

## Configuring User Plane in CUPS

This section describes the CLI commands available to configure User Plane in CUPS.

### Important

For information related to following configurations, refer the *Ultra Packet Core CUPS Sx Interface Administration and Reference Guide*:

- *Configuring Sx Service for CUPS*
- *Configuring Sx-u Interface for CUPS*
- *Configuring Sx Demux for CUPS*

### Important

- The following configuration limit applies in CUPS:
  - Rulebase - 512
  - Ruledef - 2500
  - Charging-action - 2048
- The following CLI command is not recommended to be used, with active subscriber sessions, in production environment: **no active-charging service** *service\_name*

- [Configuring User Plane Service, on page 1](#)
- [Associating GTP-U Service with User Plane Service, on page 2](#)
- [Associating Sx Service to User Plane Service, on page 3](#)
- [Recommended Timers, on page 3](#)

## Configuring User Plane Service

Use the following CLI commands to configure the User Plane service.

```
configure
context context_name
```

```
[ no ] user-plane-service service_name
end
```

**NOTES:**

- **user-plane-service service\_name**: Creates the specified User Plane service name to allow configuration of User Plane service. The *service\_name* is a mandatory parameter to define the User Plane service.
- **[ no ] user-plane-service service\_name**: Removes the User Plane service from the particular context.
- By default, the CLI is disabled.

**Starting a User Plane Service**

The following minimum and critical parameters must be configured to start the User Plane service:

- One Sx-Service.
- Three GTP-U Services of interface type P-GW ingress, S-GW-ingress, and S-GW-egress.

**Important** Removal or change of any critical parameters from User Plane service results in the User Plane service getting stopped.

The services that are associated with User Plane service should be in running mode. Else, stop in any associated service triggers stopping of User Plane service.

## Associating GTP-U Service with User Plane Service

To associate the GTPU service with the User Plane service, execute the following CLI commands:

```
configure
context context_name
    user-plane-service service_name
    [ no ] associate gtpu-service gtpu_service_name { pgw-ingress |
sgw-ingress | sgw-egress }
end
```

**NOTES:**

- **no**: Removes association of GTP-U service with the specified interface type from User Plane service.
- **associate**: Associates User Plane service with GTP-U service.
- **gtpu-service gtpu\_service\_name**: Specifies the GTP-U service for the User Plane service.
- **pgw-ingress**: Configures the interface type as P-GW ingress.
- **sgw-ingress**: Configures the interface type as S-GW ingress.
- **sgw-egress**: Configures the interface type as S-GW egress.
- By default, this command is disabled.

# Associating Sx Service to User Plane Service

Use the following CLI commands to associate Sx service with User Plane service.

```
configure
context context_name
  user-plane-service service_name
    associate sx-service sx_service_name
  no associate sx-service
end
```

## NOTES:

- **no** : Removes association of Sx service from User Plane service.
- Associating Sx service with User Plane service is a mandatory parameter.
- By default, this CLI command is disabled.

## Recommended Timers

The following table provides the recommended timer values for CLI commands related to IPsec, Sx, and SRP.

| IPSEC                                        | CP                                     | UP                                     |
|----------------------------------------------|----------------------------------------|----------------------------------------|
| ikev2-ikesa max-retransmission               | 3                                      | 3                                      |
| ikev2-ikesa retransmission-timeout           | 1000                                   | 1000                                   |
| keepalive                                    | interval 4<br>timeout 1<br>num-retry 4 | interval 5<br>timeout 2<br>num-retry 4 |
| Sx                                           | CP                                     | UP                                     |
| sx-protocol heartbeat interval               | 10                                     | 10                                     |
| sx-protocol heartbeat retransmission-timeout | 5                                      | 5                                      |
| sx-protocol heartbeat max-retransmissions    | 4                                      | 4                                      |
| sxa max-retransmissions                      | 4                                      | 4                                      |
| sxa retransmission-timeout-ms                | 5000                                   | 5000                                   |
| sxb max-retransmissions                      | 4                                      | 4                                      |
| sxb retransmission-timeout-ms                | 5000                                   | 5000                                   |
| sxab max-retransmissions                     | 4                                      | 4                                      |
| sxab retransmission-timeout-ms               | 5000                                   | 5000                                   |

| IPSEC                                                | CP | UP |
|------------------------------------------------------|----|----|
| <b>sx-protocol association<br/>reattempt-timeout</b> | 60 | 60 |
| SRP                                                  | CP | UP |
| <b>hello-interval</b>                                | 3  | 3  |
| <b>dead-interval</b>                                 | 15 | 15 |

## Recommended Configurations

Following are the recommended configurations and restrictions related to Sx and SRP over IPsec:

- The multihop BFD timer between CP and UP must be seven seconds (for Data UPs).
- The singlehop BFD must be enabled on all the contexts (CP GW/Billing and UP Gn/Gi).
- Inter-chassis multihop BFD must be enabled for CP-CP ICSR and UP-UP ICSR (IMS UP).
- The SRP-IPsec ACL must be configured for TCP protocol instead of IP protocol.
- The Sx-IPsec ACL must be configured for UDP protocol instead of IP protocol.

## Example Configurations in CP

### Multihop BFD Configuration VPC-DI

The following is an example of multihop BFD configuration with seven seconds timer.

```
bfd-protocol
  bfd multihop-peer 209.165.200.226 interval 350 min_rx 350 multiplier 20
  bfd multihop-peer 209.165.200.227 interval 350 min_rx 350 multiplier 20
  bfd multihop-peer 209.165.200.225 interval 350 min_rx 350 multiplier 20
  bfd multihop-peer 209.165.200.230 interval 350 min_rx 350 multiplier 20
  bfd multihop-peer 209.165.200.228 interval 350 min_rx 350 multiplier 20
  bfd multihop-peer 209.165.200.229 interval 350 min_rx 350 multiplier 20
#exit
```

### Multihop BFD Configuration VPC-SI

The following is an example of multihop BFD configuration with three seconds timer.

```
bfd-protocol
  bfd multihop-peer 209.165.200.226 interval 150 min_rx 150 multiplier 20
  bfd multihop-peer 209.165.200.227 interval 150 min_rx 150 multiplier 20
  bfd multihop-peer 209.165.200.225 interval 150 min_rx 150 multiplier 20
  bfd multihop-peer 209.165.200.230 interval 150 min_rx 150 multiplier 20
  bfd multihop-peer 209.165.200.228 interval 150 min_rx 150 multiplier 20
  bfd multihop-peer 209.165.200.229 interval 150 min_rx 150 multiplier 20
#exit
```

## BGP Configuration

The following is an example of BGP configuration with recommended timers.

```
router bgp 1111
  router-id 209.165.200.225
  maximum-paths ebgp 15
```

```

neighbor 209.165.200.250 remote-as 1000
neighbor 209.165.200.250 ebgp-multihop
neighbor 209.165.200.250 update-source 209.165.200.225
neighbor 1111:2222::101 remote-as 1000
neighbor 1111:2222::101 ebgp-multihop
neighbor 1111:2222::101 update-source 1111:2222::1
bgp graceful-restart restart-time 120
bgp graceful-restart stalepath-time 300
timers bgp keepalive-interval 30 holdtime-interval 90 min-peer-holdtime-interval 0
server-sock-open-delay-period 10
address-family ipv4
redistribute connected
#exit
address-family ipv6
neighbor 1111:2222::101 activate
redistribute connected
#exit
#exit

```

## Singlehop BFD Configuration

The following is an example of singlehop BFD configuration with three seconds timer.

```

interface bgp-sw1-2161-10
ip address 209.165.200.233 209.165.200.255
ipv6 address 1111:2222::9/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-11
ip address 209.165.200.234 209.165.200.255
ipv6 address 1111:2222::10/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-12
ip address 209.165.200.235 209.165.200.255
ipv6 address 1111:2222::11/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-3
ip address 209.165.200.226 209.165.200.255
ipv6 address 1111:2222::2/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-4
ip address 209.165.200.227 209.165.200.255
ipv6 address 1111:2222::3/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-5
ip address 209.165.200.228 209.165.200.255
ipv6 address 1111:2222::4/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-6
ip address 209.165.200.229 209.165.200.255
ipv6 address 1111:2222::5/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-7
ip address 209.165.200.230 209.165.200.255
ipv6 address 1111:2222::6/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-8

```

## Static Route for Multihop BFD Configuration

```

ip address 209.165.200.231 209.165.200.255
ipv6 address 1111:222::7/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit
interface bgp-sw1-2161-9
ip address 209.165.200.232 209.165.200.255
ipv6 address 1111:222::8/112 secondary
bfd interval 999 min_rx 999 multiplier 3
#exit

```

## Static Route for Multihop BFD Configuration

The following is an example of static route multihop BFD configuration.

```

ip route static multihop bfd UP-5 209.165.200.240 209.165.200.245
ip route static multihop bfd UP-6 209.165.200.240 209.165.200.246
ip route static multihop bfd UP-9 209.165.200.240 209.165.200.247
ip route static multihop bfd UP-10 209.165.200.240 209.165.200.248
ip route static multihop bfd UP-7 209.165.200.240 209.165.200.249
ip route static multihop bfd UP-8 209.165.200.240 209.165.200.250

```

## Static Route for Singlehop BFD Configuration

The following is an example of static route singlehop BFD configuration.

```

ip route static bfd bgp-sw1-2161-3 209.165.200.230
ip route static bfd bgp-sw1-2161-4 209.165.200.230
ip route static bfd bgp-sw1-2161-5 209.165.200.230
ip route static bfd bgp-sw1-2161-6 209.165.200.230
ip route static bfd bgp-sw1-2161-7 209.165.200.230
ip route static bfd bgp-sw1-2161-8 209.165.200.230
ip route static bfd bgp-sw1-2161-9 209.165.200.230
ip route static bfd bgp-sw1-2161-10 209.165.200.230
ip route static bfd bgp-sw1-2161-11 209.165.200.230
ip route static bfd bgp-sw1-2161-12 209.165.200.230

```

## IPSec ACL Configuration

The following is an example IPSec ACL configuration in CP.

```

ip access-list UP-1
permit udp host 209.165.200.225 host 209.165.200.226
#exit

```

## IPSec Transform Set Configuration

The following is an example of IPSec Transform Set configuration in CP.

```

ikev2-ikesa transform-set ikesa-UP-1
encryption aes-cbc-256
group 14
hmac sha2-256-128
lifetime 28800
prf sha2-256

ipsec transform-set A-UP-1
encryption aes-cbc-256
hmac sha2-256-128
group 14

```

## IPSec Crypto Map Configuration

The following is an example of IPSec Crypto Map configuration in CP.

```

crypto map UP-1 ikev2-ipv4
  match address UP-1
  authentication local pre-shared-key encrypted key secretkey
  authentication remote pre-shared-key encrypted key secretkey
  ikev2-ikesa max-retransmission 3
  ikev2-ikesa retransmission-timeout 1000
  ikev2-ikesa transform-set list ikesa-UP-1
  ikev2-ikesa rekey
  keepalive interval 4 timeout 1 num-retry 4
  control-dont-fragment clear-bit
  payload foo-sa0 match ipv4
  ipsec transform-set list A-UP-1
  lifetime 300
  rekey keepalive
#exit
peer 192.1.1.1
ikev2-ikesa policy error-notification
#exit

```

## Sx Configuration

The following is an example of Sx configuration in CP.

```

sx-service SX-1
  instance-type controlplane
  sxa max-retransmissions 4
  sxa retransmission-timeout-ms 5000
  sxb max-retransmissions 4
  sxb retransmission-timeout-ms 5000
  sxab max-retransmissions 4
  sxab retransmission-timeout-ms 5000
  n4 max-retransmissions 4
  n4 retransmission-timeout-ms 5000
  sx-protocol heartbeat interval 10
  sx-protocol heartbeat retransmission-timeout 5
  sx-protocol heartbeat max-retransmissions 4
  sx-protocol compression
  sx-protocol supported-features load-control
  sx-protocol supported-features overload-control
exit
end

```

## Example Router Configurations

### Static Routes for Interface

The following is an example configuration of static route for interface.

```

ip route 209.165.200.224/27 Vlan1111 209.165.200.225
ip route 209.165.200.224/27 Vlan1111 209.165.200.226
ip route 209.165.200.224/27 Vlan1111 209.165.200.227
ip route 209.165.200.224/27 Vlan1111 209.165.200.228
ip route 209.165.200.224/27 Vlan1111 209.165.200.229
ip route 209.165.200.224/27 Vlan1111 209.165.200.230
ip route 209.165.200.224/27 Vlan1111 209.165.200.231
ip route 209.165.200.224/27 Vlan1111 209.165.200.232
ip route 209.165.200.224/27 Vlan1111 209.165.200.233
ip route 209.165.200.224/27 Vlan1111 209.165.200.234

```

### Static Routes for Singlehop BFD

The following is an example configuration of static route for singlehop BFD.

```

ip route static bfd Vlan1111 209.165.200.225
ip route static bfd Vlan1111 209.165.200.226
ip route static bfd Vlan1111 209.165.200.227
ip route static bfd Vlan1111 209.165.200.228
ip route static bfd Vlan1111 209.165.200.229
ip route static bfd Vlan1111 209.165.200.230
ip route static bfd Vlan1111 209.165.200.231
ip route static bfd Vlan1111 209.165.200.232
ip route static bfd Vlan1111 209.165.200.233
ip route static bfd Vlan1111 209.165.200.234

```

## Interface for Singlehop BFD

The following is an example configuration of interface for singlehop BFD.

```

interface Vlan1111
 no shutdown
 bandwidth 10000000
 bfd interval 999 min_rx 999 multiplier 3
 no bfd echo
 ip address 209.165.200.224/27
 ipv6 address 1111:222::1/112

```

## BGP Configuration

The following is an example of BGP configuration with recommended timers.

```

router bgp 1000
 router-id 209.165.200.226
 timers bgp 30 90
 timers bestpath-limit 300
 timers prefix-peer-timeout 30
 timers prefix-peer-wait 90
 graceful-restart
 graceful-restart restart-time 120
 graceful-restart stalepath-time 300

```

## Example Configurations in UP

### IPSec ACL Configuration

The following is an example of IPSec ACL configuration in UP.

```

ip access-list CP-1
 permit udp host 209.165.200.225 host 209.165.200.226
 #exit

```

### IPSec Transform Set Configuration

The following is an example of IPSec Transform Set configuration in UP.

```

ipsec transform-set A-CP-1
 encryption aes-cbc-256
 hmac sha2-256-128
 group 14

ikev2-ikesa transform-set ikesa-CP-1
 encryption aes-cbc-256
 group 14
 hmac sha2-256-128
 lifetime 28800
 prf sha2-256

```

## IPSec Crypto Map Configuration

The following is an example of IPSec Crypto Map configuration in UP.

```
crypto map CP-1 ikev2-ipv4
  match address CP-1
  authentication local pre-shared-key encrypted key secretkey
  authentication remote pre-shared-key encrypted key secretkey
  ikev2-ikesa max-retransmission 3
  ikev2-ikesa retransmission-timeout 1000
  ikev2-ikesa transform-set list ikesa-CP-1
  ikev2-ikesa rekey
  keepalive interval 5 timeout 2 num-retry 4
  control-dont-fragment clear-bit
  payload foo-sa0 match ipv4
    ipsec transform-set list A-CP-1
  #exit
peer 209.165.200.230
ikev2-ikesa policy error-notification
#exit
```

## Sx Configuration

The following is an example of Sx configuration in UP.

```
sx-service SX-1
  instance-type userplane
  sxa max-retransmissions 4
  sxa retransmission-timeout-ms 5000
  sxb max-retransmissions 4
  sxb retransmission-timeout-ms 5000
  sxab max-retransmissions 4
  sxab retransmission-timeout-ms 5000
  n4 max-retransmissions 4
  n4 retransmission-timeout-ms 5000
  sx-protocol heartbeat interval 10
  sx-protocol heartbeat retransmission-timeout 5
  sx-protocol heartbeat max-retransmissions 4
  sx-protocol compression
exit
```

## Example SRP Configurations

### IPSec ACL Configuration

The following is an example of IPSec ACL configuration for SRP.

```
ip access-list SRP
  permit tcp host 209.165.200.227 host 209.165.200.228
#exit
```

### SRP Configuration

The following is an example of SRP configuration.

```
configure
  context srp
    bfd-protocol
      bfd multihop-peer 209.165.200.225 interval 999 min_rx 999 multiplier 3
    #exit
  context srp
    service-redundancy-protocol
      chassis-mode primary
```

```
hello-interval 3
dead-interval 15
monitor bfd context srp 209.165.200.226 chassis-to-chassis
monitor bgp context gi-pgw 209.165.200.245
monitor bgp context gi-pgw 3333:888::1
