[Introduzione](#)

In questo documento viene fornita una configurazione di esempio per l'ispezione delle connessioni SMTP (Simple Mail Transfer Protocol) o ESMTP (Extended Simple Mail Transfer Protocol) in entrata che utilizzano il firewall Cisco IOS® in Cisco IOS. Tale ispezione è simile alla funzione MailGuard disponibile nelle appliance di sicurezza Cisco PIX serie 500.

[Prerequisiti](#)

[Requisiti](#)

Nessun requisito specifico previsto per questo documento.

[Componenti usati](#)

Le informazioni fornite in questo documento si basano sulle seguenti versioni software e hardware:

- Software Cisco IOS release 12.3(4)T o successive
- Cisco 3640 Router

Le informazioni discusse in questo documento fanno riferimento a dispositivi usati in uno specifico ambiente di emulazione. Su tutti i dispositivi menzionati nel documento la configurazione è stata ripristinata ai valori predefiniti. Se la rete è operativa, valutare attentamente eventuali conseguenze derivanti dall'uso dei comandi.

Convenzioni

Fare riferimento a [Cisco Technical Tips Conventions](#) per ulteriori informazioni sulle convenzioni dei documenti.

Premesse

L'ispezione SMTP determina il controllo dei comandi SMTP per individuare eventuali comandi non validi. I pacchetti con comandi non validi vengono modificati secondo il modello "xxxx" e inoltrati al server. Questo processo determina l'invio di una risposta negativa da parte del server e l'emissione di un comando valido da parte del client. Un comando SMTP non valido è un comando qualsiasi ad eccezione di questi comandi:

• DATI • HELO • HELP • POSTA • NOOP • ESCI	• RICEZIONE • RIPRISTINA • SAML • INVIO • SOML • VERIFICA
---	--

L'ispezione ESMTP funziona allo stesso modo dell'ispezione SMTP. I pacchetti con comandi non validi vengono modificati in base a un modello "xxxx" e inoltrati al server, attivando così una risposta negativa. Un comando ESMTP non valido è qualsiasi comando ad eccezione di questi:

• AUTH • DATI • EHLO • ETRN • HELO • HELP • HELP • POSTA	• NOOP • ESCI • RICEZIONE • RIPRISTINA • SAML • INVIO • SOML • VERIFICA
---	--

L'ispezione ESMTP esamina inoltre queste estensioni tramite un'ispezione più approfondita dei comandi:

- Dichiarazione dimensione messaggio (SIZE)
- ETRN (Remote Queue Processing Declaration)
- MIME binario (BINARYMIME)
- Command Pipelining
- Autenticazione
- DSN (Delivery Status Notification)
- Codice di stato avanzato (ENHANCEDSTATUSCODE)
- Trasporto MIME a 8 bit (8BITMIME)

Nota: Impossibile configurare contemporaneamente l'ispezione SMTP ed ESMTP. Un tentativo di configurazione di entrambi genera un messaggio di errore.

Nota: nel software Cisco IOS versione 12.3(4)T e successive, Cisco IOS Firewall non crea più voci di elenchi degli accessi dinamici per autorizzare il traffico. Cisco IOS Firewall ora gestisce una

tabella di stato delle sessioni per controllare la sicurezza delle connessioni ispezionate.

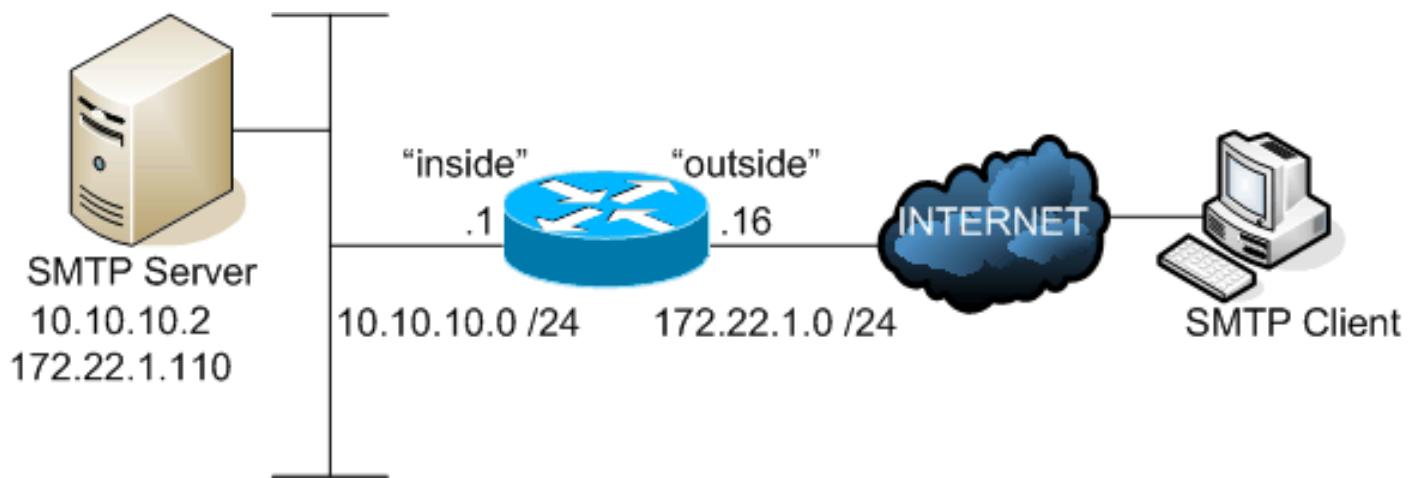

Configurazione

In questa sezione vengono presentate le informazioni necessarie per configurare le funzionalità descritte più avanti nel documento.

Nota: per ulteriori informazioni sui comandi menzionati in questa sezione, usare lo [strumento di ricerca](#) dei comandi (solo utenti [registrati](#)).

Esempio di rete

Nel documento viene usata questa impostazione di rete:

Configurazioni

Nel documento viene usata questa configurazione:

3640 Router

```

Verifica

Per verificare che la configurazione funzioni correttamente, consultare questa sezione.

Lo [strumento Output Interpreter](#) (solo utenti [registriati](#)) (OIT) supporta alcuni comandi **show**. Usare l'OIT per visualizzare un'analisi dell'output del comando **show**.

- **show ip inspect all**: verifica la configurazione delle regole di ispezione di Cisco IOS Firewall e la relativa applicazione alle interfacce.

```

3640-123#show ip inspect all
Session audit trail is disabled
Session alert is enabled

```

```

one-minute (sampling period) thresholds are [400:500] connections
max-incomplete sessions thresholds are [400:500]
max-incomplete tcp connections per host is 50. Block-time 0 minute.
tcp synwait-time is 30 sec -- tcp finwait-time is 5 sec
tcp idle-time is 3600 sec -- udp idle-time is 30 sec
dns-timeout is 5 sec
Inspection Rule Configuration
Inspection name IN-OUT
    tcp alert is on audit-trail is off timeout 3600
    udp alert is on audit-trail is off timeout 30
    ftp alert is on audit-trail is off timeout 3600
    http alert is on audit-trail is off timeout 3600
    icmp alert is on audit-trail is off timeout 10
Inspection name OUT-IN
    smtp max-data 20000000 alert is on audit-trail is off timeout 3600

Interface Configuration
Interface Ethernet2/1
    Inbound inspection rule is IN-OUT
        tcp alert is on audit-trail is off timeout 3600
