Checking the Health of the Network

This chapter describes how to check the health of a mesh network and contains the following sections:

- Show Mesh Commands, page 1
- Viewing Mesh Statistics for a Mesh Access Point, page 6
- Viewing Neighbor Statistics for a Mesh Access Point, page 11

Show Mesh Commands

The show mesh commands are grouped under the following sections:

- Viewing General Mesh Network Details
- Viewing Mesh Access Point Details
- Viewing Public Safety Setting
- Viewing Security Settings and Statistics

Viewing General Mesh Network Details

To view general mesh network details, enter these commands:

- `show mesh env {summary | AP_name}`—Shows the temperature, heater status, and Ethernet status for either all access points (summary) or a specific access point (AP_name). The access point name, role (RootAP or MeshAP), and model are also shown.
  - The temperature is shown in both Fahrenheit and Celsius.
  - The heater status is ON or OFF.
  - The Ethernet status is UP or DOWN.
The battery status appears as N/A (not applicable) in the `show mesh env AP_name` status display because it is not provided for access points.

(Cisco Controller) > `show mesh env summary`

<table>
<thead>
<tr>

</tbody>
</table>

• `show mesh ap summary`—Revised to show the CERT MAC field that shows a MAC address within an AP certificate that can be used to assign a username for external authentication.

(Cisco Controller) > `show mesh ap summary`

<table>
<thead>
<tr>
<th>AP Name</th>
<th>AP Model</th>
<th>BVI MAC</th>
<th>CERT MAC</th>
<th>Hop Bridge Group Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>R1</td>
<td>LAP1520</td>

<td>00:1a:2a:ff:f9:00</td>
<td>00:1b:34:a6:f4:60</td>
<td>1</td>
</tr>
</tbody>
</table>

Number of Mesh APs: 3
Number of RAP: 2
Number of MAP: 1

• `show mesh path`—Displays MAC addresses, access point roles, SNR ratios (dBs) for uplink and downlink (SNRUp, SNRDn) and link SNR for a particular path.

(Cisco Controller) > `show mesh path mesh-45-rap1`

<table>
<thead>
<tr>
<th>AP Name/ Radio Mac</th>
<th>Channel</th>
<th>Snr-Up</th>
<th>Snr-Down</th>
<th>Link-Snr</th>
<th>Flags</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>

<td>165</td>
<td>15</td>
<td>10</td>
<td>16</td>
<td>0x86b</td>
<td>UPDATED NEIGH PARENT BEACON</td>
</tr>
</tbody>
</table>

mesh-45-rap1 is a Root AP.

• `show mesh neighbor summary`—Displays summary information about mesh neighbors. Neighbor information includes MAC addresses, parent-child relationships, and uplink and downlink (SNRUp, SNRDn).

(Cisco Controller) > `show mesh neighbor summary ap1500:62:39:70`
After review of the `show mesh` commands above, you should be able to see the relationships between the nodes of your network and verify the RF connectivity by seeing the SNR values for every link.

**Note**

- `show mesh ap tree`—Displays mesh access points within a tree structure (hierarchy).

(Cisco Controller) > `show mesh ap tree`

R1(0,y1)
| -R2(1,y1)
| -R6(2,y1)
| -H2(1,default)

Number of Mesh APs: 4
Number of RAP: 1
Number of MAP: 3

**Viewing Mesh Access Point Details**

To view a mesh access point's configuration, enter these commands:

- `show ap config general Cisco_AP`—Displays system specifications for a mesh access point.

(Cisco Controller) > `show ap config general aps`

Cisco AP Identifier: AP1
Cisco AP Name: AP5
Country code: US - United States
Regulatory Domain allowed by Country: 802.11bg:-AB 802.11a:-AB
AP Country code: US - United States
AP Regulatory Domain: 802.11bg:-A 802.11a:-N
Switch Port Number: 1
MAC Address: 00:13:80:60:48:3e
IP Address Configuration: DHCP
IP Address: 1.100.163.133
Primary Cisco Switch Name: 1-4404
Secondary Cisco Switch Name: 1-4404
Secondary Cisco Switch IP Address: 2.2.2.2
Tertiary Cisco Switch Name: 2-4404
Tertiary Cisco Switch IP Address: 1.1.1.4

- `show mesh astools stats [Cisco_AP]`—Displays anti-stranding statistics for all outdoor mesh access points or a specific mesh access point.

(Cisco Controller) > `show mesh astools stats`

Total No of Aps stranded: 0

- `show advanced backup-controller`—Displays configured primary and secondary backup controllers.
Checking the Health of the Network

Viewing Global Mesh Parameter Settings

Use this command to obtain information on global mesh settings:

- **show mesh config**—Displays global mesh configuration settings.

(Cisco Controller) > **show mesh config**
Mesh Range....................................... 12000
Backhaul with client access status............... disabled
Background Scanning State....................... enabled
Mesh Security
Security Mode..................................... EAP
External-Auth.................................. disabled
Use MAC Filter in External AAA server.......... disabled
Force External Authentication.................. disabled
Mesh Alarm Criteria
Max Hop Count................................... 4
Recommended Max Children for MAP............. 10
Recommended Max Children for RAP............. 20
Low Link SNR.................................. 12
High Link SNR................................ 60
Max Association Number......................... 10
Association Interval......................... 60 minutes
Parent Change Numbers......................... 3
Parent Change Interval......................... 60 minutes
Mesh Multicast Mode............................ In-Out
Mesh Full Sector DFS............................ enabled
Mesh Ethernet Bridging VLAN Transparent Mode enabled

Viewing Bridge Group Settings

Use these commands to view bridge group settings:

- **show mesh forwarding table**—Shows all configured bridges and their MAC table entries.
- **show mesh forwarding interfaces**—Displays bridge groups and the interfaces within each bridge group. This command is useful for troubleshooting bridge group membership.
Viewing VLAN Tagging Settings

Use these commands to view VLAN tagging settings:

- **show mesh forwarding VLAN mode**—Shows the configured VLAN Transparent mode (enabled or disabled).
- **show mesh forwarding VLAN statistics**—Displays statistics for the VLAN and the path.
- **show mesh forwarding vlans**—Displays supported VLANs.
- **show mesh ethernet VLAN statistics**—Displays statistics for the Ethernet interface.

Viewing DFS Details

Use this command to view DFS details:

- **show mesh dfs history**—Displays a history of radar detections by channels and resulting outages.

(Cisco Controller) > show mesh dfs history
ap1520#show mesh dfs history
Channel 100 detects radar and is unusable (Time Elapsed: 18 day(s), 22 hour(s), 10 minute(s), 24 second(s)).
Channel is set to 136 (Time Elapsed: 18 day(s), 22 hour(s), 10 minute(s), 24 second(s)).
Channel 136 detects radar and is unusable (Time Elapsed: 18 day(s), 22 hour(s), 9 minute(s), 14 second(s)).
Channel is set to 161 (Time Elapsed: 18 day(s), 22 hour(s), 9 minute(s), 14 second(s)).
Channel 100 becomes usable (Time Elapsed: 18 day(s), 21 hour(s), 40 minute(s), 24 second(s)).
Channel 136 becomes usable (Time Elapsed: 18 day(s), 21 hour(s), 39 minute(s), 14 second(s)).
Channel 64 detects radar and is unusable (Time Elapsed: 0 day(s), 1 hour(s), 20 minute(s), 52 second(s)).
Channel 104 detects radar and is unusable (Time Elapsed: 0 day(s), 0 hour(s), 47 minute(s), 6 second(s)).
Channel is set to 120 (Time Elapsed: 0 day(s), 0 hour(s), 47 minute(s), 6 second(s)).

- **show mesh dfs channel channel number**—Displays a history of radar detections and outages for a specified channel.

(Cisco Controller) > show mesh dfs channel 104
ap1520#show mesh dfs channel 104
Channel 104 is available
Time elapsed since radar last detected: 0 day(s), 0 hour(s), 48 minute(s), 11 second(s).

Viewing Public Safety Setting

Use this command to view public safety setting:

- **show mesh public-safety**—Verifies that the 4.8-GHz public safety band is enabled.

(Cisco Controller) > show mesh public-safety
Global Public Safety status: enabled
Viewing Security Settings and Statistics

Use this command to view security settings and statistics:

- `show mesh security-stats AP_name`—Shows packet error statistics and a count of failures, timeouts, and successes with respect to associations and authentications as well as reassociations and reauthentications for the specified access point and its child.

(Cisco Controller) > `show mesh security-stats ap417`

```
AP MAC : 00:0B:85:5F:FA:F0
Packet/Error Statistics:
----------------------------------
Tx Packets 14, Rx Packets 19, Rx Error Packets 0
Parent-Side Statistics:
--------------------------
Unknown Association Requests 0
Invalid Association Requests 0
Unknown Re-Authentication Requests 0
Invalid Re-Authentication Requests 0
Unknown Re-Association Requests 0
Invalid Re-Association Requests 0
Child-Side Statistics:
--------------------------
Association Failures 0
Association Timeouts 0
Association Successes 0
Authentication Failures 0
Authentication Timeouts 0
Authentication Successes 0
Re-Association Failures 0
Re-Association Timeouts 0
Re-Association Successes 0
Re-Authentication Failures 0
Re-Authentication Timeouts 0
Re-Authentication Successes 0
```

Viewing GPS Status

- See a location summary of all mesh APs by entering this command:
  `show mesh gps location summary`

- See the location information for a particular mesh AP by entering this command:
  `show mesh gps location ap-name`

Viewing Mesh Statistics for a Mesh Access Point

This section describes how to use the controller GUI or CLI to view mesh statistics for specific mesh access points.

Note

You can modify the Statistics Timer interval setting on the All APs > Details page of the controller GUI.
Viewing Mesh Statistics for a Mesh Access Point (GUI)

Step 1  Choose Wireless > Access Points > All APs to open the All APs page.

Step 2  To view statistics for a specific mesh access point, hover the mouse over the blue drop-down arrow for the desired mesh access point and choose Statistics. The All APs > AP Name > Statistics page for the selected mesh access point appears. This page shows the role of the mesh access point in the mesh network, the name of the bridge group to which the mesh access point belongs, the backhaul interface on which the access point operates, and the number of the physical switch port. It also displays a variety of mesh statistics for this mesh access point.

Table 1: Mesh Access Point Statistics

<table>
<thead>
<tr>
<th>Statistics</th>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mesh Node Stats</td>
<td>Malformed Neighbor Packets</td>
<td>The number of malformed packets received from the neighbor. Examples of malformed packets include malicious floods of traffic such as malformed or short DNS packets and malformed DNS replies.</td>
</tr>
<tr>
<td></td>
<td>Poor Neighbor SNR Reporting</td>
<td>The number of times the signal-to-noise ratio falls below 12 dB on the backhaul link.</td>
</tr>
<tr>
<td></td>
<td>Excluded Packets</td>
<td>The number of packets received from excluded neighbor mesh access points.</td>
</tr>
<tr>
<td></td>
<td>Insufficient Memory Reporting</td>
<td>The number of insufficient memory conditions.</td>
</tr>
<tr>
<td></td>
<td>Rx Neighbor Requests</td>
<td>The number of broadcast and unicast requests received from the neighbor mesh access points.</td>
</tr>
<tr>
<td></td>
<td>Rx Neighbor Responses</td>
<td>The number of responses received from the neighbor mesh access points.</td>
</tr>
<tr>
<td></td>
<td>Tx Neighbor Requests</td>
<td>The number of unicast and broadcast requests sent to the neighbor mesh access points.</td>
</tr>
<tr>
<td></td>
<td>Tx Neighbor Responses</td>
<td>The number of responses sent to the neighbor mesh access points.</td>
</tr>
<tr>
<td></td>
<td>Parent Changes Count</td>
<td>The number of times a mesh access point (child) moves to another parent.</td>
</tr>
<tr>
<td></td>
<td>Neighbor Timeouts Count</td>
<td>The number of neighbor timeouts.</td>
</tr>
<tr>
<td><strong>Queue Stats</strong></td>
<td><strong>Parameter</strong></td>
<td><strong>Description</strong></td>
</tr>
<tr>
<td>-----------------</td>
<td>---------------------</td>

</tr>
<tr>
<td>Gold Queue</td>
<td>The average and peak number of packets waiting in the gold (video) queue during the defined statistics time interval.</td>
<td></td>
</tr>
<tr>
<td>Silver Queue</td>
<td>The average and peak number of packets waiting in the silver (best effort) queue during the defined statistics time interval.</td>
<td></td>
</tr>
<tr>
<td>Platinum Queue</td>
<td>The average and peak number of packets waiting in the platinum (voice) queue during the defined statistics time interval.</td>
<td></td>
</tr>
<tr>
<td>Bronze Queue</td>
<td>The average and peak number of packets waiting in the bronze (background) queue during the defined statistics time interval.</td>
<td></td>
</tr>
<tr>
<td>Management Queue</td>
<td>The average and peak number of packets waiting in the management queue during the defined statistics time interval.</td>
<td></td>
</tr>
<tr>
<td>Statistics</td>
<td>Parameter</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>------------------------------------</td>
<td>-------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Mesh Node Security Stats</strong></td>
<td>Transmitted Packets</td>
<td>The number of packets transmitted during security negotiations by the selected mesh access point.</td>
</tr>
<tr>
<td></td>
<td>Received Packets</td>
<td>The number of packets received during security negotiations by the selected mesh access point.</td>
</tr>
<tr>
<td></td>
<td>Association Request Failures</td>
<td>The number of association request failures that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Association Request Timeouts</td>
<td>The number of association request timeouts that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Association Requests Successful</td>
<td>The number of successful association requests that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Authentication Request Failures</td>
<td>The number of failed authentication requests that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Authentication Request Timeouts</td>
<td>The number of authentication request timeouts that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Authentication Requests Successful</td>
<td>The number of successful authentication requests between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reassociation Request Failures</td>
<td>The number of failed reassociation requests between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reassociation Request Timeouts</td>
<td>The number of reassociation request timeouts between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reassociation Requests Successful</td>
<td>The number of successful reassociation requests between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reauthentication Request Failures</td>
<td>The number of failed reauthentication requests between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reauthentication Request Timeouts</td>
<td>The number of reauthentication request timeouts that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Reauthentication Requests Successful</td>
<td>The number of successful reauthentication requests that occur between the selected mesh access point and its parent.</td>
</tr>
<tr>
<td></td>
<td>Unknown Association Requests</td>
<td>The number of unknown association requests received by the parent mesh access point from its child. The unknown association requests often occur when a child is an unknown neighbor mesh access point.</td>
</tr>
<tr>

<td>The number of invalid reauthentication requests received by the parent mesh access point from a child. This state may occur when a child is a valid neighbor but is not in a proper state for reauthentication.</td>
</tr>
<tr>
<td>Thenumberofunknownreassociationrequestsreceivedbytheparentmeshaccesspointfromachild.</td>
<td>Unknown Reassociation Requests</td>
<td>The number of unknown reassociation requests received by the parent mesh access point from a child. This state may occur when a child mesh access point is an unknown neighbor.</td>
</tr>
<tr>
<td>Thenumberofinvalidreassociationrequestsreceivedbytheparentmeshaccesspointfromachild.</td>
<td>Invalid Reassociation Requests</td>
<td>The number of invalid reassociation requests received by the parent mesh access point from a child. This state may occur when a child is a valid neighbor but is not in a proper state for reassociation.</td>
</tr>
</tbody>
</table>

**Viewing Mesh Statistics for an Mesh Access Point (CLI)**

Use these commands to view mesh statistics for a specific mesh access point using the controller CLI:

- To view packet error statistics, a count of failures, timeouts, and successes with respect to associations and authentications, and reassociations and reauthentications for a specific mesh access point, enter this command:

  ```
  show mesh security-stats AP_name
  ```

  Information similar to the following appears:

  ```
  AP MAC : 00:0B:85:5F:FA:F0
  Packet/Error Statistics:
  --------------------------
  x Packets 14, Rx Packets 19, Rx Error Packets 0
  Parent-Side Statistics:
  --------------------------
  Unknown Association Requests 0
  Invalid Association Requests 0
  Unknown Re-Authentication Requests 0
  Invalid Re-Authentication Requests 0
  Unknown Re-Association Requests 0
  Invalid Re-Association Requests 0
  Unknown Re-Association Requests 0
  ```
Invalid Re-Association Requests 0

Child-Side Statistics:
--------------------------
Association Failures 0
Association Timeouts 0
Association Successes 0
Authentication Failures 0
Authentication Timeouts 0
Authentication Successes 0
Re-Association Failures 0
Re-Association Timeouts 0
Re-Association Successes 0
Re-Authentication Failures 0
Re-Authentication Timeouts 0
Re-Authentication Successes 0

• To view the number of packets in the queue by type, enter this command:

  show mesh queue-stats AP_name

Information similar to the following appears:

<table>
<thead>
<tr>
<th>Queue Type</th>
<th>Overflows</th>
<th>Peak length</th>
<th>Average length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silver</td>
<td>0</td>
<td>0.000</td>
<td></td>
</tr>
<tr>
<td>Gold</td>
<td>0</td>
<td>0.004</td>
<td></td>
</tr>
<tr>
<td>Platinum</td>
<td>0</td>
<td>0.001</td>
<td></td>
</tr>
<tr>
<td>Bronze</td>
<td>0</td>
<td>0.000</td>
<td></td>
</tr>
<tr>
<td>Management</td>
<td>0</td>
<td>0.000</td>
<td></td>
</tr>
</tbody>
</table>

Overflows—The total number of packets dropped due to queue overflow.

Peak Length—The peak number of packets waiting in the queue during the defined statistics time interval.

Average Length—The average number of packets waiting in the queue during the defined statistics time interval.

Viewing Neighbor Statistics for a Mesh Access Point

This section describes how to use the controller GUI or CLI to view neighbor statistics for a selected mesh access point. It also describes how to run a link test between the selected mesh access point and its parent.

Viewing Neighbor Statistics for a Mesh Access Point (GUI)

Step 1 Choose Wireless > Access Points > All APs to open the All APs page.

Step 2 To view neighbor statistics for a specific mesh access point, hover the mouse over the blue drop-down arrow for the desired mesh access point and choose Neighbor Information. The All APs > Access Point Name > Neighbor Info page for the selected mesh access point appears.

  This page lists the parent, children, and neighbors of the mesh access point. It provides each mesh access point’s name and radio MAC address.

Step 3 To perform a link test between the mesh access point and its parent or children, follow these steps:
a) Hover the mouse over the blue drop-down arrow of the parent or desired child and choose **LinkTest**. A pop-up window appears.
b) Click **Submit** to start the link test. The link test results appear on the Mesh > LinkTest Results page.
c) Click **Back** to return to the All APs > Access Point Name > Neighbor Info page.

**Step 4**  
To view the details for any of the mesh access points on this page, follow these steps:
a) Hover the mouse over the blue drop-down arrow for the desired mesh access point and choose **Details**. The All APs > Access Point Name > Link Details > Neighbor Name page appears.
b) Click **Back** to return to the All APs > Access Point Name > Neighbor Info page.

**Step 5**  
To view statistics for any of the mesh access points on this page, follow these steps:
a) Hover the mouse over the blue drop-down arrow for the desired mesh access point and choose **Stats**. The All APs > Access Point Name > Mesh Neighbor Stats page appears.
b) Click **Back** to return to the All APs > Access Point Name > Neighbor Info page.

---

### Viewing the Neighbor Statistics for a Mesh Access Point (CLI)

Use these commands to view neighbor statistics for a specific mesh access point using the controller CLI.

- To view the mesh neighbors for a specific mesh access point, enter this command:

  ```
  show mesh neigh [detail | summary] AP_Name
  ```

  Information similar to the following appears when you request a summary display:

<table>
<thead>
<tr>
<th>AP Name/Radio Mac</th>
<th>Channel</th>
<th>Snr-Up</th>
<th>Snr-Down</th>
<th>Link-Snr</th>
<th>Flags</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>mesh-45-rap1</td>
<td>165</td>
<td>15</td>
<td>18</td>
<td>16</td>
<td>0x86b</td>
<td>UPDATED NEIGH PARENT BEACON</td>
</tr>
<tr>
<td>00:0B:85:80:ED:D0</td>
<td>149</td>
<td>5</td>
<td>6</td>
<td>5</td>
<td>0x1a60</td>
<td>NEED UPDATE BEACON DEFAULT</td>
</tr>
<tr>
<td>00:17:94:FE:C3:5F</td>
<td>149</td>
<td>7</td>
<td>0</td>
<td>0</td>
<td>0x860</td>
<td>BEACON</td>
</tr>
</tbody>
</table>

- To view the channel and signal-to-noise ratio (SNR) details for a link between a mesh access point and its neighbor, enter this command:

  ```
  show mesh path AP_Name
  ```

  Information similar to the following appears:

  ```
  AP Name/Radio Mac Channel Snr-Up Snr-Down Link-Snr Flags State
  ------------------------- ------- -------- -------- --------- -------
  mesh-45-rap1 165 15 18 16 0x86b UPDATED NEIGH PARENT BEACON 
mesh-45-rap1 is a Root AP.
  ```

- To view the percentage of packet errors for packets transmitted by the neighbor mesh access point, enter this command:

  ```
  show mesh per-stats AP_Name
  ```

  Information similar to the following appears:

  ```
  Neighbor MAC Address 00:0B:85:5F:FA:F0
  Total Packets transmitted: 104833
  Total Packets transmitted successfully: 104833
  ```
Total Packets retried for transmission: 33028
Neighbor MAC Address 00:0B:85:80:ED:D0
Total Packets transmitted: 0
Total Packets transmitted successfully: 0
Total Packets retried for transmission: 0

Neighbor MAC Address 00:17:94:FE:C3:5F
Total Packets transmitted: 0
Total Packets transmitted successfully: 0
Total Packets retried for transmission: 0

Note  
Packet error rate percentage = 1 – (number of successfully transmitted packets/number of total packets transmitted).  

Viewing the Neighbor Statistics for a Mesh Access Point (CLI)
