Introduction

Cette configuration d'échantillon décrit comment configurer l'Encapsulation de routage générique (GRE) au-dessus d'IPSec entre un concentrateur de Cisco VPN 5000 et un logiciel courant de Cisco IOS® de routeur de Cisco. GRE-au-dessus-IPSec de la caractéristique a été introduit dans VPN 5000 la version logicielle du concentrateur 6.0(19). Le protocole de routage dynamique de Protocole OSPF (Open Shortest Path First) est utilisé dans cet échantillon pour conduire le trafic à travers le tunnel VPN.

Conditions préalables

Conditions requises

Aucune spécification déterminée n'est requise pour ce document.

Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Version de logiciel 12.2(3) de Cisco IOS®
- Version de logiciel de logiciel du concentrateur VPN 5000 6.0(19)

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions de documents, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque: Pour obtenir des informations supplémentaires sur les commandes utilisées dans ce document, utilisez l'[Outil de recherche de commande \(clients enregistrés\)](#) seulement).

Diagramme du réseau

Ce document utilise la configuration réseau indiquée dans le diagramme suivant.

GRE au-dessus d'IPSec est configuré entre le routeur Cisco IOS (1720-1) et le concentrateur VPN 5002. Derrière ces périphériques, de plusieurs réseaux sont annoncés par l'intermédiaire de l'OSPF, qui fonctionne dans le tunnel GRE entre 1720-1 et VPN 5002.

Ces réseaux sont derrière le routeur 1720-1.

- 10.1.1.0/24
- 10.1.2.0/24
- 10.1.3.0/24

Ces réseaux sont derrière le concentrateur VPN 5002.

- 20.1.1.0/24
- 20.1.2.0/24
- 20.1.3.0/24

Remarque: Pour cette topologie, tous les segments de réseau sont mis dans la zone 0 OSPF.

Configurations

Ce document utilise les configurations suivantes.

- [Routeur Cisco IOS](#)
- [Concentrateur VPN 5000](#)

Routeur Cisco IOS

Le périphérique IOS et le concentrateur VPN 5000 sont configurés pour apporter un tunnel GRE les uns avec les autres. Le routeur IOS a également une crypto-carte dynamique configurée pour l'adresse IP du concentrateur VPN 5000. La configuration de tunnel VPN 5000's reflète qu'elle initie un tunnel de GRE-avec-transport-mode-IPSec au périphérique IOS. Quand les débuts de périphérique IOS, il n'a aucune artère pour des destinations par le tunnel. Il n'expédie pas le trafic réseau privé en clair. Quand les débuts de concentrateur VPN, il négocie automatiquement la crypto association de sécurité (SA) pour protéger le trafic GRE entre les deux pairs. En ce moment, le tunnel est en service et les deux artères d'échange de pairs pour les réseaux participants. Le concentrateur VPN réintroduit continuellement la connexion sur la base des mots clé de « InactivityTimeout » et de « KeepAliveInterval ». Si le routeur IOS force une nouvelle saisie, les deux pairs ne conviennent pas sur quelle SA à utiliser-et le concentrateur VPN renégocie le tunnel dû aux secondes *x de l'inactivité* (où *x* représente la valeur spécifique dans « InactivityTimeout »).

Remarque: Cette configuration de tunnel reste pour toujours. Il n'y a aucune option d'inactivité-déconnexion. Ce tunnel ne devrait pas être utilisé sur les liens utilisation-affichés chers, ou où on s'attend à ce que le routeur (IOS) distant déconnecte après des périodes de veille.

Vérifiez

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement.

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) ([clients enregistrés](#) uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

Routeur Cisco IOS

- **show crypto isakmp sa** — Affiche tout le Protocole ISAKMP (Internet Security Association and Key Management Protocol) en cours SAS.
- **show crypto ipsec sa** — Affiche tout l'IPSec en cours SAS.
- **show crypto engine connection active** — Chiffrement des paquets/déchiffrement d'expositions contre- par IPSec SA.

Concentrateur VPN 5000

- **mémoire tampon de log de show system** — Affiche les informations de base de Syslog.
- **vidage mémoire de suivi de vpn** — Affiche les informations détaillées sur des processus VPN.

Dépannez

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

Ces commandes peuvent être utilisées sur le routeur Cisco IOS.

Remarque: Avant d'exécuter les commandes **debug**, référez-vous à la section **Informations importantes sur les commandes Debug**.

- **debug crypto isakmp** — Affiche les informations détaillées sur la négociation de la phase I d'Échange de clés Internet (IKE) (mode principal).
- **debug crypto ipsec** — Affiche les informations détaillées sur la négociation de la phase II d'IKE (mode rapide).
- **debug crypto engine** — Chiffrement des paquets de debugs/déchiffrement et processus de Protocole DH (Diffie-Hellman).

Exemple de sortie de débogage

Cette section fournit l'exemple de sortie de débogage pour les périphériques de configuration.

- [Routeur Cisco IOS](#)
- [Concentrateur VPN 5000](#)

Routeur Cisco IOS

Cette sortie a été générée utilisant les commandes de **debug crypto isakmp** et de **debug crypto ipsec** sur le routeur Cisco IOS. C'est bon mettent au point sur le concentrateur routeur Cisco IOS et VPN 5000.

```

Causes de problèmes potentiels

- Le concentrateur VPN 5000 propose le mode de transport par défaut quand GRE au-dessus d'IPSec est utilisé. Quand le routeur Cisco IOS misconfiguré pour le tunnel mode, ces erreurs résultent.**Debug IOS**

```

2d21h: ISAKMP (0:23): Checking IPsec proposal 1
2d21h: ISAKMP: transform 1, ESP_DES
2d21h: ISAKMP: attributes in transform:
2d21h: ISAKMP: SA life type in seconds
2d21h: ISAKMP: SA life duration (VPI) of 0x0 0x1 0x51 0x80
2d21h: ISAKMP: SA life type in kilobytes
2d21h: ISAKMP: SA life duration (VPI) of 0x0 0x10 0x0 0x0
2d21h: ISAKMP: encaps is 2
2d21h: ISAKMP: authenticator is HMAC-MD5
2d21h: IPSEC(validate_proposal): invalid transform
proposal flags -- 0x0Log VPN 5000lan-lan-VPN0:1:[172.16.172.39]: received notify from
partner --
notify: NO PROPOSAL CHOSEN

```

- Si le routeur Cisco IOS n'est pas configuré pour ignorer les unités de transmission maximum OSPF (mtu), ces erreurs résultent quand la contiguïté entre le routeur et le concentrateur VPN 5000 est formée. La commande **Ne de show ip ospf** sur le routeur est coincée sur l'état EXSTART.Sur le routeur Cisco IOS, la commande de **debug ip ospf adj** affiche cette sortie.

```

2d22h: OSPF: Nbr 20.1.1.1 has larger interface MTU
2d22h: OSPF: Rcv DBD from 20.1.1.1 on Tunnel0 seq 0x104A opt
0x2 flag 0x0 len 132 mtu 1500 state EXSTARTLe contournement est d'utiliser la commande
d'ip ospf mtu-ignore sous l'interface de tunnel du routeur de désactiver vérifier de MTU.
