Introduction

Cette section de la [télécopie](#) principale [au-dessus du](#) document [T.37 d'enregistrement et transfert de télécopie IP](#) se concentre sur faxer d'enregistrement et transfert d'OffRamp. L'OffRamp est T.37 le processus par lequel une passerelle reçoit un email, les conversions qui envoient à une télécopie, et puis l'envoi par un port vocal.

Ce document contient la configuration nécessaire requise pour obtenir la caractéristique opérationnelle. La section de [dépannage](#) va au-dessus des commandes de **débogage** utiles et comment interpréter leur signification. La topologie utilisée est affichée dans la section de [schéma de réseau](#).

Conditions préalables

Conditions requises

Les conditions requises spécifiques pour ce document sont spécifiées dans la section principale, [télécopie au-dessus de télécopie T.37 d'enregistrement et transfert IP](#).

Composants utilisés

Ce document n'est pas limité à des versions de matériel et de logiciel spécifiques.

Les informations contenues dans ce document ont été créées à partir des périphériques d'un environnement de laboratoire spécifique. Tous les périphériques utilisés dans ce document ont

démarré avec une configuration effacée (par défaut). Si votre réseau est opérationnel, assurez-vous que vous comprenez l'effet potentiel de toute commande.

Conventions

Pour plus d'informations sur les conventions de documents, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configuration

Dans les sections ci-dessous, d'abord les paramètres de configuration du logiciel de Cisco IOS® concernant la configuration de télécopie d'OffRamp sont expliqués, et alors la configuration 5300 est affichée avec d'autres notes clarifiant les fonctions d'importantes commandes.

Diagramme du réseau

Ce document utilise la configuration réseau indiquée dans le diagramme suivant :

Paramètres de configuration

Sont ci-dessous les commandes communes utilisées dans la configuration d'OffRamp de la passerelle :

Paramètres obligatoires :	
télécopie-messagerie de fax interface-type	D'enable la fonctionnalité T.37 pour la passerelle. Exige une réinitialisation sur les 5300, mais pas les 5350 ou les 5400.
mta receive aliases	Définit une adresse Internet à utiliser comme pseudonyme pour la passerelle d'OffRamp. Jusqu'à dix peuvent être définis. La passerelle reçoit la messagerie entrante si l'adresse Internet de destination de la messagerie d'arrivée apparie un pseudonyme.
mta receive maximum-recipients	Définit le nombre maximal de destinataires simultanés de Protocole SMTP (Simple Mail Transfer Protocol) manipulés par cette passerelle.
télécopie entrante de	La commande d' offramp d'application se rapporte à la commande de <i>nom de call</i>

l'information -type de numéro appelé d'offramp d'application de mmoip de nombre de dial-peer voice	<i>application voice</i> . Le nom apparie l'offramp. La commande entrante de numéro appelé est utilisée d'apparier ce pair de messagerie multimédias sur IP (MMoIP) d'arrivée. La commande de télécopie de l'information-type identifie des appels associés avec ce pair en tant qu'étant des transmissions de télécopie.
emplacement de nom de call application voice	Définit un nom global pour l'application (offramp, dans ce cas) et son emplacement (sur un serveur externe TFTP, dans ce cas).
Paramètres optionnels :	
fax send transmitting-subscriber	Définit l'identification d'abonné de transmission (TSI).
fax send right-header de fax send left-header de fax send center-header	Les options sont : { \$a\$ \$d\$ \$p\$ \$s\$ \$t\$ chaîne} <ul style="list-style-type: none"> • \$a\$ — Date • \$d\$ — Adresse de destination • \$s\$ — Adresse d'expéditeur • \$p\$ — Compte de page • \$t\$ — Délai de transmission Utilisez l'argument de <i>chaîne</i> dans cette commande d'insérer une chaîne de texte personnalisée.
la télécopie envoient le coverpage	Les options sont : <ul style="list-style-type: none"> • enable — Permet à la passerelle d'OffRamp d'envoyer une feuille protectrice. • commentaire — Adds a personnalisé des commentaires à la feuille protectrice. • exposition-petit groupe — Imprime l'en-tête entière d'email en tant qu'élément de la feuille protectrice.
mta receive generate-mdn	Permet à la passerelle d'OffRamp de répondre aux demandes de notification de disposition de message (MDN).

Configuration d'OffRamp

Des emails ont été envoyés d'Outlook Express à la passerelle d'OffRamp (vdtl-5350-8a) et ont été envoyés à un certain nombre de destinations.

[Dépannez](#)

Ce document est une suite [T.37 de faxer d'OnRamp](#). La plupart des références de commandes répertoriées dans ce document sont également utilisées pour faxer d'OffRamp. Référez-vous à ce [pour en savoir plus de document](#).

[Debugs défectueux](#)

Ce sont les logs de sortie de commande de **débogage d'un** appel infructueux de télécopie. Cette commande de **débogage** a été émise sur une passerelle de Cisco 5350, qui agit en tant que passerelle de télécopie d'OffRamp pour le réseau dans cet exemple.
