[Introduction](#)

L'objectif de ce document est de décrire un réseau redondant d'émulation de LAN en ATM (RUELLE) utilisant des modules de Protocole SSRP (Simple Server Redundancy Protocol) pour Cisco Catalyst 5000. SSRP est pris en charge dans des ces composants :

- Version 3.1 et ultérieures de module LANE de Cisco Catalyst
- Version 11.2 et ultérieures de LightStream 1010 de Cisco
- Version de logiciel 11.2 et ultérieures de Cisco IOS®

[Conditions préalables](#)

[Conditions requises](#)

Aucune spécification déterminée n'est requise pour ce document.

[Composants utilisés](#)

Les informations dans ce document sont basées sur Cisco Catalyst 5000.

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous aux [Conventions relatives aux conseils techniques Cisco](#).

Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Note: Pour obtenir des informations supplémentaires sur les commandes utilisées dans ce document, utilisez l'[Outil de recherche de commande](#) ([clients enregistrés](#) seulement).

Diagramme du réseau

Ce document utilise la configuration réseau suivante :

Note: Puisque le préfixe atmosphère change avec le commutateur connecté à, l'adresse atmosphère des modifications d'un serveur d'émulation LAN (LES) si déplacé de PhyA à PhyB. Par conséquent, vous avez besoin de deux adresses LES dans la base de données du serveur de configuration d'émulation LAN (LECS) pour chaque LES résidant sur un module LANE. Puisqu'il y a de deux LESes redondant (un sur chacun des modules LANE), quatre lignes sont nécessaires dans la base de données LECS pour chaque LAN émulé (ELAN).

Cette configuration avancée affiche un exemple d'une grande installation avec beaucoup d'elans, car elle peut typiquement être trouvée dans les réseaux vivants. Le LECS configuré ici n'écouterait pas l'adresse réputée atmosphère. (Par exemple, ils ne sont pas configurés avec la commande de réparer-config-atmosphère-adresse de config de ruelle.)

Note: Les emplacements des divers services affichés dans ce document ne pourraient pas être optimaux. Avant de mettre en application une telle configuration dans un réseau vivant, examinez s'il vous plaît les [recommandations en matière de conception LANE](#).

Configurations

Ce document utilise les configurations suivantes :

- [C5000#1](#)
- [C5000#2](#)
- [LS1010#1](#)
- [LS1010#2](#)
