[Problema 7: L'AP3700 è collegato a uno switch Catalyst serie 3850 con 3.3.0SE.](#)

[Problema 8: L'ora del controller non rientra nell'intervallo di validità del certificato AP.](#)

[Problema 9: l'elenco di autorizzazioni AP è abilitato sul WLC; l'access point non è nell'elenco delle autorizzazioni.](#)

[Problema 10: Il criterio MIC AP è disattivato.](#)

[Suggerimenti tecnici generali](#)

Introduzione

In questo documento vengono descritti i comandi di traccia utilizzati per risolvere i problemi di join dei punti di accesso (AP, Access Point) nei controller di accesso convergenti e vengono descritte alcune delle cause più comuni dell'errore di join dei punti di accesso.

Prerequisiti

Requisiti

Cisco raccomanda la conoscenza di base dei seguenti argomenti:

- Protocollo LWAPP (Lightweight Access Point Protocol)/Controllo e provisioning di punti di accesso wireless (CAPWAP)
- Configurazioni LAP (Lightweight Access Point) e WLC (Wireless LAN Controller) per operazioni di base

Componenti usati

Per la stesura del documento, è stato usato uno switch Cisco Catalyst serie 3850 con software versione 3.3.0 SE.

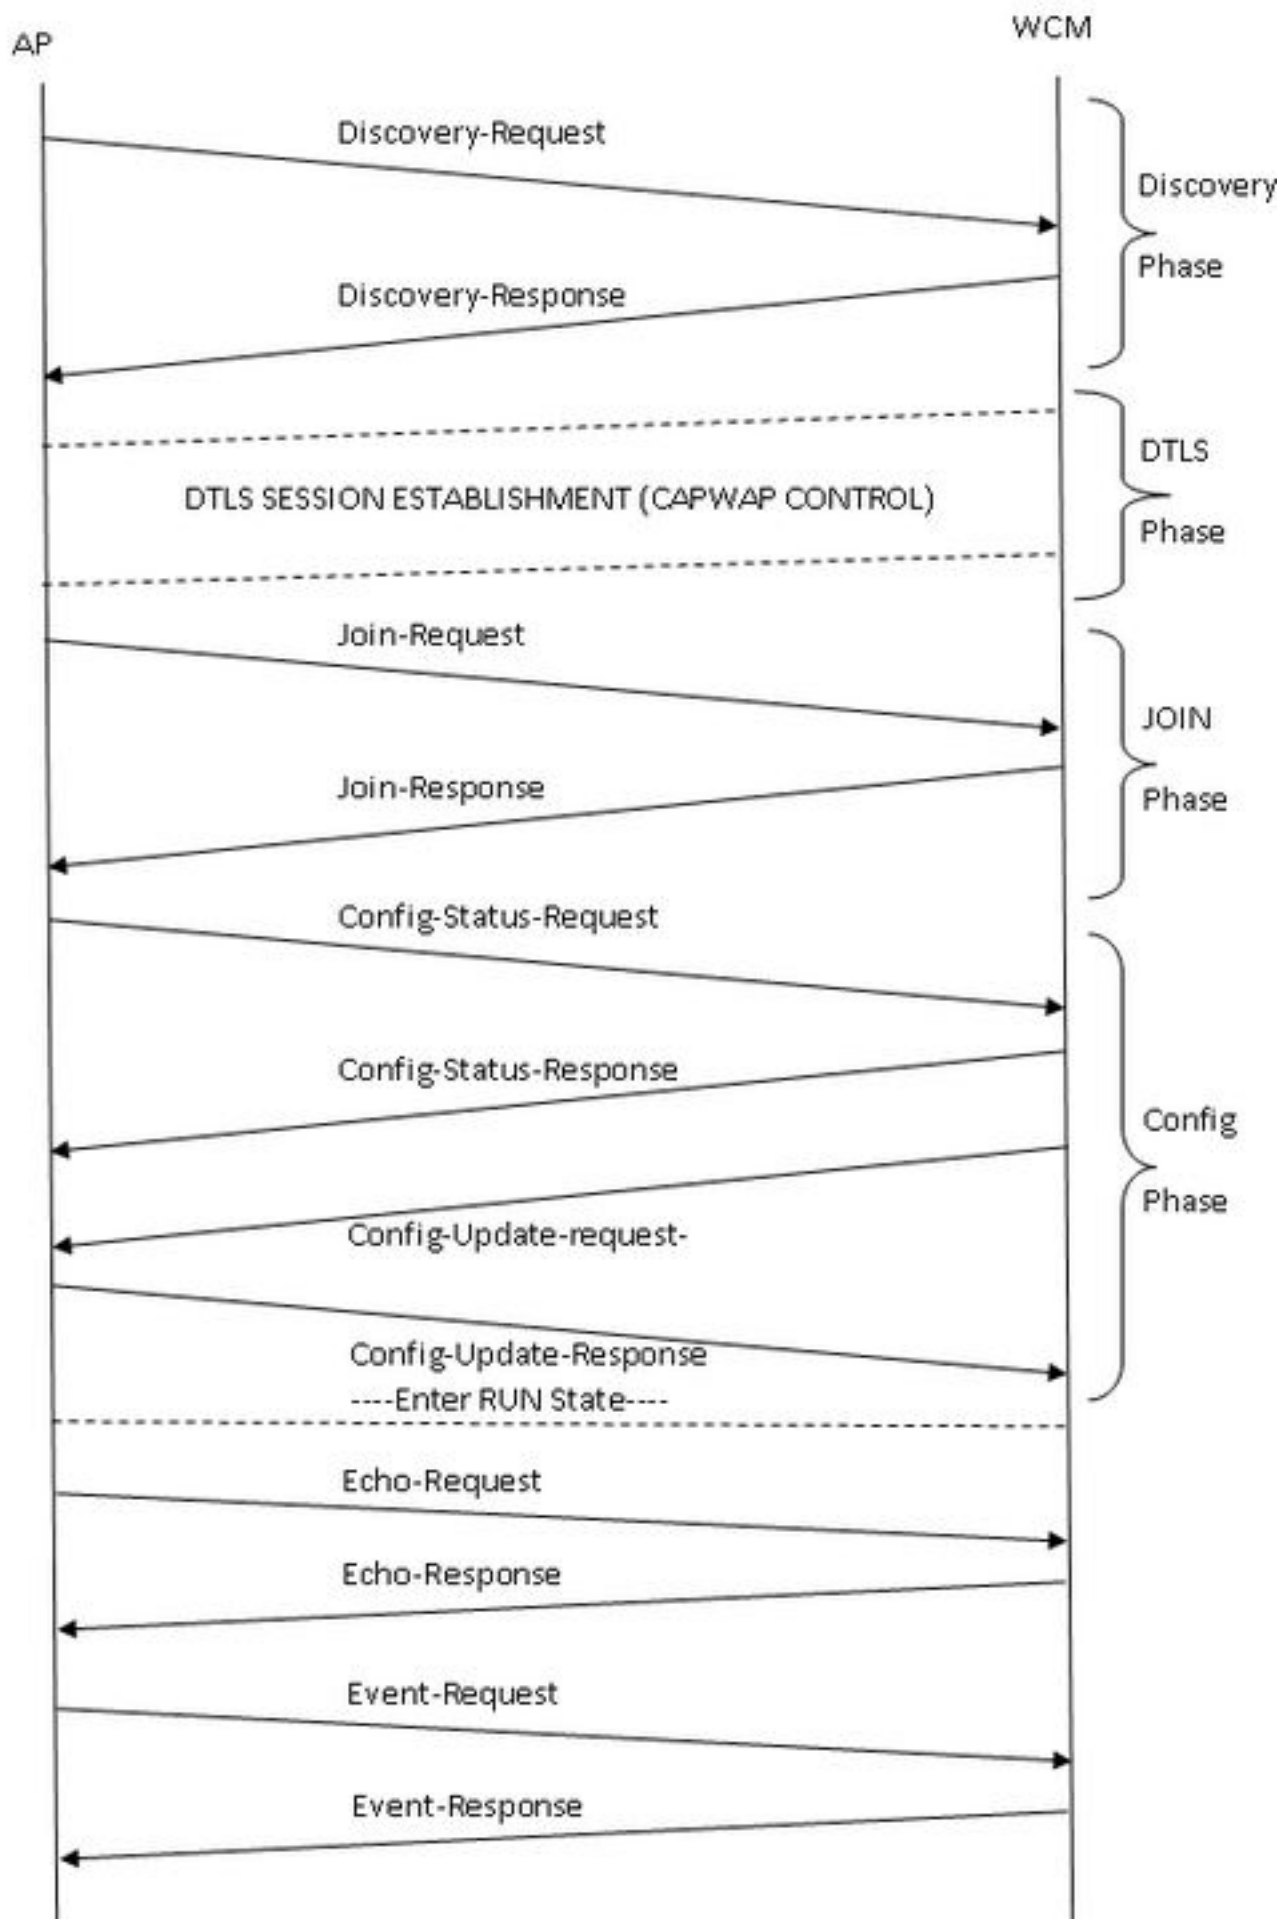

Le informazioni discusse in questo documento fanno riferimento a dispositivi usati in uno specifico ambiente di emulazione. Su tutti i dispositivi menzionati nel documento la configurazione è stata ripristinata ai valori predefiniti. Se la rete è operativa, valutare attentamente eventuali conseguenze derivanti dall'uso dei comandi.

Prodotti correlati

Questo documento è applicabile a tutti i controller degli accessi convergenti.

- Cisco serie 5760 Wireless Controller
- Switch Cisco Catalyst serie 3560
- Switch Cisco Catalyst serie 3850

Sequenza di join AP

Risoluzione dei problemi

Operazioni di base

Per risolvere il problema di aggiunta dell'access point sui controller di accesso convergenti, attenersi alla seguente procedura:

1. Confermare che l'access point sia in grado di estrarre un indirizzo IP. Dallo switch a cui è collegato l'access point, immettere:

```
#show cdp neighbor detail
```

Nota: Per gli switch Catalyst serie 3850, l'access point deve essere collegato direttamente allo switch Catalyst serie 3850 e la configurazione della porta dello switch deve essere:

Interfaccia gig <>

Accesso in modalità switchport

Switchport access vlan x >> dove x è l'interfaccia di gestione wireless vlan x configurata sugli switch Catalyst serie 3850.

2. Verificare che il WLC possa eseguire il ping dell'indirizzo IP e viceversa.
3. Verificare che nella rete sia configurato un controller di mobilità wireless. Se è stato eseguito l'accesso a un agente di mobilità, verificare che il controller di mobilità del tunnel sia attivo.

```
#show wireless mobility summary
```

4. Verificare che la licenza AP sia abilitata sul MC:

```
#show license right-to-use summary
```

5. Confermare che il codice paese appropriato è abilitato:

```
#show wireless country configured
```

Tracce dal controller

Una volta implementata la configurazione corretta, se l'access point ha esito negativo, è possibile utilizzare i comandi di traccia per un'ulteriore diagnosi. Questi comandi di traccia sono disponibili sul controller per la risoluzione dei problemi di CAPWAP e AP Join:

- #Set trace capwap
- #Set trace capwap ap
- #Set trace group-ap

In base all'analisi degli output della traccia, le tracce dell'access point del gruppo hanno fornito un output più pertinente per la risoluzione dei problemi del join AP. Pertanto, questa traccia (non

filtrata) viene descritta in dettaglio in questo documento. Fare riferimento alla sezione Suggerimenti tecnici generali di questo documento per ulteriori informazioni sulle opzioni di filtro e le limitazioni per questa traccia.

Nota: L'output di esempio (filtrato e non filtrato) per capwap e capwap ap è incluso come riferimento.

- Per visualizzare le impostazioni predefinite della traccia, immettere:

```
#show trace settings group-ap
```

```
Buffer Properties:
```

```
Feature-Name
```

```
Size          Level
```

```
-----
```

```
-----
```

```
capwap/ap/event
```

```
0
```

```
warning
```

```
dtls/ap/event
```

```
0          warning
```

```
iosd-wireless/capwap
```

```
0          warning
```

```
Feature-Name: capwap/ap/event
```

```
Filters: None
```

```
Feature-Name: dtls/ap/event
```

```
Filters: None
```

```
Feature-Name: iosd-wireless/capwap
```

```
Filters: None
```

Nota: Per impostazione predefinita, non vi sono filtri impostati su nessuna traccia.

- Per cancellare il buffer di traccia che corrisponde alla traccia di group-ap, immettere:

```
#set trace control group-ap clear
```

- Per impostare il livello di traccia per la traccia di group-ap, immettere:

```
#set trace group-ap level ?
```

```
debug      Debug-level messages (7)
```

```
default    Unset Trace Level Value
```

```
err        Error conditions (3)
```

```
info       Informational (6)
```

```
warning    Warning conditions (4)
```

Utilizzare il debug **#set trace group-ap level** durante la risoluzione dei problemi.

- Per verificare il livello di traccia, immettere:

```
# show trace settings group-ap
```

```
Buffer Properties:
```

```
Feature-Name
```

```
Size          Level
```

```
-----
```

```
-----
```

```
capwap/ap/event
```

```
0          debug
dtls/ap/event
0          debug
iosd-wireless/capwap
0          debug
```

```
Feature-Name: capwap/ap/event
  Filters: None
Feature-Name: dtls/ap/event
  Filters: None
Feature-Name: iosd-wireless/capwap
  Filters: None
```

- Per visualizzare l'output della traccia, immettere:

```
# show trace messages group-ap
```

```

Motivi comuni per l'errore di aggiunta dell'access point

In questa sezione vengono descritte le cause comuni degli errori di join AP.

Problema 1: L'access point sugli switch Catalyst serie 3850 non è nella VLAN di gestione wireless.

```
#show run interface gig1/0/2
```

```
interface GigabitEthernet1/0/22
description AP
switchport access vlan 25
switchport mode access
```

```
#show run | inc wireless
```

```
wireless mobility controller
wireless management interface Vlan1104
```

```
#show log
```

```
.*CAPWAP-3-DISC_WIRELESS_INTERFACE_ERR1: 1 wcm: Unable to process discovery request from AP 0019.0737.f630 , VLAN (25) scrIp (10.10.25.13) dstIp (255.255.255.255), could not get wireless interface belonging to this network
```

L'access point è nella VLAN 25 e non è presente una configurazione dell'interfaccia di gestione wireless per la VLAN 25.

Problema 2: Modello AP non supportato.

Ecco un test per AP1131.

```
#show log
```

```
*%CAPWAP-3-JOIN_UNSUPP_AP: 1 wcm: Received a join request from an unsupported AP
0019.0737.f630 AP8-1131AG-eb:66 (model AIR-AP1131AG-A-K9)
```

Problema 3: La licenza per il conteggio dei punti di accesso non è abilitata sul controller.

#show license right-to-use summ

License Name	Type	Count	Period left
ipservices	permanent	N/A	Lifetime
apcount	base	0	Lifetime
apcount	adder	0	Lifetime

License Level In Use: ipservices

License Level on Reboot: ipservices

Evaluation AP-Count: Disabled

Total AP Count Licenses: 0

AP Count Licenses In-use: 0

AP Count Licenses Remaining: 0

#show log

```
*%LWAPP-3-AP_LICENSE_REQUEST_ERR: 1 wcm: License request failed for AP
0c:68:03:eb:9b:20 - Check for Controller Licenses
```

```
*%CAPWAP-3-AP_DB_ALLOC: 1 wcm: Unable to alloc AP entry in database for
10.201.234.xx:29817
```

Problema 4: Il dominio normativo non corrisponde.

#show wireless country configurato

Configured Country.....: BE - Belgium

Configured Country Codes

BE - Belgium : 802.11a Indoor,Outdoor/ 802.11b / 802.11g

#show log

```
*%LWAPP-3-RD_ERR8: 1 wcm: Country code (US ) not configured for AP 0c:68:03:eb:9b:20
```

```
*%LWAPP-3-RD_ERR4: 1 wcm: Invalid regulatory domain 802.11bg:-E
802.11a:-E for AP 0c:68:03:eb:9b:20
```

Problema 5: Controller mobilità wireless non definito.

#show wireless mobility summary

```
Mobility Agent Summary:
Mobility Role                : Mobility Agent
Mobility Protocol Port      : 16666
Mobility Switch Peer Group Name :
Multicast IP Address        : 0.0.0.0
DTLS Mode                   : Enabled
Mobility Domain ID for 802.11r : 0xac34
Mobility Keepalive Interval : 10
Mobility Keepalive Count    : 3
Mobility Control Message DSCP Value : 0
Switch Peer Group Members Configured : 0
```

```
Link Status is Control Link Status : Data Link Status
```

```
The status of Mobility Controller:
```

IP	Public IP	Link Status
0.0.0.0	0.0.0.0	- : -

#show log

```
*%LWAPP-3-AP_LICENSE_REQUEST_ERR: 1 wcm: License request failed for AP
0c:68:03:eb:9b:20 - AP License Request timedout, ensure MC link is up, Resettting AP
```

Problema 6: L'access point ha un codice mesh.

```
*%CAPWAP-3-SPI_TUNNEL_CREATE_ACK_NOT_REC: 1 wcm: Dropping discovery request from AP
0c68.03eb.9b20 - SPI Tunnel Create Ack not received[...It occurred 3 times/sec!..]
```

Questo messaggio è piuttosto generico e non indicativo della questione attuale. Per eseguire una diagnosi più approfondita fino a quando non viene aggiunta una registrazione aggiuntiva per questo problema specifico, esaminare il registro della console AP.

Problema 7: L'AP3700 è collegato a uno switch Catalyst serie 3850 con 3.3.0SE.

#show log

```
*%CAPWAP-3-DISC_UNSUPPORTED_AP: 1 wcm: Rejecting discovery request from unsupported AP
08cc.68b4.4780 [...It occurred 2 times/sec!..]
```

Problema 8: L'ora del controller non rientra nell'intervallo di validità del certificato AP.

#mostra orologio

*00:14:59.459 GMT0:0 Thu Jan 1 1970

#show log

*Jan 1 00:05:51.338: %PKI-3-CERTIFICATE_INVALID_NOT_YET_VALID: Certificate chain validation has failed. The certificate (SN: 17978AAD00000036823E) is not yet valid
Validity period starts on 04:25:46 GMT0:0 Jun 8 2013

*Jan 1 00:05:51.344: *%DTLS-4-BAD_CERT: 1 wcm: Certificate verification failed.
Peer IP: 10.201.234.21

*Jan 1 00:05:51.344: *%DTLS-3-HANDSHAKE_FAILURE: 1 wcm: Failed to complete DTLS handshake
with peer 10.201.234.21 Reason: no certificate returned

Problema 9: l'elenco di autorizzazioni AP è abilitato sul WLC; l'access point non è nell'elenco delle autorizzazioni.

#show ap auth-list

Authorize MIC APs against AAA : Enabled

Authorize LSC APs against Auth-List : Disabled

APs Allowed to Join:

AP with Manufacturing Installed Certificate : Enabled

AP with Self-Signed Certificate : Disabled

AP with Locally Significant Certificate : Disabled

#show log

*%LWAPP-3-RADIUS_ERR: 1 wcm: Could not send join reply, AP authorization failed;
AP:0c:68:03:eb:9b:20

*%CAPWAP-3-DATA_TUNNEL_DELETE_ERR2: 1 wcm: Failed to delete CAPWAP data tunnel
with interface id: 0x0 from internal database. Reason: AVL database entry not found

Problema 10: Il criterio MIC AP è disattivato.

#show ap auth-list

Authorize MIC APs against AAA : Disabled

Autorizza punti di accesso LSC contro Auth-List: Disattivato

Punti di accesso autorizzati:

Punto di accesso con certificato installato di produzione: Disattivato

Punto di accesso con certificato autofirmato: Disattivato

Punto di accesso con certificato significativo a livello locale: Disattivato

#show log

```
*%LOG-3-Q_IND: 1 wcm: Validation of SPAM Vendor Specific Payload failed - AP
f8:4f:57:3b:8c:d0
*%CAPWAP-3-ALREADY_IN_JOIN: 1 wcm: Dropping join request from AP f84f.573b.8cd0 -
AP is already in joined state
*%CAPWAP-3-DATA_TUNNEL_DELETE_ERR2: 1 wcm: Failed to delete CAPWAP data tunnel
with interface id: 0x0 from internal database. Reason: AVL database entry not found
```

Questo messaggio non consente di trovare la causa principale del problema. Tuttavia, nella traccia viene visualizzato questo messaggio.

#show trace messages group-ap

```
|
MIC AP is not allowed to join by config
|
```

Suggerimenti tecnici generali

In questa sezione vengono forniti alcuni suggerimenti utili.

- Quando si avvia il processo di risoluzione dei problemi, cancellare le tracce raccolte in precedenza per la funzione specifica. In questo caso, capwap, group-ap e tutte le tracce filtrate.
Impostazione del capwap per il controllo della traccia# Impostazione del gruppo di controllo traccia-ap
Imposta controllo traccia sys-filtered-trace >> cancella le tracce filtrate e non può essere eseguito per singola funzionalità
- Il join AP sui controller degli accessi convergenti utilizza l'indirizzo MAC radio dell'access point. Quindi, quando si imposta un filtro per la traccia, usare l'indirizzo MAC di base o radio dell'access point. Immettere il comando **show ap join status summary** per trovare l'indirizzo MAC della radio.
- I problemi relativi ai certificati vengono gestiti da IOSd e richiedono l'utilizzo di debug, non di tracce, per un'ulteriore diagnosi.
