# **Risoluzione dei problemi SAN UCS**

# Sommario

Introduzione Prerequisiti Requisiti Componenti usati Convenzioni Suggerimenti per la risoluzione dei problemi Informazioni correlate

## **Introduzione**

In questo documento vengono forniti utili suggerimenti per la risoluzione dei problemi relativi alla SAN UCS (Unified Computing System).

# **Prerequisiti**

### **Requisiti**

Cisco raccomanda la conoscenza di UCS SAN.

### Componenti usati

Il documento può essere consultato per tutte le versioni software o hardware.

### **Convenzioni**

Per ulteriori informazioni sulle convenzioni usate, consultare il documento <u>Cisco sulle convenzioni</u> nei suggerimenti tecnici.

# Suggerimenti per la risoluzione dei problemi

#### Verificare che vHBA disponga di FLOGI nella struttura SAN.

1. Accedere alla CLI di UCS e connettersi a NXOS.
# connect nxos a|b
(nxos)# show npv flogi-table

UCS-250-A#	¢ conr	nect nxos

Verificare che l'FCID del WWPN sia assegnato e che VSAN sia corretto.

2. In alternativa, dallo switch Cisco MDS, verificare che il WWPN disponga di FLOGI. SV-35-06-MDS9222i# show flogi database SV-35-06-MDS9222i# show fcns database

Controllare lo zoning dello switch MDS per verificare che vHBA(WWPN) e la destinazione di storage siano online e nella stessa zona.

<u>SV-35-06-MDS9222i# show zoneset active vsan 1000</u>

Verificare se vHBA è in grado di vedere la destinazione durante l'avvio della SAN.

In UCS Manager, se il blade può essere avviato dalla SAN, il "Actual Boot Order" di UCS Manager deve essere in grado di visualizzare il WWPN di tutte le destinazioni.

Boot Order Details	8
Configured Boot Order Actual Boot Order	
There may be a delay of a few minutes before the actual boot order is updated.

	=
(4) Elx 01 5006016A445044FA,00 04 0 UCS should see the target WWPN	
	-

Quando si avvia il blade, premere F2 per accedere al BIOS e passare a Boot Manager. Il BIOS dovrebbe essere in grado di visualizzare la LUN da avviare.

Per la scheda PALO, in questa fase (quando il sistema operativo non è stato ancora avviato), è possibile connettersi alla scheda per verificare se la vHBA dispone di FLOGI e PLOGI.

Una volta avviato il sistema operativo, l'output è diverso. Questo è previsto.

Per un adattatore M71KR-E, all'avvio del server premere CTRL + E per accedere all'utility di configurazione dell'HBA Emulex. Scegliere quindi vHBA ed elencare il dispositivo di avvio. Il vHBA dovrebbe essere in grado di vedere la destinazione.

Verificare se vHBA dispone dell'ID LUN corretto per l'avvio dalla SAN.

La configurazione di avvio del criterio di avvio associato al profilo del servizio è. Verificare che il WWPN della destinazione sia corretto e che l'ID LUN corrisponda anche al LUN definito nello storage.

Verificare che la destinazione FC sia in grado di vedere vHBA(WWPN) e che disponga di PLOGI per la destinazione.

#### Verificare se per l'avvio SAN viene utilizzata un'immagine ESXi personalizzata da Cisco.

Se ESXi non riesce a visualizzare la LUN sulla SAN mentre vHBA la rileva durante la fase di avvio, è probabile che l'immagine ESXi non disponga del driver corretto. Verificare se il cliente sta utilizzando l'immagine ESXi personalizzata da Cisco. Visitare il sito Web VMware e cercare "Cisco ESXi" per scaricare l'immagine personalizzata Cisco.

Immagine personalizzata Cisco per ESXi 5.1.0

https://my.vmware.com/web/vmware/details?downloadGroup=CISCO-ESXI-5.1.0-GA-25SEP2012&productId=285

Immagine personalizzata Cisco per ESXi 5.0.0 U1

https://my.vmware.com/web/vmware/details?downloadGroup=CISCO-ESXI-5.0.0-U1-28AUG2012&productId=268

Immagine personalizzata Cisco per ESXi 4.1 U2

https://my.vmware.com/web/vmware/details?downloadGroup=OEM-ESXI41U2-CISCO&productId=230

Immagini ISO di rollup vSphere 5.0 (fornisce un'immagine ISO di ESXi installabile che include driver per vari prodotti prodotti da partner VMware), ad esempio con server C220 M3, CIMC 1.46c e LSI 9266-8i. Anche l'immagine ESXi personalizzata non dispone del driver per rilevare lo storage locale.

https://my.vmware.com/web/vmware/details?downloadGroup=ROLLUPISO\_50\_2&productId=229

Consultare inoltre la nota di rilascio rollup

http://www.vmware.com/support/vsphere5/doc/vsphere-esxi-50-driver-rollup2-release-notes.html

Verificare che ESXi utilizzi lo stesso driver fnic corretto.

Abilitare SSH ed ESX SHELL e accedere all'host ESXi. Eseguire quindi vmkload\_mod -s fnic.

The ESXi Shell can be disabled by an administrative user. See the
vSphere Security documentation for more information.
~ # vmkload_mod -s fnic
vmkload_mod_module_information
input file: /usr/lib/vmware/vmkmod/fnic
Version: Version 1.5.0.7, Build: 472560, Interface: 9.2 Built on: Dec 21 2011

vmhba1	naa.6006016081f02800ca79c3b09150e111
vmhba2	naa.6006016081f0280000e47af49150e111
vmhba2	naa.6006016081f028007a6ffec12985e111
vmhba2	naa.6006016081f02800ca79c3b09150e111

#### In questo esempio, sia vmhba1 che vmhba2 possono visualizzare le 3 LUN.

#### 3. Controllare i percorsi alle LUN.

```
vmhba2:C0:T1:L0 LUN:0 state:active fc Adapter: WWNN: 20:00:00:25:b5:a0:05:0f WWPN:
20:00:00:25:b5:b0:05:2f Target: WWNN: 50:06:01:60:c4:60:44:fa WWPN: 50:06:01:68:
44:60:44:fa
```

In questo esempio, sono disponibili quattro percorsi per ogni LUN: due da vmhba1 e due da vmhba2.
