[Introduzione](#)

Questo documento descrive la configurazione di un client hardware Cisco VPN 3002 che si connette a un router Cisco IOS® in modalità di estensione della rete con software Cisco IOS versione 12.2(8)T e funzionalità server Easy VPN (EzVPN). Questo consente a Cisco IOS di terminare i tunnel VPN provenienti da client EzVPN, quali client VPN, PIX e client Cisco IOS EzVPN. Quando il client VPN si connette a un headend, è necessario disporre di un minimo di cinque associazioni di protezione (SA), ovvero un IKE (Internet Key Exchange) più quattro IPsec. Ciò è dovuto al fatto che quando il client VPN si connette all'headend, negozia sempre due SA IPsec con un indirizzo IP dell'interfaccia pubblica di un concentratore e l'indirizzo IP dell'headend. Questo tunnel viene usato a scopo di gestione per connettersi al client VPN dall'headend tramite la GUI o l'interfaccia della riga di comando (CLI). Questa operazione viene eseguita automaticamente. Gli altri due sono per il traffico di dati tra le reti dietro il client VPN e il router Cisco IOS.

Fare riferimento a [Configurazione del client hardware VPN 3002 su PIX 6.x](#) per ulteriori informazioni sullo stesso scenario in cui il server VPN è il PIX 6.x.

Per ulteriori informazioni sullo stesso scenario in cui il server VPN è il concentratore Cisco VPN serie 3000, fare riferimento a [Configurazione di una connessione tra il client hardware VPN 3002 e un concentratore VPN 3000 in modalità di estensione di rete](#).

Prerequisiti

Requisiti

Nessun requisito specifico previsto per questo documento.

Componenti usati

Le informazioni fornite in questo documento si basano sulle seguenti versioni software e hardware:

- Cisco VPN 3002 Hardware Client
- Software Cisco IOS release 12.2(8)T e successive

Le informazioni discusse in questo documento fanno riferimento a dispositivi usati in uno specifico ambiente di emulazione. Su tutti i dispositivi menzionati nel documento la configurazione è stata ripristinata ai valori predefiniti. Se la rete è operativa, valutare attentamente eventuali conseguenze derivanti dall'uso dei comandi.

Convenzioni

Per ulteriori informazioni sulle convenzioni usate, consultare il documento [Cisco sulle convenzioni nei suggerimenti tecnici](#).

Configurazioni

In questa sezione vengono presentate le informazioni necessarie per configurare le funzionalità descritte più avanti nel documento.

Nota: per ulteriori informazioni sui comandi menzionati in questo documento, usare lo [strumento di ricerca](#) dei comandi (solo utenti [registrati](#)).

Esempio di rete

Nel documento viene usata questa impostazione di rete:

Nel documento vengono usate queste configurazioni.

- [Cisco IOS Router](#)
- [Cisco VPN 3002 Hardware Client](#)

[Configurazione del client hardware Cisco VPN 3002](#)

Per configurare il client VPN, completare i seguenti passaggi:

1. Selezionare **Configuration > Interfaces** e controllare l'indirizzo IP.

Configuration | Interfaces Thursday, 30 May 2002
Save Needed  R

This section lets you configure the VPN 3002 Hardware Client's network interfaces.

In the table below, or in the picture, select and click the interface you want to configure:

Interface	Status	IP Address	Subnet Mask	MAC Address	Default Gateway
Ethernet 1 (Private)	UP	10.48.66.185	255.255.254.0	00:05:31:98:00:0A	
Ethernet 2 (Public)	UP	209.165.200.225	255.255.255.224	00:05:31:98:00:0B	209.165.200.226
DNS Server(s)	DNS Server Not Configured				
DNS Domain Name					

2. Selezionare **Configurazione > Rapida > Data e ora > Ora** per impostare e verificare l'ora.

Configuration | Quick | Time and Date

[Time](#) [Upload Config](#) [Private Intf](#) [Public Intf](#) [IPSec](#) [PAT](#)

Set the time on your device. The correct time is very important, so that logging entries are accurate.

The current time on this device is Thursday, 30 May 2002 16:17:11.

New Time : : / /

Enable DST Support

 Click to go back without saving changes

 Click to save changes and continue

3. Selezionare **Configurazione > Quick > Private Interface > Private Intf** per configurare gli indirizzi IP statici sugli host interni (senza DHCP).
4. Selezionare **No** per "Configurare l'indirizzo IP dell'interfaccia privata?".
5. Selezionare **No, non utilizzare il server DHCP** per fornire gli indirizzi per "Utilizzare il server DHCP sull'interfaccia 1 per fornire gli indirizzi per la LAN locale?".

Configuration Quick Private Interface					
<u>Time</u>	<u>Upload Config</u>	Private Intf	<u>Public Intf</u>	<u>IPSec</u>	<u>PAT</u>
 You are modifying the interface you are using to connect to this device. If you make any changes, you will be prompted to log out of the login screen.					
IP Address 10.48.66.185/ 255.255.254.0 DHCP Server Enabled (10.48.66.58 - 10.48.66.184)					
Do you want to configure the IP address of the Private Interface?					
<input type="radio"/> Yes <input checked="" type="radio"/> No					
Do you want to use the DHCP server on Interface 1 to provide addresses for the local LAN?					
<input type="radio"/> Yes, and configure the DHCP server parameters. <input type="radio"/> Yes, but leave the DHCP server parameters as is. <input checked="" type="radio"/> No, do not use the DHCP server to provide addresses.					
 Click to go back without making any changes					
 Click to make changes and continue					
<input type="button" value="Back"/>		<input type="button" value="Continue"/>			

- Specificare l'indirizzo IP se si dispone di un indirizzo statico selezionando **Configuration > Quick > Public Interface > Public Intf** (Interfaccia pubblica).
- Dalla finestra Interfaccia pubblica, selezionare **Specifica un indirizzo IP** e immettere l'indirizzo IP appropriato, la subnet mask e il gateway predefinito.

Configuration | Quick | Public Interface

Time Upload Config Private Intf ✓ Public Intf IPsec

System Name (a.k.a. hostname) may be required to be set if you use DHCP to obtain an address.

System Name

How do you want to configure the IP address of the Public Interface?

Obtain an IP address from a DHCP server

Use PPPoE to connect to a public network

PPPoE User Name

rete.

10. Selezionare **Configuration > Quick > DNS** e immettere il nome del server e del dominio DNS dell'ISP per configurare il

Configuration | Quick | DNS
 Time Upload Config Private Intf ✓ Public Intf ✓

Configure the ISP's DNS server IP address. Enter 0.0.0.0 to not use DNS.

DNS Server

Domain

↩ Click to go back without making any changes

↩ Click to make changes and continue

Back Continue

DNS.

11. Selezionare **Configuration > Quick > Static Routes** e fare clic su **Add** per aggiungere una route statica alla tabella di routing e configurare il gateway predefinito del client VPN.

Verifica

Le informazioni contenute in questa sezione permettono di verificare che la configurazione funzioni correttamente.

Lo [strumento Output Interpreter](#) (solo utenti [registrati](#)) (OIT) supporta alcuni comandi **show**. Usare l'OIT per visualizzare un'analisi dell'output del comando **show**.

Per ulteriori informazioni sui comandi **show**, fare riferimento a [Risoluzione dei problemi di sicurezza IP - Comprensione e uso dei comandi di debug](#).

Risoluzione dei problemi

Le informazioni contenute in questa sezione permettono di risolvere i problemi relativi alla configurazione.

Nota: se PAT Enabled viene utilizzato nel client Cisco VPN 3002, il ricaricamento rimuoverà il nome utente e la password esistenti. È necessario configurare il nuovo nome utente e la nuova password per il client.

Nota: se si usa PAT Disabled (NEM), il comando reload conserva il nome utente e la password, a condizione che l'headend sia configurato per il salvataggio del nome utente e della password.

Procedura di risoluzione dei problemi

Queste sono informazioni utili per risolvere eventuali problemi con questa configurazione. Per ulteriori informazioni sulla risoluzione dei problemi, consultare il documento sulla [risoluzione dei problemi di sicurezza IP - descrizione e uso dei comandi di debug](#). Completare la procedura seguente per risolvere i problemi relativi alla configurazione:

1. Assicurarsi di vedere la definizione dell'associazione di sicurezza Fase 1 e Fase 2. Usare la linea di base **debug** nella sezione [Comandi per la risoluzione dei problemi](#).
2. Una volta visualizzate le associazioni di protezione, inviare il traffico tra le reti protette per verificare la connettività.

Comandi per la risoluzione dei problemi

Lo [strumento Output Interpreter](#) (solo utenti [registrati](#)) (OIT) supporta alcuni comandi **show**. Usare l'OIT per visualizzare un'analisi dell'output del comando **show**.

Nota: consultare le [informazioni importanti sui comandi di debug](#) prima di usare i comandi di **debug**.

- **debug crypto ipsec:** visualizza gli eventi IPsec.
- **debug crypto isakmp:** visualizza i messaggi sugli eventi IKE.
- **debug crypto engine:** visualizza i messaggi di debug sui motori di crittografia, che eseguono la crittografia e la decrittografia.
