

Prioritise. Investigate. Remediate. Faster.

Cisco Breach Protection Suite

Simplify security operations and empower your security team to accelerate detection and response, regardless of vendor or vector.

Security teams grapple with complexity like never before. They face sophisticated adversaries who rely on the lack of integration across the security stack to exploit gaps and avoid detection. Cisco Breach Protection Suite provides an integrated approach to security that empowers your teams to stop attackers fast, before the damage is done.

Take the attack to the attackers

In the hybrid multi-vector, multi-vendor reality, a comprehensive and robust detection and response solution is essential. Cisco Breach Protection Suite, designed by security practitioners for security practitioners, unifies threat detection, investigation, mitigation and hunting solutions by integrating the entire Cisco security portfolio and select third-party tools across endpoints, email, network and cloud.

Backed by actionable threat intelligence and AI-driven enrichment, your team can now detect, prioritise and mitigate threats across their entire environment with speed, efficiency and confidence.

What it delivers

- **Better efficacy:** Stops threats like ransomware by using high-fidelity telemetry and pairing human intuition with AI
- **Better economics:** Elevates Tier 1 SOC analysts to Tier 2 performance with response guidance and automation
- **Better experiences:** Reduces time to investigate and recover with clear prioritisation and streamlined investigations

Tiers to match your business needs

Breach Protection Essentials

- Cisco XDR
- Secure Email Threat Defence
- Secure Endpoint

Breach Protection Advantage

Everything in Essentials, plus:

- Cisco XDR
- Secure Endpoint
- Secure Network Analytics

Breach Protection Premier*

Everything in Advantage, plus:

- Cisco Managed Extended Detection and Response (MXDR)
- Cisco Talos Incident Response
- Cisco Technical Security Assessments

* Eligibility of proactive services depends on number of Security Content Users (CUs)

Why Cisco? Why suites?

- Our cloud-based **security platform** leverages AI and cross-domain telemetry to deliver intelligent, integrated protection across your entire environment.
- Our security **tools and services** are designed from the ground up to provide world-class protection without imposing burdens on IT or friction on your users.
- Our **security suites** bring together the right tools, in the right combinations, to deliver the best protection, at the best value, for your evolving business needs.

Why managed services?

For organisations that don't have the people to manage or don't want to build a security operations team, Breach Premier delivers turnkey SOC operations with managed XDR (MXDR) services delivered by an elite team of security experts.

Whether you are looking for round-the-clock support or to extend your team, Cisco can help you operate with confidence, future-proof your security and realise faster time to value.
