Inleiding

In de meeste gevallen gebruikt een afgelegen PIX die zich verbindt met een centrale PIX geen netwerkadresomzetting (NAT). In plaats daarvan gebruikt de externe PIX een statisch extern IP-adres. In een geval wanneer een centrale PIX die 7.x draait en later verbonden is met een externe PIX die NAT gebruikt, is dit hetzelfde als een klein thuishkantoor, zoals een PIX 501 of 506 dat is aangesloten op een kabel of DSL-modem met Dynamic Host Control Protocol (DHCP). PIX 7.x en hoger en Cisco Adaptieve Security Devices Manager (ASDM) werken niet op een PIX 501 of 506. Daarom wordt bijvoorbeeld de PIX op afstand met DHCP en NAT verondersteld een PIX 501 of 506 te zijn met 6.x-code. Deze configuratie stelt de centrale PIX in staat dynamische IPsec-verbindingen te accepteren. De afgelegen PIX gebruikt NAT om zich aan te sluiten bij de privé geadresseerde apparaten achter het netwerk achter de centrale PIX. PIX op afstand kan verbindingen naar de centrale PIX initiëren (hij weet het eindpunt), maar de centrale PIX kan geen verbindingen naar de afgelegen PIX initiëren (hij weet het eindpunt niet).

In deze voorbeeldconfiguratie is Tiger de afgelegen PIX en Leeuw de centrale PIX. Aangezien het IP-adres van Tiger onbekend is, moet u Lion configureren om verbindingen dynamisch te accepteren vanaf elke locatie met behulp van de wild-card, de vooraf gedeelde sleutel. Tiger weet wat verkeer moet worden versleuteld (omdat de toegangslijst het bepaalt) en waar het eindpunt van de leeuw ligt. Tiger moet de verbinding openen. Beide partijen voeren NAT en NAT 0 uit om NAT voor IPsec-verkeer te omzeilen.

Bovendien sluit de externe gebruiker in deze configuratie zich aan op de centrale PIX (Leeuw) met behulp van de Cisco VPN-client 4.x. De externe gebruiker kan geen verbinding maken met de

externe PIX (Tiger) omdat beide zijden dynamisch IP-adressen hebben toegewezen en niet weten waar ze het verzoek moeten verzenden.

Raadpleeg [PIX](#) te [configureren](#) tot [PIX Dynamic-to-Static IPsec met NAT en Cisco VPN Client](#) om meer te weten te komen over hetzelfde scenario in PIX 6.x met Cisco VPN-client 3.x.

Voorwaarden

Vereisten

Er zijn geen specifieke vereisten van toepassing op dit document.

Gebruikte componenten

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- Cisco PIX-firewall-software-release 7.x en hoger (centrale PIX)
- Cisco PIX-firewall-software-release 6.3.4 (Remote PIX)
- Cisco VPN-client versie 4.x

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Conventies

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

Configureren

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

Opmerking: Gebruik het [Opname Gereedschap](#) ([alleen geregistreerde](#) klanten) om meer informatie te verkrijgen over de opdrachten die in deze sectie worden gebruikt.

Netwerkdigram

Het netwerk in dit document is als volgt opgebouwd:

Configuraties

Dit document gebruikt deze configuraties:

- [leeuw](#)
- [Tiger](#)

Verifiëren

Gebruik dit gedeelte om te bevestigen dat de configuratie correct werkt.

Het [Uitvoer Tolk](#) ([uitsluitend geregistreeerde](#) klanten) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van **tonen** opdrachtoutput te bekijken.

Opmerking: U moet de **duidelijke** opdrachten in de configuratie modus uitvoeren.

- **duidelijke crypto ipsec sa-**Resets de IPsec associaties na mislukte pogingen om te onderhandelen over een VPN-tunnel.
- **duidelijke crypto isakmp sa-**Resets de Security Association en Key Management Protocol (ISAKMP) veiligheidsassociaties na mislukte pogingen om te onderhandelen over een VPN-tunnel.
- **Laat crypto motor ipsec-displays** de gecodeerde sessies zien.

Problemen oplossen

Gelijk voorgedeelde toetsen

Als de LAN-to-LAN (L2L) IPsec-tunnel niet is ingesteld, controleert u of de vooraf gedeelde toets

voor de DefaultRAGgroup en de vooraf gedeelde toets voor de DefaultL2LGroup hetzelfde zijn. Als dit het geval is, dan beëindigt PIX/ASA de tunnel op de DefaultRAGGroup eerst en zal de L2L tunnel dan waarschijnlijk falen. Verzeker u ervan dat de vooraf gedeelde toetsen voor de twee standaardtunnelgroepen verschillend zijn.

[Opdrachten voor troubleshooting](#)

Het [Uitvoer Tolk](#) (uitsluitend geregistreeerde klanten) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van **tonen** opdrachtoutput te bekijken.

Opmerking: Raadpleeg [Belangrijke informatie over debug Commands](#) voordat u **debug**-opdrachten gebruikt.

- **debug crypto ipsec**-gebruikt om te zien of een client onderhandelt over het gedeelte IPsec van de VPN-verbinding.
- **debug crypto isakmp *[level]***—gebruikt om te zien of de peers onderhandelen over het ISAKMP-gedeelte van VPN.

[Goede voorbeelden van Debug-uitvoer](#)

Dit zijn voorbeelden van een paar goede **debug** opdrachtoutput:

- [Central PIX \(7.0.0\)](#)
- [Remote PIX Dynamic NAT \(6.3.4\)](#)
- [VPN-client 4.0.5 via Central PIX 7.0](#)

[Central PIX \(7.0.0\)](#)
