## [Introducción](#)

Este documento describe cómo configurar al Routers de Cisco IOS® para apoyar las Autoridades de certificación de múltiple identidad (CA). En algunas situaciones, tales como un proyecto conjunto entre dos compañías o dos unidades comerciales, el Routers en cada (que alistan a diversos CA que no tengan ninguna relación de confianza) necesidad lateral de comunicar usando el IPsec VPN. El router de borde pudo necesitar tener dos conjuntos de los certificados de identidad a comunicar con el Routers en ambos dominios de CA. Este documento describe explica cómo alistar a un router Cisco a diversos servidores de CA para conseguir los certificados de identidad múltiples; la verificación se proporciona usando un ejemplo simple.

## [prerrequisitos](#)

### [Requisitos](#)

La característica se introduce en el Software Release 12.2(2)T de Cisco IOS®. Las versiones anteriores del software no podrán utilizar la configuración mostrada en este documento.

### [Componentes Utilizados](#)

La información que contiene este documento se basa en las siguientes versiones de software y

hardware.

- Cisco 7200 Router con el Cisco IOS Software Release 12.2(4)T1
- Microsoft CA server encendido Windows 2000 Server
- Confíe el servidor de CA en el servidor del Windows NT

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

## Convenciones

Para obtener más información sobre las convenciones del documento, consulte [Convenciones de Consejos Técnicos de Cisco](#).

## Diagrama de la red

En el diagrama mostrado abajo, el SJhub, el SJVPN, y el SJPKI son tres Cisco 7200 Router que conectan con la red de estructura básica. El SJhub es el router de eje de conexión, con los Certificados de la múltiple-identidad de los servidores de la confianza CA y de Microsoft CA que residen en la red de estructura básica. El SJVPN alista a CA de la confianza el servidor, y el SJPKI alista al Microsoft CA server.

## Configuración del router de Cisco IOS para obtener certificados múltiples

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Para obtener información adicional sobre los comandos que se utilizan en este documento, use la Command Lookup Tool (solo para clientes [registrados](#)).

**Nota:** Algo de la salida mostrada en el procedimiento abajo se ha envuelto a las líneas múltiples por consideraciones del espaciamento.

1. Genere las claves RSA en el router.  
`SJhub#configure terminal` Enter configuration commands, one per line. End with CNTL/Z. `SJhub(config)#ip domain-name sjtac.com` `SJhub(config)#crypto key generate rsa` The name for the keys will be: SJhub.sjtac.com Choose the size of the key modulus in the range of 360 to 2048 for your General Purpose Keys. Choosing a key modulus greater than 512 may take a few minutes. How many bits in the modulus [512]: Generating RSA keys ... [OK]
2. Defina el primer ca identity crypto en el router. El servidor usado aquí es un servidor de CA de la confianza.  
`SJhub(config)#crypto ca identity EntrustPKI` `SJhub(ca-identity)#enrollment url http://171.69.89.16` `SJhub(ca-identity)#enrollment mode ra` `SJhub(ca-identity)#query url ldap://171.69.89.16` `SJhub(ca-identity)#exit`
3. Consiga CA y los Certificados del registration authority (RA) y aliste al router a la confianza CA.  
`SJhub(config)#crypto ca authenticate EntrustPKI` Certificate has the following attributes: Fingerprint: 1FCDF2C8 2DEDA6AC 4819D4C4 B4CFF2F5 % Do you accept this certificate? [yes/no]: y `SJhub(config)#crypto ca enroll EntrustPKI` % % Start certificate enrollment .. % Create a challenge password. You will need to verbally provide this password to the CA Administrator in order to revoke your certificate. For security reasons

your password will not be saved in the configuration. Please make a note of it. Password: Re-enter password: % The subject name in the certificate will be: SJhub.sjtac.com % Include the router serial number in the subject name? [yes/no]: n % Include an IP address in the subject name? [yes/no]: n Request certificate from CA? [yes/no]: y % Certificate request sent to Certificate Authority % The certificate request fingerprint will be displayed. % The 'show crypto ca certificate' command will also show the fingerprint. SJhub(config)# Fingerprint: B530BB30 70D2C565 E6F20A88 BB86A75A

4. **Verifique los Certificados.** SJhub#**show crypto ca certificates** Certificate Status: Available Certificate Serial Number: 3B2FD63F Key Usage: General Purpose Issuer: OU = sjvpn O = cisco C = us Subject Name Contains: Name: SJhub.sjtac.com CRL Distribution Point: CN = CRL1, OU = sjvpn, O = cisco, C = us Validity Date: start date: 21:48:52 UTC Jan 9 2002 end date: 22:18:52 UTC Jan 9 2003 Associated Identity: EntrustPKI RA Signature Certificate Status: Available Certificate Serial Number: 3B2FD319 Key Usage: Signature Issuer: OU = sjvpn O = cisco C = us Subject: CN = First Officer OU = sjvpn O = cisco C = us CRL Distribution Point: CN = CRL1, OU = sjvpn, O = cisco, C = us Validity Date: start date: 22:03:31 UTC Jun 19 2001 end date: 22:33:31 UTC Jun 19 2004 Associated Identity: EntrustPKI RA KeyEncipher Certificate Status: Available Certificate Serial Number: 3B2FD318 Key Usage: Encryption Issuer: OU = sjvpn O = cisco C = us Subject: CN = First Officer OU = sjvpn O = cisco C = us CRL Distribution Point: CN = CRL1, OU = sjvpn, O = cisco, C = us Validity Date: start date: 22:03:31 UTC Jun 19 2001 end date: 22:33:31 UTC Jun 19 2004 Associated Identity: EntrustPKI CA Certificate Status: Available Certificate Serial Number: 3B2FD307 Key Usage: General Purpose Issuer: OU = sjvpn O = cisco C = us Subject: OU = sjvpn O = cisco C = us CRL Distribution Point: CN = CRL1, OU = sjvpn, O = cisco, C = us Validity Date: start date: 22:02:40 UTC Jun 19 2001 end date: 22:32:40 UTC Jun 19 2021 Associated Identity: EntrustPKI

5. **Defina el ca identity crypto de segundo CA en el router. Un Microsoft CA server se utiliza**

aquí. SJhub(config)#**crypto ca identity MicrosoftCA** SJhub(ca-identity)#**enrollment url http://171.69.89.182:80/certsrv/mscep/mscep.\$** SJhub(ca-identity)#**enrollment mode ra** SJhub(ca-identity)#**query url ldap://171.69.89.182** SJhub(ca-identity)#**exit**

6. **Consiga los Certificados de CA y RA del Microsoft CA server.** SJhub(config)#**crypto ca authenticate MicrosoftCA** Certificate has the following attributes: Fingerprint: 5FC47E85 9A2724A2 7242F172 BFB87F7E % Do you accept this certificate? [yes/no]: y

7. **Aliste al Microsoft CA server y consiga el certificado de identidad del**

**router.** SJhub(config)#**crypto ca enroll MicrosoftCA** % % Start certificate enrollment .. % Create a challenge password. You will need to verbally provide this password to the CA Administrator in order to revoke your certificate. For security reasons your password will not be saved in the configuration. Please make a note of it. Password: Re-enter password: % The subject name in the certificate will be: SJhub.sjtac.com % Include the router serial number in the subject name? [yes/no]: n % Include an IP address in the subject name? [yes/no]: n Request certificate from CA? [yes/no]: y % Certificate request sent to Certificate Authority % The certificate request fingerprint will be displayed. % The 'show crypto ca certificate' command will also show the fingerprint. SJhub(config)# Fingerprint: 4046052F 2D32A725 235D55E9 694DF3EA

8. **Verifique los Certificados. Usted debe ver dos conjuntos de los Certificados.** SJhub#**show**

## Verificación

Esta sección utiliza una configuración simple para verificar cómo los routers IOS manejan los certificados de identidad múltiples. El diagrama de la red antedicho muestra a tres 7200 Router que forman una topología radial. El router de eje de conexión (SJhub) tiene dos certificados de identidad — uno de un servidor de CA de la confianza y uno de un Microsoft CA server. El router radial (SJVPN) tiene el un certificado de identidad lo mismo confiar el servidor de CA, y el otro router radial (SJKPI) tiene un certificado de identidad del mismo Microsoft CA server. En este ejemplo, el router de eje de conexión simula la punta de conexión de dos compañías en un proyecto conjunto; con la ayuda del soporte de CA de la múltiple-identidad, el concentrador puede comunicar con cualquier lado aunque el spokes se alista a diversos CA.

## Ejemplos de Configuración

Las configuraciones de todo el Routers son mencionadas abajo como referencia.

## Troubleshooting

### Comandos para resolución de problemas

Usted puede utilizar algunos comandos debug IPsec-relacionados IOS de ver cómo la negociación del Internet Key Exchange (IKE) trabaja con los certificados de identidad múltiples.

La herramienta [Output Interpreter](#) (sólo para clientes [registrados](#)) permite utilizar algunos comandos “show” y ver un análisis del resultado de estos comandos.

**Nota:** [Antes de ejecutar un comando de depuración, consulte Información importante sobre comandos de depuración.](#)

- debug crypto isakmp — Muestra mensajes acerca de eventos IKE.
- debug crypto ipsec — Muestra eventos de IPsec.
- **debug crypto pki transaction** — Mensajes del debug de las visualizaciones para la traza de la interacción (Tipo de mensaje) entre CA y el router.
- **debug crypto pki message** — Mensajes del debug de las visualizaciones para los detalles de

la interacción (vaciado de mensaje) entre CA y el router.

## Certificados de un servidor Entrust CA

Los debugs siguientes fueron recogidos en el SJVPN y el SJhub. Típicamente, el SJVPN intenta iniciar el túnel IPsec al SJhub del router de eje de conexión. El SJhub envía un payload del CERT\_REQ para cada dominio de CA que soporta. Cada **payload del CERT\_REQ** contiene el Nombre distintivo (DN) del emisor de los Certificados. El SJVPN entonces intenta asociar el DN en el CERT\_REQ y enviar sus propios Certificados al SJhub.

En los ejemplos abajo, el router SJhub envía sus Certificados basados en el CERT\_REQ enviado por el router SJVPN. Los Certificados del servidor de CA de la confianza se utilizan.

- [Debugs recogidos en el SJVPN](#)
- [Debugs recogidos en el SJhub](#)
- [Listas de revocación de certificados \(CRL\) que oculta en el Routers](#)

## [Certificados de un servidor Microsoft CA Server](#)

Los debugs siguientes fueron recogidos en el SJPKI y el SJhub durante la negociación IKE. Después de que el SJPKI marque el primer payload del CERT\_REQ, encuentra ya los Certificados que corresponden con en su base de datos, así que no continúa mirando en el segundo payload del CERT\_REQ. En este caso, los Certificados del Microsoft CA server se utilizan para la autenticación IKE.

## [Resultado del comando show](#)

Usted puede utilizar el comando **show crypto ipsec sa** de verificar el ISAKMP y las asociaciones de seguridad IPSec en el Routers después de que los túneles se negocien con éxito. La salida de muestra se muestra abajo.

```
