Introducción

Las configuraciones de seguridad IP (IPsec) normales no pueden transferir protocolos de ruteo como EIGRP (Enhanced Interior Gateway Routing Protocol) y OSPF (Open Shortest Path First), o tráfico que no sea IP como IPX (Internetwork Packet Exchange) y AppleTalk. Este documento ilustra cómo rutear entre diversas redes que utilicen un Routing Protocol y el tráfico no IP con el IPSec. Este ejemplo utiliza el Generic Routing Encapsulation (GRE) para lograr la encaminamiento entre las diversas redes.

Refiera al PIX/ASA 7.x y posterior: VPN/IPsec con el ejemplo de la configuración de OSPF para más información sobre cómo configurar para un VPN/IPsec con el Open Shortest Path First (OSPF) sin un túnel GRE en la versión de software 7.x del dispositivo de seguridad del Cisco PIX o el dispositivo de seguridad adaptante de Cisco (ASA).

Refiera a configurar el hub and spoke del router a router del IPSec con la comunicación entre el spokes para la información sobre cómo configurar un diseño del IPSec del hub and spoke entre tres Routers.

Refiera a configurar el IPSEC de router a router (claves previamente compartidas) en el túnel GRE con el escudo de protección IOS y el NAT para la información sobre cómo configurar la configuración de escudo de protección básica del ® del Cisco IOS en un túnel GRE con el Network Address Translation (NAT).

prerrequisitos

Requisitos

Asegúrese de cumplir estos requisitos antes de intentar esta configuración:

- Aseegurese que el túnel funciona antes de que usted aplique las correspondencias de criptografía.
- Refiera a ajustar el IP MTU, TCP MSS y PMTUD en los sistemas de Windows y de Sun según la información sobre los problemas posibles de la Unidad máxima de transmisión (MTU) (MTU).

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Cisco 3600 que funciona con el Cisco IOS Software Release 12.4(8)
- Cisco 2600 que funciona con el Cisco IOS Software Release 12.4(8)
- Software Release 6.3(5) del firewall PIX (león)
- Software Release 6.3(5) del firewall PIX (tigre)

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

Convenciones

Consulte Convenciones de Consejos TécnicosCisco para obtener más información sobre las convenciones del documento.

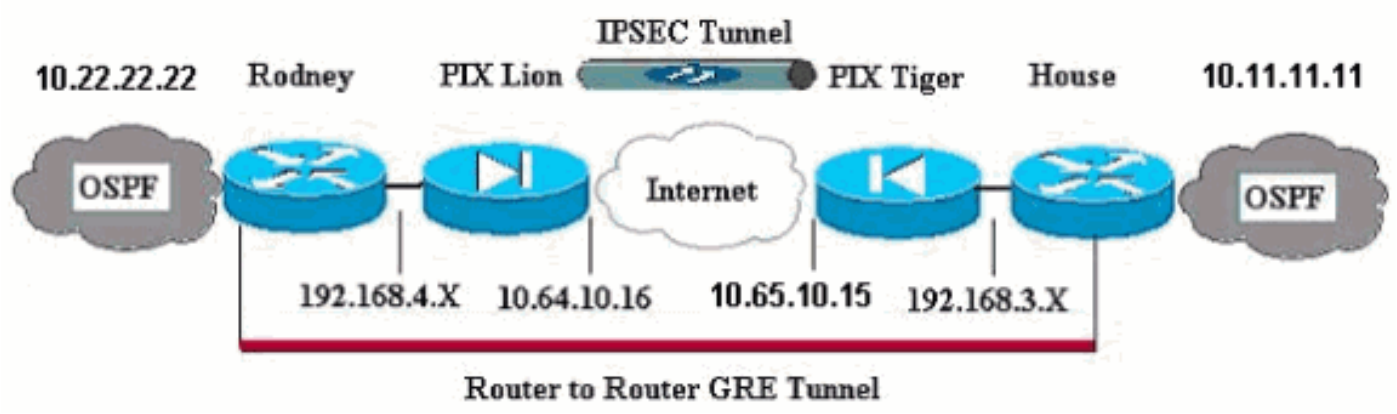
Configurar

En esta sección, le presentan con la información usada para configurar las características descritas en este documento.

Note: Use la herramienta Command Lookup Tool (clientes registrados solamente) para encontrar más información sobre los comandos usados en este documento.

Diagrama de la red

En este documento, se utiliza esta configuración de red:



Note: Los esquemas de direccionamiento IP usados en esta configuración no son legalmente enrutables en Internet. Éstos son los direccionamientos del RFC 1918 que se han utilizado en un ambiente de laboratorio.

Note: Crypto no apoya al Cisco 7600 Series Router. Usted puede tener que instalar el módulo VPN para que esto trabaje.

Configuraciones

En este documento, se utilizan estas configuraciones:

- PIX Lion
- PIX Tiger
- Router Rodney
- Base del router

Verificación

Actualmente, no hay un procedimiento de verificación disponible para esta configuración.

Troubleshooting

En esta sección encontrará información que puede utilizar para solucionar problemas de configuración.

Refiera a resolver problemas el PIX para pasar el tráfico de datos en un túnel de IPSec establecido para más información sobre resolver problemas un PIX y un túnel IPsec.

Comandos para resolución de problemas

La herramienta Output Interpreter Tool (clientes registrados solamente) (OIT) soporta ciertos comandos show. Utilice la OIT para ver un análisis del resultado del comando show.

Note: Consulte Información Importante sobre Comandos de Debug antes de usar un **comando debug**.

Debug correcta del IPSec de PIX

- show crypto isakmp sa - Muestra la Asociación de seguridad (SA) del Protocolo de administración de asociaciones de seguridad de Internet (ISAKMP) construida entre los pares.

```
Lion#show crypto isakmp sa
Total : 1
Embryonic : 0
dst src state pending created
10.65.10.15 10.64.10.16 QM_IDLE 0 1

Tiger#show crypto isakmp sa
Total SAs : 1
Embryonic : 0
dst src state pending created
10.65.10.15 10.64.10.16 QM_IDLE 0 1
```

- **show crypto engine connection active** — Muestra cada fase 2 SA construida y la cantidad de tráfico enviada.

```
Lion#show crypto engine connection active
Crypto Engine Connection Map:
```

```
size = 8, free = 6, used = 2, active = 2

Tiger#show crypto engine connection active
Crypto Engine Connection Map:
size = 8, free = 6, used = 2, active = 2
```

- **debug de la demostración** — Visualiza la salida de los debugs.

```
Lion#show debug
debug crypto ipsec
debug crypto isakmp
debug crypto engine
