DSL: Protocolo punto a punto sobre la guía de configuración de los Ethernetes (PPPoE) en ASR920

Contenido

Introducción

Este documento describe el procedimiento para configurar el protocolo punto a punto sobre los Ethernetes (PPPoE) en el router del servicio de la agregación de Cisco ASR 920 que actúa como cliente.

Prerrequisitos

Requisitos

Cisco recomienda que usted tiene conocimiento de la Conectividad de punta a punta del Layer 1.

Componentes Utilizados

La información en este documento se basa en el hardware de Cisco ASR 920.

La información en este documento fue creada de los dispositivos en un ambiente de laboratorio específico, todos los dispositivos usados en este documento comenzado con una configuración del cleared(default).

> Nota: Si su red está viva, asegúrese de que usted entienda el impacto potencial del comando any.

Configurar

> Nota: Use la Command Lookup Tool (clientes registrados solamente) para obtener más información sobre los comandos usados en esta sección.

La configuración en el Routers es de a de nuevo a la configuración posterior (cliente y servidor).

Configuración del Cliente

Es específica a la plataforma ASR 920.

```
interface GigabitEthernet0/0/1
 no ip address
 no ip redirects
 no ip proxy-arp
 ip tcp adjust-mss 1452
 speed 1000
 no negotiation auto
 cdp enable
 ip virtual-reassembly
 service instance 10 ethernet
 encapsulation untagged etype pppoe-all
 bridge-domain 10
!
interface Dialer1
 ip address negotiated
 encapsulation ppp
 dialer pool 1
 dialer-group 1
 ppp authentication pap chap callin
 ppp chap hostname cisco
 ppp chap password 0 cisco123
 ppp pap sent-username cisco password 0 cisco123
end
!
interface BDI10
 no ip address
 pppoe enable group global
 pppoe-client dial-pool-number 1
!
ip route 0.0.0.0 0.0.0.0 Dialer1
```

Configuración del servidor

Éste sigue siendo lo mismo en los escenarios Allto, con independencia de la plataforma usada en el lado del cliente.

```
username cisco password 0 cisco123
!
bba-group pppoe global
 virtual-template 1
!
```

```
interface GigabitEthernet0/0
 ip address 192.168.1.1 255.255.255.0
 ip rip advertise 4
 load-interval 30
 duplex auto
 speed auto
 pppoe enable group global
!
interface Virtual-Template1
 mtu 1492
 ip unnumbered GigabitEthernet0/0
 peer default ip address pool PPPoE_Pool
 ppp authentication pap chap
!
ip local pool PPPoE_Pool 10.1.1.1 10.1.1.100
```

Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

Estos debugs se habilitan en ambos cliente y servidor:

- Debug ppp negotiation
- Debug ppp authentication
- Debug ppp error
- Debug dialer

Registros del cliente:

Troubleshooting

En esta sección encontrará información que puede utilizar para solucionar problemas de configuración.

Siga el estándar

> Nota: Si la interfaz BDI no se configura y la configuración de Cliente de PPPoE se aplica en la interfaz de Ethernet Gigabite, usted verá que la sesión PPPoE no consigue establecida y visualiza este mensaje de error.

```
 padi timer expired
Sending PADI: Interface = GigabitEthernet0/0/1
```
