Introduction

Ce document fournit un exemple de configuration sur la façon de permettre l'accès à un utilisateur VPN à l'Internet tandis qu'il est connecté par l'intermédiaire d'un tunnel IPsec LAN-to-LAN (L2L) à un autre routeur. Cette configuration est réalisée quand vous activez la transmission tunnel partagée. La transmission tunnel partagée permet aux utilisateurs VPN d'accéder à des ressources de l'entreprise par l'intermédiaire du tunnel IPsec tout en permettant l'accès à Internet.

Conditions préalables

Conditions requises

Aucune spécification déterminée n'est requise pour ce document.

[Composants utilisés](#)

Les informations dans ce document sont basées sur un routeur de Cisco 3640 avec la version de logiciel 12.4 de Cisco IOS®.

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

[Diagramme du réseau](#)

Ce document utilise la configuration réseau suivante :

Remarque: Les schémas d'adressage d'IP utilisés dans cette configuration ne sont pas légalement routables sur Internet. Ce sont des adresses [RFC 1918](#) qui ont été utilisés dans un environnement de laboratoire.

Configurations

Ce document utilise les configurations suivantes :

- [routeur A](#)
- [routeur B](#)

Dépannez

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration. L'exemple de sortie Debug est également affiché.

Dépannage des commandes

[L'analyseur de Cisco CLI](#) (clients [enregistrés](#) seulement) prend en charge certaines **commandes show**. Employez l'analyseur de Cisco CLI pour visualiser une analyse de sortie de commande show.

Remarque: Référez-vous aux [informations importantes sur les commandes de débogage](#) avant d'utiliser les commandes de **débogage**.

- **debug crypto isakmp** - Affiche les négociations ISAKMP du Phase 1.
- **debug crypto ipsec** - Affiche les négociations IPSecs du Phase 2.

Exemple de sortie de débogage
