[Introduction](#)

Ce document fournit à une configuration d'échantillon pour la configuration des tunnels d'IPsec utilisant des profils d'ISAKMP sur un routeur concentrateur deux sites distants PIX. Un site distant PIX se compose de l'entre réseaux locaux et l'autre se compose de la configuration de mode d'Accès à distance d'EzVPN. Le routeur concentrateur est configuré pour l'authentification locale pour les tunnels d'EzVPN, et l'authentification de RAYON pour le client vpn de logiciel.

[Conditions préalables](#)

Conditions requises

Aucune spécification déterminée n'est requise pour ce document.

Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Appliance 501 de pare-feu Cisco Secure PIX qui fonctionne 6.3(3)
- Routeur 1750 de Cisco qui exécute la version de logiciel 12.3.9a de Cisco IOS®
- Appliance 506 de pare-feu Cisco Secure PIX qui fonctionne 6.3(3)
- Client VPN Cisco qui exécute 4.0 (version) (l'authentification de l'utilisateur utilisant le serveur de RAYON)

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configurez

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque: Pour obtenir des informations supplémentaires sur les commandes utilisées dans ce document, utilisez l'[outil de recherche de commande](#) (clients [enregistrés](#) uniquement).

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement. Référez-vous au [dépannage de sécurité IP - Comprenant et utilisant des commandes de débogage](#) pour la vérification/dépannage supplémentaires. Si vous rencontrez n'importe quelles questions ou erreurs de client vpn, référez-vous à l'[Outil VPN Client GUI Error Lookup](#).

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) ([clients enregistrés](#) uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

- **show crypto isakmp profile** — Affiche tous les profils d'ISAKMP et leurs configurations sur le routeur.
- **show crypto isakmp key** — Affiche tous les keyrings et leurs clés pré-partagées. Utilisez cette commande de vérifier votre configuration de crypto keyring sur le routeur.
- **debug crypto ipsec** — Affiche des informations sur des négociations d'IPsec SA sur le routeur.
- **debug crypto isakmp** — Affiche le SA ISAKMP qui est construit et les attributs d'IPsec qui sont négociés. Pendant la négociation de SA ISAKMP, le PIX pourrait jeter plusieurs propositions en tant que « non acceptable » avant qu'une soit reçue. Une fois que le SA ISAKMP est convenu, les attributs d'IPsec sont négociés.
