Inleiding

Het document beschrijft de verschillende Call status die betrokken is bij een Cisco Voice Portal (CVP), alsmede Callback (CCB)-toepassing.

Voorwaarden

Vereisten

Cisco raadt kennis van de volgende onderwerpen aan:

- CVP
- CVP Call Studio
- CVP-terugbellen met dank aan

Gebruikte componenten

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- CVP versie 10
- Call Studio versie 10

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden gebruikt, zijn gestart met een gewalste (standaard) configuratie. Als uw netwerk levend is, zorg er dan voor dat u de mogelijke impact van om het even welke opdracht begrijpt.

Met dank aan CallConnector - operator en toepassingen

Wanneer u een vraag naar een systeem plaatst waar de Terugbellen uit hoofde van de Kegang wordt uitgevoerd, zijn verscheidene toepassingen en processen betrokken om u een callback aan te bieden, zodat u niet op de telefoon hoeft te wachten wanneer een agent beschikbaar wordt.

1. De oproep moet eerst worden gevalideerd zodat CCB kan worden aangeboden indien de validering verloopt.

De aanroep wordt toegevoegd aan de geheugenrij en de verschillende parameters worden gevalideerd om een callback aan te bieden. Bijvoorbeeld, de minimum Geschatte Tijd van de Wacht (EWT), vereiste ingangsgateway configuratie, huidige terugbellen, aantal Ingrek gateway trunks toegewezen voor callback, etc.

De toepassing van de CVP Call Studio met betrekking tot dit validatieproces is **CallbackEntry**.

2. Indien validatie verstrikt, wordt terugbellen op basis van terbeschikkingstelling aangeboden. Indien de terugbellen uit hoofde van de gebruiksrechten door de beller wordt geaccepteerd, verzamelt de CCB-oplossing van de CVP de informatie van de beller. Nadat de informatie wordt verzameld, wordt een goed gedag bericht aan de beller weergegeven.

De applicaties van de Call studio voor dit proces zijn **CallbackEntry** en **CallbackEngine**. Op dit moment, aangezien de callback aan de database is toegevoegd, is de status van de oproep: **Terugbellen in afwachting van (21)**.

3. De achtste terugbellen wacht tot de EWT is verlopen om de terugbellen (**terugbellen op gang te brengen (22)**). De callback vindt plaats en de oproep wordt geaccepteerd. Op dit moment verandert de status van de callback in **Complete/Connected (Status 24)**.

De toepassing die bij dit proces hoort, is **TerugbellenWachten**. De status van de oproep is: **Terugbellen voltooid (24)**.

4. De beller wacht op de rij terwijl een agent beschikbaar wordt. Zodra een agent beschikbaar wordt wordt de vraag naar de agent verzonden en wordt de callback uit de geheugenrij verwijderd. De toepassing met betrekking tot dit proces is **CallbackQueue**.

Activiteitenbestanden, rapportavastlegging en gegevensuitvoer analyseren

Terugbellen
