Introduction

Ce document décrit comment configurer et dépanner la caractéristique que la version 2.0 du Logiciel Cisco Identity Services Engine (ISE) prend en charge le protocole d'échange de TrustSec SGT (SXP) dans une listeuse et un mode haut-parleur.

Conditions préalables

Conditions requises

Cisco vous recommande de prendre connaissance des rubriques suivantes :

- Configuration de commutateur Cisco Catalyst
- Services du Cisco Identity Services Engine (ISE) et du TrustSec

[Composants utilisés](#)

Les informations contenues dans ce document sont basées sur les versions de logiciel suivantes :

- Commutateur de Cisco Catalyst 3850 avec le logiciel IOS-XE 3.7.2 et plus tard
- Cisco ISE, version 2.0 et ultérieures

Configurez

[Diagramme du réseau](#)

La circulation

- 3850-2 est l'authentificateur de 802.1x pour 10.0.0.100 - Le groupe de sécurité de renvoi ISE étiquettent (SGT) 16 (service informatique) pour l'authentification réussie
- 3850-2 le commutateur apprend l'IP address de suppliant (périphérique d'IP dépistant) et envoie les informations de mappage (IP-SGT) à ISE utilisant le protocole SXP
- 3850-1 est l'authentificateur de 802.1x pour 10.0.0.1 - ISE renvoyant SGT étiquettent 9 (vente) pour l'authentification réussie
- 3850-1 reçoit les informations de mappage SXP d'ISE (10.0.0.100 est SGT 16), télécharge la stratégie d'ISE
- Le trafic envoyé de 10.0.0.100 à 10.0.0.1 est expédié par 3850-2 (aucune stratégies spécifiques téléchargées) à 3850-1 qui est autorisé frappant le service informatique de stratégie (16) - > la vente (9)

Veillez noter le lien entre les Commutateurs n'est pas des cts joignent - ainsi tous les mappages distants sur les Commutateurs sont installés par l'intermédiaire du protocole SXP.

Remarque: Non tous les Commutateurs ont le matériel laissant être programmé par l'intermédiaire de la stratégie reçue d'ISE basé sur les mappages reçus SXP. Pour la vérification toujours référez-vous s'il vous plaît à la plus défunte matrice de compatibilité de TrustSec ou contactez Cisco Systems.

Configurations

Pour des détails concernant la configuration de base de TrustSec, référez-vous aux articles dans la section de références.

Commutez 3850-1

Le commutateur termine la session de 802.1x avec l'affectation SGT et également comme haut-parleur SXP vers ISE.

```
aaa authentication dot1x default group ISE_mgarcarz
aaa authorization network default group ISE_mgarcarz
aaa authorization network ISE_mgarcarz group ISE_mgarcarz
aaa accounting dot1x default start-stop group ISE_mgarcarz
aaa accounting update newinfo
```

```
radius server ISE_mgarcarz
address ipv4 10.48.17.235 auth-port 1645 acct-port 1646
pac key cisco
```

```
aaa group server radius ISE_mgarcarz
server name ISE_mgarcarz
```

```
interface GigabitEthernet1/0/3
switchport mode trunk
```

```
interface GigabitEthernet1/0/5
description mgarcarz
switchport access vlan 100
switchport mode access

cts role-based enforcement vlan-list 1-4094
cts sxp enable
cts sxp default password cisco
cts sxp connection peer 10.48.17.235 password default mode local speaker hold-time 0
```

ISE

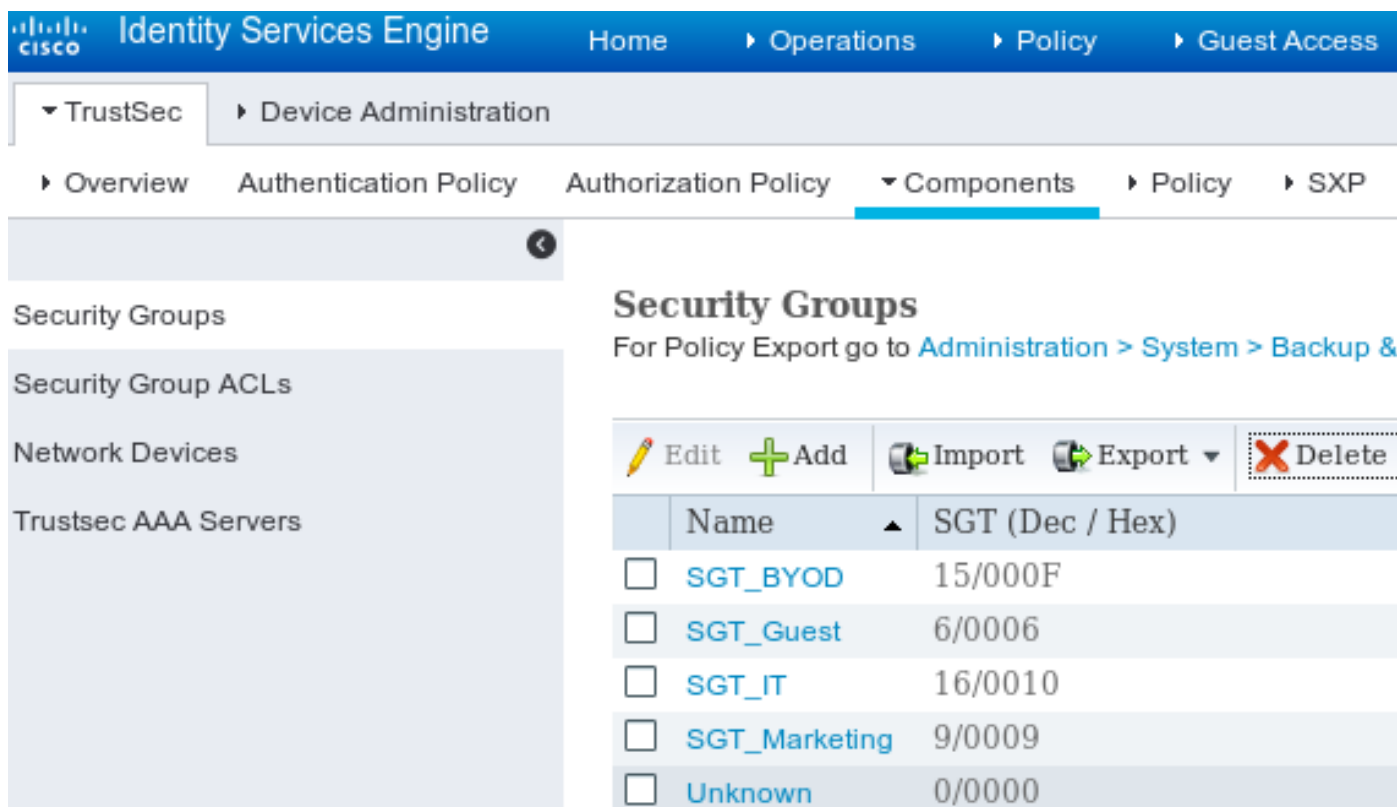

Étape 1. Périphériques d'accès au réseau

Naviguez vers les **centres de travail > la gestion > les ressources de réseau de périphérique**, ajoutez les Commutateurs avec le secret cisco et le mot de passe partagés Krakow123 de TrustSec.

Étape 2. Groupes de sécurité

Afin d'ajouter SGT pour le service informatique et le marketing, naviguez vers des **centres de travail > TrustSec > des composants > des groupes de sécurité**.

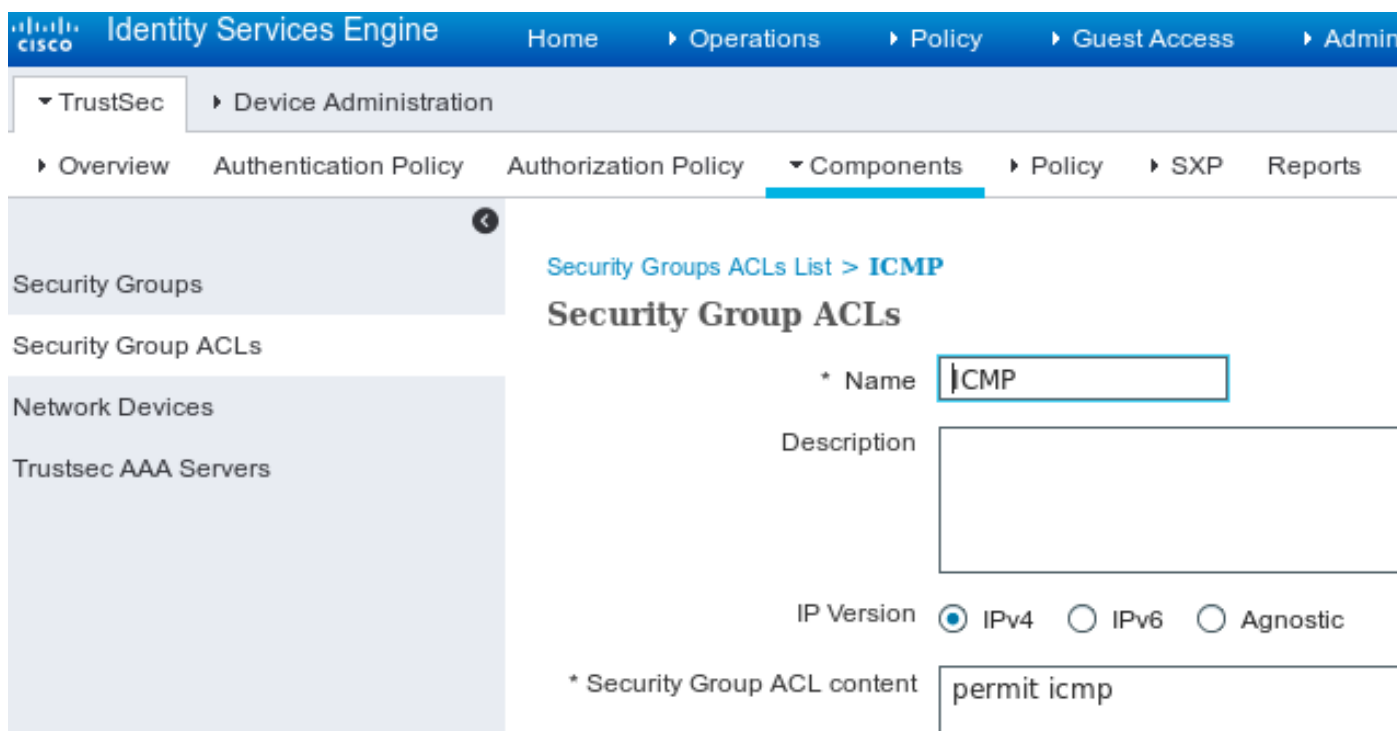

The screenshot shows the Cisco Identity Services Engine (ISE) interface. The top navigation bar includes "Identity Services Engine" and "Home", "Operations", "Policy", and "Guest Access". The left sidebar shows "TrustSec" and "Device Administration". The main content area is titled "Security Groups" and includes a sub-header "For Policy Export go to Administration > System > Backup &". Below this, there are buttons for "Edit", "Add", "Import", "Export", and "Delete". A table lists the following Security Groups:

	Name	SGT (Dec / Hex)
<input type="checkbox"/>	SGT_BYOD	15/000F
<input type="checkbox"/>	SGT_Guest	6/0006
<input type="checkbox"/>	SGT_IT	16/0010
<input type="checkbox"/>	SGT_Marketing	9/0009
<input type="checkbox"/>	Unknown	0/0000

Étape 3. ACL de groupes de sécurité

Afin d'ajouter l'ACL de groupe de sécurité, naviguez vers des **centres de travail > TrustSec > des composants > groupe de sécurité ACLs**.

The screenshot shows the Cisco Identity Services Engine (ISE) interface. The top navigation bar includes "Identity Services Engine" and "Home", "Operations", "Policy", "Guest Access", and "Admin". The left sidebar shows "TrustSec" and "Device Administration". The main content area is titled "Security Groups ACLs List > ICMP" and "Security Group ACLs". Below this, there are fields for "Name" (ICMP), "Description", "IP Version" (IPv4, IPv6, Agnostic), and "Security Group ACL content" (permit icmp).

Permettez seulement le trafic d'ICMP.

Étape 4. Stratégie de TrustSec

Afin d'ajouter la stratégie contrôlant le trafic du service informatique à la commercialisation, naviguez vers des **centres de travail > TrustSec > des composants > stratégie > matrice de sortie**.

The screenshot shows the 'Egress Policy (Matrix View)' configuration in Cisco ISE. The left sidebar contains navigation options: Matrix, Source Tree, Destination Tree, Network Device Authorization, and Security Group Mappings. The main area displays a matrix with Source SGTs on the vertical axis and Destination SGTs on the horizontal axis. The source SGTs are SGT_BYOD (15/000F), SGT_Guest (6/0006), and SGT_IT (16/0010). The destination SGTs are SGT_BYOD (15/000F), SGT_Guest (6/0006), SGT_IT (16/0010), and SGT_Marketing (8/0008). A blue cell in the bottom right corner indicates 'ICMP, Deny IP'.

Placez le crochet par défaut d'entrée toute la règle de refuser tout le trafic.

Étape 5. Périphériques SXP

Afin de configurer l'auditeur et l'orateur SXP pour les Commutateurs correspondants, naviguez vers des **centres de travail > TrustSec > des périphériques SXP**.

The screenshot shows the 'SXP Devices' configuration page in Cisco ISE. The left sidebar contains navigation options: SXP Devices, Static SXP Mappings, and All SXP Mappings. The main area displays a table of SXP devices. The table has columns for Name, IP Address, Status, Role(s), Password Type, Negotiated Version, Ver., Connected To, Duration, and VPN. Two devices are listed: KSEC-3850-1-... (10.62.148.108) and KSEC-3850-2-... (10.62.148.109).

Mot de passe cisco d'utilisation (ou tout autre configuré pour le sxp sur le commutateur).

Étape 6. Stratégie d'autorisation

Assurez-vous que stratégie d'autorisation renvoie les balises correctes SGT pour chaque utilisateur, naviguez vers la **stratégie > l'autorisation**.

The screenshot shows the 'Authorization Policy' configuration page in Cisco ISE. The left sidebar contains navigation options: Authentication, Authorization, Profiling, Posture, Client Provisioning, and Policy Elements. The main area displays a table of authorization rules. The table has columns for Status, Rule Name, Conditions, and Permissions. Two rules are listed: IT and Marketing.

Vérifiez

Étape 1. Commutez joindre ISE pour des cts

De chaque commutateur fournissez les qualifications de TrustSec (configurées dans ISE/Step1) pour obtenir le PAC.

```
KSEC-3850-2#cts credentials id KSEC-3850-2 password Krakow123
```

CTS device ID and password have been inserted in the local keystore. Please make sure that the same ID and password are configured in the server database.

Assurez-vous que le PAC est téléchargé.

```
KSEC-3850-2#show cts pacs
```

```

Et présentez tous les mappages par l'intermédiaire du GUI (mappage y compris pour 10.0.0.100 a reçu de 3850-2), suivant les indications de cette image.

The screenshot shows the Cisco Identity Services Engine (ISE) GUI. The navigation menu includes 'TrustSec' and 'Device Administration'. The main content area displays 'All SXP Mappings' with a table of IP addresses, SGTs, and learned sources.

IP Address	SGT	Learned From	Learned By
10.0.0.100/32	SGT_IT(16/0010)	192.168.77.2	SXP
192.168.1.203/32	SGT_IT(16/0010)	10.48.17.235,10.48.67.250	Session

192.168.77.2 est l'identifiant de la connexion SXP sur 3850-2 (l'IP address le plus élevé défini).

```
KSEC-3850-2#show ip interface brief
```

```

Interface                IP-Address      OK? Method Status      Protocol
GigabitEthernet0/0      unassigned      YES unset   down        down
Vlan1                    unassigned      YES NVRAM   administratively down down
Vlan100                  10.0.0.2        YES manual   up          up
Vlan480                  10.62.148.109  YES NVRAM   up          up
Vlan613                  unassigned      YES NVRAM   administratively down down
Vlan666                  192.168.66.2   YES NVRAM   down        down
Vlan777                  192.168.77.2   YES NVRAM   down        down

```

Étape 4. Auditeur SXP

Alors ISE renvoie ce mappage à 3850-1, commutateur met au point.

```

```

Wireshark utilise le décodeur standard SMPP. Pour vérifier la charge utile :

10 (SGT = 16) pour des Cb "c0 a8 01 » (192.168.1.203)

10 (SGT = 16) pour "0a 00 00 64" (10.0.0.100)

3850-1 installe tous les mappages reçus d'ISE.

```
KSEC-3850-1# show cts sxp sgt-map
SXP Node ID(generated):0xC0A84D01(192.168.77.1)
IP-SGT Mappings as follows:
IPv4,SGT: <10.0.0.100 , 16:SGT_IT>
source : SXP;
Peer IP : 10.48.17.235;
Ins Num : 2;
Status : Active;
Seq Num : 439
Peer Seq: 0A3011EB,C0A84D02,
IPv4,SGT: <192.168.1.203 , 16:SGT_IT>
source : SXP;
Peer IP : 10.48.17.235;
Ins Num : 6;
Status : Active;
Seq Num : 21
Peer Seq: 0A3011EB,
Total number of IP-SGT Mappings: 2
```

```
KSEC-3850-1# show cts role-based sgt-map all
Active IPv4-SGT Bindings Information
```

IP Address	SGT	Source
10.0.0.100	16	SXP
192.168.1.203	16	SXP

```
IP-SGT Active Bindings Summary
```

```
=====  
Total number of CLI bindings = 1  
Total number of SXP bindings = 2  
Total number of active bindings = 3
```

Étape 5. Téléchargement et application de stratégie

Téléchargez la stratégie correcte d'ISE. (Ligne de matrice avec SGT 16)

```
KSEC-3850-1#show cts role-based permissions
IPv4 Role-based permissions default:
  Permit IP-00
IPv4 Role-based permissions from group 16:SGT_IT to group 9:SGT_Marketing:
  ICMP-10
  Deny IP-00
```

```
RBACL Monitor All for Dynamic Policies : FALSE
RBACL Monitor All for Configured Policies : FALSE
```

On permet le trafic d'ICMP de 10.0.0.100 (service informatique SGT) à 10.0.0.1 (vente SGT), augmentation de compteurs.

```
KSEC-3850-1#show cts role-based counters from 16
Role-based IPv4 counters
#Hardware counters are not available for specific SGT/DGT
#Use this command without arguments to see hardware counters
From   To     SW-Denied   SW-Permitted
16     9      0           0           11          0
```

En essayant d'utiliser la connexion de telnet échoue, des compteurs de baisse augmentent.

```
KSEC-3850-1#show cts role-based counters from 16
```

Role-based IPv4 counters

#Hardware counters are not available for specific SGT/DGT

#Use this command without arguments to see hardware counters

```
From    To      SW-Denied    SW-Permitted
16      9       3            0            11           0
```

Notez s'il vous plaît là n'est aucune stratégie spécifique sur 3850-2, tout le trafic est laissé.

```
KSEC-3850-2#show cts role-based permissions
```

```
IPv4 Role-based permissions default:
```

```
    Permit IP-00
```

```
RBACL Monitor All for Dynamic Policies : FALSE
```

```
RBACL Monitor All for Configured Policies : FALSE
```

Après avoir modifié l'ACL SG sur ISE, ajouter le TCP d'autorisation, et les cts régénèrent la stratégie sur 3850-1 - alors le trafic de telnet est reçu.

Son possible aussi d'utiliser le cache local de Technologie Flexible NetFlow (à partir d'IOS-XE 3.7.2 c'est SGT averti) pour confirmer le comportement.

```
KSEC-3850-2#show cts role-based permissions
```

```
IPv4 Role-based permissions default:
```

```
    Permit IP-00
```

```
RBACL Monitor All for Dynamic Policies : FALSE
```

```
RBACL Monitor All for Configured Policies : FALSE
```

Le trafic d'expositions de résultats reçu de 3850-2. La source SGT est 0 parce que le trafic reçu n'a aucun SGT (aucun lien de cts), mais la balise de groupe de destination est automatiquement remplacée basée sur la table de mappage locale.

```
KSEC-3850-1#show flow monitor F_MON cache
```

```
Cache type:                Normal (Platform cache)
Cache size:                Unknown
Current entries:          6
```

```
Flows added:              1978
Flows aged:               1972
- Active timeout          ( 1800 secs)    30
- Inactive timeout        (   15 secs)    1942
```

IPV4 SRC ADDR	IPV4 DST ADDR	TRNS SRC PORT	TRNS DST PORT	FLOW DIRN	FLOW CTS	SRC GROUP
TAG	FLOW CTS DST GROUP	TAG IP PROT	pkts long			
150.1.7.1	224.0.0.10	0	0	Output		
0	0	88	57			
10.62.148.1	224.0.0.13	0	8192	Output		
0	0	103	0			
7.7.4.1	224.0.0.10	0	0	Output		
0	0	88	56			
10.0.0.1	10.0.0.100	0	0	Output		
0	0	1	1388			
150.1.7.105	224.0.0.5	0	0	Output		
0	0	89	24			
150.1.7.1	224.0.0.5	0	0	Output		
0	0	89	24			
10.0.0.100	10.0.0.1	0	2048	Input		
0	9	1	1388			

Le cache local de NetFlow peut être utilisé pour confirmer le trafic reçu. Si ce trafic est reçu ou abandonné, cela est confirmé par des compteurs de cts présentés avant.

ISE laisse également générer des états d'attache et de connexion SXP, suivant les indications de cette image.
