Configurar el Cisco Secure PIX Firewall 6.0 y a los Clientes Cisco VPN que usan el IPSec

Contenido

Introducción

Las versiones 6.0 y posteriores de Cisco Secure PIX Firewall Software soportan conexiones de Cisco VPN Client 3.x y 4.x. Esta configuración de ejemplo muestra dos versiones diferentes de los Clientes VPN que se conectan y cifran el tráfico con el PIX como el punto final del túnel. En esta configuración, se configura un conjunto de direcciones para asignarlo a Seguridad IP (IPSec).

prerrequisitos

Requisitos

Esta configuración de muestra asume que el PIX actúa ya con las estáticas apropiadas, los conductos, o las Listas de acceso. Este documento no se piensa para ilustrar estos conceptos básicos, pero para mostrar la Conectividad al PIX de un Cliente Cisco VPN.

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Software PIX versión 6.2(1)**Nota:** Esta configuración fue probada en el software PIX versión 6.2(1), pero debe trabajar en las versiones anteriores de nuevo a 6.0(1) así como versiones

posteriores.
- Cliente VPN de Cisco versión 3.6 Rel**Nota:** Esta configuración fue probada en el Rel del cliente VPN v4.0, pero debe trabajar en las versiones anteriores de nuevo al 3.0 y hasta la versión actual.

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

Convenciones

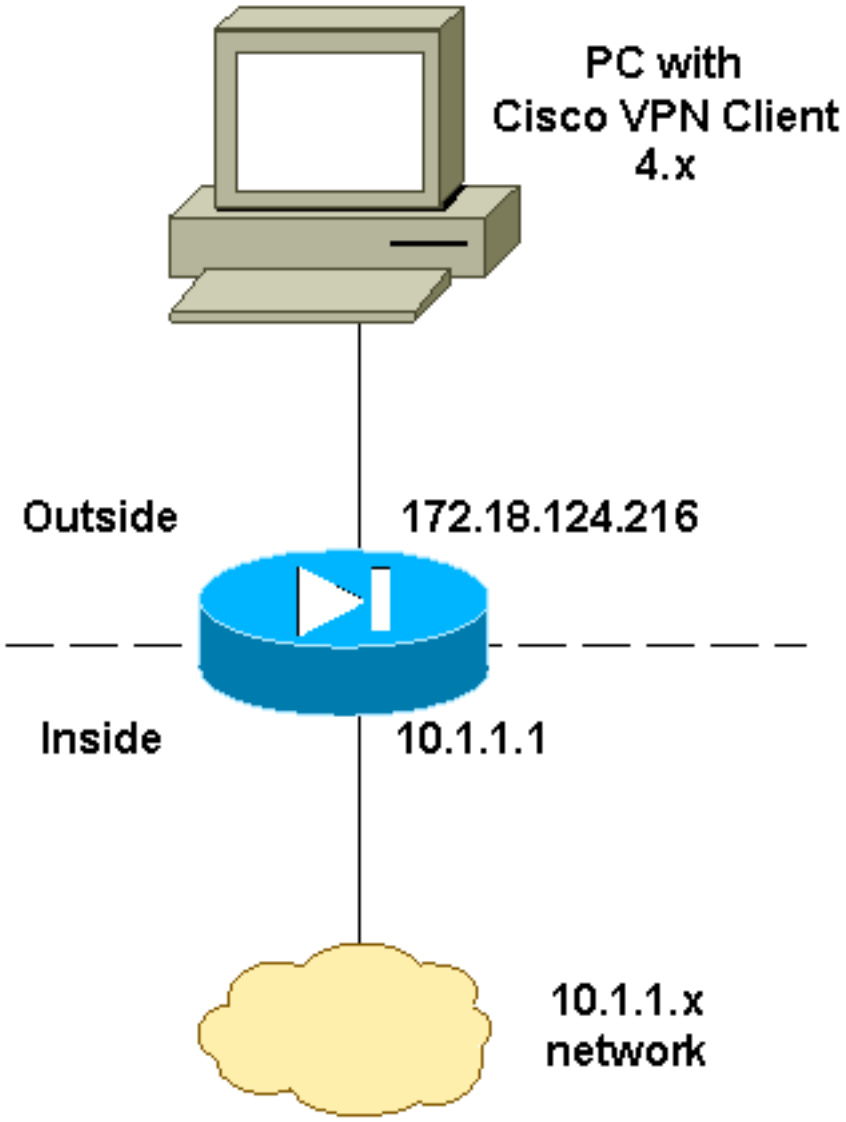
Consulte Convenciones de Consejos TécnicosCisco para obtener más información sobre las convenciones del documento.

Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

Diagrama de la red

En este documento, se utiliza esta configuración de red:



Configure el PIX

Nota: Use la herramienta Command Lookup Tool (clientes registrados solamente) para encontrar más información sobre los comandos usados en este documento.

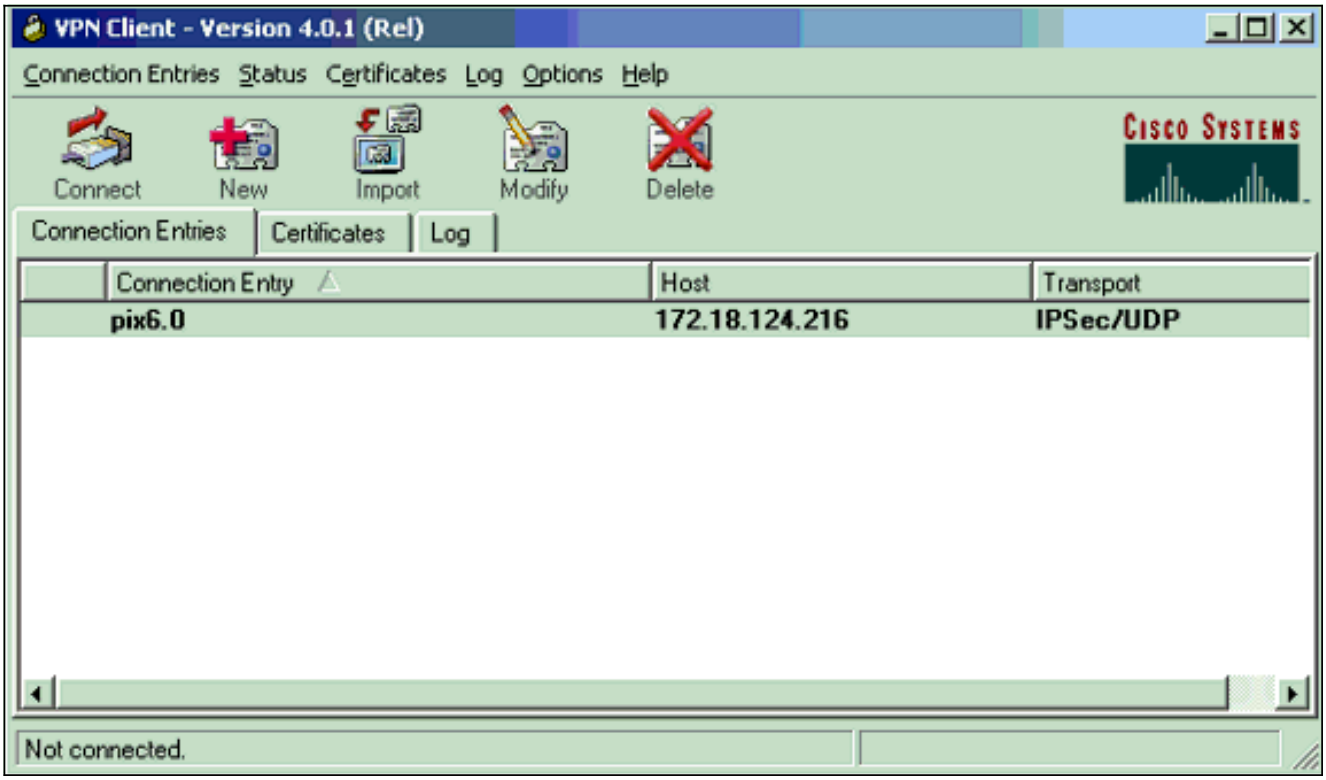
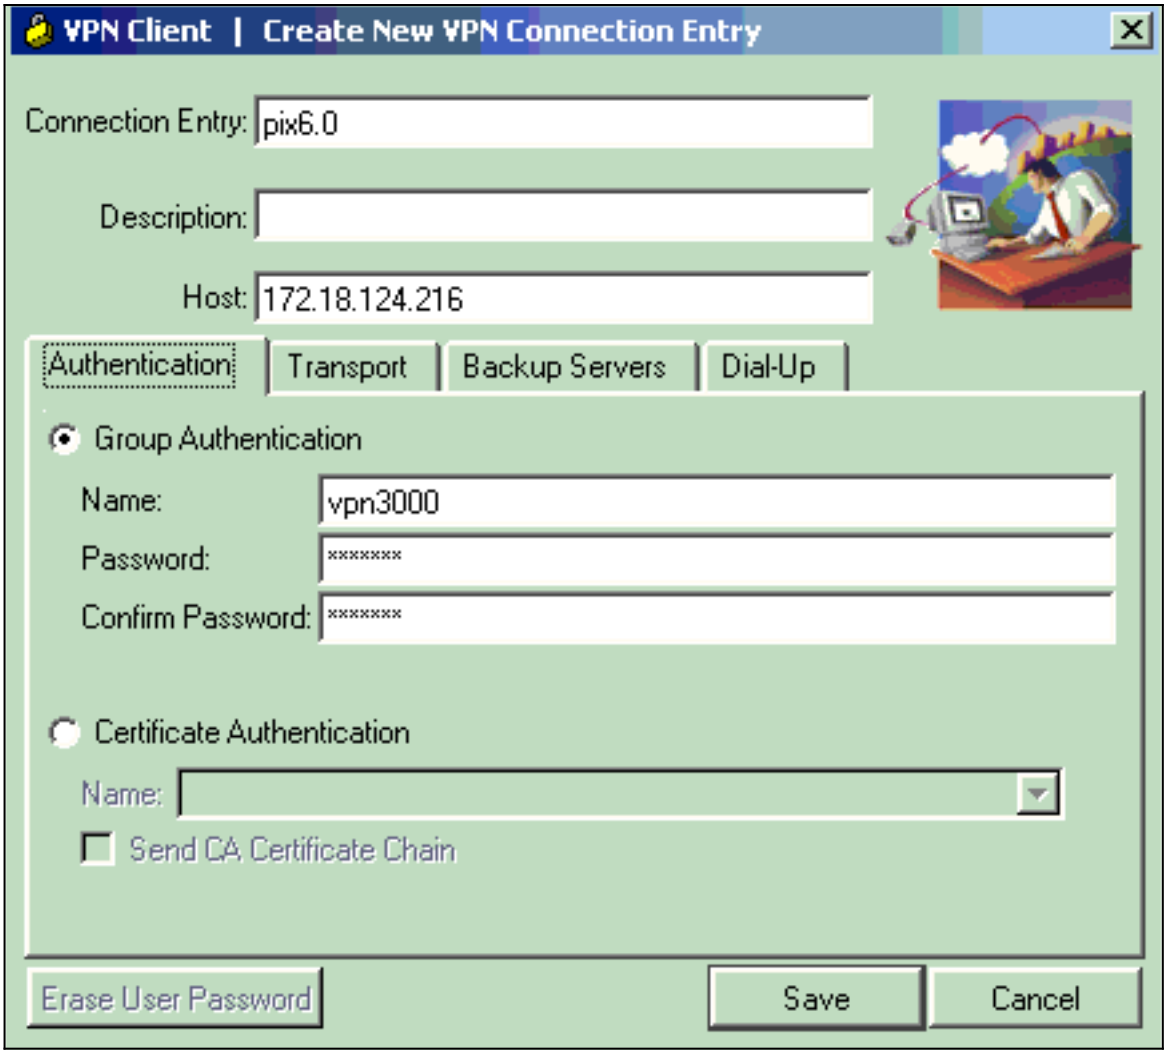
Configure al Cliente Cisco VPN

Complete estos pasos para crear una nueva conexión usando el cliente VPN.

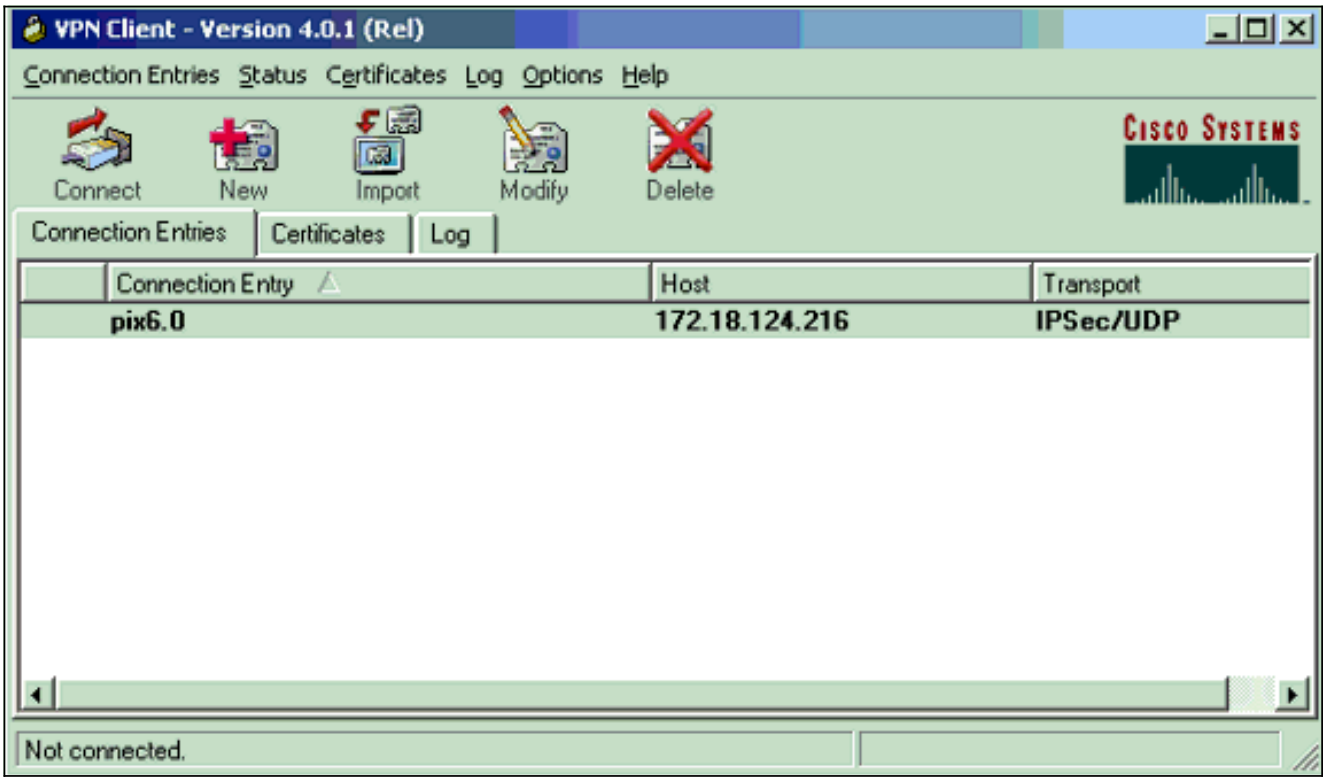
1. Inicie el cliente VPN y luego haga clic en New (Nuevo) para crear una nueva conexión.



2. Ingrese la información de configuración para la nueva conexión.En Entrada de conexión el campo, asigne un nombre a su entrada.En el campo del host, ingrese el IP Address de la interfaz pública del PIX.Elija la lengueta de la **autenticación**, y después ingrese el grupo y la contraseña (dos veces - para la confirmación).Cuando usted ha acabado, haga clic la **salvaguardia**.



3. Haga clic en Connect (Conectar) para conectar con el PIX.



Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

La herramienta Output Interpreter Tool (clientes registrados solamente) (OIT) soporta ciertos comandos show. Utilice la OIT para ver un análisis del resultado del comando show.

- **muestre isakmp crypto sa** — Vea todas las asociaciones de seguridad actuales del Internet Key Exchange (IKE) (SA) en un par.
- **muestre IPSec crypto sa** — Vea las configuraciones usadas por los SA actuales.

Troubleshooting

Use esta sección para resolver problemas de configuración.

Comandos para resolución de problemas

Nota: Consulte Información Importante sobre Comandos de Debug antes de usar un **comando debug**.

- **IPSec del debug crypto** — Utilice para ver los IPSec Negotiations de la fase 2.
- **isakmp del debug crypto** — Utilice para ver negociaciones ISAKMP de la fase 1.
- debug crypto engine — muestra el tráfico codificado.

Ejemplo de resultado del comando debug

Esto es una muestra de un debug correcta generado con el cliente del Cisco VPN 3.0.x:

```
goss-d3-pix515b#debug crypto isakmp
goss-d3-pix515b#debug crypto ipsec
goss-d3-pix515b#debug crypto engine
