Ancla unificada del invitado de los reguladores del Wireless LAN del acceso con el ejemplo de configuración convergido del acceso

Contenido

Introducción

Esto documenta describe cómo configurar los reguladores del Wireless LAN de las 5508/5760 Series (WLCs) y el Catalyst 3850 Series Switch para el ancla del invitado del cliente de red inalámbrica en el nuevo despliegue de la movilidad puso donde el WLC de las 5508 Series actúa como el ancla de la movilidad y el Catalyst 3850 Series Switch actúa como regulador no nativo de la movilidad para los clientes. Además, el Catalyst 3850 Series Switch actúa como agente de la movilidad a un WLC de las 5760 Series que actúe como regulador de la movilidad de donde el Catalyst 3850 Series Switch adquiere la licencia del punto de acceso.

Prerequisites

Requisitos

Cisco recomienda que usted tiene conocimiento de estos temas antes de que usted intente esta configuración:

- ® GUI o CLI del Cisco IOS con el WLCs convergido de las 5760 y 3650 Series del acceso y el Catalyst 3850 Series Switch
- Acceso GUI y CLI con el WLC de las 5508 Series
- Configuración del Service Set Identifier (SSID)
- Autenticación Web

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Versión 3.3.3 ([NGWC] de Cisco 5760 del Wiring Closet de la última generación)
- Catalyst 3850 Series Switch
- Versión 7.6.120 del WLC de las Cisco 5508 Series
- Cisco 3602 Series AP ligeros
- Cisco Catalyst 3560 Series Switches

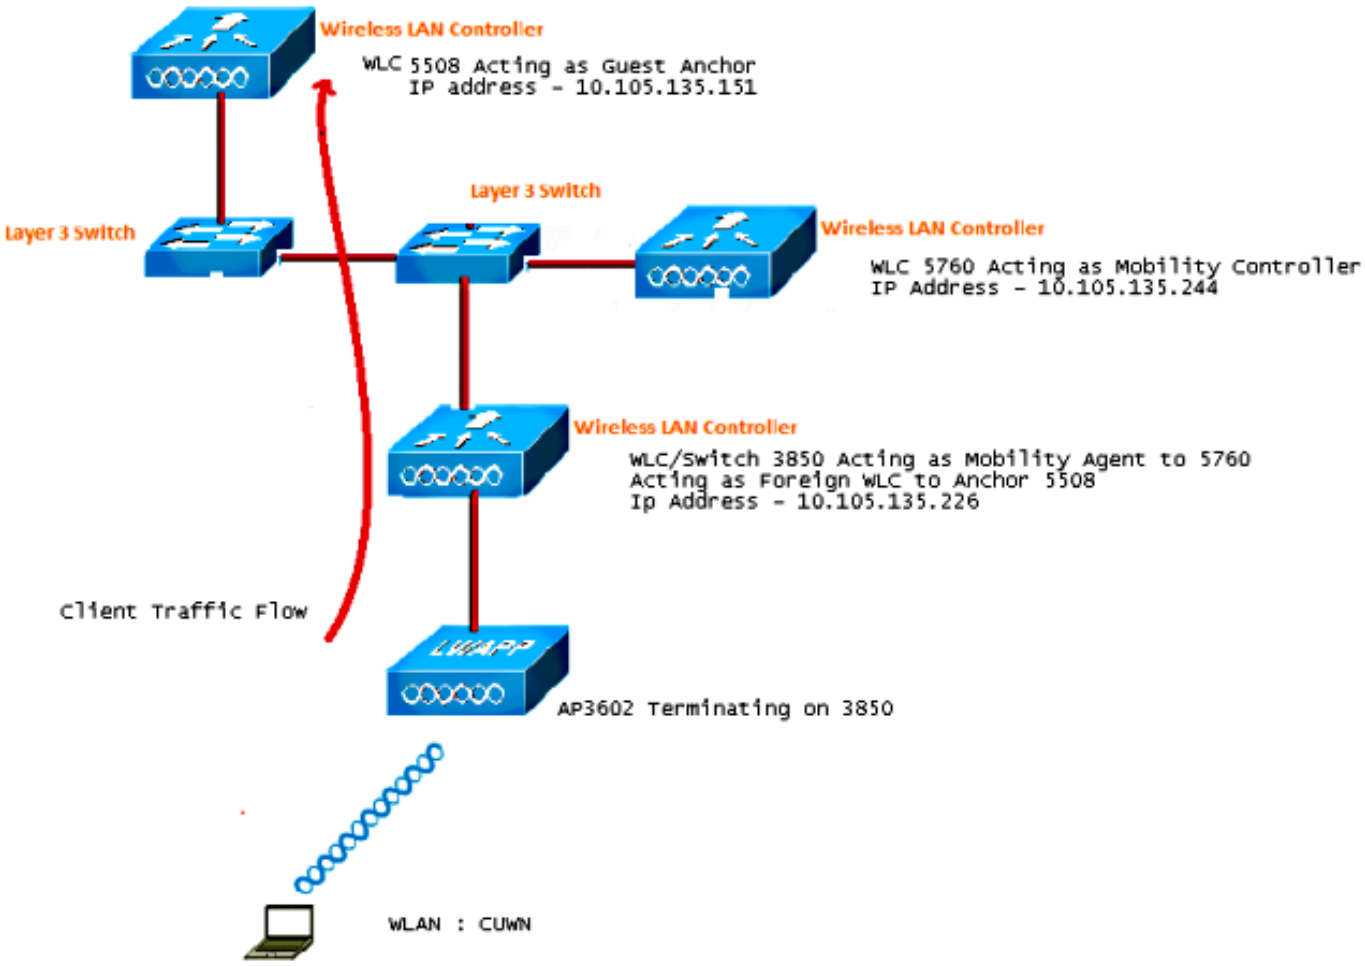
La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si la red está funcionando, asegúrese de haber comprendido el impacto que puede tener cualquier comando.

Configurar

> **Note**: Use la Command Lookup Tool (clientes registrados solamente) para obtener más información sobre los comandos usados en esta sección.

Diagrama de la red

El WLC de las 5508 Series actúa como regulador del ancla, y el Catalyst 3850 Series Switch actúa como un regulador no nativo y el agente de la movilidad que obtiene la licencia del regulador 5760 de la movilidad.



Note: En el diagrama de la red, el WLC de las 5508 Series actúa como el regulador del ancla, el WLC de las 5760 Series actúa como el regulador de la movilidad, y el Catalyst 3850 Series Switch actúa como el agente de la movilidad y el WLC no nativo. En cualquier momento, el regulador del ancla para el Catalyst 3850 Series Switch es el WLC de las 5760 Series o el WLC de las 5508 Series. Ambas no pueden ser anclas al mismo tiempo, porque el ancla doble no funciona.

Configuraciones

La configuración incluye tres porciones:

Parte 1 - Configuración en los 5508 WLC del ancla

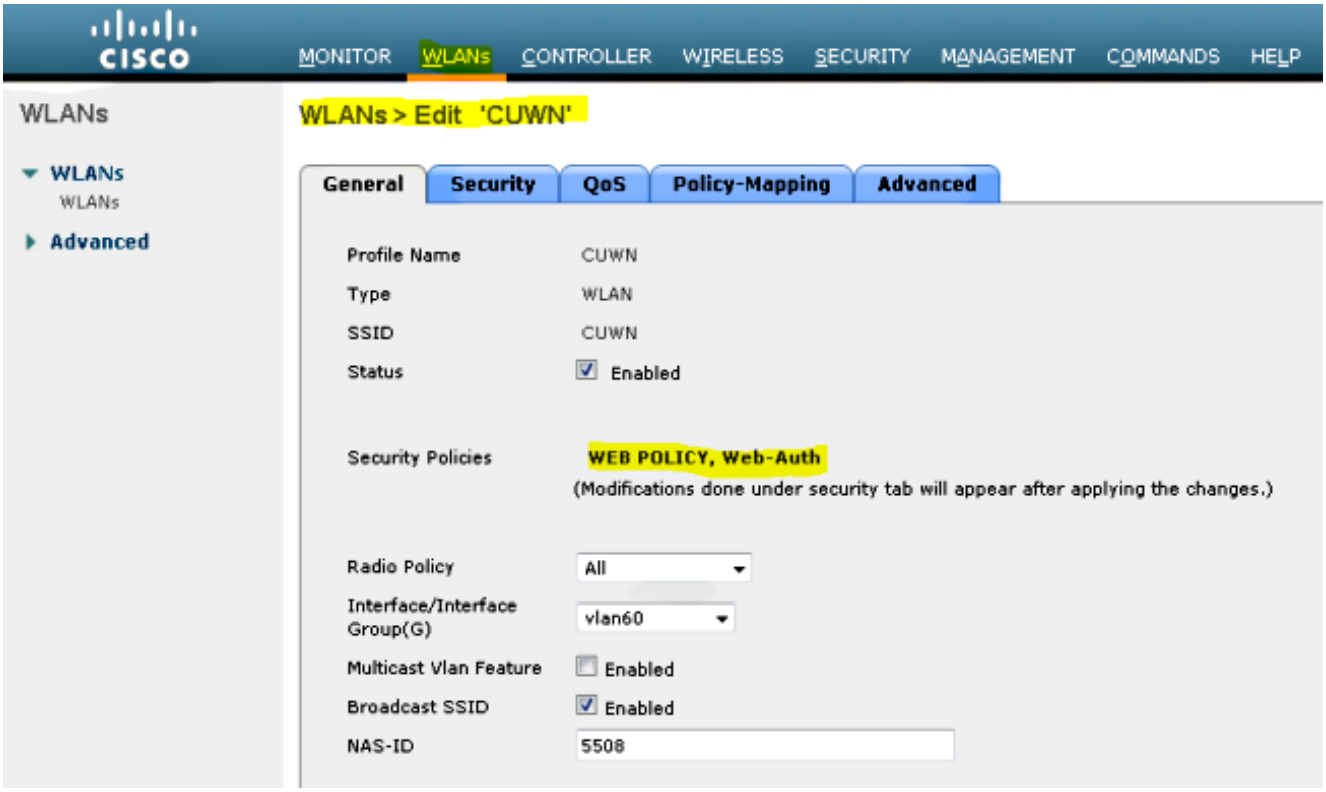
Parte 2 - Configuración convergida de la movilidad del acceso entre el WLC de las 5508/5760 Series y el Catalyst 3850 Series Switch

Parte 3 - Configuración en el Catalyst 3850 Series Switch no nativo

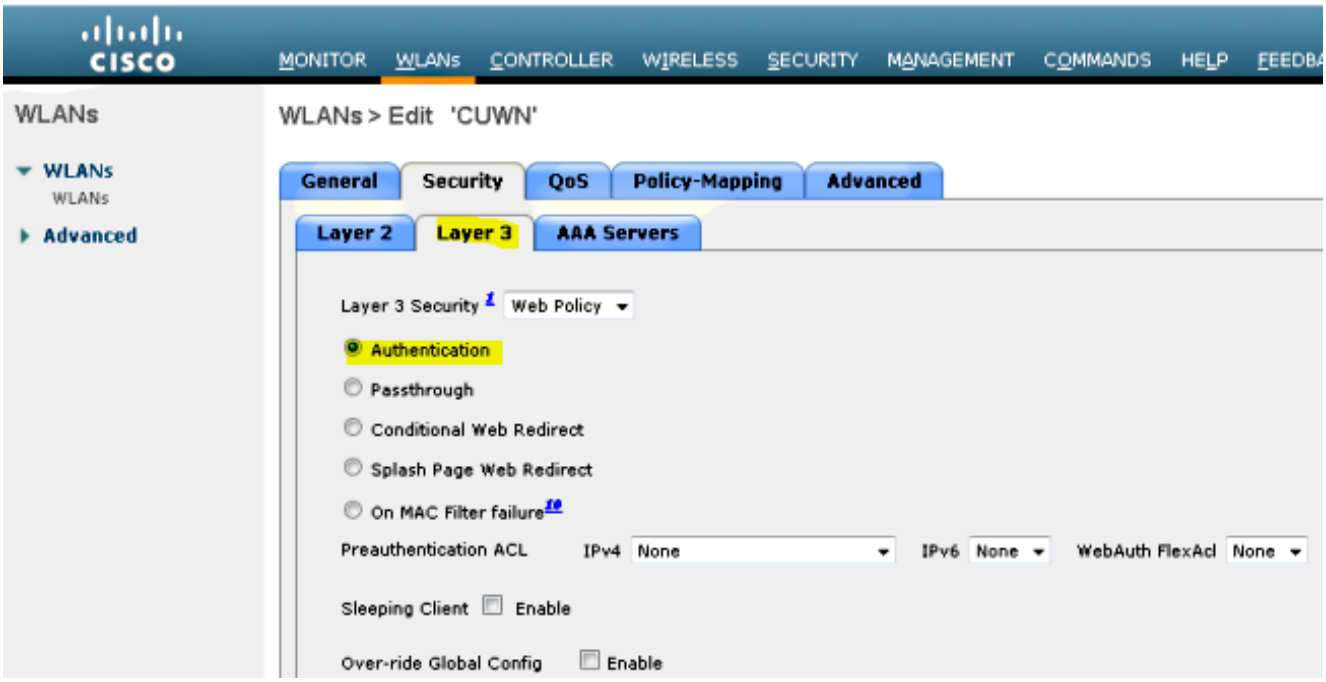
Parte 1 - Configuración en los 5508 WLC del ancla

1. En el WLC de las 5508 Series, libración sobre la **red inalámbrica (WLAN) > nuevo** para crear

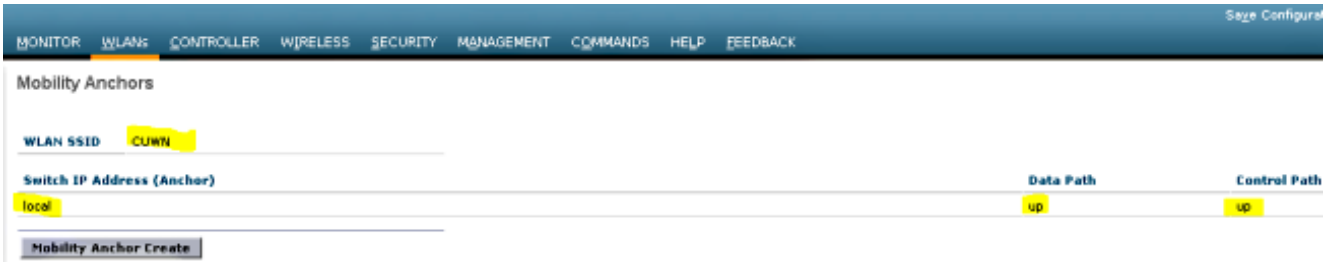
un nuevo Wireless LAN (red inalámbrica (WLAN)).



2. La libración sobre la **red inalámbrica (WLAN) > la red inalámbrica (WLAN) edita el > Security (Seguridad) > la autenticación Web habilitada de la capa 3** para configurar la Seguridad de la capa 3.



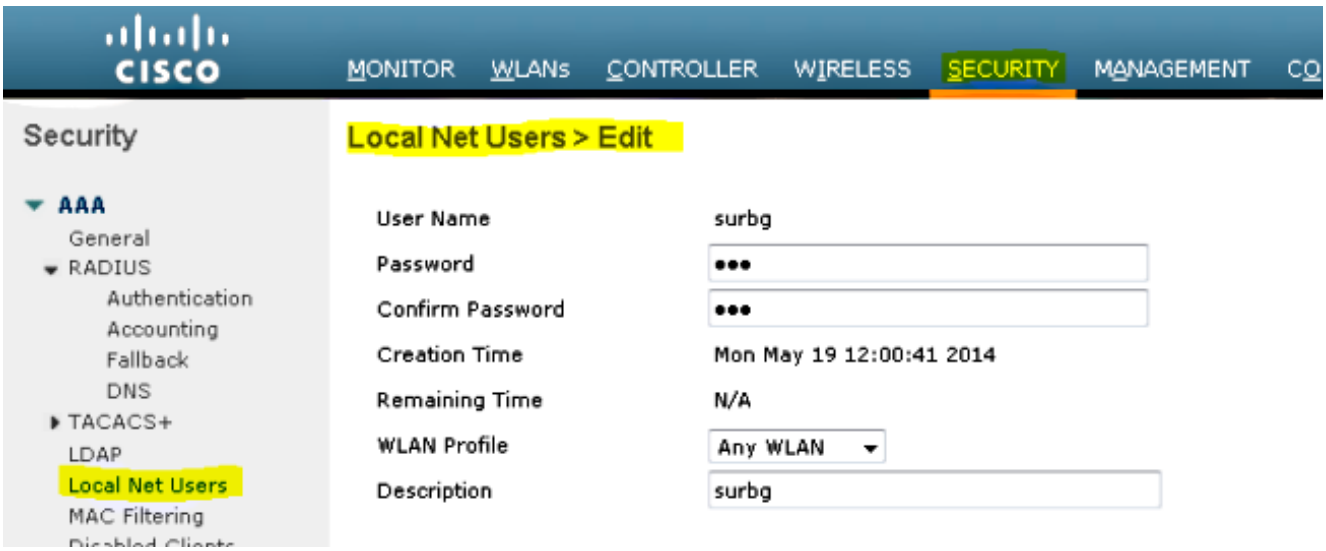
3. Haga el direccionamiento del ancla **local** bajo la ventana de configuración del ancla de la movilidad de la red inalámbrica (WLAN) para agregar el WLC de las 5508 Series como el ancla.



4. Asome sobre la **página de la Seguridad > de Webauth > de Webauth** para configurar la página de Webauth que se utilizará para la autenticación de cliente.

   En este ejemplo, se selecciona la página interna de Webauth del WLC:

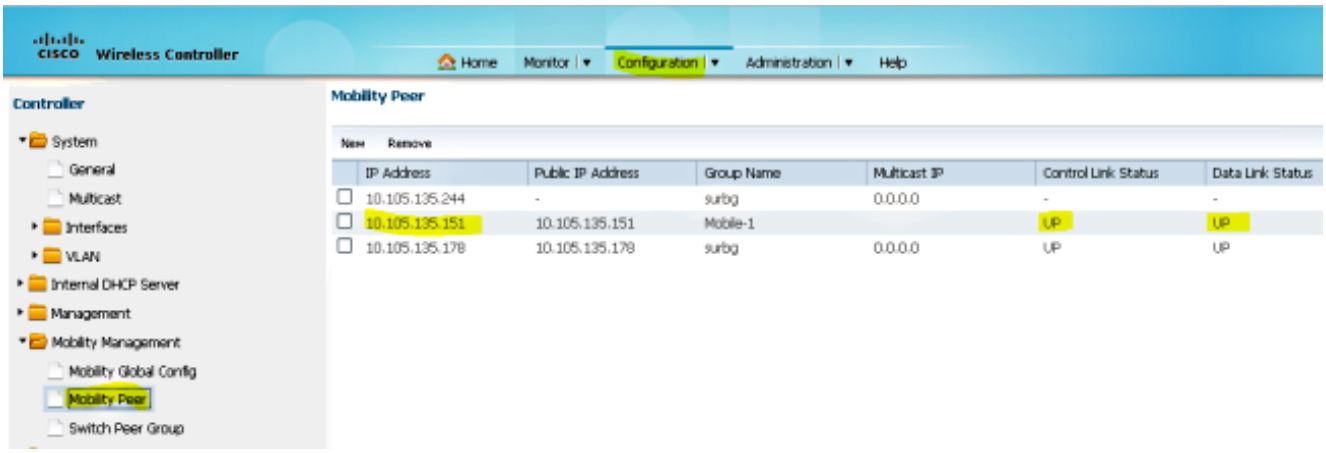
5. Cree a un usuario de red local. Este par de nombre de usuario/contraseña es utilizado por el usuario cuando está indicado en la página de Webauth.



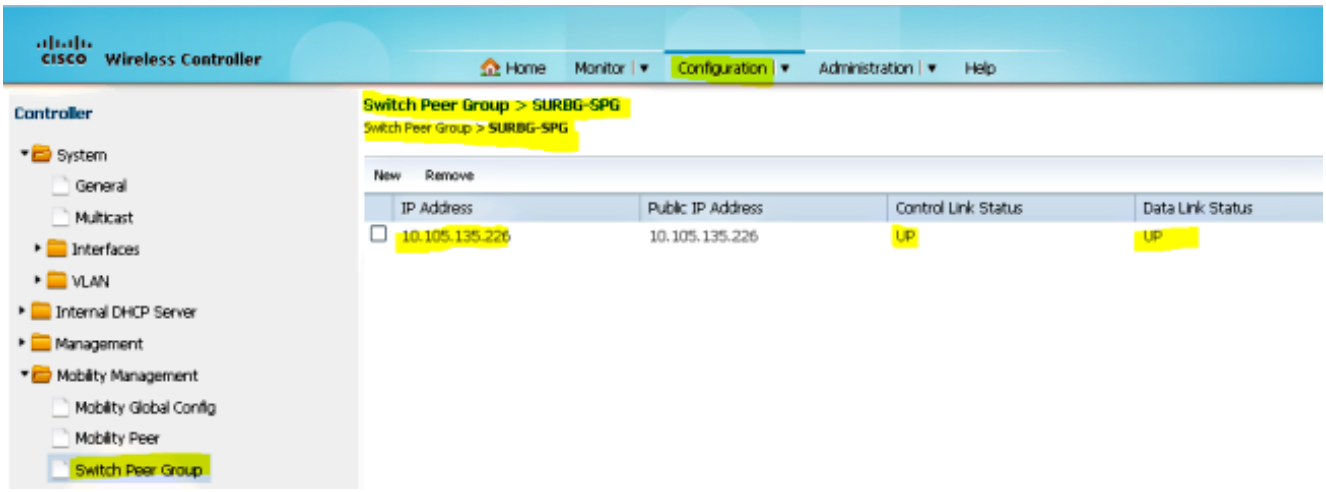
Parte 2 - Configuración convergida de la movilidad del acceso entre el WLC de las 5508/5760 Series y el Catalyst 3850 Series Switch

1. En el WLC de las 5508 Series, agregue el WLC de las 5760 Series como el par de la movilidad.

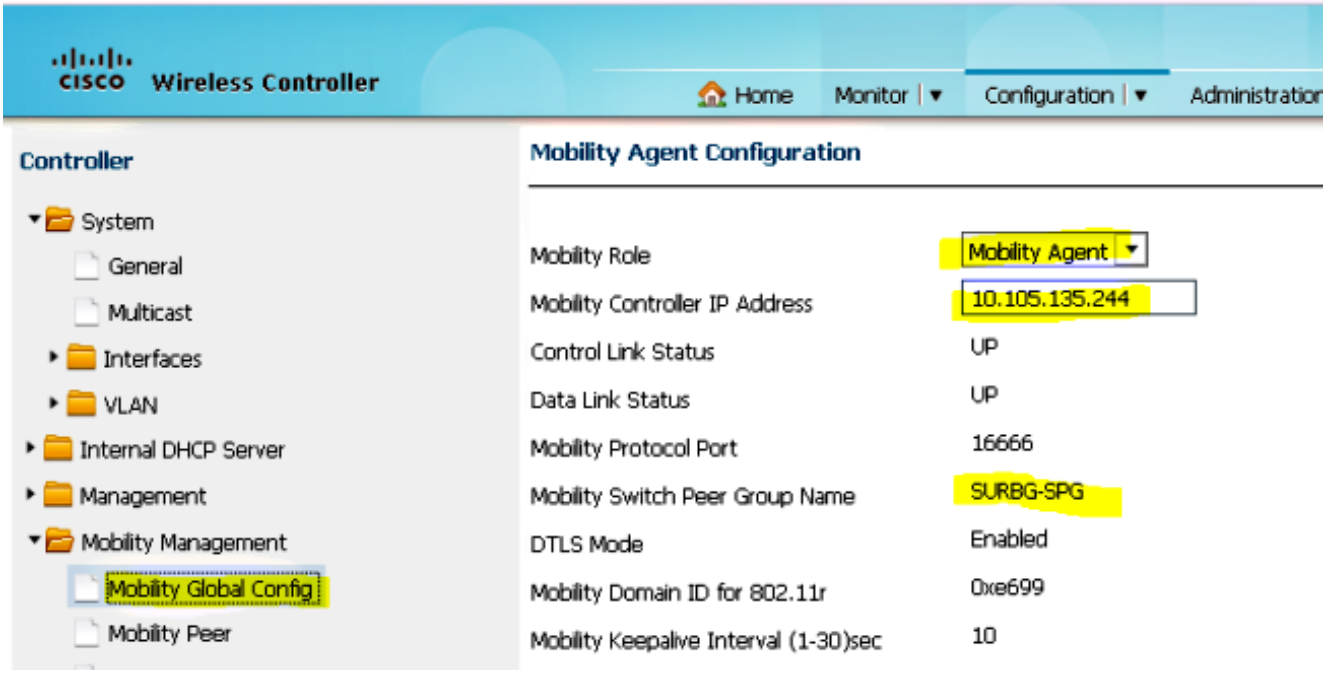
2. En el WLC de las 5760 Series, actuando como regulador de la movilidad, agregue el WLC de las 5508 Series como el par de la movilidad.



3. ¡Este paso es muy importante! Agregue el Catalyst 3850 Series Switch como el agente de la movilidad en el WLC de las 5760 Series bajo lengueta del grupo de peer del Switch bajo Administración de movilidad.



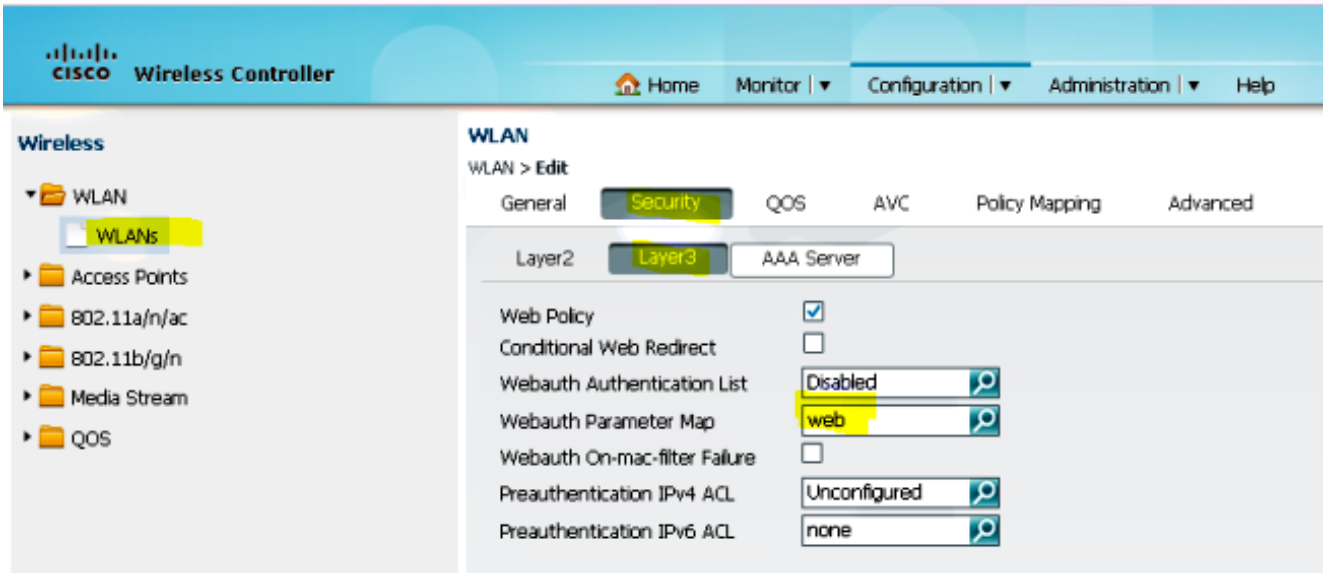
4. En el Catalyst 3850 Series Switch, agregue el WLC de las 5760 Series como el regulador de la movilidad. Una vez que usted hace esto, el Catalyst 3850 Series Switch ase la licencia del coult AP del regulador 5760 de la movilidad.



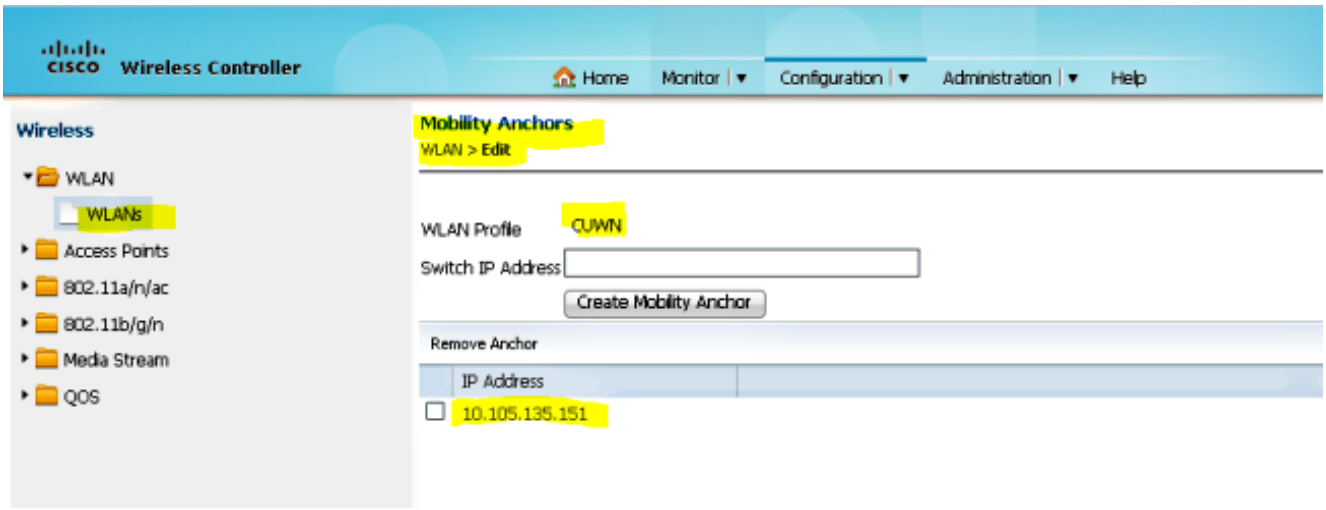
Parte 3: Configuración en el Catalyst 3850 Series Switch no nativo

1. Libración sobre **GUI > configuración > Tecnología inalámbrica > red inalámbrica (WLAN) > nuevo** para configurar el SSID/WLAN exacto en el Catalyst 3850 Series Switch.

2. La libración sobre la **red inalámbrica (WLAN) > la red inalámbrica (WLAN) edita el > Security (Seguridad) > la autenticación Web habilitada de la capa 3** para configurar la Seguridad de la capa 3.



3. Agregue la dirección IP del WLC de las 5508 Series como el ancla bajo configuración del ancla de la movilidad de la red inalámbrica (WLAN)

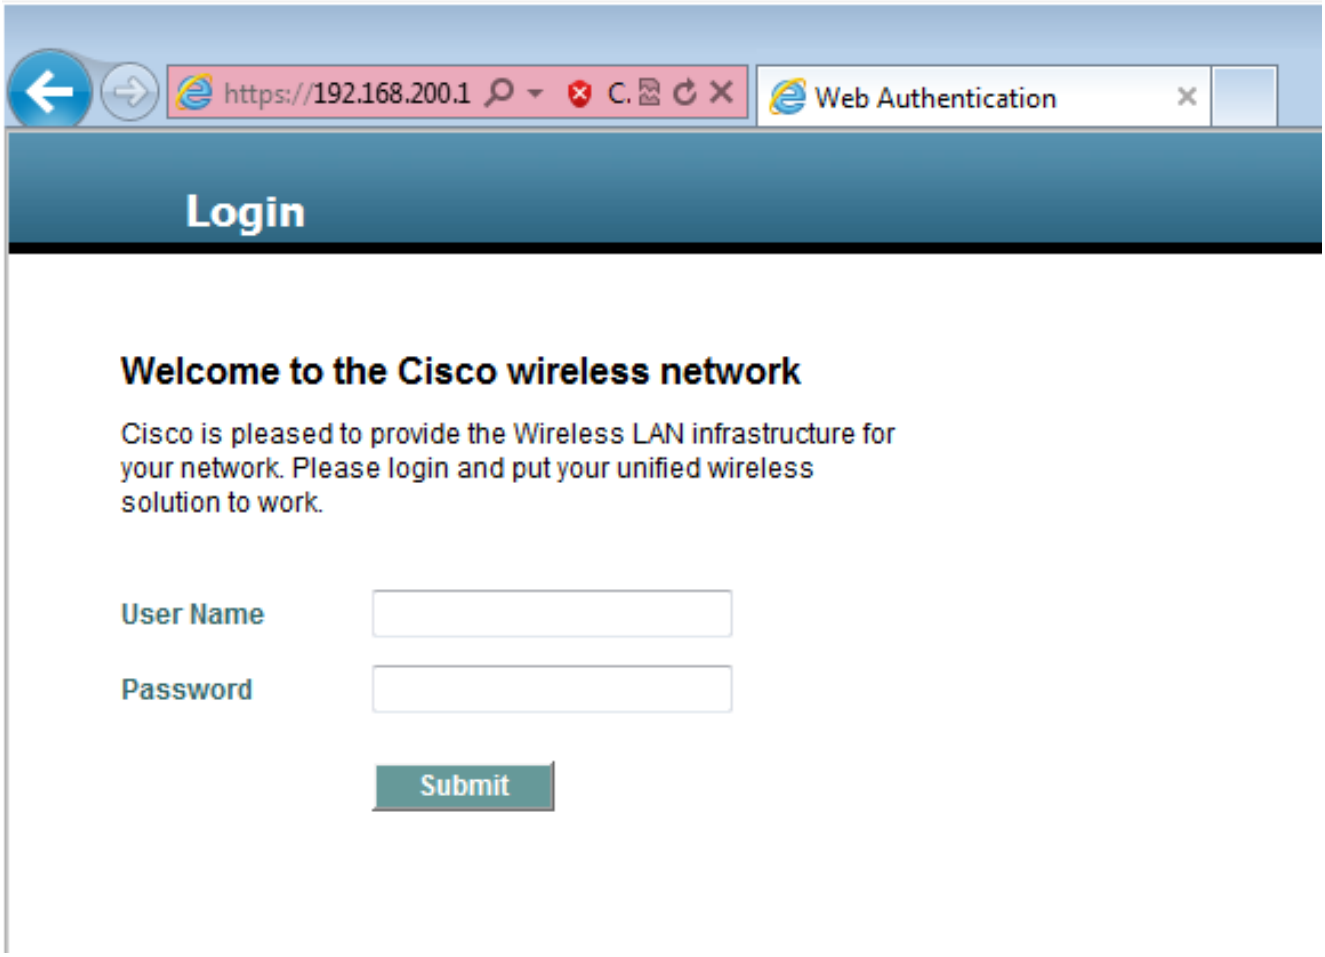


Verificación

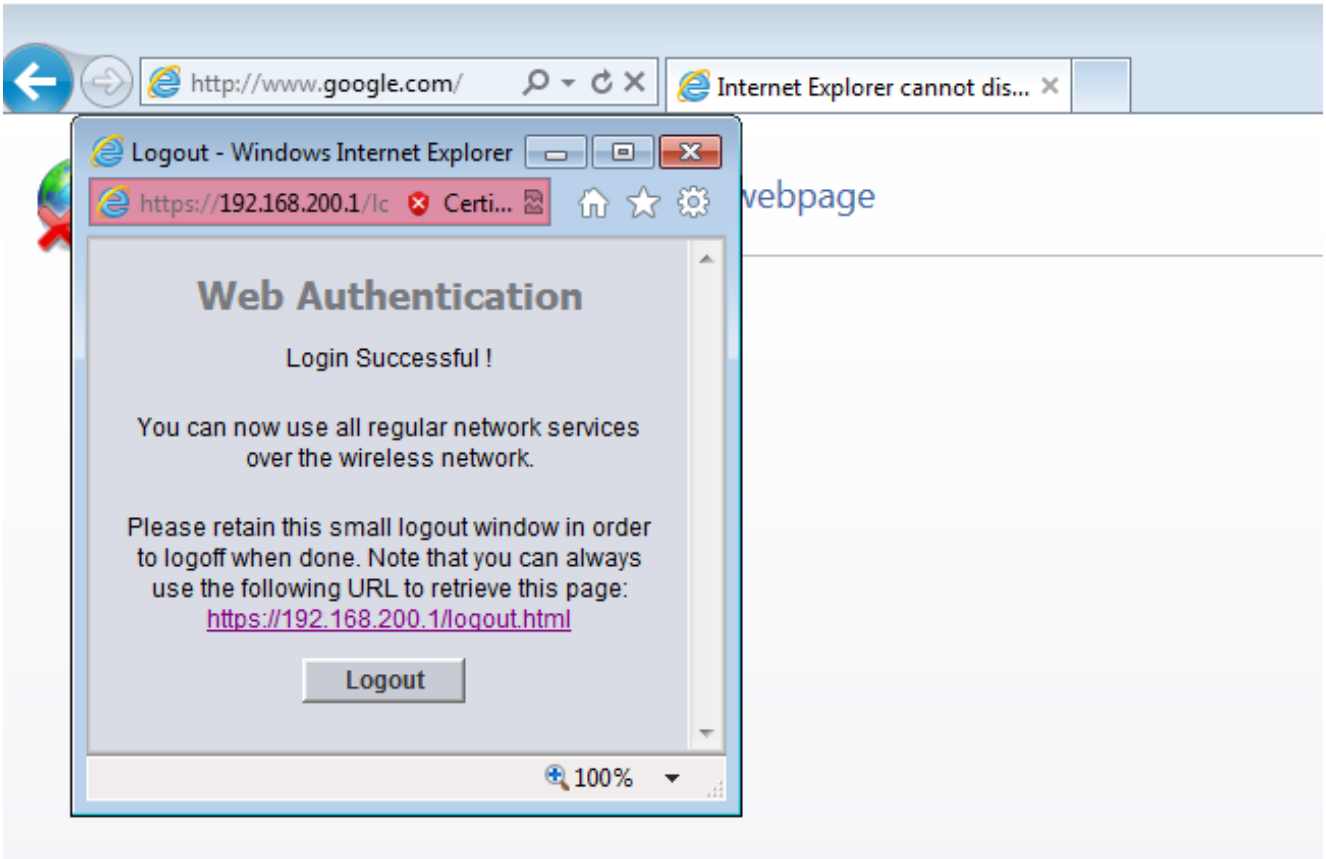
Utilize esta sección para confirmar que su configuración funcione correctamente.

Conecte al cliente con la red del Cisco Unified Wireless de la red inalámbrica (WLAN) (CUWN). Aquí está el flujo de trabajo:

1. El cliente recibe una dirección IP.
2. El cliente abre a un navegador y accede cualquier sitio web.
3. El primer paquete TCP enviado por el cliente es secuestrado por el WLC, y el WLC intercepta y envía la página de Webauth.
4. Si el DNS se configura correctamente, el cliente consigue la página de Webauth.
5. El cliente debe proporcionar el nombre de usuario/la contraseña para conseguir autenticado.
6. Después de la autenticación satisfactoria, reorientan al cliente a la página original del acceso.



7. Después de que el cliente proporcione las credenciales derechas, el cliente pasa el auth.



Troubleshooting

Para resolver problemas su configuración, ingrese estos debugs en el WLC de las 5508 Series, que actúa como ancla del invitado:

Debug Client <client mac addr>
Debug web-auth redirect enable mac <client mac addr>

Aquí tiene un ejemplo:

Debug Client 00:17:7C:2F:B6:9A
Debug web-auth redirect enable mac 00:17:7C:2F:B6:9A

```
show debug

MAC Addr 1..................................... 00:17:7C:2F:B6:9A

Debug Flags Enabled:
 dhcp packet enabled.
 dot11 mobile enabled.
 dot11 state enabled
 dot1x events enabled.
 dot1x states enabled.
 FlexConnect ft enabled.
 pem events enabled.
 pem state enabled.
 CCKM client debug enabled.
 webauth redirect enabled.
```

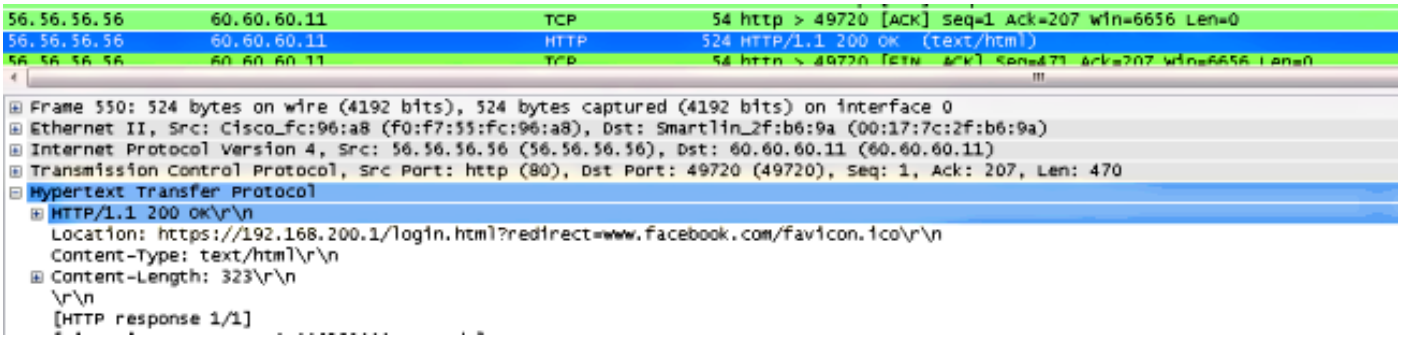
El WLC intercepta el primer paquete TCP del cliente y avanza su dirección IP virtual y la página interna de Webauth.



Después de la autenticación Web acertada, el resto del flujo de trabajo completa.
