## Introduction

Ce document explique comment configurer une connexion entre un routeur Cisco IOS et le client VPN Cisco 4.x utilisant RADIUS pour l'autorisation des groupes et l'authentification des utilisateurs. Les versions logicielles 12.2(8)T et ultérieures de Cisco IOSMD prennent en charge les connexions depuis le Client VPN Cisco 3.x. Les clients VPN 3.x et 4.x utilisent la stratégie du groupe 2 de Diffie Hellman (DH). La commande « isakmp policy # group 2 » active les clients VPN à connecter.

**Remarque:** La comptabilité d'IPSec VPN est maintenant disponible. Référez-vous à [IPSec VPN expliquant](#) plus d'informations et de configurations d'échantillon.

## Conditions préalables

### Conditions requises

Assurez-vous que vous répondez à ces exigences avant d'essayer cette configuration :

- Un groupe d'adresses à assigner pour IPSec

- Un groupe a appelé "3000clients" avec une clé pré-partagée de "cisco123"
- Groupez l'autorisation et l'authentification de l'utilisateur sur un serveur de RAYON

**Remarque:** La comptabilité de RAYON n'est pas prise en charge à ce moment.

## Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Un routeur 2611 qui exécute le Logiciel Cisco IOS version 12.2(8)T.
- Cisco Secure ACS pour Windows (n'importe quel serveur de RAYON devrait travailler)
- Client VPN Cisco pour la version 4.8 de Windows (n'importe quel client vpn 4.x devrait travailler)

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Ceci est sorti de la commande de **show version** sur le routeur :

```
vpn2611#show version

## Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

## Théorie générale

Ce document affiche l'authentification et l'autorisation, telle qu'assigner Windows Internet Naming Service (WINS) et le service de nom de domaine (DN), par le serveur de RAYON. Si vous êtes intéressé à exécuter l'authentification par le serveur et l'autorisation de RAYON localement par le routeur, référez-vous à la [configuration d'IPSec entre un routeur Cisco IOS et un Client VPN Cisco 4.x pour Windows utilisant le RAYON pour l'authentification de l'utilisateur](#).

## Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

**Remarque:** Utilisez l'outil [Command Lookup Tool](#) (clients [enregistrés](#) seulement) pour trouver plus d'informations sur les commandes utilisées dans ce document.

## Diagramme du réseau

Ce document utilise la configuration réseau suivante :

**Remarque:** Les adresses IP dans ce réseau d'exemple ne sont pas routable en Internet global parce qu'elles sont des adresses IP privées dans un réseau des travaux pratiques.

## [Configuration du serveur RADIUS](#)

### [Configurez le serveur de RAYON pour des clients d'AAA \(le routeur\)](#)

Procédez comme suit :

1. Cliquez sur Add l'**entrée** pour ajouter le routeur à la base de données du serveur de RAYON.

AAA Client Hostname	AAA Client IP Address	Authenticate Using
<a href="#">340</a>	172.18.124.151	RADIUS (Cisco Aironet)
<a href="#">Aironet-340-Lab</a>	14.36.1.99	RADIUS (Cisco Aironet)
<a href="#">glenntest</a>	172.18.124.120	RADIUS (Cisco IOS/PIX)
<a href="#">router</a>	172.18.124.150	TACACS+ (Cisco IOS)

- [Network Device Groups](#)
- [Adding a Network Device Group](#)
- [Renaming a Network Device Group](#)
- [Deleting a Network Device Group](#)
- [AAA Clients](#)
- [Adding a AAA Client](#)
- [Editing a AAA Client](#)

**AAA Client IP Address**

## [Configurez le serveur de RAYON pour l'authentification et l'autorisation de groupe](#)

Procédez comme suit :

1. Cliquez sur Add/éditez pour ajouter un utilisateur nommé **3000client** au serveur de RAYON.

User:

List users beginning with letter/number:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9																

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, delete users in the database.

**User Setup and External User Databases**

Before Cisco Secure ACS can authenticate users with an external database, you must:

- You must have the database up and running on the external server. For example, if you are using token card authentication, you must have the database up and running and properly configured.
- You must have configured the applicable parameters in the Cisco Secure ACS configuration.

2. Spécifiez le mot de passe cisco pour cet utilisateur. Ce mot de passe est un mot clé spécial pour le Cisco IOS, qui indique qu'un profil de groupe doit être mis en référence. Vous pouvez tracer l'utilisateur à un groupe Cisco Secure si vous préférez. Assurez-vous qu'**aucune affectation d'adresse IP** n'est

choisie.

**CISCO SYSTEMS**

# User Setup

## User Setup

Password Authentication:

CiscoSecure Database

CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Password

Confirm Password

Separate (CHAP/MS-CHAP/ARAP)

Password

Confirm Password

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Group to which the user is assigned:

Group 20

Callback

Use group setting

No callback allowed

Callback using this number

Dialup client specifies callback number

Use Microsoft NT callback settings

Client IP Address Assignment

Use group settings

No IP address assignment

Assigned by dialup client

Assign static IP address

Assigned by AAA client pool

Submit Delete Cancel

3. Spécifiez les paramètres d'autorisation de groupe qui seront passés vers le bas par ce compte utilisateur de nouveau au client vpn. Veillez-vous pour avoir des Cisco-poids du commerce-**paire**s activées avec ces attributs : ipsec : key-exchange=ike ipsec : key-exchange=preshared-key ipsec : addr-pool=ippool ipsec : inacl=108 (seulement requis si vous utilisez la Segmentation de tunnel sur le routeur) En outre, assurez-vous que vous faites activer l'IETF RADIUS Attribut de theseg : Attribut 6 : Service-Type=Outbound Attribut 64 : L'ESP de Tunnel-Type=IP Attribut 69 : Tunnel-Password=cisco123 (c'est votre mot de passe

de groupe sur le client vpn)Une fois que vous avez terminé, cliquez sur Submit.

Checking this option will PERMIT all UNKNOWN Services

Default (Undefined) Services

**Cisco IOS/PIX RADIUS Attributes** ?

[009\001] cisco-av-pair

```

## [Configuration VPN Client 4.8](#)

Terminez-vous ces étapes afin de configurer le client vpn 4.8 :

1. Choisissez le **début > les programmes > le client vpn de Cisco Systems > le client vpn**.
2. Cliquez sur **New** pour ouvrir la fenêtre Create New VPN Connection Entry.

3. Entrez le nom de l'entrée de connexion avec une description. Écrivez l'adresse IP extérieure du routeur dans la case d'hôte. Puis, entrez le nom de groupe VPN et le mot de passe et cliquez sur la sauvegarde.

4. Cliquez sur en fonction la connexion que vous voulez au clic d'utiliser-et vous connectez de la fenêtre principale de client vpn.

5. Lorsque vous y êtes invité, saisissez le nom d'utilisateur et le mot de passe pour Xauth et cliquez sur **OK** pour vous connecter au réseau distant.

Le client vpn obtient lié au routeur au lieu d'exploitation principal.

## Vérifiez

Référez-vous à cette section pour vous assurer du bon fonctionnement de votre configuration.
