

# Cisco Small Business <sup>®</sup> Simple Network Management Protocol

Simple Network Management Protocol

Cisco Small Business Simple Network Management Protocol ID : cisco-sa-20190515-sb-snmpdos

[CVE-2019-1806](#)

Published : 2019-05-15 16:00

Version : 1.0 : Final

CVSS Score : 7.7

Workarounds : No workarounds available

Cisco Bug ID : [CSCvn49346](#) [CSCvn93730](#)

Summary: A Denial of Service (DoS) vulnerability exists in the Simple Network Management Protocol (SNMP) implementation on Cisco Small Business switches. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

## Impact

Cisco Small Business Sx200, Sx300, Sx500, ESW2, Small Business Sx250, Sx350, Sx550 Simple Network Management Protocol (SNMP) versions 1.0 through 1.1.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

SNMP versions 1.0 through 1.1 are affected. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability by sending a specially crafted SNMP request to cause a switch to reload, resulting in a service outage.
