Revision Details	Release
First introduced.	2023.02.0

Feature Description

The PCF supports the base images of all containers from the Ubuntu and Mongo versions, which got updated from 20.04 to 18.04 for the Ubuntu version and from 4.4 to the 4.0 version for Mongo containers. The Software

Upgrade using Site Isolation Procedure requires the site isolation and a method of procedures for execution during the maintenance window considering the upgrade path. The in-service updates aren't supported because there's no upgrade from Mongo 4.0 to 4.4.

Prerequisites

Ensure that the PCF system runs with the Pre April 2023 PCF release version.

Pre-Upgrade Backup Steps

Step 1 To start the upgrade, log in to the SMI Cluster Manager node as an Ubuntu user and verify all the pods and nodes are operational.

```
# SSh to Master node and if not all the pods and nodes are running please don't not proceed

cloud-user@pcf-cm-node-master-1:~$ kubectl get nodes -A

Step 3 Collect and backup the Mongo data from the primary members of the db-admin-config pods.

Note Refer to Step 2, for detailed commands for the following steps.

a) Collect the names of the Mongo admin pods.

```
cloud-user@pcf-cm-node-master-1:~$ kubectl get pods -n pcf-ims | grep db-admin-config
db-admin-config-0                                                 1/1     Running   0

db-admin-config-2                                                 1/1     Running   0
  13h
```

b) Log in to the db-admin-config pod to acquire access to the primary pod member.
c) Log in to the primary db-admin-config pod and take the dump of data and create the tar file out of the dump.
d) Transfer the dump tar file to the host from the primary db-admin-config pod.

Step 4 SSH to the ops-center, enter "system mode shutdown" at the config prompt, and then commit.

Step 5 Delete the data files from the Mongo admin pods using the PCF namespace on all three master nodes.

```
