Sommario

Introduzione

In questo documento viene descritto come abilitare i comandi AnyConnect Lockdown e Hide AnyConnect dall'elenco dei programmi di aggiunta/rimozione per i computer Windows.

Contributo di Christian G. Hernandez R, Cisco TAC Engineer.

Prerequisiti

Requisiti

Cisco raccomanda la conoscenza dei seguenti argomenti:

- Configurazione di Cisco Adaptive Security Appliance (ASA)
- Configurazione di Cisco AnyConnect

Conoscenze base di Windows

Componenti usati

Le informazioni fornite in questo documento si basano sulle seguenti versioni software e hardware:

- Cisco ASA versione 9.14.2.13
- Cisco Adaptive Security Device Manager (ASDM) versione 7.14.1
- Cisco AnyConnect versioni 4.9.04053 e 4.9.06037

Le informazioni discusse in questo documento fanno riferimento a dispositivi usati in uno specifico ambiente di emulazione. Su tutti i dispositivi menzionati nel documento la configurazione è stata ripristinata ai valori predefiniti. Se la rete è operativa, valutare attentamente eventuali conseguenze derivanti dall'uso dei comandi.

Premesse

AnyConnect Lockdown per Windows: Cisco consiglia di concedere agli utenti finali diritti limitati sui Cisco AnyConnect Secure Mobility Client sul loro dispositivo. Se l'utente finale garantisce diritti aggiuntivi, i programmi di installazione possono fornire una funzionalità di blocco che impedisce agli utenti e agli amministratori locali di disattivare o interrompere i servizi AnyConnect.

Per abilitare la funzione AnyConnect Lockdown, sono disponibili tre opzioni:

- 1. I programmi di installazione MSI dal terminale del prompt dei comandi di Windows.
- 2. Opzione di blocco dalla procedura guidata di installazione del pacchetto pre-distribuzione di AnyConnect.
- 3. ASDM Importare un esempio di blocco del programma di installazione per trasformare il file nell'appliance ASA.

Nascondere AnyConnect dall'elenco Installazione applicazioni di Windows: è possibile nascondere i moduli AnyConnect installati dall'elenco Installazione applicazioni nel Pannello di controllo di Windows. Disinstallare un programma.

Per abilitare la funzione Nascondi AnyConnect dall'elenco dei programmi da aggiungere o rimuovere, sono disponibili due opzioni:

- 1. I programmi di installazione MSI dal terminale del prompt dei comandi di Windows.
- 2. ASDM Importare un esempio di file di trasformazioni hide-address del programma di installazione nell'appliance ASA.

Configurazione

Esempio di rete

Configurazione del blocco AnyConnect

Programmi di installazione MSI dal terminale del prompt dei comandi di Windows.

Procedura di configurazione

Passaggio 1. Scaricare il file del pacchetto pre-distribuzione di AnyConnect per Windows.

Passaggio 1.1. Accedere alla pagina di download del software Cisco e scaricare la versione di AnyConnect da installare sul computer Windows.

Per questo esempio, scaricare il pacchetto pre-distribuzione di Windows AnyConnect che include il singolo MSI file per la versione 4.9.04053 (anyconnectwin-4.9.04053-predeploy-k9.zip).

Passaggio 2. Scaricare il file di trasformazione del programma di installazione di AnyConnect per Windows.

2.1 Passare alla pagina di download del software Cisco e scaricare il file delle trasformazioni di AnyConnect Installer per Windows che corrisponde alla stessa versione di AnyConnect da installare sul computer Windows.

Per questo esempio, scaricare il file delle trasformazioni per AnyConnect versione 4.9.04053 (tools-anyconnect-win-4.9.04053-transforms.zip).

Passaggio 6. Installare i moduli AnyConnect con il file di trasformazione dei blocchi.

Passaggio 6.1 I Installare tutti i moduli AnyConnect richiesti con il comando MSI installer successivo che punti al file del modulo .msi di AnyConnect e al file di trasformazione **_anyconnect-win-lockdown.mst** lockdown.

Nota:L'impostazione del valore LOCKDOWN su "1" abilita la funzione di blocco per il modulo AnyConnect.

Nota: Cisco consiglia di utilizzare il file di trasformazioni di esempio fornito per impostare questa proprietà, applicare la trasformazione a ciascun programma di installazione MSI per ciascun modulo che si desidera bloccare. Le trasformazioni di esempio possono essere scaricate dalla pagina di download del software Cisco AnyConnect Secure Mobility Client.

Nota:Se si distribuisce il client di base più uno o più moduli facoltativi, è necessario applicare la proprietà LOCKDOWN a ogni programma di installazione. L'operazione è unidirezionale e non può essere rimossa a meno che non si reinstalli il prodotto.

Passaggio 6.2 In questo esempio vengono installati il modulo **CORE e VPN di AnyConnect** e il file di trasformazione **_anyconnect-win-lockdown.mst** lockdown, entrambi corrispondenti ai file della versione 4.9.04053 di AnyConnect.

msiexec -i anyconnect-win-4.9.04053-core-vpn-predeploy-k9.msi TRANSFORMS=_anyconnect-win-

Passaggio 3. Usare l'installazione guidata di AnyConnect.

Passaggio 3.1 Tra le opzioni visualizzate, selezionare i moduli AnyConnect da installare.

Per questo esempio, selezionare i moduli AnyConnect CORE e VPN e Umbrella Roaming Security.

```
Select the AnyConnect 4.9.04053 modules you wish to install:
Core & VPN
Start Before Login
Network Access Manager
VPN Posture (Hostscan)
AMP Enabler
Network Visibility Module
Cloud Web Security
Umbrella Roaming Security
ISE Posture
Select All
Diagnostic And Reporting Tool
Lock Down Component Services
```

Passaggio 4. Abilitare la funzione di blocco di AnyConnect.

Passaggio 4.1 Per abilitare la funzione di blocco per i moduli CORE e VPN e Umbrella Roaming Security, selezionare l'opzione Lock Down Component Services e procedere con l'installazione.

Passaggio 5. Confermare l'installazione dei moduli AnyConnect.

Passaggio 5.1 L'installazione dei moduli AnyConnect è completata al 100% quando viene visualizzato il messaggio successivo.

Configurare per nascondere AnyConnect dall'elenco di Installazione applicazioni

Programmi di installazione MSI dal terminale del prompt dei comandi di Windows.

Procedura di configurazione

Passaggio 1. Scaricare il file del pacchetto pre-distribuzione di AnyConnect per Windows.

Passaggio 1.1. Accedere alla pagina di download del software Cisco e scaricare la versione di AnyConnect da installare sul computer Windows.

Per questo esempio, scaricare il pacchetto pre-distribuzione di Windows AnyConnect che include il singolo MSI file per la versione 4.9.04053 (anyconnectwin-4.9.04053-predeploy-k9.zip).

Passaggio 6. Installare i moduli AnyConnect con il file di trasformazione hide-addremove.

Passaggio 6.1 I Installare tutti i moduli AnyConnect richiesti con il comando MSI installer successivo che punta al file del modulo .msi di AnyConnect e al file di trasformazione _anyconnect-win-hide-addremove-display.mst.

Nota: il valore "1" impostato per ARPSYSTEMCOMPONENT consente di nascondere AnyConnect dalla funzionalità Add/Remove Program List per il modulo AnyConnect da installare.

Nota: Cisco consiglia di utilizzare il file di trasformazioni di esempio fornito per impostare questa proprietà, applicare la trasformazione a ciascun programma di installazione MSI per ciascun modulo che si desidera nascondere. Le trasformazioni di esempio possono essere scaricate dalla pagina di download del software Cisco AnyConnect Secure Mobility Client.

Nota: Se si distribuisce il client di base più uno o più moduli facoltativi, è necessario applicare la proprietà HIDE-AnyConnect a ogni programma di installazione. L'operazione è unidirezionale e non può essere rimossa a meno che non si reinstalli il prodotto.

Passaggio 6.2 In questo esempio vengono installati il modulo AnyConnect CORE e VPN e il file AnyConnect-win-hide-addremove-display.mst. I due file corrispondono a quelli della versione 4.9.04053 di AnyConnect.

Configurazione di AnyConnect Lockdown e della funzione Hide AnyConnect da Add/Remove Program List con ASDM

Questa procedura è valida solo per gli aggiornamenti della distribuzione Web di AnyConnect. Nell'esempio viene preso in considerazione un aggiornamento della distribuzione Web di AnyConnect dalla versione 4.9.04053 alla versione 4.9.06037.

Procedura di configurazione

Passaggio 1. Confermare la versione di AnyConnect in esecuzione sul computer Windows.

Passaggio 1.1 Sul computer Windows in questo esempio, è già installata la versione 4.9.04053 di AnyConnect per i moduli Core e VPN e Umbrella Roaming Security.

Passaggio 2. Scaricare il file del pacchetto di distribuzione dell'headend AnyConnect per Windows.

Passaggio 2.1 Passare alla pagina di download del software Cisco e scaricare la versione del file del pacchetto di distribuzione dell'headend AnyConnect da installare sul computer Windows per l'aggiornamento della distribuzione Web.

Per questo esempio, scaricare il pacchetto di distribuzione dell'headend Windows AnyConnect versione 4.9.06037 (anyconnect-win-4.9.06037-webdeploy-k9.pkg).

Nota: Quando questo articolo è stato scritto, il nome usato per importare i file delle trasformazioni di esempio deve avere un carattere di sottolineatura "_" all'inizio del nome. In questo modo, le trasformazioni di esempio importate funzionano per qualsiasi modulo AnyConnect. Se si utilizza un nome diverso senza un carattere di sottolineatura all'inizio del nome, l'esempio delle trasformazioni importate funziona solo per il modulo CORE e VPN Anyconnect (<u>CSCvy38427</u>).

Passaggio 9. Aggiornamento automatico della distribuzione Web di AnyConnect.

Passaggio 9.1 Forza l'aggiornamento automatico dell'implementazione Web di AnyConnect per i moduli CORE e VPN e Umbrella Roaming Security.

Di seguito viene riportata la configurazione ASA AnyConnect in uso per consentire l'aggiornamento automatico dei moduli CORE e VPN e Umbrella Roaming Security:

webvpn enable outside anyconnect image disk0:/anyconnect-win-4.9.06037-webdeploy-k9.pkg 1 anyconnect enable tunnel-group-list enable group-policy ANYCONNECT_GP1 internal group-policy ANYCONNECT_GP1 attributes vpn-tunnel-protocol ssl-client ssl-clientless split-tunnel-policy tunnelspecified split-tunnel-network-list value SPLIT_TUNNEL1 webvpn anyconnect modules value umbrella tunnel-group MY_TUNNEL1 type remote-access tunnel-group MY_TUNNEL1 general-attributes address-pool VPN_POOL1 default-group-policy ANYCONNECT_GP1 tunnel-group MY_TUNNEL1 webvpnattributes group-alias SSL_TUNNEL1 enable

Passaggio 9.2. Avviare una connessione all'headend ASA dal client AnyConnect con versione 4.9.04053 sul computer Windows.

S Cisco Any	Connect Secure Mobility Client	_		\times
	VPN: Exiting. Upgrade in progress. 10.3.3.2	~	Connect	
	Roaming Security: Umbrella is inactive. Profile is missing.			
¢ ()				uluilu cisco
AnyConnect S	ecure Mobility Client Download	der		

The AnyConnect Downloader is installing AnyConnect Secure Mobility Client 4.9.06037. Please wait...

AnyConnect Secure Mobility Client Downloader

The AnyConnect Downloader is installing AnyConnect Umbrella Roaming Security 4.9.06037. Please wait...

Passaggio 9.3. Quindi, i moduli AnyConnect Core e VPN e Umbrella Roaming Security vengono aggiornati alla versione 4.9.06037 con le funzionalità di blocco e di rimozione dall'elenco dei programmi abilitate.

Verifica

Confermare che la funzione Lockdown sia abilitata per i moduli AnyConnect installati

Passaggio 1. Aprire i servizi di Windows (services.msc) come indicato di seguito.

Passaggio 2. Quindi, rFare clic con il pulsante destro del mouse sui servizi **CORE e VPN** e **Umbrella Roaming Security**.

È possibile verificare che la funzione di blocco sia abilitata, in quanto non è possibile avviare, arrestare, sospendere, riprendere o riavviare i servizi di questi moduli AnyConnect.
