## [Introducción](#)

Este documento ilustra la configuración del IPSec entre la característica de la función Easy VPN Remote de PIX del cliente de hardware y del Easy VPN Server disponible en versiones posteriores del software de Cisco IOS®. La característica Easy VPN Remote para PIX se presentó en PIX versión 6.2 y también se considera cliente de hardware/cliente EzVPN. Cuando el Easy VPN Remote se conecta a un dispositivo de cabecera, existe un mínimo de cinco asociaciones de seguridad (SA), que incluyen una asociación de Intercambio de claves de Internet (IKE) y cuatro de IPSec. Cuando Easy VPN Remote se conecta a la cabecera, negocia siempre dos SA de IPSec con la dirección IP de la interfaz exterior del PIX a cualquier dirección que haya detrás del servidor VPN. Esto se puede utilizar con fines de administración para conectarse a la interfaz exterior del PIX desde la red que hay detrás del router de Cisco IOS (mediante Secure Shell [SSH], Secure HTTP for PIX Device Manager [PDM] o Telnet). El SA se crea de forma predeterminada sin ninguna configuración, y los otros dos SA se crean para el tráfico de datos entre las redes que hay detrás del PIX y el router de Cisco IOS.

Refiera a PIX-a-[PIX 6.x: Ejemplo de configuración fácil VPN \(NEM\)](#) para más información sobre un escenario similar donde el PIX 506 6.x actúa como el Easy VPN Server.

Refiera al [PIX/ASA 7.x VPN fácil con un ASA 5500 como el servidor y el PIX 506E como el](#)

[ejemplo de configuración del cliente \(NEM\)](#) para más información sobre un escenario similar donde el PIX/ASA 7.x actúa como el Easy VPN Server.

Refiera al [PIX/ASA 7.x VPN fácil con un ASA 5500 como el servidor y Cisco 871 como el ejemplo de la configuración VNP remota sencilla](#) para más información sobre un escenario similar donde el Cisco 871 Router actúa como el Easy VPN Remote.

Refiera al [hardware cliente VPN en un dispositivo de seguridad de las 501/506 Series PIX con el ejemplo de configuración concentrador VPN 3000](#) para más información sobre un escenario similar donde el Cisco VPN 3000 Concentrator actúa como el Easy VPN Server.

## [prerrequisitos](#)

### [Requisitos](#)

No hay requisitos específicos para este documento.

### [Componentes Utilizados](#)

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Firewall PIX que funciona con la versión de software 6.3(5)**Nota:** La característica fácil del cliente VPN en el PIX fue introducida en la versión 6.2.
- Router IOS de las Cisco 7200 Series que funciona con la versión de software 12.4(4)T1**Nota:** La característica del Easy VPN Server fue introducida en la versión 12.2(8)T).

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

### [Convenciones](#)

Consulte [Convenciones de Consejos TécnicosCisco](#) para obtener más información sobre las convenciones del documento.

## [Configurar](#)

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Use la herramienta [Command Lookup Tool](#) ([clientes registrados solamente](#)) para encontrar más información sobre los comandos usados en este documento.

### [Diagrama de la red](#)

En este documento, se utiliza esta configuración de red:

## Configuraciones

En este documento, se utilizan estas configuraciones:

- [Router del Cisco IOS](#)
- [PIX](#)

### Router del Cisco IOS

## Verificación

### Comandos show de PIX y salida de ejemplo

Use esta sección para confirmar que su configuración funciona correctamente.

[La herramienta Output Interpreter Tool \(clientes registrados solamente\)](#) (OIT) soporta ciertos comandos show. Utilice la OIT para ver un análisis del resultado del comando show.

- comando `vpnclient enable`—Permite una conexión remota a Easy VPN. En NEM el túnel está activo aun cuando no existe tráfico interesante para ser intercambiado con el servidor de cabecera Easy VPN.

```
pix506(config)#vpnclient enable
```

- `show crypto isakmp policy` – Muestra los parámetros para cada política IKE.

```
pix506(config)#show crypto isakmp policy
```

```

Default protection suite
  encryption algorithm:  DES - Data Encryption Standard (56 bit keys).
  hash algorithm:        Secure Hash Standard
  authentication method: Rivest-Shamir-Adleman Signature
  Diffie-Hellman group:  #1 (768 bit)
  lifetime:              86400 seconds, no volume limit

```

Este ejemplo muestra la salida del comando `show crypto isakmp policy` después de que habiliten al hardware cliente.

```
pix506(config)#show crypto isakmp policy
```

```

Protection suite of priority 65001
  encryption algorithm:  DES - Data Encryption Standard (56 bit keys).

```

```

hash algorithm: Message Digest 5
authentication method: Pre-Shared Key with XAUTH
Diffie-Hellman group: #2 (1024 bit)
lifetime: 86400 seconds, no volume limit
Protection suite of priority 65002
encryption algorithm: DES - Data Encryption Standard (56 bit keys).
hash algorithm: Message Digest 5
authentication method: Pre-Shared Key
Diffie-Hellman group: #2 (1024 bit)
lifetime: 86400 seconds, no volume limit

```

- **el IPsec crypto de la demostración transforma** — Visualiza el IPsec actual transforma.

```
pix506(config)#show crypto ipsec transform
```

Este ejemplo muestra la salida del **comando show crypto ipsec transform** después de que habiliten al hardware cliente. Antes de que utilicen al **comando vpnclient enable**, había solamente un conjunto de protección predeterminada para el ISAKMP. Luego de ejecutar el comando, Easy VPN Remote crea automáticamente cuatro propuestas además del conjunto de protección predeterminada. Además, no hay IPsec transforma el conjunto antes de que utilicen al **comando enable**. El conjunto de transformaciones se crea de manera dinámica luego de la ejecución del comando.

```
pix506(config)#show crypto ipsec transform-set
```

```
Transform set _vpnc_tset_9: { esp-des esp-md5-hmac }
will negotiate = { Tunnel, },
```

```
Transform set _vpnc_tset_10: { esp-null esp-md5-hmac }
will negotiate = { Tunnel, },
```

```
Transform set _vpnc_tset_11: { esp-null esp-sha-hmac }
will negotiate = { Tunnel, },
```

- **show crypto isakmp sa** — Muestra todas las asociaciones actuales de seguridad (SA) IKE de un par.

```
pix506(config)#show crypto isakmp sa
```

```
Total      : 1
Embryonic  : 0
```

dst	src	state	pending	created
10.10.10.2	10.10.10.1	QM_IDLE	0	2

- **show vpnclient** – Muestra información de configuración del VPN Client o del dispositivo remoto Easy VPN.

```
pix506(config)#show vpnclient
```

```
LOCAL CONFIGURATION
vpnclient server 10.10.10.2
vpnclient mode network-extension-mode
vpnclient vpngroup hwclient password *****
vpnclient username cisco password *****
vpnclient enable
```

```

## Troubleshooting

Use esta sección para resolver problemas de configuración.

Si ha configurado el Remoto VPN Easy (PIX) y el Servidor VPN Easy (IOS) como se describe en este documento y todavía tiene problemas, recopile el resultado de la depuración del PIX y del IOS y el resultado del comando show para que el Centro de asistencia técnica de Cisco (TAC) lo analice. [Consulte también Solución de problemas de PIX para pasar el tráfico de datos en un túnel IPsec establecido o Solución de problemas de seguridad IP – Información y uso de los comandos de depuración.](#) Habilitar depuración de IPsec en el PIX.

## Comandos de depuración PIX y salida de ejemplo

### Comandos de depuración PIX

**Nota:** Consulte [Información Importante sobre Comandos de Debug](#) antes de usar un comando debug.

- debug crypto ipsec — Muestra los IPsec Negotiations de la Fase 2.
- debug crypto isakmp — Muestra las negociaciones ISAKMP para la fase 1.

### Salida de muestra PIX

```

## [Comandos de depuración del IOS y ejemplo de resultado](#)

### Comandos de depuración IOS

**Nota:** Consulte [Información Importante sobre Comandos de Debug](#) antes de usar un comando debug.

- debug crypto ipsec—Muestra eventos detallados de IPsec.
- debug crypto isakmp — Muestra mensajes acerca de eventos IKE.
- debug crypto engine - Muestra el tráfico cifrado.

### Salida de muestra del IOS

!--- As soon as the **vpnclient enable** command is issued on the PIX, !--- the IOS device receives an IKE negotiation request.
