Revision Details	Release
First introduced.	2020.01.0

Feature Description

PCF can subscribe to the policy control request triggers on the SMF. This is done by including triggers in the response to smPolicyControl_Create request. PCF can modify the request triggers that are subscribed in the SMF using Npcf_SMPolicyControl_UpdateNotify request or in response to smPolicyControl_Update service operation.

Configuring the Policy Control Request Trigger Events over N7

This section describes how to configure the Policy Control Request Trigger (EventTrigger) service to configure different events that are subscribed in response to smPolicyControl_Create request.

Before configuring the trigger service, ensure that you have created the use case templates and added the required service.

For information on how to create a use case template and add a service for this configuration, see Configuring the Use Case Template and Adding a Service.

1. Under **Service Configurations**, click **Add** to open the **Select Service Configuration** window.

2. Select **PCF > EventTrigger** and configure the required parameters.

   PCF can subscribe to the policy control request triggers in SMF. For the list of supported policy control triggers, refer to the *3GPP TS 29.512 N7* specification.
