Exemple de configuration du tunnel IPsec entre routeur IOS et client VPN Cisco 4.x pour Windows avec authentification utilisateur TACACS+

Contenu

Introduction

Ce document décrit comment configurer une connexion d'IPsec entre un routeur et le client du réseau privé virtuel de Cisco (VPN) 4.x avec le Terminal Access Controller Access Control System Plus (TACACS+) pour l'authentification de l'utilisateur. Les versions de version de logiciel 12.2(8)T et ultérieures de Cisco IOS® prennent en charge des connexions du Client VPN Cisco 4.x. Le client vpn 4.x utilise la stratégie du groupe 2 de Diffie-Hellman (D-H). Les commandes enables de **stratégie # de groupe 2 d'ISAKMP les** clients 4.x à connecter.

Ce document affiche l'authentification sur le serveur TACACS+ avec l'autorisation, telle que des affectations de Windows Internet Naming Service (WINS) et de service de nom de domaine (DN), exécutées localement par le routeur.

Référez-vous à configurer le Client VPN Cisco 3.x pour Windows à l'IOS utilisant l'authentification étendue locale afin de se renseigner plus sur le scénario où l'authentification de l'utilisateur se produit localement dans le routeur Cisco IOS.

Référez-vous à la configuration d'IPSec entre un routeur Cisco IOS et un Client VPN Cisco 4.x pour Windows utilisant le RAYON pour l'authentification de l'utilisateur afin de se renseigner plus sur le scénario où l'authentification de l'utilisateur se produit extérieurement avec le protocole

RADIUS.

Conditions préalables

Conditions requises

Assurez-vous de répondre à ces exigences avant d'essayer cette configuration :

- Un groupe d'adresses à assigner pour IPsec
- Un groupe a nommé le « vpngroup » avec un mot de passe de "cisco123"
- Authentification de l'utilisateur sur un serveur TACACS+

Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Client VPN Cisco pour la version 4.0.2D de Windows (n'importe quel client 3.x VPN ou plus tard devrait travailler.)
- Cisco Secure pour la version 3.0 de Windows (n'importe quel serveur TACACS+ devrait travailler)
- La version 12.2(8)T1 de routeur du Cisco IOS 1710 a chargé avec le positionnement de caractéristique d'IPsecLa sortie de la commande de **show version** sur le routeur est affichée ici.

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-

vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à Conventions relatives aux conseils techniques Cisco.

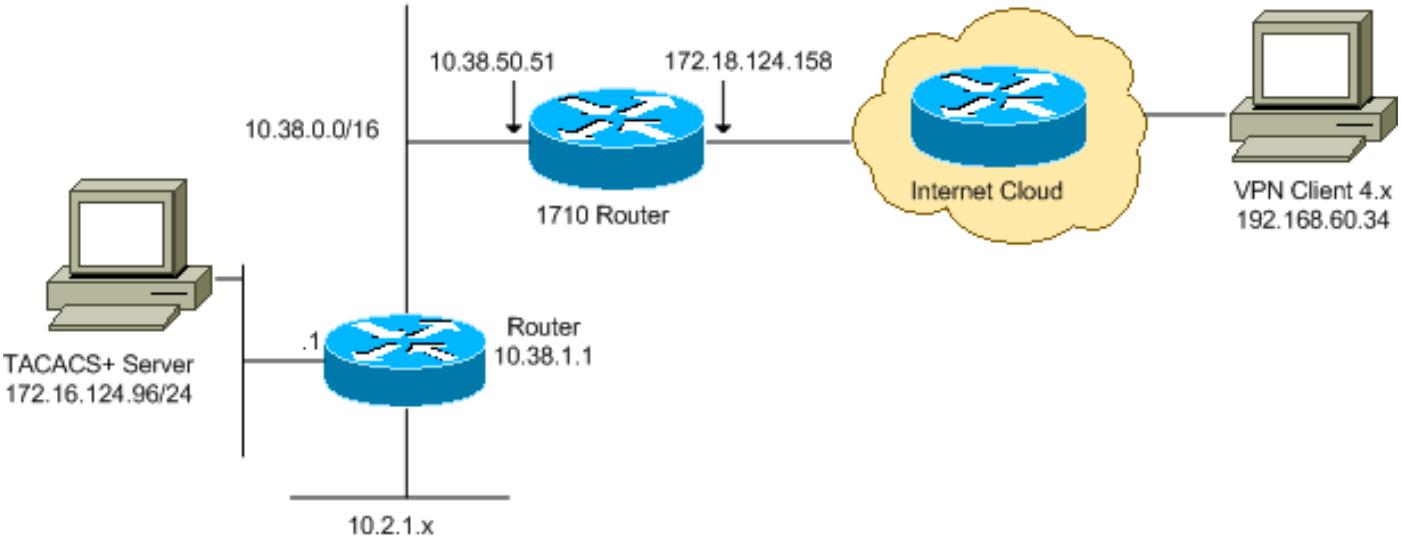
Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque: Utilisez l'outil de recherche de commande (réservé aux clients inscrits) pour plus d'informations sur les commandes utilisées dans ce document.

Diagramme du réseau

Ce document utilise la configuration réseau suivante :



Remarque: Les schémas d'adressage d'IP utilisés dans cette configuration ne sont pas légalement routables sur Internet. Ce sont des adresses RFC 1918 qui ont été utilisées dans un environnement de laboratoire.

Configurations

Ce document utilise les configurations suivantes :

- Routeur Cisco 1710
- Serveur TACACS+
- Client vpn 4.x
- transmission tunnel partagée

Routeur Cisco 1710

Routeur Cisco 1710

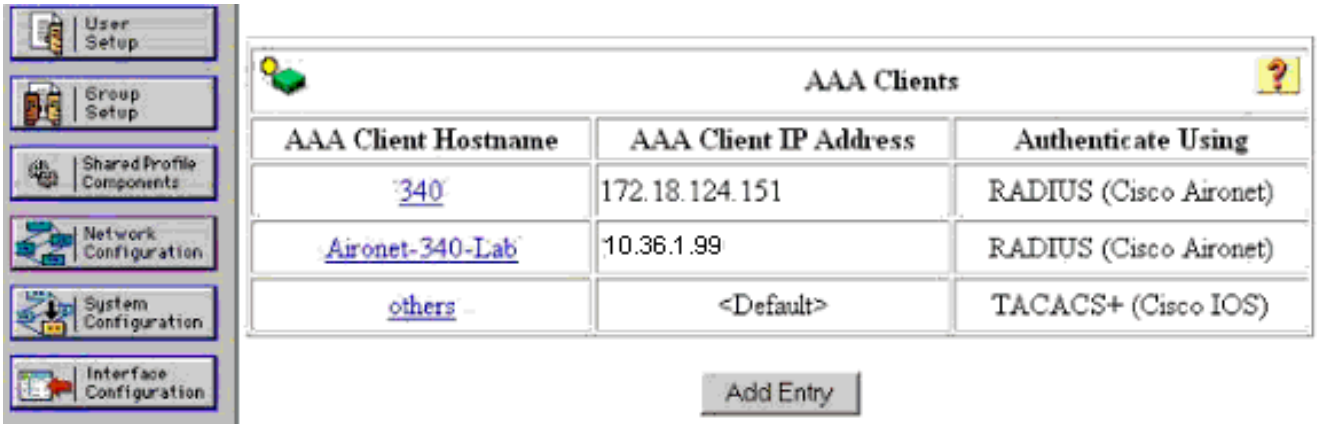
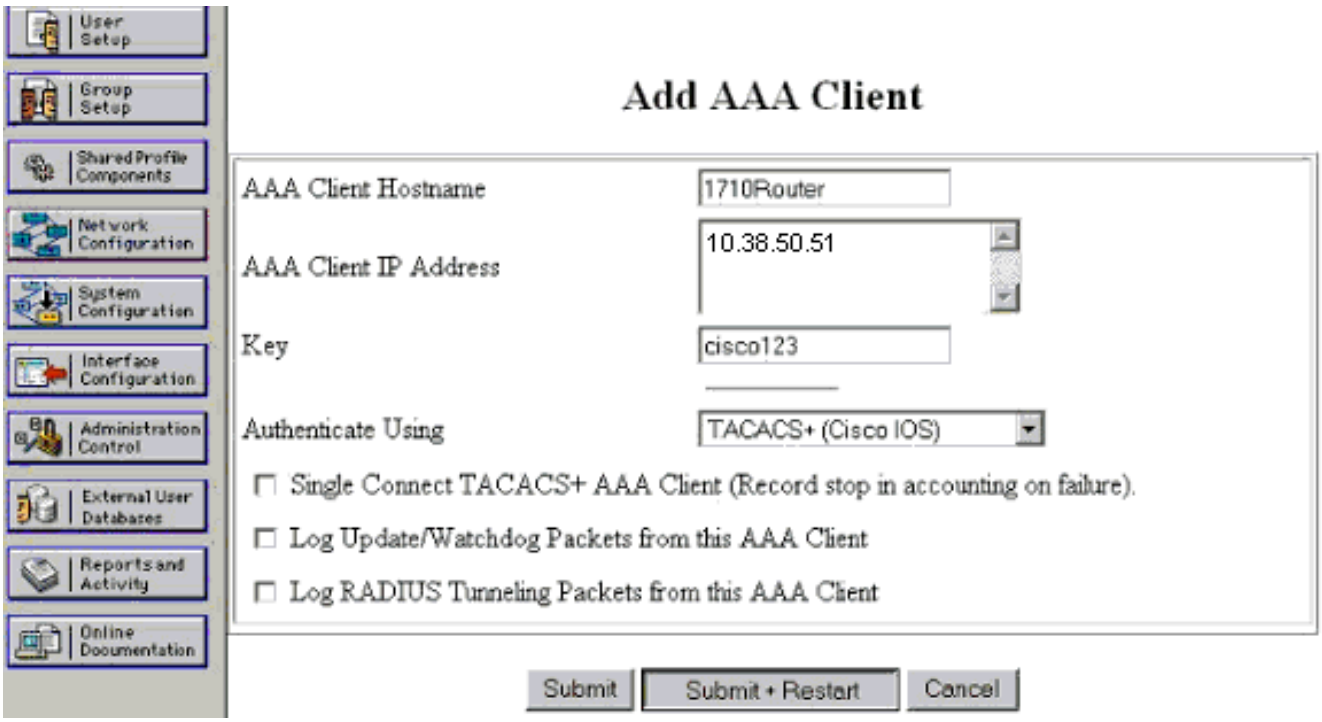
Serveur TACACS+

Afin de configurer le serveur TACACS+, terminez-vous ces étapes :

1. Cliquez sur Add l'**entrée** afin d'ajouter une entrée pour le routeur dans la base de données du serveur
   TACACS+.

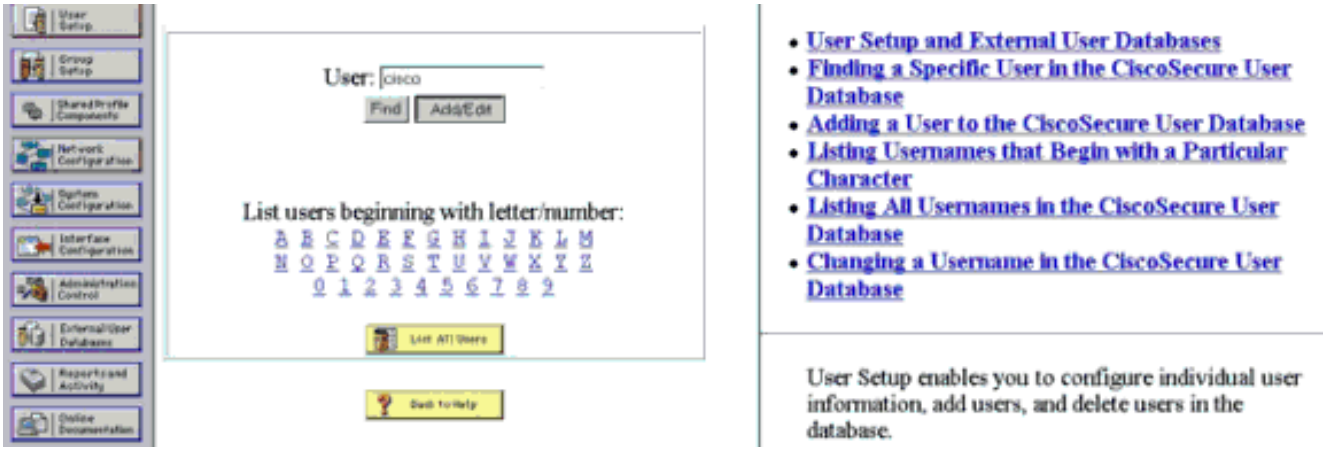


2. Àla page de client d'AAA d'ajouter, écrivez les informations de routeur suivant les indications de cette image
:

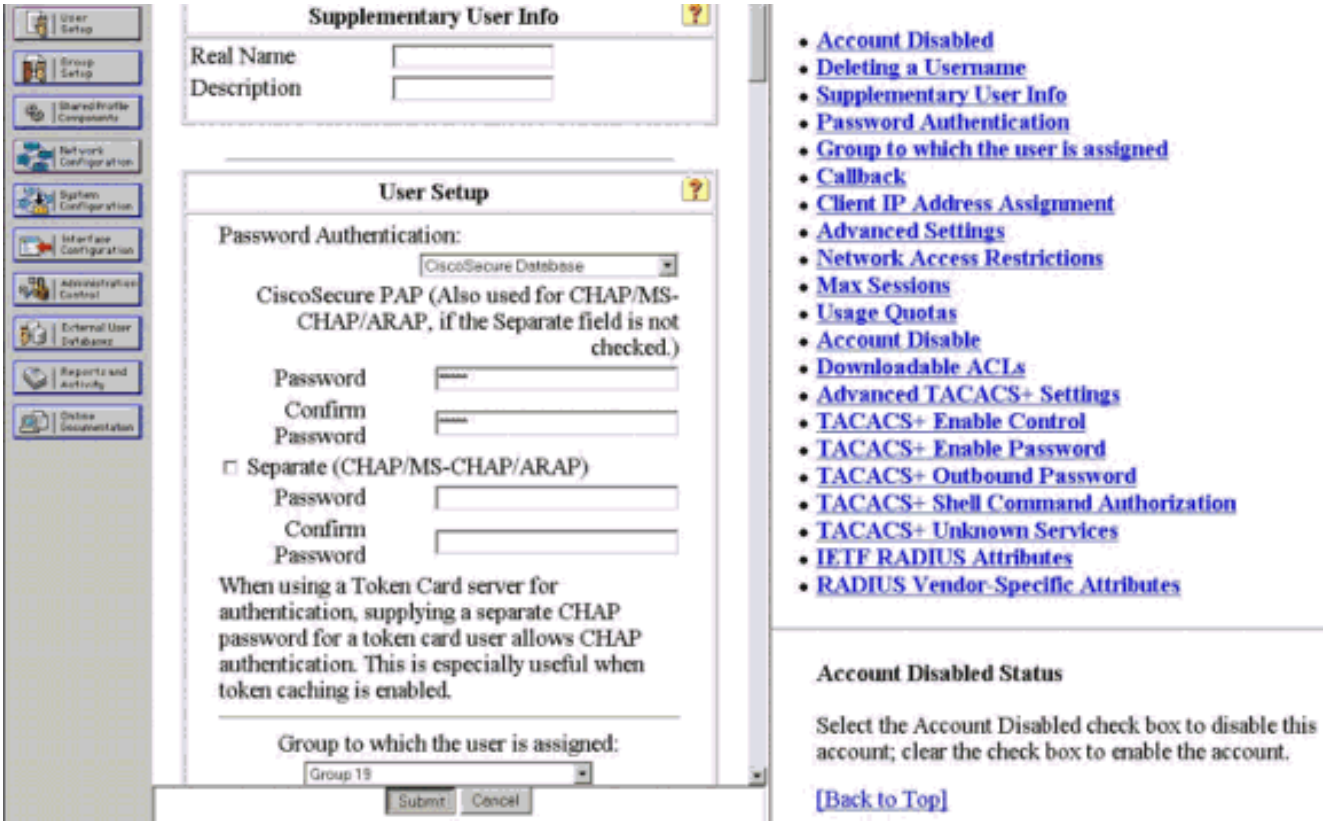


Dans le domaine d'adresse Internet de client d'AAA, écrivez un nom pour le routeur.Dans le champ IP Address de client d'AAA, entrez dans **10.38.50.51**.Dans la zone de tri, écrivez **cisco123** comme clé secrète partagée.De l'authentifier utilisant la liste déroulante, choisissez **TACACS+ (Cisco IOS)**, et cliquez sur Submit.

3. Dans le domaine d'utilisateur, écrivez le nom d'utilisateur pour l'utilisateur VPN dans la base de données Cisco Secure, et cliquez sur Add**/l'éditez**.Dans cet exemple, le nom d'utilisateur est
Cisco.



4. Sur la page suivante, entrez et confirmez le mot de passe pour l'utilisateur *Cisco*.Dans cet exemple, le mot de passe est également *Cisco*.

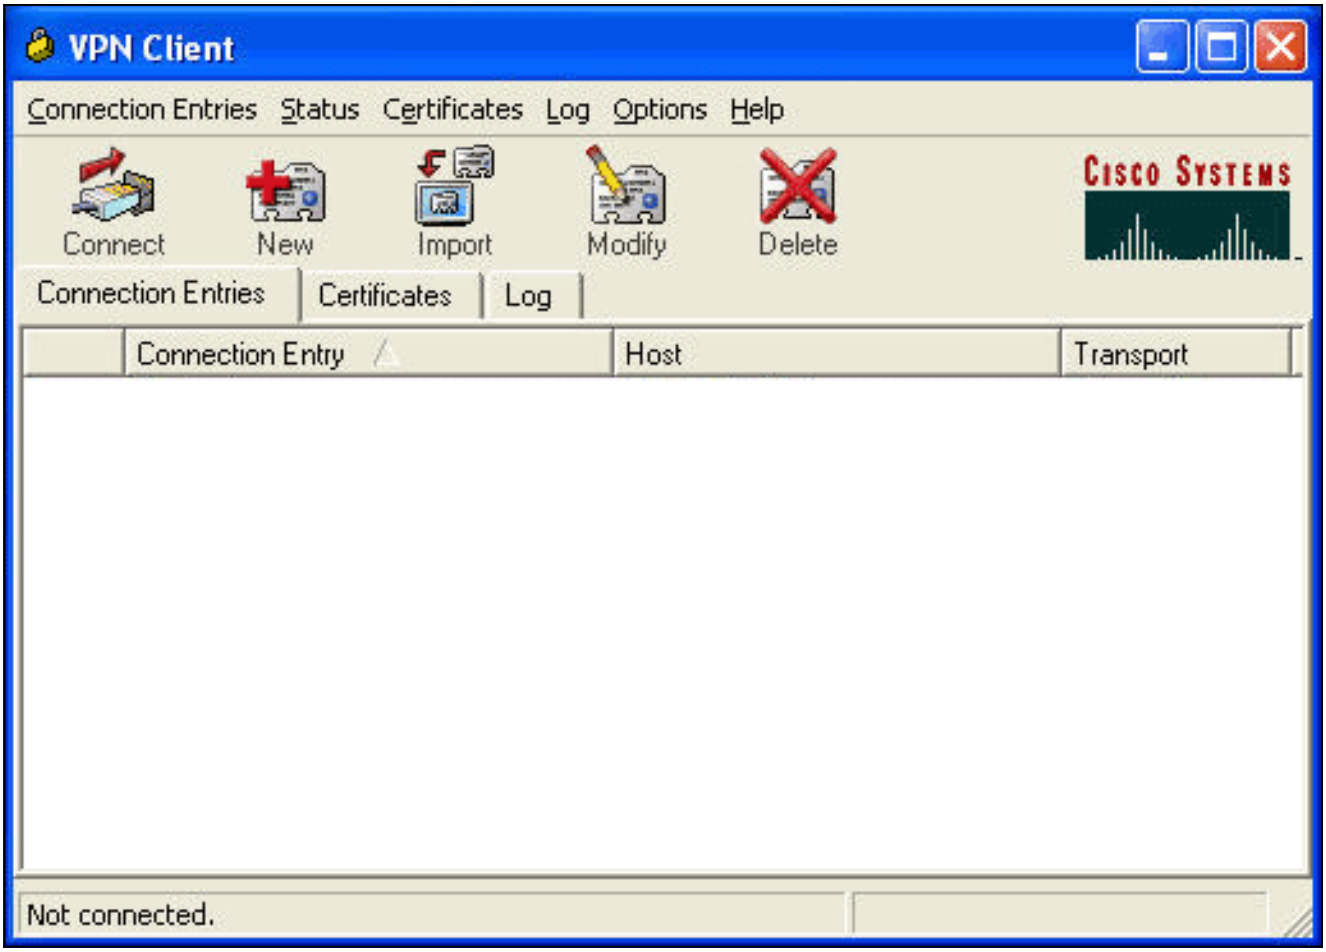


5. Si vous voulez tracer le compte utilisateur à un groupe, complet qui font un pas maintenant. Quand vous terminez, cliquez sur Submit.

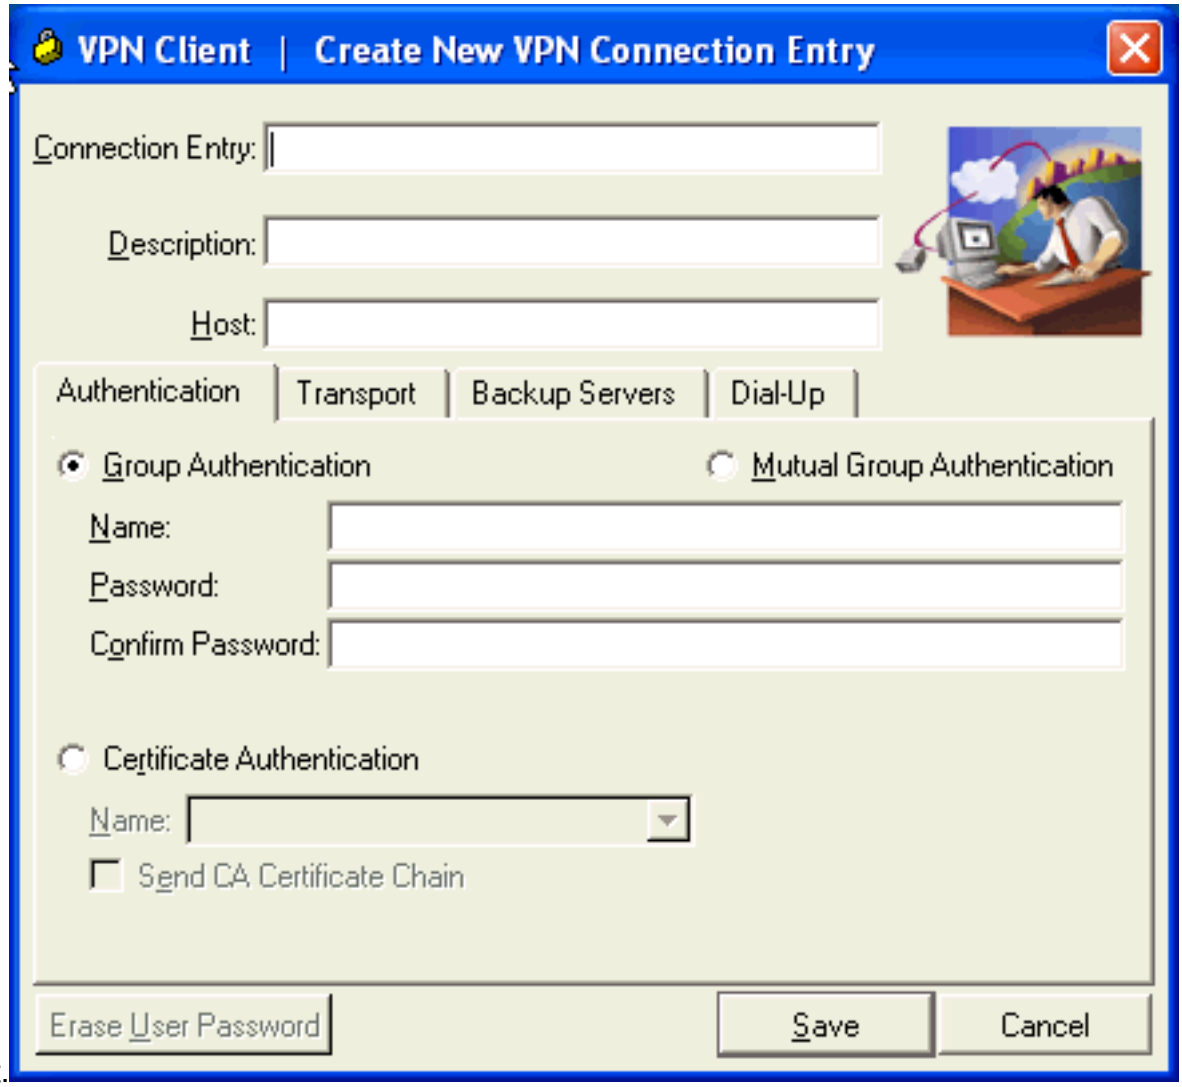
Client vpn 4.x

Afin de configurer le client vpn 4.x, terminez-vous ces étapes :

1. Lancez le client vpn, et cliquez sur New afin de créer une nouvelle connexion.

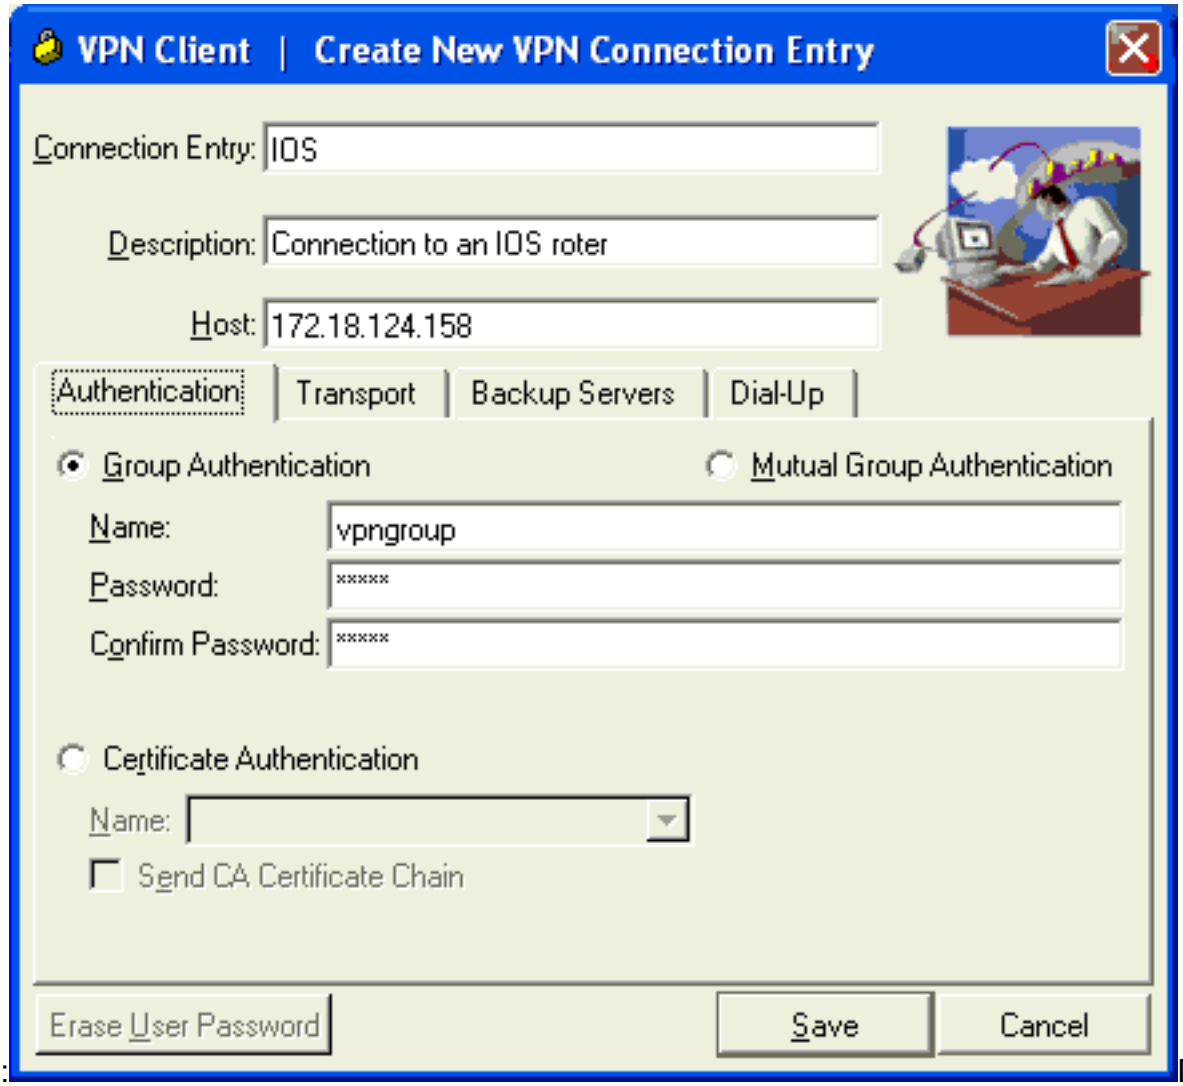


Le client vpn créent la nouvelle boîte de dialogue d'entrée de connexion VPN



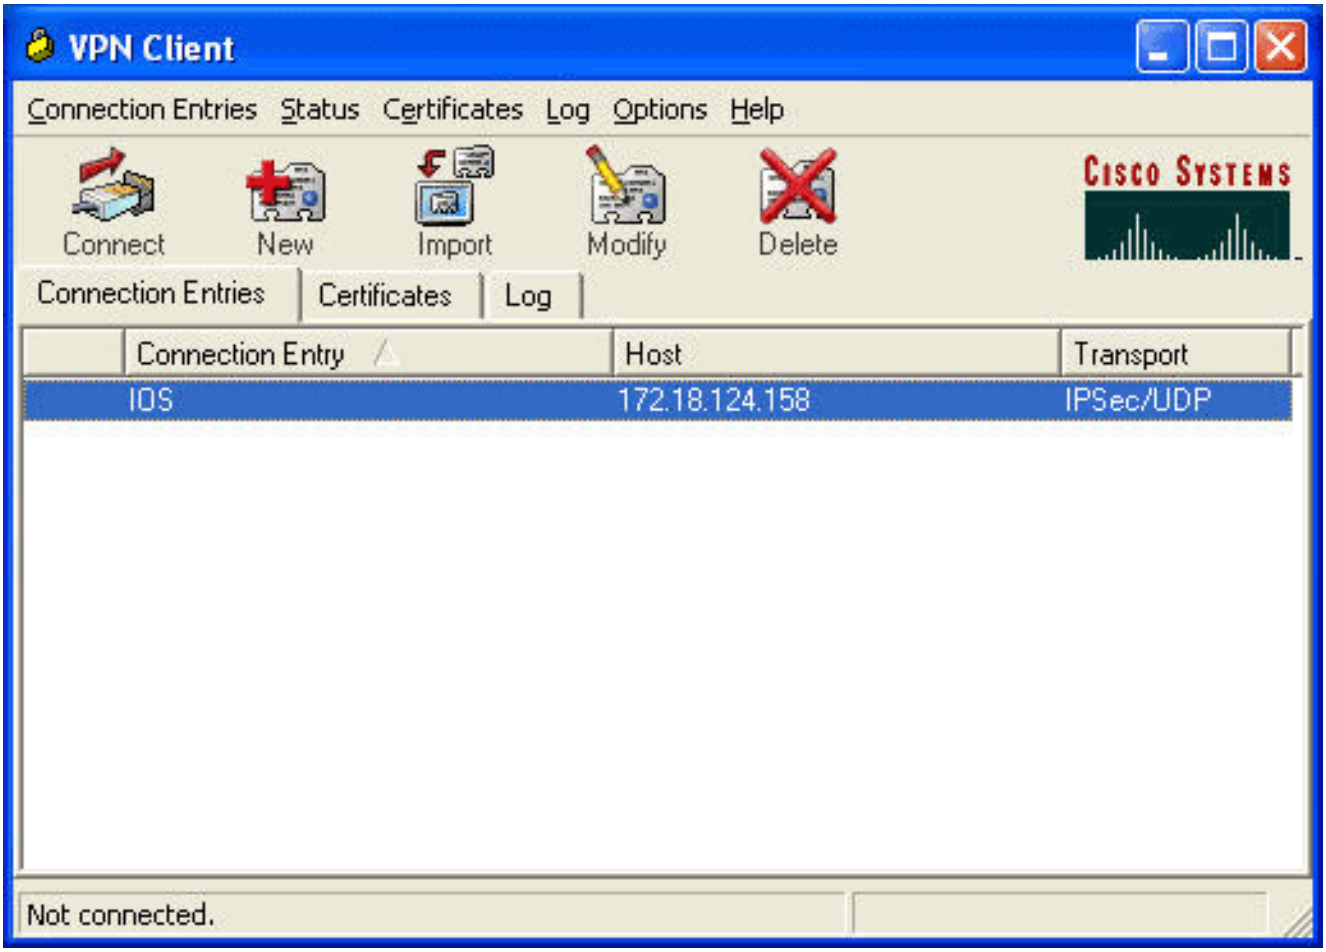
apparaît.

2. Dans la nouvelle boîte de dialogue d'entrée de connexion VPN de création, écrivez les informations de connexion suivant les indications de cette image



:Dans le domaine d'entrée de connexion, écrivez un nom pour la connexion.Dans la description et les champs Host, écrivez une description et l'adresse IP d'hôte pour l'entrée de connexion.Sur l'onglet d'authentification, cliquez sur la case d'option d'**authentification de groupe**, et entrez le nom et le mot de passe de l'utilisateur.**Sauvegarde de** clic afin de sauvegarder la connexion.

3. Dans la fenêtre de client vpn, sélectionnez l'entrée de connexion que vous avez créée, et le clic **se connectent** afin de se connecter au routeur.



4. Pendant qu'IPsec négocie, vous êtes incité pour un nom d'utilisateur et un mot de passe. Entrez un nom d'utilisateur et un mot de passe.La fenêtre affiche ces messages :« Profils de Sécurité de négociation. »« Votre lien est maintenant sécurisé. »

[transmission tunnel partagée]

Afin d'activer la Segmentation de tunnel pour les connexions VPN, veillez-vous pour configurer une liste de contrôle d'accès (ACL) sur le routeur. Dans cet exemple, la commande de la **liste d'accès 102** est associée avec le groupe pour des buts de partitionner la mise en tunnel, et le tunnel est formé aux réseaux 10.38.X.X /16 et 10.2.x.x. La circulation décryptée aux périphériques pas dans l'ACL 102 (par exemple, l'Internet).

```
access-list 102 permit ip 10.38.0.0 0.0.255.255 10.1.1.0 0.0.0.255
access-list 102 permit ip 10.2.0.0 0.0.255.255 10.1.1.0 0.0.0.255
```

Appliquez l'ACL sur les propriétés de groupe.

```
crypto isakmp client configuration group vpngroup
 key cisco123
 dns 10.2.1.10
 wins 10.2.1.20
 domain cisco.com
 pool ippool
 acl 102
```

Vérifiez

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre

configuration fonctionne correctement.

Certaines commandes **show** sont prises en charge par l'outil Output Interpreter Tool (clients **enregistrés** seulement). Cet outil te permet pour visualiser une analyse de sortie de commande show.

```

Dépannez

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

L'Outil Interpréteur de sortie (clients enregistrés uniquement) (OIT) prend en charge certaines commandes **show**. Employez l'OIT afin d'afficher une analyse de la sortie de la commande show.

Remarque: Référez-vous aux informations importantes sur les commandes de débogage avant d'utiliser les commandes de **débogage**.

- **debug crypto ipsec** — Affiche des informations de débogage sur les connexions IPSec.
- **debug crypto isakmp** — Les affichages mettent au point des informations sur des connexions

d'IPsec et affichent le premier ensemble d'attributs qui sont refusés en raison des incompatibilités sur les deux extrémités.

- **debug crypto engine** — Affiche des informations du moteur de chiffrement.
- **debug aaa authentication** — Affiche des informations sur l'authentification AAA/TACACS+.
- **autorisation de debug aaa** — Affiche des informations sur l'autorisation AAA/TACACS+.
- **debug tacacs** — Affiche des informations qui te permet pour dépanner la transmission entre le serveur TACACS+ et le routeur.
