# **Revision History**

Note

Revision history details are not provided for features introduced before release 21.24.

Revision Details	Release
First introduced	Pre 21.24

# **Feature Descriptions**

QoS Group of Ruledefs is also called as QGR or SGQ. This feature enables fair usage policing for the subscriber.

## **How It Works**

The following configuration primarily does Flow-Status and Bandwidth Limiting in hierarchical manner, first doing at matched Charging-Action and then at QoS-Group Level.

```
conf
active-charging service acs
  qos-group-of-ruledefs QGR1
     add-group-of-ruledef group
     add-ruledef http
     #exit
rulebase cisco
action priority 2 ruledef http charging-action standard
action priority 5 ruledef catchall charging-action standard
```

```
route priority 1 ruledef http-rule analyzer http end
```

### QoS Group QGR1 received over PCRF.

```
qos-group-rule-install
qgr-name QGR2
qgr-mon-key 1
qgr-flow-status 3
qgr-precedence 1
qgr-eqos-information
qgr-eqos-mbr 1000 2000
qgr-eqos-mbr-burst-size 1000 2000
qgr-eqos-mbr-limit-conform-action 1 -1 1 -1
qgr-eqos-mbr-limit-exceed-action 2 7 2 8
```

## **Data Path Enforcement**

- 1. Packet matches ruledef 'http'.
- **2.** QGR match is carried out to check if there is a QGR with the matched ruledef/group. Highest Priority QGR is returned. The ruledef/group can be static or predefined.
- **3.** If QGR matches, then Flow-Action Enforcement which is first done at Charging-Action Level and then at QGR Level assuming Charging-Action has allowed the packet. If the packet is dropped, then QGR Level Flow Action Enforcement is skipped.
- **4.** If Flow-Action at QGR allows the packet, then QER Limiting is enforced on a packet. If it is dropped at QGR, QER Limiting is skipped.
- **5.** Likewise, QER Limiting is done stepwise, first at Charging-Action Level and then at the QGR subject to packet is allowed at Charging-Action.

## **Static Configuration Push to UPlane**

- Static configuration pushed from CP to UP via the PFD mechanism in similar to ECS elements ruledef/charging-action/group-of-ruledefs.
- Show CLIs 'show user-plane-service qos-group-of-ruledefs all/name' displays the static configuration on UPlane.

## **QGR Params Push to UPlane**

QGR is pushed along with Session Establishment and Modification Request.

QGR Name and Precedence is sent in a private IE. Flow-action, bandwidth parameters, and monitoring-key will create a new FAR, new QER, and new URR respectively.

Any changes to QGR dynamic parameters triggers an update to FAR/QER/URR.

This is sent in Session Establishment or Modification Request.

## **Private IE**

```
Qos-Group-Of-Ruledef:
Name:
Operation: (0 - Add 1 - Modify 2 - Delete)
```

Precedence:

FAR ID:

URR ID:

QER ID:

#### Table 1: FAR Format

FAR ID	Unique ID
Extended Apply Action	Private IE to include Flow-Action Allow as well Discard, Uplink, Discard Downlink, Terminate Flow.

#### Table 2: QER Format

QER ID	Unique ID
Maximum Bitrate	MBR of QGR in Kbps:
	UL MBR:
	DL MBR:
Burst Size	Private IE to include the Burst Size:
	UL Burst:
	DL Burst:
Conform Action	Private IE to configure the conform action:
	Uplink Action:
	Uplink ToS:
	Downlink Action:
	Downlink ToS:
Exceed Action	Private IE to configure the exceed action:
	Uplink Action:
	Uplink ToS:
	Downlink Action:
	Downlink ToS:

Display the FAR, PDR, QER, and URR in 'show subscribers user-plane-only callid <> far|qer full all'.

## **Processing of QGR on UPlane**

- On Receiving a IE 'Qos-Group-Of-Ruledef', search for the QGR in static configuration. For each ruledef/group-of-ruledef in QGR, look up for its corresponding PDR and update the FAR/QER list with the received QGR FAR/URR/QER IDs.
- For each ruledef/group-of-ruledef PDR on UPlane, associate high priority QGR's FAR-id, QER-id.

• Maintain QGR map at both Control and UPlane, it consists of QGR name, precedence, QER-ID, and FAR-ID. Use QGR map for recovery and lookup whenever required.

## **QGR Hit in Data Path**

- For a packet matching rule PDR, search for the highest priority QGR FAR, and QER and enforce the parameters.
- Enforce flow-status and flow-rate as expected.
- · QGR matching for Offloaded Flows are handled.
- QGR hit statistics are incremented.

## Limitations

The QoS Group of Ruledefs support feature has the following limitations:

- URR creation and enforcement is not supported.
- Inclusion of dynamic-rules in static QGR definition is not supported.
- Flow-Status Redirect and Kill Flow are not supported.
- QoS Group Conform action as Drop and Exceed action as ALLOW or MARK\_DSCP are not supported.
- CP can communicate maximum 20 QGRs received over PCRF to UP.

# **Monitoring and Troubleshooting**

This section provides information about CLI commands available for monitoring and troubleshooting the feature.

## **Show Commands and Outputs**

This section provides information about show commands and their outputs in support of this feature.

### show subscribers user-plane-only full all

The output of this show command has been enhanced to include the following fields introduced in support of this feature.

- Total QoS-Group Active
- QoS-Group Statistics
  - QGR Name
  - Pkts-Down
  - Bytes-Down

- Pkts-Up
- Bytes-Up
- Hits
- · Match-Bypassed
- FP-Down(Pkts/Bytes)
- FP-Up(Pkts/Bytes)

## show user-plane-service qos-group-of-ruledefs all name

The output of this show command has been enhanced to include the following fields introduced in support of this feature.

## **QGR-INFO-LIST**

- Value
- Number of QGRs
- QGR INFO
  - NAME
  - PRECEDENCE
  - OPERATION
  - FAR ID
  - QER ID
- QGR INFO
  - NAME
  - PRECEDENCE
  - OPERATION
  - FAR ID
  - QER ID

## show subscribers user-plane-only callid 00004e21 qos-group all

The output of this show command has been enhanced to include the following fields introduced in support of this feature.

```
Callid: 00004e21

Interface Type: Sxb

QGR-Name: Priority: FAR-ID: QER-ID: URR-ID:

------

Total Number of QGRs found:
```

## show subscribers user-plane-only callid 00004e21 far full all

The output of this show command has been enhanced to include the following fields introduced in support of this feature.

- · Associated with QGR
  - Extended Apply Action

### show subscribers user-plane-only callid 00004e21 qer full all

The output of this show command has been enhanced to include the following fields introduced in support of this feature.

- UL Burst
- UL Conform Action
  - UL DSCP Value
- UL Exceed Action
  - UL DSCP Value
- DL Burst
- DL Conform Action
  - DL DSCP Value
- DL Exceed Action
  - DL DSCP Value

### show subscribers user-plane-only callid 00004e21 gos-group statistics all name

This show command and its output is introduced to support of this feature.

- Flow-Status Statistics
  - Total Uplink Packets
  - Total Uplink Bytes
  - · Uplink Packets Redirected
  - Uplink Bytes Redirected
  - Uplink Packets Dropped
  - Uplink Bytes Dropped
