Introduction

Ce document décrit les étapes requises pour activer le verrouillage AnyConnect et le masquage AnyConnect de la liste des programmes Add/Remove pour les ordinateurs Windows.

Contribué par Christian G. Hernandez R, ingénieur TAC Cisco.

Conditions préalables

Conditions requises

Cisco vous recommande de prendre connaissance des rubriques suivantes :

- Configuration du dispositif de sécurité adaptatif (ASA) Cisco
- Configuration de Cisco AnyConnect
- Connaissances de base Windows

Components Used

L'information fournie dans ce document est basée sur les versions logicielles et matérielles suivantes :

- Cisco ASA version 9.14.2.13
- Cisco Adaptive Security Device Manager (ASDM) version 7.14.1
- Cisco AnyConnect versions 4.9.04053 et 4.9.06037

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Si votre réseau est en ligne, assurez-vous de bien comprendre l'incidence possible des commandes.

Informations générales

Verrouillage AnyConnect pour Windows : Cisco recommande de limiter les droits des utilisateurs finaux sur le Client de mobilité sécurisée Cisco AnyConnect sur leur périphérique. Si l'utilisateur final justifie des droits supplémentaires, les installateurs peuvent fournir une fonctionnalité de verrouillage qui empêche les utilisateurs et les administrateurs locaux de désactiver ou d'arrêter les services AnyConnect.

Vous disposez de trois options différentes pour activer la fonction de verrouillage AnyConnect :

- 1. Installateurs MSI à partir du terminal d'invite de commandes Windows.
- 2. Option de verrouillage de l'assistant d'installation du package de prédéploiement AnyConnect.
- 3. ASDM Importer un exemple de verrouillage du programme d'installation transforme le fichier en ASA.

Masquer AnyConnect de la liste Ajout/Suppression de programmes pour Windows : Vous pouvez masquer les modules AnyConnect installés de la liste Ajout/Suppression de programmes du Panneau de configuration de Windows Désinstaller un programme.

Vous avez deux options pour activer la fonction Masquer AnyConnect de la liste des programmes Add/Remove :

- 1. Installateurs MSI à partir du terminal d'invite de commandes Windows.
- 2. ASDM Importe un exemple de fichier de transformation cache-addremove du programme d'installation vers l'ASA.

Configuration

Diagramme du réseau

Configurer le verrouillage AnyConnect

Installateurs MSI à partir du terminal d'invite de commandes Windows.

Configuration Steps

Étape 1. Téléchargez le fichier du package de prédéploiement AnyConnect pour Windows.

Étape 1.1 Accédez à la page de téléchargement du logiciel Cisco et téléchargez la version d'AnyConnect à installer sur l'ordinateur Windows.

Pour cet exemple, téléchargez le package de prédéploiement de Windows AnyConnect qui inclut chaque MSI pour la version 4.9.04053 (anyconnect-win-4.9.04053-preDeployment-k9.zip).

Étape 6. Installez les modules AnyConnect avec le fichier de transformation de verrouillage.

Étape 6.1 I Installez chacun des modules AnyConnect requis avec la prochaine commande du programme d'installation MSI qui pointe vers le fichier de module AnyConnect .msi et le fichier de transformation **_anyconnect-win-lockdown.mst** lockdown.

Note:La valeur LOCKDOWN définie sur « 1 » active la fonction de verrouillage du module AnyConnect à installer.

Note: Cisco vous recommande d'utiliser l'exemple de fichier de transformations fourni pour définir cette propriété, d'appliquer la transformation à chaque installateur MSI pour chaque module que vous voulez verrouiller. Vous pouvez télécharger l'exemple de transformation à partir de la page de téléchargement du logiciel Cisco AnyConnect Secure Mobility Client.

Note: Si vous déployez le client principal plus un ou plusieurs modules facultatifs, vous devez appliquer la propriété LOCKDOWN à chacun des installateurs. Cette opération n'est qu'une façon et ne peut pas être supprimée si vous ne réinstallez pas le produit.

Étape 6.2 Cet exemple installe le module **CORE et VPN** AnyConnect et le fichier de transformation **_anyconnect-win-lockdown.mst** lockdown, tous deux correspondent aux fichiers de la version 4.9.04053 d'AnyConnect.

msiexec -i anyconnect-win-4.9.04053-core-vpn-predeploy-k9.msi TRANSFORMS=_anyconnect-win-

msi TRANSFORMS=_anyconnect-win-lockdown.mst LOCKDOWN=1 -lvx* install.log_

Option de verrouillage d'AnyConnect package de prédéploiement assistant d'installation.

Configuration Steps

Étape 1. Téléchargez le fichier du package de prédéploiement Anyconnect pour Windows.

Étape 1.1 Accédez à la page de téléchargement du logiciel Cisco et téléchargez la version d'AnyConnect à installer sur l'ordinateur Windows.

Pour cet exemple, téléchargez le package de prédéploiement de Windows AnyConnect qui inclut les fichiers MSI individuels pour la version 4.9.04053 (anyconnect-win-4.9.04053-preDeployment-k9.zip).

Étape 3. Utilisez l'assistant d'installation d'AnyConnect.

Étape 3.1 Sélectionnez les modules AnyConnect que vous souhaitez installer dans les options affichées.

Pour cet exemple, sélectionnez les modules AnyConnect CORE & VPN et Umbrella Roaming Security.

```
Select the AnyConnect 4.9.04053 modules you wish to install:
Core & VPN
Start Before Login
Network Access Manager
VPN Posture (Hostscan)
AMP Enabler
Network Visibility Module
Cloud Web Security
Umbrella Roaming Security
ISE Posture
Select All
Diagnostic And Reporting Tool
Lock Down Component Services
```

Étape 4. Activez la fonction de verrouillage AnyConnect.

Étape 4.1 Afin d'activer la fonction de verrouillage pour les modules CORE & VPN et Umbrella Roaming Security, sélectionnez l'option Lock Down Component Services et poursuivez l'installation.

Étape 5. Confirmez l'installation des modules AnyConnect.

Étape 5.1 L'installation des modules AnyConnect est terminée à 100 % une fois le message suivant affiché.

Configurer la fonction Masquer AnyConnect de la liste des programmes Add/Remove

Installateurs MSI à partir du terminal d'invite de commandes Windows.

Configuration Steps

Étape 1. Téléchargez le fichier du package de prédéploiement AnyConnect pour Windows.

Étape 1.1 Accédez à la page de téléchargement du logiciel Cisco et téléchargez la version d'AnyConnect à installer sur l'ordinateur Windows.

Pour cet exemple, téléchargez le package de prédéploiement de Windows AnyConnect qui inclut chaque MSI pour la version 4.9.04053 (anyconnect-win-4.9.04053-preDeployment-k9.zip).

er (osers (edito (bomilioodis (birj	connect han storosos predepady kor		

Étape 6. Installez les modules AnyConnect à l'aide du fichier de transformation hide-addremove.

Étape 6.1 I Installez chacun des modules AnyConnect requis avec la commande MSI installer suivante qui pointe vers le fichier de module AnyConnect .msi et le fichier de transformation **_anyconnect-win-hide-addremove-display.mst**.

Remarque: La configuration de la valeur ARPSYSTEMCOMPONENT en tant que « 1 » active la fonction Masquer AnyConnect de la liste des programmes Add/Remove du module AnyConnect à installer.

Note: Cisco vous recommande d'utiliser l'exemple de fichier de transformations fourni pour définir cette propriété, d'appliquer la transformation à chaque programme d'installation MSI pour chaque module à masquer. Vous pouvez télécharger l'exemple de transformation à partir de la page de téléchargement du logiciel Cisco AnyConnect Secure Mobility Client.

Note: Si vous déployez le client principal plus un ou plusieurs modules facultatifs, vous devez appliquer la propriété HIDE-AnyConnect à chacun des installateurs. Cette opération n'est qu'une façon et ne peut pas être supprimée si vous ne réinstallez pas le produit.

Étape 6.2 Cet exemple montre comment installer le module **CORE et VPN** AnyConnect et le fichier de **transformation _anyconnect-win-hide-addremovedisplay.mst** correspondent aux fichiers de la version 4.9.04053 d'AnyConnect.

B Cisco AnyConnect Secure Mobility Client Setup

Configurez AnyConnect Lockdown et la commande Masquer AnyConnect de la liste des programmes Add/Remove avec ASDM

Cette procédure s'applique uniquement aux mises à jour de déploiement Web AnyConnect. Cet exemple présente une mise à jour de déploiement Web AnyConnect de la version 4.9.04053 à la version 4.9.06037.

Configuration Steps

Étape 1. Confirmez la version AnyConnect qui s'exécute sur l'ordinateur Windows.

Étape 1.1 Dans cet exemple, l'ordinateur Windows dispose de la version 4.9.04053 d'AnyConnect déjà installée pour les modules Core & VPN et Umbrella Roaming Security.

Étape 2. Téléchargez le fichier de package de déploiement de tête de réseau AnyConnect pour Windows.

Étape 2.1 Accédez à la page de téléchargement du logiciel Cisco et téléchargez la version du fichier de package de déploiement de tête de réseau AnyConnect à installer sur l'ordinateur Windows pour la mise à jour du déploiement Web.

Pour cet exemple, téléchargez le package de déploiement de tête de réseau Windows AnyConnect version 4.9.06037 (anyconnect-win-4.9.06037-webdéploiement-k9.pkg).

Note: Au moment où cet article a été écrit, le nom utilisé pour importer les fichiers de transformation d'échantillon doit avoir un trait de soulignement « _ » au début du nom, cela force l'exemple de transformation importé à fonctionner pour n'importe quel module AnyConnect. Si vous utilisez un autre nom sans trait de soulignement au début du nom, alors l'exemple transforme les travaux importés uniquement pour le module CORE & VPN Anyconnect (<u>CSCvy38427</u>).

Étape 9. Mise à jour automatique du déploiement Web AnyConnect.

Étape 9.1 Forcez la mise à jour automatique du déploiement Web AnyConnect pour les modules CORE & VPN et Umbrella Roaming Security.

lci, la configuration ASA AnyConnect est en place afin de permettre la mise à jour automatique des modules CORE & VPN et Umbrella Roaming Security :

webvpn enable outside anyconnect image disk0:/anyconnect-win-4.9.06037-webdeploy-k9.pkg 1 anyconnect enable tunnel-group-list enable group-policy ANYCONNECT_GP1 internal group-policy ANYCONNECT_GP1 attributes vpn-tunnel-protocol ssl-client ssl-clientless split-tunnel-policy tunnelspecified split-tunnel-network-list value SPLIT_TUNNEL1 webvpn anyconnect modules value umbrella tunnel-group MY_TUNNEL1 type remote-access tunnel-group MY_TUNNEL1 general-attributes address-pool VPN_POOL1 default-group-policy ANYCONNECT_GP1 tunnel-group MY_TUNNEL1 webvpnattributes group-alias SSL_TUNNEL1 enable

Étape 9.2 Démarrez une connexion à la tête de réseau ASA à partir du client AnyConnect qui exécute la version 4.9.04053 sur l'ordinateur Windows.

S Cisco Any	Connect Secure Mobility Client	_		\times
	VPN: Exiting. Upgrade in progress. 10.3.3.2	~	Connect	
	Roaming Security: Umbrella is inactive. Profile is missing.			
¢ ()				uluilu cisco
AnyConnect S	ecure Mobility Client Download	der		

The AnyConnect Downloader is installing AnyConnect Secure Mobility Client 4.9.06037. Please wait...

AnyConnect Secure Mobility Client Downloader

The AnyConnect Downloader is installing AnyConnect Umbrella Roaming Security 4.9.06037. Please wait...

Étape 9.3 Après cela, les modules AnyConnect Core & VPN et Umbrella Roaming Security sont mis à jour vers la version 4.9.06037 avec le verrouillage et le masquage des fonctionnalités de liste de programmes add/remove activés.

Vérification

Confirmer que la fonction de verrouillage est activée pour les modules AnyConnect installés

Étape 1. Ouvrez les services Windows (services.msc) comme suit.

Étape 2. Puis, rCliquez avec le bouton droit sur les services **CORE & VPN** et **Umbrella Roaming Security**.

Vous pouvez confirmer que la fonction de verrouillage est activée car vous n'êtes pas autorisé à démarrer, arrêter, mettre en pause, reprendre ou redémarrer les services pour ces modules AnyConnect.
