helps you optimize your space. These insights are derived from data obtained through sensors integrated into the networking and collaboration infrastructure in your space.

The Space Utilization App enables you to view the occupancy and density for any space within a campus, building, or floor. This information includes data such as people count, peak utilization, and time spent by people in that physical space.

Figure 1: Space Utilization App

SU SPACE UTILIZATION

Analyze occupancy trends to understand space usage across buildings, floors, and rooms.

Occupied		Not Occupied	
Reserved	15% Org. Avg. 17.5%	Ghosted	10% Org. Avg. 12.5%
Booked	40% Org. Avg. 32.5%	Unbooked	15% Org. Avg. 12.5%

About the App

Access historical occupancy and space utilization data. Drive smarter decisions that reduce real estate costs, enhance space planning, streamline leases, optimize energy, and adapt to hybrid workplace demands. Eliminate guesswork and manual effort and make informed decisions to right size your real-estate portfolio and create the right mix of meeting rooms. Spot peak and low-traffic days to optimize energy and resource planning.

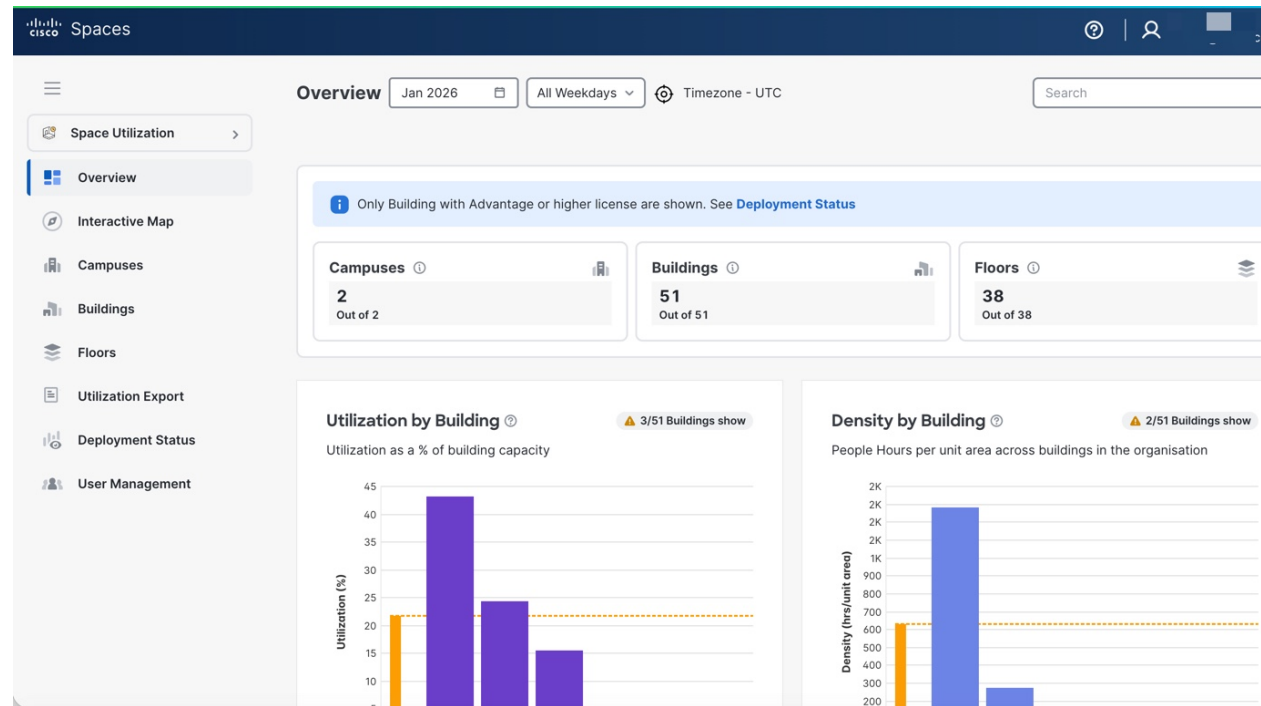

Close [Open App](#)

Overview

This section provides a high-level snapshot of how buildings are being used. It highlights key utilization metrics such as the number of campuses, buildings, and floors with active Advantage-level licensing, along with overall building capacity usage. You can quickly understand space availability, monitor utilization trends, and identify locations where deployment or data availability may need attention.

The app supports reporting occupancy data from various sources, including collaboration devices, portal beams, PIR sensors (Thingsee, Moko), Webex, and Wi-Fi.

Figure 2: Space Utilization App

Licensing Requirements

The Space Utilization App is tied to these Cisco Spaces licenses.

- ACT (displayed in UI as Advantage)
- UNLIMITED
- PREMIER_CW
- PREMIER_W

Prerequisites

You can use the Space Utilization App if your Cisco Spaces deployment meets these requirements:

- You need to run the Digital Maps Pro version and meeting rooms must be defined.
- If Webex devices are used to monitor occupancy, these devices must be integrated with Webex Control Hub.
- You must configure Cisco Spaces to work with various wireless networks so that Wi-Fi metrics and insights can be gathered.

Space Utilization App Features

The **Overview** window is divided into two parts. The upper part has icons that present a quick view into the number of **Campuses**, **Buildings**, and **Floors** in your network and a count of these spaces that have rich maps integrated.

In the lower part, you can see the graphical trends for utilization (% average daily occupancy), density (people hours per unit area), and room utilization (% time during work hours) for buildings. In these graphs, click on the network bar to navigate to the detailed network view.

The app also supports the reporting of occupancy data from various sources such as collaboration devices, portal beams and PIR sensors (such as Thingsee and Moko).

To view the data for different time periods, change the selection in the month and days dropdown menus on the top of the **Overview** window.

You can use the search box to look up locations as per the defined **Location Hierarchy**.

UI updates

These enhancements improve user navigation and provide a more intuitive interface.

- **Dynamic Page Title:** The page title and filters now update automatically based on your selected view. You can quickly identify the specific building or floor and see which filter is applied.
- **Location drop-down:** The **Location Selection** drop-down list is now strategically repositioned to the right-hand side of the window. This filter is now available in both building and floor views, enabling you to switch between locations more efficiently.

Interactive Map

The Space Utilization App features **Interactive Maps**, which provide fast and intuitive geographic visualization of locations such as campuses, buildings, and floors on a global map. This feature displays occupancy and utilization metrics with dynamic markers and color-coded clusters. This enables you to gain quick insights at multiple levels.

Key Highlights

- Seamlessly switch between global, campus, building, and floor-level perspectives with dynamic clustering.
- Color-coded **Markers** representing key metrics such as people count, time spent, and percentage utilization.
- Smart Map Controls, zooming, and informative panels that facilitate rapid exploration of your spaces.

CHAPTER 2

Interactive Map

- [Interactive Maps, on page 5](#)

Interactive Maps

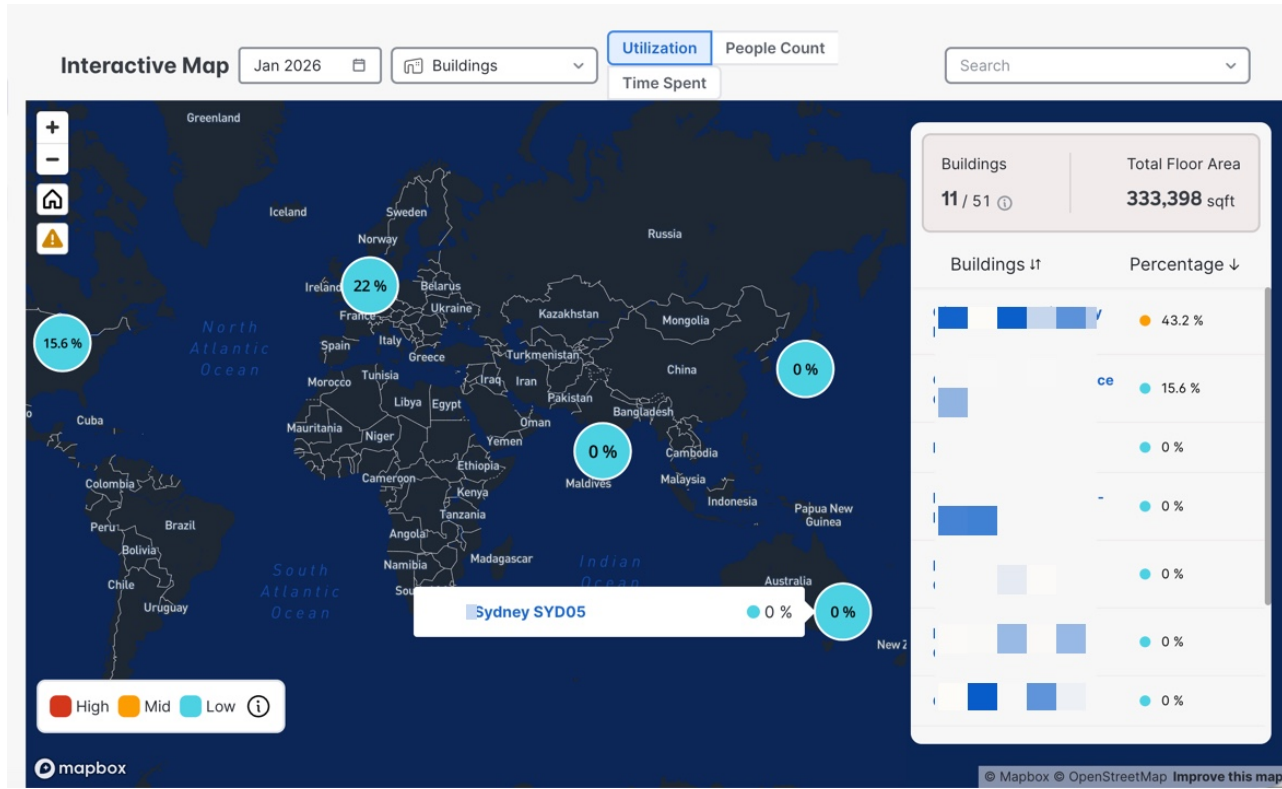

The **Interactive Maps** section in Cisco Spaces provides users with a dynamic, map-based interface to visualize and analyze space utilization across different campuses, buildings, and floors. This map tool leverages real-time and historical data to display metrics such as people count and time spent within various locations, supporting effective workspace management and planning.

The map is interactive and supports multiple utilization metrics for comprehensive analysis.

Key features:

- **Map Navigation:** You can zoom, pan, and select specific regions on the map to explore facilities in detail.
- **Filtering Options:** The interface allows filtering by date (e.g., Nov 2025), type of location (e.g., Buildings), and utilization metric (e.g., People Count or Time Spent).
- **Search Functionality:** A search bar enables you to quickly locate specific campuses, buildings, or floors.
- **Data Visualization:** Utilizes an overlay on a geographic map (powered by Mapbox and OpenStreetMap) to represent real-world locations and their utilization statistics.
- **Summary Panel:** Provides a snapshot of the number of buildings and total floor area selected. If data is not available, a notification is displayed (e.g., "Building data is unavailable").
- **Color-coded Bubble Markers:** Display aggregated values and clicking on these bubbles zooms into the campus, building, or floor view. Tooltips for bubble markers show campus details for campuses, building details for buildings, and building with all floor details for floors. Clicking on the names in the bubble marker tooltip or the summary panel redirects to the respective campus, building, or floor details pages.

Figure 3: Interactive map

CHAPTER 3

View Utilization Status

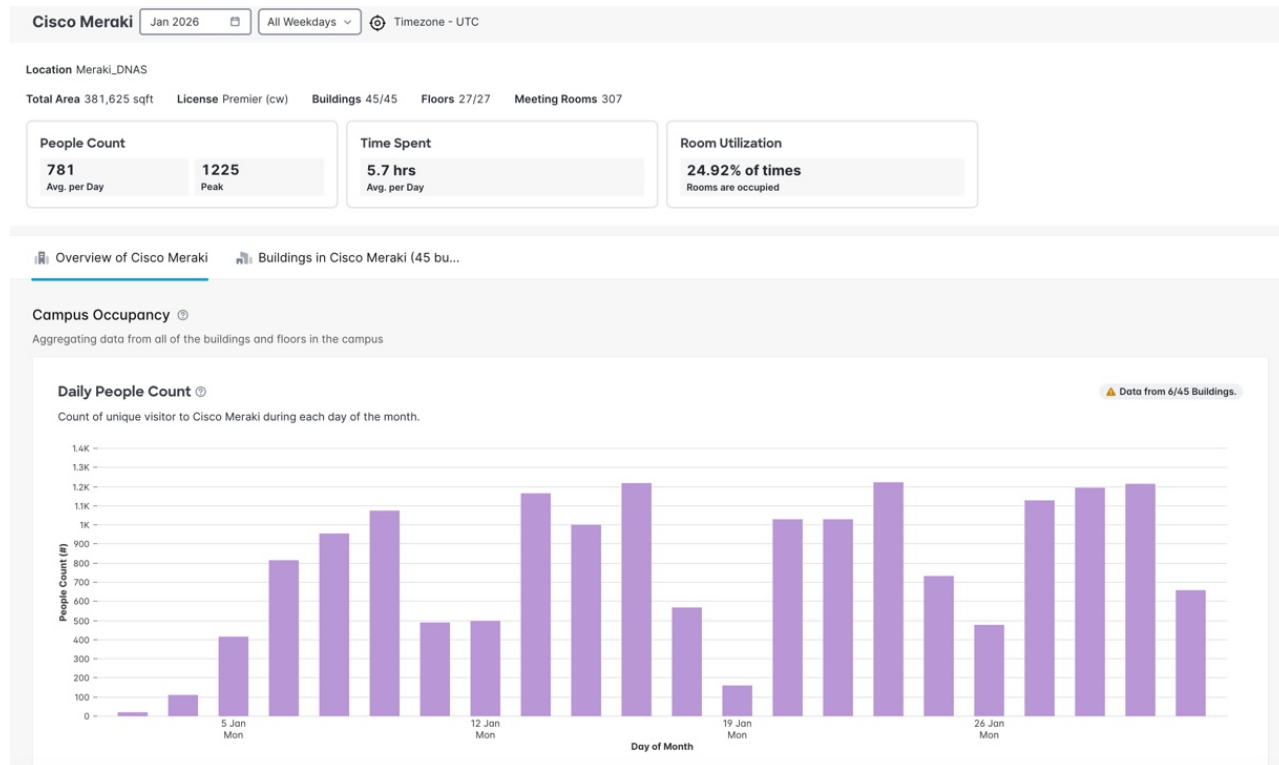

- [View Campus Utilization Reports, on page 7](#)
- [View Building Utilization Reports, on page 8](#)
- [View Floor Utilization Reports, on page 9](#)

View Campus Utilization Reports

Procedure

- Step 1** In the Space Utilization App left navigation menu, choose **Campuses**.
A table listing the various campuses is displayed.

Figure 4: Campus Reports

- Step 2** Choose the time period from the month and days dropdown menus on the top of the window.
- Step 3** Use **Search** or manually choose the campus by clicking its name in the table. The **Campus Details** window is displayed.
- Step 4** Choose either the **Overview** tab or the **View by Buildings** tab to understand the space utilization at a campus or building level.
- **Overview:** A summary of the **People Count**, **Time Spent**, and **Room Utilization** for the campus is displayed.
 - **View by Buildings:** Graphical charts showing trends in the utilization, people count, time spent, people hours, and density of the spaces within a building are displayed.

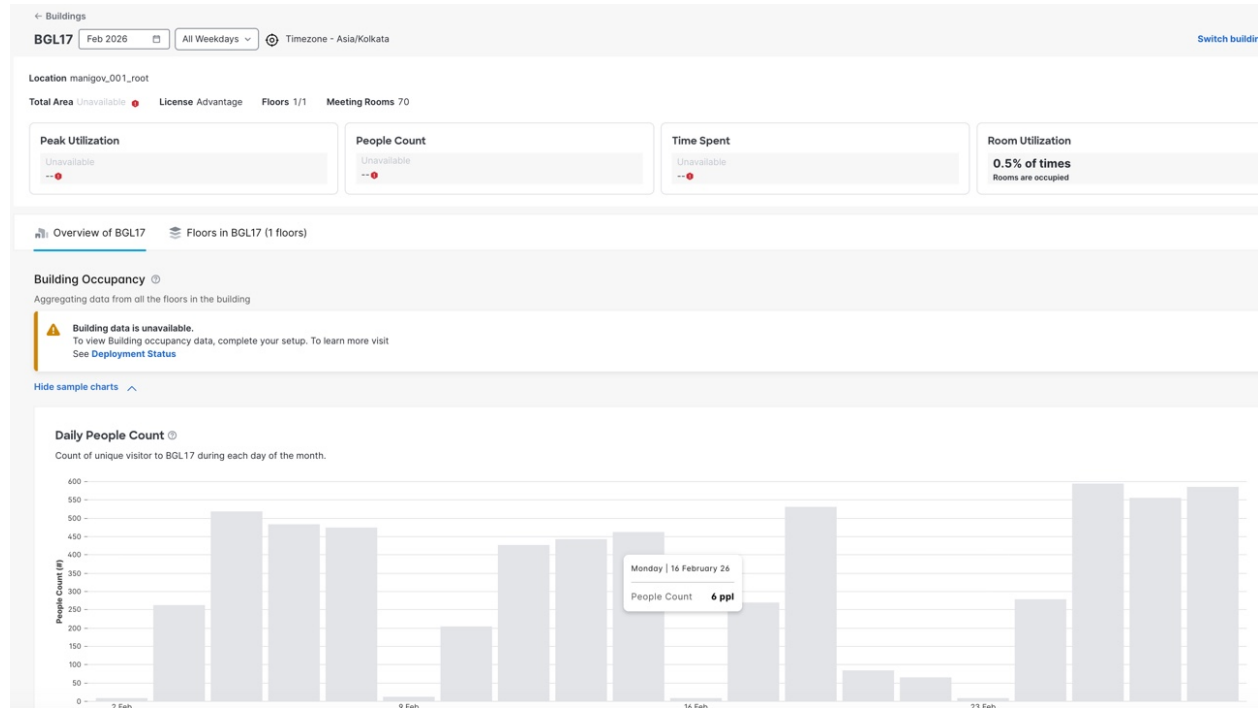

View Building Utilization Reports

Procedure

- Step 1** In the Space Utilization App left navigation menu, choose **Buildings**. A table listing the various buildings is displayed.
- Step 2** Choose the time period from the month and days dropdown menus on the top of the window.

- Step 3** Use **Search** or manually choose the building by clicking its name in the table. The **Building Details** window is displayed.

Figure 5: Building

- Step 4** Choose either the **Overview** tab or the **Floors in Building** tab to understand the space utilization at a building or floor level.
- **Overview:** A summary of the **Peak Utilization**, **People Count**, **Time Spent**, and **Room Utilization** for the building is displayed.
 - **Floors in Building:** Graphical charts showing trends in the utilization, people count, time spent, people hours, and density of the spaces on a floor are displayed.

View Floor Utilization Reports

Procedure

- Step 1** In the Space Utilization App left navigation menu, choose **Floors**.
A list of buildings and a table listing the various floors within the chosen building are displayed.
- Step 2** Choose the time period from the month and days dropdown menus on the top of the window.
- Step 3** Use **Search** or manually choose the building by clicking its name in the table. The **Floor Details** window is displayed.
- Step 4** Choose the **Overview** tab to understand the space utilization at a floor or room level.

A summary of the **Peak Utilization**, **People Count**, **Time Spent**, and **Room Utilization** for the building is displayed.

CHAPTER 4

Utilization Exports

- [Utilization Exports, on page 11](#)
- [Create report, on page 13](#)

Utilization Exports

Use the **Utilization Exports** feature to export utilization data via reports. The **Utilization Exports** section in the Space Utilization App allows you to create, view, and download utilization reports. It lists previously created reports along with their location scope, reporting period, completion status, and download access.

Key features

- Create new utilization reports to generate exportable utilization data for selected locations and time periods.
- View all existing reports in one list with key metadata (report name, location scope, reporting period).
- Track report readiness using **Last completed period** to confirm whether an output is available.
- Download report outputs on demand directly from the report row entry.

You can view the existing reports and also create new reports.

Figure 6: Utilization exports

Report Name	Locations	Report Type	Last completed period		
Report 2497		2026-01-01 - 2026-02-04	N/A	Download	...
Report 2465		FO12/5th 2023-12-31 - 2024-01-30	N/A	Download	...
Report 2473		2026-01-27 - 2026-01-30	N/A	Download	...
Report 2471		FO12/2nd 2026-01-19 - 2026-01-26	N/A	Download	...
Report 2463		FO12/4th 2025-12-01 - 2025-12-31	N/A	Download	...
Report 2453		Occupancy 2025-09-01 - 2026-01-12	N/A	Download	...
Report 2451		FO12/1st 2025-11-01 - 2025-11-30	N/A	Download	...
Report 2163		WEEKLY	02/01/26	Download Recent	...
Report 2162		WEEKLY	02/01/26	Download Recent	...

The Utilization Exports page includes these details:

Table 1: Utilization exports

Field	Description
Report Name	Identify the report entry and open its details by selecting the linked name (for example, <i>Report 2497</i>).
Locations	Displays the location scope included in the report (often displayed as a campus/building/floor path).
Report Type	Displays the reporting timeframe covered by the report (for example, a date range such as 2026-01-01 - 2026-02-04).
Last completed period	Displays the most recent period for which the report successfully completed, or display <i>N/A</i> when no completed output is available yet.
Download	Click to download the generated report output file for that report entry.
More options (...)	Includes Edit and Delete options.

View reports

To view an existing report, click **Report Name** to view utilization data for the same. View these information:

- Workspace
- Date
- Interval Start Time (Local)
- Building
- Floor
- Capacity
- Peak People Count

Perform these additional tasks:

- **Edit**: Click to edit and regenerate the report.
- **Download**: Click to download the report.

Create report

Use **Create New** to define a new utilization report by choosing the location scope and reporting period.

The **Utilization Exports** feature allows you to create utilization report exports for specific locations and time periods, track completion, and download the results for offline analysis and distribution.

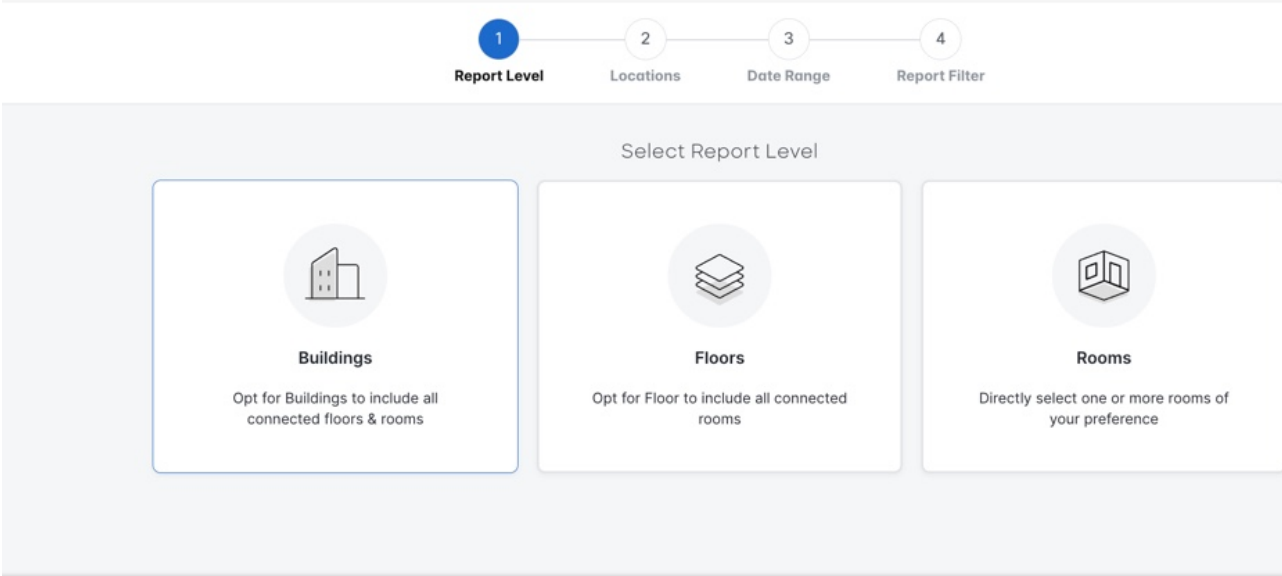

Complete these steps to create new reports.

Procedure

- Step 1** In the **Utilization Exports** window, click + **Create New**.
The **Report Parameters** wizard is displayed.

Figure 7: Report Parameters

Report Parameters

Step 2 In the **Report Level** section, click to choose one among **Buildings**, **Floors**, or **Rooms**.

Step 3 Click **Next**.
The **Locations** section is displayed.

Step 4 In the left pane, expand the hierarchy to navigate to the desired location, and select the corresponding check box.

Note
Alternatively, in the left pane, you can search for the desired **Building**, **Floor**, or **Room**.

The selected locations are displayed in the right side of the pane.

Step 5 Click **Next**.
The **Date Range** pane is displayed.

Step 6 In the **Select Date Range** section, you can either specify a date range or choose a cadence for the occupancy report.

a) **Specify Date Range:** Choose this option if you need a report for a fixed time period and select the **Start Date** and **End Date** from the date picker.

Note
The dates are based on the selected location's local time zone.

b) **Recurring Report:** Choose this option if you want to generate a recurring occupancy report and specify the cadence by choosing one among the following options:

- **Weekly:** This report contains data for the last completed week (Sunday to Saturday).
- **Bi-weekly:** This report contains data for the last completed two weeks.

- **Monthly**: This report will contain data for the last completed month.

- Specify the **Reporting Time Interval** by choosing one of these options: **15 minutes**, **30 minutes**, or **60 minutes**.

Step 7 Click **Next**.

The **Report Filters** pane is displayed.

Step 8 In the **Report Filters** pane, you can specify the following criteria for the occupancy report:

- Under **Filter By Specific Day(s)**, you can either select specific days of the week, or **All Days of the Week**.

Note

You must select at least one day. If not, the following error message is displayed:

Atleast one day must be selected to generate a report.

- Under **Filter By Specific Hours**, you can either choose **Full Day (24 Hrs)** or specify the **Start Time** and **End Time**.

- Under **Filter By Capacity of Room(s)**, choose the desired room capacity.

Note

You must select at least one room capacity group. If not, the following error message is displayed:

Atleast one capacity group must be selected to generate a report.

- Choose **Skip Empty Rows** to exclude entries for those intervals where there is no data.

Step 9 Click **Create Report**.

The new report is generated.

What to do next

View the report details in the **Utilization Exports** window.

CHAPTER 5

Deployment Status

- [Deployment Status, on page 17](#)

Deployment Status

The **Deployment Status** section in Space Utilization App provides a unified and comprehensive view of occupancy statuses across all buildings and floors within an organization. This feature empowers facility managers and administrators to monitor the deployment and operational status of their space utilization system, ensuring accurate occupancy insights and optimized workspace usage.

This app provides insights into the status of your deployment. Users often encounter gaps in key metrics within the app, which typically result from incomplete deployments. For instance, the Daily Utilization Chart requires both capacity (configuration) and occupancy data, while the Density Chart needs area specifications (configuration) in addition to occupancy data.

Similarly, to effectively track room utilization, digital maps must be available, and sensors need to be attached to the rooms defined in these maps. By visiting the **Deployment Status** section, you can pinpoint any missing elements and take the necessary actions to fill these gaps and to ensure that charts and reports are accurately generated as expected.

Key Features:

- Centralized dashboard for monitoring floor and room occupancy.
- Status indicators for buildings and floors based on licensing and configuration.
- Quick access to deployment readiness tasks (connecting network, uploading maps, configuring metadata).
- Detailed breakdowns of floors with missing maps, occupancy data, capacity, or area information.
- Search and filter capabilities for easier navigation across multiple locations.
- Integration with licensing to show only eligible locations.

This section includes two tabs: **Floor occupancy** and **Room occupancy**.

Figure 8: Deployment status

Deployment Status

Stay informed and optimize your space with a single view of occupancy statuses for all buildings and floors.

Floor occupancy Room occupancy

Getting started with Floor occupancy

Floor occupancy is calculated with data from your wireless network

- Connect your wireless network to spaces
- Upload maps for your locations
- Configure metadata for your locations

Floor occupancy status

All Buildings	0/38	28/38	31/38	24/38
51 buildings with 38 floors Buildings and floors with appropriate licenses	Floors without Maps These floors may not provide accurate occupancy data	Floors without Occupancy These floors will be excluded from the occupancy charts	Floors without Capacity These floors will be excluded from the % Utilization charts	Floors without Area These floors will be excluded from the Density charts

Only locations with or higher licenses are shown.

Search 38 Floors in 51 Buildings

Location Floors with Maps Floors with Occupancy Floors with Capacity Floor area available

Floor occupancy

Use the **Floor occupancy** tab to view the floor occupancy status. Floor occupancy is calculated with data from your wireless network.

Under the **Floor occupancy status** area, view these details:

- **All Buildings:** Displays the number of buildings and floors with appropriate licenses
- **Floors without Maps:** Displays the number of floors without floors. These floors may not provide accurate occupancy data.
- **Floors without Occupancy:** Displays the number of floors without occupancy. These floors are excluded from the occupancy charts.
- **Floors without Capacity:** Displays the number of floors without capacity. These floors are excluded from the % Utilization charts.
- **Floors without Area:** Displays the number of floors without area. These floors are excluded from the Density charts.

Room occupancy

Use the **Room occupancy** tab to view the room occupancy status. Room occupancy is calculated using data from IoT Sensors.

To get started with floor occupancy:

1. Room occupancy is calculated using data from IoT Sensors.
2. Connect to Cisco Webex control hub.
3. Configure rooms in Cisco Spaces: Space Manager.

Under the **Room occupancy status** area, view these details:

- All Buildings: Displays the number of buildings and floors with appropriate licenses
- Floors without Digital Maps Pro: Displays the number of floors without digital maps pro. These floors do not have mapped rooms, so occupancy data is not recorded.
- Rooms without Sensors: Displays the number of rooms without sensors. These rooms lack sensors, so occupancy data is not recorded.
- Rooms with no data: Displays the number of rooms without data. These rooms have not recorded data for the past two weeks.
- Rooms with no bookings: Displays the number of rooms without booking data. These rooms have not recorded booking data for the past two weeks.

CHAPTER 6

User Management

- [User Management](#), on page 21
- [Send a user invitation](#) , on page 22

User Management

The **User Management** section in Cisco Spaces allows administrators to centrally manage user access, roles, and location permissions within the Space Utilization App. The feature provides capabilities to view all existing users, monitor their invitation status, assign appropriate roles, and invite new users into the app.

Key features

- Search functionality: Use the **Search** bar for quick search and filtering.
- New User Invitation workflow with email entry, role selection, and location assignment.
- User attributes: Displays the user details such as **Name**, **Email**, **Role** (Read Only User, Dashboard Admin Role), **Location**, and **Invitation Status**.
- Pagination controls

Figure 9: User management

The screenshot shows the 'User Management' interface. At the top, there is a search bar with the placeholder text 'Search' and a blue button labeled '+ Invite User'. Below this is a table with the following columns: 'User', 'Email address', 'Role', 'Location', and 'Invitation Status'. The table contains several rows of user data. At the bottom of the table, there is a pagination control showing 'Rows per page' set to 10, and '1-10 of 304' items. The current page is 1, with navigation arrows and page numbers 1, 2, ..., 31.

User	Email address	Role	Location	Invitation Status
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Read-Only	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Dashboard Admin Role	All Locations	Accepted
[Redacted]	[Redacted]	Read-Only	All Locations	Accepted

Send a user invitation

Add a new user to Space Utilization App by sending an invitation with the appropriate role and location permissions.

Use this procedure when you need to add a new users to Space Utilization App and provide then appropriate access permissions.

Procedure

Step 1 In the Space Utilization App, navigate to the **User Management** section from the left-navigation menu.

Step 2 In the **User Management** window, click **Invite User**.

The **Invite User** window is displayed.

Step 3 In the **Email** field, enter the user's email address.

Step 4 From the **Role** drop-down list, choose the appropriate role for the new user. The options are: **Read Write User** and **Read Only User**.

Read Only users cannot access **Deployment Status** or **User Management** features, while **Read Write** users have access to all sections.

- Step 5** Click **Select Locations** to choose which locations the user will have access to from the **Choose Locations** pop-up window.
- a) Check the check boxes corresponding to the location you want to give access to.
 - b) Verify the selected location details in the **Select Locations** area.
 - c) Click **Select Locations**.
- Step 6** Click **Send Invitation**.
-

The new user invitation is sent successfully, and the recipient will receive an email with instructions to accept.

What to do next

The newly invited user details are displayed in the **User Management** list with the status **Pending** until they accept the invitation.
