## **Introducción**

Este documento proporciona a una configuración de muestra que le muestre cómo permitir al router validar las conexiones dinámicas de IPsec de un PIX. El router remoto realiza el Network Address Translation (NAT) si la red privada 10.2.1.x tiene acceso a Internet. El tráfico de 10.2.1.x a la red privada 10.1.1.x detrás del dispositivo de seguridad PIX se excluye del proceso NAT. El túnel de IPsec establece solamente si el tráfico (10.1.1.x) inicia la conexión del dispositivo de seguridad PIX con el router que tiene red remota (10.2.1.x). El PIX puede iniciar las conexiones al router, pero el router no puede iniciar las conexiones al PIX.

Esta configuración utiliza a un router de Cisco IOS® para crear los túneles dinámicos LAN-a-LAN de IPsec (L2L) con un dispositivo de seguridad que reciba los IP Addresses dinámicos en su interfaz pública (interfaz exterior). El Protocolo de configuración dinámica de host (DHCP) proporciona a un mecanismo para afectar un aparato los IP Addresses dinámicamente del proveedor de servicio. Esto permite que los IP Addresses sean reutilizados cuando los host los

necesitan no más.

Refiera a [configurar el IPsec dinámica a estática de PIX a router con NAT](#) para más información sobre un decorado donde el PIX 6.x valida las conexiones dinámicas de IPsec del router.

Refiérase Router--PIX a [IPSec dinámico a estático con el ejemplo de la configuración del NAT](#) para más información sobre un decorado donde el router valida las conexiones dinámicas de IPsec de un Firewall PIX que ejecute 6.x.

Refiera a [IPsec entre un router estático y un PIX/ASA dinámico 7.x IOS con el ejemplo de la configuración del NAT](#) para permitir al dispositivo de seguridad del PIX/ASA validar las conexiones dinámicas de IPsec del router del Cisco IOS.

Refiera al [PIX/ASA 7.x PIX--PIX a IPsec dinámico a estático con el ejemplo de la configuración del cliente NAT y VPN](#) para más información sobre el decorado donde el dispositivo de seguridad 7.x del PIX/ASA valida las conexiones dinámicas de IPsec de otro PIX 6.x.

## [\*\*prerrequisitos\*\*](#)

### [\*\*Requisitos\*\*](#)

Asegúrese de que los PIX y el router tengan conectividad a Internet para el establecimiento del túnel de IPsec antes de que usted intente esta configuración.

Este documento asume que usted ha asignado ya los IP Addresses en ambas las interfaces públicas y privadas y que usted puede hacer ping la dirección IP del dispositivo VPN remoto.

### [\*\*Componentes Utilizados\*\*](#)

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Cisco 3600 que funciona con el Cisco IOS Software Release 12.4
- Software Release 7.x y Posterior del dispositivo de seguridad de la serie PIX 515E

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

### [\*\*Productos relacionados\*\*](#)

La versión 7.x de las 5500 Series de Cisco ASA funciona con una versión de software similar de la versión de PIX 7.x. Las configuraciones en este documento son aplicables a ambas líneas de producto.

### [\*\*Convenciones\*\*](#)

Consulte [Convenciones de Consejos Técnicos de Cisco](#) para obtener más información sobre las convenciones sobre documentos.

## Antecedentes

En el PIX, los comandos access-list y nat 0 funcionan de manera conjunta. Cuando un usuario en la red de 10.1.1.0 va a la red de 10.2.1.0, la lista de acceso se utiliza para permitir que el tráfico de la red de 10.1.1.0 sea cifrado sin el NAT. En el router, utilizan a los **comandos access-list** de permitir que el tráfico de la red de 10.2.1.0 sea cifrado sin el NAT. Sin embargo, cuando van los mismos usuarios en cualquier parte (como Internet), los traducen a la dirección IP de la interfaz exterior con la traducción de la dirección de puerto (PALMADITA).

Éstos son los comandos configuration requeridos en el dispositivo de seguridad PIX para que el tráfico no ejecutarse a través de la PALMADITA sobre el túnel, y tráfico a Internet a ejecutarse a través del patente.

```
access-list nonat permit ip 10.1.1.0 255.255.255.0 10.2.2.0 255.255.255.0
nat (inside) 0 access-list nonat
nat (inside) 1 10.1.1.0 255.255.255.0 0 0
```

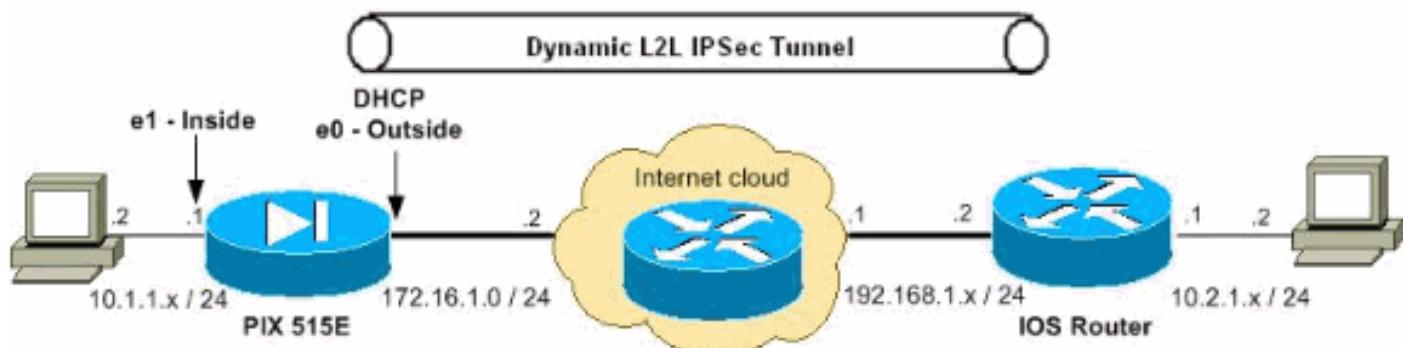

## Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Utilice la [herramienta de búsqueda de comandos](#) ([clientes registrados](#) solamente) para obtener más información sobre los comandos usados en esta sección.

### Diagrama de la red

En este documento, se utiliza esta configuración de red:

## Borre las asociaciones de seguridad (el SAs)

Utilice estos comandos en el modo del privilegio del PIX:

- **borre ipsec sa del [crypto]** — Suprime el IPSec activo SAs. La palabra clave crypto es opcional.
- **borre isakmp sa del [crypto]** — Suprime el IKE activo SAs. La palabra clave crypto es opcional.

## Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

[La herramienta Output Interpreter Tool \(clientes registrados solamente\)](#) (OIT) soporta ciertos comandos show. Utilice el OIT para ver un análisis de la **salida del comando show**.

- [Dispositivo de seguridad PIX - comandos show](#)
- [Comandos show del router remotos IOS](#)

## Dispositivo de seguridad PIX - comandos show

- **show crypto isakmp sa** — Muestra todas las IKE SAs actuales en un par.

```
pixfirewall#show crypto isakmp sa
