[Informations connexes](#)

## [Introduction](#)

Ce document présente un exemple de configuration permettant au HUB ASA d'autoriser les connexions des tunnels site à site et des IPsec Easy VPN à la même interface. L'IPsec entre un Cisco ASA 5520 et un serveur de sécurité adaptatif dédié (ASA) de la gamme Cisco 5505 utilise Easy VPN en mode d'extension du réseau (NEM).

## [Conditions préalables](#)

### [Conditions requises](#)

Aucune spécification déterminée n'est requise pour ce document.

### [Composants utilisés](#)

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Gamme ASA 5500 qui exécute la version 7.x et ultérieures (pivot)**Remarque:** La configuration du PIVOT ASA peut également être utilisée avec l'appliance de Sécurité PIX 515, 515E, 525, et 535 qui exécute la version 7.x et ultérieures
- Easy VPN ASA 5505 qui exécute la version 7.x et ultérieures

- Appliance de Sécurité PIX 515, 515E, 525, et 535 qui exécute la version 7.x et ultérieures

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

## Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

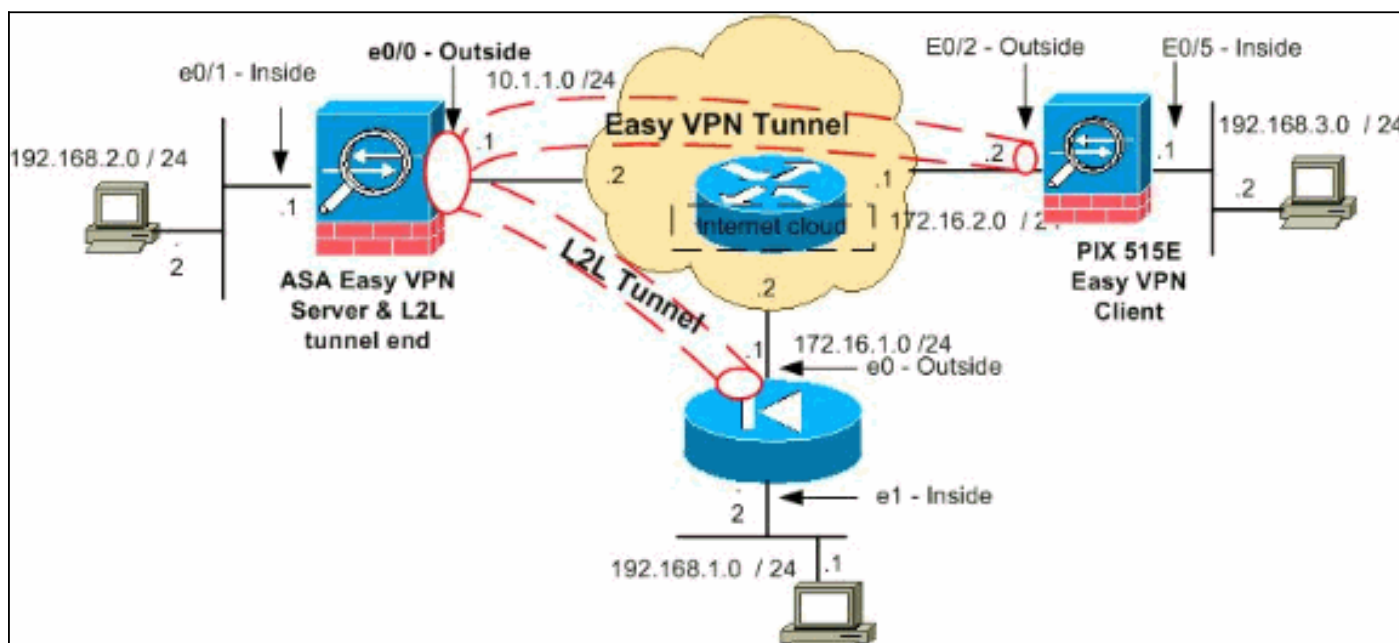

## Configurez

Cette section vous présente avec les informations que vous pouvez employer afin de configurer les caractéristiques ce document décrit.

**Remarque:** Utilisez l'[Outil de recherche de commande](#) (clients [enregistrés](#) seulement) pour obtenir plus d'informations sur les commandes utilisées dans cette section.

## Diagramme du réseau

Ce document utilise la configuration réseau suivante :

**Remarque:** Les schémas d'adressage d'IP utilisés dans cette configuration ne sont pas légalement routables sur Internet. Il s'agit d'adresses [RFC 1918](#) qui sont utilisées dans un environnement de laboratoire.

## Configurations

Ce document utilise les configurations suivantes :

- [HUB ASA](#)

- [Client ASA 5505 d'Easy VPN](#)
- [PIX](#)

## Vérifiez

Cette section fournit des informations qui vous permettront de vérifier que votre configuration fonctionne correctement.

L'[Outil Interpréteur de sortie](#) (clients [enregistrés](#) uniquement) (OIT) prend en charge certaines commandes **show**. Utilisez l'OIT pour afficher une analyse de la sortie de la commande **show**.

- **show crypto isakmp sa** - Affiche toutes les associations de sécurité actuelles d'IKE (SA) sur un pair.
- **show crypto ipsec sa** — Affiche tout le courant SAS.

Cette section montre des configurations de vérification d'exemple pour :

- [HUB ASA](#)
- [Client ASA 5505 d'Easy VPN](#)
- [PIX](#)

## Dépannez

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

### Dépannage des commandes

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) ([clients enregistrés](#) uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

**Remarque:** Reportez-vous à [Informations importantes sur les commandes de débogage](#) avant d'émettre des commandes **debug**.

Commandes de la question PIX dans le mode de configuration :

- **clear crypto isakmp SA** — Efface le Phase 1 SAS
- **clear crypto ipsec sa** — Efface le Phase 2 SAS

Les commandes de **débogage** pour des tunnels VPN :

- **debug crypto isakmp SA** — Négociations de SA ISAKMP de debugs
- **debug crypto ipsec SA** — Négociations d'IPSec SA de debugs
